coryfin (kor'if-in). A colorless liquid, the menthol ester of ethylglycolic acid, $CH_2(O.C_2H_5).COO.(C_{10}H_{19})$: used externally as an anesthetic and analgesic.

coryl (kor'il). A mixture of methyl and ethyl chlorids: a local anesthetic.

coryleur (kor-il-ur') [Fr.]. An instrument used in spraying with coryl.

corylin (ko-ri'l-in). A protein obtained from the hazelnut.

coryloform (ko-ri'l'o-form). An anesthetic mixture of ethyl and methyl chlorids and ethyl bromid.

corynanthin (ko-rin-an'thin). A crystalline alkaloid, $C_{21}H_{23}N_2O_3$, from the bark of *Pseudocinchona africana*.

Corynebacterium (ko-ri-'ne-bak-te're-um) [Gr. κόρυς club + bacterium]. A genus of *Mycobacteriaceae* of which *C. diphtheriae* is the type organism. They are slender, Gram-positive, non-motile, rod-shaped organisms with a tendency to form club-shaped and pointed forms and to show uneven staining. **C. commune**. Same as *C. hoffmanni*. **C. diphtheriae**, a pathogenic species found in the false membrane of diphtheria which shows a characteristic pleomorphism and produces diphtheria toxin. Called also *diphtheria bacillus*, *Löffler's bacillus*, *Klebs-Löffler bacillus*, and *Mycobacterium diphtheriae*. **C. granulomatis maligni**, a species found in cases of Hodgkin's disease. **C. hodgkini**, a bacillus in Hodgkin's disease (Bettencourt). **C. hoffmanni**, a bacterial organism found in throat cultures and much resembling *C. diphtheriae*. It is somewhat shorter, thicker, more uniform in size and shape, and produces no toxin. It produces an alkaline reaction in both dextrose and saccharose bouillon. Called also *Bacillus clavatus*, *Bacillus pseudodiphthericus*, *Bacillus hoffmanni*, *Hoffmann's bacillus*. **C. lymphae vaccinae**, a species discovered in lymph of calves and said to be present on the skin of man. **C. mallei**. Same as *Pfeifferella mallei*. **C. pseudodiphtheriae**. See *C. hoffmanni*. **C. segmentum**, an organism resembling *C. diphtheriae* which is found in the nose and thought at one time to be concerned in the production of common colds. **C. xerosis**, a non-motile rod-shaped organism resembling *C. diphtheriae* which is found in cases of xerosis and at one time was thought to be the cause of the disease. It is frequently found in normal eyes. It produces acid in both dextrose and saccharose bouillon.

corypalmin (ko-re-pal'min). A crystalline alkaloid, $C_{20}H_{23}NO_4$, from the roots of *Corydalis tuberosa*.

corytuberin (ko-re-tu'ber-in). A crystalline alkaloid, $C_{15}H_{21}NO_4 \cdot 5H_2O$, from commercial corydalin.

coryza (ko-ri'zah) [L.; Gr. κόρυζα]. Cold in the head; an acute catarrhal affection of the nasal mucous membrane, attended with a ropy discharge from the nostrils. **c. foetida**, *ozena*. **c. oedemato'sa**, a serous inflammation of the inferior and middle turbinate bones.

coryzol (ko-ri'zol). A proprietary coryza preparation containing formaldehyd and eucalyptus.

cosaprin (kos'ap-rin). A white, crystalline compound, sodium acetulphanylinate, $CH_3 \cdot CO \cdot NH \cdot C_6H_4 \cdot SO_3Na$, soluble in water; it is used as an antipyretic and antirheumatic in doses of from 5-8 gr. (0.33-0.52 gm.) three times daily.

Coschwitz's duct (kosh'vits) [Georgius Daniel Coschwitz, German physician, 1679-1729]. See *duct*.

cosensitize (ko-sen'sit-iz). To sensitize to two or more infections.

cosmesis (koz-me'sis) [Gr. κόσμησις]. The art of increasing and preserving beauty.

cosmetic (koz-met'ik) [Gr. κοσμητικός]. 1. Beautifying; tending to preserve or restore comeliness. 2. A beautifying substance or preparation.

cosmetology (koz-met-ol'o-je). The study of the proper care of the body from the point of view of cleanliness and comeliness.

cosmin (koz'min). See *agathin*.

cosmolin (koz'mo-lin). A trade-name for a variety of petrolatum, like vaselin; there are also liquid cosmoline; used chiefly in external applications. See *petrolatum*.

cosotoxin (ko-so-tck'sin). Same as *kosotoxin*.

costa (kos'tah), pl. *costae* [L. for *rib*]. A rib. **c. fluc'tuans**, a floating rib. **c. fluc'tuans dec'**

ima. See *Stiller's sign*, under *sign*. **cos'tae spu'riae**, false ribs. **cos'tae ve'rae**, true ribs.

costal (kos'tal) [L. *costa* 'lis]. Pertaining to a rib or ribs.

costalgia (kos-tal'je-ah) [L. *costa* rib + Gr. ἄλγος pain]. Pain in the ribs.

costectomy (kos-tek'to-me) [L. *costa* rib + Gr. ἐκτομή excision]. The operation of excising a rib.

costicartilage (kos-te-kar'til-ej) [L. *costa* rib + *cartilago*]. The cartilage of a rib.

costicervical (kos-te-ser'vik-al). Pertaining to or connecting the ribs and the neck.

costiferous (kos-ti'er-us) [L. *costa* rib + *ferre* to carry]. Bearing a rib, as the dorsal vertebrae of man.

costiform (kos'tif-orm). Shaped like a rib.

costispinal (kos-te-spi'nal). Pertaining to or connecting the ribs and spine.

costive (kos'tiv). Affected with constipation.

costiveness (kos'tiv-nes). Constipation of the bowels.

costo-. A prefix denoting relation to the ribs.

costocentral (kos-to-sen'tral). Pertaining to a rib and the centrum of a vertebra.

costochondral (kos-to-kon'dral). Pertaining to a rib and its cartilage.

costoclavicular (kos'to-klay-ik'u-lar). Pertaining to the ribs and clavicle.

costocolic (kos-to-kol'ik). Joining the ribs and the colon.

costocoracoid (kos-to-kor'ak-oid). Pertaining to the ribs and coracoid process.

costodiaphragmitis (kos'to-di-af-rag-mi'tis). Inflammation of the costodiaphragmatic sinus.

costogenic (kos-to-jen'ik) [L. *costa*, rib + *γεννᾶν* to produce]. Arising from a rib, especially from defect of the bone-marrow of the ribs.

costo-inferior (kos-to-in-fe're-or). Pertaining to the lower ribs.

costopleural (kos-to-plu'ral). Pertaining to the ribs and the pleura.

costopneumopexy (kos-to-nu'mo-pek-se) [L. *costa* rib + Gr. πνεῦμον lung + πῆξις fixing]. The operation of anchoring the lung to a rib.

costoscapular (kos-to-skap'u-lar). Pertaining to the ribs and the scapula.

costoscapularis (kos'to-skap-u-la'ris). The serratus magnus muscle.

costosternal (kos-to-ster'nal). Pertaining to a rib and to the sternum.

costosuperior (kos'to-su-pe're-or). Pertaining to the upper ribs.

costotome (kos'to-tōm) [L. *costa* rib + Gr. τέμνειν to cut]. A knife for dividing the costal cartilages.

costotomy (kos-tot'o-me) [L. *costa* rib + Gr. τομή a cut]. Resection of a rib.

costotransverse (kos'to-trans-vers'). Lying between the ribs and transverse processes of the vertebrae.

costotransversectomy (kos'to-trans-ver-sek'to-me). Excision of a part of a rib with the transverse process of a vertebra.

costovertebral (kos-to-ver'te-bral). Pertaining to a rib and a vertebra.

costoxiphoid (kos-to-zif'oid). Connecting the ribs and the xiphoid cartilage.

Cotard's syndrome (cot-arz') [Jules Cotard, French neurologist, 1840-1887]. See *syndrome*.

cotargit (ko-tar'jit). The double salt of cotarnin hydrochlorate and ferric chlorid: used as a hemostatic.

cotarnin (ko-tar'nin). A yellow crystalline bitter alkaloid deliquescent in moist air. It is quaternary oxymethyl-oxymethylene-dihydroxy-isouquinolin, $(CH_3O)(CH_2O_2)C_6H_4N(CH_3)Cl$: astringent and sedative. **c. hydrochlorate**. See *stypticin*. **c. phthalate**, styptol.

COTe. An abbreviation for *cathodal opening tetanus*.

coto (ko'to). 1. The bark of an unknown Bolivian tree: useful in diarrheas and in intestinal troubles. Dose of fluidextract, 1-15 min. (0.066-1 c.c.); of powder, 1-15 gr. (0.066-1 gm.); of tincture, 10-30 min. (0.666-2 c.c.). 2. See *paracoto*.

cotoin (ko-to'in). A crystalline principle from coto. It is irritant to the skin and mucous membranes: it has been used in cholera and dysentery: to be used with caution. Dose, $\frac{3}{4}$ -1 gr. (0.03-0.06 gm.). **c. formaldehyd**, fortoin.

cotonetin (ko-to-ne'tin). A principle, $C_{20}H_{10}O_5$, in white scales, from coto: it is similar in its effects to cotoin.

cotton (kot'n) [L. *gossyp'ium*]. A textile material derived from the seeds of one or more of the cultivated varieties of *Gossyp'ium herba'ceum*. **absorbent c.**, cotton that has been rendered absorbent by removal of its fatty matter. **gun c.**, pyroxolon. **c.-oil**, **c.-seed oil** [L. *oleum gossyp'ii sem'inis*], a fixed oil from the seed of the cotton plant: much used in pharmacy. **purified c.**, absorbent cotton. **c.-root**, the root of *Gossyp'ium herba'ceum*, the cotton plant. The root-bark (*gossyp'ii cortex*, U. S. P.) is diuretic and emmenagogue. Dose, 30 gr. (2 gm.). of fluid-extract, 15-45 min. (1-3 c.c.). **salicylated c.**, purified cotton charged with salicylic acid: an antiseptic dressing. **styptic c.**, cotton impregnated in a styptic solution and dried.

cottonoid (kot'n-oid). A felt of absorbent cotton for surgeons' use.

Cotton-process ether (kot'on) [James H. Cotton, Canadian physician]. See *ether*.

cottonwood (kot'un-wood). See *Populus*.

Cotugno (ko-toon'go). Same as *Cotunnus*.

Cotunnus' aqueduct, nerve, etc. (ko-tun'e-us) [Domenico Cotugno, Italian anatomist, 1736-1822]. See *aqueduct, nerve*, etc.

cotyledon (kot-il-e'don) [Gr. *κοτυληδών*]. 1. The seed-leaf of the embryo of a plant. 2. Any one of the subdivisions of the uterine surface of the placenta.

Cotylogonimus (kot-il-o-gon'im-us). A genus of flukes infesting dogs and cats in Egypt.

cotyloid (kot'il-oid) [Gr. *κοτυλοειδής* cup-shaped]. 1. Cup-shaped. 2. Pertaining to the cotyloid cavity or acetabulum.

cotylopubic (kot'il-o-pu'bik). Relating to the acetabulum and the os pubis.

cotylosacral (kot'il-o-sa'kral). Relating to the acetabulum and the os pubis.

couch-grass (kowtch'gras). The perennial grass, *Agropyrum (Triticum) repens*. Its long roots (*tril'icum*, U. S. P.) are diuretic and are useful in cystitis. It is given in decoction *ad libitum*. Dose of fluidextract, 1-4 dr. (4-16 c.c.).

couching (kowtch'ing). Displacement of the lens in cataract.

cough (kaw) [L. *tus'sis*]. A sudden noisy expulsion of air from the lungs. **aneurysmal c.**, a variety of cough commonly associated with aneurysm, and often with paralysis of one vocal cord. **Balne's c.**, cough on lying down, seen in obstruction of the nasopharynx. **compression c.**, a deep resonant cough caused by compression of the bronchi. It resembles in character the cough of a dog and is sometimes called *dog-c.* **dog-c.** See *compression c.* **dry c.**, one which is not accompanied with expectoration. **ear-c.**, a reflex cough caused by disease of the ear. **extrapulmonary c.**, a cough due to causes outside the lungs. **hack-ing c.**, a short, frequent, and feeble cough. **hebetec c.**, the dry barking of puberty: cynobex hebetica. **minute-gun c.**, whooping-cough with the paroxysms occurring close together. **Morton's c.**, a persistent cough in pulmonary tuberculosis which brings on vomiting and

thus causes loss of nourishment. **reflex c.**, a cough due to the irritation of some remote organ. **stomach c.**, a cough attended by reflex irritation from stomach disorder. **tea-tasters' c.**, cough in tasters of tea, due to inhaling fungi, such as *Monilia, Aspergillus*, etc., from tea leaves. **trigeminal c.**, a cough due to irritation of the fibers of the trigeminal nerve distributed to the throat, nose, and external meatus of the ear. **wet c.**, one which is attended with expectoration. **whooping-c.** See *whooping-cough*. **winter c.**, chronic bronchitis recurring in the winter.

coulomb (koo'lom) [after C. A. de Coulomb, French physicist, 1736-1806]. The unit of quantity in current electricity; the quantity afforded by an ampere of current in one second flowing against one ohm of resistance with a force of one volt.

coumarin (koo'mah-rin). Fragrant colorless crystals, the anhydride of ortho-oxy-cinnamic acid, $C_9H_4(CH_3)_2O.CO$, from tonka bean, sweet clover, other plants, and also prepared synthetically.

Councilman'ia lafeu'ri. A species of ameba resembling *Endameba coli*, but distinguished by multiplying during its encystment.

counterextension (kown'ter-eks-ten'shun). Traction in a proximal direction coincident with traction in the opposite direction.

counterirritant (kown-ter-ir-it-ant). 1. Producing a counterirritation. 2. A derivative agent.

counterirritation (kown'ter-ir-it-a'shun). A superficial irritation; an irritation which is intended to relieve some other irritation.

counteropening (kown-ter-o'pen-ing). A second opening, as in an abscess, made to facilitate drainage.

counterpoison (kown'ter-poi-zn). A poison given to counteract another poison.

counterpuncture (kown'ter-punkt-ur). A second opening made opposite to another.

counterstain (kown'ter-stān). A stain applied to render the effects of another stain more discernible.

countersuggestion (kown'ter-sug-jes'chun). A suggestion opposed to another suggestion.

counting-cell (kown'ting-sel). See under *cell*.

coup (koo) [French for "stroke"]. **c. de fouet** (koo-de-foo-a) ["stroke of the whip"]. Rupture of the plantaris muscle accompanied by a sharp disabling pain; whip-lash injury; lawn-tennis leg. **c. de soleil** (koo'deh so-lāl) [Fr.]. A sunstroke.

courap (koo-rap'). A disease of the skin occurring in India, with eruption and itching of the armpits, groin, breast, and face.

courbature (koo'r-bah-tür) [Fr.]. 1. Aching of the muscles. 2. Caisson disease.

courses (kor'sez). Menses; the monthly illness of a woman.

court-plaster (kort'plas-ter). A silk plaster spread with isinglass.

Courvoisier's law, sign (koo'r-vwah-ze-āz') [Louis G. Courvoisier; a French surgeon, 1843-1918]. See *law and sign*.

coussein (koo'se-in). Same as *koussein*.

coussin (koo'sin). See *koussin*.

couso (koo'so). See *kouso*.

couvade (koo-vad'). An ethnic custom, in which the husband feigns illness during his wife's parturient and puerperal periods.

couvercle (koo'ver-kl) [Fr.]. A blood-clot formed outside a vessel.

couveuse (koo-vuz') [Fr.]. See *incubator*.

cover-glass (kov'er-glas). A thin glass plate which covers a mounted microscopic object or a culture.

cowage, cowhage (kow'edj). See *Mucuna*.

cow-hocked (kow-hokt). Having hocks like a cow: said of horses whose hocks are abnormally close to each other.

cowl (kowl). See *pilleus*.

Cowper's cyst, gland (kow'perz) [William Cowper, English surgeon, 1666-1709]. See *cyst* and *gland*.

cowperian (kow-pe're-an). Pertaining to William Cowper or to Cowper's cyst or gland.

cowperitis (kow-per-i'tis). Inflammation of Cowper's glands.

cowpox (kow'poks). See *vaccinia*.

coxa (koks'ah) [L.]. The hip or hip-joint. **c. pla'na**, osteochondritis deformans juvenalis. **c. val'ga**, deformity of the neck of the femur, the opposite of *coxa vara*, producing in the limb marked external rotation, increased abduction, and decreased adduction. Called also *collum valgum*. **c. va'ra**, "bent hip," bending downward of the neck of the femur without hip-joint disease. It is usually due to rickets.

coxalgia, coxalgy (koks-al'je-ah, kok'sal-je) [L. *cox'a* hip + Gr. *άλγος* pain]. 1. Hip-joint disease; tuberculosis of the hip-joint. 2. Pain in the hip.

coxankylometer (kok-sang-kil-om'et-er) [L. *cox'a* hip + *ἀγκύλος* bent + *μέτρον* measure]. An instrument for measuring the deformity in hip disease.

coxarthrits (koks-ar-thri'tis). Same as *coxitis*.

coxarthrocace (koks-ar-throk'as-e). Fungous disease of the hip-joint.

coxarthropathy (koks-ar-throp'ath-e) [L. *cox'a* hip + Gr. *άρθρον* joint + *πάθος* disease]. Hip-joint disease.

coxitis (koks-i'tis). Inflammation of the hip-joint. **senile c.**, rheumatoid arthritis of the hip-joint.

coxodynia (koks-o-din'e-ah). See *coxalgia*.

coxofemoral (koks-o-fem'or-al) [L. *cox'a* hip + *femur* thigh]. Pertaining to the hip and thigh.

coxotuberculosis (kok'so-tu-ber-ku-lo'sis) [L. *cox'a* hip + *tuberculosis*]. Tuberculous disease of the hip-joint.

C. P. Abbreviation for *chemically pure*.

Cr. The symbol for *chromium*.

crab, crab-louse (krah, krah'lows). A louse, *Phthirus inguinalis*, that infests the pubic region.

crabs'-claws, crabs'-eyes. Concretions from the stomach of craw-fish.

crachotement (krah-shot-maw') [Fr.]. Inability to spit, even with a strong desire to do so.

crack (krahk). See *sand-crack*.

cracked-pot sound (krakt-pot'). A percussion-sound indicative of a pulmonary cavity into which the breath may pass.

cradin (kra'din) [Gr. *κράδη* fig-bough]. A peptic ferment from the twigs and leaves of the fig tree; ficoin.

cradle (kra'dl). A frame for keeping bed-clothes from a wounded limb. **ice-c.**, a device for refrigerating fever patients.

Crafts's test (krafts) [Leo M. Crafts, American neurologist, born 1863]. See under *tests*.

zoans, two species of which, *C. hom'inis* and *C. mi'grans*, inhabit the intestine and cause dysentery-like symptoms. This genus was originally named *Paramaba* by Craig.

craigiasis (kra-gi'as-is). A diseased condition produced by infection of the intestine with *Craigia*. It is marked by lassitude, mild headache, abdominal discomfort, and moderate diarrhea.

cramp (kramp). A painful spasmodic muscular contraction, especially a tonic spasm. **accessory c.**, spastic torticollis due to a lesion of the accessory nerve. **auctioneers' c.**, a professional neurosis affecting mainly the left side of the orbicularis oris muscle. **compositors' c.**, an occupation neurosis of the thumb and fingers of compositors, resembling writers' cramp. **dactylographers' c.**, an occupation neurosis similar to writers' cramp affecting typewriters. **hammermen's c.**, a spasmodic affection of the muscles of the entire arm. **heat-c.**, muscular spasms attended by pains, dilated pupils, and weak pulse: seen in those who labor in intense heat. **hephestic c.**, hammermen's cramp. **intermittent c.** See *tetany*. **musicians' c.**, a neurosis seen in musicians and named from the instrument used. **occupation c.** Same as *professional c.* **professional c.**, a spasm of a group of muscles, due to excessive use in one's daily occupation. **seamstresses' c.**, a neurosis of sewing-women, resembling writers' cramp. **shaving c.**, a neurosis of the hands of barbers resembling writers' cramp. **telegraphers' c.**, a neurosis resembling writers' cramp, seen in telegraphers. **violinists' c.**, an occupation neurosis peculiar to violin players. **waiters' c.**, spasm and pain in the muscles of the back and arms of table-waiters. **watchmakers' c.**, a spasm of the finger muscles peculiar to watchmakers. **writers' c.**, an occupation neurosis due to excessive writing. It is marked by spasmodic contraction of the muscles of the fingers, hand, and forearm, together with neuralgic pain therein. It comes on whenever an attempt is made to write.

cramp-bark. The bark of *Viburnum oxycoc'cus*: antispasmodic. Dose of fluidextract, $\frac{1}{2}$ -2 dr. (2-8 c.c.). See *Viburnum*.

Crampton's line, muscle (kramp'tonz) [Sir Philip Crampton, Irish surgeon, 1777-1858]. See *line* and *muscle*.

cram-stunt (kram'stunt). A mental defect due to overstudy.

cranesbill (kränz'bil). See *Geranium*.

cranial (kra'ne-al) [L. *crania'lis*]. Pertaining to the cranium.

craniaphimotomy (kra'ne-am-fit'o-me) [*cranium* + Gr. *ἀμφί* around + *τομή* cutting]. Division of the entire circumference of the skull for securing decompression.

craniectomy (kra-ne-ek'to-me) [Gr. *κρανίον* skull + *ἐκτομή* excision]. Excision of a part of the skull. **linear c.**, excision of a strip of the skull, done for the relief of microcephalus.

cranio-acromial (kra'ne-o-ak-ro'me-al). Pertaining to the cranium and acromion.

cranio-aural (kra'ne-o-aw'ral). Pertaining to the cranium and the ear.

craniocèle (kra'ne-o-sēl) [Gr. *κρανίον* cranium + *κήλη* tumor]. A protrusion of any part of the encephalon from the cranial cavity.

craniocerebral (kra'ne-o-ser'e-bral). Pertaining to the cranium and the cerebrum.

cranioclasia (kra-ne-ok'la-sis) [Gr. *κρανίον* skull + *κλάσις* fracture]. The crushing of the fetal head.

cranioclast (kra'ne-o-klast) [Gr. *κρανίον* skull + *κλαστός* broken]. An instrument for use in performing cranioclasia.

cranioclasty (kra'ne-o-klas-te). Same as *cranioclasia*.

craniocleidodysostosis (kra'ne-o-kli'do-dissos-to'sis) [Gr. *κρανίον* skull + *κλείς* clavicle +

Craigia hominis (Barlow).

Craigia (kra'ge-ah) [Charles F. Craig, U. S. Army surgeon, born 1872]. A genus of flagellate proto-

δυσ- bad + *ὀστέον* bone]. Cleidocranial dysostosis. See under *dysostosis*.

craniodidymus (kra'ne-o-did'im-us) [Gr. *κρανίον* skull + *δίδυμος* twin]. A monster with two heads.

craniofacial (kra'ne-o-fa'shal). Pertaining to the cranium and the face.

craniognomy (kra-ne-og'no-me) [Gr. *κρανίον* head + *γνώμων* an interpreter or judge]. The study of the shape of the head.

craniograph (kia'ne-o-graf) [*cranium* + Gr. *γράφειν* to write]. An instrument for outlining the skull.

craniology (kra-ne-o'l'o-ji) [Gr. *κρανίον* head + *λόγος* treatise]. The scientific study of skulls.

cranio-malacia (kra'ne-o-mal-a'se-ah) [Gr. *κρανίον* skull + *μαλακία* softness]. Abnormal softness of the skull; craniotabes.

craniometer (kra-ne-om'et-er) [Gr. *κρανίον* head + *μέτρον* measure]. An instrument for use in craniometry.

craniometric (kra-ne-o-met'rik). Pertaining to craniometry.

craniometry (kra-ne-om'et-re) [Gr. *κρανίον* head + *μέτρον* measure]. The scientific study of the proportions of the human head.

craniopagus (kra-ne-op'ag-us) [Gr. *κρανίον* head + *πηγνύναι* to fix]. A twin monster united at the head.

craniopathy (kra-ne-op'ath-e) [Gr. *κρανίον* skull + *πάθος* disease]. Any disease of the skull.

cranioplasty (kra-ne-o-plas-te) [Gr. *κρανίον* skull + *πλάσσειν* to mold]. Plastic surgery of the skull; surgical correction of defects of the skull.

craniopuncture (kra'ne-o-punk-tür). Puncture of the brain for exploratory purposes in cranial disease.

craniorachischisis (kra'ne-or-ah-kis'kis-is) [Gr. *κρανίον* cranium + *ράχης* spine + *σχίζω* to split]. Congenital fissure of the skull and spinal column.

craniocranial (kra'ne-o-sa'kral). Pertaining to the skull and the sacrum.

cranoschisis (kra-ne-os'kis-is) [Gr. *κρανίον* skull + *σχίζω* fissure]. Congenital fissure of the cranium.

cranoscopy (kra-ne-os'ko-pe) [Gr. *κρανίον* skull + *σκοπεῖν* to view]. Diagnostic examination of the head.

craniospinal (kra'ne-o-spi'nal). Pertaining to the cranium and spine.

craniostenosis (kra'ne-o-ste-no'sis) [Gr. *κρανίον* skull + *στένωσις* narrowing]. Hyperostosis cranii, producing contraction of the cranial fissures and foramina.

craniostosis (kra'ne-os-to'sis) [Gr. *κρανίον* skull + *ὀστέον* bone]. Congenital ossification of the cranial sutures.

craniotabes (kra'ne-o-ta'bēz) [L. *cranium* skull + *tabes* a wasting]. Thinning of spots in the infantile skull, chiefly in cases of rickets and syphilis.

craniotome (kra'ne-o-töm) [Gr. *κρανίον* skull + *τομή* a cut]. An instrument for use in performing craniotomy.

craniotomy (kra-ne-ot'o-me) [Gr. *κρανίον* head + *τομή* a cut]. The cutting in pieces of the fetal head to facilitate delivery.

craniotonoscopy (kra'ne-ot-o-nos'ko-pe) [Gr. *κρανίον* head + *τόνος* tone + *σκοπεῖν* to view]. The auscultatory percussion of the head.

craniotopography (kra'ne-o-to-pog'raf-e) [Gr. *κρανίον* skull + *τοπογραφία*]. The study of the relations of the surface of the skull to the various parts of the brain beneath.

craniotrypesis (kra'ne-o-trip-e'sis) [Gr. *κρανίον* head + *τρυπήσις* a piercing]. The trephination of the skull.

craniotympanic (kra'ne-o-tim-pam'ik). Pertaining to the skull and its tympanum.

cranitis (kra'ni-tis). Inflammation of the cranial bones.

cranium (kra'ne-um), pl. *crania* [L.; Gr. *κρανίον*]. The skull or brain-pan.

crapulent, crapulous (krap'u-lent, krap'u-lus) [L. *crapulentus*, *crapulosus* drunken]. Due to excess in eating or drinking.

crasis (kra'sis) [L.; Gr. *κράσις* mixture]. The individual temperament or constitution. **parasitic c.**, a weakened state due to the presence of parasites or favorable to infestation by them.

crassamentum (kras-am-en'tum) [L.]. A clot, as of blood.

Crast. Abbreviation for *L. crastinus*, for tomorrow.

cratægin (krat-e'jin). A bitter crystalline compound from the bark of the twigs of *Cratægus*.

Cratægus (kra-te'gus). A genus of trees and shrubs. *C. oxyacantha* is the hawthorn of Europe; from its fruit are obtained a tincture and a fluidextract that have been used in cardiac neuroses.

crateriform (kra-ter'if-orm) [L. *crater* bowl + *forma* shape]. Depressed or hollowed, like a bowl.

creaunology (kraw-nol'o-je). Same as *crenology*.

creaunotherapy (kraw-no-ther'ap-e). Same as *crenotherapy*.

cravat (krav-at') [Fr. *cravate*]. A form of bandage made by folding a triangular piece of cloth from its apex toward the base.

craw-craw (kraw'kraw). An obstinate form of skin disease occurring in West Africa, and affecting chiefly the thighs and genitals, though it may spread over the whole body. It is caused by *Onchocerca volvulus*.

crawley (kraw'le). See *Corallorhiza*.

crealbin (kre-al'bin). A dry powder of creolin and albumin: an antiseptic for internal use.

cream (krēm) [L. *cremor*]. The oily or fatty part of milk whence butter is prepared. **aluminum hydroxid c.**, precipitate a 1 per cent. solution of ammonium alum with a slight excess of 1 per cent. ammonium hydroxid and wash the precipitate. **cold-c.**, ointment of rose water. **leukocytic c.**, the more or less concentrated layer of leukocytes supposed to remain on the surface of a corpuscular mixture after centrifugalization in the determination of the opsonic index. **Moynihan's c.**, a mixture consisting of as much bismuth carbonate in 1:1000 aqueous solution of HgI₂ as will make a thick paste: used as a wound dressing. **c. of tartar.** See *potassium bitartrate*.

creamometer (kre-mom'et-er) [*cream* + Gr. *μέτρον* measure]. An instrument for the determination of the percentage of cream in milk.

creasote (kre'as-öt). See *creosote*.

creatin (kre-at'in) [Gr. *κρέας* flesh]. A crystallizable nitrogenous principle, NH.C(NH₂).N(CH₃)₂.CH₂.COOH, or methyl-guanidin-acetic acid, derivable from the juice of muscular tissue. It is an opaque white and bitter solid; sometimes seen in transparent prisms. Therapeutically it is a cardiac, muscular, and digestive tonic. Dose, 1½ gr. (0.1 gm.). Called also *kreatin*.

creatinase (kre-at'in-äs). An enzyme which transforms creatin into creatinin.

creatinemia (kre'at-in-e'me-ah) [*creatin* + Gr. *αἷμα* blood]. Excess of creatin in the blood.

creatinin (kre-at'in-in). A basic substance, C₄H₇N₃O; creatin anhydrid: procurable from creatin and from urine.

creatininase (kre-at-in'in-äs). A ferment which decomposes creatinin into urea and methyl glycol.

creatiorrhea (kre-at-o-re'ah) [Gr. *κρέας* flesh + *ροία* flow]. The presence of muscle-fibers in the feces.

creatotoxism (kre'at-o-toks'ism). Meat-poisoning. **creatotoxicon** (kre-at-oks'ik-on). See *kreatotoxicon*.

creatoxin (kre-at-oks'in). See *kreoloxin*.

crèche (kräsh) [Fr.]. A day-nursery for infants.

credargan (kre-dar'gan). A proprietary form of colloidal silver.

Credé's antiseptic, ointment (kra-dāz') [Benno C. Credé, German surgeon, born 1847]. See *antiseptic, ointment*.

Credé's method, etc. (kra-dāz') [Karl Sigmund Franz Credé, German gynecologist, 1819-1892]. See *method*.

creek (krēk). An obsolete equivalent to *ventricle* (of the brain or of the heart).

creeping eruption. See under *eruption*.

cremaster (kre-mas'ter) [L.; Gr. *κρεμᾶν* to suspend]. See *muscles, table of*.

cremasteric (kre-mas-ter'ik). Pertaining to the cremaster.

cremation (kre-ma'shun) [L. *crema'tio* a burning]. The burning or incineration of dead bodies.

crematorium (krem-at-o're-um). Crematory.

crematory (krem'at-o-re). A furnace or establishment for the burning up of dead bodies.

cremnocele (krem'no-sēl). Labial hernia.

cremnophobia (krem-no-fo'be-ah) [Gr. *κρημνός* cliff + *φόβος* fear]. Insane dread of precipices.

cremo-bismuth (kre-mo-biz'muth). A mixture of bismuth subcarbonate suspended in water in a finely divided state. Dose, 1-4 fl.dr. (4-16 c.c.).

cremor (kre'mor). Latin for *cream*. **c. tar'tari**, cream of tartar; potassium bitartrate.

cremule (krem'ul). A small chocolate cream: used as a vehicle for medicines.

crena (kre'nah) [L.]. A notch or cleft. **c. a'ni** [B N A], the anal cleft. **c. che'nium**, crena ani. **c. cor'dis**, the longitudinal sulcus of the heart.

crenasol (kren'as-ol).

A disinfectant preparation of paracresol, metacresol, pyridin compounds, etc.

crenate, crenated

(kre'nät, kre'na-ted) [L. *crenātus*]. Scallop or notched.

Crenated red blood-corpuscles (Hill).

crenation (kre-na'shun). An abnormal notched appearance, as of the margins of the red blood-corpuscles.

crenic acid (kre'nik). See *acid*.

crenilabrin (kren-il-a'brin). A protamin obtained from the sperm of the cunner (fish).

crenology (kren-ol'o'e) [Gr. *κρήνη* spring + *λόγος* treatise]. The science of therapeutic springs; cranaology.

crenotherapy (kren-o-ther'ap-e) [Gr. *κρήνη* spring + *θεραπεία* treatment]. Treatment by water from mineral springs.

Crenothrix (kren'o-thriks) [L.; Gr. *κρήνη* spring + *θρίξ* hair]. A genus of Chlamydo-bacterales. They consist of long, stiff, unbranched filaments which have a deposit of iron in the sheath. **C. polys'pora**, the only species. It occurs abundantly in the reservoirs and conduits of public water supplies where it forms brownish masses which may obstruct the flow of water and often imparts an unpleasant taste to the water.

creoform (kre'o-form). Same as *guaiaform*.

creolalbin (kre-ol-al'bin). Same as *crealbin*.

creolin (kre'o-lin). A thick, blackish, liquid preparation, saponified coal-tar creosote; it is a deodorizer, antiseptic, and hemostatic; used in surgical dressings, in obstetric cases, and in gastric and urinary disorders in 2 per cent. solution. Dose, $\frac{1}{2}$ -5 min. (0.033-0.32 c.c.). **Artmann's c.**, a local antiseptic and disinfectant consisting of a compound of phenols and sulphuric acid.

creophagism, creophagy (kre-of-a-jizm, kre-of'-aj-e) [Gr. *κρέας* flesh + *φαγείν* to eat]. The use of flesh food.

creophen (kre'o-fen). A proprietary disinfecting fluid derived from coal-tar.

creosol (kre'o-sal). Tannosol; a proprietary combination of tannic acid and the phenols of creosote: it is a dark-brown powder, antiseptic and astringent, and is recommended for local and internal use in laryngismus.

creosin (kre'o-sin). A patented mixture of creosote, iodine, calcium hypophosphite, and balsam of Peru: used like creosote.

creosoform (kre-os'o-form). A greenish powder composed of formic aldehyd and creosote: antiseptic.

creosol (kre'o-sol) [*creosote* + L. *oleum* oil]. A colorless, oily liquid, $C_6H_5CH_3(OH)(O.CH_3)$, from potassium creosotate: it is an antiseptic. Dose, $\frac{1}{2}$ -2 min. (0.025-0.1 c.c.).

creosolid (kre-o-sol'id). Magnesium creosotate; magnesia and creosote in equal parts: a non-irritant antiseptic. Dose, 8 gr. (0.5 gm.).

creosomagnesol (kre'o-so-mag'ne-sol). A dry compound of creosote, magnesia, and potassium hydroxid: antiseptic. Dose, 2 gr. (0.13 gm.), in a pill with honey.

creosotal (kre-o-so'tal). A thick, brown oil, creosote carbonate, from beechwood creosote: safer than creosote for use as an internal antiseptic. Dose, 3-15 min. (0.199-1 c.c.).

creosote (kre'o-söt) [L. *creoso'tum*, from Gr. *κρέας* flesh + *σῶζεν* to preserve]. An oily, transparent, poisonous distillate from wood-tar; it is a local anesthetic, escharotic, and powerful antiseptic: used as a caustic for warts, etc.; externally, in skin diseases and unhealthy ulcers; internally, to arrest vomiting, and internally, hypodermically, and by inhalation, in pulmonary phthisis. Dose, 1-3 min. (0.065-0.18 c.c.); of *aqua creosoti*, 1-4 dr. (4-16 c.c.); of *mis'tura creosoti*, 1 fl.oz. (30 c.c.). The *unguentum creosoti* and *va'por creosoti* are also used. **c. calcium chlorhydrophosphate**, a syrupy, white substance containing creosote carbonate and calcium hydrophosphate: used in tuberculosis as an antiseptic. Dose, 5-15 gr. (0.333-1 gm.). **c. carbonate**. See *creosotal*. **c. formaldehyd**, creosoform. **methylen c.** See *pneumin*. **c. oleate**, a yellowish, antiseptic oil. Dose, 3-10 min. (0.2-0.6 c.c.). **c. phenylpro'pionate**. See *proposote*. **c. phosphate**, phosote. **c. phosphite**. See *phosphotal*. **c. valerianate**. See *eosote*.

creotoxin (kre-o-tok'sin). See *kreoloxin*.

creotoxism (kre-o-tok'sizm). See *kreoloxism*.

crepitan (krep'it-ant) [L. *crepita're* to rattle]. Rattling or crackling.

crepitation (krep-it-a'shun) [L. *crepita're* to crackle]. 1. A sound like that made by rubbing the hair between the fingers, or like that made by throwing fine salt into a fire. 2. The noise made by rubbing together the ends of a fractured bone.

crepitin (krep'it-in). An albumoid from the juice of *Hura crepitans*. It has an action like abrin.

crepitus (krep'it-us) [L.]. 1. The discharge of flatus from the bowels. 2. Crepitation in either sense; a crepitant râle. **articular c.**, joint crepitus. **bony c.**, the crackling sound produced by the rubbing together of fragments of fractured bone. **false c.**, joint c., the grating sensation caused by rubbing together of the dry synovial surfaces of joints. **c. in'dux**, a crepitant râle, or crackling sound, heard in pneumonia at the beginning of the process of solidification of the lung. **c. re'dux**, crepitus heard in the resolving stage of pneumonia. **silken c.**, a sensation as of two pieces of silk rubbed between the fingers, felt on moving a joint affected with hydrarthrosis.

crepuscular (kre-pus'ku-lar) [L. *crepus'culum* twilight]. Referring to twilight, as a twilight state.

cresalol (kres'al-ol). Any one of the three isomeric salicylic esters of the cresols; distinguished as orthocresalol, metacresalol, and paracresalol; they are milky-white powders, of the formula $\text{OH.C}_6\text{H}_4.\text{CO}_2\text{C}_6\text{H}_4.\text{CH}_3$; antiseptic, mainly for external use. The cresalols are also used internally for rheumatism. Dose, 4-15 gr. (0.26-1 gm.).

cresamin (kres-am'in). An antiseptic and germicide mixture of ethylenediamin and tricesol.

cresapol (kres'a-pol). A solution of crude cresols in potash soap: used as a disinfectant.

cresaprol (kres'ap-rol). See *cresin*.

cresatin (kres'at-in). Meta-cresyl acetate, $\text{CH}_3\text{-C}_6\text{H}_4\text{O}(\text{CH}_3\text{CO})$, a colorless oily liquid, used as an antiseptic and analgesic in diseases of the nose, throat, and ear.

crescent (kres'ent) [L. *cres'cens*]. 1. Shaped like a new moon. 2. Either of the two lateral bands of gray matter in the spinal cord, each made up of a ventral and a dorsal cornu. **articular c.**, a crescent-shaped articular fibrocartilage. **c's of Gianuzzi**, crescent-shaped groups of granular cells in the acini of mucous glands: also called *demilunes of Heidenhain*. **malarial c's**, the sausage-shaped sporonts of the parasite of pernicious malarial fever. See *microgametocyte*. **myopic c.**, a crescentic posterior staphyloma in the fundus of the eye in myopia. **c's of the spinal cord**, the cornua, or horns, of gray matter in the spinal cord, distinguished as *anterior* and *posterior*, or *ventral* and *dorsal*.

cresecentic (kres-en'tik). Shaped like a crescent or new moon.

crescograph (kres'ko-graf) [L. *cre'cere* to grow + Gr. *γράφειν* to record]. An instrument which magnifies movements and demonstrates the growth of plants.

cresegol (kres'e-gol). A parasulphonic derivative of cresol, mercury, and potassium: a reddish-brown powder: antiseptic and emetic.

cresin (kres'in). A brown liquid containing cresol and sodium cresoxyl acetate: antiseptic; its weak solutions are used externally.

cresochin (kres'o-kin). A somewhat soluble mixture of chinolin, tricesol, and chinolin-tricesol sulphate: used in washes as a disinfectant.

cresosform (kre'so-form). Any oily fluid containing cresosote and formaldehyd. It is used as an antiseptic for ulcers and tuberculous lesions, and internally in tuberculous enteritis. Dose, 10-40 min. (0.65-2.6 c.c.).

cresol (kre'sol). Cresylic acid, methyl-phenol, $\text{CH}_3\text{-C}_6\text{H}_4\text{OH}$, a phenol from coal-tar or wood-tar; there are three varieties—orthocresol, metacresol, and paracresol—the second of which is a liquid: all are antiseptic. **c-anitol**, a solution of metacresol in antin: a remedy in erysipelas. **c. ioidid**, an ill-smelling, resinous, light yellow powder: antiseptic. **c-naphthol**, a viscous brown liquid: a germicide. **c. phthalein**, an indicator, orthocresol-phthalein, used in determination of hydrogen-ion concentration. **c. red**, an indicator, orthocresol-sulphophthalein: used in the determination of hydrogen-ion concentration. It has a pH range of 7.2 to 8.8, being yellow at 7.2 and red at 8.8.

cresolene (kres'o-lēn). Same as *anisol*.

cresolin (kres'o-lin). A proprietary antiseptic resembling creolin.

cresorcin (kre-sor'sin). A crystalline derivative from cresol, $\text{C}_7\text{H}_5\text{O}_3$; ditoluene.

cresosulphuric acid (kre'so-sul-fu'rik). See *acid*.

cresotate (kres'o-tāt). Same as *cresylate*.

cresotic acid (kre-so'tik). See *acid*.

crest (krest) [L. *cris'ta* a crest]. A projecting ridge, especially one which surmounts a bone or its border. **acustico-facial c.**, the embryonic structure from which develop the ganglia of the

seventh and eighth nerves. **buccinator c.**, a ridge running from the base of the coronoid process of the mandible to a point near the last molar tooth and giving attachment to the buccinator muscle. **cross c.**, a fold of enamel extending across the face of a tooth. **deltoid c.**, a rough elevation on the humerus where the deltoid muscle is attached. **dental c.**, the maxillary ridge passing along the alveolar processes of the fetal maxillary bones. **frontal c.**, a ridge in the middle line of the internal surface of the frontal bone. **gluteal c.**, the gluteal ridge. **c. of the ilium**, the thickened and expanded upper border of the ilium. **infratemporal c.**, the pterygoid ridge. **interosseous c.** See *interosseous ridge*, under *ridge*. **inter-trochanteric c.** See *intertrochanteric line*, under *line*. **lacrimal c.**, a vertical ridge on the outer surface of the lacrimal bone. **malar c.**, the anterior edge of the sphenoid bone. **nasal c.**, a crest on the internal border of the nasal bone. **neural c.**, the ridge-like dorsal part of the neural tube of the embryo, giving rise to the spinal ganglia. **obturator c.**, a ridge of bone extending from the spine of the os pubis to the anterior extremity of the condyloid notch. **occipital c.**, a vertical ridge on the external surface of the occipital bone. **orbital c.**, the lower edge of the orbital surface of the sphenoid bone. **c. of the pubes**, a crest from the spine to the inner extremity of the pubes. **sphenofrontal c.**, that edge of the malar bone which articulates with the sphenoid below and the frontal above. **sphenoid c.**, the median ridge on the anterior surface of the sphenoid bone, running down from the ethmoid spine and forming a part of the nasal plate. **sphenomaxillary c.**, a bony ridge along the edge of the sphenomaxillary fissure. **supramastoid c.**, a ridge on the temporal bone above the auditory meatus. **temporal c.**, a ridge on the temporal bone. **c. of the tibia**, the prominent ridge on the patellar side of the tibia. **trigeminal c.**, the embryonic structure from which the gasserian ganglion develops. **turbinated c.**, a horizontal ridge on the internal surface of the palate bone. **c. of the urethra**. Same as *verumontanum*.

cresyl (kres'il). An antiseptic ester, $\text{OH.C}_6\text{H}_4.\text{CO}_2\text{-C}_6\text{H}_4.\text{CH}_3$, consisting of salicylic acid and cresol.

cresylate (kres'il-at). A cresol compound in which the hydrogen of the hydroxyl is replaced by a base.

cresylone (kres'il-ōn). A proprietary preparation similar to the *liquor cresolis compositis* of the U. S. P.

creta (kre'tah) [L. for "chalk"]. Chalk. **c. præparata** (U. S. P.), prepared chalk; elutriated calcium carbonate. It is an antacid remedy; often useful in diarrhea. Dose, 5-40 gr. (0.333-2.666 gm.). **pulvis cre'tæ compositus**, compound chalk powder: chalk, 30 parts; sugar, 50 parts; and gum arabic, 20 parts. Dose, 5-60 gr. (0.333-4 gm.).

cretaform (kre'taf-orm). Oxymethylcresoltannin, a brownish-white powder: used in treatment of wounds.

cretin (kre'tin) [Fr.]. A person affected with cretinism.

cretinin (kre'tin-in). A compound found in the thyroid gland.

cretinism (kre'tin-izm). A chronic condition, congenital or developed before puberty, marked by arrested physical and mental development with dystrophy of the bones and soft parts. Cretinism is regarded as a form of myxedema and is probably due to deficient thyroid activity. It is associated with disease of the thyroid body, and is endemic in Switzerland. **fetal c.**, achondroplasia. **spontaneous c.**, **sporadic c.**, cretinism in a person not descended from cretins, and who has not lived in a region where cretinism prevails.

cretinistic (kre-tin-is'tik). Pertaining to cretinism. **cretinoid** (kre'tin-oid). Resembling a cretin; resembling cretinism.

cretinous (kre'tin-us). Affected with cretinism.

crevice, gingival (krev'is). The space between the surface of the cervical enamel of a tooth; and the overlying unattached gingiva; called also *subgingival space*.

crevicular (krev-ik'u-lar). Pertaining to a crevice, especially the gingival crevice.

crib (krib). In dentistry, a removable anchorage for orthodontic appliances.

cribbing (krib'ing). A bad habit of some horses in which the animal grasps the manger or other object with the incisor teeth, arches the neck, makes peculiar movements with the head, and swallows quantities of air. Called also *crib-biting* and *wind-sucking*.

cribral (krib'ral). Pertaining to a cribrum, or sieve-like structure.

cribrate (krib'rät) [L. *cribratus*]. Pitted with depressions like the holes in a sieve.

cribration (krib-ra'shun). 1. The quality of being cribrate. 2. The process or act of sifting or passing through a sieve.

cribriform (krib'rif-orm) [L. *cribrum* a sieve + *forma* form]. Perforated with small apertures like a sieve.

cribrum (kri'brum) [L. a "sieve"]. The lamina cribrosa.

Crichton-Browne's sign (kri'ton-brownz) [Sir James Crichton-Browne, English physician, born 1840]. See under *sign*.

crico-arytenoid (kri''ko-ar-it-e'oid). Pertaining to or extending between the cricoid and arytenoid cartilages.

cricoderma (kri-ko-der'mah) [Gr. *κρίκος* ring + *δέρμα* skin]. A disease of the skin with ring-shaped linear infiltration surrounding a similar but darker central area of infiltration.

cricoid (kri'koid) [Gr. *κρίκος* ring + *εἶδος* form]. 1. Resembling a ring; ring-shaped. 2. The cricoid cartilage. See *cartilage*.

cricoidectomy (kri-koid-ek'to-me). Excision of the cricoid cartilage.

cricoidynia (kri-koi-din'e-ah) [Gr. *κρίκος* cricoid + *δύσση* pain]. Pain in the cricoid cartilage.

cricopharyngeal (kri''ko-far-in'je-al). Pertaining to the cricoid cartilage and the pharynx.

cricothyrotomy (kri''ko-thi-re-ot'o-me) [Gr. *κρίκος* a ring + *θυρεός* shield + *τομή* a cut]. Incision through the cricoid and thyroid cartilages.

cricothyroid (kri-ko-thi'roid). Pertaining to or connecting the cricoid and thyroid cartilages.

cricotomy (kri-kot'o-me) [Gr. *κρίκος* ring + *τομή* a cut]. The surgical cutting of the thyroid cartilage.

cricotracheotomy (kri''ko-tra-ke-ot'o-me). Cricotomy and tracheotomy together; incision of the cricoid and trachea.

criminaloid (krim'in-al-oid). 1. Like a criminal. 2. A person belonging to the criminal type of physique.

criminology (krim-in-ol'o-je) [L. *crimen* crime + Gr. *λόγος* treatise]. The scientific study of crime and criminals.

crinin (krin'in) [Gr. *κρίνειν* to separate]. A substance which stimulates glandular secretion.

crinis (kri'nis), pl. *crines*. [Latin for hair]. **c. capitis**, the hair of the head. **c. pubis**, the pubic hair.

crinogenic (krin-o-jen'ik) [Gr. *κρίνειν* to secrete + *γενέω* to produce]. Stimulating secretion.

crinosin (kri'no-sin) [L. *crinis* hair]. A substance occurring in hair-like filaments, derivable from brain tissue.

Crinum (kri'num). A genus of amaryllidaceous plants; the root of *C. asiaticum*, of India, has properties like those of squill.

Cripps's obturator, operation (crips) [William Harrison Cripps, 1850-1923]. See *obturator* and *operation*.

crisis (kri'sis), pl. *crises* [L.; Gr. *κρίσις*]. 1. The turning-point of a disease for good or evil. 2. A painful paroxysm, with functional disturbance, occurring in the course of tabes dorsalis. **blood c.**, a sudden temporary appearance of great numbers of nucleated red cells (erythroblasts) in the blood. **bronchial c.**, a paroxysm of dyspnea in the course of a case of locomotor ataxia. **cardiac c.**, a severe paroxysm of palpitation of the heart occurring in tabes dorsalis. **cerebral c.**, a severe and sudden attack of hemiplegia, apoplexy, or other cerebral disorder. **clitoris c.**, an attack of sexual excitement in women in a case of tabes dorsalis. **Dietl's c.**, sudden severe attacks of nephralgic or gastric pain, chills, fever, nausea and vomiting, and general collapse: said to be due to partial turning of the kidney upon its pedicle. **febrile c.**, an attack of chilliness, fever, and sweating. **gastric c.**, a paroxysm of intense abdominal pain in a case of locomotor ataxia. **hematic c.**, a crisis in the course of a fever characterized by a sudden increase in the blood-plates. **hemoclastic c.**, a temporary leukopenia, with a relative lymphocytosis, associated with a lowered blood-pressure and changes in blood coagulability. It occurs in anaphylactic shock after a meal of albuminoids in persons whose liver function is disordered. **hepatic c.**, an attack of intense pain in the region of the liver. **intestinal c.**, a sharp attack of pain in the intestine in a case of tabes dorsalis. **laryngeal c.**, paroxysmal spasm of the larynx in the earlier course of locomotor ataxia. **Lundvall's blood-c.**, an alteration in the state of the blood from leukopenia to leukocytosis in dementia præcox. **nephralgic c.**, a paroxysm of pain in the course of the ureter in a case of tabes dorsalis. **nitritoid c.**, a group of symptoms sometimes following the injection of arsphenamin, consisting of redness of the face, dyspnea, a feeling of distress, cough, and precordial pain. The condition is named from its resemblance to the symptoms of amyl-nitrite poisoning. **ocular c.**, a sudden attack of intense pain in the eyes, with lachrimation, photophobia, etc. **pharyngeal c.**, a sudden attack occurring in tabes dorsalis marked by peculiar sensations in the pharynx and involuntary swallowing movements. **rectal c.**, a severe seizure of rectal pain in locomotor ataxia. **renal c.**, an attack of pain resembling renal colic, occurring in tabes. **tabetic c.** See *crisis*, 2d def. **thoracic c.**, an attack of pain resembling angina pectoris, but with spasmodic contracture of the muscles of the chest and arms in tabes dorsalis. **vesical c.**, a severe seizure of pain in the bladder in cases of locomotor ataxia. **visceral c.**, a paroxysm of shooting pain in any viscus occurring in a case of locomotor ataxia.

Crismer's test (kris'merz) [Leon Crismer, Belgian chemist, born 1858]. See under *tests*.

crispation (kris-pa'shun) [L. *crispare* to curl]. Slight convulsive or spasmodic muscular contractions producing a creepy sensation.

crista (kri'tah) [L. for "crest"]. A crest or ridge. **c. acustica**, a localized thickening of the membrane lining the ampullæ of the semicircular canals: it is covered with neuro-epithelium containing auditory cells. **c. ampullaris** [B N A], crista acustica. **c. anterior tibialis** [B N A], the crest of the tibia. **c. arcuata**, a ridge on the external surface of the arytenoid cartilage between the fovea triangularis and the fovea oblongata. **c. buccinato-ria** [B N A], buccinator crest. **c. concha-lis** [B N A], the inferior turbinal crest. **c. cutis** [B N A], any one of the ridges of skin on the palms and soles. **c. ethmoidalis** [B N A], the superior turbinal crest. **c. falciformis**, a ridge separating the macula cribrosa superior above from the other maculae cribrosæ below. **c. fem-oralis**. Same as *linea aspera*. **c. gal-li** [B N A], the "cock's-comb"; a ridge on the ethmoid bone to which the falx cerebri is attached. **c. hel'icis**, a projection on the helix above the external meatus

of the ear. **c. il'i, c. ili'aca** [B N A], the crest of the ilium. **c. infratempora'lis** [B N A], the pterygoid ridge. **c. interos'ea** [B N A]. See *interosseous ridge*, under *ridge*. **c. interrochanter'ica** [B N A]. See *interrochanteric line*, under *line*. **c. lacrima'lis poster'ior**, the lacrimal crest. See *crest*. **c. pu'bis**, the crest of the pubes. **c. reiss'neri**, a crista in the pelvis of the fenestra rotunda, forming the outer boundary of the recessus anterior. **c. sphenoida'lis** [B N A]. See *sphenoid crest*, under *crest*. **c. spina'rum**. Same as *c. tympanica*. **c. spira'lis**, a ridge on the spiral lamina of the cochlea. **c. supraventricula'ris** [B N A], a ridge on the inner wall of the right ventricle, marking off the conus arteriosus. **c. tog'minis tympani**, a ridge along the roof of the tympanum. **c. termina'lis** [B N A], a ridge marking the upper termination of the pectinate muscles in the right auricle. **c. transver'sa**, a ridge dividing the surface of the cribriform plate into two fossæ. **c. tuber'culi majo'ris** [B N A], the posterior bicipital ridge. **c. tuber'culi mino'ris** [B N A], the anterior bicipital ridge. **c. tympan'ica**, one of two ridges on the anterior arm of the annulus tympanicus. **c. ul'næ**, the external border of the ulna. **c. urethra'lis** [B N A], the verumontanum. **c. vestib'uli**, a ridge on the floor of the vestibule between the vestibular aqueduct and fossa hemispherica.

crystal (kris'tal) [L. *cris'ta* crest]. Pertaining to a crest or ridge.

Cristispira (kris-tis-pi'rah). A genus of spiral organisms (Spirochaetes) which are characterized by the presence of a membranous structure which runs spirally along the body. They infest the great crystal styles of certain mollusks.

Critchett's operation (krit'shets) [George Critchett, oculist in London, 1817-1882]. See *operation*.

crith (krith) [Gr. *κριθή* barleycorn]. The unit of weight for gases, being the weight in a vacuum of a liter of hydrogen gas at 0° C.

Crithidia (krith-id'e-ah). 1. A genus of protozoan organisms resembling trypanosoma; found as parasites in the intestines of certain insects. 2. One of the developmental forms assumed by a trypanosome during its life in its insect host.

critical (krit'ik-al). Of the nature of a crisis.

CrO₃. Chromic anhydride.

crocated (kro'ka-ted) [L. *croca'tus*]. Tinctured with or containing saffron.

crocein (kro'se-in). Any one of a series of bright-red stains.

crocidism (kro-sid-iz'mus) [Gr. *κροκή* a tuft of wool]. Carphology.

crocin (kro'kin). A derivative of *Crocus sativus*, C₁₀H₁₅O₆.

crocose (kro'kôs). A white, crystalline sugar, C₆H₁₂O₆, formed by the decomposition of crocin.

Crocq's serum (kroks) [Jean Crocq, a Belgian physician, 1868-1925]. See under *serum*.

Crocus (kro'kus) [L.; Gr. *κρόκος*]. 1. A genus of irideaceous plants. 2. The dried stigmas of *Crocus sativus*, or tree saffron; stimulant and emmenagogue. Dose, 10-30 gr. (0.666-2 gm.); of tincture, 1-2 dr. (4-8 c.c.).

crooked foot. See under *foot*.

Crookes's space, tube [Sir William Crookes, English physicist, 1832-1919]. See under *space* and *tube*.

cross. Any figure or structure in the shape of a cross. **Ranvier's c's**, dark, cross-shaped markings at the nodes of Ranvier, seen on longitudinal section after staining with silver nitrate. **silver c.**, a cross-like marking seen at the nodes of certain bundles of medullated nerve-fibers.

cross-birth (kros'berth). Any abnormal presentation requiring a version.

cross-fire (kros'fir). Application of radiation-treatment from different points on the exterior, but with the rays directed toward the same internal point, so that the rays cross one another.

crossed (krost). Shaped or arranged like a cross: decussating.

crossing-over. An interchange of factors or genes between the chromosomes.

crossway, sensory (kros'wä). The posterior part of the internal capsule of the brain.

Crotalaria (krot-al-a're-ah) [L., from Gr. *κρόταλον* a rattle]. An extensive genus of leguminous plants, of which many are poisonous.

crotalic (kro-tal'ik). Pertaining to the genus *Crotalus*, or to the poison of snakes of that genus.

crotalin (kro'tal-in). A protein found in the venom of rattlesnakes and certain other serpents. It has been used hypodermically in the treatment of epilepsy.

crotalism (kro'tal-izm). A disease of horses caused by eating rattlesbox, *Crotalaria sagitta'lis*. Called also *bottom disease*.

crotalotoxin (kro-tal-o-toks'in). A poisonous substance from rattlesnake venom.

Crotalus (kro'tal-us) [L., from Gr. *κρόταλον* rattle]. A genus of rattlesnakes; also a homeopathic preparation of the virus of the rattlesnake.

crotaphion (kro-ta'fe-on) [Gr. *κρόταφος* the temple]. A craniometric point at the tip of the great wing of the sphenoid.

crotch (krot'chet) [Fr. *crochet*]. A hook used in delivering the fetus after craniotomy.

crotin (kro'tin). A mixture of crotonallin and crotonglobulin. It resembles a bacterial toxin in that an antibody results when it is injected into an animal.

Croton (kro'ton) [L.; Gr. *κρότων* tick]. A large genus of euphorbiaceous trees, shrubs, and herbs, many of them poisonous and medicinal. See *Cascarilla*. **C. tig'lium** furnishes castor-oil bean. **c.-cho'ral**. See *bulychloral*. **c. oil** [L. *oleum tig'lii*], the fixed oil of the seeds of *Croton tig'lium*, an Asiatic plant; a drastic purgative; externally, a vesicant. Dose, ½-2 min. (0.033-0.132 c.c.).

cortonallin (kro-ton-al'in). A toxic albuminoid from the seeds of *Croton tig'lium*.

crotonarin (kro-ton-a'rin). A solid part from croton oil.

crotonglobulin (kro-ton-glob'u-lin). A toxic albuminoid from the seeds of *Croton tig'lium*.

crotonism (kro'ton-izm). Poisoning by croton oil.

crotonol (kro'ton-ol). Crotonolic acid; a vesicant, toxic, oily principle, C₉H₁₄O₂, from croton oil; purgative. Drastic dose, 1½-2½ dr. (5-10 gm.), in a keratin-coated pill.

crounotherapy (kru-no-ther'ap-e) [Gr. *κρουνός* spring + *θεραπεία* treatment]. Treatment of disease by mineral waters.

croup (kroop). A disease characterized by laborious and suffocative breathing, laryngeal spasm, and sometimes with a local membranous deposit.

catarrhal c., a croupous affection with paroxysms of dyspnea and a ringing, metallic cough.

diphtheric c., diphtheria of the larynx.

false c., spasmodic c. Same as *laryngismus stridulus*.

fibrinous c., true croup. **membranous c.**, laryngitis with formation of a pseudo-membrane. It may be diphtheric (*laryngeal diphtheria*) or a simple plastic inflammation. Called also *pseudomembranous c.* and *true c.*

uterine c., croupous inflammation of the lining of the uterus.

croupous (kroo'pus). Of the nature of croup, or attended with an exudation like that of croup.

croupy (kroop'e). Affected with or resembling croup.

crown (krown) [L. *coro'na*]. 1. Same as *corona*. 2. The portion of a tooth which projects from the tissues in which the root is fixed and which is cov-

ered with enamel. **Alexander's c.**, a tooth cap of metal employed as a pier for a bridge. **artificial c.**, a crown of metal or of porcelain to be fitted upon the root of a natural tooth. **bell c.**, a bell-shaped tooth crown having its broad end at the occlusal surface. **Bischoff's c.**, the inner layer formed from the duplication of the epithelial capsule of the ovum. **Bonwill c.**, an artificial tooth crown fastened to a root by a metal pin and nut. **cap c.**, an artificial tooth crown fitted like a cap over the remains of a natural root. **collar c.**, an artificial crown attached by a metal ferrule to a natural root. Called also *Richmond c.* **Davis c.**, an artificial tooth crown attached by a pin which is inserted into both the crown and the natural root. **half-cap c.**, an artificial tooth crown attached by a metal band which covers only the lingual surface of the tooth which supports it. **jacket c.**, an artificial crown slipped over the remains of a natural tooth. **Morrison c.**, a cap crown of gold made in two pieces, a band and a swaged occluded surface. **openface c.** Same as *half-cap c.* **pivot c.**, an artificial crown to a natural root by a post filled into the root canal. **Richmond c.** See *collar c.* **shell c.** See *cap c.* **window c.**, a cap crown which has no outer surface.

crownwork (krown'wurk). The application of artificial crowns to teeth; also a piece of such work.

crucial (kru'shal) [L. *crucia'lis*]. 1. Shaped like a cross. 2. Severe, searching, and decisive.

crucible (kru'sib-l) [L. *crucib'ulum*]. A vessel for melting refractory substances.

cruciform (kru'sif-orm) [L. *crux* cross + *for'ma* form]. Shaped like a cross.

crude (krüd) [L. *crü'dus* raw]. Raw or unrefined.

cruentation (kroo-en-ta'shun) [L. *crü'or*, blood]. In medieval jurisprudence, the supposed bleeding of the corpse in the presence of the murderer.

cruor (kru'or), pl. *crü'ores* [L.]. A blood-clot that contains red corpuscles.

crupper (krup'er). The rump of a horse, or the part behind the saddle.

crura (kru'rah) [L.]. The plural of *crus*. **c. cerebelli**, the peduncles of the cerebellum. **c. cer'ebri**, a pair of bands which connect the pons and oblongata with the cerebrum. **c. of the diaphragm**, the two pillars which connect the diaphragm to the spinal column. **c. of the fornix**, the arches formed by the division of the extremities of the fornix. **c. of the penis**, the backward extensions of the corpora cavernosa of the penis.

cruræus (kru-re'us). See *muscles*, table of.

crural (kru'ral). 1. Pertaining to the leg or thigh. 2. Pertaining to the crus cerebri.

crurin (kru'rin). A yellowish, pungent, insoluble powder, quinolin-bismuth sulphocyanate, (C₈H₇-N.HSCN)₃Bi(SCN)₃. It is astringent and antiseptic and is used in treating ulcers of the leg and in gonorrhea.

crus (krus), pl. *crü'ra* (q. v.) [L.]. The leg or any part resembling a leg; a stalk or peduncle, especially a compact mass of fibers connecting parts of the brain. **c. clitor'idis** [B N A], the continuation on each side of the corpus cavernosum of the clitoris, diverging posteriorly to be attached to the pubic arch. **c. for'nicis** [B N A]. See *crura of the fornix*. **c. olfacto'ria**, the peduncle of the olfactory bulb.

crusocreatinin (kru'so-kre-at'in-in). See *chryso-kreatinin*.

crust (krust) [L. *crus'ta*]. Any outer layer; especially an outer layer of solid matter formed by the drying of a bodily exudate or secretion. **buffy c.** See *crusta phlogistica*. **bullock's-liver c.**, the reddish-brown crust of a scorbutic ulcer. **limpet-shell c.**, the form of crust seen upon the sore of syphilitic rupia. **milk-c.** Same as *crusta lactea*.

crusta (krus'tah) [L. "a crust"]. 1. Crust. 2. Same as *basis pedunculi*. **c. lac'tea**, seborrhea of the scalp of nursing infants. **c. petro'sa**, the cement of a tooth. **c. phlogis'tica**, the buffy coat or light colored layer on the surface of a blood-clot when coagulation is completed; the extent of the buffy coat depends on the speed of coagulation, the rate at which the corpuscles settle, and the amount of fibrin present.

Crustacea (krus-ta'she-ah) [L., from *crus'ta* shell]. A large class of animals, including the lobsters, crabs, shrimps, wood-lice, water-fleas, barnacles, etc.

crustal (krus'tal). Pertaining to the crusta.

crutch (krutch). A staff long enough to reach from the arm-pit to the ground, used for supporting the weight of the body. **c.-paralysis**, paralysis, chiefly of the musculospiral nerve, from pressure of crutch in armpit.

Cruveilhier's atrophy, disease, etc. (kroo-va-yāz') [Jean *Cruveilhier*, French pathologist, 1791-1874]. See *atrophy, disease*, etc.

Cruz trypanosomiasis (kruz) [Oswaldo *Cruz*, Brazilian physician, 1871-1917]. Chagas' disease.

cry (kri). A sudden loud vocal sound. **articular c.** Same as *joint c.* **Douglas c.**, a sharp, prolonged cry uttered by a patient when, during laparotomy, the culdesac of Douglas is wiped.

epileptic c., a loud scream which often occurs at the onset of an epileptic attack. **hydrocephalic c.**, a loud involuntary cry uttered by patients with acute tuberculous meningitis. **joint c.** Same as *night c.* **night c.**, a shrill cry uttered by a child in sleep, often heard in beginning joint disease.

cryalgæsia (kri-al-je'ze-ah) [Gr. *κρύος* cold + *ἄλγος* pain]. Pain due to the application of cold.

cryanesthesia (kri-an-es-the'ze-ah) [Gr. *κρύος* cold + *ἄνesthesia*]. Loss of the power of perceiving cold.

cryesthesia (kri-es-the'ze-ah) [Gr. *κρύος* cold + *αἰσθησις* perception]. Abnormal sensitiveness to cold.

cryodynîa (kri-mo-din'e-ah) [Gr. *κρυμός* frost + *ὀδύνη* pain]. Rheumatic pain coming on in cold or damp weather.

crymotherapeutics (kri'mo-ther-ap-u'tiks). Same as *cryotherapy*.

cryotherapy (kri-mo-ther'ap-e) [Gr. *κρυμός* frost + *θεραπεία*]. The therapeutic use of cold.

cryocautery (kri-o-kaw'ter-e) [Gr. *κρύος* cold + *καυτήρ*]. See *cold cautery*, under *cautery*.

cryofin (kri'o-fin). A white, crystalline compound, odorless and tasteless, formed by the action of methylglycolic acid on parphenetidin. Used as an analgesic and antiseptic, especially in sciatica. Dose, 5-10 gr. (0.33-0.66 gm.).

cryogen (kri'o-jen) [Gr. *κρύος* cold + *γεννάν* to produce]. A substance for producing low temperatures; a freezing mixture.

cryogenic (kri-o-jen'ik). Pertaining to the production of low temperatures; producing low temperatures.

cryogenin (kri-oj'en-in) [Gr. *κρύος* cold + *γεννάν* to produce]. Phenylsemicarbazid, C₆H₅.NH.NH.CO.NH₂, a white crystalline powder: antipyretic and analgesic. It is used as an analgesic (15-45 gr. a day) in rheumatism, gout, headache, and other painful conditions, and as an antipyretic (5-30 gr. a day) in tuberculosis, typhoid fever, and influenza. Dose, 5-15 gr. (0.33-1 gm.) daily.

cryohydrate (kri-o-hi'drät) [Gr. *κρύος* cold + *hydratē*]. A eutectic mixture (q. v.), especially one having water as one of its constituents.

cryometer (kri-om'et-er) [Gr. *κρύος* cold + *μέτρον* measure]. A thermometer for measuring very low temperatures.

cryoscope (kri'o-skôp). An apparatus for performing cryoscopy.

cryoscopic (kri-o-skop'ik). Pertaining to cryoscopy.

cryoscopy (kri-os'ko-pe) [Gr. κρύος cold + σκοπεῖν to examine]. Examination of liquids, based on the principle that the freezing-point of solutions varies according to the amount and the nature of the substance contained in them in solution.

cryostase (kri-os-tās) [Gr. κρύος cold]. An antiseptic mixture of camphor, phenol, and saponin, with a little oil of turpentine: heat solidifies and cold melts it.

cryotherapy (kri-o-ther'ap-e) [Gr. κρύος cold + θεραπεία]. The therapeutic use of cold.

crypt (kript) [L. *crypta*, from Gr. κρυπτός hidden]. A follicle or pit. **dental c.**, the space occupied by a developing tooth. **enamel c.**, a space bounded by the dental ledges on either side and usually by the enamel organ. It is filled with mesenchyma. **c's of Lieberkühn**, simple tubular glands opening on the surface of the intestinal mucous membrane. **c's of Morgagni**, small recesses or pockets in the mucous surface of the rectum. **synovial c.**, a pouch in the synovial membrane of a joint.

cryptæsthesia. See *cryptesthesia*.

cryptanmnnesia (kript'an-am-ne'se-ah). Crypt-omnesia.

cryptesthesia (krip-tes-the'ze-ah) [Gr. κρυπτός hidden + αἴσθησις perception]. Subconscious appreciation or perception of occurrences not ordinarily perceptible to the senses.

cryptic (krip'tik) [Gr. κρυπτικός hidden]. Concealed, hidden, larval.

cryptitis (krip-ti'tis). Inflammation of a crypt.

cryptocephalus (krip-to-sef'al-us) [Gr. κρυπτός hidden + κεφαλή head]. A monster with an inconspicuous head.

cryptococco'sis epider'mica. A skin disease of the tropics caused by the fungus *Cryptococcus epidermidis* and marked by the presence on the arms, neck, or chest of small roundish patches of a dirty yellow or brown color.

Cryptococcus (krip-to-kok'us). A genus of parasitic molds. **C. degen'erans** has been found in ulcers. **C. epider'midis**, the fungus causing human cryptococcosis. **C. farcimino'sus**. Same as *Blastomyces farciminosus*. **C. Gilchristi**, the organism which causes blastomycosis or blastomycetic dermatitis. **C. hom'inis** has been found in abscesses. **C. lin'guæ pilo'sæ**, an yeast-like organism found in cases of black tongue. **C. xanthogen'icus**, a small spheric anilinophil coccus, swiftly motile, derived from a yellow-fever cadaver: pathogenic to animals.

cryptocrystalline (krip-to-kris'tal-in) [Gr. κρυπτός concealed + crystalline]. Composed of crystals of microscopic size.

Cryptocystis trichodec'tis. The cysticeroid larval form of *Dipylidium caninum*.

cryptodidymus (krip-to-did'im-us) [Gr. κρυπτός concealed + δίδυμος twin]. A teratim in which one twin is concealed within another.

cryptogam (krip'to-gam) [Gr. κρυπτός concealed + γάμος marriage]. Any one of the lower plants that have no true flowers, but propagate by spores.

cryptogenetic, cryptogenic (krip'to-jen-et'ik, krip-to-jen'ik) [Gr. κρυπτός hidden + γεννᾶν to produce]. Of obscure, doubtful, or unascertainable origin.

cryptoglioma (krip'to-gli-o'mah) [Gr. κρυπτός hidden + glioma]. One of the stages in the development of glioma of the retina, marked by shrinking of the eyeball due to cyclitis, which masks the presence of the growth.

cryptolith (krip'to-lith) [Gr. κρυπτή crypt + λίθος stone]. A calculus or concretion in a crypt.

cryptolithiasis (krip-to-lith-i'as-is) [see *cryptolith*]. Calcification of tumors of the skin.

Cryptolucil'ia cæsa'ron. A bright green fly which breeds in cow manure.

cryptomenorrhea (krip'to-men-o-re'ah) [Gr. κρυπτός hidden + menor'hea]. A condition in which the monthly molimina are experienced but no external manifestations occur.

cryptomerorachischisis (krip'to-me'ro-rak-is'-kis-is) [Gr. κρυπτός hidden + μέρος part + ράχis spine + σχίσis cleavage]. Spina bifida occulta.

cryptomnesia (krip-tom-ne'ze-ah) [Gr. κρυπτός hidden + μνήσις memory]. Subconscious memory.

cryptoneurous (krip-to-nu'r-us) [Gr. κρυπτός hidden + νεύρον nerve]. Having no definite or distinct nervous system.

cryptophthalmus (krip-to-thal'mus) [Gr. κρυπτός hidden + ὀφθαλμός eye]. Complete congenital adhesion of the eyelids.

cryptopin (krip'to-pin) [Gr. κρυπτός hidden + ὀπιον opium]. A hypnotic, anodyne, and poisonous alkaloid, $C_{21}H_{23}NO_5$, from opium. Dose, $\frac{1}{8}$ gr. (0.008 gm.).

cryptoplasmic (krip-to-plas'mik). Occurring in a concealed form: said of an infection in which the infecting organism has concealed itself.

cryptopodia (krip-to-po-de-ah) [Gr. κρυπτός hidden + ποῖς foot]. A condition characterized by swelling of the lower part of the leg and dorsum of the foot so as to cover all but the soles of the feet.

cryptopyic (krip-to-pi'ik) [Gr. κρυπτός concealed + πύον pus]. Attended by concealed suppuration.

cryptoradiometer (krip'to-ra-de-om-et'er) [Gr. κρυπτός concealed + L. radius, ray + Gr. μέτρον measure]. An apparatus for measuring the penetrative power of x-rays.

cryptorchid, cryptorchis (krip-tor'kid, krip-tor'-kis) [Gr. κρυπτός hidden + ὄρχis testis]. A person whose testicles have not descended into the scrotum.

cryptorchidectomy (krip'tor-kid-ek'to-me) [*cryptorchid* + Gr. ἐκτομή excision]. Excision of an undescended testicle.

cryptorchidism, cryptorchism (krip-tor'kid-izm, krip-tor'kizm). Concealment of the testes within the abdomen.

cryptorchidy (krip-tor'kid-e). Same as *cryptorchidism*.

cryptorhetic (krip-to-re'ik). Cryptorhetic.

cryptorhetic (krip-to-ret'ik) [Gr. κρυπτός hidden + ῥοῖα flow]. Pertaining to the internal secretions.

cryptorrhea (krip-to-re'ah). Abnormal activity of an endocrine organ.

cryptoscope (krip'to-skōp) [Gr. κρυπτός hidden + σκοπεῖν to view]. A fluoroscope.

cryptoscopy (krip-tos'ko-pe). Fluoroscopy.

cryptotoxic (krip-to-toks'ik) [Gr. κρυπτός hidden + τοξικ]. Having hidden toxic properties: said of a solution normally non-toxic, but which may become toxic when the colloidal balance is disturbed.

Crys. Abbreviation for *crystal*.

crystal (kris'tal) [Gr. κρύσταλλος ice]. A naturally produced angular solid of definite form in which the ultimate units from which it is built up are systematically arranged; they are usually regularly spaced on a regular space lattice. **asthma-c's**, Charcot-Leyden crystals. **blood-c's**, hematoidin crystals in the blood. **Böttcher's c's**, microscopic crystals seen on adding a drop of solution of ammonium phosphate to a drop of prostatic fluid. **Charcot-Leyden c's**, minute crystals in the sputum of asthma and bronchitis. **Charcot-Neumann c's**, minute crystals of spermin phosphate found in semen and various animal tissues. **Charcot-Robin c's**, minute crystals occurring in the blood of leukemic patients. **coffin-lid c's**, peculiar indented crystals of ammoniomagnesium phosphate from alkaline urine. Called also *knife-rest c's*. **dumb-bell c's**, crystals of calcium oxalate occurring in the urine. **ear-c**. Same as *otolith*. **Florence c's**, crystals formed by the action of iodine on any liquid containing lecithin, as

in semen. **hedgehog c's**, a spiny form of uric acid concretions. **knife-rest c's**, peculiar notched crystals of triple phosphate in the urine. **leukocytic c's**. Same as *Charcot-Leyden c's*. **Lubarsch's c's**, crystals in the testis resembling sperm crystals. **Platner's c's**, crystals of the salts of the bile acids. **rock c.**, a transparent form of quartz, silicon dioxide, SiO_2 ; used for lenses. **sperm c's**, **spermin c's**, crystals of spermin phosphate in the semen. **Teichmann's c's**, crystals of hemin. **c. violet**. See under *violet*. **Virchow's c's**, yellow or orange-colored crystals of hematoïdin sometimes seen in extravasated blood. **whetstone c's**, crystals of xanthin sometimes seen in urine. **Zenker's c's.**, *Charcot-Leyden crystals*.

crystalbumin (kris-tal-bu'min). An albuminous substance found in an aqueous extract of the crystalline lens.

crystalbrin (kris'tal-fi'brin). A substance extracted from the crystalline lens by the action of hydrochloric acid.

crystalli (kris-tal'e). Chickenpox.

crystallin (kris-tal'in). 1. A protein belonging to the class of vitellins and existing in the crystalline lens of the eye. *Alpha c.* is precipitated by dilute acetic acid; *beta c.* is not. 2. A solution of pyroxylin in wood alcohol and amyl acetate: used like collodion. 3. *Soziodol*.

crystalline (kris'tal-in). Resembling a crystal in nature or clearness. **c. humor**, **c. lens**, the lens of the eye. See *lens*.

crystallitis (kris-tal-i'tis). Inflammation of the crystalline lens; phakitis.

crystallization (kris'tal-iz-a'shun). The formation of crystals.

crystalloid (kris'tal-oid) [Gr. *κρύσταλλος* crystal + *εἶδος* form]. 1. Resembling a crystal. 2. A non-colloid substance; a substance which, in solution, passes readily through animal membranes, lowers the freezing-point of the solvent containing it, and is generally capable of being crystallized. Cf. *colloid*.

crystalloïditis (kris-tal-oi-di'tis). Inflammation of the crystalline lens; phakitis.

crystallophobia (kris'tal-o-fō-be-ah) [*crystal* + Gr. *φόβος* fear]. Insane dread of glass objects.

crystallose (kris'tal-ōs). A soluble crystalline salt of sodium and saccharin, four hundred times as sweet as sugar. It is used in diabetes, corpulence, fermentative dyspepsia, etc.

crystalluridrosis (kris'tal-u-rid-rō'sis) [Gr. *κρύσταλλος* crystal + *οὐρον* urine + *ἰδρῶς* sweat]. A condition in which urinary elements from the sweat crystallize on the skin.

CS₂. Carbon bisulphid.

C. S. Abbreviation for *current strength*.

Cs. The symbol for *cesium*.

C. S. M. Abbreviation for *cerebrospinal meningitis*.

ctenophyte (ti'no-fit) [Gr. *κτείνειν* to kill + *φυτόν* plant]. A parasitic fungus which has a destructive action upon its host.

Ctenocephalus (te-no-sef'al-us). A genus of fleas which includes the dog flea, *C. canis*, and the cat flea, *C. felis*. They may be the intermediate hosts for tapeworms and filaria.

Ctenopsylla (te-no-sil'ah). A genus of fleas found on rats and mice.

Ctesias (te-se-as). A Greek physician and historian who was a contemporary of Xenophon, flourishing about 400 B. C.

ctetology (te-to'l-o-je) [Gr. *κτητός* that may be acquired + *λόγος* treatise]. That branch of biology which treats of acquired characters.

ctetosome (tet'o-sōm) [Gr. *κτητός* acquired + *σώμη*]. A supernumerary chromosome; a heterochromosome.

Cu. The symbol for *copper* (*cuprum*).

Cuba itch. See under *itch*.

cubeb (ku'beb) [L. *cube'ba*; Arabic *kabā'ba*]. The dried unripe fruit of *Piper cube'ba*, a piperaceous plant of Java. It is a stimulant diuretic, and is used in gonorrhea, leukorrhea, urethritis, etc. Dose in powder, 10-60 gr. (0.666-4 gm.); of fluid-extract, 5-30 min. (0.333-2 c.c.); of oleoresin, 5-20 min. (0.333-1.333 c.c.); of volatile oil, 5-20 min. (0.333-1.333 c.c.); of tincture, 1-2 fl.dr. (♂ 3 c.c.). **c. camphor**, a crystalline deposit from oil of cubebs, $\text{C}_{15}\text{H}_{26}\text{O}$.

cubebene (ku'beb-ēn). An eleopten from oil of cubebs, $\text{C}_{15}\text{H}_{24}$.

cubebic acid (ku-be'bik). See *acid*.

cubebin (ku-be'bin). An inactive crystalline principle, $\text{C}_{10}\text{H}_{10}\text{O}_3$, from cubeb.

cubebism (ku'beb-izm). Poisoning by cubebs.

cubicle (ku'bic-el). One of the compartments in a dormitory or a ward separated from adjoining compartments and from the rest of the room by low partitions.

cubilose (ku'bil-ōs) [L. *cubi'le* nest]. A mucilaginous and nutritious principle from the edible nest of the swiftlet, *Collocalia esculen'ta*, of southern Asia. It is an excretion from the stomach of the bird.

cubital (ku'bit-al). Pertaining to the ulna or to the forearm.

cubitale (ku-bit-a'le). The cuneiform bone.

cubitalis (ku-bit-a'lis) [L.]. One of the ulnar muscles. **c. ante'rior**, **c. inter'nus**, the flexor carpi ulnaris. See under *muscles*, *table of*. **c. gra'cilis**, the palmaris longus. See *muscles*, *table of*. **c. poste'rior**, **c. exter'nus**, the extensor carpi ulnaris. See *muscles*, *table of*. **Riola'ni**, the anconeus. See *muscles*, *table of*.

cubitocarpal (ku'bit-o-kar'pal). Pertaining to the radius and the carpus

cubitoradial (ku'bit-o-ra'de-al). Pertaining to the radius and the ulna.

cubitus (ku'bit-us) [L. "elbow"]. The forearm. **c. val'gus**, deformity of the forearm in which it deviates inwardly when extended. **c. va'rūs**. See *deformity*, *gunstock*.

cuboid, **cuboidal** (ku'boid, ku-boid'al) [Gr. *κυβοειδής*]. 1. Resembling a cube. 2. The cuboid bone: on the outer side of the tarsus, between the calcaneum and the fourth and fifth metatarsals.

cuboides (ku-boi'déz). The cuboid bone.

cucullaris (ku-ku-la'ris). The trapezius muscle.

cucumber (ku'kum-ber) [L. *cu'cumis*]. The fruit of various species of *Cu'cumis*, chiefly *C. sativus*. The seeds are diuretic.

cucurbitol (ku-ker'bit-ol). A sterol, $\text{C}_{24}\text{H}_{46}\text{O}_4$, obtained from watermelon seeds.

cucurbitula (ku-kur-bit'u-lah) [L.]. A cupping-glass. **c. cruen'ta**, a wet cup, or one applied to draw blood. **c. sic'ca**, a dry cup: one which does not draw blood.

cudbear (kud'bār). A red-brown powder, obtained from lichens, such as *Lecano'ra tart'rea*: used as a coloring-matter in pharmacy. Called also *persio*.

Cuguière's serum (ke-ge-yāz') [E. *Cuguière*, contemporary French physician]. See under *serum*.

cuichunchuli (kwe-chun-choo'ye) [Spanish American]. A violaceous plant, *Ionid'ium parviflorum*, of South America: emetic, cathartic, and diuretic; not very different from ipecac in its effects.

Cuignet's method (ke-ēn-yāz') [Ferdinand Louis Joseph *Cuignet*, French ophthalmologist, born 1823]. Retinoscopy.

cuirass, **tabetic** (kwe'ras). An area of diminished sense of touch encircling the chest of patients with *tabes dorsalis*.

Cuj., cuj. Abbreviation for *L. cu'jus*, of which.

culdesac (kul'deh-sahk') [Fr.]. A blind pouch or cecum; a cavity closed at one end. **conjunctival c.**, the fold formed by the junction of the palpebral and ocular conjunctive. **Douglas's c.**, a pouch between the anterior wall of the rectum and the uterus. **dural c.**, the caudal portion of the dural sac.

Culex (ku'leks) [L. "gnat"]. The common American mosquito. A genus characterized by short palpi and by holding the body parallel to the surface on which it rests while the head and beak are bent at an angle to the body. **C. fatigans**, the tropical house mosquito. The species which transmits filariasis and probably dengue. **C. fasciatus**. See *Stegomyia calopus*. **C. pi'piens** is the gnat, and is thought to be the distributor of dengue. **C. quinquefasciatus**. See *Culex fatigans*. **C. ter'ritans**, a common form in the northwestern United States which does not annoy man.

culicicide (ku-lis'is-id). Same as *culicide*.

Culicidae (ku-lis'id-e). A family of insects of the order Diptera, including the mosquitos. There are ten subfamilies, of which three are of medical interest: Anopheline, Culicinae, and Edinae.

culicidal (ku-lis-i'dal). Destructive to the culex.

culicide (ku'lis-id) [L. *cu'lex* gnat + *ca'dere* to kill]. An agent destructive to gnats and mosquitos. **Minn's c.**, phenol camphor volatilized by heat and allowed to diffuse through a room.

culicifuge (ku-lis'if-ū) [L. *cu'lex* gnat + *fu'ga* banishment]. A preparation intended to prevent the attacks of gnats and mosquitos.

Culicinae (ku-lis'in-e). A subfamily of the Culicidae, containing two genera, *Culex* and *Stegomyia*.

Cullen's sign (kul'enz) [Thomas S. Cullen, Baltimore surgeon, born 1868]. See under *sign*.

culmen (kul'men), pl. *cul'mina* [L. "ridge"] [B N A]. The anterior superior part of the monticulus: a lobe of the cerebellum made up of the portion of the vermiciform process between the anterior crescentic lobes. Called also *culmen monticuli*.

cultivation (kul-tiv-a'shun) [L. *cultiva'tio*]. The artificial propagation of microorganisms. **fractional c.**, cultivation in which a small portion of a culture containing several species of bacteria is used to form a new culture, and a small portion of this culture to form another, and so on until practically a pure culture is obtained.

cultural (kul'tu-ral). Pertaining to a culture.

culture (kul'tür) [L. *cultu'ra*]. 1. The propagation of microorganisms. 2. A growth of microorganisms. **agar c.**, a growth of microorganisms on some form of agar culture-medium. **attenuated c.**, a culture of microorganisms that have been made less virulent by some process or that have become less virulent by natural processes. **B. B. c.**, a culture of *Lactobacillus bulgaricus*. **bouillon c.**, a growth of microorganisms in some form of bouillon culture-medium. **direct c.**, a bacterial culture made by direct transfer from a natural source to an artificial medium. **drop-c.**, one in which a drop of some material containing bacteria is placed. **flask c.**, a culture made on a medium hardened on one side of a flat flask. **gelatin c.**, a growth of microorganisms on some form of gelatin culture-medium. **hanging-block c.**, a culture in which the inoculation is made on a block of agar medium fastened to a cover-glass, which is then inverted over a hollowed slide. **hanging-drop c.**, a culture in which the organisms are inoculated into a drop of fluid attached to a cover-glass and which is inverted over a hollowed slide. **liquid c.**, a culture made in a liquid medium. **c. medium**. See *culture-medium*. **nail-c.**, a culture in which the growth resembles in shape a nail driven into the medium. **needle-c.**, a stab-culture. **negative c.**, a culture made from suspected matter which is not followed by bacterial

growth. **plate-c.**, a bacterial culture, usually of agar or gelatin, spread upon a flat surface, usually of glass. **puncture c.**, a stab- or needle-culture. **pure c.**, a culture of a single bacterial species. **race c.**, eugenics. **roll c.**, a culture

Types of growth in stab cultures. A, Non-liquefying: 1, Filiform (*B. coli*); 2, beaded (*Str. pyogenes*); 3, echinate (*Bact. acidilactici*); 4, villous (*Bact. murisepicum*); 5, arborescent (*B. mycoides*). B, Liquefying: 6, Crateriform (*B. vulgare*, 24 hours); 7, napiform (*B. subtilis*, 48 hours); 8, infundibuliform (*B. prodigiosus*); 9, saccate (*Msp. Finkleri*); 10, stratiform (*Ps. fluorescens*). (Frost.)

made by placing the medium in a test-tube, rapidly revolving it, and cooling on ice. **sensitized c.**, a bacterial culture to which has been added its specific antiserum. See *sensitized vaccine*, under *vaccine*. **shake c.**, a culture made by inoculating the medium and distributing the organism through it by shaking. **slant c.**, one made on a slanting surface. **slide-c.**, a bacterial culture made on a microscopic slide. **smear-c.**, a bacteriologic culture made by smearing the inoculating material on the surface of the medium. **solid c.**, one in which a solid medium is employed. **stab-c.**, one in which the medium is inoculated by means of a needle thrust deeply into its substance. **stick c.** Same as *stab-c.* **stock c.**, a permanent culture from which transfers may be made. **streak-c.**, **stroke c.**, a culture in which the medium is inoculated by drawing an infected wire over it. **thrust c.** Same as *stab-c.* **tissue c.**, the cultivation of tissue cells in vitro. **trouser-leg c.**, a culture which forms an area in the culture-medium resembling a trouser-leg or stocking-leg. **tube-c.**, one made in a test-tube.

culture-dish (kul'tür-dish). A shallow glass dish for making bacterial cultures.

culture-flask (kul'tür-flask). A flask for growing bacterial cultures.

culture-medium (kul'tür-mé'di-um). Any substance or preparation suitable for, prepared for, and used for the cultivation of microorganisms. **Abe's c.** (for gonococci), mix 500 gm. of fat-free meat, finely hashed, with 1000 c.c. of water. Allow to stand in ice-chest for from eighteen to twenty-four hours, filter through paper and a Chamberland filter into sterile containers. For use it is mixed with fluid or solid peptone culture-medium in the proportion of 1 to 5. **æsculin c.** See *æsculin agar*. **agar c.**, one of the various forms of culture-media in which agar-agar is used as the solidifying agent. See under *agar* and also *agar gelatin*, under *gelatin*. **animal tissue c.**, a bacteriologic culture-medium consisting of pieces of tissue or of organs of a rabbit or other animal supported in test-tubes by means of glass rods in such a way that they are in contact with, but not submerged in a 6 per cent. solution of glycerol. **Aronson's c.**, an alkaline medium for the isolation of the cholera spirillum. It consists of agar-agar 35 gm., meat extract and peptone each 10 gm., sodium chlorid 5 gm., sodium

carbonate (10 per cent. solution) 60 c.c., cane-sugar (20 per cent. solution) 50 c.c., dextrin (20 per cent. solution) 50 c.c., basic fuchsin (saturated solution) 4 c.c., sodium sulphite (10 per cent. solution) 20 c.c., and water 1000 c.c. **artificial sea-water c.** See under *water*. **ascitic fluid c.** See *ascitic fluid agar* and *ascitic fluid bouillon*. **Ashby's c.** See *Ashby's agar*. **asparagin c.** (Fraenkel and Voges), a synthetic medium containing asparagin 4 gm., disodium acid phosphate 2 gm., ammonium lactate 6 gm., and sodium chlorid 5 gm., in water 1000 c.c. **asparagin c.** (Uschinsky), a synthetic medium containing asparagin 3.4 gm., ammonium lactate 10 gm., sodium chlorid 5 gm., magnesium sulphate 0.2 gm., calcium chlorid 0.1 gm., monopotassium acid phosphate 1 gm. and glycerol 40 c.c. in water 1000 c.c. **Avery's sodium oleate c.** See *sodium oleate agar*. **Bariekow's c.**, to a 1 per cent. solution of nutrose add $\frac{1}{2}$ per cent. of sodium chlorid, 1 per cent. of lactose, and sufficient litmus to color it a pale blue. **beer-wort c.**, 1 part of crushed malt macerated in 3 parts of water, then filtered and sterilized. **Beyrnick's c.**, Beyrnick's solution. **bile c.**, a mixture of ox bile 900 c.c., glycerol 100 c.c., and peptone 20 gm. It is used in obtaining blood-cultures of *Bacillus typhosum*. **bile-salt c.**, nutrient bouillon containing $\frac{1}{3}$ per cent. each of dextrose and sodium taurocholate and sufficient litmus solution to color it a deep purple. See *bile salt agar*. **Blaxall's c.**, English proof agar. **blood c.**, blood agar. **blood-serum c.** See *blood-serum*. **bouillon c.**, bouillon, plain or modified, used as a culture-medium. **Braun's c.**, fuchsin agar. **bread paste c.**, stale or toasted bread is powdered, moistened with water, filled into Erlenmeyer flasks, and sterilized. **brilliant green-bile salt c.**, brilliant green-bile salt agar. **brilliant green-eosin c.**, brilliant green-eosin agar. **calcium carbonate c.**, calcium carbonate bouillon. **Capaldi-Proskauer c. No. 1**, a synthetic medium containing sodium chlorid 2 gm., magnesium sulphate 0.1 gm., calcium chlorid 0.2 gm., monopotassium acid phosphate 2 gm., asparagin 2 gm., mannite 2 gm., and litmus solution 47.5 c.c. in water 1000 c.c. **Capaldi-Proskauer c. No. 2**, a medium containing peptone 20 gm., mannite 1 gm., and litmus solution 47.5 c.c., in water 1000 c.c. **carbolized c.** See under *agar*, *bouillon*, and *gelatin*. **China green c.**, China green agar. **chocolate c.**, nutrient bouillon or agar to which 5 to 10 per cent. of fresh blood has been added and which are then heated to 75° C. The red blood changes to a chocolate brown color. It is used for growing the influenza organism. **Cohn's c.**, Cohn's solution. **Conradi's c.**, brilliant green agar. **Conradi-Drigalski's c.**, litmus-maltose agar. **cooked meat c.**, a mixture of nutrient bouillon and chopped meat. **Councilman and Mallory's c.** See *blood-serum*. **dextrose c.** See under *agar*, *bouillon*, and *gelatin*. **Dieudonne's c.**, a mixture of 7 parts of 3 per cent. nutrient agar and 3 parts of a mixture of beef blood and normal sodium hydroxid. **Dorset's egg c.** See *egg culture-medium* (Dorset). **Drigalski-Conradi's c.**, litmus-nutrose agar. **Dunham's c.** See *peptone water c.* **Durham's c.**, inosite-free bouillon. **egg c.** (Dorset), a bacteriologic medium prepared by mixing whole eggs 3 parts and physiologic salt solution 1 part. It is usually coagulated in test-tubes in an inclined position and used for the cultivation of tuberculosis. **egg c.** (Lubenau), Dorset's egg medium containing $\frac{1}{3}$ per cent. of glycerol. **egg c.** (Petroff), a meat juice is prepared by extracting 500 gm. of chopped beef with 500 c.c. of 15 per cent. solution of glycerol for twenty-four hours in the ice-box and filtering. To this is added two volumes of whole eggs well mixed and 1 part of gentian violet to 10,000 parts of the mixture. **egg-albumin c.** See under *agar* and *bouillon*. **egg-albumin c.** (inspis-

sated), egg-white to which is added 40 per cent of distilled water, 0.15 per cent. of sodium hydroxid, and 1 to 2 per cent. of glucose. Filter and coagulate in an inclined position. **egg-albumin c.** (Tarchanoff and Kolesnikoff), place unbroken eggs in dekanormal sodium hydroxid for ten days. Remove the shell and cut into slices. Wash in running water two hours. Place in Petri dishes and sterilize. **egg-meat c.** (Rettger), 1 pound of ground lean meat and the whites of six eggs in one liter of water. The meat and the eggs are heated separately, but are mixed before tubing. Calcium carbonate is added to stabilize the reaction. Anaerobes grow in this mixture without anaerobic precautions. **egg-yolk c.**, egg-yolk agar. **Eisenberg's milk-rice c.** See *milk-rice c.* **Elsner's c.**, potato gelatin. **EMB c.**, eosin-methylene-blue agar. **Endo's c.**, fuchsin-sulphite agar. **English proof c.**, English proof agar. **eosin-methylene-blue c.**, eosin-methylene-blue agar. **esculin c.**, a medium containing esculin and iron citrate on which the colon bacillus produces a black colony. **Eyre's nutrose c.**, nutrose agar. **Fawcus's c.**, brilliant green-bile salt agar. **fish c.** See under *bouillon*, *gelatin*, *gelatin agar*, and *water*. **Fleming's c.**, oleic acid agar. **Frankel and Voges's asparagin c.** See *asparagin c.* **French mannite c.**, French mannite agar. **French proof c.**, French proof agar. **Frugoni's animal tissue c.** See *animal tissue c.* **fuchsin c.**, fuchsin agar. **fuchsin-sulphite c.**, fuchsin-sulphite agar. **Gasperini's c.**, wheat bouillon. **gelatin c.**, one of the various culture-media in which gelatin is used as the solidifying agent. **gelatin-agar c.**, gelatin agar. **glucose-formate c.** See under *agar*, *bouillon*, and *gelatine*. **glycerin c.** See under *agar*, *blood-serum*, *bouillon*, *potato bouillon*. **glycerinated potato c.**, potato culture-medium in which the wedges of potato have been soaked, and in which the cotton pads at the bottom are moistened with a 25 per cent. solution of glycerol. **Goadsby's c.**, potato gelatin. **Guarnieri's c.**, agar gelatin. **Guy's c.**, blood-agar. **haricot c.** See under *agar* and *bouillon*. **Heiman's c.**, Heiman's agar. **Heller's c.**, urine gelatin. **Hershell's c.**, malt-extract solution. **Hitchen's c.**, Hitchen's agar. **Hiss's c.** See *semisolid c.* and *serum-dextrose water*. **Holt-Harris and Teague's c.**, Holt-Harris and Teague's E. M. B. agar. **Holz's c.**, potato gelatin. **hormone c.**, a bacteriologic culture-medium made without filtration. It is thought that the filter material removes by adsorption or by some other process constituents which enhance the nutritive value of the medium. **hydrocele c.** See *ascitic agar* and *ascitic bouillon*. **inosite-free c.**, inosite-free bouillon. **iron c.**, iron bouillon. **Kanthack and Stephen's c.**, serum agar. **Kitasato's c.** See *glucose-formate agar*, *bouillon*, and *gelatin*. **Krumweide's c.**, brilliant green agar. **lactose bile c.**, it consists of fresh ox bile containing 1 per cent. of peptone and 1 per cent. of lactose. **lactose-litmus c.** See under *agar*, *bouillon*, and *gelatin*. **lead c.**, lead bouillon. **lead acetate c.**, lead acetate agar. **Libman's c.**, serum agar. **Lipschuetz's c.**, egg-albumin bouillon. **litmus c.** See under *bouillon* and *gelatin*. **litmus milk c.**, milk culture-medium containing sufficient litmus solution to give it a deep lavender color. **litmus-nutrose c.**, litmus-nutrose agar. **litmus whey c.**, litmus whey gelatin. **Löffler's c.** See *malachite green agar* and *Löffler's blood-serum*. **Lorrain Smith's c.** See *blood-serum*. **Lubennau's egg c.**, egg culture-medium. **MacConkey's bile salt c.** See *bile salt culture-medium* and *bile salt agar*. **malachite green c.** See under *agar* and *bouillon*. **malt-extract c.**, malt-extract bouillon. **meat-extract c.** See under *agar*, *bouillon*, and *gelatin*. **meat infusion c.** See under *agar*, *bouillon*, and *gelatin*. **milk c.**, milk, usually in test-tubes, free from cream, and sterilized for use as a culture-medium.

milk-rice c., a mixture of 1 part of nutrient bouillon and 3 parts of milk solidified with 35 to 50 per cent. of rice powder. It is used for growing chromogenic bacteria. **Moor's c.**, nitrogen-free agar. **Naegeli's c.**, Naegeli's solution. **neutral red c.**, glucose agar containing in each 100 c.c. 1 c.c. of a saturated solution of neutral red. **nitrate c.** See *nitrate bouillon* and *nitrate solution*. **nitrogen-free c.**, nitrogen-free agar. **N. N. N. c.**, a medium for growing *Leishmania donovani*; it consists of agar-agar 14, salt 6, water 900; this is sterilized and then has added to it one-third of its volume of rabbit blood. **Noguchi's tissue c.** See *tissue culture medium*. **nutrient c.** See under *agar*, *bouillon*, and *gelatin*. **nutrose c.**, nutrose agar. **oleic acid c.**, oleic acid agar. **Omeliansky's nutritive c.**, a synthetic medium for the growth of cellulose-fermenting organisms. It contains potassium phosphate 4 gm., magnesium sulphate 2 gm., ammonium sulphate 4 gm., sodium chlorid 0.25 gm., and precipitated chalk 80 gm. in 1 liter of water. **Parietti's c.**, Parietti's bouillon. **Park and Williams's chocolate c.**, chocolate culture-medium. **Pasteur's c.** See *Pasteur's solution* and *Pasteur's yeast water*. **peptone water c.**, 1 per cent. of peptone in 0.5 per cent. salt solution. **Petroff's egg c.** See *egg culture-medium*. **Petroff's synthetic c.**, a synthetic medium for growing the tubercle organism. It contains dipotassium acid phosphate 0.35 gm., magnesium acid phosphate 4.93 gm., asparagin 5.29 gm., N/1 sulphuric acid 10 c.c., N/1 phosphoric acid 20 c.c., M/1 citric acid 10 c.c., glycerol 20 c.c., N/1 sodium hydroxid 10 c.c. in water 1000 c.c. **Petrusky's c.**, litmus whey. **Piorowski's c.**, a medium consisting of 100 parts of urine that has undergone ammoniacal fermentation, 0.5 part of peptone, and 3.3 parts of gelatin. **pleuritic c.** See *ascitic agar* and *bouillon*. **potato c.**, cylindric, wedge-shaped pieces of potatoes in test-tubes or flat pieces in Petri dishes sterilized and used as a bacteriologic culture-medium, especially for the chromogenic germs and for the sporogenic aerobes. **protein-free c.**, a synthetic medium containing calcium chlorid 0.1 gm., magnesium sulphate 0.2 gm., monopotassium acid phosphate 2 gm., potassium aspartate 3 gm., sodium chlorid 5 gm., ammonium lactate 6 gm., and glycerol 30 c.c. in water 1000 c.c. **rabbits' blood c.**, sterile rabbits' blood allowed to clot in a test-tube and inactivated at 56° C. for one-half hour. **Reddish's c.**, malt extract bouillon. **Rettger's egg-meat c.** See *egg-meat culture-medium*. **rosolic acid-peptone c.**, Dunham's peptone water containing 20 c.c. of 0.5 per cent. alcoholic solution of rosolic acid in each liter. **Russell's double sugar c.**, Russell's double sugar agar. **Sabouraud's c.**, French proof agar. **saccharose-mannitol c.**, saccharose-mannitol agar. **semisolid c.**, a medium containing agar-agar 8 gm., gelatine 40 gm., peptone 10 gm., meat-extract 3 gm., sodium chlorid 5 gm., and glucose or some other sugar 5 gm., in water 1000 c.c. **serum c.** See under *agar*, *bouillon*, and *water*. **sheeps brains' c.**, equal parts of fresh sheeps' brains and distilled water are cooked slightly and squeezed through cheese-cloth. Adjust the reaction, tube, and sterilize. **silicate jelly c.**, a synthetic medium for the growth of nitrogen-fixing bacteria. It contains ammonium sulphate 0.4 gm., ammonium sulphate 0.05 gm., calcium chlorid 0.01 gm., potassium phosphate 0.1 gm., and sodium carbonate 0.6 gm., in water 1000 c.c. and solidified with silicic acid 3.4 gm. **sodium oleate c.**, sodium oleate agar. **Soyka's milk-rice c.** See *milk-rice c.* **starch c.**, starch agar. **sugar c.**, sugar bouillon. **sugar-free c.**, a medium in which *Bacillus coli* has grown and thus removed all sugars by decomposition. After clarification it is used as a basis for fermentation tests with the various sugars. **sulphindigotate c.** See under *agar*, *bouillon*, and *gelatine*. **Tarchanoff and**

Kolesnikoff's egg-albumin c. See *egg-albumin c.* **Teague and Travis's c.**, a sugar-free nutrient agar to which is added nutrose 0.25 per cent., saccharose 1 per cent., bluish eosin 0.06 per cent., and Bismarck brown 0.04 per cent. **tissue c.**, nutrient agar to which is added one-half its volume of ascitic fluid or hydrocele fluid and a piece of fresh animal tissue. Paraffin oil is also placed on the surface to favor anaerobic conditions. **tryptagar c.** See *tryptagar*. **urine c.**, freshly passed urine is heated, filtered, tubed, and sterilized for use as a culture-medium. See also *urine agar* and *urine gelatin*. **Ushinsky's c.** See *asparagin culture-medium* and *protein-free bouillon*. **Vedder's c.**, starch agar. **vitamin c.** See *hormone culture-medium*. **Washbourn's c.** See *blood-agar*. **Wassermann's c.** See *ascitic fluid agar* and *bouillon*. **Werbitski's c.**, China green agar. **Wertheimer's c.**, serum agar. **Weyl's c.** See *sulphindigotate bouillon* and *gelatin*. **wheat c.**, wheat bouillon. **whey c.** See *whey agar* and *gelatin*, also *litmus whey*. **Winogradsky's c.** See *silicate jelly culture-medium* and *Winogradsky's solution*. **wort c.** See *wort agar* and *gelatin*. **Wuntz's c.** See *lactose litmus agar* and *gelatin*. **yeast autolysate c.**, incubate 200 gm., of yeast in 1 liter of water two days at 37° C. with reaction at pH 6.1 and kept sterile with chloroform. Filter and solidify with agar-agar. **yeast-water c.**, yeast water.

Culver's-physic (ku'verz). See *Leptandra*.

cumic acid (ku'mik). See under *acid*.

cumidin (ku'mid-in). A liquid base, $C_3H_7.C_6H_4.NH_2$, derived from cumic acid.

cumin (ku'min) [L. *cumi'nium*]. An umbelliferous plant of the old world, *Cuminum cyminum*; also its aromatic and carminative seed.

cuminuric acid (ku-min-u'rik). See under *acid*.

cumol, cumene (ku'mol, ku'mēn). An oily hydrocarbon, isopropyl benzene, $C_6H_5.CH(CH_3)_2$, used in sterilizing catgut.

cumulative (ku'mu-la-tiv) [L. *cu'mulus* heap]. Increasing suddenly in intensity of action after slow additions.

cumulus (ku'mu-lus) [L. "a little mound"]. A mound. **c. oph'orus**, the discus proligerus.

cuneate (ku'ne-āt) [L. *cu'neus* wedge]. Wedge-shaped.

cuneiform (ku'ne-if-orm) [L. *cu'neus* wedge + *for'ma* form]. 1. Shaped like a wedge. 2. A cuneiform bone: there are three in the foot and one in the wrist. See *bone*.

cuneihysterectomy, cuneohysterectomy (ku'ne-i-his-ter-ek-to-me, ku'ne-o-his-ter-ek-to-me) [L. *cu'neus* wedge + *hysterectomy*]. The excision of a wedge-shaped piece from the uterine tissue for the correction of antelexion.

cuneocuboid (ku'ne-o-ku'bo'id). Pertaining to the cuneiform and cuboid bones.

cuneohysterectomy. See *cuneihysterectomy*.

cuneonavicular (ku'ne-o-nav-ik'u-lar). Pertaining to the cuneiform and navicular bones.

cuneoscapoid (ku'ne-o-skaf'o'id). Cuneonavicular.

cuneus (ku'ne-us), pl. *cu'nei* [L. "wedge"]. A wedge-shaped lobule of the occipital lobe of the cerebrum on its medial aspect.

cuniculus (ku-nik'u-lus), pl. *cunic'uli* [L. "rabbit," "rabbit-burrow"]. The burrow of an itch-mite, *Sarcoptes hom'inis*, in the human skin.

Cunila (ku-ni'lah). A genus of labiate plants. *C. maria'dna*, of North America (dittany), is diuretic and diaphoretic. Dose of tincture, 5-20 min. (0.333-1.333 c.c.).

cunnilingus (kun-il-in'gwist) [L. *cunnilin'gus*]. A sexual pervert who licks the vulva.

cunus (kun'us) [L.]. The vulva.

CuO. Cupric oxid.

Cu₂O. Cuprous oxid.

cuorin (ku'o'-rin). A mono-amino-diphosphatid lipid compound occurring in the heart muscle.

cup (kup). 1. A cupping-glass. 2. A cup-shaped part or structure. **dry c.**, a cupping-glass applied to the intact skin in order to draw blood to the part. **glaucomatous c.**, that form of ocular disk depression which is peculiar to glaucoma. **impression c.**, in dentistry, a metal container to hold the wax or plaster while an impression of the jaw is being taken. **Montgomery's c's**, the dilated canals of the tubular glands of the uterus. **ocular c.**, the secondary optic vesicle; a cup-like organ of the embryo whence the retina is developed. **optic c.**, the optic vesicle. **physiologic c.**, the depression which occurs naturally in the optic disk. **retinal c.**, excavation of the eye-disk, whether pathologic or not. **wet c.**, a cup applied to the incised skin in order to abstract blood.

cupola (ku'po-lah). The little dome at the apex of the cochlea and of the spiral canal. **c. space**, the attic of the tympanum.

cupped (kupt). Hollowed out like a cup.

cupping (kup'ing). 1. The application of a cupping-glass. 2. The formation of a cup-shaped depression.

cupping-glass (kup'ing-glas). See *cucurbitula*.

cupram (ku'pram). A fungicide solution of copper carbonate in ammonia water.

cuprammonia (ku-pram-o'ne-ah). A solution of cupric hydroxid in ammonia: used as a reagent and as a solvent for cellulose: called also *Schweitzer's reagent*.

cuprargol (ku-prar'gol). A dull, gray-green, powdery copper silver albuminate. It reduces inflammation and increases the secretion of mucous surfaces.

cuprase (ku'prās). Colloidal cupric hydroxid: for subcutaneous injection in cancer.

cupratin (ku'prat-in). A copper and albuminoid preparation resembling ferratin.

cuprea-bark (ku'pre-ah). The bark of a species of *Remijia* yielding quinin.

cuprein (ku'pre-in). An alkaloid, C₁₉H₂₉O₂N₃, from cuprea-bark.

cuprentum (ku-pren'tum). A proprietary ointment containing 5 per cent. of copper citrate: used in trachoma and ulcerations and granulations of the eyelids.

cupressin (ku-pres'in). An oil derived from cypress: useful in whooping-cough.

cupriaseptol (ku'pre-as-ep'tol). Copper sulphocarbonate, a light-green, crystalline compound: used as a hemostatic.

cuprocitrol (ku-pro-sit'rol). See *copper citrate*.

cuprocyan (ku-pro-si'an). A copper compound used in the chemotherapeutic treatment of syphilis.

cuprohemol (ku-pro-he'mol). A dark-brown copper and hemol derivative: used in tuberculosis. Dose, 1½–2 gr. (0.1–0.15 gm.).

cupro-iodase (ku-pro-i'o-dās). A copper compound used in the chemotherapeutic treatment of syphilis.

cuprol (ku'pro'l). A therapeutic preparation of copper and nucleic acid, used as an ointment, or as a wash for chronic ulcers, and in powder for diseases of the conjunctiva.

cuprum (ku'prum), gen. *cu'pri* [L. for "copper"]. See *copper*.

cupula (ku'pu-lah). A membranous structure on the crista acustica in the ampulla of the ear. **c. pleuræ** [B N A], the cervical pleura. See *pleura*. **c. ra'dii**. See *Jovea capitata*.

curaçao (ku-rah-so') [name of a West Indian

island]. A highly flavored liqueur or cordial: stomachic and stimulant.

curalues (ku-rah-lu'èz). Bismuth hydroxid in oil: for syphilis.

curangin (ku-ran'jin). A bitter glucosid, C₄₅H₇₇O₂₀, from *Curanga amara*, a scrophulariaceous herb of southern Asia, which is a vulnerary, febrifuge, and vermifuge.

curara, curare, curari (koo-rah're) [South American]. A highly toxic dried extract of various species of *Strychnos* used originally in South America as an arrow poison and now used in pharmacologic research. It paralyzes the motor end plates of nerves. It is used in tetanus and in physiologic experiments. Dose, ⅓–½ gr. (0.002–0.01 gm.), given hypodermically. **calabash c.**, an extract formerly known in commerce and containing curarin. **para c.**, the variety now found in commerce. It contains curin and paracurarin, which exert a powerful paralyzing action on the motor nerve endings of striated muscle. **pot c.**, a dark brown, dry extract which contains the intensely poisonous protocurarin.

curarin (ku-rah'rin). A crystalline alkaloid, C₁₈H₂₅N, from curare: a strong paralyzant. Dose, ⅓–½ gr. (0.00033–0.0016 gm.), given hypodermically.

curarization (ku-rar-iz-a'shun). To bring under the influence of curare.

cura'tio paraffi'ni. The N. F. name for paraffin dressing. See under *dressing*.

curb (kerb). A thickening of the metatarsocaneal ligament of the horse, causing a swelling at the back of the hock joint and resulting in lameness.

Curcas (kur'kas) [L.]. A genus of euphorbiaceous shrubs. *C. pur'gans* has cathartic seeds, called purging nuts, or Barbados nuts, which afford a purgative fixed oil: used like castor oil.

curcin (kur'sin). A poisonous principle (phyto-toxin) from *Curcas pur'gans*.

curcuma (kur'ku-mah). See *turmeric* and *zedoary*.

curcumin (kur'ku-min). A yellow, crystalline substance, C₂₁H₂₀O₆, the coloring principle of turmeric.

curd (kurd). The coagulum of milk, consisting mainly of casein. **alum-c.**, a coagulum formed by agitating milk containing a piece of alum. **a.-c. of Riverius**, a coagulum prepared from the white of an egg and a dram of alum.

cure (kür) [L. *cura'tio*, from *cu'ra* care]. 1. The course of treatment of any disease, or of a special case. 2. The successful treatment of a disease or wound. 3. A system of treating diseases. 4. A medicine effective in treating a disease. **Banting c.** See *bantingism*. **diet c.**, treatment by the systematic regulation of the diet. **economic c.**, cure of a disease which, while not complete, is sufficient to restore the patient to his wage-earning capacity. **gold c.** Same as *Keeley c.* **grape c.**, the use of an exclusive diet of grapes. **hunger-c.**, the treatment of disease by severe fasting. **Karell's c.**, the systematic use of skim milk for the purpose of unloading the system, especially the circulatory organs. **Keeley c.**, a proprietary method of treatment for the alcohol and opium habits by means of gold chlorid. **liman c.**, a method of treatment practised at Odessa, consisting of bathing in the water of "limans," or sheets of water that have been isolated from the sea and converted into salt lakes: used in cases of scrofula, rickets, chronic rheumatism, and chronic skin diseases. **milk c.**, an exclusive diet of milk as a means of treatment. **movement c.** See *kinesitherapy*. **potato c.**, treatment of foreign bodies in the alimentary canal by ingesting mashed potatoes. **starvation c.**, the treatment of a disease by a restricted diet. **terrain c.**, a method of treatment for a weak heart, neurasthenia, corpulence, etc., consisting of systematic

exercise, mountain-climbing, and regulation of diet. **thirst c.**, treatment by restricting the intake of fluids. **water c.**, hydrotherapy. **wey c.**, treatment by drinking whey. **work c.**, the treatment of neurasthenia by systematically arranged work.

curet (ku-ret') [Fr.]. A kind of scraper or spoon for removing growths or other matter from the walls of cavities. **Hartmann's c.**, a curet for removing adenoids.

curettage (ku-ret-ahzh') [Fr.]. The use of, or treatment by, the curet. In dentistry, apoxesis.

curette (ku-ret'). See *curet*.

curettement (ku-ret'ment). Same as *curettage*.

curie (koo're) [Marie Skłodowska Curie, Polish chemist in Paris, born 1867, the discoverer of radium]. The standard unit for measuring radium emanations. It is the amount of radium emanations in equilibrium with a gram of radium element.

curiegram (koo're-gram). A print made by radium emanation on a photographic plate.

curietherapy (koo-re-ther'ap-e). Radium therapy.

curin (ku'rin). A crystalline alkaloid, $C_8H_9NO_3$, from curare: it paralyzes the nervous system.

current (kur'ent) [L. *currens* running]. 1. Anything which flows. 2. The stream of electricity which moves along a conductor. An electric current is due to a difference of potential between two points, this difference being measured in volts. The speed of flow depends on the difference of potential and the resistance to be overcome and is measured in amperes. The quantity of current is measured in coulombs. **abnormal c.**, an electric current passing from a nerve to and through a muscle. **action c.**, an electric current occurring during the action of a muscle or nerve. **after-c.**, a current produced in a muscle and nerve when an electric current which has been flowing through it has stopped. **alternating c.**, an electric current which is alternately direct and reversed. **anionic c.**, that part of the electric current carried by the anion. **ascending c.** See *centripetal c.* **axial c.**, the central colored part of the blood-current. **battery c.**, a galvanic current. **blaze-c.**, an electric current produced in living tissue by mechanic stimulation. **centrifugal c.**, an electric current in the body with the positive pole near the nerve-center and the negative at the periphery; called also *descending c.* **centripetal c.**, an electric current passing through the body with the positive electrode on the nerve or at the periphery and the negative near the nerve-center: called also *ascending c.* **compensating c.**, an electric current used to neutralize the intensity of a muscle current. **constant c.**, **continuous c.**, an uninterrupted galvanic current. **d'Arsonval c.**, the high potential discharge of a condenser or pair of condensers through a large solenoid of wire, producing alternations at the rate of 200,000 to 1,000,000 times a second. Such currents are used therapeutically to stimulate metabolism. **demarcation c.**, an electric current passing from an injured nerve to an injured or dead portion of the same nerve; called also *current of injury*. **descending c.** See *centrifugal c.* **direct c.**, a current whose direction is always the same. **electric c.**, the flow of electricity through a conductor. **electrostatic c.** See *static c.* **electrotonic c.**, a current induced in the sheath of a nerve by a current passing through the conducting part of that nerve. **electrovital c's**, two electric currents supposed to exist in animal bodies; called also *neuro-electric c's*. **extra c.**, an induced current produced in a faradic battery in addition to the regular primary and induced currents. **eye-c.**, an electric current passing from the cornea to the optic nerve under the influence of light. **faradic c.**, an alternating current of induced electricity. **galvanic c.**, an electric current from a battery. **high-frequency c.**, an alternating cur-

rent with oscillations backward and forward at the rate of about 500,000 a second. See *d'Arsonval c.* **high-potential c.**, **high-tension c.**, a current having a high electromotive force. **induced c.**, electricity in a circuit generated by proximity to another current. **inducing c.**, the current which induces a secondary current. **c. of injury**. See *demarcation c.* **interrupted c.**, a current which is frequently opened and closed. **labile c.**, a current applied to the body with electrodes moving over the surface. **le Duc's c.**, a sinusoidal current applied with the negative pole on the head and the positive pole over the kidneys. It produces unconsciousness similar to that of ether or chloroform, from which the subject emerges as soon as the current is removed. **Morton's c.**, a series of electric charges from a Leyden jar, the jar being constantly recharged from a static machine. **oscillating c.**, a current which reverses periodically and rapidly in direction of flow. **Oudin c.**, a high-frequency current applied from one pole only of the machine. **reversed c.**, a current which is frequently made to reverse its direction. **secondary c.**, an induced current. **sinusoidal c.**, an alternating faradic current in which the potential rises gradually from zero to a maximum, and then gradually returns to zero or to a minimum. **stable c.**, a current applied to the body with both electrodes stationary. **static c.**, **spark-gap c.**, an electric current derived from a static apparatus. **swelling c.**, a current which is alternately weak and strong. **Tesla's c.** Same as *d'Arsonval c.*

curriculum (kur-ik'u-lum) [L.]. A regular and established course of study.

Curschmann's disease, spirals (kooersh'manz) [Heinrich Curschmann, physician in Leipzig, 1846-1910]. See *disease, spiral*.

curtometer (kur-tom'et-er). Same as *cyrtometer*.

curvature (kur'va-tür). Deviation from a rectilinear direction. See *kyphosis, lordosis, scoliosis*. **angular c.**, **Pott's c.**, abnormal curvature of the spinal column due to vertebral disease. **backward c.**, **lordosis**. **gingival c.**, the curvature of the gum where it is attached to the neck of a tooth. **lateral c.**, **scoliosis**.

curve (kurv) [L. *curvum*]. A non-angular deviation from a straight course in a line or surface. **alinement c.**, the curve formed by the alinement of the teeth. **Barnes's c.**, the segment of a circle whose center is the promontory of the sacrum, the concavity looking dorsad. **buccal c.**, the curve of the dental arch from the canine tooth to the third molar. **c. of Carus**, the normal axis of the pelvic outlet. **Damoiseau's c.**, Ellis' line. See under *line*. **dental c.**, the curve of the teeth. The various portions in the curve are distinguished as follows: **alinement c.**, that portion which passes through the center of the teeth; **buccal c.**, the portion from cuspid to third molar; **compensating c.**, the occlusal line of bicuspid and molars; **labial c.**, the portion from cuspid to cuspid. **c. of Ellis and Garland**. See *Ellis's line*, under *line*. **frequency c.**, in statistics, a curve representing graphically the probabilities of different numbers of recurrences of an event. **Harrison's c.** See *Harrison's groove*, under *groove*. **labial c.**, the curve of the dental arch between the two canine teeth. **muscle c.**, a myogram. **Price-Jones c.**, a graphic curve representing the variation in the size of the red blood-corpuscles: used in studying cases of anemia. **Spee's c.**, a curved line touching the tops of the buccal cusps of the teeth, from the first bicuspid to the third molar. **tension c's**, curved lines in which the cancellous tissue of bones is arranged according to the directions of tension exerted on the bones. **Traube's c's**, **Traube-Hering c's**, high bold curves seen in the tracings of the sphygmograph when respiration has been completely arrested. **Wunderlich's c.**, the typical curve of typhoid fever.

cuscamin (kus-kam'id-in). A cinchona alkaloid.
cuscamin (kus-kam'in). One of the cinchona alkaloids.

cusco bark (kus'ko). A variety of cinchona.

Cusco's speculum (koo's'kōz) [Edouard Gabriel Cusco, French surgeon, 1819-1894]. See *speculum*.

cusconidin (kus-kon'id-in). A cinchona alkaloid, $C_{23}H_{28}N_2O_4$.

cusconin (kus'ko-nin). An alkaloid of cinchona, $C_{23}H_{28}O_4N_2 \cdot 2H_2O$.

Cuscuta (kus-ku'tah) [L.]. A genus of parasitic convolvulaceous plants, the dodders. Many species are employed as medicines.

Cushing's law (koosh'ingz) [Harvey Cushing, Boston surgeon, born 1869]. See under *law*.

Cushing's suture (koosh'ingz) [Hayward W. Cushing, contemporary Boston surgeon]. See *suture*.

cushion (koosh'un). An anatomic structure resembling a cushion. **coronary c.**, the cushion-like band of vascular tissue at the upper edge of the wall of the hoof of the horse. It is concerned in the secretion of the horny wall. Called also *coronary band* and *coronary ring*. **c. of the epiglottis**, a median elevation of the mucous membrane within the larynx, below the epiglottis. **eustachian c.**, a part of the posterior cartilaginous wall of the eustachian tube. **Passavant's c.**, a ridge projecting from the posterior and lateral walls of the nasopharynx, at the level of the free margin of the soft palate, in persons with sclerotic or atrophic rhinitis. It acts with the soft palate in closing the opening from the nose to the oropharynx. **plantar c.**, a wedge-shaped mass of elastic tissue overlying the frog of a horse's foot. **sucking c's**, a pair of capsules filled with fatty lobules overlying the buccinator muscles in young infants.

cusol (ku'sol). A solution of copper citrate containing sodium chlorid and borocitrate, used in eye and skin diseases.

cusp (kusp). A tapering projection; especially one of the projections upon the crown of a tooth, and one of the pointed segments of a cardiac valve.

cusparia (kus-pa're-ah). Angustura.

cusparin (kus'par-in). A crystalline alkaloid, $C_{19}H_{17}NO_3$, from the bark of *Galipea cusparia*.

cuspid (kus'pid). A tooth having one cusp or point—a canine tooth.

cuspidate (kus'pid-ät) [L. *cuspidatus*]. Having a cusp or cusps.

cuspis (kus'pis). L. for *cusp*.

cusso (kus'o). See *koussou*.

cusylol (ku'si-lol). A combination of cuprum citricum and sodium borocitricum: used as a bactericide in gonorrhea.

cutal (ku'tal). Same as *cutol*.

cutaneous (ku-ta'ne-us) [L. *cutis* skin]. Pertaining to the skin.

cute (küt). The local name in Venezuela for a skin disease marked by the presence of bright yellow patches. It is probably *tinea flava*.

Cuterebra (ku-ter-e'brah). A genus of flies, the rabbit bot flies, whose larvæ infest rabbits.

cuticle (ku'tik-l) [L. *cuticula*, from *cutis* skin]. The epidermis or outer layer of the skin. **dental c.**, **enamel c.**, the cuticula dentis. **keratose c.**, the outer surface layer of the pigment-cells of the eye.

cuticolor (ku-tik'o-lor) [L. *cutis* skin + *color* color]. Having the color of the skin.

cuticula dentis (ku-tik'u-lah den'tis) [L. "skin of a tooth"]. The membrane (*Nasmyth's membrane*) covering the enamel of an unworn tooth. Called also *enamel cuticle*.

cuticularization (ku-tik'u-lar-i-za'shun). The formation of skin upon a sore or wound.

cuticulum of Flechsig (ku-tik'u-lum). A layer of flat cells on the external surface of the neuroglia.

cutidure, cutiduris (ku'tid-ür, ku-tid-u'ris). The coronary cushion of horses. See under *cushion*.

cutigeral cavity (ku-tij'e-ral). See under *cavity*.

cutin (ku'tin) [L. *cutis* skin]. 1. A waxy substance which, combined with cellulose, forms the cuticle of plants. 2. A preparation of the gut of the ox, used as a substitute for catgut and silk and as a dressing for wounds.

cutinization (ku-tin-iz-a'shun). The operation of lining a cavity, such as a fistulous cavity in bone, with skin.

cuti-reaction (ku'te-re-ak'shun) [L. *cutis* skin + *reaction*]. A local reaction of the skin, occurring in certain infections, following the inoculation or application of an extract of the organism which causes the infection. It is employed for the diagnosis of the disease, most commonly in tuberculosis, but also in typhoid, syphilis, glanders, etc. See *Lautier's test*, *Moro reaction*, *Pirquet's reaction*. **differential c.**, inoculation at one and the same time of old tuberculin, a filtrate of human tubercle bacilli, and a filtrate of bovine tubercle bacilli in order to determine whether the patient is tuberculous or not, and if he is, whether the infection is human or bovine.

cutis (ku'tis) [L. *cutis* skin]. The true skin, or derma. **c. anserina**, "goose-flesh"; erection of the papillæ of the skin, as from cold or shock. **c. elastica**, abnormal elasticity of the skin, which may be pulled to some distance. **c. hyperplastica**, a condition in which the skin is loosely attached to the underlying tissue and has the property of great elasticity and distensibility; called also *elastic skin* and *cutis elastica*. **c. laxa**, dermatolysis. **c. marmorata**, a transitory mottling of the skin sometimes occurring in exposure of the skin to cold. **c. pendula**, "hanging skin"; abnormal flabbiness of the skin. **c. penilis**, dermatolysis. **c. testacea**, "shelly skin"; general seborrhea. **c. unctuousa**, "greasy skin"; seborrhea. **c. vera**, "true skin"; the derma or corium. **c. verticis gyrate**, a condition in which the skin of the scalp of the crown and back of the head lies in furrows. The condition is allied to dermatolysis.

cutisector (ku'te-sek-tor) [L. *cutis* skin + *sec'tor* cutter]. An instrument for removing bits of skin.

cutitis (ku-ti'tis). Dermatitis, or inflammation of the skin.

cutituberculin reaction (ku'te-tu-ber'ku-lin). See under *reaction*.

cutization (ku-tiz-a'shun). The change of exposed mucous membrane into true skin.

cutol (ku'tol). Aluminum borotannate; a proprietary antiseptic and astringent preparation containing boric and tannic acids with an aluminum salt: used in skin diseases.

Cuvier's duct (koo've-äz) [Georges Léopold Chrétien Frédéric Dagobert, Baron Cuvier, French naturalist, 1769-1832]. See *duct*.

C. V. Abbreviation for *L. cras ves'pere*, tomorrow evening.

Cwt. Abbreviation for *hundredweight*.

Cx. Abbreviation for *convex*.

Cy. Symbol for *cyanogen*.

cyanalcohol (si-an-al'ko-hol). Same as *cyanhydrin*.

cyanamid (si-an'am-id). Carbamic acid nitril, $CN.NH_2$ or $NH.C.NH$, the anhydrid of urea.

cyanemia (si-an-e'me-ah) [Gr. *kyanos* blue + *aima* blood]. Bluishness of the blood, as in cyanosis.

cyanephidrosis (si'an-ef-id-ro'sis) [Gr. *kyanos* blue + *ἐπίδρωσις* sweat]. The excretion of bluish sweat.

cyanhematin (si-an-hem'at-in). A compound of cyanogen and hematin.

cyanhemoglobin (si'an-hem-o-glo'bin). A compound formed in the blood by the action of hy-

drocyanic acid on hemoglobin. It gives the blood a bright-red color.

cyanhidrosis (si'an-hid-ro'sis). Same as *cyanephidrosis*.

cyanhydrin (si-an-hi'drin). A compound formed by the addition of HCN to the aldehyd or ketone group.

cyanic acid (si-an'ik). See *acid*.

cyanid, **cyanide** (si'an-id, si'an-id). Any binary compound of cyanogen.

cyanin (si'an-in). An indicator with a PH range of 7 to 8.

cyanmethemoglobin (si'an-met-he-mo-glo'bin). A crystalline substance formed by the action of hydrocyanic acid on methemoglobin in the cold or on oxyhemoglobin at the body temperature.

cyanochoiria (si'an-o-kroi'ah) [Gr. *κύανος* blue + *χρoία* color]. Bluishness of the skin; cyanosis.

cyanocuprol (si'an-o-ku'prol). Potassium and copper cyanid; used in tuberculosis.

cyano-derma (si'an-o-der'mah) [Gr. *κύανος* blue + *δέρμα* skin]. Blue discoloration of the skin.

cyanoform (si-an'o-form). A crystalline substance, CH(CN)₃, formed by the action of potassium cyanid on chloroform.

cyanogen (si-an'o-jen) [Gr. *κύανος* blue + *γεννᾶν* to produce]. The halogen radical CN; also CN.CN (dicyanogen), the latter an exceedingly poisonous gas. **c. bromid**, a lethal war gas, BrCN. **c. chlorid**, a gas, ClCN, used for fumigating houses, ships, etc. It is as lethal for rats and other vermin as HCN, but less dangerous to man, as it causes lacerimation.

cyanogenesis (si'an-o-jen-es-is) [cyanogen + Gr. *γενεσις* production]. The formation or production of cyanogen or hydrocyanic acid.

cyanogenetic (si'an-o-jen-et'ik). Producing cyanogen or hydrocyanic acid.

cyanolophia (si'an-o-lo'fe-ah) [Gr. *κύανος* blue + *λοφία* ridge]. A specific infectious disease of fowls known as avian pest.

cyanomycosis (si'an-o-mi-ko'sis) [Gr. *κύανος* blue + *μύκως* fungus]. The development of *Micrococcus pyocyaneus* in pus.

cyanopathy (si-an-op'ath-e) [Gr. *κύανος* blue + *πάθος* disease]. Cyanosis.

cyanophil (si-an'o-phil). 1. Cyanophilous. 2. A cell or other histologic element readily stainable with blue.

cyanophilous (si-an-of'il-us) [Gr. *κύανος* blue + *φιλεῖν* to love]. Stainable with blue dyes.

cyanophoric (si'an-o-for'ik). Bearing hydrocyanic acid; used in the case of glucosids that yield hydrocyanic acid on hydrolysis.

cyanophose (si'an-o-fōz) [Gr. *κύανος* blue + *φῶς* light]. A blue phase.

Cyanophyceæ (si'an-o-fi'se-e) [Gr. *κύανος* blue + *φυκος* seaweed]. An order of algae including the families Bacteriaceæ and Nostocaceæ.

cyanopia, **cyanopsia** (si-an-o-pe-ah, si-an-op'se-ah) [Gr. *κύανος* blue + *ὥψ* eye]. Vision in which all objects appear to be blue.

cyanosed, **cyanotic** (si'an-ōzd, si-an-ot'ik). Affected with or pertaining to cyanosis.

cyanosis (si-an-o'sis) [Gr. *κύανος* blue]. 1. Bluishness of the skin, often due to cardiac malformation causing insufficient oxygenation of the blood. 2. Any bluish discoloration of the skin. **c. bul'bi**. 1. Congenital violet flecks in the sclera (Liebisch). 2. Bluish discoloration of the white of the eye in cyanosis (Hirschfeld). **enterogenous c.**, cyanosis attributed to the absorption of toxic matter from the intestine without cardiac or pulmonary lesions or evidences of drug poisoning. Methemoglobin or sulphemoglobin are found in the blood. **false c.**, cyanosis due to the presence of pigment and not to deficient oxygenation of the blood.

heliotrope c., cyanosis in influenzal septicemia in which the facies assumes a heliotrope or lilic color. Such cyanosis indicates a grave condition of the patient.

cyanotic (si-an-ot'ik). Cyanosed.

Cyanthomas'tix hom'inis. Same as *Chilomastix hominis*.

cyanurine (si-an-u'rin) [Gr. *κύανος* blue + *οἶνον* urine]. Indigo-blue found in the urine on the addition of a mineral acid to it.

cyarsal (si-ar'sal). 1. The potassium salt of an oxybenzoic acid to the nucleus of which mercury (46 per cent.) is fixed. 2. Paracyanmercurialized salicylic acid, used in the treatment of syphilis.

cyasma (si-az'mah). Pigmentation of the skin in pregnancy.

Cyath. Abbreviation for *L. cyathus*, a glassful.

Cyath. vin. Abbreviation for *L. cyathus vinarius*, a wineglass.

cyathus (si'a-thus) [Gr. *κύαθος* cup]. The canal of the infundibulum cerebri.

Cyclamen (sik'lam-en) [L.]. A genus of primulaceous plants. *C. euroῑdum* has an acrid, cathartic root.

cyclamin (sik'lam-in). A glucosid, C₂₀H₃₄O₁₀, from *Cyclamen euroῑdum*; strongly purgative and emetic.

cyclarthrodial (sik-lar-thro'de-al). Pertaining to a cyclarthrosis.

cyclarthrosis (sik-lar-thro'sis) [Gr. *κύκλος* circle + *arthrosis*]. A pivot-joint; a joint which permits rotation: called also *rotatory diarthrosis* and *lateral ginglymus*.

Cyclaster scarlatina'lis. A body, supposed to be protozoan, found in the epithelial cells of the epidermis and in the corium in scarlet fever. They are possibly the cause of scarlet fever.

Cyclasterion scarlatina'le. A name proposed by Mallory for *Cyclaster scarlatinalis*.

cycle (si'kl) [Gr. *κύκλος* circle]. A round or succession of symptoms. **aberrant c.**, the formation of a communication between the pulmonary and bronchial vessels, due to congestion caused by mitral stenosis. **asexual c.**, generation by budding or division of the parent organism. **biliary c.** See *Schiff's biliary c.* **cardiac c.**, a complete cardiac movement or heart-beat. The period from the beginning of one heart-beat to the end of another; the systolic and diastolic movement, with the interval between them. **cytoplasmic c.**, that stage in the life of a parasite during which it lives in cytoplasm of the cells of the host. **endogenous c.**, that portion of the life of a protozoan parasite which is spent within the body of its vertebrate host. **exogenous c.**, that part of the life of a protozoan parasite which is spent in the body of its invertebrate host. **forced c.**, a cardiac cycle which is interrupted by a forced beat. **genesial c.**, the reproductive period of a woman's life. **human c.**, the schizogenic stage of a protozoan parasite when it passes that stage in the human body. **intranuclear c.**, that stage in the life of a microörganism during which it lives in the nuclei of the cells of the host. **life c.**, the entire life of a protozoan blood parasite, including the endogenous and exogenous cycles. **mosquito c.**, the sporogenic cycle of a malarial parasite. **restored c.**, a cardiac cycle following a returning cycle and taking up the normal rhythm. **returning c.**, a cardiac cycle which begins with an extrasystole. **Schiff's biliary c.**, bile salts secreted along with the bile are absorbed by the intestinal villi and are then conveyed back to the liver, where they are used over again. **schizogenic c.**, **schizogenous c.**, the asexual cycle in protozoa during which growth and segmentation occur. **sexual c.**, generation of beings from an ovum or female gametocyte. **sporogenic c.**, **sporogenous c.**, the sexual cycle in protozoa which is usually passed in another host, often an insect.

cyclectomy (sik-lek'to-me) [Gr. κύκλος circle, ciliary body + ἐκτομή excision]. 1. Excision of a piece of the ciliary body. 2. Excision of a portion of the ciliary border of the eyelid.

cyclencephalus (sik-len-sef'al-us) [Gr. κύκλος circle + ἐγκέφαλος brain]. A monster-fetus with the eyes blended into one.

cyclic (sik'lik) [Gr. κυκλικός]. Pertaining to or occurring in a cycle or cycles. The term is applied to chemical compounds which contain a ring of atoms in the nucleus. See *closed chain*, under *chain*.

cyclotomy (sik-le-kot'o-me) [Gr. κύκλος circle + τέμνειν to cut]. Division of the ciliary body for the purpose of relieving tension in glaucoma.

cyclitis (sik-lí'tis) [Gr. κύκλος ring]. Inflammation of the ciliary body. **heterochromic a.**, chronic cyclitis producing difference in the color of the two irides. **plastic c.**, cyclitis with exudation of fibrinous matter into the anterior chamber. **pure c.**, inflammation of the ciliary body without involvement of the iris. **purulent c.**, supuration in the ciliary body. **serous c.**, simple inflammation of the ciliary body; serous iritis.

cyclo-. A prefix indicating a cyclic chemical structure. See *cyclic*.

cyclocephalus (si-klo-sef'al-us) [Gr. κύκλος circle + κεφαλή head]. A monster in which the eyes are fused into one; a cyclops.

cycloceratitis (sí'klo-ser-at-í'tis) [Gr. κύκλος circle + keratitis]. Inflammation of the cornea and ciliary body.

cyclochoroiditis (sí'klo-ko-roid-í'tis) [Gr. κύκλος circle + choroid]. Inflammation of the choroid and of the ciliary body.

cycloclialysis (sí'klo-di-al-í'sis) [Gr. κύκλος circle + διάλυσις dissolution]. The operation of forming a communication between the anterior chamber of the eye and the suprachoroidal space: done for glaucoma.

cyclocloduction (si-klo-duk'shun) [Gr. κύκλος circle + ductio]. The ductation of the eyeball produced by the oblique muscle.

cycloform (sí'klo-form). Isobutyl paraminobenzoate, $\text{NH}_2\text{C}_6\text{H}_4\text{CO}_2\text{OCH}_2\text{CH}(\text{CH}_3)_2$: used as a local anesthetic and vulnerary.

cycloid (sí'kloid). Containing a ring of atoms: said of organic chemic compounds.

cyclokeratitis (sí'klo-ker-at-í'tis). Cycloceratitis.

cyclophoria (si-klo-fó're-ah) [Gr. κύκλος circle + φόρος bearing]. Rotational heterophoria; rotation of the eyeball due to insufficiency of the oblique muscles.

cyclopia (si-klo'pe-ah). The state of a cyclops.

cycloplegia (si-klo-ple'je-ah) [Gr. κύκλος circle + πλῆγη stroke]. Paralysis of the ciliary muscle.

cycloplegic (si-klo-ple'jik). Causing cycloplegia: also a drug so acting.

cyclops (sí'klops) [Gr. κύκλος circle + ὤψ eye]. 1. A fetal monster with one median eye, or two eyes blended. 2. A genus of fresh water crustaceans. **C. corona'tus**, the water-flea is an intermediate host of *Dracunculus medinensis*.

cyclopterin (si-klop'ter-in). A protamin derived from the spermatozoa of the lump-sucker, *Cyclopterus lumpus*.

cycloscope (sí'klo-skōp) [Gr. κύκλος circle + σκοπεῖν to view]. Donders' apparatus for measuring the field of vision.

cyclosis (si-klo'sis) [Gr. κύκλωσις circulation]. The movement of protoplasm within a plant-cell.

Cyclo'spora caryol'itica. A pathogenic protozoan found in pernicious enteritis in the hedgehog (Schaudinn, 1902).

cyclotherapy (si-klo-ther'ap-e) [*cycle* + Gr. θεραπεία treatment]. Use of the bicycle in treatment of disease.

cyclothymia (si-klo-thim'e-ah) [Gr. κύκλος circle + θυμός mind]. Cyclic insanity (Kahlbaum).

cyclothymiac (si-klo-thím'e-ak). 1. Affected with cyclic insanity. 2. A person affected with cyclic insanity.

cyclothymosis (sí'klo-thi-mo'sis). Any mental disease of the cyclothymic and manic-depressive group (Southard).

cyclotome (sik'lo-tōm). A cutting instrument for use in cyclotomy or other operations upon the eye.

cyclotomy (si-klot'o-me) [Gr. κύκλος circle + τέμνειν to cut]. Division of or incision into the ciliary muscle.

cydonin (si-do'nin). A mucilaginous principle, $\text{C}_{18}\text{H}_{26}\text{O}_{14}$, found in the seeds and carpels of the quince.

cydonium (si-do'ne-um) [L.]. The quince; the fruit of *Cydonia vulgaris*; also its mucilaginous seeds and carpels.

cyema (si-e'mah) [Gr. κύημα the product of pregnancy]. The product of conception during all its stages.

cyemology (si-e-mol'o-je) [Gr. κύημα embryo + λόγος treatise]. Embryology.

cyesedema (si-e-se-de'mah) [Gr. κύησις pregnancy + edema]. A peculiar bloating of the body, especially of the face, sometimes seen in pregnant women.

cyesiognosis (si-e'se-og-no'sis) [Gr. κύησις pregnancy + γνώσις knowledge]. Diagnosis of pregnancy.

cyesiology (si-e'ze-o'je) [Gr. κύησις pregnancy + λόγος treatise]. The sum of knowledge regarding pregnancy.

cyesis (si-e'sis) [Gr. κύησις]. Pregnancy.

cyesædema. See *cyesedema*.

cygnin (sig'nin). An alkaloid, $\text{C}_{12}\text{H}_{22}\text{N}_2\text{O}_8$, from *Gastrolabium colcytinum*. It is a convulsant poison.

Cyl., cyl. Abbreviations for *cylinder* or *cylindric lens*.

cyclicotomy (sil-ik-ot'o-me) [Gr. κύλιξ cup + τομή cut]. Surgical division of the ciliary muscle.

cylinder (sil'in-der). A solid body shaped like a column; especially a cylindric cast or cylindric lens. **Bence-Jones c's**, cylindric gelatinous bodies forming the contents of the seminal vesicles. **Külz's c.** See *coma cast*, under *cast*. **Leydig's c's**, bundles of muscular fibers separated by partitions of protoplasm.

cylindrarthritis (sil'in-drar-thro'sis) [*cylinder* + Gr. ἄρθρωσις joint]. A joint in which the articular surfaces are cylindric.

cylindraxile (sil-in-draks'il). An axis-cylinder. **cylindric, cylindric** (sil-in'drik, sil-in'drik-al). Pertaining to or shaped like a cylinder.

cylindriform (sil-in'drif-orm). Resembling or shaped like a cylinder.

cylindro-adenoma (sil-in'dro-ad-en-o'mah). A tumor formed by the hyaline degeneration of an adenoma and containing cylindric masses of hyaline matter.

cylindrocellular (sil'in-dro-sel'u-lar). Composed of or containing cylindric cells.

cylindrodendrite (sil'in-dro-den'drit). Same as *paraxon*.

cylindroid (sil-in'droid) [Gr. κυλινδροειδής cylindric]. 1. Somewhat cylindric. 2. A spurious or mucous cast in the urine, of various origin and of various forms, though generally they resemble hyaline casts, differing from the latter in that they taper to a slender tail which is often twisted or curled upon itself.

cylindroma (sil-in-dro'mah) [Gr. κύλινδρος cylinder]. A variety of myxosarcoma, so called from its somewhat cylindric cells (Billroth). The tumor is usually seen about the face, and especially in the orbit.

cylindrosarcoma (sil-in'dro-sar-ko'mah). A tumor containing both cylindromatous and sarcomatous elements.

cylindruria (sil-in-dru'-re-ah) [Gr. *κύλινδρος* cylinder + *οὐρον* urine]. The presence of tube casts in the urine.

cyllin (sil'in). A disinfectant preparation of creolin.

cylosis (sil-o'-sis) [Gr. *κύλλωσις*]. Club-foot or other like deformity of the foot or leg.

cytotropin. A solution of sodium salicylate (0.8 gm.) and caffeine sodium salicylate (0.2 gm.) in 40 per cent. urotropin: used as a urinary antiseptic and diuretic.

cymarín (si-mar'in). A colorless crystalline compound obtained from *Apoeynum cannabinum* and *A. androsæmifolium*: used like digitalis. Dose, oral, 200 gr. (0.0003 gm.); intravenous or intramuscular, 100-200 (0.0005-0.001 gm.).

cyma con'chæ (sim'bah). The upper part of the concha of the ear.

cymbocephalic, cymbocephalous (sim'bo-sef-al'ik, sim-bo-sef'al-us) [Gr. *κύμβη* boat + *κεφαλή* head]. Having a boat-shaped head.

cymbocephaly (sim-bo-sef'al-e). The condition of being cymbocephalic.

cyme (sim). A form of inflorescence composed of a flat-topped cluster of blossoms.

cymene (si'mēn). A hydrocarbon, $\text{CH}_3\text{C}_6\text{H}_4\text{C}_2\text{H}_7$, occurring in the oils of cumin, thyme, and eucalyptus.

cymogen (si'mo-jen). Specially prepared and modified rennin for milk curdling in infant feeding.

cymograph (si'mo-graf). Same as *kymograph*.

cynanche (si-nan'ke) [Gr. *κύων* dog + *ἄγχειν* to choke]. Severe sore throat with threatened suffocation. **c. maligna**, a gangrenous or putrid sore throat, often diphtheric or scarlatinal. **c. sublingualis**, inflammation of the submaxillary connective tissue. **c. tonsillarís**. See *quinsy*.

cynanthropy (si-nan'thro-pe) [Gr. *κύων* dog + *ἄνθρωπος* man]. Insanity in which the patient considers himself, or behaves like, a dog.

cynapin (sin'ap-in) [Gr. *κύων* dog + *ἄπιον* parsley]. A poisonous crystalline alkaloid from *Æthusa cynapium*, or fool's-parsley.

cynarase (si'nar-áz). A ferment derived from the plant *Cynara*.

cyniatria, cyniatrics (sin-e-at-re'ah, sin-e-at'-riks) [Gr. *κύων* dog + *ιατρεια* cure]. That branch of veterinary medicine which treats of diseases of dogs.

cynic (sin'ik) [Gr. *κυνικός*]. Dog-like. **c. spasm**. See *spasm*.

cynobex (si'no-beks) [Gr. *κύων* dog + *βήξ* cough]. The barking cough of early youth.

cynocephalic (si'no-sef-al'ik) [Gr. *κύων* dog + *κεφαλή* head]. Having a head shaped like that of a dog.

cynoctonin (si-nok'to-nin) [Gr. *κύων* dog + *κτείνειν* to kill]. An amorphous poisonous alkaloid, $\text{C}_{36}\text{H}_{55}\text{N}_2\text{O}_{13}$, from *Aconitum septentrionale*.

Cynomyia (si-no-mi'e-ah). A genus of blue-bottle flies which deposits its larvæ in decaying meat.

cynophobia (si-no-fō-be-ah) [Gr. *κύων* dog + *φόβος* fear]. Spurious hydrophobia.

cynorexia (si-no-reks'e-ah) [Gr. *κύων* dog + *ὄρεξις* appetite]. Morbidly excessive hunger; bulimia.

cynothyrotoxin (si-no-thi-ro-tok'sin) [Gr. *κύων* dog + *thyrotoxin*]. A hypothetic substance assumed to occur normally in thyroid of dogs and to be toxic for man.

cynotoxin (si-no-toks'in). A bitter, crystalline principle, $\text{C}_{20}\text{H}_{23}\text{O}_{11}$, from *Apoeynum cannabinum*.

cynurenic acid (sin-u-ren'ik). See under *acid*.

cynurin (sin'u-rin). A bitter, colorless, crystalline compound, $\text{HOC}_6\text{H}_4\text{N}$, prepared from cynurenic acid and cinchonin.

Cyon's nerve (se'onz) [Elie de Cyon, a Russian physiologist, 1843-1912]. See under *nerves*, *table of*.

cyopin (si'o-pin) [Gr. *κύανος* blue + *πύον* pus]. The pigment of blue pus.

Cyperus (si-pe'rus) [L.; Gr. *κύπερος* rush]. A genus of grass-like sedges or rushes. See *adruæ*.

cyphoscoliosis (si-fō-sko-le-o'sis). See *kyphoscoliosis*.

cyphosis (si-fō'sis). See *kyphosis*.

cyphotíc (si-fot'ik). See *kyphotíc*.

cypridol (sip'rid-ol). A 1 per cent. solution of mercuric iodid in a fixed oil: used in syphilis.

cypridopathy (sip-rid-op'ath-e) [Gr. *Κύπρις* Venus + *πάθος* disease]. A venereal disease.

cypridophobia (sip'rid-o-fō-be-ah) [Gr. *Κύπρις* Venus + *φόβος* fear]. 1. A morbid fear of becoming infected with venereal disease. 2. Morbid dread of sexual intercourse.

cyprinín (sip'rin-in). A protamin obtained from the sperm of the carp.

cyripedin (sip-rip-e'din). A proprietary concentration derived from *Cyripedium*. Dose, ½-3 gr. (0.032-0.19 gm.).

Cyripedium (sip-rip-e'de-um) [Gr. *Κύπρις* Venus + *πῆδιον* pudendum]. A genus of orchidaceous plants. The rhizome and root of *C. hirsutum*, *C. pubes'cens*, and *C. parviflorum*, North American plants, are antispasmodic and nervine, and are used in hysteria, epilepsy, and chorea. Dose, in powder, 15 gr. (1 gm.); of fluidextract, 10-30 min. (0.666-2 c.c.).

cyriphobia (sip-rif-o-be-ah) [Gr. *Κύπρις* Venus + *φόβος* fear]. Morbid dread of coitus.

cyrtograph (sir-to-graf) [Gr. *κυρτός* bent + *γράφειν* to record]. A cyrtometer which registers the movements of the chest wall.

cyrtometer (sir-tom'e-ter) [Gr. *κυρτός* bent + *μέτρον* measure]. A device for use in measuring the curves and curved surfaces of the body.

cyrtosis (sir-to'sis) [Gr. *κύρτωσις*]. 1. Same as *kyphosis*. 2. Distortion of the bones.

cyst (sist) [Gr. *κύστις* bladder]. Any sac, normal or other, especially one which contains a liquid or semisolid. **adventitious c.**, a cyst formed about a foreign body or an exudate. **allantoic c.**, a form of cystic dilatation of the urachus. **apoplectic c.**, a cyst formed in a part by extravasation of blood in apoplexy. **atheromatous c.**, a sebaceous tumor of the skin having pulsatious contents. **Baker's c.**, hernia of the synovial membrane of a joint through an opening in its capsule. **blood c.**, a cyst containing extravasated blood. **blue dome c.**, a benign retention cyst of the breast containing straw-colored fluid that shows a blue color when cut down on. **Boyer's c.**, a painless and gradual enlargement of the subhyoid bursa. **branchiogenetic c.**, **branchiogenous c.**, a cyst formed from an incompletely closed branchial cleft. **bursal c.**, a cyst derived from a serous bursa by dilatation. **butter c.** 1. A necrotic mass in a lipoma. 2. A retention cyst of the mammary gland filled with the products of the alteration of milk, such as butyric acid. **chocolate c.**, an ovarian cyst having a dark syrupy or tarry contents, the cyst wall contains structures identical with the uterine mucosa and the dark contents is retained menstrual blood. Formerly called *corpus luteum c.* **chyle c.**, an abnormal sac of the mesentery containing chyle. **colloid c.**, a cyst which contains jelly-like material. **compound c.** Same as *multilocular c.* **corpus luteum c.** See *chocolate c.* **cutaneous c.**, **cuticular c.**, a dermoid cyst. **daughter c.**, a small cyst developed from the wall of a larger one. **dentigerous c.**, a cyst containing teeth. **dermoid c.**, one containing tissues or appendages derived from the epiblast; some examples also contain teratoid remains. **dilatation c.**, a cyst formed by dilatation of a previously existing cavity. **distention c.**, a

collection of watery fluid in a normal, but distended cavity. **echinococcus c.** See *hydatid c.* **endothelial c.**, a cyst whose sac has an endothelial lining. **ependymal c.**, a circumscribed dilatation of some part of the ependyma. **epithelial c.**, a dermoid cyst. **extravasation c.**, a cyst formed by hemorrhage into the tissues. **exudation c.**, a cyst formed by an exudate collected in a closed cavity. **false c.**, an adventitious cyst. **follicular c.**, one due to the occlusion of the duct of a follicle or small gland. **gärtnerian c.**, a cystic tumor developed from Gärtner's duct. **gas c.**, a small cyst filled with gas, of bacterial origin. **granddaughter c.**, a cyst sometimes seen within a daughter cyst. **hemorrhagic c.**, an encapsulated mass of extravasated blood. **hydatid c.**, a cyst-like tumor found in man, sheep, cattle, and swine which is the cysticercus stage of *Tania echinococcus*. **I-c.** See *Iodamæba buetschlii*. **implantation c.**, a cyst formed from a piece of skin that has become implanted into the deep tissues. **inclusion c.**, one formed by the inclusion of a small portion of the epiblast within the mesoblast. **involution c.**, a multiple cystic dilatation of the milk-ducts after the menopause. It is not always malignant, but may result in cancer. **iodin c.** See *Iodamæba buetschlii*. **lacteal c.**, a cyst of the breast due to obstruction of a lactiferous duct. **meibomian c.** See *chalazion*. **milk c.** Same as *lacteal c.* **morgagnian c.**, a hydatid of Morgagni. **mother c.**, a cyst inclosing other cysts. **mucous c.**, a retention cyst which contains mucus. **multilocular c.**, a cyst containing many loculi or spaces, which usually are endogenous daughter cysts. **nabothian c's**, small cysts formed by the retention of the secretion of the nabothian follicles. **neurotic c.**, a cyst containing necrotic matter. **neural c.**, a cyst-like dilatation of a ventricle or lymph-space of the brain or spinal cord. **nevroid c.**, an abnormal cyst with vascular walls. **oil c.**, a cyst containing oily matter, due to fatty degeneration of the epithelial lining. **oöphoritic c.**, a cyst of the ovary proper. **pancreatic c.**, a retention cyst of the pancreatic duct. **paranephric c.**, a cyst of the fatty tissue surrounding the kidney. **parent c.**, a mother cyst. **paroöphoritic c.**, a cyst of the parovarium. **pilliferous c.**, a dermoid cyst containing hair. **proliferous c.**, a cyst which produces multiple daughter cysts: often malignant. **psorospermal c.**, a cyst containing psorosperms. **retention c.**, one which is caused by the retention of the secretion of a gland. **sanguineous c.**, a cyst containing blood. **sebaceous c.**, the retention cyst of a sebaceous gland. **secondary c.**, a daughter cyst. **secretory c.**, a cyst produced by retention of the normal secretion of a gland. **seminal c.**, a cyst containing semen. **sequestration c.**, a dermoid cyst separated from the skin, due to embryonic displacement of a piece of skin. **serous c.**, a cyst containing a thin liquid or serum. **soap c.**, a collection of yellow, fatty matter encysted in the breast. **sterile c.**, a true hydatid cyst which fails to produce brood-capsules. **sublingual c.** Same as *ranula*. **subsynovial c.**, one caused by the distention of a synovial follicle. **synovial c.**, a distended synovial bursa or tendon-sheath. **tarsal c.**, chalazion. **thecal c.**, distention of a sheath of a tendon. **thyrolingual c.**, a cyst in the neck caused by lack of closure of the primitive thyrolingual duct. **true c.**, any cyst not normal and not formed by the dilatation of a passage or cavity. **umbilical c.** Same as *vitello-intestinal c.* **unilocular c.**, a cyst containing but one cavity. **urachal c.** Same as *allantoic c.* **urinary c.**, a cyst containing urine. **vitello-intestinal c.**, a cyst-like tumor at the umbilicus, caused by persistence of a portion of the umbilical duct. **wolffian c.**, a cyst of the broad ligaments of the uterus, regarded as developed from vestiges of the wolffian body.

cystadenoma (sis'tad-e-no'mah) [*cyst* + *adenoma*]. Adenoma which has undergone cystic degeneration. **c. adamantinum**. See *adamantinoma*. **c. par'tim simplex par'tim papilliferum**, a combination of simple and papillary cystadenoma.

cystadenosarcoma (sis-tad'en-o-sar-ko'mah). Cystadenoma blended with sarcoma.

cystalgia (sis-tal'je-ah) [Gr. *κύστις* bladder + *ἄλγος* pain]. Pain in the bladder.

cystamin (sis-tam'in). A urinary antiseptic useful in cystitis, phosphaturia, and gout. Dose, 5-10 gr. (0.333-0.666 gm.).

cystatrophia (sis-tat-ro'fe-ah) [Gr. *κύστις* bladder + *ἀτροφία* atrophy]. Atrophy of the bladder.

cystauchentitis (sis'taw-ken-i'tis) [Gr. *κύστις* bladder + *αὔχην* neck]. Inflammation of the neck of the bladder.

cystauchenotomy (sis'taw-ken-ot'o-mē) [Gr. *κύστις* bladder + *αὔχην* neck + *τομή* cut]. Surgical incision of the neck of the bladder.

cystazol (sis'taz-ol). A proprietary name for hexamethylenetetramin-sodio-benzoate: used as an antiseptic in cystitis and bacillary infections of the genito-urinary tract.

cystectasia, cystectomy (sis-tek-ta'se-ah, sis-tek'ta-se) [Gr. *κύστις* bladder + *ἐκτασις* dilatation]. Slitting of the membranous portion of the urethra and dilatation of the neck of the bladder for the extraction of stone.

cystectomy (sis-tek'to-mē) [Gr. *κύστις* bladder + *ἐκτομή* excision]. 1. Excision of a cyst. 2. Excision of a bladder, especially the gall-bladder.

cystein (sis-te'in). An amino-acid produced by the digestion or by the acid hydrolysis of proteins. It is alpha-amino-beta-thio-lactic acid, $\text{SH}\cdot\text{CH}_2\cdot\text{CH}(\text{NH}_2)\cdot\text{COOH}$. It is easily oxidized to cystin and is sometimes found in the urine.

cystelcosis (sis-tel-ko'sis) [Gr. *κύστις* bladder + *ἐλκυσίς* ulceration]. Ulceration of the bladder.

cystencephalus (sis-ten-sef'al-us) [Gr. *κύστις* bladder + *ἐγκέφαλος* brain]. A fetal monster with a membranous sac in place of a brain.

cystendesis (sis-ten-de'sis) [Gr. *κύστις* bladder + *ἐνδησις* suture]. Suturation of a wound of the gall-bladder or of the urinary bladder.

cysterethism (sis-ter'eth-izm) [Gr. *κύστις* bladder + *ἐρεθισμός* erethism]. Irritability of the bladder.

cysthypersarcosis (sis-ti'per-sar-ko'sis) [Gr. *κύστις* bladder + *ὕπερ* over + *σάρκωσις* growth of flesh]. A thickening of the muscular coat of the bladder.

cystic (sis'tik) [Gr. *κύστις* bladder]. Pertaining to a cyst or to the urinary bladder.

cysticercoid (sis-te-ser'koid). A form of larval tapeworm resembling cysticercus, but having the bladder small and almost devoid of fluid.

cysticercosis (sis-te-ser-ko'sis). The condition of being infected with cysticerci.

Cysticercus (sis-te-ser'kus), pl. *cysticer'ci* [Gr. *κύστις* bladder + *κέρκος* tail]. A larval form of the tapeworm in which the scolex is enclosed in a bladder-like cyst. See *hydatid*. **C. acanthotrias**, a species found in the dura mater of the human brain. **C. bo'vis**, the larva of *Tænia saginata*, found in the muscles of the ox. **C. cellulosa**, the larva of *Tænia saginata*, or pork tapeworm of man. It is found in the muscles of the pig and sometimes in those of man from auto-infection. **C. fasciolaris**, the larval stage

Cysticercus of the anterior chamber of the eye (Blanchard).

of *Tænia crassicolis*. It causes spindle-celled sarcomata in the livers of rats. **C. tenuicollis**, a hydatid found in the abdominal cavity of swine, sheep, and occasionally of man. It is the larva of *Tænia marginata* of the dog.

cysticolithectomy (sis'tik-o-lith-ek'to-me) [Gr. *kýstis* bladder + *lithos* stone + *ékromē* excision]. Removal of stone from the gall-bladder by an incision through the cystic duct.

cysticorrhaphy (sis-tik-or'af-e) [cystic duct + Gr. *ráxē* suture]. Suture of the cystic duct.

cysticotomy (sis-tik-ot'om-e) [cystic duct + Gr. *tomē* a cutting]. Incision into the cystic duct.

cystidolaparotomy (sis'tid-o-lap-ar-ot'o-me) [Gr. *kýstis* bladder + *laparotomy*]. Incision of the bladder through the abdominal wall.

cystidotrachelotomy (sis'tid-o-trak-el-ot'o-me) [Gr. *kýstis* bladder + *tráxēlos* neck + *tomē* a cut]. Incision of the neck of the bladder.

cystifellotomy (sis'te-fel-ot'o-me) [Gr. *kýstis* bladder + *L. fel* bile + Gr. *témnein* to cut]. Cholecystotomy.

cystiform (sis'tif-orm) [L. *cystis* cyst + *forma* form]. Having the form or appearance of a cyst.

cystigerous (sis-tij'er-us) [cyst + L. *gerere* to bear]. Containing cysts.

cystin (sis'tin). Dicystein, $[S.CH_2.CH(NH_2).COOH]_2$, an amino-acid produced by the digestion or acid hydrolysis of proteins. It is sometimes found in the urine and in the kidneys in the form of minute hexagonal crystals, frequently forming cystin calculus in the bladder. Cystin is the chief sulphur-containing compound of the protein molecule and a necessary constituent of a complete diet.

cystinemia (sis-tin-e-me-ah) [cystin + Gr. *αἷμα* blood]. Presence of cystin in the blood.

cystinuria (sis-tin-u're-ah) [cystin + *urine*]. The occurrence of cystin in the urine.

cystinuric (sis-tin-u'rik). Pertaining to or affected with cystinuria.

cystirrhagia (sis-tir-a'je-ah). Cystorrhagia.

cystirrhœa (sis-te-re'ah). Cystorrhœa.

cystistaxis (sis-te-staks'is) [Gr. *kýstis* bladder + *στάξις* dripping]. Oozing of blood into the bladder.

cystitis (sis-ti'tis). Inflammation of the bladder. **acute catarrhal c.** is excited by injuries, irritation of foreign bodies, gonorrhea, etc., and is marked by burning in the bladder, pain in the urethra, and painful micturition. **chronic c.** is due to a neglected acute cystitis. The symptoms are the same as those of the acute form, but are milder in character, and the disease is attended by increasing depreciation of health. **c. colli**, inflammation of the neck of the bladder. **croupous c.**, **diphtheric c.**, that due to diphtheric infection, and marked by the presence of false membrane. **exfoliative c.**, cystitis with sloughing of the mucous membrane of the bladder. **c. papillomatosæ**, cystitis located at the trigone of the bladder and marked by the presence of villi springing from an inflamed mucous membrane. **c. senilis femina rum**, a chronic cystitis occurring in old women and marked by abnormal frequency of micturition with tenesmus and burning.

cystitome (sis'te-töm) [Gr. *kýstis* sac + *témnein* to cut]. An instrument for opening the sac of the lens of the eye.

cystitomy (sis-ti'to-me) [Gr. *kýstis* sac + *témnein* to cut]. The surgical division of the capsule of the lens.

cysto-adenoma (sis'to-ad-en-o'mah). A tumor containing cystic and adenomatous elements.

cystoblast (sis'to-blast) [Gr. *kýstis* cyst + *βλαστός* germ]. The layer of cells that lines the amniotic cavity of the early embryo on the side of the enveloping layer.

cystocarcinoma (sis'to-kar-sin-o'mah). Carcinoma affected with cystic degeneration.

cystocele (sis'to-sēl) [Gr. *kýstis* bladder + *κήλη* hernia]. Hernial protrusion of a knuckle of the urinary bladder.

cystochrome (sis'to-kröm) [Gr. *kýstis* bladder + *χρῶμα* color]. A mixture of indigocarmine and urotopin: used by intramuscular or intravenous injection for the indigocarmine test of renal function.

cystocolostomy (sis'to-ko-lo'sto-me) [Gr. *kýstis* bladder + *colostomy*]. The surgical creation of a permanent passage from the bladder to the colon.

cystodynia (sis-to-din'e-ah) [Gr. *kýstis* bladder + *ὀδὸν* pain]. Pain in the urinary bladder.

cysto-elytroplasty (sis'to-el-it'ro-plas-te) [Gr. *kýstis* bladder + *ἐλτρον* vagina + *πλάσσειν* to form]. Surgical repair of vesicovaginal injuries.

cysto-enterocele (sis-to-en'ter-o-sēl). Hernia of a portion of the bladder and of the intestine.

cysto-epiplocele (sis'to-ep-ip'lo-sēl). Hernia containing a portion of the bladder and of the omentum.

cysto-epithelioma (sis'to-ep-e-the-le-o'mah). A tumor containing cystic and epitheliomatous elements.

cystofibroma (sis'to-fi-bro'mah) [L.]. Fibroma containing cysts.

cystoformin (sis-to-for'min). A compound of urotopin and sodium acetate used as a urinary antiseptic in doses of 30 gr. (1.95 gm.) daily.

cystogen (sis'to-jen). A white powder, $C_9H_{12}N_4$, used as a germicide in gonorrhea, cystitis, and kidney diseases. Dose, 5 gr. (0.333 gm.).

cystogram (sis'to-gram). A radiographic picture of the bladder.

cystography (sis-tog'raf-e) [Gr. *kýstis* bladder + *γράφειν* to write]. Radiography of the bladder after injection of the organ with collargol solution.

cystoid (sis'toid) [Gr. *kýstis* bladder + *εἶδος* form]. 1. Resembling a cyst. 2. A cyst-like, circumscribed collection of softened material, differing from a true cyst in having no inclosing capsule.

cystolith (sis'to-lith) [Gr. *kýstis* bladder + *λίθος* stone]. A urinary calculus.

cystolithectomy (sis'to-lith-ek'to-me) [Gr. *kýstis* bladder + *λίθος* stone + *ékromē* excision]. The excision of a gall-stone from the gall-bladder.

cystolithiasis (sis'to-lith-i'as-is) [Gr. *kýstis* bladder + *λίθος* stone]. The development of calculi in the bladder.

cystolithic (sis-to-lith'ik). Pertaining to urinary calculi.

cystolutein (sis-to-lu'te-in) [Gr. *kýstis* cyst + *L. luteus* yellow]. A yellow pigment from certain ovarian cysts.

cystoma (sis-to'mah) [Gr. *kýstis* cyst + *-ωμα* tumor]. A tumor containing cysts of pathologic origin; a cystic tumor.

cystomatitis (sis'to-mat-i'tis). Inflammation of one or more of the cysts of a cystoma.

cystomatous (sis-to-mat-us). Relating to or containing cystoma.

Cystomonas (sis-tom'o-nas). Same as *Bodo*.

cystomorphous (sis-to-mor'fus) [Gr. *kýstis* bladder + *μορφή* form]. Resembling a cyst or bladder.

cystomyoma (sis'to-mi-o'mah). Cystoma blended with myoma.

cystomyxo-adenoma (sis'to-miks-o-ad-en-o'mah). Cystomyxoma blended with adenoma.

cystomyxoma (sis'to-miks-o'mah). Myxoma which has undergone cystic degeneration.

cystonephrosis (sis'to-nef-ro'sis) [Gr. *kýstis* cyst + *νεφρός* kidney]. Cystiform dilatation or enlargement of the kidney.

cystoneuralgia (sis'to-nu-ral'je ah) [Gr. κύστις bladder + neuralgia]. Neuralgia of the bladder.

cystoparalysis (sis'to-par-al'is-is). Paralysis of the bladder.

cystopexy (sis'to-peks-e) [Gr. κύστις bladder + πῆξις fixation]. Cure of cystocele by fixing the bladder to the abdominal wall.

cystophotography (sis'to-to-fo-graf-e). The photographing of the inside of the bladder.

cystophthisis (sis-tof'this-is) [Gr. κύστις bladder + φθίσις consumption]. Tuberculosis of the bladder.

cystoplasty (sis'to-plas-te) [Gr. κύστις bladder + πλάσσειν to mold]. The plastic surgery of the bladder.

cystoplegia (sis-to-ple'je-ah) [Gr. κύστις bladder + πληγή stroke]. Paralysis of the bladder.

cystoproctostomy (sis'to-prok-tos'to-me). Same as *cystorectostomy*.

cystoptosis (sis-top-to'sis) [Gr. κύστις bladder + πῶσις a falling]. Prolapse of a part of the inner coat of the bladder into the urethra.

cystopurin (sis-to-pu'rin). A proprietary urinary antiseptic, being a double salt of hexamethylenamin and sodium acetate, $(\text{CH}_2)_6\text{N}_4 \cdot 2\text{CH}_3\text{COONa} \cdot 6\text{H}_2\text{O}$.

cystopyelitis (sis'to-pi-el-i'tis) [Gr. κύστις bladder + πυελίτις]. Cystitis complicated with pyelitis.

cystopyelonephritis (sis'to-pi'el-o-nef-ri'tis) [Gr. κύστις bladder + πύελος pelvis + νέφρος kidney + -ιτις inflammation]. Combined inflammation of the bladder and of the pelvis of the kidney.

cystoradiography (sis'to-ra-de-og'raf-e) [Gr. κύστις bladder + radiography]. Radiography of the bladder.

cystorectostomy (sis'to-rek-tos'to-me) [Gr. κύστις bladder + L. *rectum* straight gut + Gr. στόμα opening]. The formation of an artificial passage between the rectum and the bladder.

cystorrhagia (sis-tor-a'je-ah) [Gr. κύστις bladder + ῥηγνύναι to burst forth]. Hemorrhage from the bladder.

cystorrhaphy (sis-tor'af-e) [Gr. κύστις bladder + ραφή suture]. The suturing of the bladder.

cystorrhea (sis-tor-e'ah) [Gr. κύστις bladder + ῥοία flow]. Catarrh of the bladder.

cystosarcoma (sis'to-sar-ko'mah). Sarcoma with contained cysts.

cystoschisis (sis-tos'kis-is) [Gr. κύστις bladder + σχίσις fissure]. Fissure of the bladder.

cystoscirrhus (sis-to-skir'us) [Gr. κύστις bladder + σκίρρος hard]. Hard cancer of the bladder.

cystoscope (sis-to-skōp) [Gr. κύστις bladder + σκοπεῖν to inspect]. An endoscope for examining the interior of the bladder.

cystoscopic (sis-to-skōp'ik). Pertaining to or performed with the cystoscope.

cystoscopy (sis-tos'ko-pe). Examination of the bladder with the cystoscope.

cystose (sis'tōs). Resembling or containing a cyst or cysts.

cystosin (sis'to-sin). Dithiodiamido-ethylene lactic acid, a substance derivable from nuclein and sometimes found in urinary sediment.

cystospasm (sis'to-spazm) [Gr. κύστις bladder + σπασμός spasm]. Spasm of the bladder.

cystospermitis (sis'to-sper-mi'tis) [Gr. κύστις bladder + σπέρμα semen]. Inflammation of a seminal vesicle.

cystostaxis (sis-to-staks'is). Same as *cystislaxis*.

cystostomy (sis-tos'to-me) [Gr. κύστις bladder + στόμα opening]. The formation of an opening into the bladder.

cystotome (sis'to-tōm) [Gr. κύστις bladder + τέμνειν to cut]. 1. An instrument for incising the bladder. 2. Same as *cystilome*.

cystotomy (sis-tot'o-me). The operation of making an incision into the bladder. **suprapubic c.**, the operation of cutting into the bladder by an incision just above the pubic symphysis.

cystotrachelotomy (sis'to-tra-kel-ot'o-me) [Gr. κύστις bladder + τράχηλος neck + τομή cut]. Surgical incision of the neck of the bladder.

cysto-ureteritis (sis'to-u-re-ter-i'tis). Inflammation of the bladder and ureters.

cysto-ureterogram (sis'to-u-re'ter-o-gram). A radiogram of the bladder and ureter.

cysto-ureteropyelonephritis (sis'to-u-re'te-ro-pi-el-o-nef-ri'tis). Combined inflammation of the bladder, ureters, and pelvis of the kidney.

cysto-urethritis (sis'to-u-reth-ri'tis). Inflammation of the bladder and urethra.

cysto-urethroscope (sis'to-u-re'thro-skōp). An instrument for examining the bladder and posterior urethra.

cytameba (si-tam-e'bah) [Gr. κύτος cell + ameba]. An ameba occurring within a cell.

cytarsan (si-tar'san). A soluble cacodylate of bismuth and soda given by intramuscular injection in the treatment of syphilis. Dose, 0.05 gm.

cytase (si'tās) [Gr. κύτος cell + -ασε]. 1. Metchnikoff's term for the complement regarded as a ferment. 2. An enzyme occurring in the seeds of various plants, having the power of making soluble the material of the cell-wall.

cytaster (si'tas-ter) [Gr. κύτος cell + ἀστήρ star]. Same as *aster*.

cytax (si'taks) [Gr. κύτος cell + L. *taxa're* to estimate]. An instrument for automatically estimating and registering the proportions of the various cells of the blood.

cythemolysis (si-them-ol'is-is). Same as *hemocytolysis*.

cythemolytic (si-them-o-lit'ik). Pertaining to destruction of blood-corpuscles.

cytheromania (sith'er-o-ma'ne-ah) [Gr. κυθερα Venus + μανία madness]. Nymphomania.

cytidin (si'tid-in). A pentoside from nucleic acid. On hydrolysis it yields cytosin and ribose.

cytisin (si'tis-in) [Gr. κύτισος laburnum]. A white, crystalline base, $\text{C}_{20}\text{H}_{27}\text{N}_3\text{O}$, from *Cytisus laburnum*, the laburnum tree of Europe, and others of the same genus; it is a cathartic, diuretic, and emetic poison; its nitrate is given hypodermically. Dose, $\frac{1}{20}$ – $\frac{1}{12}$ gr. (0.003–0.0054 gm.).

cytismism (si'tis-izm). Poisoning by *Cytisus laburnum*.

cyto-architectonic (si'to-ar-ke-tek-ton'ik). Pertaining to the arrangement of cells in a tissue.

cytobiology (si'to-bi-ol'o-je) [Gr. κύτος cell + biol-ogy]. Cell biology; the biology of cells.

cytobiotaxis (si'to-bi-o-tak'sis) [Gr. κύτος cell + βίος life + τάξις arrangement]. Same as *cytoclesis*.

cytoblast (si'to-blast) [Gr. κύτος cell + βλαστός germ]. 1. Same as *micelle*. 2. The cell-nucleus.

cytoblastema (si'to-blas-te'mah) [Gr. κύτος cell + blastema]. Schleiden's name for the mother liquid from which cells are formed.

cytocerastic (si'to-se-ras'tik). See *cytokerastic*.

cytochemism (si-to-kem'izm) [Gr. κύτος cell + chemism]. The reaction of the body-cells to antitoxin, producing in the organism specific antitoxic substances.

cytochemistry (si-to-kem'is-tre) [Gr. κύτος cell + chemistry]. Chemistry of the cell.

cytochrome (si'to-krōm) [Gr. κύτος cell + χρώμα color]. A nerve-cell having an ill-developed cell-body, in which the stained nucleus appears to be completely surrounded, and does not exceed in size the nucleus of a leukocyte.

cytochylema (si'to-ki-le'mah) [Gr. κύτος cell + χυλός juice]. Hyaloplasm.

cytotoxic (si-to-si'dal). Same as *cytotoxic*.

cytotoxic (si'to-sid) [Gr. *kýtos* cell + *caedere* to kill]. Destroying cells.

cytokinesis (si'to-sin-e'sis). Same as *cytokinesis*.

cytotoxicity (si-to-kla'sis) [Gr. *kýtos* cell + *κλάσις* destruction]. The destruction of cells.

cytotoxic (si-to-kla'stik). Destroying cells.

cytotoxicity (si-to-kle'sis) [Gr. *kýtos* cell + *κλήσις* a call]. The influence of body cells on other body cells; the "call of cell to cell" (F. Wood Jones).

cytotoxic (si'to-sist) [Gr. *kýtos* cell + *κύστις* cyst]. A cyst-like structure inclosing a mass of merozoites, being the remains of the host-cell in which the merozoites were formed.

cytoid (si'töd) [Gr. *kýtos* cell + *εἶδος* form]. A non-nucleated cell or cell-element.

cytodendrite (si-to-den'drit) [Gr. *kýtos* cell + *δένδριον*]. Any dendrite other than an axodendrite; a dendrite given off from the cell itself, as distinguished from an *axodendrite*.

cytodesma (si-to-dez'mah) [Gr. *kýtos* cell + *δέσμα* band]. The lamellar or bridge-like tissues binding animal cells together (Studnicka).

cytodiagnosis (si'to-di-ag-no'sis) [Gr. *kýtos* cell + *διάγνσις*]. Diagnosis of disease based on a differential count of the cells in a transudate or exudate.

cytodieresis (si'to-di-er-es-is) [Gr. *kýtos* cell + *διαίρεσις* division]. Indirect cell-division.

cytodistal (si-to-dis'tal) [Gr. *kýtos* cell + *distal*]. Remote from the cell of origin.

cytofin (si'to-fín). One of the alloxur bases allied to thymine.

cytogenesis (si-to-jen'es-is) [Gr. *kýtos* cell + *γένεσις* origin]. The origin and development of cells.

cytogenic (si-to-jen'ik). Of, or pertaining to, cytogenesis.

cytogenous (si-toj'en-us) [Gr. *kýtos* cell + *γεννᾶν* to produce]. Producing cells.

cytogeny (si-toj'en-e). Same as *cytogenesis*.

cytoglobin (si-to-glo'bin) [Gr. *kýtos* cell + *globin*]. A protein substance from white blood-corpuscles. It is also obtainable from lymph-glands (Alexander Schmidt).

cytogony (si-tog'o-ne) [Gr. *kýtos* cell + *γόνη* seed]. Cytogenic reproduction.

cytostogenesis (si'to-his-to-jen'es-is) [Gr. *kýtos* cell + *ιστός* tissue + *γένεσις* formation]. The development of the structure of cells.

cytohyaloplasm (si-to-hi'al-o-plazm) [Gr. *kýtos* cell + *ὑαλος* transparent + *πλάσμα* plasm]. The reticular substance of cell-protoplasm.

cytohydrolyst (si-to-hi'dro-list) [Gr. *kýtos* cell + *hydrolysis*]. An enzyme which breaks up the cell wall by hydrolysis.

cytoid (si'toid) [Gr. *kýtos* cell + *εἶδος* form]. Resembling a cell.

cytokerastic (si'to-ke-ras'tik) [Gr. *kýtos* cell + *κεράστος* mixed]. Pertaining to the development of cells from a lower to a higher order.

cytokinesis (si'to-kin-e'sis) [Gr. *kýtos* cell + *κίνησις* motion]. The changes that take place in the cytoplasm during mitosis, meiosis, and fertilization.

cytolist (si'to-list). Same as *cytolysin*.

cytologic (si-to-loj'ik). Pertaining to cytology.

cytology (si-to-lo-je) [Gr. *kýtos* cell + *λόγος* treatise]. The scientific study of cells, their structure, and functions.

cytolymph (si'to-limf) [Gr. *kýtos* cell + *lymph*]. See *hyaloplasm*.

cytolysin (si-to-lis-in). A substance or antibody which produces dissolution of cells. Cytolysins which have a specific action for certain cells are named accordingly, as *hemolysins*, etc.

cytolysis (si-to-lis-is) [Gr. *kýtos* cell + *λύσις* dissolution]. The dissolution or destruction of cells.

cytolytic (si-to-lit'ik). Pertaining to or causing cytolysis.

cytoma (si-to'mah) [Gr. *kýtos* cell + *-ωμα* tumor]. A cell tumor, as a sarcoma.

cytomachia (si-to-mak'e-ah) [Gr. *kýtos* cell + *μάχη* fight]. The struggle between bacteria and the protective cells of the body.

cytomere (si'to-mér) [Gr. *kýtos* cell + *μέρος* part]. 1. One of the bodies formed in coccidian reproduction by division of the trophozoite, each cytomere becoming the center of merozoite formation. 2. That part of the sperm which is composed of cytoplasm.

cytometaplasia (si'to-met-ah-pla'se-ah) [Gr. *kýtos* cell + *μεταπλάσις* change]. Alteration in the form or function of a cell.

cytometer (si-tom'et-er) [Gr. *kýtos* cell + *μέτρον* measure]. A device for counting and measuring cells.

cytometry (si-tom'et-re). The counting of blood-cells; blood-counting.

cytomicrosome (si-to-mik'ro-söm) [Gr. *kýtos* cell + *microsome*]. A microsome of chromatin found in cytohyaloplasm.

cytomitome (si-to-mi'töm) [Gr. *kýtos* cell + *μίτος* thread]. A fibril or fibrillary structure of the spongioplasm.

cytomorphosis (si'to-mor-fo'sis) [Gr. *kýtos* cell + *μόρφωσις* transformation]. The series of changes through which cells go in the process of formation, development, senescence, etc.

cyton, **cytone** (si'tön) [Gr. *kýtos* cell]. The cell body of a neurone.

cytopenia (si-to-pe'ne-ah) [Gr. *kýtos* cell + *πένις* poor]. Deficiency in the cellular elements of the blood.

cytophagocytosis (si'to-fag-o-si-to'sis). Same as *cytophagy*.

cytophagous (si-tof'a-gus) [Gr. *kýtos* cell + *φαγείν* to eat]. Devouring or consuming cells.

cytophagy (si-tof'aj-e). The absorption of cells by other cells.

cytopharynx (si-to-far'inks). The depression in the body of infusoria through which food matter is received.

cytophil, **cytophilic** (si'to-fil, si-to-fil'ik) [Gr. *kýtos* cell + *φιλεῖν* to love]. Having an affinity for cells, as, the *cytophil* group of molecules of an amboceptor.

cytophysics (si-to-fiz'iks). The physics of cell activity.

cytophysiology (si'to-fiz-e-ol'o-je) [Gr. *kýtos* cell + *physiology*]. The physiology of the cell.

cytoplasm (si'to-plazm) [Gr. *kýtos* cell + *πλάσμα* plasm]. The protoplasm of a cell exclusive of that of the nucleus. Cf. *nucleoplasm*.

cytoplasmic (si-to-plaz'mik). Pertaining to or contained in the cytoplasm.

cytoplast (si'to-plast). The contents of the cell-body as distinguished from the nuclear contents.

cytoplastin (si-to-plas'tin). The plastin of cell cytoplasm.

cytoproximal (si-to-proks'im-al) [Gr. *kýtos* cell + *proximal*]. Nearest to the cell of origin.

cytoreticulum (si'to-re-tik'u-lum) [Gr. *kýtos* cell + *L. reticulum* network]. A fibrillar network of spongioplasm.

Cytorrhyses (si-tor-ik'tēz) [Gr. *kýtos* cell + *ρύσσειν* to dig]. Cell inclusions, found in various diseases, which may be specific protozoal pathogens, or they may be manifestations of cell reactions to the parasite of the disease, or they may be degenerations caused by the disease. **C. aphtha'rum**, a species thought to be concerned in the etiology of foot-and-mouth disease. **C. coc'ci**. See *Siegel's organism*, under *organism*. **C. guarnieri**, C.

vaccinae and *C. variolae*. **C. lu'is**, a species found in the blood in certain cases of syphilis. **C. scarlatinae**, a species thought to be the causative agent in scarlatina. **C. vaccin'iae**, a species found in the lesions of small-pox, and thought to be concerned in the etiology of that disease. **C. vari'olae** occurs in the epithelial cells of the vesicles of variola, and is thought to be the etiologic factor in that disease.

Cytorrhyctes (si-tor-ik'tēz). Cytorrhynes.

cytoscopy (si-tos'ko-pe) [Gr. *kýtos* cell + *σκοπεῖν* to examine]. Examination of cells.

cytosin (si'to-sin). A base, oxyaminopyrimidin, $C_4H_6N_3O$, one of the disintegration products of nucleic acid.

cytosis (si-to'sis) [Gr. *kýtos* cell]. A term used by Arneth to denote the condition of the nucleus of a leukocyte. According to the condition or characteristics of the nucleus there are distinguished *isocytosis*, *anisocytosis*, *hypercytosis*, *hypocytosis*, and *normocytosis*.

cytosome (si'to-sōm) [Gr. *kýtos* cell + *σῶμα* body]. The body of a cell apart from its nucleus.

cytospongium (si-to-spon'je-um) [Gr. *kýtos* cell + *σπόγγος* sponge]. The cell network or spongio-plasm.

cytost (si'tost) [Gr. *kýtos* cell]. A specific toxin given off from a cell as a result of injury to it; a specific agent given off from broken-down tissue.

cytostasis (si-tos'tas-is) [Gr. *kýtos* cell + *στάσις* halt]. The closure of capillaries by white blood-corpuscles in the early stages of inflammation.

cytostome (si'to-stōm) [Gr. *kýtos* cell + *στόμα* mouth]. The cell-mouth; the mouth aperture of certain protozoa.

cytostromatic (si'to-stro-mat'ik) [Gr. *kýtos* cell + *stroma*]. Pertaining to the stroma of a cell.

cytotactic (si-to-tak'tik). Pertaining to cytotaxis.

cytotaxia, **cytotaxis** (si-to-taks'e-ah, si-to-taks'is) [Gr. *kýtos* cell + *τάξις* arrangement]. The selection and arranging function of the cells.

cytotherapy (si-to-ther'ap-e) [Gr. *kýtos* cell + *θεραπεία* treatment]. Treatment by the administration of animal cells.

cytothesis (si-toth'es-is) [Gr. *kýtos* cell + *θέσις*

placing]. The restitution of injured cells to their normal condition.

cytotoxic (si-to-toks'ik). Having the action of a cytotoxin.

cytotoxin (si-to-toks'in) [Gr. *kýtos* cell + *toxin*]. A toxin or antibody which has a specific toxic action upon cells of special organs. Cytotoxins are named according to the special variety of cell for which they are specific, as, *nephrotoxin*.

cytotrochin (si-to-tro'kin) [Gr. *kýtos* cell + *τροχία* track]. That element of a toxin which carries the active element to the cell.

cytotropic (si-to-trop'ik) [Gr. *kýtos* cell + *τροπή* a turn]. Attracting cells; having affinity for cells.

cytotropism (si-to'tro-pizm). Same as *cytolaxis*.

cytozoic (si-to-zo'ik) [see *cytozoön*]. Living within or attached to cells; said of parasites.

cytozoön (si-to-zo'on), pl. *cytozo'a* [Gr. *kýtos* cell + *ζῶον* animal]. A protozoan parasite inhabiting a cell or having the structure of a simple cell.

cytozym, **cytozyme** (si'to-zim) [Gr. *kýtos* cell + *ζύμη* ferment]. Bordet's term for the substance liberated from the corpuscular elements of the blood which combines with serozyme to form thrombin. Cf. *serozyme*.

cyttarhagia (sit-ar-a'je-ah) [Gr. *κύτταρος* socket + *ῥηγνύειν* to burst forth]. Hemorrhage from a tooth socket.

cytula (sit'u-lah). The impregnated ovum.

cytuloplasm (sit'u-lo-plazm). The combined ovoplasm and spermoplasm in a cytula.

cyturia (si-tu're-ah) [Gr. *kýtos* cell + *οὐρον* urine]. Presence of cells of any sort in the urine.

Czaplewsky's bacillus, method of staining (chap-plev'skēz) [Eugen Czaplewsky, a Polish bacteriologist, born 1865]. See *bacillus* and *stain*, *table of*.

Czermak's spaces (chär'mahks) [Johann Nepomuk Czermak, Bohemian physician, 1828-1873]. See *space*.

Czerny's suture (chär'nēz) [Vincenz Czerny, surgeon in Heidelberg, 1842-1916]. See *suture*.

Czerny-Lembert suture (chär'ne-lahm-bär). See *suture*.

D

D. stands for *L.*, *dosis*, dose; *da*, give; *delur*, let it be given; *dexter*, right; also for *deciduous*, *density*, *died*, *didymium*, *diopter*, *dorsal*, and *duration*.

Daboia Russell'i. Russell's viper, a very poisonous Indian snake.

Da Costa's disease [Jacob M. *Da Costa*, American physician, 1833-1900]. Retrocedent gout.

dacrocystitis (dak'ro-sis-ti'tis). Same as *dacryocystitis*.

dacryadenalgia (dak're-ad-en-al'je-ah) [Gr. *δάκρυ* tear + *ἀδὴν* gland + *ἄλγος* pain]. Pain in a lacrimal gland.

dacryadenitis (dak're-ad-en-i'tis) [Gr. *δάκρυ* tear + *ἀδὴν* gland + *-ιτις* inflammation]. Inflammation of a lacrimal gland.

dacryadenoscirrhus (dak're-ad-en-o-skir'us) [Gr. *δάκρυ* tear + *ἀδὴν* gland + *σκιρῶς* scirrhus]. Scirrhus of a lacrimal gland.

dacryagogatresia (dak're-ag-o-gat-re'ze-ah) [Gr. *δάκρυ* tear + *ἀγωγός* leading + *atresia*]. Atresia, imperforation, or closure of a tear-duct.

dacryagogue (dak're-ag-og) [*L. dacryago'eus*; Gr. *δάκρυ* tear + *ἀγωγός* leading]. 1. Provoking a flow of tears. 2. Serving as a channel for tears. 3. A substance or agent which causes a flow of tears.

dacrycystalgia (dak're-sis-tal'je-ah) [Gr. *δάκρυ* tear + *κύστις* cyst + *ἄλγος* pain]. Pain in a dacryocyst.

dacrycystitis (dak're-sis-ti'tis). Same as *dacryocystitis*.

dacryelcosis (dak're-el-ko'sis) [Gr. *δάκρυ* tear + *ἐλκος* ulceration]. Ulceration of the lacrimal apparatus.

dacryo-adenalgia (dak're-o-ad-en-al'je-ah). *Dacryadenalgia*.

dacryo-adenitis (dak're-o-ad-en-i'tis). Same as *dacryadenitis*.

dacryoblennorrhoea (dak're-o-blen-or-e'ah) [Gr. *δάκρυον* tear + *blennorrhoea*]. Mucous discharge from the tear-ducts, as in chronic dacryocystitis.

dacryocoele (dak're-o-sēl) [Gr. *δάκρυον* tear + *κῆλη* hernial]. Hernial protrusion of the lacrimal sac.

dacryocyst (dak're-o-sist) [Gr. *δάκρυον* tear + *κύστις* bag]. The lacrimal sac or tear-sac.

dacryocystalgia (dak're-o-sis-tal'je-ah). See *dacrycystalgia*.

dacryocystitis (dak're-o-sis-ti'tis). Inflammation of the tear-sac; especially an acute suppurative inflammation of the submucous tissue, with painful swelling and discharge of pus. **chronic d.** See *dacryocystoblennorrhoea*.

dacryocystitome (dak're-o-sis'tit-ōm) [*dacryocyst* + Gr. *τομή* cut]. An instrument for incising lacrimal strictures.

dacryocystoblennorrhoea (dak're-o-sis'to-blenn-or-e'ah) [*dacryocyst* + *blennorrhoea*]. Chronic dacryocystitis, a chronic catarrhal inflammation of the lacrimal sac, due to stricture of the nasal duct, with consequent decomposition of the tears.

dacryocystocele (dak're-o-sis'to-sēl) [*dacryocyst* + Gr. *κήλη* hernia]. Protrusion of the lacrimal sac.

dacryocystoptosis (dak're-o-sis-top-to'sis) [Gr. *δάκρυον* tear + *κύστις* sac + *πτῶσις* fall]. Prolapse or downward displacement of the tear-sac.

dacryocystorhinostomy (dak're-o-sis-to-ri-nos'to-me) [*dacryocyst* + Gr. *ῥίς* nose + *στόμα* opening]. The operation of forming a communication between the lacrimal sac and the middle meatus of the nose through the lacrimal bone.

dacryocystosyringotomy (dak're-o-sis-to-si-ringot'o-me) [Gr. *δάκρυον* tear + *κύστις* sac + *σύριγξ* tube + *τομή* cut]. The operation of incising the lacrimal sac and duct.

dacryocystotome (dak're-o-sis'to-tōm) [Gr. *δάκρυον* tear + *κύστις* sac + *τομή* cut]. An instrument for cutting or piercing the lacrimal sac.

dacryocystotomy (dak're-o-sis-tot'o-me). Surgical puncture of the tear-sac.

dacryohelcosis (dak're-o-hel-ko'sis) [Gr. *δάκρυον* tear + *ἑλκος* ulceration]. Ulceration of the lacrimal sac or of the lacrimal duct.

dacryohemorrhoea, dacryohæmorrhœa (dak're-o-hem-or-e'ah) [Gr. *δάκρυον* tear + *αἷμα* blood + *ῥοία* flow]. The discharge of bloody tears.

dacryolin (dak're-o-lin). An albuminous substance found in tears.

dacryolite, dacryolith (dak're-o-lit, dak're-o-lith) [Gr. *δάκρυον* tear + *λίθος* stone]. A calcareous concretion in the lacrimal apparatus; tear-stone or lacrimal calculus. **Desmarre's d's**, masses of *Nocardia farsteri* in the lacrimal canal.

dacryolithiasis (dak're-o-lith-i'as-is) [Gr. *δάκρυον* tear + *λίθιασις*]. The formation of lacrimal calculi, or tear-stones.

dacryoma (dak-re-o'mah) [Gr. *δάκρυ* tear + *-ωμα* tumor]. 1. Obstruction of an inner tear-duct, causing a lacrimal tumor; or the tumor so caused. 2. Closure of a punctum lacrimale, with consequent overflow of tears.

dakryon (dak're-on) [Gr. *δάκρυον* tear]. A cranial point at the juncture of the lacrimal, frontal, and upper maxillary bones; the lacrimal point.

dacryops (dak're-ops) [Gr. *δάκρυ* tear + *ὤψ* eye]. 1. A watery state of the eye. 2. Distention of a tear-duct by a contained fluid.

dacryopyorrhoea (dak're-o-pi-or-e'ah) [Gr. *δάκρυον* tear + *πύον* pus + *ῥοία* flow]. Discharge of pus mixed with tears.

dacryopyosis (dak're-o-pi-o'sis) [Gr. *δάκρυον* tear + *πύωσις* suppuration]. Suppuration in the lacrimal apparatus.

dacryorhinocystotomy (dak're-o-ri-no-sis-tot'o-me) [Gr. *δάκρυον* tear + *ῥίς* nose + *κύστις* bag + *τομή* a cut]. The operation of passing a probe through the lacrimal sac and into the nasal cavity.

dacryorrhoea (dak're-or-e'ah) [Gr. *δάκρυον* tear + *ῥοία* flow]. Morbid or too profuse flow of tears.

dacryosolenitis (dak're-o-so-len-i'tis) [Gr. *δάκρυον* tear + *σολήν* duct + *-ιτις* inflammation]. Inflammation of a lacrimal or nasal duct.

dacryostenosis (dak're-o-sten-o'sis) [Gr. *δάκρυον* tear + *στένωσις* narrowing]. Stricture or narrowing of a lacrimal duct.

dacryosyrinx (dak're-o-si'rinks) [Gr. *δάκρυον* tear + *σύριγξ* pipe]. 1. Lacrimal fistula. 2. A syringe for lacrimal ducts.

dacryuria (dak-re-u're-ah) [Gr. *δάκρυ* tear + *ουρία* urine]. Involuntary discharge of urine accompanied by weeping; seen in hysteria, etc.

dactyl (dak'til) [Gr. *δάκτυλος*]. 1. A digit; a finger or toe. 2. The fruit of the date.

dactylate (dak'til-āt) [Gr. *δάκτυλος* finger]. Possessing finger-like processes.

dactylion, dactylum (dak-til'e-on, dak-til'e-um) [Gr. *δάκτυλος* finger]. Webbing together or union of fingers.

dactylitis (dak-til-i'tis) [Gr. *δάκτυλος* finger + *-ιτις* inflammation]. Inflammation of a finger or toe. **d. syphilitica**, syphilitic inflammation of a finger or toe. **d. tuberculo'sa**, tuberculous inflammation of a finger or toe.

dactylium (dak-til'e-um) See *dactylion*.

Dactylius aculeatus (dak-til'e-us). An animal parasite which has been detected in human urine.

dactylocampsodynia (dak'til-o-kamp'so-din'e-ah) [Gr. *δάκτυλος* finger + *κάμψις* bend + *ὀδύνη* pain]. Painful flexure of the fingers.

dactylogram (dak-til'o-gram) [Gr. *δάκτυλος* finger + *γράμμα* mark]. A finger-print taken for purposes of identification.

dactylography (dak-til-og'raf-e) [Gr. *δάκτυλος* finger + *γράφειν* to write]. The study of finger-prints.

dactylogryposis (dak'til-o-grip-o'sis) [Gr. *δάκτυλος* finger + *γρύψωσις* curve]. A permanent bending of the fingers.

dactylology (dak-til-ol'o-je) [Gr. *δάκτυλος* finger + *λόγος* discourse]. Conversation or talking by means of signs made with fingers.

dactylolysis (dak-til-ol'i'sis) [Gr. *δάκτυλος* finger + *λῦσις* a loosening]. Spontaneous loss of fingers and toes, as in ainhum or in leprosy.

dactylomegaly (dak'til-o-meg'al-e) [Gr. *δάκτυλος* finger + *μέγας* large]. Abnormally large size of the fingers or toes.

Dactylomyia (dak'til-o-mi'e-ah). A genus of anopheline mosquitos, some species of which act as carriers of the malarial parasite.

dactylometry (dak-til-os'ko-pe) [Gr. *δάκτυλος* finger + *σκοπεῖν* to examine]. Examination of finger-prints for purposes of identification.

dactylospasm (dak'til-o-spazm) [Gr. *δάκτυλος* finger + *σπασμός* spasm]. Spasm or cramp of a finger or toe.

dactylosymphysis (dak'til-o-sim'fis-is) [*dactyl* + *symplysis*]. A growing together of fingers or toes; syndactylism.

dactylus (dak'til-us) [Gr. *δάκτυλος* finger]. A finger or toe; especially a toe as contrasted with a finger or digitus.

dæmonomania (de'mo-no-ma'ne-ah). See *demonomania*.

Daffy's elixir (daf'ēz) [Thomas Daffy, an English clergyman of the seventeenth century]. Compound tincture of senna.

dagga (dag'ah). The leaves of African plants of the genus *Leonotis*; used by the natives for colds, snake-bites, and as a purgative and emmenagogue.

D. A. H. Abbreviation for *disordered action of the heart*. See *neurocirculatory asthenia*, under *asthenia*.

dahlia (dah'lah). A violet dye, methyl-triethyl-amino-triphenyl-carbinol chlorid, C₂H₅.NH(CH₃).C₆H₅.C(C₂H₅).NH.C₆H₅.Cl. Called also *Hofmann's violet*. **d. B.** methyl violet.

dahlin (dah'lin). 1. A reddish-purple anilin dye, formed by treating mauvein with ethyl iodid. It has been used as an antiseptic in streptococcic throat infections. 2. Inulin.

daisy (da'ze). The parasite of quartan malaria in its segmented phase.

Dakin's fluid or solution (da'kinz) [Henry Drysdale Dakin, New York chemist, born 1888]. See under *fluid*.

dakinization (da-kin-iz-a'shun). Treatment with Dakin's fluid.

dakryon (dak're-on). See *dacryon*.

Dalmatian powder (dal-ma'shan). See *pyrethrum*.

Dalrymple's disease, sign (dal'rim pelz) [John Dalrymple, an English oculist, 1804-1852]. See *disease* and *sign*.

dalton (dawl'ton). A unit of mass, being one-sixteenth of the mass of the oxygen atom.

Dalton's law (dawl'tonz) [John Dalton, English chemist, 1766-1844]. See *law*.

Dalton-Henry law [John Dalton. Joseph Henry, American physicist, 1797-1878]. See under *law*.

daltonism (dawl'ton-izm) [after John Dalton]. Same as *color-blindness*.

dam (dam). Sheet india-rubber used in dentistry and surgery to keep fluids away from the part which is to be operated upon. Called also *rubber-dam* and *coffer-dam*.

damalic acid (dam-al'ik). See *acid*.

damaluric acid (dam-al-u'rik). See *acid*.

damascenin (dam-as-e'nin). An alkaloid, $C_{15}H_{15}NO_3$, in yellow prisms, derived from the plant, *Nigella damascena*.

damiana (dah-me-ah'nah). The leaves of *Tur'nera aphroditi'sca* (*T. diffu'sa*) and *Haplopap'pus discoid'eus*, Mexican plants; said to be tonic, analeptic, diuretic, and aphrodisiac.

dammar (dam'ar). A transparent resin of *Dam'mara orientalis*, *D. al'ba*, *Ho'pea micran'tha*, *H. splendida*, and other trees: used in plasters, in varnishing, and in microscopy. **d. varnish**, a solution of dammar resin in chloroform or benzene, used for mounting microscopic specimens.

Dämmerschlaß (dem'er-slahf). German for *twilight sleep*. See under *sleep*.

Damocrates's confection (dam-ok'rat-ēz) [a Greek physician who lived at Rome about 50 A. D.]. See *confection*.

Damoiseau's curve or sign (dam-wah-zōz') [Louis Hyacinthe Céleste Damoiseau, a French physician, 1815-1890]. Same as *Ellis' line*, see under *line*.

damp (damp). A noxious gas in a mine. **after d.**, a gaseous mixture formed in a mine by the explosion of fire damp or dust. It contains nitrogen, carbon dioxide, and usually carbon monoxide. **black d.**, **choke d.**, a gaseous mixture formed in a mine by the gradual absorption of the oxygen and the giving off of carbon dioxide by the coal. **cold-d.**, foggy vapor charged with carbon dioxide. **fire-d.**, light explosive hydrocarbon gases, chiefly methane, CH_4 , found in coal-mines. **stink d.**, hydrogen sulphid. **white d.**, carbon monoxide.

Dana's operation (da'nahz) [Charles Loomis Dana, neurologist in New York, born 1852]. See *operation*.

dance, St. Vitus' (dans). See *chorea*.

Dance's sign (dan'sez) [Jean Baptiste Hippolyte Dance, a French physician, 1797-1832]. See *sign*.

dancing disease (dan'sing). See *tarantism*. **d. mania**, epidemic chorea. **d. spasm**, saltatory spasm. See *palmus*.

dandelion (dan'de-li-on). See *Taraxacum*.

dandruff (dan'druf). Scales formed upon the scalp, as in pityriasis capitis.

dandy (dan'de). A litter for the wounded, used to some extent in armies. **d.-fever**. See *dengue*.

daniell (dan'yel) [John Frederick Daniell, English physicist, 1790-1845]. A unit of electricity equal to 1.124 volts.

Danielssen's disease (dan'yel-senz) [Daniel Cornelius Danielssen, Norwegian physician, 1815-1894]. See *disease*.

Danube fever (dan'yüb). See *fever*.

Danyez's bacillus, phenomenon, vaccine (dan'ēz). See *bacillus, phenomenon, vaccine*.

Daphne (daf'ne) [Gr. *δάφνη* bay-tree]. A genus of trees and shrubs, *D. gnid'ium* and *D. mezereum*,

the principal medicinal species, are stimulant, vesicator, and purgative. See *mezercon*.

daphnetin (daf-ne'tin). A crystalline substance, $C_9H_6O_4$, from daphnin.

Daphnia (daf'ne-ah). A genus of fresh water crustaceans, called water fleas. The best known species, *D. pulex*, is used in biologic research.

daphnin (daf'nin). A volatile, acrid glucosid, $C_{15}H_{18}O_9 + 2H_2O$, from *Daph'ne mezereum*. It has vesicating properties.

daphnism (daf'nizm). Poisoning by species of *Daphne*.

Darier's disease (dar'e-āz) [Ferdinand Jean Darier, French physician, born 1856]. See *psorospermosis*.

dark-ground or dark-field illumination. See under *illumination*.

Darkshevitch's nucleus (dark-sha'vitsh-ez) [Livierius Darkshevitch, Russian neurologist, born 1858]. See *nucleus*.

darmol (dar'mol). A proprietary purgative, sodium phenolphthaleinate.

d'arsonvalization (dar'son-val-iz-a'shun). See *arsonvalization*.

darto, dartoid (dar-to'ik, dar'toid). Of the nature of a dartos; having a slow, involuntary contractility like that of the dartos. **d. tissue**, tissue like that of the dartos.

dartos (dar'tos) [Gr. *δάρτος* skinny]. The reddish, cellular, contractile tissue beneath the skin of the scrotum. **woman's d.**, a layer of unstriated muscular fibers immediately under the skin of the labia majora.

dartre (dar'ter) [Fr.]. Herpes, or any skin disease resembling it.

dartrous (dar'trus). Of, pertaining to, or resembling, the dartos.

darwinian tubercle (dar-win'e-an). See *tubercle*.

darwinism (dar'win-izm) [Charles Robert Darwin, English naturalist, 1809-1882]. The theory of evolution according to which higher organisms have been developed from lower ones through the influence of natural selection.

dasetherapy (das-e-ther'ap-e) [Gr. *δάσος* forest + *θεραπεία* treatment]. Treatment by living in a region surrounded by pine or spruce trees.

dasymeter (das-im'et-er). An instrument for measuring the density of a gas.

date (dāt). Fruit of the date-palm, *Phœnix dactylif'era*.

datum-plane (da-tum-plān). An assumed horizontal plane from which craniometric measurements are taken.

Datura (da-tu'rah). A genus of solanaceous plants. See *stramonium*.

daturin (da-tu'rin). An alkaloid of *Datu'ra stramonium*, acting like atropin, but stronger: said to be a mixture of hyoscyamin and atropin.

daturism (da-tu'rizm). Poisoning by stramonium.

Daubenton's angle, line, plane (do-bon-tonz') [Louis Jean Marie Daubenton, French physician and naturalist, 1716-1800]. See *angle, line, plane*.

Daucus (daw'kus) [L.; Gr. *δαυκος* carrot]. A genus of umbelliferous plants. *D. caro'ta* is the carrot. See *carrot*.

daughter cell, d. cyst, etc. See *cell, cyst*, etc.

Davainea (da-va'ne-ah) [Casimir Joseph Davaine, French physician, 1812-1882]. A genus of tape-worms. **D. asiatica** has been found once in man in Asiatic Russia. **D. formosana**, a species found in Formosa and Tokio. **D. madagascariensis** occurs in man in Madagascar and neighboring islands. **D. proglottina**, a species found in fowls. **D. strutio'nis**, a species found in the ostrich.

David's disease (dah-vidz') [Jean Pierre David, French surgeon, 1738-1884]. See *disease*.

Davidsohn's sign (da'vid-sönz) [Hermann Davidsohn, Prussian physician, born 1842]. See under *sign*.

Daviel's operation, spoon (dav-e-elz') [Jacques David, French oculist, 1696-1762]. See *operation* and *spoon*.

Davy's lever (da'vëz) [Richard Davy, English surgeon, born 1838]. See *lever*.

Davy's test (da'vëz) [Edmund William Davy, Irish physician, 1826-1890]. See *test*.

day, green. A day, during the diet for diabetes, on which the patient is permitted to take green vegetables, butter, eggs, and bacon. **hunger d.**, a day, during the diet for diabetes, on which the patient is permitted to take nothing but broth.

Day's test (dāz) [Richard Hance Day, American physician, 1813-1892]. See *test*.

day-blindness. A condition in which the patient sees better in a dim light or by night than in daylight.

day-nursery. See *crèche*.

day-sight. Same as *night-blindness*.

daymare (dā'mār) [L. *in'cubus vigilan'tium*]. Incubus occurring when awake, or by day, and resembling nightmare.

dazzle (daz'l'). See *glare*.

D. C. Abbreviation for *Doctor of Chiropractic*.

D. Cc. Abbreviation for *double concave*.

D. Cx. Abbreviation for *double convex*.

D. D. Abbreviation for L. *de'tur ad*, "let it be given to."

D. D. S. An abbreviation for *Doctor of Dental Surgery*.

de-. A Latin particle often signifying *down* or *from*: it is sometimes negative or privative, and frequently intensive.

deacidification (de'as-id'if-ik-a'shun). The act or art of correcting or destroying acidity or of neutralizing an acid.

deactivation (de-ak-tiv-a'shun). The process of making or becoming inactive; loss of radio-activity.

dead (ded). Destitute of life. **d. limb**, the subjective sensation of numbness in a limb.

deadly nightshade (ded'le). See *belladonna*.

deaf (def). Lacking the sense of hearing or not having the full power of hearing. **d.-fields, d.-points, d.-spots**, places near the ear at which the vibration of the tuning-fork is not heard. **d.-mute**, a person affected with deaf-mutism; a deaf and dumb person. **d.-mutism**, condition of being both deaf and dumb.

deafness (def'nes). Lack or loss, complete or partial, of the sense of hearing. **apoplectic-form d.**, Ménière's disease. **bass-d.**, deafness to certain low tones. **boilermakers' d.**, that which is caused by working in places where the sound is very deafening. **cerebral d.**, that which is due to brain lesion. **ceruminous d.**, that which is due to plugs of ear-wax. **cortical d.**, deafness due to a lesion of cortical brain substance. **hysteric d.**, that which may appear or disappear in a hysteric patient without discoverable cause. **labyrinthine d.**, that which is due to disease of the labyrinth. **malarial d.**, that which occurs as a result of malarial poisoning. **mental d., mind-d.**, a condition in which auditory sensations persist, but, owing to some lesion of the auditory center of the brain, they convey no meaning to the mind. Called also *psychic d., sensory d., and mental d.* **midbrain d.**, deafness dependent on injury of the fillet tract of the tegmentum. **music-d.**, inability to recognize musical notes; amusia. **nervous d.**, that which is due to a lesion of the auditory nerve. **paradoxical d.**, that when the hearing is best dur-

ing the continuance of a loud noise; *paracusis willisiana*. **pocket-handkerchief d.**, deafness due to excessive pressure on the eustachian tubes from blowing the nose. **psychic d., sensory d., soul-d.** Same as *mental d.* **throat-d.**, that due to enlarged tonsils or to closure of the eustachian tube. **tone-d.**, amusia. **toxic d.**, deafness caused by the effect of poisons on the auditory nerve. **vascular d.**, that due to disease of blood-vessels of the ear. **word-d.**, disease of the auditory center in which sounds are heard, but convey no meaning to the mind.

dealbation (de-al-ba'shun). Bleaching.

dealcoholization (de-al-ko-hol-iz-a'shun). The removal of alcohol from an object, as in microscopic work.

dealin (de'al-in). A proprietary dressing powder containing sodium perborate, boric acid, magnesium carbonate, zinc oxide, starch, and talcum.

deamidase (de-am'id-ās). A ferment which splits adenin and guanin.

deamidization (de-am-id-iz-a'shun). Liberation of the ammonia from an amid.

deaminase (de-am'in-ās). An enzyme which causes deamination, or the removal of the amino group from organic compounds.

deamination (de-am-in-a'shun). Removal of the group NH₂ from an amino-body.

deaminization (de-am-in-iz-a'shun). Deamination.

deanesthesiant (de-an-es-the'ze-ant). Anything that will arouse a patient from anesthesia.

deaoation (de-ak-wa'shun) [L. *de* from + *a'qua* water]. Removal of water from anything; dehydration.

Dearg. pil. Abbreviation for L. *deargen'tur pil'ulae*, let the pills be silvered.

dearterialization (de-ar-te're-al-iz-a'shun). The conversion of arterial into venous blood.

dearticulation (de-ar-tik-u-la'shun). Same as *abarticulation*.

death (deth). Cessation or extinction of life. **apparent d.**, a condition in which the breathing, heart's action, bodily warmth, and other manifestations of life are very feebly maintained. **black d.**, old name for an epidemic plague which occurred in Europe in the fourteenth century. **limes d.** See *L+ dose*, under *dose*. **local d.**, death of a part of the body. **d.-mask**, a plaster cast of the face of a dead person. **molecular d.**, caries, catastasis, or the last stage of a catabolic process. **d.-point, thermal**, the degree of heat required to kill young fluid cultures of an organism exposed for ten minutes (in thin-walled test-tubes of a diameter not exceeding 20 mm.) in the thermal water-bath. **d.-rate**, the proportional number of persons who die in a year in a given population. **d.-rattle**, the sound sometimes emitted by the dying, and caused by expulsion of the breath through channels partly filled with mucus. **serum d.**, death due to anaphylaxis following the injection of serum. **somatic d.**, death of the whole body. **d.-struggle**, the semi-convulsive and, in part, at least, automatic movements which sometimes occur just before death. **thymic d.** See *mors thymica*. **d.-trance**, trance which simulates death.

Deaur. pil. Abbreviation for L. *deauren'tur pil'ulae*, let the pills be gilded.

Deaver's incision (de'verz) [John B. Deaver, contemporary Philadelphia surgeon]. See under *incision*.

Deb. spis. Abbreviation for L. *deb'ita spissitu'dine*, of the proper consistence.

deba (de'bah). Diethylbarbituric acid.

debilitant (de-bil'it-ant) [L. *deb'ilis* weak]. 1. Causing debility. 2. A remedy for too great excitement.

debility (de-bil'i-te). Lack or loss of strength.

debouchment (da-boosh-maw') [Fr.]. Opening into another part.

Debout's pills (deb-ōz') [Emile *Debout*, French physician, 1811-1865]. See under *pill*.

Débove's membrane (da-bōvz') [Maurice Georges *Débove*, French histologist, 1845-1920]. See *membrane*.

débridement (da-brēd-maw') [Fr.]. Wound excision; a procedure used in treating wounds consisting in the removal of all foreign matter and excision of all the tissues immediately surrounding the wound, including devitalized soft parts in the vicinity. Cf. *épluchage*.

débris (da-brē') [Fr.]. Accumulated fragments; rubbish. In dentistry, soft foreign matter loosely attached to the surface of a tooth. **word d.**, sounds made by an aphasic patient in attempting to talk.

Dec. Abbreviation for *L. decan'ta*, pour off.

decagram (dek'ag-ram) [Gr. *dēka* ten + *gram*]. Ten grams, or 154.32 grains troy.

decalcification (de'kal-sif-ik-a'shun). 1. The process of removing calcareous matter. 2. Artificial or morbid softening of the teeth.

decalcify (de-kal'sif-i) [L. *de* priv. + *calx* lime]. To deprive of lime salts.

decaliter (dek'al-e-ter) [Gr. *dēka* ten + *līter*]. Ten liters, or 61.028 cubic inches.

decalvant (de-kal'vant). Removing or destroying hair.

decameter (dek'am-e-ter) [Gr. *dēka* ten + *meter*]. Ten meters.

decane (dek'an) [Gr. *dēkan* ten]. A hydrocarbon, $C_{10}H_{22}$, from paraffin.

decannulation (de-kan-nu-la'shun). Removal of a cannula, especially a tracheotomy cannula.

decantation (de-kan-ta'shun) [L. *de* from + *can'tus* tire of a wheel]. The pouring of a clear supernatant liquid from a sediment.

decapeptid (dek-ah-pep'tid). A peptid a molecule of which contains ten amino-acid groups.

decapitation (de-kap-it-a'shun) [L. *de* from + *cap'ut* head]. The removal of the head of a fetus or of a bone.

decapitator (de-kap'it-a-tor). An instrument for removing the head of a fetus in embryotomy.

Decapoda (dek-ap'o-dah) [Gr. *dēka* ten + *pod's* foot]. An order of *Crustacea*, including the crabs, lobsters, shrimps, etc. They have five pairs of legs upon the thorax.

decapsulation (de-kap-su-la'shun). Removal of the capsule; especially removal of the renal capsule. **renal d.**, that occurring in cases of chronic Bright's disease.

decarbonization (de'kar-bon-iz-a'shun). The removal of carbon from the blood in the lungs by the substitution of oxygen for carbon dioxide.

decarboxilation, decarboxylation (de-kar-bok-sil-a'shun, de-kar-box-il-iz-a'shun). Conversion of an amino-acid into a corresponding amin by removal of a molecule of carbon dioxide.

decay (de-ka') [L. *de* down + *cadere* to fall]. 1. The gradual decomposition of dead organic matter. 2. The process or stage of decline; old age and its effects on mind and body. **anile d.**, old age in women.

decentered (de-sen'terd). Said of a lens in which the visual axis does not pass through the axis of the lens.

decentration (de-sen-tra'shun) [L. *de* from + *cen'trum* center]. The act or process of removing from a center.

decerebrate (de-ser'e-brāt). Having the brain removed. **d. rigidity**. See under *rigidity*.

decerebration (de'ser-e-bra'shun) [L. *de* from + *cerebrum* cerebrum]. The removal of the brain in performing craniotomy.

decerebrize (de-ser'e-briz). To remove the brain in vivisection.

dechloridation (de-klo-rid-a'shun). The removal of salt from the diet.

dechlorination (de-klo-rin-a'shun). Dechloridation.

dechloruration (de-klo-ru-ra'shun). The production of decreased excretion of chlorates in the urine, brought about by diet.

decholesterinization (de-ko-les-ter-in-iz-a'shun). Decholesterolization.

decholesterolization (de-ko-les-ter-ol-iz-a'shun). Extraction of cholesterol from the system.

decidua (de-sid'u-ah) [L. from *decid'uus* falling off]. The membranous structure produced in the uterus during gestation and thrown off after parturition. **d. basalis**, the decidua serotina. **d. capsularis**, the decidua reflexa. **d. graviditatis**, the menstrual decidua during the stage of pregnancy. **d. membranosa**. Same as *d. reflexa*. **d. menstrua'lis**, the hyperemic and swollen mucous membrane of the uterus during the menstrual period. **ovular d.** See *d. reflexa*. **placental d.** See *d. serotina*. **d. reflexa**, the part of decidua which is reflected upon and surrounds the ovum. **d. serotina**, the late decidua; the part of the decidua vera which becomes the maternal portion of the placenta. **uterine d.** See *d. vera*. **d. vera**, the true decidua; the portion of the decidua which lines the uterus.

decidual (de-sid'u-al). Pertaining to the decidua. **d. cells**. See *cell*.

decidualitis (de-sid'u-al-ī'tis). A bacterial disease leading to alterations in the decidua.

deciduitis (de-sid-u-ī'tis). Decidual endometritis. See *endometritis*.

deciduoma (de-sid-u-o'mah) [*decidua* + Gr. *-ōma* tumor]. An intra-uterine neoplasm containing decidual cells; probably derived from portions of retained decidua after abortion. The tumor may be malignant, and is then called *d. malignum* and also *chorioepithelioma*, on the theory that it is derived from the epithelial structures. **d. malignum**. See *syncytioma malignum*.

deciduosarcoma (de-sid'u-o-sar-ko'mah). Same as *deciduoma malignum*.

deciduus (de-sid'u-us) [L. *decid'us*, from *decid'ere* to fall off]. Not permanent; temporary; the term is used to designate the teeth of the first dentition.

decigram (des'ig-ram). The tenth part of a gram; 1.544 grains.

decilan (des'il-an). A solution of formaldehyd potassium oleate; antiseptic and disinfectant.

deciliter (des'il-e-ter). One-tenth of a liter, equal to 6.1028 cubic inches.

decimeter (des'im-e-ter). One-tenth of a meter; 3.937 linear inches.

decinem (des'in-em). Pirquet's term for one-tenth of a nem or the nutritive value of 1 decigram of milk. It is abbreviated *dn*.

decinormal (des-in-or'mal) [L. *de'cimus* tenth + *norma* rule]. Having one-tenth of the normal or standard strength.

decipara (des-ip-ar'ah) [L. *de'cem* ten + *parere* to produce]. A woman who has borne ten children.

decitellization (de-si-tel-iz-a'shun) [L. *de* away + *citellus* ground squirrel]. The destruction of ground squirrels, which are carriers of plague.

deckplate (dek'plāt). See *dorsal plate*, under *plate*.

declination (dek-lin-a'shun) [L. *declin'are* to decline]. 1. The angle made with the horizon by any freely suspended magnetic needle. 2. Rotation of the eye about its anteroposterior diameter so that its vertical meridian lies to the temporal (*positive d.*) or to the nasal side (*negative d.*) of its proper position.

declinator (dek'lin-a-tor). An instrument by which parts (as the meninges of the brain) are held aside during an operation.

decline (de-klīn'). 1. The period or stage of the abatement of a disease or paroxysm. 2. Any wasting disease, especially pulmonary tuberculosis.

declive (de-kliv') [Fr. *declive*; L. *declivis*]. 1. [B N A] The declivis cerebelli. 2. Having a downward slope.

declivis cerebelli (dek-lī'vis ser-e-bel'i). The inclined dorsal surface of the superior vermis of the cerebellum. See *monticulus*.

Decoct. Abbreviation for L. *decoc'tum*, a decoction.

decoction (de-kok'shun) [L. *decoc'tum*, from *de* down + *co'quere* to boil]. 1. The act or process of boiling. 2. A medicine or other substance prepared by boiling. **d. of the woods**, compound decoction of sarsaparilla. **Zimmermann's d.**, a cathartic decoction of 30 gr. of rhubarb, 240 gr. of potassium bitartrate, 240 gr. of barley, 16 fl.oz. of water, and enough syrup to sweeten it. **Zittmann's d.**, the compound decoction of sarsaparilla: a decoction of sarsaparilla, calomel, cinabar, alum, senna, licorice, anise-seed, and fennel. It is used in syphilis.

decoctum (de-kok'tum) [L. "boiled"]. A decoction.

decollation (de-kol-a'shun) [L. *de* away + *col'lum* neck]. Decapitation, or beheading; removal of the head, chiefly of the fetus in difficult labor.

decollement (da-ko-maw') [Fr. "ungluing"]. The operation of separating an organ from the adjoining tissue to which it normally adheres, as of the parietal pleura from the chest wall.

decoloration (de-kul-or-a'shun). 1. Removal of color; bleaching. 2. Lack or loss of color.

decolorize (de-kul'or-iz). To free from color; to bleach.

decompensation (de-kom-pen-sa'shun). Failing compensation of the heart in valvular disease.

decomplementize (de-kom'ple-men-tiz). To remove complement from.

decomposition (de'kom-po-zish'un) [L. *de* neg. + *comp'nerere* to put together]. 1. The separation of compound bodies into their constituent principles. 2. Decay; putrefaction. 3. Infantile atrophy.

decompression (de-kom-presh'un). The removal of pressure or compression force. **cerebral d.**, removal of a flap of the skull and incision of the dura mater for the purpose of relieving intracranial pressure. **d.-injury**. See *caisson-disease*, under *disease*.

decongestive (de-kon-jes'tiv). Reducing congestion.

decortication (de'kor-tik-a'shun) [L. *de* from + *cortex* bark]. 1. The removal of bark, hull, husk, or shell from a plant, seed, or root, as in pharmacy. 2. Removal of portions of the cortical substance of the brain. **arterial d.** See *peri-arterial sympathectomy*, under *sympathectomy*. **d. of lung**, removal of the pleura for the relief of empyema. **renal d.**, removal of the capsule of the kidney.

decrement (dek're-ment) [L. *decremen'tum* decrease]. The stage of decline of a disease.

decrepitate (de-krep'it-ät). To explode with a crackling noise.

decrepitation (de-krep-it-a'shun) [L. *decrepita're* to crackle]. The crackling noise made by throwing certain bodies, as salt, on the fire.

decrudescence (de-kru-des'ens). Diminution of the intensity of symptoms.

Decub. Abbreviation for L. *decu'bitus*, lying down.

decubital (de-ku'bit-al). Pertaining to decubitus, or to a bed-sore.

decubitus (de-ku'bit-us) [L. a "lying down"]. 1. An act of lying down. 2. A bed-sore. **d. acu'tus**, a severe and fatal form of bed-sore on a paralyzed side in hemiplegia. **Andral's d.**, decubitus on the sound side; a position assumed in the early stages of pleurisy. **d. chron'icus**, ordinary bed-sore due to recumbent position. **dorsal d.**, recumbency in the supine position.

decurrent (de-kur'ent) [L. *decu'rere* to run down]. Extending or moving from above downward.

decur'sus fibra'rum cerebra'lium [B N A]. The running down of the cerebral fibers; indicating the course of fiber tracts of the brain.

decurtate (de-kur'tät) [L. *decurta'tus* cut short]. Abridged, or cut short.

decussate (de-kus'ät) [L. *decussa're* to cross in the form of an X]. 1. To cross or intersect in the form of the letter X. 2. Crossing in the form of the letter X.

decussatio (de-kus-a'she-o) [L.]. Decussation. **d. bra'chii conjuncti'vi** [B N A], a crossing of the fibers of the tegmenta starting from the brachia conjunctiva. **d. lemnis'ci**, **d. lemnisco'rum** [B N A], the superior pyramidal decussation. **d. nervo'rum trochlear'icum** [B N A], the crossing of the fibers of the trochlear nerves on the upper surface of the superior medullary velum. **d. pyram'idum** [B N A]. See *decussation* of the pyramids. **d. tegmento'rum** [B N A], the crossing of the fiber tracts of the tegmenta.

decussation (de-kus-a'shun) [L. *decussa'tio*]. 1. The running of two fellow-parts or structures athwart each other; a chiasm; particularly a band of nerve-fibers crossing the median plane of any part of the central nervous system and connecting unlike centers on the two sides. Some decussations are called *commissures*. 2. The point of crossing of decussate parts. **fillet d.**, a crossing of nerve-fibers over the median line in the medulla oblongata, forming the fillet. **Forel's d.**, the ventral part of the fountain decussation. **fountain d.**, a decussation such as that of the nerve-fibers in the cortex of the anterior corpora quadrigemina. **motor d.**, the decussation of the pyramids. **optic d.**, the optic chiasm. **pini-form d.**, the superior pyramidal decussation. **d. of the pyramids**, the crossing of the fibers of the pyramids of the oblongata from one pyramid to another. **sensory d.**, the superior pyramidal decussation. **superior pyramidal d.**, the chiasm in front of the central canal of the oblongata, of fibers from the nucleus cuneatus and nucleus gracilis.

decussorium (de-kus-o're-um). An instrument for depressing the dura mater in trephining.

dedasol (ded'as-ol). A proprietary preparation of digitals in tablet form.

dedentition (de-den-tish'un) [L. *de* away + *dens* tooth]. The shedding or loss of teeth.

De d. in d. Abbreviation for L. *de di'e in di'em*, from day to day.

dedolation (ded-o-la'shun). 1. A sensation as if the limbs had been bruised. 2. The shaving off of a piece of skin by an oblique cut.

de-electronation (de-e-lek-tro-na'shun). The removal of an electron or electrons from an element; a term proposed as a substitute for oxidation.

deëmanate (de-em'an-ät). To deprive of the property of giving off radioactive emanations.

Deen's test (dēnz) [Izaak Abrahamszoon van Deen, Dutch physiologist, 1804-1866]. See under *tests*.

deep (dēp). Not near the surface; not superficial.

deer-fly. See *Chrysops discalis*.

deer-fly disease, fever, or malady. See *tularæmia*.

Deetjen's bodies (dät'yenz) [Hermann Deetjen, German physician, born 1867]. Blood-platelets.

defatigation (de-fat-ig-a'shun). Overstrain or fatigue of muscular or nervous tissue.

defatted (de-fat'ed). Deprived of fat. **d. vaccine.** See *Dreyer's vaccine*, under *vaccine*.

defecalgiesiophobia (def'e-kal-je'-se-o-f'be-ah) [defecation + Gr. *ἄλγος* pain + *φόβος* fear]. Fear of defecation because of pain caused by the act.

defecation (def-ik-a'shun) [L. *defecare* to deprive of dress]. The discharge of fecal matters from the bowel. **fragmentary d.**, a condition in which every few hours a small stool is passed, with tenesmus and a feeling of incomplete defecation.

defective (de fek'tiv). 1. Imperfect. 2. A person lacking in some physical, mental, or moral quality.

defemination (de-fem-in-a'shun) [L. *de* from + *femina* woman]. Perversion of the instincts of a woman, so that her sexual impulses resemble those of a man.

defensive protein (de-fen'siv). See *protein*.

deferens (def'er-enz). The vas deferens.

deferent (def'er-ent) [L. *deferens* carrying away]. Conveying anything away, as from a center.

deferentectomy (def'er-en tek'to-me). Surgical removal of a vas deferens; vasectomy.

deferential (def'er-en'shal). Pertaining to the vas deferens.

deferentitis (def'er-en-ti'tis). Inflammation of the vas deferens.

defervescence (def'er-ves'ens) [L. *defervescere* to cease boiling]. The period of disappearance of fever.

defervescient (def'er-ves'ent). Causing reduction of fever; also a remedy so acting.

defibrination (de'fib-rin-a'shun). Deprival of fibrin.

deficiency disease (de-fish'en-se). See under *disease*.

deficit, pulse (def'is-it). The difference between the heart rate and the pulse rate.

definition (def-in-ish'un). The clear determination of the limits of anything, as a disease process or a microscopic image.

deflagration (def-lag-ra'shun) [L. *deflagrare* to be consumed by fire]. A rapid, violent combustion with flame and explosion.

deflection of the complement (de-flek'shun). See *deviation of the complement*.

defloration (def-lo-ra'shun) [L. *defloratio*]. Loss of virginity without actual rape or violence.

deflorescence (def-lor-es'ens). The disappearance of the eruption in any exanthematous disease.

defluvium (de-flu've-um). Sudden loss of the hair. Called also *deflu'vium capillorum*.

defluxio capillorum (de-fluks'e-o) [L. for "loss of hair"]. Sudden loss of the hair. **d. ciliorum**, sudden loss of the eyelashes.

defluxion (de-fluk'shun) [L. *defluxio* a flowing down]. A copious discharge; a sudden loss.

deformation, deformity (def-or-ma'shun, de-for-mit-e). Distortion of any part or general disfigurement of the body. **anterior d.**, lordosis. **gun-stock d.**, deformation in which the forearm when extended makes an angle with the arm; due to fracture at the elbow. **Madelung's d.**, distortion of the radius at its lower end, with ulnar displacement backward. **seal-fin d.**, outward deflection of the fingers in rheumatoid arthritis. **silver-fork d.**, the peculiar deformity seen in Colles' fracture. See illustration under *fracture*. **Sprengel's d.**, congenital upward displacement of the scapula. **Velpeau's d.**, silver-fork deformity. **Volkmann's d.**, congenital tibiotarsal dislocation.

deforming (de-for'ming). Causing deformity. **d. arthritis, d. osteitis**. See *arthritis, osteitis*.

defunctionalization (de-furk'shun-al-i-za'shun). Loss or deprival of a function.

defurfuration (de-fur-fu-ra'shun) [L. *de* away +

furfur bran]. The formation and shedding of fine, bran-like scales from the skin.

Deg. Abbreviation for *degeneration* and *degree*.

degallol (deg'al-ol). A mixture of oil of peppermint and desoxycholic acid; used as a cholagogue.

deganglionate (de-gan'gle-on-ät). To deprive of a ganglion, to remove a ganglion or ganglia from.

degassing (de-gas'ing). Treatment of men who have been subjected to the fumes of gas.

degeneracy (de-jen'er-as-e). A state characterized by deterioration of the powers of body and mind. **inferior d.**, degeneracy marked by deformity or by weakened mentality. **superior d.**, degeneracy with brilliant mental powers.

degenerate (de-jen'er-ät). 1. To change from a higher to a lower type or form. 2. A person of a perverted mental or physical constitution.

degeneratio (de-jen'er-a'she-o). Latin for *degeneration*. **d. micans**, the glistening hyaline matter formed by degenerating glia-cells.

degeneration (de-jen'er-a'shun) [L. *degeneratio*]. Deterioration; change from a higher to a lower form; especially change of tissue to a lower or less functionally active form. When there is chemic change of the tissue itself, it is *true* degeneration; when the change consists in the deposit of abnormal matter in the tissues, it is *infiltration*. **Abercrombie's d.**, amyloid degeneration. **adipose d.** See *fatty d.* **adiposogenital d.**, dystrophia adiposogenitalis. **albuminoid d.**, albuminous d. See *cloudy swelling*, under *swelling*. **amyloid d.**, degeneration with the deposit of lardacein in the tissues. It indicates impairment of nutritive function, and is seen in wasting diseases. **anemic d.**, polychromatophilia. **angiolithic d.**, one characterized by mineral deposits and hyaline changes in the coats of the vessels. **Armanini-Ehrlich's d.**, hyaline degeneration of the epithelial cells of Henle's loops; seen in diabetes. **ascending d.**, wallerian degeneration affecting centripetal nerve-fibers and progressing toward the brain or spinal cord. **atheromatous d.**, the change in the arterial coats which occurs in arteritis deformans; atheroma. **axonal d.**, the reaction of a nerve-cell to injury to its axone. It consists of central chromatolysis and eccentricity of the nucleus. **bacony d.** Same as *amyloid d.* **basic d.** See *basophilia*. **basophilic d.** See *basophilia*. **blastophthoric d.**, blastophthoria. **calcareous d.**, degeneration with infiltration of calcareous materials into the tissues. **caseous d.**, cheesy d. Same as *caseation*. **cellulose d.**, amyloid degeneration. **chitinous d.** Same as *amyloid d.* **cloudy swelling d.** See *cloudy swelling*, under *swelling*. **colloid d.**, the assumption by the tissues of a gum-like or gelatinous character. **comma d.**, progressive degeneration of the nervous matter of the comma-tract. **cystic d.**, degeneration with the formation of cysts. **descending d.**, wallerian degeneration extending peripherally along nerve-fibers. **earthy d.** Same as *calcareous d.* **elastoid d.**, amyloid degeneration of the elastic tissue of arteries. **endoglobular d.**, a condition sometimes seen in large red blood-corpuscles (megalo-cytes) in which they exhibit irregularly shaped colorless areas. **fascicular d.**, degeneration of paralyzed muscles due to lesion in the motor ganglion-cells of the central tube of gray matter of the cord. **fatty d.**, deposit of fat-globules in a tissue. **fibrinous d.**, necrosis with deposit of fibrin within the cells of the tissue. **fibroid d.**, degeneration into fibrous tissue. **fibrous d.** Same as *fibrosis*. **gelatiniform d.** Same as *colloid d.* **glassy d.**, a peculiar change occurring in the heart muscle and other muscles in fevers. **glistening d.**, degeneration of glia tissue characterized by the formation of glistening masses. Called also *degeneratio micans* and *Rosenthal's d.* **granular d.** Same as *basophilia*. **Grawitz's**

- d.** See *basophilia*. **gray d.**, degeneration of the white substances of the spinal cord, in which it loses myelin and assumes a gray color. **hemato-hyaloid d.**, a form of hyaline degeneration of thrombi due to conglutination of the red cells or blood-platelets. **hepatolenticular d.** See *progressive lenticular d.* **Holmes's d.** See *primary progressive cerebellar d.* **Horn's d.**, degeneration with nuclear proliferation in striated muscles. **hyaline d.**, abnormal transformation of a tissue into a transparent, shining material. **hyaloid d.**, amyloid degeneration. **hydropic d.**, a variety in which the degenerated cells absorb much water. **keratoid d.**, change of the plasma of a cell into keratin. **lardaceous d.** Same as *amyloid d.* **lenticular d.** See *progressive lenticular d.* **Maragliano's endoglobular d.**, degeneration of red blood-cells, marked by the formation of one or more vacuolated areas, which are probably areas of coagulative necrosis. **mucinoid d.**, a term used to include both mucoid and colloid degeneration. **mucoid d.**, **myelinic d.**, a deposit of myelinic and lecithin substances in the cells. **mucous d.**, **myxomatous d.**, degeneration which converts tissue-cells into a glutinous substance containing mucin. **Nissl d.**, degeneration of a nerve-cell after division of the nerve-fiber supplying it. **parenchymatous d.** See *cloudy swelling*, under *swelling*. **pigmental d.**, in which cells of affected tissue become abnormally pigmented. **polychromatophilic d.**, polychromatophilia. **polypoid d.**, the development, on a mucous membrane, of polypoid growths. **primary progressive cerebellar d.**, a familial disease marked by motor disorders and due to cerebellar degeneration, occurring in adults between the ages of thirty and forty and progressing slowly to a fatal termination (Holmes). **progressive lenticular d.**, a rare disease characterized by bilateral degeneration of the corpus striatum and cirrhosis of the liver, and marked by tremor, spastic contractures, psychic disturbance, and increasing weakness and emaciation. This is also called *Wilson's disease* and *hepatolenticular d.* **Quain's d.**, the fibrous degeneration of the muscles of the heart. **red d.**, degeneration of a uterine fibroid during pregnancy, marked by the formation of soft red areas. **Rosenthal's d.** See *glistening d.* **sclerotic d.**, a variety of hyaline degeneration affecting connective tissue, especially the intima of arteries. **secondary d.** Same as *wallerian d.* **senile d.**, the wide-spread degenerative changes, principally fibroid and atheromatous, that occur in old age. **theroid d.**, acquirement of beast-like qualities by the insane. **trabecular d.**, a change in the walls of the bronchi, which become thin and wasted in respect to the muscular and mucous elements, while the stroma is increased in volume. **traumatic d.**, degeneration of a divided nerve up to the nearest node of Ranvier. **Türk's d.**, secondary parenchymatous degeneration of nerve-tracts of the cord. **uratic c.**, degeneration marked by the deposit of urates or uric acid. **vacuolar d.**, the formation of vacuoles in the cells of a tissue. **Virchow's d.**, amyloid degeneration. **vitreous d.** Same as *hyaline d.* **wallerian d.**, fatty degeneration of a nerve-fiber which has been severed from its nutritive centers. **waxy d.**, amyloid degeneration. **Zenker's d.**, necrosis and hyaline degeneration of striated muscle.
- degenerative** (de-jen'er-a-tiv). Of or pertaining to degeneration.
- dégénéré supérieur** (da-zhon'er-a soo-pa-re-er') [Fr.]. A person of superior mind but morbid or degenerate tendencies.
- Degkwitz method** (deg'wítz). See under *method*.
- Deglut.** Abbreviation for *L. deglutia'tur*, let it be swallowed.
- deglutible** (de-glu'tib-l). Capable of being swallowed.
- deglutition** (deg-lu-tish'un) [*L. degluti'tio*]. The act of swallowing.
- deglutitive, deglutitory** (deg-lu'tit-iv, deg-lu'te-to-re). Pertaining to deglutition.
- degote** (de-gōt') [Russ.]. Tarry oil of white birch: used in the arts, and to some extent in medicine.
- degradation** (deg-ra-da'shun). The reduction of a chemical compound to one less complex, as by splitting off one or more groups.
- degrasin** (de-gras'in). A proprietary antifat remedy made from fresh sheep's thyroid.
- degrease** (de-grēs'). To remove grease or fat from.
- degree** (de-gre'). The title or rank of doctor, master, licentiate, bachelor, surgeon, or apothecary conferred by an authorized college or university.
- degustation** (de-gus-ta'shun) [*L. degusta'tio*]. The act or function of tasting.
- dehematize** (de-hem'at-iz) [*L. de* from + *Gr. αἷμα* blood]. To deprive of blood.
- dehemoglobinize** (de-hem-o-glo'bin-iz). To remove hemoglobin from the red blood-corpuscles.
- Dehio's test** (da'he-ōz) [Karl Konstantinovich Dehio, Russian physician, born 1851]. See *tests*.
- dehiscence** (de-his'ens) [*L. dehiscere* to gape]. The act or process of splitting. **Zuckerkind's d's**, small gaps occasionally seen in the papyraceous layer of the ethmoid bone.
- dehumanization** (de-hu'man-i-za'shun) [*L. de* from + *humā'nus* human]. Loss of the qualities of humanity, as in some cases of insanity.
- dehydrase** (de-hi'drās). Wieland's name for a reducing enzyme, which according to his theory acts by dehydrogenation.
- dehydration** (de-hi-dra'shun) [*L. de* away + *Gr. ὕδωρ* water]. Removal of water from a substance or compound; also removal of water from the body; restriction of the water intake.
- dehydrocholic acid** (de-hi-dro-kol'ik). See under *acid*.
- dehydrocodeinon** (de-hi-dro-ko-de'in-on). A proprietary sedative and analgesic of the morphin group. Dose, $\frac{1}{2}$ gr. (0.02 gm.).
- dehydrogenase** (de-hi-dro'jen-ās). Hydrogen acceptor. See under *acceptor*.
- dehydrogenate** (de-hi'dro-jen-āt). Dehydrogenize.
- dehydrogenation** (de-hi-dro-jen-a'shun). Indirect oxidation due to removal of hydrogen by the action of a hydrogen acceptor.
- dehydrogenize** (de-hi'dro-jen-iz). To remove hydrogen from.
- dehydromorphin** (de-hi-dro-mor'fin). A compound, $C_{24}H_{36}N_2O_4 \cdot 3H_2O$, occurring in opium and prepared by the oxidation of morphin. Called also *pseudomorphin* and *oxymorphin*.
- dehypnotize** (de-hip'not-iz). To awaken from the hypnotic state.
- deiteral** (di'ter-al). Pertaining to Deiters' nucleus.
- Deiters's cells, nucleus, process**, etc. (di'terz) [Otto Friedrich Carl Deiters, German anatomist, 1834-1863]. See *cell*, *nucleus*, *process*, etc.
- dejecta** (de-jek'tah) [L., pl.]. Excrementitious substances.
- dejection** (de-jek'shun) [*L. dejectio*]. 1. Discharge of excrementitious material; also material so discharged. 2. Prostration; mental depression.
- Déjerine's disease, syndrome** (da-zher-ēnz') [Joseph Jules Déjerine, neurologist in Paris, 1849-1917]. See *disease* and *syndrome*.
- deka-.** For words thus beginning, see *deca-.*
- dekanem** (dels'an-ēm). Ten nems.
- dekanormal** (dek-ah-nor'mal) [Gr. *δέκα* ten]. Having a strength ten times the normal; said of solutions.

delacrimation (de-lak-rim-a'shun) [L. *de* from + *lacrima* tear]. Excessive and abnormal flow of tears.

delactation (de-lak-ta'shun) [L. *de* from + *lactation*]. 1. Weaning. 2. The cessation of lactation.

Delafield's hematoxylin (del'af-eldz) [Francis Delafield, pathologist in New York, 1841-1915]. See under *stains*, *table of*.

delamination (de-lam-in-a'shun) [L. *de* apart + *lam'ina* plate]. Separation of the blastoderm into the epiblast and hypoblast.

Delbet's sign (del-báz') [Paul Delbet, French surgeon, 1866-1924]. See under *sign*.

deleterious (del-e-te're-us) [Gr. *δολητήριος*]. Hurtful; injurious.

Delhi boil, sore (del'he). A form of furunculus orientalis. See *furunculus orientalis*.

deligation (del-ig-a'shun) [L. *de* down + *lig'are* to bind]. The application of a ligature or bandage.

delimitation (del-lim-it-a'shun) [L. *de* apart + *limita're* to limit]. 1. The process of limiting or of becoming limited. 2. Ascertainment of the limits and extent of a diseased tissue or process.

delineascope (de-lin'e-ah-sköp). A form of lantern for the projection of slides on to a screen.

deliquescence (del-ik-wes'ens) [L. *deliques'cere* to grow moist]. The condition of becoming liquified as a result of the absorption of water from the air.

deliquescent (del-ik-wes'ent). Having a tendency to melt or become liquid by the absorption of moisture from the air.

deliquium (de-lik'we-um) [L.]. 1. A fainting or syncope. 2. Impairment of mental faculties. **d. an'imi**, a swoon or syncope.

delire de toucher (da-lär du too-sha'). An insane and irresistible impulse to touch objects.

deliria (de-lir'e-ah). Plural of *delirium*.

deliriant (de-lir'e-ant). 1. Capable of producing delirium. 2. A drug which may produce delirium. 3. A delirious person.

delirifacient (de-lir-if-a'she-ent) [L. *delir'ium* + *fa'cere* to make]. 1. Capable of causing delirium. 2. A drug which may produce delirium.

delirious (de-lir'e-us). Suffering from delirium.

delirium (de-lir'e-um) [L.]. A mental disturbance marked by illusions, hallucinations, short unsystematized delusions, cerebral excitement, physical restlessness and incoherence, and having a comparatively short course. Delirium occurs in insanity or as a result of fever, disease, or injury.

active d., delirium accompanied by maniacal movements. **acute d.**, a suddenly appearing and severe delirium lasting only a short time and ending usually in death. **afebrile d.**, delirium not attended by, nor occurring in the course of, fever. **d. alcoholicum**, **d. ebriosita'tis**.

Same as *d. tremens*. **d. ambitio'sum**, **d. grandio'sum**, delirium with delusions as to wealth, greatness, and power: often seen in general paresis. **anxious d.**, a condition of excitement marked by an undefined feeling of anxiety. **Bell's d.** Same as *acute d.*

chronic alcoholic d., Korsakoff's psychosis. **d. cor'dis**, violent tremulous beating of the heart. **febrile d.**, the delirium of fever.

d. of grandeur, delirium in which the patient has insanely exaggerated ideas of his power, importance, or wealth. **grave d.** Same as *acute d.*

intellectual d., mental disturbance which does not manifest itself in insane acts, illusions, or hallucinations. **lingual d.**, the utterance of meaningless words and sentences. **low d.**, delirium marked by confusion of ideas and slowness of mental action rather than by excitement. **macromaniacal d.**, delirium with delusions of greatness of the body or members. **micromaniacal d.**, delirium in which the patient believes that his body or limbs are very

small. **d. mus'sitans**, muttering delirium, such as often accompanies a low fever. **d. of negation**, insane belief of a patient that he has lost some of his members or parts. **d. of persecution**, delirium in which the patient believes himself the object of persecution. **d. of ruin**, the insane belief of a patient that he is financially ruined. **d. schizophrenoi'des**, delirium with symptoms of dementia praecox. **senile d.**, dotage: the imbecility of old age. **d. sine delir'io** [L. "delirium without delirium"], delirium tremens without hallucinations and mental distress, but with all the physical symptoms present. **specific febrile d.** Same as *acute d.* **toxic d.**, delirium caused by poisons. **traumatic d.**, that which follows severe injury and accompanies shock. **d. tre'mens**, a variety of acute insanity marked by delirium with trembling and great excitement, and attended by anxiety, mental distress, sweating, and precordial pain. It is caused by abuse of alcoholic stimulants or, more rarely, by opium. **d. vesanicum**, the delirium of uncomplicated insanity.

delitescence (del-it-es'ens) [L. *delites'cere* to lie hidden]. 1. Sudden disappearance of symptoms or of objective signs of a disease. 2. The period of latency of a poison or morbid agent.

deliver (de-liv'er). 1. To aid in the process of childbirth. 2. To remove, as the fetus, placenta, or the lens of the eye.

delivery (de-liv'er-e). 1. Expulsion or extraction of the child at birth. 2. Removal of a part, as the placenta or lens. **abdominal d.**, delivery of the child by cesarean section. **postmortem d.**, birth of a child after the death of the mother. **premature d.**, the expulsion of a viable fetus, namely, after the beginning of the seventh month.

delle (del'eh). The clear area in the center of a stained erythrocyte.

delomorphie, delomorphous (del-o-mor'fik, del-o-mor'fus) [Gr. *δῆλος* evident + *μορφή* form]. Having definitely formed and well-defined limits. See *cell*.

Delore's method (da-lorz') [Xavier Delore, French physician, 1828-1916]. Forceful manual correction of genu valgum.

delousing (de-lows'ing). The freeing from lice; destruction of lice.

Delpech's abscess, operation (del-pesh'ez) [Jacques Mathieu Delpech, French surgeon, 1777-1832]. See *abscess* and *operation*.

dolphin (del'fin). Same as *delphinin*.

delphinin (del-fin'in). A poisonous alkaloid, C₂₄H₂₇NO₈, from the seeds of *Delphin'ium staphisa'gria*: used for the most part externally to relieve pain in neuralgia, rheumatism, and paralysis. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.001-0.05 gm.).

Delphinium (del-fin'e-um) [L.]. A genus of ranunculaceous plants, including *D. consol'ida*, or larkspur, the seeds of which are diuretic, emmenagogue, and poisonous. Dose of fluidextract, 1-10 min. (0.066-0.66 cc.). *D. staphisa'gria*, or stavesacre: is used for destroying lice.

delphinoidin (del-fin-oid'in). An alkaloid from the seeds of *Delphin'ium staphisa'gria*.

delphinin (del'fis-in). An alkaloid, isomeric with delphinin, from the seeds of *Delphin'ium staphisa'gria*.

delta (del'tah) [Gr. *δέλτα* letter Δ]. 1. A triangular space. 2. The fourth letter of the Greek alphabet. See *alpha*. **d. for'niceis**, the lyra, or triangular space on the posterior surface of the spleen, between the posterior pillars of the fornix. **Galton's d.**, a triangular arrangement of the lines of a fingerprint near the base. **d. mesoscap'ulæ**, the triangular area at the root of the spine of the scapula.

deltoid (del'toid) [L. *deltoides* triangular]. 1. Of a triangular outline. 2. See *deltoid*, in *muscles*, *table of*.

deltoideus (del-toid'e-us). See *muscles*, table of.

de lunatico inquirendo (de lu-nat'ik-o in-kwe-ren-do) [L.]. A commission, board, inquisition, or jury appointed by a court for the investigation of the mental condition of a person whose sanity has been disputed.

delusion (de-lu'zhun) [L. *delu'sio*, from *de* from + *lu'dus* a game]. A false belief which cannot be corrected by reason; mistaken conviction, of the falsity of which not even the evidence of the senses will convince the patient. Cf. *illusion*. **depressive d.**, a delusion of sad ideas. **expansive d.**, an insane belief in one's own greatness, goodness, or power. **d. of grandeur**, insane conviction of one's own importance, power, wealth, etc. **d. of negation**, an insane belief that some part of the body is missing or that the world has ceased to exist. **nihilistic d.**, a delusion which denies the existence of something. **d. of persecution**, a morbid belief on the part of a patient that he is being persecuted, slandered, and injured by secret enemies. **d. of reference**, a delusion in which the patient believes he is the object of comment. **somatic d.**, a delusion as to some alteration in a bodily organ or its function. **systematized d.**, a delusion which is carried out by the patient in a logical manner; a delusion which has a logical structure. **unsystematized d.**, a delusion made up of disconnected parts.

delusional (de-lu'zhun-al). Pertaining to or characterized by delusions.

demagnetization (de-mag'net-iz-a'shun). Deprivation of magnetism.

demagnetize (de-mag'net-iz). To deprive of magnetic properties.

demarcation (de-mar-ka'shun) [L. *demarca're* to limit]. The marking off or ascertainment of boundaries. **surface-d.**, the limit between dead and living muscle; a term used in the records of experiments regarding the electromotive properties of muscle.

Demarquay's sign (dem-ar-kāz') [Jean Nicolas Demarquay, a French surgeon, 1811-1875]. See *sign*.

demedication (de-med-ik-a'shun). The removal of drugs from the system. **catalytic d.**, **cathaporetic d.**, the removal of foreign matter from the tissues by cataphoresis.

dement (de-ment'). A person affected with dementia (used often in comparison or contrast with *ament*).

demented (de-men'ted). Deprived of reason.

dementia (de-men'she-ah) [L. *de neg.* + *mens* mind]. Insanity characterized by loss or serious impairment of intellect, will, and memory. **acute d.**, a form which affects comparatively young persons and is often curable. **apperceptive d.**, the final stage of dementia præcox, marked by great mental weakness. **chronic d.**, dementia which may occur at any time of life and is incurable. **epileptic d.**, insanity with mental deterioration, resulting from the long continuance of epilepsy. **d. myoclonica**, mental deterioration occurring in paramyoclonus multiplex. **paralytic d.**, **d. paralytica**, **paretic d.** See *general paresis*, under *paresis*. **d. paranoïdes**, a form of adolescent insanity marked by paranoid delusions, developing rapidly and terminating in a demented confusional condition. **d. præcox**, adolescent insanity, a term used to include a large range of mental disorders which occur in early life and are marked by melancholia and self-absorption, terminating in a characteristic mental weakness of an emotional nature. The term includes *primary dementia*, *catatonia*, and *hebephrenia*. Called also *adolescent insanity*. **d. præsenilis**, dementia beginning between forty and fifty and marked by apathy, loss of memory, disturbances of speech and gait. **primary d.**, dementia occurring independently of any other form of insanity. **sec-**

ondary d., dementia following and due to some other form of insanity. **senile d.**, dementia from old age. **tabetic d.**, that which sometimes follows *tabes dorsalis*. **terminal d.**, dementia coming on as a final result of nervous or mental diseases. **toxic d.**, that which is due to the excessive use of some poisonous drug.

demethylation (de-meth-il-a'shun). The removal of a methylene group, —CH₃, from a compound.

Demetrius Pepagomænus. A Greek physician of the thirteenth century A. D., who wrote a work on gout.

demi- [Fr. *demi*; L. *dimidi'us* half]. A prefix signifying half.

demi-bain (dem'e-bān) [Fr.]. A half-bath, sitz-, or hip-bath.

demi-gantlet (dem-e-gant'let). A form of bandage for the hand and fingers.

demilune (dem'il-ün). 1. A half-moon, or crescent. 2. Crescentic; crescent-shaped. **d's of Adamkiewicz**, crescent-shaped cells beneath the neurilemma of medullated nerve-fibers. **d. body**. See under *body*. **d's of Heidenhain**. See *crescents of Gianuzzi*.

demimonstrosity (dem'e-mon-stros'it-e). Malformation of a part which does not prevent the exercise of its function.

demineralization (dem' min-er-al-iz-a'shun). Excessive elimination of mineral or inorganic salts, such as is seen in pulmonary tuberculosis and cancer.

demipenniform (dem-e-pen'if-orm). Pen-shaped or wing-shaped as to the one of the two margins: used of certain muscles.

Demme's bacillus (dem'ehz). See under *bacillus*.

demodectic (dem-o-dek'tik). Pertaining to, or caused by, *Demodex*.

Demodex (dem'o-deks) [Gr. *δημός* fat + *δῆξ* worm]. A genus of mites or acarids. **D. e'qui**, a species causing a sarcoptic mange in horses. **D. folliculo'rum**, the pimple-mite; a species found in hair-follicles and in sebaceous secretions, especially of the face and nose. See *comedo*.

demography (de-mog'raf-e) [Gr. *δημος* people + *γραφειν* to write]. The study or science of mankind collectively; especially the statistical study of human life. **dynamic d.**, collective physiology of communities, with statistics of births, marriages, deaths, etc. **static d.**, collective anatomy of communities and study of their environment.

demoniac (de-mo'ne-ak). 1. Possessed by a demon; frenzied. 2. A lunatic.

demonomania (de'mo-no-ma'ne-ah) [Gr. *δαίμων* demon + *μανία* madness]. Demonomania in which the patient considers himself possessed of devils.

demonopathy (de-mon-op'ath-e) [Gr. *δαίμων* demon + *πάθος* disease]. Demonomania.

demonophobia (de'mo-no-f'o-be-ah) [Gr. *δαίμων* demon + *φόβος* fear]. Morbid fear of demons.

demonstrator (dem'on-strā-tor) [L. *demonstra'tor*]. 1. An instructor who does not take rank as a professor. 2. The forefinger.

De Morgan's spots (de-mor'ganz) [Campbell De Morgan, English physician, 1811-1876]. See under *spot*.

demorphinization (de-mor'fin-iz-a'shun). The gradual depriving of one addicted to the morphin-habit of the drug until the habit is cured.

Demours's membrane (da-moorz') [Pierre Demours, French ophthalmologist, 1702-1795]. See *membrane*.

Demodex folliculorum (X 100). (Brompt.)

demucosa'tio intesti'ni. Demucosation of the intestine.

demucosation (de-mu-ko-sa'shun). Removal of mucous membrane from a part.

demulcent (de-mul'sent). 1. Soothing; bland; allaying the irritation of inflamed or abraded surfaces. 2. A soothing, mucilaginous or oily medicine or application. The principal demulcents are glycerin, gum arabic, flaxseed, Irish moss, Iceland moss, licorice, sassafras, slippery elm, starch paste, and tragacanth.

demustardization (de-mus-tar-diz-a'shun). Treatment of men who have been subjected to the fumes of mustard gas.

demutization (de-mu-tiz-a'shun) [L. *de* from + *mutus* mute]. The teaching of deaf-mutes to communicate by lip-language or by dactylology.

denarcotize (de-nar'ko-tiz). To deprive of narcotin.

denatured (de-na'tshurd). Having its nature changed; rendered unfit for human consumption. **d. alcohol.** See under *alcohol*.

dendraxon (den-draks'on) [*dendron* + *axon*]. A nerve-cell whose axis-cylinder breaks up into terminal filaments almost immediately after leaving the cell. Cf. *inaxon*.

dendric (den'drik). Having a dendron or dendrons.

dendriceptor (den'dre-sep-tor). One of the sensitive points at the ends of the branching processes of a dendrite, capable of being stimulated by the mittors of other neurons.

dendriform, dendroid (den'drif-orm, den'droid). Branched, or tree-shaped.

dendrite (den'drit). A dendron.

dendritic (den-drit'ik). Branched like a tree; pertaining to or possessing dendrons.

dendroid (den'droid) [Gr. *δένδρον* tree + *εἶδος* form]. Branching like a tree or shrub.

dendron (den'dron) [Gr. *δένδρον* tree]. A branched and tree-shaped protoplasmic process from a nerve-cell: a neurodendron.

Denecke's spirillum (den'ek-ez) [*Denecke*, contemporary German bacteriologist]. *Vibrio tyro-genum*.

denervated (de-ner'va-ted). Having the nerve removed or the nerve supply interrupted.

denervation (de-ner-va'shun). Resection of or removal of the nerves of an organ.

dengue (deng'u; Spanish, *dan'gwa*) [Sp.]. An infectious, eruptive, febrile disease, coming on suddenly, and marked by severe pains in the head, eyes, muscles, and joints, sore throat, catarrhal symptoms, and sometimes a cutaneous eruption and painful swellings of the parts. The disease comes on suddenly after an incubation period of from three to six days. The symptoms increase in severity for two or three days, then decrease somewhat, only to increase again on the fourth or fifth day, at which time the eruption appears. It occurs epidemically and sporadically in India, Egypt, Persia, and the West Indies, is caused by a filtrable virus, and is transmitted by the bite of the mosquito, *Aedes aegypti*. Called also *breakbone fever*, *dandy fever*, *sun fever*, and *solar fever*.

denidation (den-id-a'shun) [L. *de* away + *nidus* nest]. The supposed removal in menstruation of a part of the nidus for a fertilized ovum, made up of the epithelial elements of the intra-uterine mucous membrane.

Denigès's test (den-e-zhâz') [Georges *Denigès*, French chemist, born 1850]. See under *tests*.

denigration (de-ni-gra'shun) [L. *de* from + *niger* black]. The act of rendering black or of becoming black.

denitrification (de-ni-trif-ik-a'shun). The setting free of gaseous nitrogen from nitrites and nitrates.

denitrifier (de-ni'trif-i-er). A bacterium which causes denitrification.

Denman's evolution or version (den'manz) [Thomas *Denman*, English obstetrician, 1733-1815]. See under *evolution*.

Denonvillier's aponeurosis or fascia, operation (den-aw-vél-yáz'y) [Charles Pierre *Denonvillier*, surgeon in Paris, 1808-1872]. See *fascia* and *operation*.

dens (denz), pl. *den'tes* [L.]. 1. A tooth. 2. [B N A] The odontoid process of the axis. **d. cani'nus** [B N A], a canine tooth. **d. decid'uus** [B N A], a deciduous or milk tooth. **d. incis'i'vus** [B N A], incisor tooth. **d. mola'ris** [B N A], molar tooth. **d. per'manens** [B N A], a permanent tooth. **d. premola'ris** [B N A], premolar tooth. **d. sero'ti'nus** [B N A], a wisdom tooth.

densimeter (den-sim'et-er) [L. *dens* dense + *me'trum* measure]. An apparatus for determining the density or specific gravity.

density (den'sit-e) [L. *dens* dense]. 1. The quality of being compact or dense. 2. The quantity of matter in a given space. 3. The quantity of electricity in a given area or in a given volume or in a given time.

dentagra (den-tag'rah, den'tag-rah) [L. *dens* tooth + Gr. *ἀγρα* seizure]. 1. A forceps or key for pulling out teeth. 2. Toothache.

dental (den'tal) [L. *dent* tooth]. 1. Pertaining to a tooth or teeth. 2. A letter or sound made by or in part by the front teeth.

dentale (den-ta'le). The dentary bone.

dentalgia (den-tal'je-ah) [L. *dens* tooth + Gr. *ἀλγος* pain]. Toothache; odontalgia.

dentaphen (den'taf-en). A proprietary solution of benzyl alcohol: used as a local anesthetic on mucous surfaces.

dentaphone (den'taf-ōn) [L. *dens* tooth + Gr. *φωνή* sound]. An instrument by means of which deaf persons are enabled to hear sounds propagated through the medium of the teeth.

dentata (den-ta'tah). The second vertebra or axis, so called from its tooth-like process.

dentate (den'tät) [L. *dent* tooth]. Having teeth or projections like saw-teeth on the edges.

dentatum (den-ta'tum) [L. "toothed"]. The nucleus dentatus.

dentes (den'tēz) [pl. of L. *dens* tooth]. See *teeth*. **d. acu'ti**, the sharp teeth; incisor teeth. **d. incis'i'vi**, the incisor teeth. **d. mola'res**, the molar teeth. **d. præmola'res**, the premolar teeth. **d. sapient'iæ**, **d. serot'ini**, the wisdom-teeth; the last grinder or molar teeth.

dentiascope (den'ti-ah-ski'as-köp) [L. *dens* tooth + *skiascope*]. An apparatus for examining the teeth by the x-rays; a dental skiascope.

dentibucaal (den-te-buk'al). Pertaining to the teeth and the cheek.

denticulate, denticulated (den-tik'u-lät, den-tik'u-la-ted) [L. *denticula'tus*]. Provided with minute teeth; having very fine marginal teeth.

dentification (den-tif-ik-a'shun). The formation of dentin or tooth-substance.

dentiform (den'tif-orm). Shaped like a tooth.

dentifrice (den'tif-ris) [L. *denifric'ium*]. A tooth-powder or tooth-wash.

dentigerous (den-tij'er-us) [L. *dens* tooth + *gerere* to carry]. Containing or bearing a tooth or teeth.

dentilabial (den-ti-la'be-al) [L. *dens* tooth + *labium* lip]. Pertaining to the teeth and lips.

dentilingual (den-ti-lin'gwal) [L. *dens* tooth + *lingua* tongue]. Pertaining to the teeth and tongue.

dentilinimentum (den-te-lin-im-en'tum). The N. F. name for toothache drops. **d. aconiti compos'itum**, menthol, 36; chloroform, 13.5; tincture of aconite, to make 100. **d. aconiti et io'di compos'itum**, menthol, 2.2; iodine, 2.2; chloroform, 16.5; tincture of aconite, to make 100.

dentimeter (den-tim'et-er) [L. *dens* tooth + Gr. *μέτρον* measure]. An instrument for measuring teeth.

dentin, dentine (den'tin) [L. *dens* tooth]. The chief substance or tissue of the teeth which surrounds the tooth-pulp, and is covered by enamel on the exposed part of the tooth and by cement on the part implanted in the jaw. Dentin resembles bone, but is harder and denser. It consists of a solid organic substratum, infiltrated with lime salts which is permeated by numerous branching spiral canaliculi or tubules which contain processes of the connective-tissue cells (*dentin cells*) that line the pulp cavity. **adventitious d.** Same as *secondary d.* **secondary d.**, deposits of dentin in the pulp cavity subsequent to complete tooth formation. **sensitive d.**, a sensitive condition of the dentin due to distal irritation of the dentinal tubules.

dental (den'tin-al). Pertaining to dentin.

dentalgia (den-tin-al'je-ah) [L. *dentin* + Gr. *ἄλγος* pain]. Pain in the dentin.

dentinification (den-tin-if-ik-a'shun). The formation of dentin.

dentinitis (den-tin-itis). Inflammation of the dentinal tubules.

dentinoid (den'tin-oid). Resembling dentin; also a tumor composed of dentin.

dentinoma (den-tin-o'mah). A tumor of dentin.

dentinosteoid (den-tin-os'te-oid). A tumor composed of or containing dentin and bone.

dentiparous (den-tip'ar-us). Pertaining to the production of teeth.

dentiphone (den'tif-ōn). Same as *dentaphone*.

dentist (den'tist). A person authorized to practise dentistry.

dentistry (den'tis-tre). The surgery and therapy of the teeth. **ceramic d.**, that department of dentistry which deals with the production and preparation of artificial teeth; dental ceramics. **cosmetic d., esthetic d.**, the repairing and filling of decayed or broken teeth with such materials and in such a manner as to conceal the dental work and restore the part to a natural appearance. **operative d.**, that branch of dentistry which deals with the operations or manipulations in the mouth of the patient, as distinguished from those performed in the workshop or laboratory. **prosthetic d.** See *prosthodontia*.

dentition (den-tish'un) [L. *denti'tio*]. 1. The cutting of the teeth; teething. 2. The kind, number, and arrangement of the teeth. **primary d.**, the eruption of the deciduous or milk-teeth. **secondary d.**, the eruption of second or permanent teeth. **tertiary d.**, a third dentition which sometimes occurs in adult life or old age.

dento-alveolar (den'to-al-ve'o-lar). Pertaining to a tooth alveolus.

dento-alveolitis (den'to-al-ve-o-li'tis). Pyorrhea alveolaris.

dentoid (den'toid) [L. *dens* tooth + Gr. *εἶδος* form]. Tooth shaped.

dentoidin (den-toi'din). The organic or albuminous ground-substance of a tooth.

dentola (den'to-lah). A solution of potassium bromid and cocain hydrochlorid in glycerin and water: used as an application to painful gums.

dentoliva (den-to-li'vah) [L. *dens* tooth + *oli'va* olive]. The olivary nucleus.

dentology (den-to'l'o-je) [L. *dens* tooth + Gr. *λόγος* treatise]. Same as *odontology*.

dentor (den'tor). A dentist.

dentosurgical (den-to-ser'jik-al). Relating to, or used in, dentistry and surgery.

dentalur (den'tu-ral). Pertaining to a denture.

denture (den'tūr) [Fr.; L. *dens* tooth]. An entire set of teeth; also a set of artificial teeth. **arti-**

ficial d., a structure replacing missing natural teeth. **clasp d.**, a partial denture retained with clasps (A. D. A.). **continuous gum d.**, an artificial denture consisting of porcelain teeth fused to a base of platinum. **full d.**, a structure replacing the full number of natural teeth of both jaws (A. D. A.). **immediate d.**, an artificial denture inserted before complete hardening of the tissues. **partial d.**, a structure supporting less than the full number of teeth in one jaw (A. D. A.). **permanent d.**, an artificial denture inserted after the tissue layer becomes completely hardened.

Denucé's ligament (den-u-sāz') [Jean Henri Maurice Denucé, French surgeon, 1859-1924]. See *ligament*.

denucleated (de-nu'kle-a-ted). Deprived of the nucleus.

denudation (den-u-da'shun) [L. *denuda're* to make bare]. The act of laying anything bare; the deprival of a surface of its epithelial covering, whether surgical or pathologic.

denutrition (de-nu-trish'un). A withdrawal or failure of the nutritive processes, with consequent atrophy and degeneration.

Denys's tuberculin (den-ēs'ez) [G. Denys, a contemporary Belgian physician]. See *tuberculin*.

Denys-Leclef phenomenon (den-ēs-lek-lā'). See *phenomenon*.

deobstruent '(de-ob'stru-ent) [L. *de* priv. + *obstruere* to block up]. 1. Removing obstructive matters. 2. A medicine that removes obstructions.

deodar (de'o-dar). The *Cedrus deod'ara*, a large tree of the Himalayas: its turpentine is medicinal.

deodorant (de-o'dor-ant) [L. *de* from + *odora're* to perfume]. 1. Removing undesirable or offensive odors. 2. A substance that destroys ill odors.

deodorize (de-o'dor-iz) [L. *de* from + *odor* odor]. To deprive of odor.

deodorizer (de-o'dor-i-zer). A deodorizing agent.

deontology (de-on-to'l'o-je) [Gr. *δέοντα* things that ought to be done + *λόγος* treatise]. The science of professional duties and etiquette.

deopillant, deoppilative (de-op'il-ant, de-op'il-at-iv). Removing obstructions.

deopilation (de-op-il-a'shun) [L. *de* away + *oppila'tio* obstruction]. The removal of obstructions.

deorsum (de-or'sum) [L.]. Downward. **d. ver'gens**, turning or directed downward.

deorsumduction (de-or-sum-duk'shun) [L. *deor'sum* downward + *ducere* to lead]. The turning down of a part, as the eyes.

deorsumvergence (de-or-sum-ver'jens). A downward movement, especially of the eyes.

deorsumversion (de-or-sum-ver'shun) [L. *deor'sum* downward + *vertere* to turn]. An act of turning or directing downward.

deossification (de-os-if-ik-a'shun) [L. *de* from + *os* bone + *facere* to make]. Loss of or removal of the mineral elements of bone.

deoxidation (de'oks-id-a'shun) [L. *de* from + *oxy-gen*]. The removal of oxygen from a chemical compound.

deoxidize (de-oks'id-iz). To deprive of chemically combined oxygen.

deoxycholeic acid (de-ok-se-ko-le'ik). See under *acid*.

deoxygenation (de-oks'ij-en-a'shun). The act of depriving of oxygen.

Dep. Abbreviation for L. *depuratus*, purified.

depancreatize (de-pan'kre-at-iz). To deprive of the pancreas, as by operation.

dependency, cortical. That part of the brain stem which is developed as a subsidiary of the cerebral cortex.

depersonalization (de-per-sun-al-iz-a'shun). Loss of the sense of personality, or of personal ownership of the parts of one's body.

dephlogisticate (de-flo-jis'tik-ät). To reduce inflammation in.

depigmentation (de'pig-men-ta'shun). The removal of pigment by an artificial or a natural process.

depilate (dep'il-ät) [L. *de* away + *pilus* hair]. To remove the hair from.

depilation (dep-il-a'shun). The process of removing hair.

depilatory (de-pil'at-o-re) [L. *de* from + *pilus* hair]. 1. Having the power to remove the hair. 2. An agent for removing or destroying the hair. The chief depilatories are arsenic, calcium sulphate, and quicklime. **Atkinson's d.**, 6 parts of quicklime, 1 part of orpiment mixed with flour and colored yellow.

deplete (de-plēt') [L. *deplēre* to empty]. To empty; to unload; to cause depletion.

depletion (de-ple'shun) [L. *deplēre* to empty]. 1. The act or process of emptying; removal of a fluid, as the blood. 2. Exhausted state which results from excessive loss of blood. **plasma d.**, plasmapheresis.

depilumation (dep-lu-ma'shun) [L. *de* from + *piluma* down]. Loss of the eyelashes by disease.

depolarization (de-po'lar-iz-a'shun). The process or act of neutralizing polarity.

depolarize (de-po'lar-iz) [L. *de* from + *pōlus* pole]. To reduce to a non-polarized condition; to deprive of polarity.

depolarizer (de-po'lar-i-zer). A chemic agent placed in a galvanic cell for preventing the accumulation of gas upon either of the plates.

deposit (de-poz'it) [L. *de* down + *ponere* to place]. 1. Sediment or dregs. 2. Extraneous inorganic matter collected in the tissues or in a viscus or cavity. In dentistry, hard or soft material adherent to the surface of a tooth. **brick-dust d.**, a reddish sediment in the urine, composed of urates.

depositive (de-pos'it-iv). Depositing; said of the condition in which lymph is exuded into the derma, forming papules.

depravation (dep-ra-va'shun) [L. *depravare* to vitiate; *de* down + *pravus* bad]. Deterioration; a change for the worse.

depraved (de-prävd'). Vitiated or perverted.

deprementia (dep-re-men'she-ah). Insanity marked by depression, impairment of memory, etc.: due to autotoxemia.

depressant (de-pres'ant). 1. Diminishing functional activity. 2. A medicine which reduces functional activity and the vital energies in general by producing muscular relaxation and diaphoresis. The chief depressants are aconite, antimony compounds, tobacco, veratrum viride, and other nauseant drugs.

depressed (de-pres't'). Carried below the normal level; associated with depression.

depressing (de-pres'ing). Couching.

depression (de-pres'h'un) [L. *depressio*; *de* down + *primere* to press]. 1. A hollow or depressed area. 2. Downward or inward displacement. 3. A lowering or decrease of functional activity. 4. Absence of cheerfulness or hope. **auricular d.**, the great lowering in the sphygmographic tracing of the venous pulse, representing the diastole of the right auricle. **d. of cataract.** See *couching*. **pachionian d's**, the fossae on the interior surface of the skull for the pachionian bodies. **pterygoid d.** See *pterygoid pit*, under *pit*. **radial d.**, a fossa on the anterior surface of the humerus, just above the radial head. **supratrochlear d.**, a slight depression on the anterior surface of the femur, above the trochlea. **systolic d.**, a falling of the precordial region of the chest observed during the systole of the heart.

ventricular d., that part of the venous pulse-tracing which lies between the ventricular and auricular waves.

depressive (de-pres'iv). Causing depression.

depressomotor (de-pres'o-mo'tor) [L. *deprimere* to press down + *mo'tor* mover]. 1. Retarding or abating motion. 2. An agent which lessens or depresses motor activity.

depressor (de-pres'or) [L.]. 1. A muscle, agent, instrument, or apparatus which depresses. 2. An afferent nerve whose stimulation causes vasodilatation and thus lowers, restrains, or inhibits motions or other function. See *muscles*, *table of*. **Sims's d.**, a loop of stout wire used in depressing the anterior vaginal wall in examinations.

deprimens oculi (dep'rim-enz) [L.]. The rectus inferior muscle. See *muscles*, *table of*.

deprival, deprivation, deprivement (de-pri'val, dep-riv-a'shun, de-priv'ment) [L. *de* from + *privare* to remove]. Loss or absence of parts, organs, or powers.

despide (des'pid). One of a class of compounds which are products of the condensation of two or more molecules of the oxyacids of benzene, *e. g.*, gallic acid.

depth, focal (depth). The measure of the power of a lens to yield clear images of objects at different distances from it.

depula (dep'u-lah) [L., from Gr. *δέπας* a goblet]. The developing egg in the stage succeeding the blastula and preceding the gastrula.

depulization (de-pu-liz-a'shun) [L. *de* away + *pullex* flea]. The destruction of fleas in an infested dwelling.

depurant (dep'u-rant). A purifying agent or drug.

depurated (dep'u-ra-ted) [L. *depurare* to purify]. Cleansed, refined, or purified.

depuration (dep-u-ra'shun). The act or process of purifying.

depurative (dep'u-ra-tiv). Tending to purify or cleanse.

depurator (dep'u-ra-tor) [L. *de* away + *purus* pure]. 1. A depurative agent. 2. A vacuum-producing apparatus for stimulating the excretory function of the skin.

De R. A contraction or symbol for *reaction of degeneration*.

deradelphus (der-ad-el'fus) [Gr. *δέρη* neck + *ἀδελφός* brother]. A monster made up of twins fused at or near the navel, and with but one head.

deradenitis (der'ad-en-i'tis) [Gr. *δέρη* neck + *ἀδήν* gland]. Inflammation of the glands of the neck.

deradenoncus (der'ad-en-ong'kus) [Gr. *δέρη* neck + *ἀδήν* gland + *ὄγκος* tumor]. A swelling of a gland of the neck.

deranencephalia (der-an'en-sef-a'le-ah) [Gr. *δέρη* neck + *ἀν* neg. + *ἐγκέφαλος* brain]. Monstrosity marked by defect of the brain and upper part of the spinal cord.

derangement (de-ranj'ment). Insanity, or disorder of the reason. **Hey's internal d.**, partial dislocation of the knee, marked by great pain and spasm of the muscles.

deratization (de-rat-iz-a'shun). Extermination of rats.

Derbyshire neck (der'be-sheer). See *goiter*.

Dercum's disease (der'kum) [Francis Xavier Dercum, Philadelphia physician, born 1856]. See *disease*.

derencephalocoele (der'en-se-fal'o-sē) [Gr. *δέρη* neck + *ἐγκέφαλος* brain + *κῆλη* hernial]. Protrusion of the brain substance through a slit in one or more of the cervical vertebrae.

derencephalus (der-en-sef'al-us) [Gr. *δέρη* neck + *ἐγκέφαλος* brain]. A monster-foetus born with rudimentary skull bones and bifid cervical vertebrae; the brain resting in the latter.

deric (der'ik) [Gr. *dépos* skin]. Pertaining to the ectoderm; the opposite of *enteric*.

dericin (der'is-in). A light colored oil derived from castor oil.

derivant (der'iv-ant). 1. Derivative. 2. A derivative agent.

derivation (der-iv-a'shun) [L. *derivatio*, from *derivare* to draw off]. 1. The process or act of withdrawing blood, or of removing a disease process to another part; derivative treatment and its intended result. 2. The alleged suctional action of the heart. 3. Same as *lead*.

derivative (de-riv'a-tiv). 1. Producing or causing a derivation. 2. An agent which withdraws blood from the seat of a disease.

derm, derma (derm, der'mah) [Gr. *δέρμα*]. The skin; especially the corium, or true skin.

Dermacentor (der-mas-en'tor) [Gr. *δέρμα* skin + *κεντρίν* to pierce]. A genus of ticks. **D. andersoni**. See *D. venustus*. **D. marginatus**, **D. modestus**, a species which transmits Rocky Mountain spotted fever. **D. nitens**, a tropical horse tick of Panama which may transmit *Piroplasma caballi*. **D. occidentalis**, a dog tick found in Oregon and California which attacks man. Its bite is apt to leave ugly ulcerating sores. **D. parumapterus** is found in jack rabbits in California. **D. reticulatus**, of Europe, Asia, and America, attacks sheep and oxen. **D. variabilis**, the common dog tick of Eastern North America. **D. venustus**, a handsome reddish-brown species of wood tick which is responsible for transmitting Rocky Mountain spotted fever to man and for causing tick paralysis. Its first and second hosts are rodents, especially squirrels, while its third hosts are domestic animals and man.

Dermacentroxenus rickettsii. An organism which has been considered the possible causative organism in Rocky Mountain spotted fever. See *Rickettsia*.

dermad (der'mad). Toward the integument.

dermagra (der-mag-rah, der-mag'rah) [Gr. *δέρμα* skin + *ἄγρα* seizure]. Pellagra.

dermahemia (der-mah-he'me-ah). Same as *dermathemia*.

dermal (der'mal). Of or pertaining to the skin.

dermalaxia (der-mal-aks'e-ah) [Gr. *δέρμα* skin + *μαλαξίς* softening]. Morbid softness of the skin.

dermalgia (der-mal'je-ah). Same as *dermatalgia*.

dermametropathism (derm-am-et-rop'ath-izm). The diagnosis of disease by observing the character of the markings that result from pressure on the skin with some blunt instrument.

dermanyiasis (der'mah-mi-i'as-is) [Gr. *δέρμα* skin + *μύια* fly]. Disease of the skin caused by flies. **d. linearis migrans oestro'sa**, creeping eruption. See under *eruption*.

dermanaplasty (der-man'ap-las-te) [Gr. *δέρμα* skin + *ἀναπλάσσειν* to form again]. Skin-grafting.

Dermanysus a'vium et galli'næ. The bird-mite, poultry mite, or chicken-louse. It sometimes attacks the human integument.

dermapostasis (der-map-os'tas-is) [Gr. *δέρμα* skin + *ἀπόστασις* a falling away]. A skin disease with abscess formation.

dermaskeleton (der-mah-skel'et-on). Same as *exoskeleton*.

dermatagra (der-mat-ag'rah, der-mat'ag-rah) [Gr. *δέρμα* skin + *ἄγρα* seizure]. See *pellagra*.

dermatalgia (der-mat-al'je-ah) [Gr. *δέρμα* skin + *ἄλγος* pain]. Pain in the skin with no local lesion: it is of reflex origin or is due to a nervous disease.

dermataneuria (der'mat-an-u're-ah) [Gr. *δέρμα* skin + *νεύρον* nerve]. Disorder of the nerve-supply of the skin.

dermatatrophia (der'mat-at-ro'fe-ah). Same as *dermatrophia*.

dermatauxæ (der-mat-awks'e) [Gr. *δέρμα* skin + *αὐξή* increase]. Hypertrophy of the skin.

dermathemia (der-mat-he'me-ah) [Gr. *δέρμα* skin + *αἷμα* blood]. Congestion of the skin.

dermatic (der-mat'ik). Dermal.

dermatin (der'mat-in). A powder of starch, talc, kaolin, and salicylic acid: employed in skin diseases.

dermatitis (der-mat-i'tis) [Gr. *δέρμα* skin]. Inflammation of the skin. **d. æstivalis**, eczema coming on in hot weather. **d. ambustio'nis**, **d. calor'ica**, **d. combustio'nis** is due to a burn, scald, or sunburn. **arsphenamin d.**, dermatitis due to the use of arsenphenamin in syphilis. **d. artefacta**, dermatitis produced intentionally by the patient, as by scratching. **d. atrophicans**, diffuse atrophy of the skin. **blastomyetic d.**, a rare disease due to invasion of the skin by a blastomycete, known as *Cryptococcus gilchristi*. It is marked by a gradually developing papillomatous-looking area, from which a secretion can be pressed out. Abscess-like formations may develop. **brown-tail moth d.**, a cutaneous irritation produced by the hairs of the brown-tail moth, *Euproctis crysorrhæa*. **d. bullo'sa**, a vesicobullous eruption on the skin. **d. calor'ica**, inflammation of the skin due to heat or cold. **cane d.**, dermatitis occurring in persons who cut cane (*Arundino donax*) in Provence, Italy, Greece, etc. **d. coccidio'des**, **d. coccidio'sa**. See *coccidioidal granuloma*, under *granuloma*. **d. congelatio'nis** is due to cold or frost-bite; chilblain. **d. contusifor'mis**, erythema nodosum. **cotton-seed d.**, a dermatitis occurring on the neck and forearms of dock laborers handling cotton-seed. **d. cupulifor'mis**, an ulcerative disease caused by *Streptococcus tropicalis* (Castellani, 1916). **d. epidem'ica**, an epidemic disease marked by blotches or patches which become confluent and form a red, desquamating patch. It is attended with itching and burning. Called also *Savill's disease*. **d. erythemato'sa**, erythema. **d. excoriati'va infan'tum**, inflammatory excoriation of the skin in infants. **d. exfoliati'va** is characterized by scaly, exfoliating patches, and resembles pityriasis rubra. **d. exfoliati'va epidem'ica**. Same as *d. epidemica*. **d. exfoliati'va infan'tum**, a rare severe exfoliative skin inflammation affecting infants: called also *Ritter's disease*. **d. facti'tia**, dermatitis artificially produced. **d. fic'ta**, artificially produced dermatitis. **fungoid d.**, mycosis fungoides. **d. gangræno'sa**. Same as *spha-celoderma*. **d. gangræno'sa infan'tum**, multiple disseminated gangrene of the skin of infants. **d. glandula'ris erythemato'sa**, lupus erythematosus. **d. herpetifor'mis**. Same as *d. multiformis*. **d. hiema'lis**, a dermatitis coming on with cold weather. **hyphomycetic d.**, infection of the skin with hyphomycetes. **d. infectio'sa eczematoid'es**, a pustular eczematoid eruption frequently following or occurring coincidentally with some pyogenic process; called also *Engman's disease*. **malignant papillary d.**, Paget's disease. **d. medicamento'sa**, dermatitis caused by the action of drugs. **metol d.** See under *metol*. **d. multifor'mis**, dermatitis marked by grouped, erythematous, papular, vesicular, pustular, or bullous lesions occurring in varied combinations, accompanied by burning and itching. Called also *Dühring's disease*. **d. papilla'ris capilli'tii**, a disease of the scalp and neck, with the formation of elevations of the surface, interspersed with pustules and ending in scar-like elevations that resemble keloid. **d. pediculo'des ventric'o'sus**. Same as *straw-itch*, see under *itch*. **precancerous d.** See *Bowen's disease*, under *disease*. **primrose d.**, **primula d.**, dermatitis caused by the primrose. **d. re'pens**, a spreading dermatitis, chiefly of the upper extremity, following an injury and probably neuritic in its nature. **satinwood d.**, dermatitis occurring among work-

ers in satinwood, a fine grained wood used in cabinetmaking. **d. schambergi**. See *straw-itch*, under *itch*. **d. seborrhoeica**, seborrhea sicca. **d. simplex**, erythema. **d. skiagraphica** is due to the misuse of the Roentgen rays. **straw-mat d.** See *straw-itch*, under *itch*. **tetryl d.**, an occupation eruption caused by working with tetryl. **d. traumatica**, a form due to local injury or bruising. **uncinariid d.**, an irritation of the skin due to the entrance of the larva of hookworm. **vanilla d.**, vanillism; dermatitis from handling vanilla beans. **d. variegata**, maculopapular erythrodermia. See *erythrodermia*. **d. vegetans**, a disease characterized by eczematous eruption on which grow red, fungous masses. **d. venenata**, a form due to local action of a chemical or external poison. **x-ray d.**, inflammation of the skin from prolonged exposure to the x-rays.

dermato-autoplasty (der'mat-o-aw'to-plas-te) [Gr. *derma* skin + *αὐτός* self + *πλάσσειν* to mold]. The operation of grafting with skin taken from some other portion of the patient's own body.

Dermatobia (der-mat-o-be-ah). A genus of warble flies of the family *Estrus*. **D. cyaniventris**, a species widely distributed in South America. The larva lives as a parasite in cattle, dogs, and at times in man. **D. hominis**, the human bot-fly of South America. **D. noxialis** is the cause of tropical cutaneous myiasis.

Dermatobia cyaniventris.

dermatobiasis (der'mat-o-bi'as-is). The presence of Dermatobia in the body.

dermatocoele (der'mat-o-sel) [Gr. *derma* skin + *κήλη* hernia]. Dermatology. **d. lipomato'sa**, lipoma showing cystic degeneration.

dermatocelidosis (der'mat-o-sel-id-o'sis). Dermatokelidosis.

dermatocellulitis (der'mat-o-sel-u-li'tis) [Gr. *derma* skin + *cellulitis*]. Inflammation of the skin and subcutaneous cellular tissue.

Dermatocentor (der-mat-o-sen'tor). See *Dermacentor*.

dermatococcus (der'mat-o-kok'us). A diplococcus sometimes found in elephantiasis.

dermatokoniosis, dermatokoniosis (der'mat-o-ko-ne-o'sis) [Gr. *derma* skin + *κονία* dust]. Any skin affection caused by dust.

dermatocyst (der'mat-o-sist) [Gr. *derma* skin + *cystis*]. A cyst of the skin.

dermatodynia (der'mat-o-din'e-ah) [Gr. *derma* skin + *δύνη* pain]. Same as *dermatalgia*.

dermatoglyphics (der'mat-o-glif'iks) [Gr. *derma* skin + *γλυφή* a carving]. The study of the surface markings (ridges) of the skin.

dermatograph (der-mat'o-graf) [Gr. *derma* skin + *γράφειν* to write]. An instrument for marking the boundaries of the body.

dermatographia, dermatographism (der'mat-o-graf'e-ah, der-mat-og'raf-izm). Dermographia.

dermatography (der-mat-og'raf-e) [Gr. *derma* skin + *γράφειν* to write]. A description of the skin.

dermatoheteroplasty (der'mat-o-het'er-o-plas-te) [Gr. *derma* skin + *ἕτερος* other + *πλάσσειν* to form]. Skin-grafting in which the skin is taken from the body of another person.

dermatoid (der'mat-oid) [Gr. *derma* skin + *εἶδος* form]. Skin-like.

dermatokelidosis (der'mat-o-kel-id-o'sis) [Gr. *derma* skin + *κηλιδόω* to stain]. A spotted condition of the skin.

dermatol (der'mat-ol). A basic gallate of bismuth, $C_6H_5(OH)_3CO_2Bi(OH)_2$; a yellow, astringent, antiseptic powder, used as a dressing for

wounds and sores, and internally as a remedy for diarrhea and diseases of mucous membranes. Dose, 10-30 gr. (0.666-2 gm.).

dermatologist (der-mat-ol'o-jist). An expert in skin diseases.

dermatology (der-mat-ol'o-je). The sum of what is known regarding the skin and skin diseases.

dermatolysis (der-mat-ol'is-is) [Gr. *derma* skin + *λύσις* loosening]. Hypertrophy of the skin and subcutaneous tissues, with a tendency of the skin to hang in folds; called also *cutis pendula*, *cutis laxa*, *loose skin*, *chalazodermia*, and *pachydermatocoele*. **d. palpebrarum**. See *blepharochalasis*.

dermatoma (der-mat-o'mah) [Gr. *derma* skin + *-ωμα* tumor]. An abnormal or perverted growth of skin tissue. **corneal d.**, a tumorous growth upon the cornea of animals: its surface contains hair.

dermatome (der'mat-ōm) [Gr. *derma* skin + *τομή* cut]. 1. An instrument for incising the skin, or for cutting thin skin transplants. 2. Any one of the segmental cutaneous areas innervated by the different segments of the spinal cord.

dermatomere (der'mat-o-mēr) [Gr. *derma* skin + *μέρος* part]. Any segment or metamere of the embryonic integument.

dermatomic (der-mat-om'ik). Pertaining to a dermatome.

dermatomucosomyositis (der'mat-o-mu-ko'so-mi-o-si'tis). Inflammation of the skin, mucous membrane of the mouth, throat and nose, and muscles.

dermatomyces (der'mat-o-mi'sēz). Same as *dermatophyte*.

dermatomycosis (der'mat-o-mi-ko'sis) [Gr. *derma* skin + *μύκης* fungus]. Any skin disease due to a parasitic plant growth. **blastomycetic d.**, blastomycosis of the skin. **d. furfuracea**, tinea versicolor. **d. microspori'na**, tinea versicolor. **d. trichophy'tina**, tinea trichophytina.

dermatomyoma (der'mat-o-mi-o'mah) [Gr. *derma* skin + *μύωμα*]. A myoma of the skin.

dermatomyositis (der'mat-o-mi-o-si'tis) [Gr. *derma* skin + *μῦς* muscle + *-ιτις* inflammation]. An inflammatory disease of the voluntary muscles accompanied by characteristic skin lesions. It is attended by violent pains and by swellings in the muscles, inflammation of the skin, and edema. Called *multiple myositis* and *pseudotrichinosis*.

dermatoneurology (der'mat-o-nu-ro'l'o-je) [Gr. *derma* skin + *νεῦρον* nerve + *λόγος* treatise]. The study of the nerves of the skin in health and disease.

dermatoneurosis (der'mat-o-nu-ro'sis) [Gr. *derma* skin + *νεῦρον* nerve]. Any neurosis of the skin.

dermatopathia, dermatopathy (der'mat-o-path'e-ah, der-mat-op'ath-e) [Gr. *derma* skin + *πάθος* disease]. Any disease of the skin.

dermatopathology (der'mat-o-path-ol'o-je). Pathology of the skin.

dermatopathophobia (der'mat-o-path-o-fo'be-ah) [Gr. *derma* skin + *πάθος* disease + *φόβος* fear]. Morbid anxiety with regard to the skin, its diseases, etc.

dermatophiliasis (der'mat-o-fil-i'as-is). Invasion of the skin by Dermatophilius.

Dermatophilus penetrans. See *chigger*.

dermatophobia (der'mat-o-fo'be-ah) [Gr. *derma* skin + *φόβος* fear]. A morbid dread of having some cutaneous lesion.

dermatophone (der'mat-o-fōn) [Gr. *derma* skin + *φωνή* sound]. An instrument for auscultating the sounds of the blood-current of the skin.

dermatophyte (der'mat-o-fit) [Gr. *derma* skin + *φυτόν* plant]. A plant-growth, or species of plant, parasitic upon the skin.

dermatophytosis (der'mat-o-fi-to'sis). Same as *dermatomycosis*.

dermatoplastic (der'mat-o-plas'tik). Pertaining to the plastic surgery of the skin.

dermatoplasty (der'mat-o-plas'te) [Gr. *derma* skin + *pláassein* to form]. Operative replacement of destroyed or lost skin.

dermatopolyneuritis (der'mat-o-pol-e-nu-ní'tis). See *erythredema*.

dermatoptictic (der-mat-op'tik) [Gr. *derma* skin + *optiktós* optict]. Seeing with the integument; a power alleged to be possessed by the mollusk *Pho'las dac'tylus*.

dermatorrhagia (der'mat-o-ra'je-ah). Discharge of blood from the skin. **d. parasit'ica**, a disease of the skin of horses in Europe and Asia, marked by hard elevations formed by accumulations of blood between the layers of the skin, and caused by the presence of a parasitic worm.

dermatorrhea (der'mat-or-e'ah) [Gr. *derma* skin + *rhoia* flow]. A morbid excess of sweat.

dermatosclerosis (der'mat-o-skle-ro'sis) [Gr. *derma* skin + *skλήρωσις* hardening]. Same as *scleroderma*.

dermatoscopy (der-mat-os'ko-pe) [Gr. *derma* skin + *σκοπέιν* to view]. Examination of the skin; especially microscopic examination of the superficial capillaries of the skin.

dermatosiphobia (der-mat-o'se-o'fo-be-ah) [*dermatosis* + Gr. *φόβος* fear]. Dermatophobia.

dermatosis (der-mat-o'sis) [Gr. *derma* skin]. Any skin disease. **angioneurotic d.**, a skin disease in which the manifestations are due to vasomotor disturbance of the skin. **Auspitz's d.**, granuloma fungoides. **Bowen's precancerous d.** See *Bowen's disease*, under *disease*. **d. kapo'si**, xeroderma pigmentosum. **stasis d.**, skin disease marked by disturbances of the circulation and of lymphatic absorption. **Unna's d.**, seborrheic eczema.

dermatosome (der'mat-o-sōm) [Gr. *derma* skin + *σώμα* body]. A thickening of each chromatid segment forming a part of the equatorial plate in karyokinesis.

dermatotherapy (der'mat-o-ther'ap-e) [Gr. *derma* skin + *θεραπεία* treatment]. Treatment of the skin and its diseases.

dermatothlasia (der'mat-o-thla'ze-ah) [Gr. *derma* skin + *θλάσις* bruising]. A morbid tendency to injure determinate areas of the skin by pinching and bruising (H. Fournier, 1898).

dermatotome (der'mat-o-tōm) [Gr. *derma* skin + *τομή* cut]. 1. A knife for cutting the skin. 2. One of the skin segments of the embryo.

dermatotropic (der'mat-o-trop'ik) [Gr. *derma* skin + *τροπή* a turning]. Having a special affinity for the skin.

dermatoxerasia (der'mat-o-ze-ra'ze-ah) [Gr. *derma* skin + *ξηρασία* dryness]. Same as *xeroderma*.

dermatozoiasis (der'mat-o-zo-i'as-is). Same as *dermatozoönosis*.

dermatozoön (der'mat-o-zo'on) [Gr. *derma* skin + *ζωον* animal]. Any animal parasite of the skin; an ectozoön.

dermatozoönosis (der'mat-o-zo-on-o'sus) [Gr. *derma* skin + *ζωον* animal + *νόσος* disease]. A skin disease caused by a dermatozoön.

dermatrophia (der-mat-ro'fe-ah) [Gr. *derma* skin + *άτροφία* atrophy]. Atrophy of the skin.

dermatrophy (der-mat-ro'fe). Same as *dermatrophia*.

dermenchysis (der-men'kis-is) [Gr. *derma* skin + *ἐγχύσις* pouring in]. The hypodermic exhibition of medicines.

dermepenthesis (der-mep-en'the-sis) [Gr. *derma* skin + *ἐπένθεσις* insertion]. Skin-grafting.

dermic (der'mik). Pertaining to the skin, or dermis.

dermis (der'mis) [L.]. The skin; especially the corium, or true skin.

dermitis (der-mi'tis) [Gr. *derma* skin + *-ιτις* inflammation]. Inflammation of the skin.

dermoblast (der'mo-blast) [Gr. *derma* skin + *βλαστός* germ]. That part of the mesoblast which develops into the true skin.

dermochrome (der'mo-krōm) [Gr. *derma* skin + *χρῶμα* color]. A colored illustration of the skin or of a skin disease.

dermococcus (der-mo-kok'us). Any coccus found in the skin.

dermocyma, dermocymus (der-mo-si'mah, der-mo-si'mus) [Gr. *derma* skin + *κύμα* fetus]. A monstrosity in which one fetus is inclosed within another.

dermogen (der'mo-jen). A yellow, odorless powder, a proprietary preparation of zinc peroxid: used as a stimulant and antiseptic dressing.

dermographia, dermographism, dermography (der-mo-gra'fe-ah, der-mog'raf-izm, der-mog'raf-e) [Gr. *derma* skin + *γράφειν* to write]. A condition in which tracings made on the skin leave a distinct reddish, elevated mark. See *autographism*.

dermohemia, dermohæmia (der-mo-he'me-ah) [Gr. *derma* skin + *αἷμα* blood]. Hyperemia of the skin.

dermoid (der'moid) [Gr. *derma* skin + *εἶδος* form]. 1. Resembling the skin. 2. A form of congenital cyst, chiefly ovarian, containing hair, skin, teeth, etc.; a dermoid cyst. See *cyst. implantation d.*, a dermoid resulting from an injury by which a portion of the epiblastic structure is driven into the body. **sequestration d.**, a dermoid formed along the line of coalescence of the opposite halves of the body of the embryo. **thyroid d.**, a tumor formed from a retention cyst of the persistent thyroid duct or of the thyro-lingual duct. **tubal d.** See *tubulodermoid*. **wandering d.**, a dermoid tumor which is found in an abnormal situation, and which is movable from one place to another.

dermoidectomy (der-moid-ek'to-me) [*dermoid* + Gr. *ἐκτομή* excision]. Excision of a dermoid.

dermol (der'mol). Bismuth chrysophanate, Bi-(C₁₅H₉O)₂Bi₂O₃; an amorphous yellow powder, a result of the mixture of chrysarobin and bismuth hydroxid. It is an antiseptic: used in skin diseases.

dermolan (der'mo-ian). A proprietary resorcinol ointment.

dermolia (der'mo-le-ah). An antiseptic containing zinc oxid, phenol, wool-fat, and thymol.

dermolysis (der-mol-is-is). Dissolution or destruction of the skin.

dermomycosis (der'mo-mi-ko'sis) [Gr. *derma* skin + *μύκησις* fungus]. Any skin disease caused by a fungus.

dermoneurosis (der'mo-nu-ro'sis) [Gr. *derma* skin + *νεῦρον* nerve]. Any neurosis of the skin.

dermonosology (der'mo-no-sol'o-je) [Gr. *derma* skin + *νολογία*]. The nosology or classification of skin diseases.

dermopathic (der-mo-path'ik). Pertaining to disease of the skin.

dermopathy (der-mop'a-the) [Gr. *derma* skin + *πάθος* disease]. Any skin disease.

dermophlebitis (der'mo-fle-bi'tis) [Gr. *derma* skin + *φλέβ* a vein + *-ιτις* inflammation]. Inflammation of the veins of the skin.

dermophyte (der'mo-fit). Same as *dermatophyte*.

dermoplasty (der'mo-plas-te). See *dermatoplasty*.

dermosap (der-mo-sa'pol). A cod-liver oil soap recommended for inunctions in scrofulous and tuberculous subjects.

dermoskeleton (der-mo-skel'et-on). Same as *exoskeleton*.

dermostenosis (der'mo-sten-o'sis) [Gr. *derma* skin + *στένωσις* contraction]. Contraction of the skin.

dermostosis (der-mos-to'sis) [Gr. *derma* skin + *όστέον* bone]. Ossification in the skin.

dermosynovitis (der'-mo-si-no-vi'tis) [Gr. *δέρμα* skin + *synovitis*]. A malignant inflammation of the sole of the foot, with a tendency to involve the synovial sheaths.

dermosyphilopathy (der'-mo-sif-il-op'ath-e) [Gr. *δέρμα* skin + *syphilopathy*]. Any syphilitic skin disease.

dermotropic (der-mo-trop'ik) [Gr. *δέρμα* skin + *τροπή* a turning]. Having a selective affinity for the skin.

derodidymus, derodymus (der-o-did'im-us, der-rod'im-us) [Gr. *δέρη* neck + *δίδυμος* twin]. A fetus with one body, two heads, and two necks.

derrengadera (der-en-gah-da'rah) [Spanish "crooked?"]. Same as *murrina*.

derrid (der'id). A poisonous resin from *Der'ris elliptica*, a tree of southern Asia.

desalgin (des-al'jin). Colloidal chloroform, a preparation containing 25 per cent. chloroform combined with albumin: used in biliary and intestinal colic and catarrh of the respiratory tract. Dose, $\frac{1}{4}$ -1 dr. (1-4 c.c.).

desalination (de-sal-in-a'shun) [L. *de-* from + *sal* salt]. The removal of salt from a substance.

desaloin (des-al'o-in). See *disaloin*.

desamidase (des-am'id-āz). Same as *deamidase*.

desamidization (des'am-id-iz-a'shun). Same as *deamidization*.

desanimania (des'an-i-ma'ne-ah) [L. *dis-* neg. + *animus* mind + *ma'nia* madness]. Amentia, or mindless insanity.

Desault's bandage, ligature, sign (de-sōz') [Pierre Joseph Desault, French surgeon, 1744-1795]. See *bandage*, *ligature*, and *sign*.

Descemet's membrane (des-māz') [Jean Descemet, French anatomist, 1732-1810]. See under *membrane*.

descemetitis (des'e-met-i'tis). Inflammation of Descemet's membrane; cyclitis or serous iritis.

descemetocoele (des-e-met'o-sēl) [*Descemet's membrane* + Gr. *κήλη* hernia]. Hernia of Descemet's membrane.

descendens noni (de-sen'denz no'ni) [L.]. See *nerves*, *table of*.

descending (des-en'ding) [L. *descen'dere* to go down]. Extending downward or distad.

descensus (de-sen'sus). Latin for *descent, falling*.
d. tes'tis [B N A], the descent of the testicle into the scrotum. **d. u'teri**, prolapse of the uterus.
d. ventric'uli, gastroptosis.

Deschamp's needle (de-shawz') [Joseph François Louis Deschamp, 1740-1824]. See *needle*.

De Seigneux's dilator (duh-sān-zuhz'). A dilator for the cervix uteri.

desensitization (de-sen-sit-iz-a'shun). A condition in which the organism is rendered insensitive to a specific protein. See *antianaphylaxis*.

desensitize (de-sen'sit-iz). 1. To deprive of sensation; paralysis of a sensory nerve by section or blocking. 2. To decrease or remove the anaphylactic sensitiveness.

desexualize (de-seks'u-al-iz). To deprive of sexual characters; to castrate.

deshydremia (des-hi-dre'me-ah) [L. *de* from + *ἵδωρ* water + *αἷμα* blood]. Deficiency of the watery element of the blood.

desiccant, desiccative (des-ik'ant, des'ik-at-iv). Promoting dryness.

desiccate (des'ik-āt) [L. *desicca're* to dry up]. To render thoroughly dry.

desiccation (des-ik-a'shun). The act of drying up. **electric d.**, the treatment of a tumor or other disease by drying up the part by the application of a monopolar electric current (short spark) of high frequency and high tension.

desiccative (des'ik-at-iv). Causing to dry up.

desiccator (des'ik-a-tor). A closed vessel for con-

taining apparatus or chemicals that are to be kept free from moisture.

desichthol (des-ik'thol). A volatile oil distilled from ichthyol: used in skin diseases.

Desmarre's dacryoliths (da-marz') [Louis Augusta Desmarre, French oculist, 1810-1882]. See under *dacryolith*.

desmectasia, desmectasis (des-mek-ta'se-ah, des-mek-ta-sis) [Gr. *desmós* ligament + *ἐκτασις* stretching]. The stretching of a ligament.

desmepithelium (des-mep-e-the'le-um) [Gr. *desmós* band + *επιθήλη*]. The dermal epithelium or endothelial lining of blood-vessels, lymphatics, and synovial membranes.

desmitis (des-mi'tis) [Gr. *desmós* ligament + *-ιτις* inflammation]. Inflammation of a ligament.

Desmobacteria (des'mo-bak-te're-ah) [Gr. *desmós* band + *bacteria*]. The true bacteria, or bacilli.

desmocyte (des'mo-sit) [Gr. *desmós* band + *κύτος* cell]. A supporting tissue cell.

desmocytoma (des-mo-si-to'mah). A tumor of desmocytes; a sarcoma.

desmodynia (des-mo-din'e-ah) [Gr. *desmós* ligament + *ὀδύνη* pain]. Pain in a ligament.

desmogonous (des-moj'en-us) [Gr. *desmós* ligament + *γεννώ* to produce]. Of ligamentous origin.

desmography (des-mog'raf-e) [Gr. *desmós* ligament + *γραφία* writing]. A description of the ligaments.

desmohemoblast (des-mo-hem'o-blast) [Gr. *desmós* band + *αἷμα* blood + *βλαστός* germ]. Same as *mesenchyme*.

desmoid (des'moid) [Gr. *desmós* band + *εἶδος* form]. 1. Fibrous or fibroid. 2. A very hard and tough fibroma.

desmology (des-mol'o-je) [Gr. *desmós* ligament + *λόγος* treatise]. 1. The science of the ligaments. 2. The art of bandaging.

desmoma (des-mo'mah) [Gr. *desmós* band + *-ωμα* tumor]. A fibroma, or connective-tissue tumor.

desmon (des'mon) [Gr. *desmós* band]. Amboceptor.

desmoneoplasm (des-mo-ne'o-plazm) [Gr. *desmós* band + *νεοπλάσμα*]. A neoplasm formed of connective tissue.

desmopathy (des-mop'ath-e) [Gr. *desmós* band + *πάθος* disease]. A disease of the ligaments.

desmopexia (des-mo-peks'e-ah) [Gr. *desmós* band + *πῆξις* fixation]. The operation of suturing the round ligaments to the abdominal wall or to the vaginal wall for the correction of uterine displacement.

desmoplastic (des-mo-plas'tik). [Gr. *desmós* band + *πλάσσειν* to form]. Producing or forming adhesions.

desmopyknosis (des-mo-pik-no'sis) [Gr. *desmós* ligament + *πύκνωσις* condensation]. Dudley's operation of shortening the round ligaments by fastening them to an oval denudation on the anterior vaginal wall.

desmorrhexis (des-mor-ek'sis) [Gr. *desmós* ligament + *ῥήξις* rupture]. Rupture of a ligament.

desmosis (des-mo'sis) [Gr. *desmós* band]. A disease of the connective tissue.

desmotomy (des-mot'o-me) [Gr. *desmós* ligament + *τομή* a cutting]. The anatomy of, or the cutting of, ligaments.

desmotroposantonin (des-mo-tro-po-san'to-nin). An isomeric form of santonin, (CH₃)₂C₁₀H₇OH.CH₃(CH₃)CO₂, produced by heating santonin with hydrochloric acid.

Desnos's disease (da-nōz') [Louis Joseph Desnos, French physician, 1828-1893]. Splenopneumonia.

desoleolecithin (des-o'-le-o-les'ith-in). One of the components, the other being oleic acid, into which lecithin is split by the action of cobra venom.

desoxycholic acid (des-ox-e-ko'lik). See under *acid*.

D'Espine's sign (des-pênz') [Adolphe *D'Espine*, French physician, born 1844]. See *sign*.

despumation (des-pu-ma'shun) [L. *de* away + *spu'ma* froth]. The removal of froth or scum from the surface of a liquid.

despyrin (des'pi-rin). A tartaric acid ester of salicylic acid; used like aspirin.

desquamation (des-kwam-a'shun) [L. *de* from + *squa'ma* scale]. The shedding of epithelial elements, chiefly of the skin, in scales or sheets. **furfuraceous d.**, desquamation in bran-like scales. **membranous d.**, desquamation in large sheets. **siliquose d.**, the shedding from the skin of dried vesicles resembling siliques.

desquamative, desquamatory (des'kwam-a-tiv, des-kwam'at-o-re). Associated with desquamation.

dessertspoonful (dez-ert'-). A measure about equal to two fluidrams.

desternalization (de-ster'nal-i-za'shun) [L. *de* from + *sternum*]. Separation from the sternum.

Destil. Abbreviation for L. *destil'la*, distil.

destructive (des-truk'tiv). Causing or associated with destruction or loss of identity.

desumvergence (de-sum-ver'jens). Same as *desumvergence*.

Desvoi dea obtur'bens. A mosquito which transmits dengue.

Det, det. Abbreviation for L. *de'tur*, let it be given.

detergal (de-ter'gal). A proprietary liquid antiseptic soap containing thymol and cresylic acid.

detergent (de-ter'jent) [L. *detergere* to cleanse]. Purifying, cleansing; a purifying medicine.

deterioration (de-te're-o-ra'shun). The process of becoming worse or the state of being worse. **emotional d.**, a mental condition in which the emotions are not aroused by those stimuli which normally would arouse them.

determinant (de-ter'min-ant) [L. *determina're* to bound, limit, or fix]. That which determines, fixes, or establishes something. In biology, a biophore or group of biophores inherited from some ancestor and having the special function of developing in the descendant some particular characteristic of the ancestor. Cf. *biophore*. **germ-cell d.**, oösome.

determination (de-ter-min-a'shun) [L. *determina'tia*]. A tendency of the blood to collect in a part. **sex d.**, the process by which the sex of an organism is fixed.

determiner (de-ter'min-er). Same as *determinant*.

dethyroidism (de-thi'roid-izm). Symptoms due to the removal of the thyroid.

dethyroidized (de-thi'roi-dizd). Deprived of the thyroid gland.

Det. in dup., Det. in 2 plo. Abbreviation for L. *de'tur in du'plo*, let twice as much be given.

detonation (de-to-na'shun) [L. *de* intensive + *tona're* to thunder]. Loudly explosive combustion.

detorsion (de-tor'shun). The correction of a curvature or deformity.

detoxicate (de-toks'ik-ät). To remove the toxic quality of a substance.

detoxicated (de-toks'ik-a-ted). Having the toxic or virulent quality removed from.

detoxication, detoxification (de-toks-ik-a'shun, de-toks-if-ik-a'shun).¹ Reduction of the toxic properties of poisons.

detoxify (de-toks'if-i). Detoxicate.

Detre's reaction (da'terz') [Ladislaus *Detre*, contemporary Hungarian physician]. See under *reaction*.

detrition (de-trish'un) [L. *de* away + *ter'ere* to wear]. A wearing away, as of the teeth, by friction.

detritus (de-tri'tus) [L., from *deter'ere* to rub away]. The remains of any broken-down tissue. In dentistry, hard matter adhering to the surface of a tooth or to disintegrated tooth substance.

detruncation (de-trun'ka'shun) [L. *de* off + *trun'cus* trunk]. Decapitation, or decollation; beheadal, chiefly of the fetus.

detrusor urinæ (de-tru'sor u-ri'ne) [L.]. The longitudinal muscle-fibers of the bladder.

D. et s. Abbreviation for L. *de'tur et signe'tur*, let it be given and labeled.

detubation (de-tu-ba'shun). Removal or extraction of a tube.

detuberculization (de'tu-ber-ku-liz-a'shun). Systematic effort toward the eradication of tuberculosis.

detumescence (de-tu-mes'ens) [L. *de* down + *tum'ere* to swell]. Subsidence of swelling.

deutencephalon (du-ten-sef'al-on) [Gr. *δευτερος* second + *ἐγκέφαλος* brain]. See *thalamencephalon*.

deuteranomalopia (du'ter-an-om-al-o'pe-ah) [Gr. *δευτερος* second + *ἀνῶμαλος* irregular + *ὄψις* vision]. A relative red vision in which less than the normal proportion of green is required to equate red to yellow.

deuteranope (du'ter-an-öp). A person affected with deuteranopia.

deuteranopia (du-ter-an-o'pe-ah) [L. *deutero-* + *anopia*]. Von Kries' term for green-blindness, as indicating a defect in the second constituent necessary for color-vision. See *protanopia* and *tritanopia*.

deutero- [Gr. *δευτερος* second]. A prefix meaning second.

deutero-albumose (du'ter-o-al'bu-mös). See *deutero-proteose*.

deuteroconidium (du'ter-o-ko-nid'e-um) [Gr. *δευτερος* second + *conidium*]. A reproductive element derived from a protoconidium.

deutero-elastose (du'ter-o-e-las'tös). A product of the digestion of elastin; elastin peptone.

deuterofibrinose (du'ter-o-fi'brin-ös). A proteolyte formed from blood-fibrin by digestion.

deuterglobulose (du'ter-o-glob'u-lös). One of the proteolytes formed in the digestion of paraglobulin.

deuteromyosinose (du'ter-o-mi-os'in-ös). An albumose derived from the digestion of myosin.

deuteropathic (du'ter-o-path'ik). Occurring secondarily to some other disease.

deuteropathy (du-ter-op'ath-e) [Gr. *δευτερος* second + *πάθος* disease]. A disease that is secondary to another disease.

deuteropin (du-ter-o'pin). An alkaloid, C₂₀H₂₁O₃N, from opium.

deuteroplasm (du'ter-o-plazm) [Gr. *δευτερος* second + *πλάσμα* something formed]. Same as *deutoplasm*.

deutero-proteose (du'ter-o-pro'te-ös). One of the hydrolytic cleavage-products of a protein which is precipitated by complete saturation with ammonium sulphate. Called also *secondary proteose* and *deutero-albumose*.

deuterotocia, deuterotoky (du'ter-o-to'se-ah, du-ter-ot'o-ke) [Gr. *δευτερος* second + *τύκος* birth]. Asexual reproduction in which the female produces offspring of both sexes.

deuterotoxin (du'ter-o-toks'in). The second of the three groups into which toxins may be divided on the basis of their affinity for antitoxin. It has less affinity for antitoxin than has prototoxin and more than has tritotoxin.

deuthyalosome (du-thi-al'o-söm) [Gr. *δευτερος* second + *θαλός* glass + *σῶμα* body]. The matured nucleus of an ovum.

deutiodid (du-ti'o-did). An iodid which contains twice the normal proportion of iodine.

deutipara (du-tip'ar-ah). Same as *secundipara*.

deutobromid (du-to-bro'mid). That one of two bromids of the same base which contains twice the amount of bromin which the other contains.

deutochlorid (du-to-klo'rid). Any chlorid which contains twice the normal proportion of chlorin.

deutomerite (du-to-me'rit) [Gr. *δέυτερος* second + *μέρος* portion]. The posterior portion of certain gregarine protozoa.

deutonephron (du-to-nef'ron) [Gr. *δέυτερος* second + *νεφρός* kidney]. The mesonephron or wolfian body.

deutoplasm (du'to-plazm). The passive or inactive materials in protoplasm, especially reserve food-stuffs, such as yolk.

deutoscolex (du-to-sko'leks) [Gr. *δέυτερος* second + *scolex*]. A secondary scolex; the hydatid form of a tapeworm.

deutospematoblast (du-to-sper'mat-o-blast) [Gr. *δέυτερος* second + *σπέρμα* seed + *βλαστός* germ]. One of the cells into which the protospematoblasts divide. The deutospematoblasts form the spermatozooids.

Deutsch's maneuver (doitshez) [Eugen Deutsch, German obstetrician, born 1866]. See under *maneuver*.

Deutschmann's serum (doits'h'manz) [contemporary German oculist]. See under *serum*.

devasation (de-vas-a'shun) [L. *de* away + *vasa* vessel]. Destruction of the blood-vessels of a tissue or organ. **senile cortical d.**, a form of arteriosclerotic insanity marked by destruction of the blood-vessels of the cerebral cortex.

devascularization (de'vas-ku-lar-iz-a'shun). Removal of blood from a part; cutting off of the blood-supply from any part of the body.

development (de-vel'op-ment). The process by which the egg becomes an adult.

developmental (de-vel'op-men'tal). Pertaining to development.

Deventer's diameter, pelvis (de-ven'terz) [Hendrik Deventer, Dutch obstetrician, 1651-1724]. See *diameter* and *pelvis*.

Devergie's disease (dev-er-zhēz') [Marie Guillaume Devergie, French physician, 1798-1879]. Pityriasis rubra pilaris.

deviation (de-ve-a'shun) [L. *devia're* to turn aside]. A turning away from the regular standard or course. **d. of complement**, Neisser-Wechsberg phenomenon; when more amboceptors are introduced into the mixture than can be taken up by the bacteria, those that remain free are capable of combining with the complement that is present and thus prevent a portion or all of the complement from acting on the amboceptor attached to the bacteria—i. e., the complement has been deviated or deflected from its natural course. (This phenomenon is not to be confounded with fixation of the complement and may be simply a zone phenomenon, q. v.) **conjugate d.**, the deflection of two similar parts, as the eyes, in the same direction at the same time. **minimum d.**, the smallest deflection of a ray of light that can be produced by a given prism. **primary d.**, the displacement of the axis of the squinting eye in strabismus when the sound eye fixes. **secondary d.**, that which affects the sound eye in strabismus while the squinting eye performs fixation. **standard d.**, the measure of variability of a normal curve. It is found by multiplying the square of the deviation of each class from the mean or mode by the frequency of the class, adding together the products so obtained, dividing the number by the total number of variables, and extracting the square root of the result. **strabismic d.**, the abnormal turning of the eye in strabismus. **d. to the left**, the existence of immature forms of white blood-cells. **d. to the right**, absence of immature forms of white blood-cells.

devil's grip. See *epidemic pleurodynia*, under *pleurodynia*.

deviometer (de-ve-om'et-er) [deviation + Gr. *μέτρον* measure]. An instrument for measuring the amount of deviation in strabismus.

devisceration (de-vis-er-a'shun) [L. *de* away + *viscus* viscus]. The removal of viscera.

devitalize (de-vi'tal-iz) [L. *de* from + *vi'ta* life]. To deprive of vitality or of life. In dentistry, to destroy the vitality of dental pulp.

devolution (dev-o-lu'shun) [L. *de* down + *volvere* to roll]. x. The reverse of evolution. 2. Catabolic change.

devorative (dev'or-a-tiv) [L. *devora're* to devour]. Intended to be swallowed without chewing.

De Vries' theory (de-vrēz') [Hugo de Vries, botanist in Amsterdam, born 1848]. See *theory of mutations*.

dewatered (de-wah'terd). Having the water removed: a term applied to sludge from which the water has been removed by drying or pressing.

dew-cure (du'kūr). Kneippism: treatment by walking barefooted in the dew.

dew-itch. See under *itch*.

dew-point (du'point). The temperature of the atmosphere at which the moisture begins to be deposited as dew.

Dewees's carminative, sign, tincture (de-wēz') [William Potts Dewees, American obstetrician, 1768-1841]. See *carminative*, *sign*, *tincture*.

dexiocardia (deks'e-o-kar'de-ah) [Gr. *δεξιός* on the right + *καρδία* heart]. Transposition of the heart to the right side of the thorax.

dextiotropic (deks'e-o-trop'ik) [Gr. *δεξιός* on the right + *τροπός* turning]. Wound in a spiral from left to right.

dexter (deks'ter) [L.]. Situated on the right side.

dextrad (deks'trad). Toward the right side or right hand.

dextran (deks'tran). A gummy substance produced from milk, beet-juice, molasses, etc., by the action of certain cocci.

dextrase (deks'trās). A ferment which changes dextrose into lactic acid.

dextraural (deks-trau'ral) [L. *dex'ter* right + *auris* ear]. Hearing better with the right ear than with the left.

dextrimaltose (deks-tre-mawl'tōs). A proprietary nutritive preparation used to supply the carbohydrate deficiency of cows' milk.

dextrin (deks'trin) [L. *dex'ter* right]. A soluble carbohydrate (C₆H₁₀O₅)_n, into which starch is converted by diastase or by dilute acids. It is a white or yellowish powder, in aqueous solution forming mucilage. See *achroödextrin* and *erythro-dextrin*. **animal d.**, glycogen. **liver d.**, glycogen.

dextrinase (deks'trin-ās). A ferment of starch which converts the latter into isomaltose.

dextrinate, dextrinize (deks'trin-āt, deks'trin-iz). To convert into dextrin.

dextrinuria (deks-trin-u're-ah) [*dextrin* + Gr. *ούρον* urine]. The presence of dextrin in the urine.

dextrocardia (deks-tro-kar'de-ah). Same as *dexiocardia*.

dextrocardiogram (deks-tro-kar'de-o-gram) [L. *dex'ter* right + *cardiogram*]. A cardiogram representing the right side of the heart.

dextrocerebral (deks-tro-ser'eb-ral) [L. *dex'ter* right + *cer'ebrium* brain]. Having the right hemisphere of the brain more active than the left.

dextrococain (deks-tro-ko'ka-in). Same as *isococain*.

dextrocompound (deks-tro-kom'pound). A dextrorotatory compound.

dextrocular (deks-trok'u-lar). Right-eyed; affected with dextrocularity.

dextrocularity (deks-trok-u-lar'it-e) [L. *dexter* right + *oculus* eye]. The condition of having greater visual power in the right eye and, therefore, using it more than the left.

dextroduction (deks-tro-duk'shun) [L. *dexter* right + *ducere* to draw]. Movement of either eye to the right.

dextroform (deks'tro-form). A substance prepared from dextrin and formaldehyd; its solutions are useful in gonorrhea, empyema, and cystitis.

dextrogyral, dextrogyre, dextrogyrate (deks-tro-j'i'al, deks'tro-jir, deks-tro-j'i'rāt) [L. *dexter* right + *gyra're* to turn]. Same as *dextrorotatory*.

dextrogyration (deks-tro-j'i-ra'shun). A turning to the right; motion to the right: said of movements of the eye and of the plane of polarization.

dextromanual (deks-tro-man'u-al) [L. *dexter* right + *ma'nus* hand]. Right-handed.

dextromenthol (deks-tro-men'thol). An oxidation-product of menthol.

dextropedal (deks-trop'e-dal) [L. *dexter* right + *pes* foot]. Using the right leg in preference to the left.

dextrophobia (deks-tro-fō-be-ah) [L. *dexter* right + Gr. *phōbos* fear]. Insane dread of objects on the right side of the body.

dextrorotatory (deks-tro-ro'tat-o-re) [L. *dexter* right + *rota're* to turn]. Turning the plane of polarization, or rays of light, to the right.

dextrosaccharin (deks-tro-sak'ar-in). A compound of glucose (1099 parts) and saccharin (1 part).

dextrosamin (deks-tro-sam'in). Glucosamin.

dextrose (deks'trōs). Same as *glucose*.

dextrosinistral (deks'tro-sin-is'tral) [L. *dexter* right + *sinis'ter* left]. Extending from right to left.

dextrosozone (deks-tro-so'zōn). Glucosozone.

dextrosuria (deks-tro-su're-ah) [*dextrose* + Gr. *ούρον* urine]. The presence of dextrose in the urine.

dextrotrorsion (deks-tro-tor'shun). A twisting to the right.

dextrotropic, dextrotropous (deks-tro-trop'ik, deks-trot'rop-us) [L. *dexter* right + Gr. *τροπος* turning]. Turning to the right.

dextroversion (deks-tro-ver'shun) [L. *dexter* right + *ver'tere* to turn]. Version to the right side.

dextroverted (deks-tro-ver'ted). Turned to the right.

dezymotize (de-zīm'o-tiz) [L. *de* priv. + Gr. *ζύμην* leaven]. To deprive of ferments or of germs.

dg. Abbreviation for *decigram*.

dhad (dahd). An annoying disease of the skin of the waist, occurring in northern India.

d'Herelle phenomenon (da-rel') [F. *d'Herelle* of the Pasteur Institute, Paris]. See *Twort-d'Herelle phenomenon*, under *phenomenon*.

D. Hg., D. Hy. Abbreviation for *Doctor of Hygiene*.

dhobie itch (do'be) [Hindoo "laundryman"]. See under *itch*.

diabetes (di-ab-e'tēz) [Gr. *διαβήτης* a syphon, from *dia* through + *baivew* to go]. A disease marked by habitual discharge of an excessive quantity of urine. **alimentary d.**, diabetes due to defective metabolism of the carbohydrates of the food. **d. alter'nans**, diabetes in which albuminuria alternates with glycosuria. **artificial d.**, puncture, or experimental, diabetes. **azoturic d.**, diabetes with increase of urea in the urine. **biliary d.**, Hanot's disease. See under *disease*. **bronze d.**, diabetes attended by pigmentation of the skin and secreting organs, and with hepatic and pancreatic sclerosis; hemochromatosis. **cerebral d.**, a form in which brain-sugar, or cerebrose, appears in the urine in place of glucose; cerebrosuria. **composite d.**, that which is at first lipogenous, but afterward

is marked by emaciation. **conjugal d.**, diabetes affecting both husband and wife. **d. decip'iens**, glycosuria with no excess in amount of urine or in the drinking of water. **fat-d.**, a variety in which the patient becomes fat. **gouty d.**, diabetes associated with the gouty diathesis. **hydruric d.**, diabetes with excess of water in the urine, but no increase in the solid elements. **d. in'nocens**, a condition marked by the presence of glycosuria which is not associated with renal disease. **d. inosi'tus**, diabetes in which the sugar of the urine is inosite; inosituria. **d. in-sip'idus**, a chronic disease, marked by great thirst and the passage of a large amount of urine with no excess of sugar. It is often attended by voracious appetite, loss of strength, and emaciation. **d. intermittens**, diabetes mellitus in which sugar is absent during certain periods. **Lancereaux's d.**, diabetes mellitus with marked emaciation and frequently associated with disease of the pancreas. **lean d.**, a variety with marked emaciation. **lipogenous d.**, diabetes with obesity. **masked d.**, obesity without glycosuria: at a later stage it passes into diabetes mellitus. **d. melli'tus**, a disease of metabolism based on defect in the body's power to store and oxidize carbohydrates, and marked by an abnormal amount of sugar in the blood (hyperglycemia) and by the passage of an excessive amount of urine (polyuria) containing an excessive amount of sugar (glycosuria). It is attended by thirst, enormous appetite, emaciation, and loss of strength: it may occur in a temporary form after the use of certain foods, with certain nervous diseases, and with congestion of the liver; but the disease is usually chronic and fatal, although in elderly people it may continue for some years. **Mosler's d.**, inosituria with polyuria. **neurogenous d.**, a form which is due to disease of a nerve-center. **pancreatic d.**, that which is associated with disease of the pancreas. **phloridizin d.**, a form produced by administering phloridzin. **phosphatic d.**, polyuria and polydipsia in which the urine is loaded with phosphates. **puncture d.**, a form produced by puncturing the oblongata near the diabetic center. **renal d.**, diabetes thought to be dependent on defective renal function. **temporary d.**, diabetes which lasts but a short time and is usually an epiphenomenon of some other disease. **toxic d.**, diabetes due to a poison.

diabeteserin (di-ab-e'tes'er-in). A combination of Trunccek's serum and cerin: used in arterial sclerosis.

diabetic (di-ab-et'ik). Pertaining to or affected with diabetes.

diabetico (di-ab-et'ik-o). A drink for diabetics: alcohol, 8.25 per cent.; tartaric acid, 0.56 per cent.; phosphoric acid, 0.025 per cent.; glycerin, 0.82 per cent.; sulphuric acid, 0.036 per cent.; saccharin, 0.023 per cent., etc.

diabetid (di-ab-e'tid). A cutaneous manifestation of diabetes.

diabetifuge (di-ab-e'tif-ūj) [*diabetes* + *fuga're* to put to flight]. A proprietary diabetes remedy containing manganese peroxid, sodium bicarbonate, antipyrin, uranium nitrate, and santonin.

diabetin (di-ab-e'tin). Levulose: recommended as a safe sugar for use in diabetes; a proprietary name.

diabetogenic (di-a-bet-o-jen'ik) [*diabetes* + Gr. *γεννᾶν* to produce]. Producing diabetes.

diabetogenous (di'ab-et-oj'en-us). Produced by diabetes.

diabetograph (di-ab-e'to-graf) [*diabetes* + Gr. *γράφειν* to write]. An instrument in which urine is dropped into boiling Fehling's solution; a graduated scale with figures shows the proportion of glucose present.

diabetol (di-ab-e'tol). A proprietary diabetes remedy advertised to the laity.

diabetometer (di'ab-e-tom'et-er) [*diabetes* + Gr. μέτρον measure]. A polariscope for use in estimating the percentage of sugar in urine.

diabrosis (di-ab-ro'sis) [Gr. διά through + βρωσις eating]. Perforation resulting from a corrosive process; perforating ulceration.

diabrotic (di-ab-rot'ik) [Gr. διαβρωτικός]. 1. Ulcerative; caustic. 2. A corrosive or escharotic agent.

diacele (di'as-ēl). See *diacale*.

diacetanilid (di'as-et-an'il-id). An acetanilid derivative, $C_6H_5N(CO.CH_3)_2$: physiologically more active than acetanilid.

diacetate (di-as'et-āt). Any salt of diacetic acid.

diacetemia (di'as-e-te'me-ah) [*diacetic acid* + Gr. αἷμα blood]. The presence of diacetic acid in the blood.

diacetic acid (di-as-e'tik). See *acid*.

diaceticaciduria (di'as-e'tik-as'id-u're-ah). Same as *diaceturia* or *acetonuria*.

diacetyl (di-as-e'tin). Glyceryl diacetate: $C_3H_5(OH)(C_2H_5O_2)_2$, an ester of glycerol and acetic acid.

diacetonuria (di-as'et-o-nu're-ah). Same as *diaceturia*.

diaceturia (di'as-e-tu're-ah) [*diacetic acid* + Gr. οὖρον urine]. The excretion of diacetic acid in the urine.

diacetyl (di-as'et-il). A yellow liquid, diketobutane, $CH_3COCOCH_3$, having a pungent, sweet odor. **d. peroxid**, a compound, $CH_3CO-O-O-CO-CH_3$: used in solution as an antiseptic.

diacetylamidoazotoluene (di-as-e'til-am'id-o-a-zo-to'l'u-ēn). Pellidol.

diacetylmorphin (di-as-e'til-mor'fin). Same as *heroin*.

diachorema (di-ak-o-re'mah). Feces.

diachoresis (di-ak-o-re'sis). Defecation.

diachylon (di-ak'il-on) [Gr. διά through + χυλός juice]. Lead plaster. **compound d.**, **yellow d.**, galbanum plaster. **d. ointment**, mixture of olive oil and lead plaster.

diacid (di'as-id) [Gr. δῖς twice + *acid*]. Having two replaceable hydrogen atoms; also, capable of saturating a dibasic acid, or two molecules of a monobasic acid.

diaclasia, **diacclasis** (di-ak-la'ze-ah, di-ak'las-is) [Gr. διά through + κλᾶν to break]. A fracture, especially one made for a surgical purpose.

diaclast (di'ak-last). An instrument for perforating the fetal skull in craniectomy.

diacœle, **diacœlia** (di-as-e'le, di-as-e'le-ah) [Gr. διά between + κοιλία a hollow]. The third ventricle.

diacrinous (di-ak'rin-us) [Gr. διακρίνειν to separate]. Giving off secretion directly, as from a filter: said of gland-cells, as those of the kidney. Opposed to *phycrinous*.

diacrisis (di-ak'ris-is) [Gr. διάκρισις separation]. 1. Diagnosis. 2. A disease marked by a morbid state of the secretions. 3. A critical discharge or excretion.

diacritic, **diacritical** (di-ah-krit'ik, di-ah-krit'ik-al) [Gr. διά apart + κρίνειν to judge]. Diagnostic.

diactinic (di-ak-tin'ik). Transmitting actinic rays. **diactinism** (di-ak'tin-izm) [Gr. διά through + ακτίς ray]. The property of transmitting chemically active rays.

Diactophyme gig'as. Same as *Eustrongylus gigas*.

diad (di'ad). 1. Having a valency or combining power of two. 2. An element or radical which has a valency of two.

diaderm (di'ad-erm) [Gr. διά throughout + δέρμα skin]. The blastoderm during that stage in which it consists of an ectoderm and an entoderm.

diadermic (di-ad-er'mik). Through the skin; applied to medication by inunction.

diadochocinesia, **diadochocinetic**. See *diadokinesia* and *diadokokinetic*.

diadokinesia (di-ah-dok'o-kin-e'se-ah) [Gr. διάδοκός succeeding + κίνησις motion]. The function of arresting one motor impulse and substituting for it one that is diametrically opposite.

diadokokinetic (di-ah-do'ko-kin-et'ik). Pertaining to diadokinesia.

diæresis (di-er'e-sis). Dieresis.

diagnose (di'ag-nōs). Same as *diagnosticate*.

diagnosis (di-ag-no'sis) [Gr. διά apart + γνῶσις knowledge]. 1. The art of distinguishing one disease from another. 2. The determination of the nature of a case of disease. **clinical d.**, diagnosis based on the symptoms shown during life, irrespective of the morbid changes producing them. **differential d.**, the distinguishing between two allied diseases by contrasting their symptoms. **direct d.**, pathologic diagnosis by observing structural lesions or pathognomonic symptoms. **d. by exclusion**, recognition of a disease by excluding all other known diseases. **group d.**, diagnosis made by the combined efforts of an organized group of specialists acting as a unit. **laboratory d.**, diagnosis made by examination of various body fluids and secretions in the laboratory. **niveau d.** [Fr. "level diagnosis"], localization of the exact level of a lesion; as, for instance, of an intervertebral tumor. **pathologic d.**, diagnosis by observing the structural lesions present. **physical d.**, determination of disease by inspection, palpation, percussion, or auscultation. **regional d.**, **topographic d.**, diagnosis of the locality in which a lesion is situated. **serum d.**, diagnosis by means of serums; serodiagnosis. **tentative d.**, a diagnosis based upon the available sources of information, but subject to change.

diagnostic (di-ag-nos'tik). Pertaining to or subserving diagnosis.

diagnosticate (di-ag-nos'tik-āt). To make a diagnosis of; to recognize the nature of an attack of disease.

diagnostician (di'ag-nos-tish'an). An expert in diagnosis.

diagnosticum, **Ficker's** (di-ag-nos'tik-um). An emulsion of killed typhoid bacilli for use in the Widal reaction.

diagrammatic (di'ag-ram-at'ik). Drawn to illustrate a principle in anatomy, physiology, or embryology, rather than as an exact representation of nature.

diagraph (di'ag-raf) [Gr. διά across + γράφειν to write]. An instrument for recording outlines: used in craniotomy, etc.

diakinesis (di-ak-in-e'sis) [Gr. διά through + κίνησις motion]. The segmented spirem stage of the spermatocyte.

dial (di'al). A clock-face. **astigmatic d.**, a diagram like the face of a watch used in testing for astigmatism.

dialacetyl (di-al-as'et-in). A combination of dial and allyl-paracetaminophenol: used in the treatment of epilepsies.

dial-Ciba (di-al-si'bah). A proprietary, hypnotic, di-allyl-barbituric acid, $(CH_2.CH)_2(CO.NH)_2CO$.

Dialister (di-al-is'ter). A genus of Bacteriaceæ: they are strictly anaerobic parasites. **D. pneumosin'tes**. Same as *Bacterium pneumosintes*.

diallyl (di-al'il). Any compound containing two allyl molecules. **d. disulphid**, an odorous principle, $(C_3H_5)_2S_2$, found in oil of garlic.

dialurate (di-al'u-rāt). A salt of dialuric acid. See *acid*.

dialuric acid (di-al-u'rik). See *acid*.

dialysate (di-al'is-āt). A liquid that has been dialyzed.

dialysis (di-al'is-is) [Gr. *διά* through + *λύνω* to loose]. 1. The separation of substances from a mixture by their different diffusibility through porous membranes. 2. Solution of continuity. **Abderhalden's d.**, Abderhalden's reaction. See under *reaction*.

dialyzed (di'al-izd). Separated or prepared by dialysis.

dialyzer (di'al-i-zer). Apparatus for effecting dialysis.

diamagnetic (di'ah-mag-net'ik) [Gr. *διά* across + *μάγνης* magnet]. Taking a position at right angles with the lines of magnetic influence.

diamalt (di'am-awlt). A proprietary malt preparation.

diameter (di-am'et-er). A straight line through a center, joining opposite points of a periphery. **anteroposterior d.** 1. (Of pelvic inlet.) That which joins the anteroposterior angle of the pelvic inlet; that which joins the sacrovertebral angle with the symphysis pubis. 2. (Of pelvic outlet.) Joins tip of coccyx to suprapubic ligament. **anterotransverse d., temporal d.**, between tips of *alæ magnæ*. **Baudelocque's d.**, the external conjugate diameter of pelvis. **biparietal d.**, joins the parietal eminences. **bitemporal d.**, that which joins the extremities of the coronal suture. **buccolingual d.**, the diameter of a tooth-crown from the buccal to the lingual surface. **coccygeopubic d.**, the distance from the tip of the coccyx to the lower edge of the symphysis pubis. **conjugate d.**, the anteroposterior diameter of the pelvic inlet. **craniometric d.**, any line connecting two craniometric points of the same name. **Deventer's d.**, the oblique diameter of the pelvis. **diagonal conjugate d.**, joins the sacrovertebral angle and subpubic ligament. **external conjugate d.**, connects depression above spine of first sacral vertebra and middle of upper border of symphysis pubis. **fetal cranial d's** are the occipitomeatal, occipitofrontal, suboccipitobregmatic, cervicobregmatic, biparietal, bitemporal, and frontomeatal. **inferior longitudinal d.**, from foramen cæcum to internal occipital protuberances; called also *sagittal d.* **intercrystal d.**, the distance between the middle points of the iliac crests. **internal conjugate d.**, the diameter from the sacral promontory to the upper edge of the pubic symphysis. **intertuberal d.**, the inner diameter of the pelvis measured between the sciatic notches. **Löhlein's d.**, the line between the center of the subpubic ligament and the superior interior angle of the great sacrosciatic foramen. **mentoparietal d.**, from chin to vertex. **occipitofrontal d.**, joins the root of the nose and occipital prominence. **occipitomeatal d.**, joins the external occipital protuberance and the chin. **parietal d., posterotransverse d.**, between tuberosities of parietal bones. **pelvic d.**, any diameter of the pelvis. **sagittal d.**, from glabella to external occipital protuberance. **superior sagittal d.**, between middle of internal crest of frontal bone and superior linea cruciata of occipital. **trachelobregmatic d.**, joins the center of the anterior fontanel and junction of neck with floor of mouth. **transverse d. of pelvic inlet**, connects the two most widely separated points of pelvic inlet. **transverse d. of pelvic outlet**, joins the ischial tuberosities. **true conjugate d.**, connects sacrovertebral angle with the middle of most prominent part of posterior aspect of symphysis pubis. **vertical d.**, between foramen magnum and vertex.

diamid, diamide (di'am-id). A double amid. 1. A compound which contains two amido groups. 2. Hydrazin.

diamido-. A prefix indicating the possession of two amido groups.

diamin, diamine (di-am'in) [L. *di* two + *amin*]. 1. A compound which contains two amino groups.

2. Hydrazin sulphate, $\text{H}_2\text{SO}_4 \cdot \text{H}_2\text{N} \cdot \text{H}_2\text{N} \cdot \text{NH}_2 \cdot \text{NH}_2 \cdot \text{H}_2\text{SO}_4$; a poisonous germicide in colorless crystals.

diamino-acids. Acids containing two amino, NH_2 , groups.

diamino-acridin (di-am'in-o-ak'rid-in). See *proflavine*.

diaminodiphosphatid. A phosphatid containing two atoms of nitrogen and two of phosphorus to the molecule.

diaminomonophosphatid. A phosphatid containing two atoms of nitrogen and one of phosphorus to the molecule.

diaminotrihydroxydodecanoic acid. See under *acid*.

diaminuria (di-am-in-u're-ah). The presence of diamins in the urine.

diamorphin (di-am-or'fin). Same as *heroin*.

diamorphosis (di-ah-mor'fo'sis). Growth into normal shape.

diamylene (di-am'il-ēn). Same as *dipentene*.

diamylose (di-am'il-ōs). Bisamylose.

dianol (di-an'ol). A lactate of glycerin, used as a cauterizant in throat and nose affections.

dian'thin B. Bluish erythrosin. **d. d. G**, yellowish erythrosin.

diapalma (di-ah-pal'mah). A drying plaster made of white wax, diachylon plaster, and sulphate of zinc.

diaparaffin (di-ap-ar'af-in). A combination of diamalt and paraffin; given for the laxative effect of the paraffin.

diapason (di-ah-pa'son) [Gr. *διά* through + *πασών* all]. A tuning-fork; used in the diagnosis of ear troubles.

diapedesis (di'ah-pe-de'sis) [Gr. *διά* through + *πηδᾶν* to leap]. The passage of blood or of leukocytes through the unruptured walls of vessels.

diaphane (di'af-ān) [Gr. *διαφανής* transparent]. 1. The investing membrane of a cell. 2. A minute electric lamp for use in transillumination.

diaphaneity (di-af-an-e'it-e). Transparency.

diaphanometer (di'a-fan-om'et-er) [Gr. *διαφανής* translucent + *μέτρον* measure]. An instrument for testing milk, urine, and other fluids by means of transmitted light.

diaphanometry (di'af-an-om'et-re). The measurement of the transparency of a fluid.

diaphanoscope (di-afan'o-skōp) [Gr. *διά* through + *σκοπεῖν* to view]. An instrument for illuminating a body-cavity and rendering it visible.

diaphanoscapy (di'af-an-os'ko-pe). Examination with the diaphanoscope.

diaphant (di'af-ant). A mixture of cocoa, sugar of milk, sape, and powdered lodestone, used in x-ray work instead of bismuth.

diaphemetric (di'af-e-met'rik) [Gr. *διά* through + *ἄφή* touch + *μέτρον* measure]. Pertaining to the measurement of tactile sensibility.

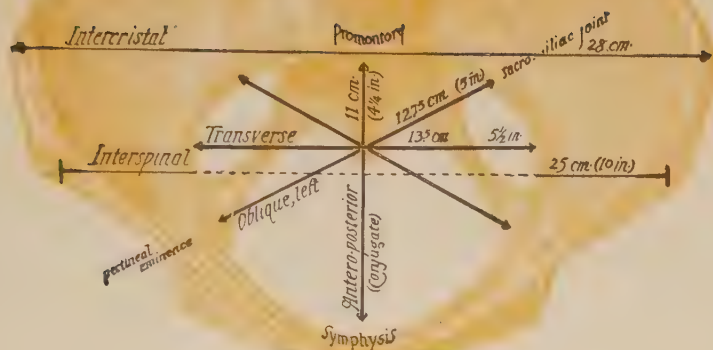

diapherin (di-af'er-in). A crystalline compound used in surgery as a powerful antiseptic.

diaphoresis (di'af-o-re'sis) [Gr. *διά* through + *φέρω* to carry]. Perspiration, and especially profuse perspiration.

diaphoretic (di'af-o-ret'ik). 1. Stimulating the secretion of sweat. 2. A medicine that increases the perspiration. **sedative d.**, one that acts by dilating the cutaneous vessels, such as the cardiac sedatives and nauseants.

Diapedesis of leukocytes (Williams).

DIAMETERS: 1, diameters of pelvic brim with transverse iliac diameters; 2, fetal skull from in front, and 3, from the side, showing diameters (Dickinson).

diaphragm (di'af-ram) [Gr. *diá* across + *φράγμα* wall]. 1. The musculomembranous partition that separates the abdomen from the thorax. 2. Any thin septum. 3. A disk with one or more openings in it, or with an adjustable opening, mounted in front of a lens to shut off part of the light from it. **Akerlund d.**, a spiral type of diaphragm for roentgenography. **Bucky d.**, **Buck-Potter d.**, a diaphragm for roentgenography, which will prevent the secondary rays from reaching the plate, thereby securing better contrast and definition. **pelvic d.**, diaphragma pelvis. **urogenital d.**, the triangular ligament of the perineum.

diaphragma (di'af-rag'mah) [B N A]. L. for *diaphragm*. **d. pelvis** [B N A], the portion of the floor of the pelvis formed by the levatores ani muscles. **d. sel'læ** [B N A], a ring-shaped fold of dura mater covering the pituitary fossa, and containing an aperture for the infundibulum. **d. urogenital'e** [B N A], the triangular ligament of the pelvis.

diaphragmalgia (di'af-rag-mal'je-ah) [*diaphragm* + *ἄλγος* pain]. Pain in the diaphragm.

diaphragmatic (di'af-rag-mat'ik). Pertaining to or of the nature of a diaphragm. **d. phenomenon**. See *phenomenon*.

diaphragmatitis, diaphragmitis (di'af-rag-mat'i'tis, di'af-rag-mi'tis). Inflammation of the diaphragm.

diaphragmatocele (di'af-rag-mat'o-sēl) [*diaphragm* + Gr. *κήλη* hernia]. Diaphragmatic hernia.

diaphragmodynia (di'af-rag-mo-din'e-ah) [*diaphragm* + Gr. *δύνη* pain]. Pain in the diaphragm.

diaphtherin (di-af'the-rin). Oxyquinaseptol, a yellow powder derived from coal-tar, and composed of two molecules of oxyquinolin and one of aseptol. It is used as an antiseptic in solutions of from 0.5 to 2 per cent.

diaphtol (di-af'tol). Quinaseptol, ortho-oxyquinolin-metasilphonic acid, $\text{OH.C}_6\text{H}_3\text{N.SO}_2\text{OH}$, a quinolin derivative in yellowish crystals: antiseptic and antirheumatic.

diaphysary (di-af'iz-a-re). Pertaining to or affecting the shaft of a bone.

diaphysectomy (di-af-is-ek'to-me) [*diaphysis* + Gr. *ἐκτομή* excision]. Excision of a portion of the shaft of a long bone.

diaphysis (di-af'is-is) [Gr. *diá* apart + *φύειν* to grow]. Any shaft of a long bone.

diaphysitis (di'af-is-i'tis). Inflammation of a diaphysis.

diaplasia (di-ap'las-is) [Gr. "putting into shape"]. The setting of a fracture or the reduction of a dislocation.

diaplex, diaplexus (di'ap-leks, di-ah-pleks'us). The choroid plexus of the third ventricle.

diaplexal (di-ap-leks'al). Pertaining to the diaplex.

diaplyte tuberculin or vaccine (di'ap-lit) [Gr. *diá* through + *πλυντός* washed]. See *Dreyer's vaccine*, under *vaccine*.

diapnoic (di-ap-no'ik) [Gr. *diá* through + *πνέειν* to breathe]. Pertaining to or causing mild perspiration.

diapophysis (di-ap-ol'is-is) [Gr. *diá* apart + *ἀπόφυσις* outgrowth]. The superior or articular part of a transverse process of a vertebra.

diapytic (di'ah-pi-et'ik). Promoting suppuration.

diarhemia, diarrhemia (di-ar'e-me-ah) [Gr. *diarrhein* to flow through]. A watery condition of the blood occurring in sheep infested with parasites.

diarrhea, diarrhœa (di-ar-e'ah) [Gr. *diá* through + *ρῆν* to flow]. Abnormal frequency and liquidity of fecal discharges (Hippocrates). **d. al'ba**, a disease of hot countries, affecting children especially. It is thought to be of filarial origin. **cachectic d.**, that which is due to some constitutional

disease. **choleraic d.**, acute diarrhea with serous stools, accompanied by vomiting and collapse. **d. chyl'o'sa**, diarrhea in which the discharge consists of a yellowish-white, mucopurulent substance. **Cochin-China d.**, psilosis. **crapulous d.**, that due to excess in eating or drinking. **critical d.**, diarrhea occurring at the crisis of a disease or producing a crisis. **dissecting-room d.**, severe diarrhea caused by exposure to the effluvia of a dissecting-room. **dysenteric d.**, diarrhea with mucous and bloody stools. **fermental d.**, fermentative d., diarrhea caused by fermentation due to microorganisms. **flagellate d.**, diarrhea marked by the presence of flagellate organisms in the stools. **gastrogenic d.**, diarrhea due to gastric disorder. **hill-d.**, a severe type of chronic intestinal catarrh peculiar to hot climates and occurring only at elevations of several thousand feet: named from the hill-districts of India. By some it is considered to be identical with sprue. **inflammatory d.**, diarrhea in which there is an inflammation of the intestine due to bacterial action. **irritative d.**, diarrhea due to irritation of the intestine by improper food, poisons, purgatives, etc. **lienteric d.**, diarrhea with fluid stools containing undigested food. **mechanical d.**, diarrhea due to mechanical obstruction to the portal circulation, producing gastro-intestinal hyperemia. **morning d.**, a condition marked by diarrhea in the morning only. **mucous d.**, a kind characterized by the presence of mucus in stools. **d. pancreat'ica**, the diarrhea that accompanies pancreatic degeneration or cystic disease of the pancreas. **serous d.**, discharge of feces softened by copious serous fluid. **stercoral d.**, diarrhea accompanied by colic and following two or three days of constipation. **summer d.**, acute diarrhea in children during great heat of summer. **trench d.**, a form of diarrhea and dysentery occurring in troops in the trenches. **tropical d.** See *sprue* (2d. def.). **tubercular d.**, a variety of diarrhea peculiar to cases of tuberculosis. **tubular d.** See *mucous colitis*, under *colitis*. **d. urino'sa**, polyuria. **vicarious d.**, that which is due to the impairment or suppression of some function. **watery d.** Same as *serous d.* **white d.** 1. A form in which the stools contain a thin, white mucus. 2. A disease in young chicks caused by *Bacillus pullorum*.

diarsenol (di-ar'se-nol). See *arsphenamin*. **silver d.**, a compound similar to silver arsphenamin. **sodium d.**, a brand of sodium arsphenamin.

diarsenolized (di-ar'sen-ol-iz'd). Treated with or impregnated with diarsenol.

diarthric (di-ar'thrik). Pertaining to two joints.

diarthrosis (di-ar-thro'sis) [Gr. *diá* through + *ἄρθρωσις* joint]. A joint freely movable in any direction, like the shoulder- or the hip-joint. **d. rotato'ria**, a joint with pivot-like mobility.

diarticulär (di-ar-tik'u-lar). Pertaining to two joints.

diaschisis (di-as-ki'sis) [Gr. *diá* apart + *σχίζειν* to split]. Monakow's term for a loss of functional continuity between the various centers or neuron tracts, constituting one of the cerebral mechanisms.

diascope (di'as-köp) [Gr. *diá* through + *σκοπεῖν* to view]. A glass plate pressed against the skin for observing the anatomic changes other than those of congestion.

diaspilin (di-as'pir-in). A white, crystalline powder, the succinic acid ester of salicylic acid, $\text{CO}_2\text{H} \cdot (\text{CH}_2)_2 \cdot \text{CO}_2 \cdot \text{C}_6\text{H}_4 \cdot \text{CO}_2\text{H}$: used as a diaphoretic. Dose, 15-30 gr. (1-2 gm.).

diastalin (di-as'tal-in). A digestant preparation of pepsin, caroid, hydrochloric acid, nux vomica, etc.

diastalsis (di-as-tal'sis) [Gr. *diá* through + *στάσις* contraction]. The forward movement of the contents of the intestine.

diastaltic (di-as-tal'tik) [Gr. *διά* apart + *στέλλειν* to send]. Performed reflexly through the medium of the spinal cord.

diastase (di'as-tās) [Gr. *διασάται* to separate]. 1. A white, amorphous, soluble solid produced during the germination of seeds, and contained in malt. It converts starch into dextrose and glucose. 2. Any ferment (in French usage). **pancreatic d.**, a ferment obtained from the pancreatic secretions and given for indigestion. **taka-d.** See *taka-diastase*.

diastasiaemia (di'as-ta-se'me-ah) [Gr. *διάστασις* separation + *αἷμα* blood]. The dissociation of the elements of the red blood-corpuscles.

diastasic, diastatic (di-as-ta'sik, di-as-tat'ik). Pertaining to diastase or to diastasis.

diastasiometry (di'as-ta-sim'et-re). The estimation of the diastatic power of a substance.

diastasis (di-as'ta-sis) [Gr. *διάστασις*]. 1. The separation of an epiphysis from the body of a bone without a fracture. 2. The fracture of a bone at the place of junction of an epiphysis. **d. recti abdominis**, separation of the recti muscles of the abdomen away from the median line, sometimes occurring in pregnancy and after abdominal operations.

diastasum (di-as-ta'sum). Diastase.

diastatic (di-as-tat'ik). 1. Pertaining to diastase. 2. Pertaining to diastasis.

diastem (di'as-tem). Same as *diastema*.

diastema (di-as-te'mah), pl. *diastemata* [Gr. *διάστημα* a space]. A space or cleft. In dentistry, a space between the teeth, particularly the space between the canine and the lateral teeth of the upper jaw into which the lower canine closes. In cytology, a narrow zone in the equatorial plane through which the cytosome divides in mitosis.

diastematocrania (di-as-tem'at-o-kra'ne-ah) [Gr. *διάστημα* fissure + *κράνιον* cranium]. Congenital longitudinal fissure of the cranium.

diastematomyelia (di-as-tem'at-o-mi-e'le-ah) [Gr. *διάστημα* fissure + *μυελός* marrow]. Congenital separation of the lateral halves of the spinal cord.

diastematopyelia (di-as-tem'at-o-pi-e'le-ah) [Gr. *διάστημα* separation + *πύελος* pelvis]. Congenital median fissure of the pelvis.

diaster (di'as-ter) [Gr. *διά* twice + *ἀστήρ* star]. Same as *amphister*.

diastin (di-as'tin). A form of diastase.

diastoid (di'as-toid). A proprietary dry malt preparation.

diastol (di'as-tol). A proprietary peptone preparation.

diastole (di-as'to-le) [Gr. *διά* apart + *στέλλειν* to send]. The dilatation or stage of dilatation of the heart, and especially that of the ventricles. **reflex d.**, the development of a red line which in a few seconds changes to a white line when the end of a pen-holder is passed firmly over the skin. Called also *reflex vasodilatation*.

diastolic (di-as-to'lik). Of or pertaining to the diastole.

diastomyelia (di-as-to-mi-e'le-ah). Diastematomyelia.

diasilin (di-as'u-lin). A Scandinavian preparation derived from the pancreas of the pig: said to be useful in diabetes.

diataxia (di-at-ak'se-ah) [Gr. *δι* two + *αταξία*]. Ataxia affecting both sides of the body. **cerebral d.**, **d. cerebra'lis infant'is**, the ataxic form of cerebral birth palsy.

diatela, diatele (di-at-e'lah, di'at-ēl). The roof of the third ventricle.

diaterma (di-ah-ter'mah) [Gr. *διά* between + *τέρμα* end]. A portion of the floor of the third ventricle.

diathermacy (di-ath-er'mas-e). The state of being diathermanous.

diathermal (di-ah-ther'mal). Same as *diathermanous*.

diathermanous (di-ah-ther'man-us) [Gr. *διά* through + *θερμαίνειν* to warm]. Admitting the passage of heat-rays.

diathermia (di-ath-er'me-ah). Diathermy.

diathermic (di-ath-er'mik). Pertaining to diathermy; permeable by heat rays.

diathermy (di'ath-er-me) [Gr. *διά* through + *θέρμη* heat]. The generation of heat in the body tissues due to the resistance offered by the tissues to high-frequency electric currents forced through them. In **medical d.**, or **thermo-penetration**, the tissues are warmed to a point short of tissue destruction; in **surgical d.**, **electrocoagulation**, the heat generated is sufficient to coagulate tissue cells.

Diathermy (Milner in British Medical Journal).

diathesis (di-ath'es-in). A bitter crystalline compound, ortho oxybenzyl alcohol, $\text{OH.C}_6\text{H}_4.\text{CH}_2\text{OH}$, soluble in water. It is antipyretic and anodyne, and is used like the salicylates. Dose, 5-15 gr. (0.33-0.98 gm.).

diathesis (di-ath'es-is) [Gr. *διαθεῖναι* to dispose]. Natural or congenital predisposition to a special disease. **aneurysmal d.**, liability to formation of multiple aneurysms. **asthenic d.**, a low state of general vitality. **bilious d.**, a tendency toward imperfect elimination of bile. **catarrhal d.**, special liability to catarrhal diseases. **contractural d.**, a hysteric tendency to contractures. **cystic d.**, a tendency to the development of multiple cysts in an organ. **dartrous d.**, **rheumatic d.**, predisposition to eczema, herpes, and other skin diseases. **exudative d.**, a diathesis marked by thickening of the lingual mucous membrane, seborrhea of the scalp, prurigo, intertrigo, severe itching, and glandular enlargements. **furuncular d.** See *furunculosis*. **gouty d.**, predisposition to gout. **hemorrhagic d.**, a tendency to the development of purpura and hemorrhages from the mucous membranes. **inopectic d.**, a bodily predisposition to embolism and thrombosis. **insane d.**, a natural predisposition to insanity. **neuropathic d.**, a congenital predisposition to nervous instability. **ossifying d.**, a tendency to the formation of bony deposits in the muscles. **psychopathic d.**, neuropathic diathesis. **rheumatic d.**, predisposition to rheumatism. **spasmodic d.**, **spasmophilic d.**, spasmophilia; a condition of abnormal excitability of the peripheral motor nerves, tending to tetany and general convulsions. **strumous d.**, predisposition to scrofulous or tuberculous disease. **tuberculous d.**, special liability to the acquisition of tuberculosis. **uric-acid d.**, a tendency to the collection of uric acid and urates in the tissues, resulting in gout, rheumatism, diabetes, etc. **varicose d.**, a tendency to the formation of varicose veins.

diathetic (di-ath-et'ik). Of or pertaining to a diathesis.

diatom (di'at-om). Any unicellular microscopic form of Alga having a wall of silica.

diatomic (di-at-om'ik) [Gr. *δύς* two + *ἄτομος* atom]. 1. Made up of two atoms. 2. Having two replaceable hydrogen atoms.

diatussin (di-at-us'in). A proprietary remedy for the treatment of whooping-cough.

diaxon, diaxone (di-aks'ōn) [Gr. *δῖς* two + *axon*]. A nerve-cell having two axons or axis-cylinder processes.

diazellose (di-az-el'ōs). A hemicellulose preparation from agar-agar: used as a cathartic and anti-diabetic.

diazin (di-az'in). A compound containing a ring of four carbon and two nitrogen atoms.

diazo-. A prefix indicating possession of the group $-N_2-$.

diazobenzene (di-az''o-ben'zēn). A univalent organic radical, $C_6H_5N_2$.

diazo-compound (di-az''o-kom'pound). See under *compound*.

diazo-reaction (di-az'o-re-ak''shun). See *Ehrlich's reaction*, under *reaction*.

diazoma (di-az-o'mah). The diaphragm.

diazonal (di-ah-zō'nal). Situated across or lying across a sclerozone.

diazosulphobenzol (di-az''o-sul''fo-ben'zol). A substance which acts upon certain principles in the urine to form anilin colors.

diazotize (di-az'o-tīz). To introduce the diazo group into a compound.

diazyme (di'az-im). A proprietary liquid said to contain the amylolytic enzyme of the pancreas free of trypsin and lipase. It is used for deficient starch digestion. Dose, 1-2 fl.dr. (4-8 c.c.).

dibasic (di-ba'sik) [Gr. *δῖς* twice + *βάσις* base]. Containing two hydrogen atoms replaceable by bases; also containing two equivalents or molecules of a base.

diblastula (di-blas'tu-lah) [Gr. *δῖς* two + *blas-tula*]. A blastula in which the ectoderm and endoderm are both present.

Dibothryocephalus (di-both-re-o-sef'al-us). A genus of tapeworms. Called also *Bothriocephalus* and *Diphyllbothrium*. **D. cordatus**, the heart-headed tapeworm. A small species found in dogs and in seals in Greenland and only once in man. **D. latius**, a very large tapeworm found in the intestines of man and (somewhat smaller) in cats and dogs. It may be $\frac{3}{4}$ inch wide and 20 feet long. The head is marked with two grooves or suckers (bothridia). It has two hosts. The first is probably a mollusk, the second is a fish, and by eating inadequately cooked fish man is infected. Several species of fish harbor the plerocercoid or infective stage, viz., the pike, the perch, the salmon, the trout, and millur thumb. **D. mansoni**, a species found in cats and dogs in Asia. **D. parvus**, a species found in Australia. **D. taeniodes**. Same as *D. latius*.

dibromid (di-bro'mid). Any bromid which combines two atoms of bromin with one of another element or radical.

dibromin (di-bro'min). A non-irritating antiseptic and germicide, dibromo-barbituric acid, $CO \cdot NH \cdot CO \cdot CBr_2$: used in dilutions of 1:10,000 and stronger.

dibromogallic acid (di-bro-mo-gal'ik). Same as *gallobromol*.

dibromoketone (di-brōm-o-ke'ton). $CH_3 \cdot CO \cdot CHBr \cdot CH_2Br$, a war gas.

dibutyl (di-būt'il). A hydrocarbon, C_8H_{18} , occurring in mineral oil.

dicacodyl (di-kak'o-dil). A colorless, poisonous compound, $(CH_3)_2AsAs(CH_3)_2$, formed by the action of zinc on cacodyl chlorid.

dicalcic (di-kal'sik). Having in each molecule two atoms of calcium.

dicamphendion (di-kam-fen'de-on). A substance, $(C_{10}H_{14}O)_2$, obtained by the action of metallic sodium upon bromocamphor, dicamphor being produced at the same time.

dicamphor (di-kam'for). A principle in colorless needles, $(C_{10}H_{15}O)_2$, produced at the same time and from the same materials as dicamphendion.

dicarbonate (di-kar'bo-nāt). Same as *bicarbonate*.

dicelous, dicelolous (di-se'lus) [Gr. *δι-* two + *κοῦλος* hollow]. 1. Hollowed on both sides. 2. Having two cavities.

dicentrin (di-sen'trin). A crystalline alkaloid, $C_{20}H_{21}NO_4$, from *Dicentra pusilla*.

dicephalous (di-sef'al-us). Having two heads.

dicephalus (di-sef'al-us) [Gr. *δῖς* twice + *κεφαλή* head]. A monster-fetus with two heads.

dichloralantipyrin (di-klo''ral-an-ti-pi'rin). A crystalline agent, $C_{11}H_9N_3O \cdot 2CCl_3CH(OH)_2$, formed by the trituration of antipyrin with chloral hydrate. It is hypnotic and analgesic. Maximum dose, 45 gr. (3 gm.).

dichloramin (di-klor-am'in). A compound formed from a primary amin by replacing both atoms of ammoniacal hydrogen by chlorine. **d.-M.**, a white crystalline substance, methyl-diphenylmethyldichloramin, having properties similar to those of chloramin-T. **d.-T.**, toluene-p-sulphondichloramid, $CH_3 \cdot C_6H_4 \cdot SO_2 \cdot NCl_2$, a yellowish-white, crystalline substance. It is a strong germicide and is used in oily solution in the treatment of wounds by spraying upon the wound surfaces or by pouring into deep wounds.

dichlorbenzol (di-klor-ben'zol). A compound recommended as a remedy for thread-worms.

dichlordiethylsulphid (di-klor-di-eth-il-sul'fid). Mustard gas, $(CH_2ClCH_2)_2S$; a vesicant gas employed in the Great War. It produces blistering and subsequent sloughing of the skin, eyes, and respiratory tract. Death results from bronchopneumonia. Called also *yperte*.

dichlordioxydimido-arsenobenzol (di-klor-di-ox''e-di-am''id-o-ar'sen-o-ben'zol). Salvarsan.

dichloren (di-klo'ren). A proprietary brand of ethylene dichlorid.

dichlorethylarsin (di-klo-reth-il-ar'sin). See *ethyldichlorarsin*.

dichlorhydrin (di-klor-hi'drin). A colorless fluid, $CH_2Cl \cdot CHOH \cdot CH_2Cl$: used as a solvent for resins and prepared by heating anhydrous glycerin with sulphur monochlorid.

dichlorid, dichloride (di-klo'rid). A combination of a base with two atoms of chlorin.

dichlormethane (di-klor-meth'an). Methylene bichlorid, CH_2Cl_2 .

dichlormethylene (di-klor-meth-il-e'ther). A form of mustard gas used in warfare, $(CH_2Cl)_2O$.

dichlorodiethylsulfid. Mustard gas, $(CH_2ClCH_2)_2S$, a lethal and vesicating war gas.

dichlorodivinyldichloroarsin. $(CHCl \cdot CH)_2AsCl$. A lethal war gas.

dichloro-urea (di-klo''ro-u-re'ah). A white powder, a derivative of urea, formed when chlorin is passed into a cold saturated aqueous solution of urea.

dichogeny (di-koj'en-e) [Gr. *δίχα* in two + *γενᾶν* to produce]. Development of tissues in different ways in accordance with changes in conditions affecting them.

dichotomy, dichotomization (di-kot'o-me, di-kot''o-mi-za'shun) [Gr. *δίχα* twofold + *τέμνειν* to cut]. 1. A process of division into two parts. 2. A division of a consultant's fee between the general practitioner and the consultant.

dichroic (di-kro'ik). Exhibiting dichroism.

dichroism (di'kro-izm) [Gr. *δῖς* double + *χρῶμα* color]. The quality or condition of presenting one color in reflected and another in transmitted light.

dichromasy (di-kro'mas-e). Ability to perceive but two colors.

dichromat (di'kro-mat). A person who can distinguish only two of the primary colors.

dichromatic (di-kro-mat'ik) [Gr. *δῖς* twice + *χρῶμα* color]. Seeing only two colors.

dichromatopsia (di-kro-mat-op'se-ah). Ability to distinguish only two of the primary colors.

dichromic (di-kro'mik) [Gr. *δῖς* twice + *χρῶμα* color]. Distinguishing only two colors.

dichromophil, dichromophile (di-kro'mo-fil). Doubly staining; taking both acid and basic dyes.

dichromophilism (di-kro-mof'il-izm) [Gr. *δῖς* twice + *χρῶμα* color + *φιλεῖν* to love]. Capacity for double staining.

dicinchonin (di-sin-kon'is-in). An alkaloid, $C_{38}H_{44}O_2N_4$, formed from cinchonin.

dicinchonin (di-sin-ko'nin) [Gr. *δῖς* double + *cinchonin*]. One of the cinchona alkaloids, $C_{38}H_{44}O_2N_4$.

Dick test (dik) [George F. Dick and Gladys H. Dick, Chicago physicians]. See under *tests*.

diciiditis (dik-lid-i'tis) [Gr. *δικλίδες* valves + *-ιτις* inflammation]. Inflammation of a valve, especially of one of the heart-valves.

diciidostosis (dik-lid-os-to'sis) [Gr. *δικλίδες* valve + *ὀστέον* bone]. Ossification of the valves of the veins.

diciidotomy (dik-lid-ot'o-me) [Gr. *δικλίδες* valve + *τομή* cut]. The cutting of a valve, especially of the rectal valve or fold.

dicodid (di'ko-did). A keto derivative of codein.

dicolous (di-se'lus). Dicolous.

diconchin (di-kon'kin-in). An amorphous alkaloid, $C_{40}H_{46}O_4N_4$, from quinoindin.

dicoria (di-ko're-ah) [Gr. *δι-* double + *κόρη* pupil]. Doubleness of the pupil.

dicroceliasis, dicroceliasis (dik-ro-se-li'as-is). Infection with dicrocelium.

Dicrocoelium lanceatum. A lancet-shaped fluke infesting the liver of cattle and sheep in Europe and northern Africa. It has been found in the human liver.

dicrotalin (di-kro'tal-in). A proprietary preparation of rattlesnake venom; used hypodermically in epilepsy, hay-fever, bronchial asthma, etc.

dicrotic (di-krot'ik) [Gr. *δίκροτος* beating double]. Having or pertaining to a double beat, as of the pulse.

dicrotism (dik'ro-tizm). The occurrence of a double pulse-wave in each arterial beat.

dictamnin (dik-tam'nin). A crystalline alkaloid, $C_{12}H_{11}NO_3$, from *Dictamnus albus*.

dictyoma (dik-ti-o'mah). Same as *diktyoma*.

dictyosome (dik'te-o-sōm) [Gr. *δίκτυον* net + *σώμα* body]. Golgi apparatus. See under *apparatus*.

dicystin (di-sis-te'in). Cystin.

dicytosis (di-si-to'sis) [Gr. *δῖς* twice + *κύτος* cell]. The condition of the blood with regard to the number of both mononuclear and polynuclear leukocytes.

didactic (di-dak'tik) [Gr. *διδακτικός*]. Teaching by theory and precept rather than by practice.

didactylism (di-dak'til-izm) [Gr. *δῖς* twice + *δάκτυλος* finger]. The congenital quality of having only two digits on one hand or foot.

didelphic (di-del'fik) [Gr. *δῖς* twice + *δελφύς* uterus]. Pertaining to a double uterus.

didermoma (di-der-mo'mah). Same as *bidermoma*.

didial (di'di-al). A combination of diallyl-barbituric acid (dial) and diethyl-morphin (dionin); used as a hypnotic.

didym (did'im). A proprietary liquid preparation said to be a by-product of the preparation of incandescent mantles; it contains didymium, cerium, sodium, and magnesium.

didymalgia (did-im-al'je-ah) [Gr. *διδυμος* testis + *ἄλγος* pain]. Pain in a testicle.

didymin (did'im-in). A dry extract of bulls' testicles. Aphrodisiac dose, 5 gr. (0.3 gm.); in larger doses it is hypnotic.

didymitis (did-im-i'tis) [Gr. *διδυμος* testis + *-ιτις* inflammation]. Inflammation of the testicle; orchitis.

didymium (di-dim'e-um). A rare metal, symbol, Di, from various earths, now recognized as a mixture of neodymium and praseodymium. Its chlorid is a non-caustic disinfectant, and one of the most effective of known antiseptic agents. The sulphate is also antiseptic. **d. salicylate**, dymal.

didymodynia (did'im-o-din'e-ah) [Gr. *διδυμος* testis + *ὀδύνη* pain]. Pain in a testicle.

Didymohelix ferruginea. A species of the Chlamydobacteriales consisting of delicate threads twisted together; they are of reddish-brown color from deposited iron.

didymus (did'im-us) [Gr. *διδυμος* twin]. A testicle.

Dieb. alt. Abbreviation for L. *die'bus alter'nis*, on alternate days.

Dieb. tert. Abbreviation for L. *die'bus ter'tius*, every third day.

diechoscope (di-ek'o-skōp) [Gr. *δι-* twice + *ἡχῶ* echo + *σκοπεῖν* to examine]. An instrument for the simultaneous perception of two different sounds in auscultation.

diecious (di-e'shus). See *diæcious*.

Dieffenbach's operation (de'fen-bahks) [Johann Friedrich Dieffenbach, Prussian surgeon, 1795-1847]. See *operation*.

dielectric (di-e-lek'trik). Transmitting electric effects by induction, but not by conduction.

dielectrolysis (di'el-ek-trol'is-is) [Gr. *διά* through + *electrolysis*]. Electrolysis of a drug, the current being passed through a diseased portion of the body, so that the drug passes through the part.

diencephalon (di-en-sef'al-on) [B N A]. Same as *thalamencephalon*.

Diendamæba. See *Dientamæba*.

Dientamæba fragilis. A rare intestinal ameba characterized by having a duplicate nuclear system (Jepps and Dobell).

die-plate (di-plāt). A plate of metal containing dies for forming the cusps on shell-crowns.

dieresis (di-er'es-is) [Gr. *διά* asunder + *αἰεῖν* to take]. 1. The division or separation of parts normally united, as by a wound or burn. 2. In surgery, the mechanical separation of parts, as by incision, diathermy, or cautery.

diesophagus, dæsofagus (di-e-sof'ag-us). Doubling of the esophagus.

diestrum (di-es'trum). See *diæstrum*.

diet (di'et) [Gr. *διαίτα*]. The customary allowance of food and drink taken by any person from day to day. Diets are classified as *broth diet*, *common diet*, *fish diet*, *full diet*, *generous diet*, *half diet*, *low diet*, *liquid diet*, *meat diet*, *milk diet*, *mixed diet*, *soft diet*, *solid diet*, *spoon diet*, *vegetable diet*, etc. **absolute d.**, fasting. **adequate d.**, a diet which will enable an animal to grow, mature, and reproduce in a normal manner. **Banting d.**, one designed to reduce fatness. **basel d.**, a diet which is just sufficient to meet the caloric requirements of basal metabolism. **bland d.**, a diet that contains the necessary nutrient elements, but is free from anything that tends to heat or excite. **Cæsar's d.**, diet of milk and barley-water, used in the early stages of gout. **Cantani's d.**, an exclusive meat diet devised for diabetics. **cardiac d.**, follows closely the regular ward diet with the exclusion of the vegetables and meats which tend to disturb the stomach. Free salt is also often excluded from this routine cardiac diet. **Chittenden's d.**, a diet containing 47 to 55 gm. of protein. **Coleman-Schaffer d.**, a typhoid fever diet, composed of eggs, cream, cocoa, milk-sugar, and bread and butter. It has a high carbohydrate ratio and is rich in protein. The food is administered in small quantities, but frequently. **convalescent d.**, a system of solid

and liquid food suitable for convalescents. **diabetic d.**, one in which ordinary sugar, starchy food, fruits, and ordinary bread are prohibited. **Du Bois d.** consists of varying amounts of milk. The time limitation is not definite and the transition to light diet is abrupt. **fever d.**, one especially designed for the requirements of fever patients. **gouty d.**, a diet devised for the mitigation of gout, and restricting the use of nitrogenous foods and prohibiting sweet wines and fermented liquors. **high-caloric d.**, a diet which furnishes 4000 calories or over a day. **high-fat d.** See *ketogenic d.* **Jarotsky d.**, a diet for gastric ulcer consisting of white of egg and olive oil, given separately, several hours apart, in increasing daily amounts. **Karell d.**, for nephritis and cardiac conditions, consists of 26 ounces of milk per day. The milk diet, running from six days to a week, is amplified gradually by the use of eggs, dry toast, meat, rice, and vegetables. **ketogenic d.**, a diet containing a large amount of fat with minimal amounts of protein and carbohydrate, the object of such a diet being to produce ketosis. **Lenhartz d.** See *Lenhartz treatment*, under *treatment*. **light d.**, or regular ward diet, consists of any simple mixed diet suitable for convalescents and is planned by the hospital dietitian. **medical soft d.** is a very limited diet consisting only of eggs, soft toast, stewed fruit, liquids, baked or mashed potato, made desserts, and ice-cream. **optimal d.**, a diet which produces the most rapid growth and the most successful reproduction. Cf. *adequate d.* **Petrén's d.**, a diabetic diet consisting of extremely small amounts of protein and very large amounts of fat. **Prochownick d.**, a diet for the last eight weeks of pregnancy, which should decrease the size and weight of the child, while strengthening the mother. It is intended for patients threatened with dystocia on account of a contracted pelvis, excessive development of the fetus with normal pelvis, or fat and weak abdominal walls. The essential features of the diet are the withholding of carbohydrates and fluids and the giving of sufficient amounts of proteins. **protective d.**, an extremely light diet employed for the purpose of relieving the work of the digestive apparatus as much as possible. **rachitic d.**, an inadequate diet which will bring about rickets in an experimental animal. **rheumatic d.**, a diet devised to meet the requirements of rheumatic patients. **salt-free d.** See *dechloridation*. **Schmidt d.**, a daily diet consisting of 1.5 liters of milk, 100 gm. of zwieback, 2 eggs, 50 gm. of butter, 125 gm. of beef, 100 gm. of boiled potato, and gruel made from 80 gm. of oatmeal. It contains 102 gm. of protein, 111 gm. of fat, and 101 gm. of carbohydrate, giving 2234 calories. **Schmidt-Strassburger d.** Same as *Schmidt d.* **Sippy d.**, for gastric ulcer and in conditions in which the patient is emaciated and is unable to take bulky foods. It consists of nothing but milk for the first few days, with the addition of crackers, cereals, and eggs on the third day; the amounts increasing gradually until during the later days of the diet puréed vegetables are included. On the twenty-eighth day the patient is placed on the regular ward diet. **subsistence d.**, that upon which one can just live. **surgical soft d.** includes hard toast, creamed meat, and puréed vegetables in addition to the medical soft diet. **Taylor's d.**, a preparation of white of egg, olive oil, and sugar, given when the urine is to be tested for chlorids. **Tufnell's d.**, a rich diet (with small allowance of liquids) sometimes prescribed in the treatment of aneurysm.

dietary (di'et-a-re). A regular or systematic scheme of diet.

dietetic (di-et-et'ik) [Gr. *διατητικός*]. Pertaining to diet or proper food.

dietetics (di-et-et'iks). The science or study and regulation of the diet.

diethylamin (di'eth-il-am'in). A non-poisonous

liquid ptomain, $\text{NH}(\text{C}_2\text{H}_5)_2$, from decaying fish and putrid sausages.

diethylendilimin (di-eth'il-en-di-im'in). Same as *piperazin*.

diethylketone (di'eth-il-ke'tôn). Propion.

diethylmalonylurea (di-eth'il-mal'o-nil-u-re'ah). Same as *veronal*.

diethyloxyacetyl-urea (di-eth'il-oks-e-as'et-il-u-re'ah). A condensation-product of urea and oxyacetic acid, a clear, transparent fluid, proposed as a hypnotic.

dietitian (di-et-ish'an). One who is skilled in the scientific use of diet in disease.

Dietl's crisis (de'tlz) [Joseph Dietl, an Austrian physician, 1804-1878]. See under *crisis*.

dietotherapy (di'et-o-ther'a-pe). Dietetic treatment.

dietotoxic (di'et-o-tox'ik). Having the quality of dietotoxicity.

dietotoxicity (di'et-o-tox-is'it-e). A condition in certain food substances which renders them toxic when used in an unbalanced diet.

Dieudonné's medium (de-ed-on-az') [Adolph Dieudonné, physician in Munich, born 1864]. See under *medium*.

Dieulafoy's aspirator, theory, triad (de-el-af-wahz') [Georges Dieulafoy, physician in Paris, 1840-1911]. See *aspirator, theory*, and *triad*.

differential (dif-er-en'shal). Pertaining to a difference or differences.

differentiation (dif'er-en-she-a'shun). 1. The distinguishing of one thing or disease from another.

2. The act or process of acquiring distinction or individual characters. **correlative d.**, differentiation produced by interaction of the parts of an organism.

diffuence (dif'lu-ens). The act of becoming fluid.

diffuent (dif'lu-ent) [L. *diffuere* to flow off]. Easily flowing away or dissolving; deliquescent; temporary.

diffraction (dif-rak'shun) [L. *dis* apart + *frangere* to break]. The bending or breaking up into its component parts of a ray of light. **d.-grating**, a strip of glass ruled closely with fine lines for use in the spectroscope.

diffusate (dif'u-zāt). That part of a mixture which, placed in a dialyzer, diffuses through a membrane; a dialysate.

diffuse, diffused (dif-ūs', dif-ūzd') [L. *dis* apart + *fundere* to pour]. Wide-opened; not definitely limited or localized.

diffusible (dif-u'zib-l). Susceptible of being rapidly diffused; having a rapidly stimulant, but transient, action.

diffusiometer (dif-u-se-om'et-er). An apparatus for measuring the speed of diffusion.

diffusion (dif-u'zhun). 1. The process of becoming diffused, or widely spread. 2. Dialysis through a membrane.

difluorophenyl, difluorophenyl (di-flu'or-di-fen'il, di-flu'or-fen'il). See *antitussin*.

Dig. Abbreviation for *L. digera tur*, let it be digested.

digalen (di'gal-en). A proprietary product from digitalis: said to be amorphous soluble digitoxin (Cloetta).

digametic (di-gam-et'ik). Forming two kinds of germ cells, one with and one without the X chromosome.

digastric (di-gas'trik) [Gr. *δύς* double + *γαστήρ* belly]. 1. Having two bellies. 2. Of or pertaining to or attacking the digastric muscle.

digastricus (di-gas'trik-us). See *muscles, table of*.

digenesis (di-jen'es-is). Same as *alternation of generation*.

digenetic (di-je-net'ik) [Gr. *δύς* twice + *γενεσις* generation]. Requiring a change of hosts: said of flukes and other parasites.

digenia (di-je'-ne-ah). See *Ianaka*.

digestant (di-jes'tant). 1. Assisting or stimulating digestion. 2. A remedy which aids digestion.

digestion (di-jest'yun) [L. *digestio*, from *dis* apart + *gerere* to carry]. 1. The process or act of converting food into materials fit to be absorbed and assimilated. 2. The subjection of a body to prolonged heat and moisture, so as to disintegrate and soften it. **artificial d.**, that which is performed outside the body. **biliary d.**, the digestive effect of the bile upon food. **gastric d.**, that which is carried on in the stomach by aid of the gastric juice. Called also *peptic d.* **gastro-intestinal d.**, the gastric and intestinal digestions together. **intercellular d.**, digestion carried on within an organ by secretions from the cells of the organ. **intestinal d.**, that which is carried on in the intestine. **intracellular d.**, digestion carried on within a single cell. **pancreatic d.**, that which is performed by the pancreatic secretion. **parenteral d.**, digestion taking place somewhere else in the body than in the alimentary canal, as in the blood or under the skin. **peptic d.** Same as *gastric d.* **primary d.** Same as *gastro-intestinal d.* **salivary d.**, the change of starch into maltose by the saliva. **secondary d.**, the final preparation of food for assimilation by aid of closed glands, lymphatics, marrow, and body cells in general. **sludge d.**, the biochemical process by which organic matter in sludge is gasified, liquified, mineralized, or converted into more stable organic matter.

digestive (di-jes'tiv). 1. Of or pertaining to digestion. 2. A digestant remedy or agent.

digestol (di-jes'tol). A proprietary digestant combination of bismuth subnitrate, pepsin, and salol, with aromatics.

digifolin (dij-if-o'lin). A proprietary solution of glucosids from digitalis leaves.

digifortis (dij-if-or'tis). A proprietary tincture of digitalis.

digipan (dij'ip-an). A preparation of digitalis containing digitoxin and digitalin without any digitonin. Dose, same as digitalis.

digipoten (dij-ip-o'ten). A proprietary digitalis preparation containing the mixed glucosids.

digipuratum (dij-ip-u-ra'tum). A digitalis extract freed from inert and irritating constituents. See *digitan*.

digistrophan (dij-is-tro'fan). A preparation of digitalis and strophanthus: used as a heart tonic and diuretic.

digit (dij'it) [L. *dig'itus*]. A finger or toe.

digital (dij'it-al). 1. Of, pertaining to, or performed with, a finger. 2. Resembling the imprint of a finger.

digitalein (dij-it-al'e-in). An active principle, $C_{29}H_{38}O_9$, of digitalis. It is soluble in water and alcohol. It is a diuretic and a cardiac tonic. Dose, $\frac{1}{4}$ – $\frac{3}{4}$ gr. (0.001–0.002 gm.).

digitalin (dij-it-a'lin) [L. *digitali-num*]. An active glucosid of digitalis, $C_{35}H_{56}O_{14}$. **French d.**, a preparation obtained from digitalis by the method of Homolle, consisting mainly of true digitalin. **German d.**, a mixture of glucosids obtained from digitalis according to the process of Walz, consisting largely of digitonin. **soluble d.**, a commercial form of digitalin. Dose, $\frac{3}{16}$ – $\frac{2}{16}$ gr. (0.001–0.003 gm.).

Digitalis (dij-it-a'lis) [L., from *dig'itus* finger, because of its finger-shaped corolla]. A genus of scrophulariaceous plants. The leaves of *D. purpurea*, or foxglove, are narcotic, cardiac, diuretic, and stimulant. Digitalis acts by producing elevation of blood-pressure, increase of systole, lengthening of diastole, and contraction of the arterioles. It is used as a heart tonic for cardiac weakness of any kind; also as a diuretic in dropsy. Dose, 1–2 gr. (0.005–0.13 gm.); of extract, $\frac{1}{4}$ gr. (0.016 gm.); of fluidextract, 1–2 min. (0.065–0.13

c.c.); of tincture, 5–20 min. (0.3–1.25 c.c.); of infusion, 2–4 dr. (8–15 c.c.).

digitalisin (dij-it-a'lis-in). A proprietary concentration from digitalis. Dose, $\frac{1}{16}$ – $\frac{1}{4}$ gr. (0.004–0.016 gm.).

digitalism (dij'it-al-izm). The effect produced on the body by the administration of digitalis.

digitalization (dij-it-al-iz-a'shun). Administration of digitalis until the physiologic effect of the drug is produced.

digitalone (dij'it-al-ōn). A non-irritating liquid preparation of digitalis. Dose, 10–30 min. (0.65–2 c.c.).

digitan (dij'it-an). A proprietary preparation of digitalis said to contain digitoxin and digitalin in the form of tannates: used like digitalis.

digitate (dij'it-āt). Having several finger-like processes.

digitation (dij-it-a'shun). 1. A finger-like process, as of a muscle. 2. Amputation in which the stump is cleft to form a gripping fork-like end.

digitatio'nes hippocam'pi. The pes hippocampi.

digitin (dij'it-in). A physiologically inert crystalline principle from digitalis.

digitogenin (dij-it-oj'en-in). A colorless, crystalline compound, $C_{15}H_{24}O_8$, derived from digitalin.

digitol (dij'it-ol). A proprietary tincture of digitalis.

digitonin (dij-it-o'nin). A saponin glucosid, $C_{54}H_{92}O_{28}$, from digitalis.

digitophyllin (dij'it-o-fil'in). A crystalline glucosid, $C_{29}H_{38}O_{10}$, contained in digitalis. It is a heart poison.

digitopltantar (dij'it-o-plan'tar) [L. *dig'itus* finger + *plan'ta* sole]. Pertaining to the toes and the sole of the foot.

digitos (dij'it-os). A preparation of the water-soluble active principle of digitalis leaves: used like other digitalis preparations, but only by hypodermic intramuscular or intravenous administration.

digitoxin (dij-it-oks'in). The most active glucosid principle of digitalis. It is a white, crystalline compound, $C_{34}H_{54}O_{11}$, a powerful and reliable heart tonic (Schmiedeberg, 1874). Dose, $\frac{2}{16}$ – $\frac{1}{16}$ gr. (0.0025–0.0005 gm.). **Cloetta's d.**, a soluble digitoxin preparation.

digitus (dij'it-us), pl. *dig'iti* [L.]. A finger. **d. annula'ris**, the ring-finger. **d. me'dius**, the index-finger. **d. min'imis**, the little finger or little toe. **d. mor'tuus**, dead finger: a cold and white condition of the fingers. **d. recel'lens**, trigger-finger. **d. val'gus**, deviation of a finger toward the ulnar side. **d. va'rus**, deviation of a finger toward the radial side.

digityl (dij'it-il). A proprietary concentrated digitalis infusion containing valerian and peppermint.

diglossia (di-glos'e-ah) [Gr. *δῖς* twice + *γλῶσσα* tongue]. Double tongue, or bifid tongue.

diglycerid (di-glis'er-id). A glycerid containing two fatty acid molecules.

dignathus (dig-na'thus) [Gr. *δῖς* twice + *γνάθος* jaw]. A monster-fetus with two lower jaws.

dihomocinchonin (di-ho-mo-sin'ko-min). An alkaloid, $C_{28}H_{44}O_8N_4$, from cinchona.

dihybrid (di-hi'brid). The offspring of parents who differ in two characters.

dihydrate (di-hi'drāt) [Gr. *δῖς* twice + *ὕδωρ* water]. 1. Any compound containing two hydroxyl groups. 2. Any compound containing two molecules of water.

dihydrated (di-hi'drā-ted). Compounded with two molecules of water.

dihydric (di-hi'drik). Having two hydrogen atoms in each molecule.

dihydrocollidin (di-hi'dro-kol'id-in). An oily base, $C_{25}H_{41}N.H_2$, from decaying flesh and fish; regarded as a ptomaine.

dihydrocoridin (di-hi''dro-kor'id-in). The base, $C_8H_{13}N$, supposed to be identical with a ptomaine derived from *Bacillus al'ii*.

dihydrol (di-hi'drol). The associated water molecule, $(H_2O)_2$.

dihydrolutidin (di-hi''dro-lu'tid-in). An oily, poisonous, caustic base, $C_7H_{11}N$, from rancid cod-liver oil.

dihydroresorcin (di-hi''dro-re-sor'sin). A crystalline, antiseptic product of the action of sodium amalgam upon resorcinol.

dihydroxyacetone (di-hi-drox''e-as'e-tōn). One of the trioses, the ketotriose.

dihydroxyphenylethylmethylamin (di''hi-droks''e-phen-il-eth''il-meth-il-am'in). Same as *epinin*.

dihydroxyphthalophenone (di-hi-droks''e-ftal-o-fe'nōn). Phenolphthalein.

dihydroxystearic acid (di-hi-drok-se-ste-ar'ik). See under *acid*.

dihypercystosis (di-hi''per-si-to'sis). Same as *hyperhypercystosis*.

dihysteria (di-his-te're-ah) [Gr. *δῖς* two + *ὑστέρα* uterus]. The condition of having a double uterus.

diiodid (di-i'o-did). An iodid containing two atoms of iodine in the molecule to one of the base.

diiodobetanaphthol (di-i''o-do-be-tah-naf'thol). A greenish-yellow powder, $C_{10}H_7I_2OH$: used like iodoform.

diiodocarbazol (di-i''o-do-kar'baz-ol). An antiseptic agent, $(C_6H_3I_2)NH$, in yellow scales.

diiodoform (di-i-o'do-form). An iodid of carbon, ethylene tetraiodid or periodid, C_2I_4 : a strong catirizant, without odor and non-poisonous.

diiodoglycerin (di-i''o-do-glis'er-in). Same as *iothion*.

diiodoresorcin (di-i''o-do-re-sor'sin). A chocolate-brown, odorless powder, $C_6H_2I_2(OH)_2$: used like aristol.

diiodosalicylic acid (di-i''o-do-sal''is-il'ik). See *acid*.

diiodosalicylic-phenyl-ester (di-i''o-do-sal''is-il'ik-fe-nil-es'ter). Same as *diiodosolol*.

diiodosalol (di-i''o-do-sal'ol). A proprietary salol and iodine derivative, diiodosalicylic phenyl ester, $C_6H_2I_2(OH)(CO_2C_6H_5)$, in colorless needles: used internally for rheumatism; externally, like iodoform, in skin diseases.

diiodothioresorcin (di-i''o-do-thi''o-re-sor'sin). A brown, antiseptic powder, $C_6H_2I_2(SH)_2$: used like iodoform and aristol.

diketone (di-ke'tōn). A ketone containing two carbonyl groups.

diktyoma (dik-te-o'mah) [Gr. *δῖκτυον* net + *-ωμα* tumor]. A tumor of the ciliary epithelium derived from embryonic retinal tissue.

Dil. Abbreviation for *L. dil'ue*, dissolve.

dilaceration (di''las-er-a'shun) [*L. dilacerat'io*]. A tearing asunder, as of a cataract. In dentistry, the displacement of a formed portion of a tooth from its natural relation to the soft parts.

dilatation (di-la-ta'shun). The condition of being dilated or stretched beyond the normal dimensions. **digital d.**, the dilatation of a cavity or orifice by means of a finger. **d. of the heart**, enlargement of the cavities of the heart, with thinning of its walls and diminution of the force of its beatings. **prognathion d.**, **prognathic d.**, dilatation of the pyloric end of the stomach greater than that of the fundus or cardiac, giving a protruding appearance in the x-ray picture. **d. of the stomach**, enlargement of the stomach from weakening of its walls and distention with gas in chronic gastritis.

dilator (di-la'tor). An appliance used in enlarging an orifice or canal by stretching. **anal d.**, an instrument for dilating or stretching the anal

sphincter. **Arnott's d.**, a distensible cylinder of oiled silk for urethral strictures. **Barnes's d.**, a rubber bag used in dilating the os and cervix uteri. **Bossi's d.**, a dilator for the cervix uteri. **d. con'chæ**, a small muscle between the lower margin of the tragus and the lower end of the concha. **De Seigneux's d.**, a dilator for the cervix uteri. **Frommer's d.**, a modified Bossi dilator for the cervix uteri. **Hegar's d's**, a series of bougies of varying sizes for dilating the os uteri. **intra-uterine d.**, an instrument for dilating the uterine cavity by means of air or water. **d. ir'idis**, **d. pupil'læ**, the radiating elastic fibers of the iris which dilate the pupil. **laryngeal d.**, an instrument with two or more blades for expanding the larynx. **d. muscles**. See *muscles*, table of. **d. tub'æ**. See *tensor palati*, in *muscles*, table of.

dilaudid (di-law'did). A keto derivative of morphin which has much the same action, though perhaps less apt to form a habit, and is given in half the dose of morphin.

dilipoxanthin (di-lip-o-zan'thin) [Gr. *δῖς* two + *λίπος* fat + *ξανθός* yellow]. A yellow lipochrome produced by various bacteria.

dill (dil). The carminative and stimulant plant, *Anethum* (*Pucedanum*) *graveolens*: its fruit affords a volatile oil. Dose of *aqua anethi*, $\frac{1}{2}$ fl.oz. (15 c.c.); of oil, 2-5 min. (0.1-0.3 c.c.).

Diluc. Abbreviation for *L. dilu'cuc*, at daybreak.

diluent (di-lu'e-ent) [*L. dilu'ere* to wash]. 1. Diluting. 2. An agent that dilutes or renders less irritant.

Dilut. Abbreviation for *L. dilu'tus*, dilute.

dilution (di-lu'shun). 1. The art or process of diluting or the state of being diluted. 2. A diluted or attenuated medicine. 3. In homeopathy, the diffusion of a given quantity of a medicine in ten or one hundred times the same quantity of water.

Dim. Abbreviation for *L. dimid'ius*, one-half.

dimargarin (di-mar'gar-in). A glycerid having two molecules of margaric acid combined with a molecule of glycerin.

Dimastigamoeba (di-mas'tig-am-e'bah). A genus of coprozoid amebæ which has both an ameboid and a flagellate stage in its life-history. In the latter stage it has two flagella and has been called *Amæba gruberi*, *A. tachypodia*, *Nægeria gruberi*, *N. punctata*, *Vahlkampffia punctata*, and *Wasielewska gruberi*.

dimazon (di-ma'zon). An orange-colored crystalline powder, diacetylmamino-azotoluene, $C_3H_6H_4N:N.C_6H_5(CH_3)N(CH_3.CO_2)$, said to promote the growth of epithelium in treatment of burns, wounds, and ulcers.

dimentholformal (di'men-thol-for'mal). Dimentholmethylether: antiseptic.

dimerous (dim'er-us) [Gr. *δι-* two + *μέρος* part]. Made up of two parts.

dimetallic (di-met-al'ik). Containing two of a metallic element in the molecule.

dimethylacetal (di'meth-il-as'e-tal). A colorless, volatile, anesthetic liquid, ethyldiene dimethyl ether, $CH_3.CH(OCH_3)_2$: it may be used like chloroform, by inhalation.

dimethylamin (di'meth-il-am'in). A gaseous and liquid ptomain, $(CH_3)_2NH$, from decaying gelatin, decomposing yeast, rotten fish, etc.

dimethyl-amino-azobenzene (di-meth'il-am'in-o-a-zo-ben'zēn). A dye, $C_6H_5.N_2.C_6H_4.N(CH_3)_2$: used as an indicator in Toepfer's test for free hydrochloric acid in gastric juice. It has a PH range of 2.9 to 4, being red at 2.9 and yellow at 4.

dimethylarsin (di-meth-il-ar'sin). See *cacodyl*.

dimethyl-carbinol (di-meth-il-kar'bin-ol). Isopropyl alcohol.

dimethyl-ethyl-pyrrol (di-meth'il-eth'il-pir'ol). A substituted pyrrol obtained from and probably a constituent of bilirubin.

- dimethyl-guanidin** (di-meth'il-guan'id-in). A ptomain, $(\text{CH}_3)_2\text{N.C}(\text{NH})\text{NH}_2$, found in small amounts in the urine.
- dimethylornarcotin** (di-meth'il-nor-nar'ko-tin). An active principle reported to exist in opium.
- dimethylphosphin** (di-meth-il-fos'in). A phosphin extremely destructive to infusorial life, $(\text{CH}_3)_2\text{PH}$.
- dimethyl sulphate**. An industrial poison, $(\text{CH}_3)_2\text{SO}_4$, causing nystagmus, convulsions, and respiratory death.
- dimethylxanthin** (di-meth-il-zan'thin). Same as *theobromin*.
- dimetria** (di-me'tre-ah) [Gr. *dis* double + *μήτρα* womb]. The condition of two uteri, or a double uterus.
- diminution** (dim-in-u'shun). In cytology, the elimination of a portion of the nuclear substance.
- dimol** (di'mol). Dimethylmonomethoxyphenol, $\text{CH}_3\text{O.C}_6\text{H}_4(\text{CH}_3)_2\text{OH}$, in combination with the tri- and tetramethoxyphenols. It is used like salol as an intestinal antiseptic.
- dimorphic** (di-mor'fik). Same as *dimorphous*.
- dimorphism** (di-mor'fizm) [Gr. *dis* two + *μορφή* form]. The property of certain solids existing in two different crystalline forms.
- dimorphobiotic** (di-mor'fo-bi-o'tik) [Gr. *dis* two + *μορφή* form + *βίωσις* life]. Showing alternation of generations and having a parasitic and a non-parasitic stage in the complete life history.
- dimorphous** (di-mor'fus) [Gr. *dis* two + *μορφή* form]. Occurring in two distinct forms; having the property of dimorphism.
- dineric** (di-ner'ik) [Gr. *δῆρι* a whirlpool]. Whirling like a whirlpool; pertaining to the interface between two miscible liquids.
- dineuric** (di-nu'rik). Having two neurons or axis-cylinder processes; said of nerve-cells.
- dinical** (din'ik-al) [Gr. *δῖνος* giddiness]. Pertaining to dizziness; relieving dizziness.
- dinitrate** (di-ni'trat). A compound of a base with two molecules of nitric acid.
- dinitrated** (di-ni'tra-ted). Compounded with or having two molecules of nitric acid, or of nitroxyl.
- dinitrobenzene** (di-ni'tro-ben'zēn). A poisonous substance, $\text{C}_6\text{H}_4(\text{NO}_2)_2$. Its fumes may cause breathlessness and final asphyxia.
- dinitrocellulose** (di-ni'tro-sel'u-lōs). Same as *pyroxylin*.
- dinitrocresol** (di-ni'tro-kre'sol). A poisonous cresol compound, $\text{CH}_3\text{C}_6\text{H}_3(\text{NO}_2)_2\text{OH}$. Also known as *saffron substitute*.
- dinitrophenol** (di-ni-tro-fe'no'l). Any one of six isomeric compounds, $\text{C}_6\text{H}_3(\text{OH})(\text{NO}_2)_2$; used in making dyes.
- dinitroresorcin** (di-ni'tro-re-sor'sin). A green coal-tar derivative, $\text{C}_6\text{H}_2(\text{NO}_2)_2(\text{OH})_2$, used in preparing degenerated nerve tissue for study.
- dinner pad**. See under *pad*.
- dinomania** (din-o-ma'ne-ah) [Gr. *δῖνος* whirling + *μανία* madness]. Dancing mania; epidemic chorea.
- dinormocytosis** (di-nor'mo-si-to'sis) [L. *di*-two + *nor'ma* rule + Gr. *κύτος* cell]. See *isonormocytosis*.
- D. in p. æq.** Abbreviation for *divi'de in par'tes æquales*, divide into equal parts.
- dinucleotid** (di-nu'kle-o-tid). One of the two cleavage products into which a tetranucleotid (nucleic acid) is split. A dinucleotid itself may be split into two mononucleotids.
- diocain** (di'o-kān). An allyl derivative of holocain; used principally in 1 per cent. solution as a local anesthetic in ophthalmology.
- Diocles Carys'tius**. An eminent Greek physician of the fourth century B. C. He belonged to the sect of the dogmatics, and wrote several works, some fragments of which are extant.
- Dioctophy'me rena'le**. Large nematode worms up to 3 feet long sometimes found in the pelvis of the kidney or in the abdominal cavity in man and also in dogs. Probably contracted from eating fish.
- diocious** (di-e'shus) [Gr. *dis*-two + *οἶκος* house]. Sexually distinct; having the two sexes in separate individuals.
- diesophagus** (di-e-sof'ag-us). See *diesophagus*.
- diæstrum** (di-e'strum) [Gr. *dis*-two + *οἶστρος* stimulus]. A short interval between two periods of sexual desire in animals.
- dioform** (di'o-form). Acetylene dichlorid, $\text{C}_2\text{H}_2\text{Cl}_2$; used by inhalation to produce narcosis.
- diogenal** (di-oj'en-al). A white, crystalline powder, dibrom-propyl-diethyl-barbituric acid; used as a somnifacient and nerve sedative in doses of 10-30 gr. (0.6-2 gm.).
- diogenism** (di-oj'en-izm) [from *Diogenes*, the Greek philosopher, noted for his contempt of the common aims and conditions of life]. An effort or tendency to get rid of the refinements of civilization and to lead a life closer to nature.
- diomorphin** (di-o-mor'fin). An aqueous solution of diionin and morphin.
- dionin** (di'o-nin). A white, bitter, crystalline compound, $\text{C}_9\text{H}_9\text{O}_2 > \text{C}_{17}\text{H}_{17}\text{NO.HCl} + \text{H}_2\text{O}$, or ethyl-morphin hydrochlorid. It is analgesic, antispasmodic, and sedative; used in asthma, bronchitis, emphysema, phthisis, and morphinism. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.016-0.032 gm.).
- diopsimeter** (di-op-sim'e-ter) [Gr. *διόψις* vision + *μέτρον* measure]. A device for measuring the field of vision.
- dioptr, dioptr, dioptric, dioptry** (di-op'ter, di-op'trik, di-op'tre) [Gr. *διόπτειν* to see through]. The refractive power of a lens with a focal distance of one meter: assumed as a unit of measurement for refractive power (Monoyer, Donders). **prism-d.**, a unit of prismatic deviation; deflection of one centimeter at a distance of one meter.
- dioptrimeter** (di-op-tom'e-ter) [*dioptric* + Gr. *μέτρον* measure]. An instrument for use in testing ocular refraction.
- dioptrometry** (di-op-tom'et-re). The measurement of refraction and accommodation of the eye.
- dioptrioscopy** (di-op-tos'ko-pe) [*dioptric* + Gr. *σκοπεῖν* to see]. Measurement of ocular refraction by means of the ophthalmoscope.
- dioptric** (di-op'trik) [Gr. *διά* through + *ὄψεσθαι* to see]. Pertaining to refraction or to transmitted and refracted light; refracting.
- dioptrics** (di-op'triks) [Gr. *διόπτειν* to see through]. The science of refracted light.
- dioptrimeter** (di-op-trom'et-er). Dioptrimeter.
- dioptrometry** (di-op-trom'et-re). Dioptrometry.
- dioptrioscopy** (di-op-tros'ko-pe). Dioptrioscopy.
- dioptry** (di-op'tre). See *dioptr*.
- dioradine** (di-or'ad-in). A proprietary radioactive preparation of menthol, iodine, and radium barium chlorid; used in tuberculosis.
- diosal** (di'o-sal). Sodium di-iodosalicylate: recommended as a germicide for local and intravenous use.
- Dioscorea villosa** (di'os-ko-re'ah vil-o'sah). Wild yam, a twining herb of the United States. Its root is diaphoretic and emetic. Dose of decoction, 4-8 fl.oz. (118.4-236 c.c.); of fluidextract, 10 min.-1 fl.oz. (0.62-30 c.c.).
- dioscorein** (di-os-ko're-in). A resinous, dry concentration prepared from *Dioscorea villosa*: diaphoretic, antispasmodic, and expectorant. Dose, 1-4 gr. (0.066-0.259 gm.).
- dioscorin** (di-os'ko-rin). A greenish, crystalline alkaloid, $\text{C}_{12}\text{H}_{19}\text{O}_2\text{N}$, from *Dioscorea*. It has a poisonous action on the central nervous system.
- diose** (di'ōs). Glycollic aldehyde, $\text{CH}_2\text{OH}-\text{COH}$, the simplest sugar.

diosmal (di-os'mal). A proprietary preparation of buchu leaves: used in genito-urinary affections. Dose, 2 gr. (0.13 gm.).

diosphenol (di-os-fe'no'l). Barosma camphor, $C_{10}H_{16}O_2$, with a peppermint odor. It separates from the volatile oil of Buchu on cooling.

diouiburnia (di-o-vi-be'r-ne-ah). A proprietary uterine tonic, antispasmodic, alterative, and anodyne.

dioxid (di-oks'id) [Gr. *dis* twice + *ôxús* sharp]. A molecule having two atoms of oxygen.

dioxogen (di-oks'o-jen). A proprietary solution of hydrogen dioxide.

dioxyacetone (di-oks-e-as'te-ôn). A compound, $HOCH_2.CO.CH_2OH$, one of the constituents of glycerose, the ketotriose. It is formed by the oxidation of glycerin with nitric acid. It has been used in the treatment of diabetes.

dioxydiaminoarsenobenzol (di-oks-e-di-am''-in-o-ar'sen-o-ben'zol). See *arsphenamin*.

dioxyfluoran (di-ok-se-flu'o-ran). See *fluorescein*.

dioxynaphthalene (di-oks-e-naf'thal-ên). A poisonous compound, $C_{16}H_6(OH)_2$, said to build up the strength of asthenic patients. Dose, 3 gr. (0.194 gm.) per day.

dioxy-naphthyl-methane (di-ok-se-naf-thil-meth'ân). A germicide, $(C_{10}H_7O)_2.CH_2$: used chiefly in veterinary practice.

dioxytoluene (di'oks-e-tol'u-ên). Same as *orcin*.

dip (dip). The angle which a magnet freely suspended makes with a horizontal plane.

dipentene (di-pen'tên). A terpene, $C_{10}H_{16}$, found in many volatile oils.

dipeptid (di-pep'tid). A product formed by the union of two amino-acids.

diphasic (di-fa'zik) [Gr. *dis* two + *φάσις* phase]. Occurring in two phases or stages.

diphenyl (di-fe'nil). A colorless compound, $C_6H_5-C_6H_5$, found in coal-tar.

diphenylamin (di-fen-il-am'in). A compound, phenyl-anilin, $(C_6H_5)_2NH$: used as a test for nitric acid and chlorin.

diphenylamino-azo-benzene (di-fen-il-am'in-o-a'zo-ben'zên). An indicator with a PH range of 1.2-2.1.

diphnylchlorarsin (di-fen-il-klor-ar'sin). Sneezing gas, $(C_6H_5)_2AsCl$, a toxic smoke, used in the Great War, causing sneezing, coughing, headache, salivation, and vomiting.

diphenyl-cyanarsin (di-fen'il-il-si-an-ar'sin). A lethal war gas, $(C_6H_5)_2AsCN$.

diphenylmethane (di-fe'nil-meth'ân). A crystalline analgesic and antipyretic, $(C_6H_5)_2CH_2$. Dose, 8 gr. (0.5 gm.).

diphenylurea (di-fen-il-u-re'ah). A mildly sedative and narcotic compound resembling phenylurea.

diphonia (di-fô-ne-ah) [Gr. *di*-two + *φωνή* voice]. A condition in which two different tones are produced in speaking; double voice.

diphosgene (di-fos'jên). Trichlormethyl chloroformate; superpalite; a gas used in the Great War. It is the most intense lung irritant known, producing pulmonary edema.

diphtheria (dif-the're-ah) [Gr. *διφθέρα* membrane]. An acute infectious disease due to the presence of the Klebs-Löffler bacillus, *Corynebacterium diphtheria*, and characterized by patches of false membrane, formed chiefly on the mucous membranes. The disease is attended with swelling of the larynx and pharynx, and consequent dyspnea, aphonia, and dysphagia. The general symptoms are fever, heart-weakness, anemia, and great prostration. Diphtheria continues from a few days to one or two weeks, frequently ending fatally. It is extremely contagious, and is apt to spread from one part of the body to another. **avian d.** See *roup*. **Brétonneau's d.**, true diphtheria of the pharynx.

circumscribed d., a form in which a circumscribed slough appears on one tonsil: it is often fatal. **cutaneous d.**, a form which attacks cutaneous abrasions. **false d.**, diphtheroid (2d def.). **gangrenous d.**, diphtheria attended with gangrene of the skin or mucous membrane or both. **laryngeal d.** Same as *membranous croup*. **latent d.**, diphtheric infection without membranous exudation. **malignant d.**, a form beginning with rigors and vomiting and marked with typhoid symptoms; often fatal. **nasal d.**, diphtheria in which the membrane extends into the nasal passages. **non-membranous d.** Same as *Löffleria*. **pharyngeal d.**, that which is especially manifested on the mucous membrane of the pharynx. **scarlatinal d.**, a sort of membranous tonsillitis occurring in scarlet fever, and caused by streptococci. **septic d.**, diphtheria rendered especially severe by secondary infection with pyogenic cocci. **surgical d.**, **wound d.**, the formation of false membrane on the surface of a wound.

diphtherial (dif-the're-al). Pertaining to diphtheria. **diphtheriaphor** (dif-the're-af-or). A diphtheria carrier.

diphtheric, diphtheritic (dif-the'rik, dif-the-rit'ik). Pertaining to diphtheria.

diphthericide (dif-the'ris-id). A proprietary mixture of thymol, sodium benzoate, saccharin, etc.: used in pastils for diphtheria.

diphtherin (dif'the-rin). 1. The poison developed and evolved by the *Corynebacterium diphtheria*. 2. A polyvalent diphtheric antigen for use in anaphylactic skin test.

diphtheriolysin (dif-the-re-ol'is-in). A lysin having a specific affinity for diphtheria bacillus.

diphtheritis (dif-the-ri'tis). Bretonneau's name for diphtheria.

diphtheroid (dif'ther-oid). 1. Resembling diphtheria. 2. A disease resembling diphtheria, but not due to Löffler's bacillus. 3. A micro-organism closely resembling the diphtheria bacillus in morphology, but not producing toxin.

diphtherotoxin (dif'the-ro-toks'in). A toxalbumin from cultures of diphtheria bacillus.

diphthongia (dif-thon'je-ah) [Gr. *dis* double + *φθγγος* voice]. The production of double vocal sounds.

Diphyllobothrium la'tum. Same as *Dibothriocephalus latius*.

diphyodont (dif'e-o-dont) [Gr. *di*-two + *φύε v* to produce + *ὀδούς* tooth]. Having two sets of teeth.

Diplacanthus na'nus. Same as *Hymenolepis nana*.

dipacusis (dip-lak-u'sis) [Gr. *διπλός* double + *ἄκουσις* hearing]. 1. The hearing of one sound as two. 2. The difference between the apparent pitch of the same sound as heard by the two ears. **d. binauralis dysharmonica**, a condition in which the same sound has a different pitch when heard by one ear than by the other. **d. binauralis echotica**, a condition in which a sound is heard later and weaker by one ear than by the other. **d. monauralis**, the condition in which a sound is heard as two sounds by one ear, the other being closed.

dipismatic (di-plaz-mat'ik) [Gr. *di*-two + *πλάσμα* something formed]. Containing substances besides protoplasm: said of cells.

diplegia (di-ple'je-ah) [Gr. *dis* twice + *πληγή* stroke]. Paralysis affecting like parts on either side of the body; bilateral paralysis. **facial d.**, facial paralysis affecting both sides of the face. **infantile d.**, birthpalsy. See *palsy*. **masticatory d.**, paralysis of all the muscles which take part in mastication. **spastic d.**, Little's disease.

diplo-albuminuria (dip'lo-al-bu-min-u're-ah) [Gr. *διπλός* double + *albuminuria*]. The presence of both physiologic and pathologic albuminuria.

diplobacillus (dip-lo-bas-il'us) [Gr. διπλός double + bacillus]. A bacillus in which the cells occur in pairs.

diplobacterium (dip'lo-bak-te're-um) [Gr. διπλός double + bacterium]. A bacterial form made up of two distinct cylinders linked together.

diploblastic (dip-lo-blas'tik) [Gr. διπλός double + βλαστός germ]. Made up of two germ-layers.

diplocardia (dip-lo-kar'de-ah) [Gr. διπλός double + καρδία heart]. A condition in which the right and left heart are somewhat separated by a fissure.

diplocephalus (dip-lo-sef'al-us) [Gr. διπλός double + κεφαλή head]. A double-headed monster.

diplocephaly (dip-lo-sef'al-e) [see *diplocephalus*]. The condition of having two heads.

diplococcal (dip-lo-kok'al). Pertaining to or caused by diplococci.

diplococcemia (dip-lo-kok-se'me-ah) [L. diplococci + Gr. αἷμα blood]. The presence of diplococci in the blood.

diplococcoid (dip-lo-kok'oid). 1. Resembling diplococci. 2. An organism that resembles a diplococcus.

Diplococcus (dip-lo-kok'us) [Gr. διπλός double + κοκκός berry]. A genus of bacterial organisms. They are Gram-positive, somewhat elongated or lance-shaped cells growing mostly in pairs or in short chains. They are capsulated and quite strictly parasitic. **D. albicans tardus**, **D. citreus liquefaciens**, forms found in the excretion of seborrhea. **d. of Class**, the *D. scarlatinae*. **Connellan-King d.**, a diplococcus from the tonsillar crypts in case of tonsillitis with symptoms of general infection. **D. coryzæ**, seen in certain nasal fluids. **D. cras'sus**, a Gram-positive organism occurring in association with meningococcus in cerebrospinal fever. Called also *Jager's meningococcus*. **D. exanthematicus**, an organism found in cases of typhus fever and in their lice. It is considered by some to be the cause of this disease. **D. fluorescens foetidus** has been obtained from the nasopharynx; another species occurs in the vesicles of pemphigus. **Foa's d.**, a capsulated diplococcus resembling Fränkel's pneumococcus, found in the lung tissue in pneumonia. **Ford-Robertson d.**, a diplococcus formerly believed to be the causative agent in general paresis. **Geirsvold's d.**, a Gram-positive coccus, found in many specimens of spinal fluid during life and in the organs of several patients after death in cases of acute anterior poliomyelitis. **D. gonorrhoeæ**. Same as *Neisseria gonorrhoeæ*. **d. of horse pneumonia**, a pathogenic species from the lungs of horses with pneumonia. **D. intracellularis**, **D. intracellularis meningitidis**. See *Neisseria meningitidis*. **Jaeger's d.**, the *D. intracellularis*. **D. lacteus faviformis**, a saprophytic species from the normal vagina. **D. lanceolatus**. See *D. pneumoniae*. **D. lu'teus**, a species found in water, appearing as motile cocci in pairs or chains: it produces a yellow pigment. **d. of Morax and Axenfeld**. See *Hemophilus of Morax-Axenfeld*. **D. mucosus**, a Gram-negative diplococcus resembling *Diplococcus intracellularis meningitidis*, except that it grows at room temperature, has a capsule, and the colonies are mucoid and resemble those of *Bacillus capsulatus mucosus*. **d. of mumps**, a pathogenic species discovered by von Leyden in the parotid secretion in mumps. **d. of Neisser**. See *Neisseria gonorrhoeæ*. **D. orchitidis**, a pathogenic species found in orchitis. **d. of pemphigus acutus**, a pathogenic species from vesicles of pemphigus. **d. of pertussis**, a species found by Ritter in the sputum of whooping-cough; pathogenicity not determined. **D. pneumoniæ**, a pathogenic species from the sputum of pneumonia and the exudate of cerebrospinal men-

ingitis; also from empyema and sputum septicaemia; in non-motile, oval, doubled cells or rods, often in short chains. It is the organism most often causing lobar pneumonia. They have been divided into four groups on the basis of immunity reactions and called Types I, II, III, and IV. Called also *Fränkel's pneumococcus*, *pneumococcus*, *Diplococcus lanceolatus*, *Micrococcus lanceolatus*, *Micrococcus pneumoniae*, and *Streptococcus pneumoniae*. See *pneumococcus*. **D. pyogenes ureæ**, a large-sized species found in purulent urine. **D. rheumaticus**, a species isolated from cases of acute rheumatism and thought to be pathogenic for that disease. **D. roseus**. See *Neisseria rosea*. **D. scarlatinae**, a species from the throat secretions in scarlatina: believed to be the cause of that disease. **Weichselbaum's d.**, the *D. intracellularis meningitidis*.

diplocoria (dip-lo-k'o-re-ah) [Gr. διπλός double + κόρη pupil]. Double pupil.

Diplodia (dip-lo'de-ah). A genus of fungi producing the dry-rot or corn-stalk disease of corn. It is thought that it may be concerned in the causation of pellagra.

diploë (dip'lo-e) [Gr. διπλόη fold]. The loose osseous tissue between the two tables of the cranial bones.

Diplogaster (dip'lo-gas-ter) [Gr. διπλός double + γαστήρ stomach]. A genus of free-living coprozoic nematodes which may lead to confusion in examining feces for hookworm and Strongyloides infections.

diplogenes (dip-lo-jen'es-is) [Gr. διπλός double + γένεσις production]. The production of a double monster.

Diplogonoporus gran'dis. A tapeworm which is a common parasite in whales and has been found twice in man in Japan.

diplogram (dip'lo-gram) [Gr. διπλός double + γράμμα letter]. An x-ray plate containing two exposures.

diploic, **diploëtic** (dip-lo'ik, dip-lo-et'ik). Of or pertaining to the diploë.

diploid (dip'loid). The number of chromosomes in the somatic cells of any species.

diplokaryon (dip-lo-kar'e-on) [Gr. διπλός double + κάρυον nucleus]. A nucleus which has twice the diploid number of chromosomes.

diplorellituria (dip'lo-mel-it-u're-ah). Contemporaneous or alternate occurrence of diabetic and non-diabetic glycosuria in the same individual.

diplomyelia (dip'lo-mi-e'le-ah) [Gr. διπλός double + μυελός marrow]. Lengthwise fissure and seeming doubleness of spinal cord.

diplonema (dip-lo-ne'mah) [Gr. διπλός double + νήμα thread]. A stage of meiosis in which the pachytene threads are double.

diploneur (dip-lo-nu'ral) [Gr. διπλός double + νεύρον nerve]. Having a double nerve-supply.

diplophase (dip'lo-fāz). That phase in the life-history in which the nuclei are diploid.

diphlophonia (dip-lo-fō'ne-ah) [Gr. διπλός double + φωνή voice]. Same as *diphthongia*.

diplopia, **diplopy** (dip-lo'pe-ah, dip'lo-pe) [Gr. διπλός double + ὄψις vision]. The seeing of single objects as double or two. **binocular d.**, diplopia due to a derangement of the muscular coordination of the eyes. **crossed d.**, **heteronymous d.**, occurs as a result of diverging strabismus. **direct d.**, **homonymous d.**, a form which occurs in cross-eye. **monocular d.**, affects only one eye, and may be due to double pupil, an early stage of cataract, or to some neurosis. **simple d.**, homonymous diplopia. **vertical d.**, diplopia in which one image is seen above the other. **diplopiometer** (dip'lo-pe-om'e-ter) [*diplopia* + Gr. μέτρον measure]. An instrument for measuring diplopia.

diplosal (dip'lo-sal). Salicylosalicylic acid, $\text{OH.C}_6\text{H}_4\text{CO}_2\text{CfH}_4\text{CO}_2\text{H}$: used like sodium salicylate in

rheumatism, sciatica, neuralgia, pleurisy, neuritis, and cystitis. Dose, 5-15 gr. (0.3-1 gm.) three times a day.

diploscope (dip'lo-skōp) [Gr. διπλός double + σκοπεῖν to examine]. An apparatus for the study of binocular vision.

diplosomatia, diplosomia (dip'lo-so-ma'she-ah, dip-lo-so-me-ah) [Gr. διπλός double + σῶμα body]. A condition in which complete twins are joined at some part of their bodies.

diplosome (dip'lo-sōm) [Gr. διπλός double + σῶμα body]. 1. An allosome which is divided in mitosis. 2. A double centrosome.

diplostreptococcus (dip'lo-strep-to-kok'us). A streptococcus in which the chains occur in pairs.

diploteratology (dip'lo-ter-at-ol'o-je) [Gr. διπλός double + teratology]. The sum of what is known regarding joined twin monstrosities.

Diplozoa (dip-lo-zo'ah) [Gr. διπλός double + ζῶον animal]. A suborder of protozoa embracing the genus *Giardia*.

Dippel's animal oil (dip'elz) [Johann Konrad Dippel, German physician and alchemist, 1673-1734]. See under *oil*.

dipping (dip'ing). Palpation of the liver by sudden and forcible pressure.

dipropaesin (di-pro-pa-e'sin). A white powder, a carbonic acid ester of propäsin, $\text{CO}(\text{NH}_2\text{C}_6\text{H}_4\text{CO}_2\text{C}_3\text{H}_7)_2$. It is transposed into propäsin in the alkaline fluids of the body and then exerts its anesthetic properties. Used internally in gastric ulcer and painful gastro-intestinal disorders.

diprosopus (di-pros-o'pus) [Gr. δῖς twice + πρόσωπον face]. A fetal monster with two faces.

dipsesis (dip-se'sis) [Gr. δίψα thirst]. Morbid thirst.

dipsetic (dip-set'ik). Producing thirst.

dipsomania (dip-so-ma'ne-ah) [Gr. δίψα thirst + μανία madness]. Uncontrollable desire for spirituous liquor.

dipsopathy (dip-sop'ath-e) [Gr. δίψα thirst + πάθος disease]. The nervous condition characterized by dipsomania.

dipsosis (dip-so'sis) [Gr. δίψα thirst]. Morbid thirst.

dipsotherapy (dip-so-ther'ap-e) [Gr. δίψα thirst + θεραπεία treatment]. Thirst-cure; treatment by strict limitation of the amount of water to be drunk.

Diptera (dip'ter-ah) [Gr. διπτερος two-winged]. An order of insects including the flies, gnats, and mosquitos.

Dipterocarpus (dip'ter-o-kar'pus) [Gr. διπτερος two-winged + καρπός fruit]. A genus of trees from southern Asia, affording gurgun balsam. See *gurgun balsam*, under *balsam*.

dipterous (dip'ter-us) [see *Diptera*]. Having two wings. See *Diptera*.

Dipteryx (dip'ter-ix). See *Tonka*.

dipygus (di-pi'gus) [Gr. δῖς twice + πυγή rump]. A monster-fetus with double pelvis. **d. parasilicis**. Same as *gastrothoracopagus dipygus*.

Dipylidium caninum. A common tapeworm of dogs and cats, the larval stage (*Ctenocephalus canis*) and lice (*Trichodectes canis*) of dogs and cats, as well as in *Pulex irritans*, which thus act as vectors. It has been found in man.

diquinacin (di-kwin'is-in). An alkaloid, $\text{C}_{40}\text{H}_{46}\text{O}_3\text{N}_4$, from quinoïdin.

diquinidin. An alkaloid, $\text{C}_{40}\text{H}_{46}\text{O}_3\text{N}_4$, from chinoidin.

direct (di-rekt') [L. *directus*]. 1. Straight; in a straight line. 2. Performed immediately and without the intervention of subsidiary means.

director (di-rek'tor) [L. *dirigere* to direct]. Any thing or device which guides, or directs. **grooved d.**, an instrument grooved to guide the knife in surgery.

directoscope (di-rek'to-skōp). An instrument for the direct examination of the larynx.

dirigation (dir-ig-a'shun) [L. *dis-* away + *rigere* to turn]. The power which certain people possess of confining the attention to some part of the body and thereby altering its blood-supply, temperature, and functional activity.

dirigomotor (dir'ig-o-mo'tor) [L. *dirigere* to direct + *motor* mover]. Controlling muscular activity.

Dirofilaria (di'ro-fil-a're-ah). A genus of *Filaria* with very long filiform bodies and a striated cuticle. **D. immitis** is found in the heart and veins of the dog, wolf, and fox in China and Japan. **D. magalhæsi**, found in the heart of a child in Brazil.

Dir. prop. Abbreviation for L. *directio'ne pro'pria*, with a proper direction.

dirt-eating. See *geophagism*.

dis- [L. *dis-* apart]. A prefix denoting reversal or separation.

disaccharid (di-sak'ar-id). See *disaccharose*.

disaccharose (di-sak'ar-ös). A sugar containing twelve carbon atoms in the molecule, $\text{C}_{12}\text{H}_{22}\text{O}_{11}$. Cane-sugar and milk-sugar are examples. So called because it contains two (hypothetic) saccharid groups.

disacidify (dis-as-id'if-i). To remove an acid from, or to neutralize an acid in, a mixture.

disaggregation (dis'ag-re-ga'shun). Failure of the hysteric mind to connect new sensations with each other and to bring them into relation with the eye; it often results in double consciousness.

disaloin (dis-al'o-in). A form of colloidal chloroform in egg-albumen.

disamidize (dis-am'id-iz). Same as *deamidize*.

disarticulation (dis'ar-tik-u-la'shun) [L. *dis-* apart + *articulus* joint]. Amputation or separation at a joint.

disassimilation (dis'as-im-il-a'shun) [*dis-* + *assimilation*]. The reverse of assimilation; the process by which a substance is changed into waste matter and cast out.

disazo-. A prefix indicating the possession of two azo groups.

disc (disk). See *disk*.

discharge (dis-charj'). 1. A setting free, or liberation. 2. Matter or force set free. 3. An excretion or substance evacuated. **disruptive d.**, liberation of electricity attended with heat, light, and mechanic effects.

discharger (dis-char'jer). An instrument for setting free electricity, as from a Leyden jar.

discharging (dis-char'jing). Giving vent, as to pus, etc.; flowing out; associated with the sudden exertion of energy.

dischromatopsy (dis-kro'mat-op-se). See *dyschromatopsia*.

dischronation (dis-kro-na'shun) [L. *dis* apart + Gr. χρόνος time]. A dislocation in the consciousness of time.

disciission (di-sizh'un) [L. *discisio*; *dis-* apart + *scindere* to cut]. A cutting in twain, or division, as of a soft cataract. **d. of cervix uteri**, excision of wedge-shaped pieces from each side of the cervix uteri for the relief of stenosis of the cervix. **d. of pleura**, cruciform sections into the pleura for empyema. **posterior d.**, incision of the capsule of a cataract from behind.

Diprosopus (Gould and Pyle).

discitis (dis-ki'tis). Inflammation of a disk, particularly of an interarticular cartilage.

discoblastic (dis-ko-blas'tik) [Gr. *δίσκος* disk + *βλαστρός* germ]. Undergoing a discoid vitelline segmentation.

discoid (dis'koid) [Gr. *δίσκος* disk + *εἶδος* form]. 1. Shaped like a disk. 2. A disk-like medicated tablet. 3. In dentistry, an excavator with a disk-like blade.

Discomyces (dis-ko-mi'sēz). The form of organism found in mycetoma in which the mycelium is not septate. See *Nocardia*. **D. asteroides**, this species has been found in mycetoma and in an abscess of the brain. **D. bo'vis**. See *Actinomyces bovis*. **D. brasiliensis**, this species has been found in mycetoma of the leg. **D. madu'ræ**, the species found in the pale variety of mycetoma.

discomycosis (dis'ko-mi-ko'sis). Infestation with *Discomyces*.

discoplacenta (dis'ko-plas-en'tah). A discoid placenta.

discoplasm (dis'ko-plazm). The structural part of a red blood-corpuscle.

discord (dis'kord) [L. *discordia*]. A simultaneous assemblage of two or more inharmonious sounds.

discoria (dis'ko're-ah). Deformity of the pupil; dyscoria.

discrete (dis-kre't) [L. *discre'tus*; *discer'nere* to separate]. Made up of separated parts or characterized by lesions which do not become blended.

discus (dis'kus). Latin for *disk*. **d. articul'aris** [B N A], an interarticular fibrocartilage. **d. intervertebra'lis**, an intervertebral disk. **d. proliger'us**, the granular zone which invests the ovum and is formed by certain cells of the membrana granulosa.

discussive (dis-kus'iv). Same as *discutient*.

discutient (dis-ku'she-ent) [L. *discu'tere* to dissipate]. Scattering; causing a disappearance; also a remedy which so acts.

disdiacblast (dis-di'ak-last) [Gr. *δῖς* twice + *διακλᾶν* to break through]. Any one of the doubly refracting elements of the contractile substance of muscle.

disease (diz-ēz) [Fr. *dés* neg. + *aïse* ease]. In general, any departure from a state of health; an illness or a disease. More specifically a definite morbid process having a characteristic train of symptoms. It may affect the whole body or any of its parts, and its etiology, pathology, and prognosis may be known or unknown. **Acosta's d.**, mountain sickness. **acute d.**, a disease characterized by a swift onset and short course. **Adams's d.**, **Adams-Stokes d.**, Huchard's name for permanent bradycardia with attacks of syncope and epilepsy, due to arteriosclerosis of the basilar and vertebral arteries. **Addison's d.**, a disease characterized by a bronze-like pigmentation of the skin, severe prostration, and progressive anemia, low blood-pressure, diarrhea, and digestive disturbance; it is due to disease (hypofunction) of the suprarenal glands, and usually ends fatally. Called also *melasma suprarenale* and *bronzed skin*. **akamushi d.** See *tsutsugamushi d.* **Albers-Schönberg d.**, osteosclerosis fragilis. **Albert's d.**, achillobursitis. **Alibert's d.**, mycosis fungoides. **alkali d.**, a name formerly given to the disease now known as *leukemia*. **Alzheimer's d.**, a presenile condition marked clinically by the symptoms of progressive mental weakness and characterized pathologically by the presence of milary plaques in the brain. **Anders's d.**, adiposis tuberosa simplex. **angiospasmic d.**, a disease marked by spasms of the various vessels of the body. **anserine d.**, a disease marked by emaciation of the extremities, causing the hands and feet to resemble a goose's feet. **Aran-Duchenne d.**, progressive muscular atrophy beginning in the upper extremity. **association d.**, myoclonus and epilepsy existing to-

gether. **attic d.**, chronic suppurative inflammation of the attic. **Aufrecht's d.**, parenchymatous alterations in the liver and kidney in infectious jaundice. **Aujeszky's d.**, pseudohydrophobia; an infectious bulbar paralysis observed in Hungary and Brazil, where it is called the "scratching pest" (*peste de cocar*). **Australian X d.**, an epidemic disease observed in Australia in 1917-18 which greatly resembles poliomyelitis clinically and histologically, but which is transmissible to monkeys, sheep, horses, and calves. **aviators' d.**, a condition seen in aviators, marked by vasomotor disturbance, hypertension, headache, and drowsiness. **Ayerza's d.**, a form of erythremia marked by chronic cyanosis, chronic dyspnea, enlargement of the liver and spleen, hyperplasia of bone-marrow, and associated with sclerosis of the pulmonary artery. **bad d.**, syphilis. **Baelz's d.**, a disease characterized by painless papules on the mucous membrane of the lips. **Balfour's d.**, chloroma or chlorosarcoma. **Ballet's d.**, ophthalmoplegia externa. **Ballingal's d.**, mycetoma. **Bamberger's d.** 1. Saltatory spasm. 2. Chronic polyserositis (1872). **Bamberger-Marie d.**, hypertrophic pulmonary osteo-arthritis. **Banti's d.**, a form of splenic anemia attended with cirrhosis of the liver, hypertrophy of the spleen, and ascites. **Barcoo d.**, a disease occurring in the elevated parts of South Australia, marked by stomach disorder, bulimia, and an eruption which sometimes progresses to sloughing of the subcutaneous tissues. **Barlow's d.**, infantile scurvy. See *scurvy*. **barometer-makers' d.**, chronic mercurial poisoning in makers of barometers, due to the inhalation of the fumes of mercury. **Barraquer's d.**, lipodystrophia progressiva. **Barthélemy's d.**, acne agminata. **Basedow's d.**, exophthalmic goiter. See *goiter*. **Bateman's d.**, molluscum contagiosum. **Bayle's d.**, progressive general paralysis of the insane. **Bazin's d.**, buccal psoriasis. **Beard's d.**, neurasthenia. **Beau's d.**, cardiac insufficiency. **Beauvais's d.**, chronic articular rheumatism. **Bechterew's d.**, spondylitis deformans. **Begbie's d.** 1. Graves's disease. 2. Bergeron's disease. **Beigel's d.** 1. Hysterical chorea. 2. Trichorrhexis nodosa. **Bell's d.**, acute periencephalitis. **Bennett's d.**, leukemia. **Benson's d.**, asteroid hyalitis. **Bergeron's d.**, hysterical chorea. **Berlin's d.**, traumatic edema of the retina. **Bernhardt's d.**, meralgia parasthetica in the leg. **Beurmann's d.**, disseminated gummatous sporotrichosis. **Biermer's d.**, pernicious anemia. **Billroth's d.** 1. Spurious meningocele. 2. Malignant lymphoma. **bleeder's d.** Same as *hemophilia*. **Blocq's d.**, astasia-abasia. **blue d.**, cyanosis. **Boeck's d.**, a multiple benign sarcoid characterized by large nodules and reddish papules which disappear, leaving a discolored area. **Bonfl's d.**, Hodgkin's disease. **Borna's d.**, a fatal enzootic encephalitis of horses caused by a filtrable virus. **Bouchard's d.**, dilatation of the stomach from inefficiency of the gastric muscles. **Bouillaud's d.**, endocarditis. **Bouveret's d.**, paroxysmal tachycardia. **Bowen's d.**, a skin disease marked by the formation of a pinkish papule or tubercle covered by a thickened horn layer, and classed as a precancerous dermatosis. **Bozzolo's d.**, Kahler's disease. **Breda's d.**, yaws. **Breisky's d.**, kraurosis vulvæ. **Bretonneau's d.**, diphtheria of the pharynx. **bridegrooms' d.**, thrombosis of the pampiniform plexus from sexual excesses. **Bright's d.**, any one of a group of kidney diseases attended with albuminuria. See *nephritis*. **Brill's d.**, an acute infectious disease of unknown origin, with symptoms resembling those of a mild typhus infection. **Brinton's d.** See *Unitis plastica*. **Brissaud's d.**, habit spasm. **Brocq's d.**, parakeratosis psoriasiformis. **Brodie's d.** 1. Chronic synovitis, especially of the knee, with a pulpy degeneration of the parts affected. 2. Hys-

teric pseudofracture of the spine. **Brooke's d.** 1. Spiradenoma. 2. Psorospersmosis. **Brown-Séquard d.**, a lesion of one lateral half of the spinal cord, causing paralysis of motion on one side and of sensation on the other. **Bruck's d.**, a condition marked by deformity of bones, multiple fractures, ankylosis of joints, and atrophy of muscles. **Bruhl's d.**, splenic anemia with fever. **Bruna's d.**, pneumopolulism. **Buerger's d.**, thrombo-angiitis obliterans. **buffalo d.** See *barbone*. **Buhl's d.** Same as *iclerus neonatorum*. **Bury's d.**, erythema elevatum diutinum. **bush d.**, a disease of sheep and cattle in certain parts of New Zealand, marked by progressive anemia. Called also *lauranga*. **Busquet's d.**, exostoses on the dorsum of the foot due to osteoperiostitis of the metatarsal bones. **button d.**, a parasitic disease of young chickens in the tropics, marked by the formation of tubercles at the angles of the mouth. **caisson-d.**, divers' paralysis; tunnel disease; a condition frequently seen in those who have worked under high atmospheric pressure, as in caissons, diving-bells, etc., after they have returned to the ordinary atmosphere. The disease is attended with various paralytic and apoplectic symptoms—pain in the back, paraplegia, incoördination, incontinence of urine, etc. It is caused by the presence of bubbles of nitrogen gas (aëremia) in the blood and tissues. Under the increased atmospheric pressure additional amounts of nitrogen go into solution in the body; this is released as bubbles of gas when the pressure is reduced. The condition can be largely prevented by reducing the pressure to normal (decompression) very slowly; the time so required (five to thirty minutes) increasing with the amount of the pressure. It is treated by again placing the patient under pressure (recompression) and reducing the pressure more slowly. **California d.**, coccidioidal granuloma. See *granuloma*. **caloric d.**, any disease due to exposure to high temperature. **Calvé-Perthes d.**, a disease of the hip-joint in young children. Called also *osteochondritis deformans juvenalis coxae*. **carapato d.**, a disease of tropical Africa, believed to be caused by a protozoan blood parasite. **Carrión's d.**, Oroya fever. **Chabert's d.**, symptomatic anthrax. **Chagas's d.**, a form of trypanosomiasis found in man and in the armadillo (*Dasypus novemcinctus*) in the interior of Brazil. It is produced by *Trypanosoma (Schizotrypanum) cruzi* which is transmitted by the bedbug (*Cimex lectularius*), by a Brazilian bug (*Lampro or Triatoma or Conorhinus magistis*), by several other species of *Lampro* and of *Cimex*, and by the tick *Ornithodoros*. It runs an acute course in children and a chronic course in adults, but is regularly fatal. Called also *Brazilian trypanosomiasis*, *thyroditis parasitaria*, and *caroerypanosis*. **Chagas-Cruz d.** See *Chagas's d.* **Charcot's d.**, multiple cerebrospinal sclerosis with attendant joint inflammations. **Charcot's joint d.**, a disease of the joints occurring in diseases of the spinal cord and leading to a chronic synovitis affecting one or more joints, to brittleness of the bones, wasting of the articular extremities, and dislocation. **Cheadle's d.**, infantile scurvy. **Cherchewsky's d.**, ileus of nervous origin. **chignon d.** See *chignon fungus*, under *fungus*. **chronic d.**, one which is slow in its progress and of long continuance. **chylopoietic d.**, one which affects the digestive organs. **climatic d.**, any disease thought to be produced by a change of climate. **Coat's d.**, retinitis circinata. **comb d.**, a kind of favus affecting the combs of fowls, and caused by a fungus, *Lophophyton gallinarum*. Called also *whitecomb* and *lophophytosis*. **communicable d.**, a disease the causative agents of which may pass or be carried from one person to another directly or indirectly. **complicating d.**, **intertecurrent d.**, one which occurs in the course of some other disease as a complication. **Concato's d.**, progressive malignant inflammation

of the serous membranes, especially of the pleura. **congenital d.**, a disease present at birth. **constitutional d.**, one which involves a system of organs or the whole body. **contagious d.**, a disease that is communicable by contact with an individual suffering from it or with some secretion of such an individual, or with an object touched by him. Cf. *infectious*. **Cooper's d.**, chronic cystic disease of the breast. **cornstalk d.**, a disease of cattle characterized by enteritis and septicemia, due to a bacillus, possibly the *Bacillus* *see*. **Corrigan's d.**, aortic incompetency. **Corvisart's d.**, chronic hypertrophic myocarditis. **Cotugno's d.**, sciatica. **Couton's d.**, tuberculous spondylitis. **covering d.**, dourine. **creeping d.** See *creeping eruption*, under *eruption*. **Cruveilhier's d.** 1. Progressive muscular atrophy. 2. Ulceration of the stomach due to excess of acids and local anemia. **Cruz-Chagas d.** Same as *Chagas's d.* **Curschmann's d.**, frosted liver. **cysticercus d.**, an affection due to the presence of the larval forms of the *Taenia solium* (the pork tapeworm). **DaCosta's d.**, retrocedent gout. **Dalrymple's d.**, cyclokeratitis. **dancing d.**, tarantism. **Danielssen's d.**, anesthetic leprosy. **Darier's d.**, keratosis follicularis. **David's d.** Same as *Pott's d.* **Débove's d.**, splenomegaly. **de Bruns's d.** See *pneumopolulism*. **deer-fly d.** See *tularemia*. **deficiency d.**, any disease due to the lack of some element in the diet. The term includes beriberi, scurvy, pellagra, etc. Cf. *avitaminosis*. **Déjerine's d.**, hypertrophic interstitial neuritis in infants. **deprivation d.** See *deficiency d.* **Dercum's d.**, adiposis dolorosa. **Dernos's d.**, splenopneumonia. **Devergie's d.** See *psoriasis rubra*. **Dieulafoy's d.**, exulceratio simplex of the stomach. **diffuse d.**, a disease involving several tracts of the spinal cord. **Ditmarsch d.**, a syphilitic disease of Ditmarsch (Holstein), probably imported by Norwegian laborers in 1785-1787. **Dressler's d.**, recurrent hemoglobinuria. **drug d.** 1. A morbid condition due to long-continued use of a drug. 2. In homeopathy, the group of symptoms seen after the administration of a drug for the purpose of proving. **Dubini's d.**, electric chorea. **Dubois's d.**, the development of multiple abscesses in the thymus gland in congenital syphilis. **Duchenne's d.** 1. See *Aran-Duchenne d.* 2. Bulbar paralysis. 3. Locomotor ataxia. **Duchenne-Aran d.**, progressing muscular atrophy beginning in the upper extremity. **Duhring's d.** See *dermatitis multiformis*. **Dukes's d.** See *fourth d.* **Dupre's d.**, a psychoneurosis in which the patient makes a conscious effort to control his emotions. **Duroziez's d.**, congenital mitral stenosis. **Dutton's d.**, trypanosomiasis. **dynamic d.** Same as *functional d.* **Eales's d.**, a condition marked by recurrent hemorrhages into the retina and vitreous. **Ebstein's d.**, hyaline degeneration and necrosis of the epithelial cells of the renal tubules: seen in diabetes. **echinococcus d.** See *hydatid*. **Economov's d.**, encephalitis lethargica. **Edsall's d.**, heat-cramp. See under *cramp*. **Ehret's d.**, paralysis of the peronei muscles with contraction of their antagonists. **Eichhorst's d.** See *neuritis fascians*. **Eichstedt's d.** See *linea versicolor*. **endemic d.**, one which occurs in some special locality year after year. **Engman's d.**, dermatitis infectiosa eczematodes. **enzootic d.**, an endemic disease of animals. **epidemic d.**, a disease which affects a large number of people in some particular region within a short period of time. **Epstein-Pil d.**, a relapsing type of pseudoleukemia. **Erb's d.**, idiopathic muscular atrophy. See *atrophy*. **Erb-Charcot d.**, spasmodic locomotor ataxia. **Erb-Goldflam d.**, myasthenia gravis pseudoparalytica. **Erichsen's d.**, railway spine. **Eulenburg's d.**, congenita paramyotonia. **Fallop's d.** (1888), congenital cyanosis due to the following: (1) Stenosis or obliteration of the pulmonary artery; (2) hypertrophy of the right ventricle; (3) dilatation and

deviation of the aorta to the right; (4) interventricular communication. **fatigue d.** 1. Febrile attack due to overexercise and the absorption of waste-products. 2. Occupation neurosis. **Fauchard's d.**, alveolodental periostitis. See *periostitis*. **Fede's d.**, sublingual fibroma. **Feer's d.**, a disorder characterized by cyanosis of the extremities, recurrent sweating, tremor, motor weakness, rapid pulse, and insomnia. **Fenwick's d.**, primary atrophy of the stomach. **Fiedler's d.** Same as *Weil's d.* **fifth d.** See *erythema infectiosum*. **Filatow-Dukes d.** Same as *fourth d.* **file-cutters' d.**, lead-poisoning from inhaling particles of lead which arise from the bed of lead used in file cutting. **fifth d.**, one due to dirt and unclean habits. **finger-and-toe d.**, a disease of cruciferous plants caused by *Plasmodiophora brassicae*. Called also *stump root*. **fish-skin d.**, ichthyosis. **fish-slime d.**, septicemia following a punctured wound made by the spine of a fish. **Flajani's d.**, exophthalmic goiter. **flax-dressers' d.**, a kind of pneumonia seen in flax-dressers, and caused by inhaling particles of flax. **flint d.** Same as *chalicosis*. **focal d.**, one which is localized at one or more foci. **foot-and-mouth d.**, an acute febrile disease marked by the formation of an eruption of vesicles in the mucous membrane of the cheeks and the skin of the digits. It is very contagious among ruminant animals and pigs, and is often transmitted from the animal to man and domestic animals, being caused by a filtrable virus. See *Loeffleria nevermanni*. Called also *epizootic stomatitis*, *epidemic stomatitis*, *aphthous fever*, and *epizootic aphthae*. **Fordeyce's d.**, a malady of the lips and oral mucous membrane, marked by the formation of yellowish, milium-like bodies. **Fothergill's d.** 1. Trifacial neuralgia. 2. Scarlatina angiosa. **Fournier's d.**, fulminating gangrene of the genitals. **fourth d.**, an alleged exanthematous contagious disease resembling rubella, scarlatina, and measles. It is marked by lamellar desquamation of the skin. Called also *Dukes's d.* **fourth venereal d.** See *specific ulcerative and gangrenous balanoposthitis*, under *balanoposthitis*. **Fox's d.** Same as *Fordeyce's d.* **Fox-Fordeyce d.**, a papular itchy eruption, limited chiefly to the axillae and the pubes, due probably to alteration of the seat-gland secretion. **Francis's d.**, tularemia. **Friedländer's d.**, obliterative arteritis. **Friedmann's d.**, relapsing infantile spastic spinal paralysis. **Friedreich's d.** See *paramyoclonus multiplex*. **frien d.** See *frieite*. **Frommel's d.**, a condition marked by prolonged lactation and atrophy of the uterus. **functional d.**, any disease without discoverable lesion. **Firstner's d.**, pseudospastic paralysis with tremor. **gambian horse d.**, a disease of horses in Senegambia caused by the *Trypanosoma dimorphon*. **gan-nister d.**, pneumoconiosis due to the inhalation of dust by workers in gannister. **Garré's d.**, sclerotic non-suppurative osteomyelitis. **Gauch-er's d.**, familial splenic anemia; a form of splenic anemia characterized by its frequent familial incidence and marked by the presence in the spleen of certain large cells with one or more nuclei and a glossy homogeneous cytoplasm (*Gauch-er's cells*). **Gayet's d.**, a rare form of fatal lethargic sleep resembling *néclavan*. **Geisbock's d.**, polycythemia hypertonica. **Gerhardt's d.**, erythromelalgia. **Gerlier's d.**, paralytic vertigo; a disease of the nerves and nerve-centers attacking farm-laborers and stablemen, and characterized by pain, paresis, vertigo, ptosis, and muscular contractions. **Gibert's d.**, pityriasis rosea. **Gilles de la Tourette's d.**, motor incoordination with echolalia and coprolalia. **Giovannini's d.**, a rare nodular disease of the hair produced by a fungus. **Glénard's d.**, splanchnoptosis. **Gold-flam's d.**, myasthenia gravis pseudoparalytica. **Gourand's d.**, inguinal intestinal hernia. **Gowers's d.**, saltatory spasm. **Grancher's d.**, splenopneumonia. **Graves's d.**, exophthalmic goiter. **Greenhow's d.** Same as *vagabonds'*

d. **Griesinger's d.**, anemia with dropsy, caused by *Ankylostomum duodenale* and general malnutrition. Called also *cachexia aquosa*. **grinders' d.**, silicosis. **Gross's d.**, encysted rectum. **Gruby's d.**, a form of tinea tonsurans seen in children, and due to the fungus *Trichophyton microsporum*. **Guinea-worm d.**, dracunculiasis. **Guinon's d.** Same as *Gilles de la Tourette's d.* **Gull's d.**, myxedema of adults. **Gull and Sutton's d.**, arteriosclerosis. **Haff d.**, a condition which affects fishermen of the Koenigsberg Haff. The men are suddenly seized with severe pain in the limbs, great weariness, and hematuria. An attack passes off in a few days, but may recur. The disease is said to be the result of poisoning by arsin introduced into the Haff through the waste water of cellulose factories. **Hallopeau's d.**, pustular dermatitis. **Hall's d.**, spurious hydrocephalus. See *hydrocephalus*. **Halstern's d.**, endemic syphilis. **Hammond's d.**, athetosis. **hand-and-foot d.**, a trophoneurotic affection characterized by ulceration of the hands and feet. **Hanot's d.**, biliary cirrhosis; hypertrophic cirrhosis of the liver with icterus. See *cirrhosis*. **Harley's d.**, recurrent hemoglobinuria. **Hay-em's d.**, apoplecticform myelitis. **heart-water d.** See *hemoglobinuria of sheep*. **Heberden's d.**, rheumatism of the smaller joints accompanied by nodosities. **Hebra's d.**, erythema multiforme. **Heerfordt's d.** See *uroparotid fever*, under *fever*. **Heine-Medin d.**, acute anterior poliomyelitis. See under *poliomyelitis*. **hematopoietic d.**, disease affecting the blood-making organs. **hemorrhagic d.**, any one of a group of diseases marked by a tendency to hemorrhage from the membranes and into the tissues, and including purpura hemorrhagica, hemophilia, and melena neonatorum. **hemorrhagic d. of new-born**, a condition marked by spontaneous hemorrhage from the umbilicus or mucous membranes or into the skin sometimes occurring in the new-born. **Henoch's d.**, Henoch's purpura. See *purpura*. **hereditary d.**, one that is transmitted from parents to children. **Heubner's d.**, syphilitic endarteritis of the cerebral vessels. **Hippel's d.**, angiogliomatosis of the retina. **Hirschfeld's d.**, acute diabetes mellitus. **Hirschsprung's d.**, congenital hypertrophic dilatation of the colon. See *megacolon*. **Hodara's d.**, a kind of trichorrhexis nodosa seen in women in Constantinople. **Hodgkin's d.**, a disease marked by an infectious granulomatous condition (inflammatory enlargement) involving particularly the lymphadenoid tissues of the body, with the presence in the lymph-glands of fibroblasts, eosinophils, giant-cells, and frequently an organism, *Corynebacterium granulomatis maligni*, which is possibly the causative agent of the disease. The glandular enlargement begins on one side of the neck and extends thence to the axillary, inguinal, mediastinal glands, and to the spleen. It is usually attended with a relapsing fever. Called also *infectious granuloma*, *malignant granuloma*, *malignant lymphoma*, *lymphomatosis granulomatosa*, *lymphadenoma*, *lymphogranulomatosis*, *granulomatosis maligna*, *lymphosarcoma*, *anemia lymphatica*, and *pseudoleukemia*. **Hodgson's d.**, an aneurysmal dilatation of the proximal part of the aorta, often accompanied by dilatation or hypertrophy of the heart. **Hoffa's d.**, traumatic proliferation of fatty tissue (solitary lipoma) in the knee-joint (Albert Hoffa, 1904). **hookworm d.** See *uncinariasis* and *ankylostomiasis*. **Huchard's d.**, continued arterial hypertension, thought to be a cause of arteriosclerosis. **Huguier's d.**, fibromyoma uteri. **Hunt's d.**, dyssynergia cerebri-myoclonica. **Huntington's d.** See *Huntington's chorea*, under *chorea*. **Huppert's d.**, multiple myeloma. **Hutchinson's d.** Same as *Tay's choroiditis*, under *choroiditis*. **Hutinel's d.**, cardioutuberculous cirrhosis of the liver in childhood; marked by cirrhosis of the liver, ascites, cyanosis, and swelling of the extremities. **hyda-**

tid d., a condition characterized by the presence of hydatid cysts. **Hyde's d.**, prurigo nodularis. **hydrocephaloid d.**, a condition resembling hydrocephalus, but marked by depression of the fontanels, due to diarrhea or some other wasting disease. **idiopathic d.**, one not consequent upon any other disease, nor upon any known lesion or injury. **infectious d.**, a disease due to an infection. See *infection*. **inherited d.**, a disease that came from one's ancestors. **insect-borne d's**, the principal ones are alkali disease, dengue, encephalitis lethargica, filariasis, infantile paralysis, Japanese river fever, kala-azar, leishmaniasis, malaria, nagana, papataci fever, plague, relapsing fever, Rocky Mountain spotted fever, surra, Texas fever, trypanosomiasis, tularemia, typhus fever, and yellow fever. **insufficiency d.** Same as *deficiency d.* **intercurrent d.**, a disease occurring during the course of another disease with which it has no connection. **interstitial d.**, one in which the stroma of an organ is mainly affected. **Isambert's d.**, acute military tuberculosis of larynx and pharynx. **island d.**, Japanese river-fever. See under *fever*. **itch d.**, a form of dermatitis in horses due to the presence of *Fusarium equinum*. **Jacquet's d.**, reflex alopecia; alopecia connected with anomalies of the teeth. **Jaksch's d.** See *von Jaksch's d.* **Janet's d.**, psychasthenia. **Johne's d.**, chronic dysentery in cattle. **Jourdain's d.**, suppurative inflammation of the gums and alveolar processes of the jaw. **Kahler's d.** See *multiple myeloma*, under *myeloma*. **Kaposi's d.**, xeroderma pigmentosum. **Katayama d.**, a disease caused by *Schistosoma japonicum* and characterized by diarrhea and dysenteric symptoms, painful enlargement of the liver and spleen, with or without fever, anemia, and dropsy. **Kayser's d.**, a condition characterized by pigmentation of the body, greenish discoloration of the cornea, and intention tremor, and attended by diabetes, enlargement of the spleen, and hepatic cirrhosis. **kedani d.** See *tsutsugamushi d.* **Kienboch's d.**, chronic osteitis of the semilunar bone. **Klippel's d.**, arthritic general pseudo-paralysis. **knife-grinders' d.**, chronic catarrhal bronchitis in knife-grinders. **Köhler's bone d.** 1. A disease or malformation of the scaphoid bone of the foot in children, of obscure pathology, due to traumatism and developmental defect conditioned by traumatism. The symptoms are: limping and pain on walking, usually tenderness over the scaphoid, and sometimes redness and swelling. Called also *tarsal scaphoiditis* and *os naviculare pedis retardatum*. 2. A disease of the second metatarsal bone, with thickening of its shaft and changes about its articular head, characterized by pain in the second metatarsophalangeal joint on walking or standing. **Kölner's d.**, epidermolysis bullosa. **Korsakoff's d.**, a condition of impaired memory with a tendency to false reminiscence, combined with symptoms of multiple neuritis: seen in alcoholics and some cases of gastro-intestinal disease. **Kris-haber's d.**, a neuropathy affecting the nerves of sensation and the heart, and marked by tachycardia, vertigo, hyperesthesia, and sense illusions. **Kümmel's d.**, a complex of symptoms coming on in a few weeks after spinal injury, and consisting of pain in the spine, intercostal neuralgia, motor disturbances of the legs, and a gibbosity of the spine which is painful on pressure and easily reduced by extension; posttraumatic spondylitis. **Kussmaul's d.**, periarteritis nodosa. **Laënnec's d.**, alcoholic cirrhosis of the liver. **Lancereaux-Mathieu d.** Same as *Weil's d.* **Landry's d.**, acute ascending paralysis. **Lane's d.**, chronic intestinal stasis. **Lasègue's d.**, mania of persecution. **Leber's d.**, hereditary optic atrophy; a congenital malformation of the optic nerve, with palsy and degeneration of the affected parts. **Legal's d.**, a disease affecting the pharyngotympanic region, and

manifested by headache and local inflammatory changes. **Legg's d.**, osteochondritis deformans juvenalis. **Legg-Calvé d.**, **Legg-Calvé-Waldenström d.**, osteochondritis deformans juvenalis. **Leloir's d.**; lupus vulgaris erythematodes. **Leyden's d.**, a form of periodic vomiting described by von Leyden. **Lipschütz's d.**, ulcus vulvæ acutum. **Little's d.**, a general term for all forms of cerebral spastic diplegia. **Lobstein's d.**, osteospathyrosis. **local d.**, **topical d.**, one which originates in and remains confined to one part. **loco d.** See *locoism*. **Lorain's d.** See *alexisis*. **Lucas-Championnière d.**, chronic pseudomembranous bronchitis. **Mackenzie's d.** See *x-disease*. **MacLean-Maxwell d.**, a chronic condition of the os calcis marked by enlargement of its posterior third and attended by pain on pressure. **Madelung's d.** 1. Congenital dislocation of the wrists. 2. Symmetric lipomatosis on the neck, shoulders, and back. **Magitot's d.**, osteoperiostitis of the alveoli of the teeth. **Mahler's d.**, perivaginitis simplex. **Majocchi's d.**, purpura annularis telangiectodes. **Malassez's d.**, cyst of the testicle. **March's d.**, exophthalmic goiter. **Marfan's d.**, progressive spastic paraplegia in children with hereditary syphilis, due to a myelitis of the pyramidal tract. **Marie's d.**, acromegaly. **Marie-Bamberger d.**, hypertrophic pulmonary osteo-arthritis. **Martin's d.**, periosteo-arthritis of the foot from excessive walking. **massai d.**, a disease of East Africa, marked by fever, vomiting, and abdominal tenderness: it is thought to be filarial in nature. **mas-toid d.**, mastoiditis. **Mathieu's d.**, Weil's disease. **Mauriac's d.**, erythema nodosum syphiliticum. **Meige's d.** Same as *Milroy's d.* **Ménière's d.**, an inflammatory process and congestion of the semicircular canals, manifested by pallor, vertigo, and various aural and ocular disturbances. Called also *aural vertigo* and *auditory vertigo*. **Meyer's d.**, adenoid vegetations of the pharynx. **miasmatic d.**, one due to malarial poisoning. **Mibelli's d.**, porokeratosis. **Mikulicz's d.**, chronic enlargement of the lacrimal and salivary glands, due to replacement of the glandular tissue by lymph-cells. Called also *achrocytosis*. **milk-borne d's**, the principal ones are Asiatic cholera, diphtheria, dysentery, food infections, foot-and-mouth disease, infantile diarrhea, Malta fever, scarlatina, septic sore throat, tuberculosis, and typhoid fever. **Mills's d.**, progressive ascending hemiplegia. **Milroy's d.**, a form of hereditary edema of the legs. Called also *Meige's disease*. **Mitchell's d.**, erythromelalgia. **mitral d.**, disease of the mitral valves. **Moeller-Barlow d.**, subperiosteal hematoma in rickets. **Morand's d.**, paresis of the extremities. **Morel-Kraepelin d.**, dementia præcox. **Morton's d.**, metatarsalgia. **Morvan's d.**, syringomyelia. **Moschcowitz's d.**, febrile pleiochromic anemia. See under *anemia*. **mountain d.**, mountain sickness. **mule-spinners' d.**, warts or ulcers of the skin, especially of the scrotum, which tend to become malignant. They are so called because found chiefly among the operators of spinning mules in cotton mills. **Münchmayer's d.**, a diffuse progressive ossifying poliomyelitis. **Myä's d.**, congenital dilatation of the colon. **nanukayami d.** See under *nanukayami*. **nar-ronian d.**, an endemic intermittent fever once prevalent at Narenta (Bosnia). **navicular d.**, necrotic inflammation of the navicular bone in horses, causing intermittent lameness. **Neftel's d.**, inability to sit, stand, or walk without discomfort and paresthesias of the back and head, all movements being easily executed in the recumbent position. **nervous d.**, any disease involving or affecting the nervous system. **Neumann's d.**, pemphigus vegetans. **Niemann's d.**, a disease of infancy and childhood marked by anemia and a leukocytosis with relative increase in lymphocytes, enlarged spleen and liver. The enlarged spleen shows lipid deposits. The disease runs a rapid

course ending in death within the first two years of life. **nodule d.**, a disease of sheep caused by a minute worm, *Cesophagus toma columbiana* num, which infests the intestines, becoming embedded in the mucous membrane, where it forms small nodules. **Nordau's d.**, degeneracy. **nutritional d.**, disturbance of nutrition and function without visible lesion. **occupation d.**, one due to one's employment. **Ohara's d.**, a disease described by Ohara of Japan; probably identical with tularemia. **Ollier's d.**, achondroplasia. **Oppenheim's d.**, congenital myotonia. **organic d.**, one due to or accompanied by structural changes visible to the unaided eye. **Osgood-Schlatter d.** Same as *Schlatter's d.* **Osler's d.**, chronic cyanosis with enlarged spleen and polycythemia. See *erythremia*. **Paget's d.** 1. Osteitis deformans. 2. An inflammatory affection of the areola and nipple, often becoming cancerous. **pandemic d.**, one which occurs over an entire country, or even more or less over the world. **parasitic d.**, one caused by vegetable or animal parasites. **parenchymatous d.**, one which attacks the parenchyma of an organ. **Parkinson's d.**, paralysis agitans. **paroxysmal d.**, one occurring in sudden seizures. **Parrot's d.**, syphilitic pseudoparalysis. **Parry's d.**, exophthalmic goiter. **Parson's d.**, exophthalmic goiter. **Pavy's d.**, recurrent albuminuria. **Paxton's d.**, tinea nodosa or trichorrhexis nodosa. **pearl-workers' d.**, recurrent inflammation of bone with hypertrophy, seen in persons who work in pearl-dust. **Pel-Ebstein d.**, lymphadenoma marked by periodical attacks of pyrexia. **peri-odic d.**, a disease which recurs at regular intervals or at the same period in every year. **periodontal d.**, a disease or disorder of the tissues surrounding the root of a tooth. **Perthes's d.** See *osteochondritis deformans juvenilis*. **Pfeiffer's d.**, glandular fever. **Phoca's d.** Same as *Tilloux's d.* **Pick's d.**, Pick's syndrome. See *syndrome*. **pink d.** See *erythredema*. **Pinkus's d.**, lichen nitidus. **Pinta d.** See *pinta*. **plaster-of-Paris d.**, atrophy of a limb which has been enclosed in a plaster-of-Paris splint. **Plummer's d.**, the development of toxicity (hyperthyroidism) in simple adenoma of the thyroid. **police-man's d.**, tarsalgia. **Poncet's d.**, tuberculous rheumatism. **porcupine d.**, ichthyosis. **Potain's d.**, pulmonary and pleural edema. **Pott's d.**, osteitis or caries of the vertebrae, usually of tuberculous origin: it is marked by stiffness of the vertebral column, pain on motion, tenderness on pressure, prominence of certain of the vertebral spines, and occasionally abdominal pain, abscess formation, and paralysis. **Poulet's d.**, rheumatic osteoperiostitis. **Profichet's d.** See *Profichet's syndrome*, under *syndrome*. **Purtscher's d.**, traumatic angiopathy in the retina with lymphorrhagia. **pyramidal d.** See *butlress foot*, under *foot*. **Quincke's d.**, giant urticaria; urticaria oedematosa. **Quinquaud's d.**, a purulent folliculitis of the scalp, causing irregular bald patches; called also *acne decalvans*. **rag-sorters' d.** 1. See *anthrax*. 2. A febrile disease with cough and headache, seen in rag-sorters, and due probably to a bacillus. **Rayer's d.**, xanthoma. **Raynaud's d.** 1. A vasomotor neurosis in children and young adults, marked by attacks of cold or emotional excitement (*local syncope*), and in the severer cases by capillary congestion and livid swelling (*local asphyxia*), which may eventually result in gangrene (*Raymond's gangrene*, *symmetric gangrene*). 2. Paralysis of the throat muscles following parotiditis. **Recklinghausen's d.** 1. Multiple neurofibromata. 2. Osteitis fibrosa osteoplastica. 3. Neoplastic arthritis deformans. **Reclus's d.** 1. A painless cystic enlargement of the mamma, marked by multiple dilatations of the acini and ducts. 2. See *ligneous phlegmon*, under *phlegmon*. **Reichmann's d.**, continuous secretion of gastric juice; gastroscorrea. **Reiter's d.**, a remittent fever of the

tropics of unknown causation, marked by pains in the muscles and joints, nephritis, jaundice, conjunctivitis, iritis, and cystitis. **respiratory d.**, one which affects the respiration. **Riedel's d.**, ligneous thyroiditis. **Riga's d.**, cachectic aphthae. **Riggs's d.**, alveolar pyorrhea. **Ritter's d.**, dermatitis exfoliativa infantum. **Rivalta's d.**, actinomycosis. **Robinson's d.**, hydrocystoma. **Roger's d.**, the presence of an abnormal congenital communication between the ventricles of the heart. **Rokitansky's d.**, acute yellow atrophy of the liver. **Romberg's d.**, facial hemiatrophy. **Rosenbach's d.** Same as *Heberden's nodes*, under *node*. **Rossbach's d.**, hyperchlorhydria. **Roth's d.**, meralgia parasthetica. **Roth-Bernhardt d.**, meralgia parasthetica. **Rummo's d.**, downward displacement of the heart. **Rust's d.**, tuberculous spondylitis of the cervical vertebrae. **Sachs's d.**, amaurotic family idiocy. **sacro-iliac d.**, chronic tuberculous inflammation of the sacro-iliac joint. **St. Agatha's d.**, mammitis. **St. Aignon's d.**, tinea favosa. **St. Anthony's d.** 1. Chorea. 2. Epidemic gangrene. **St. Apollonia's d.**, toothache. **St. Avertin's d.**, epilepsy. **St. Avidus's d.**, deafness. **St. Blasius's d.**, quinsy. **St. Clair's d.** See *ophthalmia*. **St. Dymphna's d.**, insanity. **St. Erasmus's d.**, colic. **St. Fiace's d.**, hemorrhoids. **St. Francis's d.**, erysipelas. **St. Gervasius's d.**, rheumatism. **St. Gete's d.**, carcinoma. **St. Giles's d.** 1. Leprosy. 2. Carcinoma. **St. Gothard's tunnel d.**, ankylos-tomiasis. **St. Hubert's d.**, hydrophobia. **St. Job's d.**, syphilis. **St. Main's d.**, scabies. **St. Mathurin's d.**, idiocy. **St. Modestus's d.**, chorea. **St. Roch's d.**, plague. **St. Sement's d.**, syphilis. **St. Valentine's d.**, epilepsy. **St. Zachary's d.**, dumbness. **San Joaquin Valley d.**, coccidioidal granuloma. **sandworm d.**, a skin disease of Australia characterized by an area of erythema on the inner side of the sole, which spreads in spiral lines. **sartian d.**, a facial skin disease endemic in Asiatic Russia; probably furunculosis orientalis. **Saunders's d.**, a dangerous condition seen in infants having digestive disturbances to whom is given a large percentage of carbohydrates. It is marked by vomiting, cerebral symptoms, and depression of circulation. **Savill's d.**, epidemic eczema. **Schamberg's d.**, a peculiar progressive pigmentary skin eruption of inflammatory character. **Schenck's d.**, sporotrichosis. **Schilder's d.** See *encephalitis periaxialis*. **Schimmelbusch's d.**, cystic degeneration of the breast with adhesion of the ovary or tube to the cecum, which is distended with feces. **Schlatter's d.**, avulsion of the tongue-shaped projection of the tubercle of the tibia. **Schlatter-Osgood d.**, Schlatter's disease. **Schönlein's d.**, purpura rheumatica. **Schwediauer's d.**, achillobursitis. **scythian d.**, atrophy of the penis and testicles from sexual perversion. **senecio d.**, cirrhosis of the liver due to senecio poisoning. **septic d.**, one which arises from the development of pyogenic or putrefactive organisms. **serum d.** See *serum sickness*, under *sickness*. **shimanushi d.** See *Japanese river fever*, under *fever*. **shuttlemakers' d.**, a condition in shuttlemakers, marked by faintness, shortness of breath, headache, nausea, etc., attributed to inhaling the dust of poisonous wood from which the shuttles are made. **Simmond's d.**, a condition of premature senility accompanied by psychic symptoms due to total atrophy of the pituitary body; called also *hypophyseal cachexia*. **specific d.**, any disease, such as syphilis, due to a characteristic morbid agency. **sporadic d.**, a disease occurring in single cases. **Sterbe d.**, a disease of horses in South Africa. A serum prepared from horses affected with this disease is said to be curative of malarial poisoning. **sterility d.**, a deficiency disease due to a lack of vitamin E in the diet. **Sternberg's d.**, tuberculous pseudo-

leukemia. **Still's d.**, a variety of chronic polyarthritis affecting children and marked by enlargement of lymph-nodes, generally of the spleen, and irregular fever. **Stokes's d.**, exophthalmic goiter. **Stokes-Adams d.**, an affection marked by slow pulse, attacks of vertigo, and epileptoid or apoplectoid seizures, probably due to arteriosclerosis of vertebral and basilar arteries. **Strachan's d.**, a form of multiple neuritis described by Strachan in patients in Kingston, Jamaica: now believed to be pellagra. **straw-mattress d.** See *straw-itch*, under *itch*. **structural d.**, any disease in which there are microscopic changes. **Strümpell's d.**, polioencephalomyelitis. **Strümpell-Marie d.**, rhizomelic spondylitis. **Stuttgart d.**, typhus fever of dogs. **subacute d.**, a disease more protracted and less active than an acute disease. **subchronic d.**, one more protracted than an acute disease, but less so than a chronic one. **Sutton and Gull's d.**, arteriosclerosis. **Swediaur's d.**, inflammation of the calcaneal bursa. **Swift's d.** See *erythredema*. **system d.**, one which affects a particular nerve-tract or system of nerve-fibers. **Talma's d.**, myotonia acquisita. **tarabagan d.**, an epizootic disease affecting marmots (*tarabagans*) in Mongolia. The disease resembles bubonic plague, and is highly infective to man. **tartaric d.**, gout and calculus (Paracelsus). **Tay-Sachs d.**, amaurotic family idiocy. **Thomsen's d.**, a disease, usually congenital and hereditary, characterized by tonic spasm and rigidity of certain muscles when an attempt is made to move them after a period of rest or when mechanically stimulated. The stiffness disappears as the muscles are used. Called also *paramyotonia congenita*. **Thornwaldt's d.** See *bursitis*. **Tillaux's d.**, mammitis with the formation of multiple tumors in the breast. **Tomaselli's d.**, pyrexia and hematuria due to excessive use of quinin. **Tourette's d.**, a nervous disease marked by inco-ordination, speech disorders, and convulsions. **tricuspid d.**, disease of the tricuspid valves. **Trousseau's d.**, stomachal vertigo. See *vertigo*. **tsetse-fly d.**, infection of animals in South Africa with trypanosomes which are inoculated into them by means of the tsetse-fly. **tsutsugamushi d.**, an acute infectious disease endemic in certain parts of Japan, transmitted by the bite of a mite, *Trombicula akamushi*, and marked by a small necrotic ulcer at the site of the bite, enlargement of the lymph-nodes of the region, macular eruption, and a continuous fever lasting about three weeks. Called also *Japanese river fever*, *flood fever*, *island fever*, *kedani disease*, *akamushi disease*, *shimamushi disease*, *yochubio*, and *shashitsu*. **tunnel d.**, ankylostomiasis. **Underwood's d.**, sclerema neonatorum. **Unna's d.**, seborrheic eczema. **Unverricht's d.** See *myoclonus epilepsy*, under *epilepsy*. **vagabonds' d.**, **vagrants' d.**, parasitic melanoderma: discoloration of the skin in persons of filthy habits, caused by the irritation of lice. **Vaquez's d.**, **Vaquez-Osler d.** See *erythremia*. **venereal d.**, a contagious disease, most commonly acquired in sexual intercourse: as gonorrhea, chancre, or syphilis. **Verneuil's d.**, syphilitic disease of the bursæ; syphilitic bursopathy. **Vincent's d.** See *Vincent's angina*, under *angina*. **Virchow's d.**, leontiasis ossium. **Volkman's d.**, a congenital deformity of the foot due to a tibiotarsal dislocation. **Voltolini's d.**, an acute purulent inflammation of the internal ear, with violent pain, followed by fever, delirium, and unconsciousness. **von Hippel's d.** See *angiomas of retina*. **von Jaksch's d.** See *anemia infantum pseudo-leukæmica*. **Wardrop's d.**, onychia maligna. **Wegner's d.**, osteochondritic separation of the epiphyses in hereditary syphilis. **Weil's d.**, an acute infectious disease characterized by jaundice, fever, muscular pain, and enlargement of the liver and spleen. The symptoms last from ten

days to two weeks, and recovery is usually uneventful. It is due to a spirochete, *Spirochæta (Leptospira) icterohæmorrhagica*, and is called also *acute febrile jaundice*, *infectious jaundice*, *epidemic catarrhal jaundice*, *icterogenic spirochetosis*, *spirochælosis icterohæmorrhagica*, and *Fiedler's disease*. **Weir-Mitchell d.**, erythromelalgia. **Werlhof's d.**, purpura hæmorrhagica. **Werner-His d.**, trench fever. **Wernicke's d.**, acute hæmorrhagic polioencephalitis. **Westberg's d.**, a condition marked by the formation of white spots upon the skin. **White's d.**, keratosis follicularis. **white-spot d.**, degeneration of the papillary and reticular layers of the skin, marked by the formation of white, bead-like spots; morphea guttata. **Whitmore's d.**, a condition somewhat resembling glands seen in broken-down morphin and cocaine victims in India. Called also *morphin injector's septicæmia*. **Whytt's d.**, hydrocephalus internus. **Widal-Abrami d.**, acquired hemolytic jaundice. **Wilk's d.**, chronic parenchymatous nephritis. **Willis's d.**, diabetes. **Wilson's d.** 1. Dermatitis exfoliativa. 2. See *progressive lenticular degeneration*, under *degeneration*. **Wilson-Brocq d.**, Wilson's disease (1st def.). **Winckel's d.**, an extremely fatal disease of newborn infants, characterized by icterus, hemorrhage, bloody urine, and cyanosis. **Windscheid's d.**, the series of nervous symptoms associated with arteriosclerosis. **Woillez's d.**, acute idiopathic congestion of the lungs. **wool-sorters' d.**, a form of pulmonary anthrax attacking those who handle wool. **x-d.** See *x-disease*. **Ziehen-Oppenheim d.** See *dystonia musculorum deformans*. **zymotic d.**, one due to the action of a ferment, as of a morbid germ or a ptomain.

disengagement (dis-en-gāj'ment). Escape from confinement, especially the emergence of the fetal head from the vaginal canal in labor, or of an impacted tumor.

disequilibrium (dis-e-kwil-ib're-um). Unstable equilibrium, either physical or mental.

disharmonious (dis-har-mo'ne-us). Out of harmony: a term applied by Abderhalden to substances foreign to the body and thus out of harmony with the body cells.

dish face. See under *face*.

disinfect (dis-in-fek't) [*L. dis-apart + infi'cere* to corrupt]. To free from pathogenic substances or organisms, or to render them inert.

disinfectant (dis-in-fek'tant). 1. Freeing from infection. 2. An agent that disinfects, chiefly by destroying infective agents (pathogenic micro-organisms) or rendering ferments inactive. **complete d.**, a disinfectant which destroys spores as well as vegetative forms of microorganisms. **incomplete d.**, a disinfectant which destroys vegetative forms of organisms, but does not injure spores.

disinfectin (dis-in-fek'tin). A dark-brown liquid derived from the residues of naphtha distillation. It is disinfectant.

disinfection (dis-in-fek'shun). The act or process of destroying pathogenic germs or agents. **concurrent d.**, immediate disinfection and disposal of discharges and infective matter all through the course of a disease. **terminal d.**, disinfection and destruction of infectious material after the recovery of a patient from an infectious disease.

disinfectol (dis-in-fek'tol). A proprietary mixture of crude cresol, tar hydrocarbons, resin, soap, and alkalis; disinfectant.

disinfestation (dis-in-fes-ta'shun). The extermination or destruction of insects; especially destruction of lice; delousing.

disinsected (dis-in-sek'ted). Freed from insects or vermin.

disinsection (dis-in-sek'shun). Removal of insects from; extermination of insects or vermin.

disinsector (dis-in-sek'tor). An apparatus for the removal of insects or vermin from patients or their clothing.

disintegration (dis-in-te-gra'shun) [L. *dis-* apart + *integer* entire]. 1. Decay. 2. Disassimilation or catabolism.

disintoxication (dis'in-toks-ik-a'shun). The removal of toxic principles; the act of rendering toxic substances harmless.

disinvagination (dis-in-vaj-in-a'shun). Reduction of an invagination.

disk (disk) [L. *discus*]. 1. A circular or rounded flat plate or organ. 2. A medicated lamella. **Amici's d.** Same as *membrane of Krause*. **anangiod d.**, a retinal disk without blood-vessels. **anisotropous d.** Same as *transverse d.* **Bardeen's primitive d.**, the embryonic structure which develops into the intervertebral ligament. **Blake's d's**, disks of paper for pasting over the drum after operation for otitis. **blastodermic d.**, the germinal disk after segmentation has begun. **blood-d.**, a blood-corpuscle; more correctly, a blood-platelet. **Bowman's d's**, flat, disk-like plates which make up striated muscular fibers. **choked d.**, an inflamed and edematous optic disk, due to increased intracranial pressure. Called also *papilledema*. **corundum d.**, a device used in dentistry for cutting away a portion of two contiguous teeth; it is operated by a dental engine. **dental d.**, a thin, circular piece of paper or other material, covered with abrasive powder and used for polishing teeth or fillings. It is usually operated by a dental engine. **Engelmann's d.** Same as *Hensen's d.* **epiphyseal d.**, the flattish epiphysis on the proximal or distal surface of each vertebra. **gelatin d.**, a disk or lamella of gelatin, variously medicated: chiefly used in eye diseases. **germinal d.**, a flattish area in a fertilized ovum in which the first traces of the embryo are seen. **Hensen's d.**, the pale, thin disk dividing a muscle-case into two portions. **interarticular d.**, an interarticular fibrocartilage. **intervertebral d.**, a layer of fibrocartilage between the bodies of vertebrae. **optic d.**, the area of the retina where the optic nerve enters it. **Placido's d.**, a disk having concentric circles marked on it: used in examining the cornea. **proligerous d.**, the discus proligerus. **Ranvier's tactile d's**, terminations of nerve-fibers in cup-shaped bodies in the transparent substance between Grandry's corpuscles. **stenopeic (stenopæic) d.**, an opaque disk having a narrow slit: used for testing astigmatism. **straboscopic d.**, a disk used in eye examinations to produce distortion of objects seen. **tactile d.**, a disk-like nerve-termination in a tactile cell, as in an end-organ of a nerve of special sense. **transverse d.**, one of the dark transverse layers of a muscle-fiber.

diskitis (dis-ki'tis). Same as *discitis*.

dislocatio (dis-lo-ka'she-o). Dislocation. **d. erecta**, subglenoid dislocation of the shoulder with the arm in a vertical position and the hand on top of the head.

dislocation (dis-lo-ka'shun) [L. *dis-* apart + *locare* to place]. The displacement of any part, more especially of a bone. **closed d.** Same as *simple d.* **complete d.**, one which completely separates the surfaces of a joint. **complicated d.**, one which is associated with other important injuries. **compound d.**, one in which the joint communicates with the external air. **congenital d.**, one which exists from or before birth. **consecutive d.**, one in which the luxated bone has changed its position since its first displacement. **divergent d.**, one in which the ulna and radius are dislocated separately. **habitual d.**, one which often recurs after replacement. **incomplete d.**, a subluxation; a slight displacement. **intra-uterine d.**, one which occurs to the fetus in utero. **d. of the lens**, displacement of the crystalline lens of the eye. **Monteggia's d.**, dislocation of the hip-joint in which the head of the

femur is near the anterosuperior spine of the ilium. **Nélaton's d.**, dislocation of the ankle in which the astragalus is forced up between the end of the tibia and the fibula. **old d.**, a dislocation in which inflammatory changes have occurred. **partial d.** Same as *incomplete d.* **pathologic d.**, one which results from paralysis, or from a local or other disease. **primitive d.**, one in which the bones remain as originally displaced. **recent d.**, one in which there is no complicating inflammation. **simple d.**, one in which the joint is not penetrated by a wound. **subastragalar d.**, separation of the calcaneum and the scaphoid from the astragalus. **thyroid d.**, displacement of the head of the femur into the thyroid foramen. **traumatic d.**, one due to an injury or to violence.

disocclude (dis-ok-lūd'). To grind a tooth so that it does not touch its antagonist in the other jaw in any of the movements of mastication.

disodic (di-so'dik). Having two atoms of sodium in each molecule.

disodium methylarsenate. See *arrhenal*.

disomus (di-so'mus) [Gr. *di-* two + *σῶμα* body]. A double-bodied monster.

disorganization (dis-or'gan-iz-a'shun). The process of destruction of any organic tissue; any profound change in the tissues of an organ or structure which causes the loss of most or all of its proper characters.

disorientation (dis-o're-en-ta'shun). The loss of proper bearings, or a state of mental confusion as to time, place, or identity.

disotrin (di-so'trin). A proprietary digitoxin preparation.

disoxidation (dis-ok-sid-a'shun). Deoxidation.

Disp. Abbreviation for *dispensatory*.

disparasitized (dis-par'ah si-tizd). Freed from parasites.

disparate (dis-par-ät) [L. *disparatus*, *dispar* unequal]. Not situated alike; not exactly paired.

dispareunia (dis-par-u'ne-ah). See *dispareunia*.

dispensary (dis-pen'sa-re) [L. *dispensarium*, from *dispensare* to dispense]. A place for the gratuitous treatment of patients and free distribution of medicines.

dispensatory (dis-pen'sa-to-re) [L. *dispensatorium*]. A treatise on the qualities and composition of medicines.

disperse (dis-pens') [L. *dispensare*, *dis-* out + *pensare* to weigh]. To prepare and distribute medicines to those who are to use them.

dispermin (di-sper'min). Piperazin.

dispermy (di'sper-me). The entrance of two sperms into one ovum.

disperse (dis-pers') [L. *dis-* apart + *spargere* to scatter]. To scatter the component parts as of a tumor or the fine particles in a colloid system; also the particles so dispersed. **d. medium**, the continuous phase of a colloid system; the medium in which a colloid is dispersed, corresponding to the solvent in a true solution. **d. particles**, the disperse phase of a colloid system; the particles of colloid in a colloid system. **d. system**, a colloid.

dispersible (dis-per'sib-l). Capable of being dispersed or discussed.

dispersidology (dis-per-sid-ol'o-je). Colloid chemistry; the chemistry of colloids.

dispersion (dis-per'shun) [L. *dispersio*]. 1. The act of scattering or separating; the condition of being scattered. 2. The incorporation of the particles of one substance into the body of another, comprising solutions, suspensions, and colloid solutions. 3. A colloid solution. **coarse d.**, a mechanical suspension. **colloid d.**, a colloid solution. **molecular d.**, a true solution.

dispersity (dis-per'sit-e). The degree of dispersion of a colloid; *i. e.*, the degree to which the dimensions of the disperse particles have been reduced.

dispersoid (dis-per'soid). A colloid system in which the dispersity is relatively great.

dispersonalization (dis-per-son-al-iz-a'shun). A mental condition in which a person denies the existence of his personality or believes that certain parts of his body are lacking or that they belong to other persons or animals.

dispert (dis'pert). A medicinal preparation obtained from a vegetable drug or endocrine gland by extracting its therapeutic constituents in the cold and then reducing the product to a dry concentrated form.

dispira (dis-pi'rah) [L. *dis-* two + *spira* coil]. See *dispirem*.

dispirem, dispireme (di-spi'rem, di-spi'rēm) [Gr. *dis* twofold + *σπείρμα* coil]. The stage of cell-division which follows the diaster; so called because the protoplasm is divided into two parts, in each of which the chromatin assumes the form of a coil. See *karyokinesis*.

displacement (dis-plas'ment). 1. Removal from the normal position or place; ectopia. 2. Percolation. 3. A Freudian term for the substitution of one idea for another, or an exchange of a colorless and abstract expression in the dream-thought for one that is visual and concrete (Brill). **fetal d.**, a group of cells which, during fetal development, has become displaced from its normal relations. **fish-hook d.**, a form of displacement of the stomach in which the orifice of the pylorus faces directly upward, and the duodenum runs upward and to the right to join the pylorus at an angle, producing a constricting hook.

dissect (dis-sekt') [L. *dissecare* to cut up]. To cut apart, as tissues for anatomic study.

dissection (dis-sek'shun) [L. *dissectio*]. The cutting apart of tissues, as in anatomic study or in surgery.

disseminated (dis-sem'in-a-ted) [L. *dis-* apart + *seminare* to sow]. Scattered; distributed over a considerable area.

dissempiment (dis-sep'im-ent). Partition; separation.

dissimilate (dis-sim'il-āt). To dissimilate.

dissimilation (dis'sim-il-a'shun) [L. *dis-* neg. + *similis* alike]. Dissimulation, or catabolic change.

dissociable (dis-so'she-abil). Easily separable into component parts; separable from associations.

dissociated (dis-so'se-a-ted). Split off from consciousness. Cf. *dissociation* (3d def.).

dissociation (dis-so-se-a'shun) [L. *dis-* neg. + *sociatio* union]. 1. The act of separating or state of being separated. 2. Resolution by heat of a molecule into two or more simpler molecules. 3. The condition in which an experience is stored up in the mind, but remains without the realm of consciousness, so that it cannot be reproduced. Cf. *subconscious*. **d. symptom**. See *symptom*.

dissocule (dis-ol'ik-ül). The apparent molecular weight of a substance in solution at the boiling-point of the solution.

dissolution (dis-so-lu'shun) [L. *dissolutio, dissolvere* to dissolve]. A separation of the soul from the body; death.

dissolve (dis-solv'). 1. To cause a substance to melt away in a liquid. 2. To melt away in a liquid.

dissolvent (dis-sol'vent). 1. A solvent medium. 2. A medicine capable of dissolving concretions within the body. 3. Solvent; capable of dissolving substances.

dissonance (dis'so-nans). A combination of tones which produce discords.

Dist. Abbreviation for L. *distilla*, distil.

distad (dis'tad). In a distal direction or on the distal aspect.

distal (dis'tal). Remote; farthest from the center, origin, or head; opposed to proximal.

distalia (dis-ta'le-ah). The bones of the distal row of the carpus or tarsus.

distance (dis'tans). The length of space between two objects. **angular d.**, the aperture of the angle made at the eye by lines drawn from the eye to two objects. **focal d.**, the distance from the focal point to the optical center of a lens or the surface of a concave mirror. **infinite d.**, in ophthalmology, a distance of 20 feet or more: so called because rays entering the eye from an object at that distance are practically as parallel as if they came from a point at an infinite distance. **working d.**, the distance between the front lens of a microscope and the object when correctly focused.

distemper (dis-tem'per). A name of several infectious diseases of animals: especially **canine d.**, a contagious catarrhal disease of pups caused by *Bacterium bronchisepticum*. **colt d.** Same as *strangles*.

distensibility (dis-ten-sib-il'it-e). Capability of being distended.

distichia, distichiasis (dis-tik'e-ah, dis-tik-i'as-is) [Gr. *dis* twice + *στίχως* row]. An affection in which there are two rows of eyelashes, one or both of which are turned inward against the eye.

distil (dis-til') [L. *destillare*; *de* from + *stillare* to drip]. To volatilize by heat and then cool and recollect the evaporated matter.

distillate (dis'til-at). The portion which has been distilled over.

distillation (dis-til-a'shun). Vaporization; the process of distilling and condensing vapor. **destructive d.**, that which is attended with chemic decomposition and formation of new compounds in the distillate. **dry d.**, distillation of solids without the addition of liquids. **fractional d.**, that which is attended by the successive separation of volatilizable substances in the order of their respective volatility.

distinctor (dis-tink'tor). Same as *palpatorium*.

distobuccal (dis-to-buk'al). Pertaining to the distal and buccal surfaces of teeth.

distobucco-occlusal (dis-to-buk-o-ok-lu'sal). Pertaining to the distal, buccal, and occlusal surfaces of a tooth.

distobuccopulpal (dis-to-buk-o-pul'pal). Relating to the distal, buccal, and pulpal walls of a tooth cavity.

distocervical (dis-to-ser'vik-al). Pertaining to the distal and cervical walls of a cavity tooth.

distocia, distokia (dis-to'se-ah, -ke-ah) [Gr. *dis* twice + *τόκος* birth]. The birth of the second child.

distoclusal (dis-to-kl'u'sal). Pertaining to the distal and occlusal walls of a tooth cavity.

distocclusion (dis-to-kl'u'zhun). A malrelation of the dental arches in which the mandibular arch is in a distal or posterior position in relation to the maxillary arch. Called also *posterocclusion* and *posterio-occlusion*.

distolabial (dis-to-la'be-al). Distal and labial: denoting the portion of a tooth between its distal and labial surfaces.

distolingual (dis-to-ling'gwal). Distal and lingual: denoting the portion of a tooth between its distal and lingual surfaces.

Distoma, Distomum (dis'to-mah, dis'to-mum) [Gr. *dis* two + *στόμα* mouth]. The former name of a genus of trematode worms: but as now used, a general term including the various genera of trematodes or flukes, such as *Paragonimus*, *Fasciola*, etc. **D. bus'ki**. See *Fasciolopsis buski*. **D. conjunc'tum**. See *Opisthorchis noverca*. **D. cras'sum**. See *Fasciolopsis buski*. **D. hæmato'bium**. See *Schistosoma hæmatobium*. **D. hepaticum**. See *Fasciola hepatica*. **D. lancea'tum**. See *Dicrocoelium lancea'tum*. **D. pulmona'le**, **D. ring'eri**. See *Paragonimus westermanii*. **D. sinen'sis**. See *Opisthorchis*

sinensis. **D. westermanii**. See *Paragonimus westermanii*.

distomatosis, distomia (dis'to-ma-to'sis, di-sto'-me-ah) [Gr. *dis* two + *στόμα* mouth]. 1. The presence of two mouths. 2. Infection with distoma; distomiasis.

distomiasis (dis-to-mi'-as-is). Trematode infection; fluke infection; the condition produced by the presence of Distoma in the body. **hemic d.**, schistosomiasis. **hepatic d.**, infestation with *Opisthorchis sinensis*, *Fasciola hepatica* or *Dicrocoelium*. **intestinal d.**, infestation with *Fasciolopsis buskii*. **pulmonary d.**, infection with the lung-fluke, *Paragonimus westermanii*.

disto-occlusal (dis'to-ok-lu'-zal). Distoclusal.

disto-occlusion (dis'to-ok-lu'-zhun). Distoclusion.

distor'tor o'ris. The zygomaticus minor muscle.

distoversion (dis-to-ver'zhun). The position of a tooth when it is more than normally distant from the median line.

distractibility (dis-trak-tib-il't-e). A morbid or abnormal variation of attention; inability to fix attention on any subject.

distraction (dis-trak'shun) [L. *dis*-apart + *tractio* a drawing]. Traction so exerted as to separate surfaces normally opposed.

distribution (dis-trib-u'shun) [L. *distribu'tio*]. The arrangement of the branches of a nerve or artery.

districhiasis (dis-trik-i'-as-is) [Gr. *dis* double + *τριχ* hair]. A condition in which two hairs grow from a single follicle.

distrix (dis'triks) [Gr. *dis* double + *τριχ* hair]. The splitting of the hairs at their distal ends.

disubstituted (di-sub'stit-u-ted). Having two atoms in each molecule replaced by other atoms or radicals.

disulphate (di-sul'fat). A sulphate having a replaceable hydrogen atom.

disulphid (di-sul'fid). A compound of a base with two atoms of sulphur.

disuse-atrophy. See *atrophy of disuse*.

disvolution (dis-vo-lu'shun) [L. *dis*-neg. + *volvere* to roll]. Retrogradation; extreme catabolism; degeneration.

dita-bark (de'tah). The bark of *Alstonia scholaris*, a tree of the Philippines; used as a tonic and intermittent fever remedy.

ditain (dit'ah-in). A poisonous alkaloid, $C_{22}H_{28}N_2O_4 \cdot H_2O$, from dita-bark; its action is like that of curare.

ditamin (dit-am'in). An alkaloid, $C_{16}H_{19}NO_2$, from dita-bark.

dithion (dith'e-on). A mixture of the sodium salts of two of the dithiosalicylic acids; an antiseptic for external use.

dithiosalicylic acid (di-thi'o-sal-is-il'ik). See *acid*.

dithymoldioidid (di-thi'mol-di-i'o-did). Same as *aristol*.

Ditrichomas'tix hom'inis. A very minute flagellate found in the stools of a case of diarrhea in Egypt; probably coprozoic.

Ditropenotus aureovir'idis. Same as *Pedicularios ventricosus*.

Dittrich's plugs (dit'triks) [Franz *Dittrich*, German pathologist, 1815-1859]. See under *plug*.

diurate (di-u'rat). Biurate.

diurazin (di-u-ra'zin). A compound of theobromin, salicylic acid, and formaldehyd; used as an antiseptic diuretic. Dose, 6 gr. (0.4 gm.).

diureid (di-u're-id). See *ureid*.

diuresis (di-u-re'sis) [Gr. *diá* through + *οὐρεῖν* to urinate]. Increased secretion of urine.

diuretic (di-u-ret'ik). 1. Increasing the secretion of urine. 2. A medicine that promotes the secretion of urine. **alterative d.**, any drug eliminated by the kidney and having a salutary effect on the diseased surfaces of the urinary tract. **cardiac d.**, a drug which causes diuresis by increasing the force of the heart-beat. **direct d.** Same as *stimulant d.* **hydragogue d.**, one which promotes a copious discharge of water from the kidneys. **indirect d.**, any diuretic which acts by relieving renal congestion or compression. **mechanical d.**, any agent which acts favorably by washing out the urinary tubules. **refrigerant d.**, one which renders the urine less irritating. **saline d.**, any saline agent which, being absorbed, carries water into the blood. **stimulant d.**, any agent which acts by irritating the parenchyma of the kidney.

diuretin (di-u-re'tin). Theobromin-sodium salicylate, $C_7H_7NaN_3O_2 \cdot C_6H_5OHCOONa$, a white powder: used as a diuretic. Dose, 10-15 gr. (0.666-1 gm.), repeated four to six times a day.

diurnal (di-er'nal) [L. *di'es* day]. Occurring during the day.

diurnule (di-ern'ul) [L. *diurnus* daily]. A pill or other preparation containing the complete allowance of a medicine for one day.

diurol (di-u'rol). A sedative diuretic preparation of lithium benzoate, buchu, triticum, saw-palmetto, and potassium bicarbonate.

Div. Abbreviation for L. *divide*, divide.

divalent (di'va-lent) [Gr. *dis* twice + *valens*]. Same as *bivalent*.

divergence (di-ver'jenz). A spreading or tending apart.

divergent (di-ver'jent) [L. *divergens*; *dis*-apart + *vergere* to tend]. Tending apart; deviating or radiating away from a common point.

divers' paralysis (di'verz). Caisson-disease.

diverticula (di-ver-tik'u-lah). Plural of *diverticulum*.

diverticular (di-ver-tik'u-lar). Pertaining to or resembling a diverticulum.

diverticularization (di-ver-tik-u-lar-iz-a'shun). The act of forming diverticula, pockets, etc., during development.

diverticulitis (di-ver-tik-u-li'tis). Inflammation of a diverticulum; a condition marked by the formation of small pouches along the border of the colon, which become filled with feces which sometimes set up irritation and give rise to inflammation and abscess.

diverticulogram (di-ver-tik'u-lo-gram) [*diverticulum* + Gr. *γράφω* mark]. A radiogram of a diverticulum.

diverticulosis (di-ver-tik-u-lo'sis). The presence of diverticula, particularly of intestinal diverticula.

diverticulum (di-ver-tik'u-lum) [L. *diverticula're* to turn aside]. A pouch or pocket leading off from a main cavity or tube. **false d.**, an intestinal diverticulum due to the protrusion of the mucous membrane through a tear in the muscular coat. **ganglion d.**, a hernial protrusion of the synovial membrane through a tendon sheath. **Heister's d.**, the external jugular sinus. **intestinal d.**, a hernial protrusion of the mucosa of the intestine through the muscular coat. **laryngeal d.**, a diverticulum of the laryngeal mucous membrane. **Meckel's d.**, an occasional sacculation or cecal appendage of the ileum, derived from an obliterated vitelline duct. **Nuck's d.**, the canal of Nuck. **Pertik's d.**, an unusually deep fossa of Rosenmüller. **pituitary d.**, an outgrowth from the mucous membrane of the back part of the pharynx which assists in forming the pituitary body. **pulsion d.**, a diverticulum caused by pressure within the bowel. **Rokitansky's d.**, a traction diverticulum of the esophagus. **synovial d.**, a hernial protrusion of the synovial membrane of a joint or a

tendon-sheath. **traction d.**, a diverticulum from the esophagus, due to adhesions and consequent traction. **true d.**, an intestinal diverticulum formed by protrusion of the entire intestinal wall. **Vater's d.**, the duodenal papilla. See under *papilla*.

divi-divi (div-e-div'e). The pods of *Casalpinia*, plants of South America. They contain tannin and are used as astringents.

divulse (di-vuls'). To pull apart forcibly.

divulsion (di-vul'shun) [L. *dis-* apart + *vellere* to pluck]. The act of separating or pulling apart.

divulsor (di-vul'sor). An instrument for performing divulsion in the urethra.

D. M. D. Abbreviation for *Doctor of Dental Medicine*.

dmeqon (dme'gon). Nicolle and Blaizot's vaccine: for use in all cases of gonorrhea.

Dn. Abbreviation for *dekanem*.

dn. Abbreviation for *decinem*.

D: N ratio. See under *ratio*.

D. N. B. Abbreviation for *dinitrobenzene*.

D. O. Abbreviation for *Doctor of Osteopathy*.

Dobell's solution (do-belz') [Horace Benge Dobell, English physician, 1828-1917]. See *solution*.

Dobie's globule, layer or line (do'bēz) [William Murray Dobie, English physician, 1828-1915]. See *globule* and *line*.

Dochez's antitoxin or serum (do-shays') [Alphonse Raymond Dochez, American physician, born 1882]. See under *serum*.

dochmiasis, dochmiosis (dok-mi'as-is, dok-me-o'sis). Ankylostomiasis.

Dochmius duodenalis (dok'me-us). See *Ankylostoma duodenale*.

docimasia (dos-im-a'ze-ah) [Gr. δοκιμάζειν to examine]. An assay or examination; an official test. **pulmonary d.**, determination as to whether air has entered the lungs of a dead infant, as an indication whether it was born dead or alive.

docimastic (do-se-mas'tik). Pertaining to docimasia; of the nature of an assay or test.

dock. See *Rumex*.

Dock's test-breakfast (doks) [George Dock, American physician, born 1860]. See under *test-meal*.

doctor (dok'tor) [L. *doc'tor* teacher]. 1. A practitioner of medicine or surgery, especially one who has received the degree of M. D. from a medical school. 2. A person who has received a diploma of the highest degree from one of the faculties of a university.

dodecadactylitis (do'dek-a-dak-til-i'tis) [See *dodecadactylon*]. Inflammation of the duodenum.

dodecadactylon (do'dek-ah-dak'til-on) [Gr. δώδεκα twelve + δακτύλος finger, from its length]. The duodenum.

Döderlein's bacillus (ded'er-linz) [Albert Döderlein, German obstetrician, 1860-1919]. See *bacillus*.

doeglic acid (deg'lik). See under *acid*.

doegling (deg'ling) [Norwegian]. The *Bala'na rostra'ta*, or lesser orquial; a whale whose oil is used in ointment bases.

dog-fennel. See *Marula*.

Dogmatists (dog'mat-ists). The first of the post-Hippocratic schools of medicine, in which the open-minded spirit of Hippocrates' teaching became merged with strict formalism which cared more for rigid doctrine than for investigation. The most important members of this school were Diocles of Carystus (born 400 B. C.) and Praxagoras of Cos. The dogmatists divided medical science into five branches: physiology, etiology, hygiene, semeiology, and therapeutics.

dog's-bane (dogz'-bān). See *Apocynum. Jamaica d.* See *Piscidia*.

dogwood (dog'wood). See *Cornus*.

Döhle's inclusion bodies (do'lez) [P. Döhle, German pathologist, born 1855]. See under *body*.

dolabrate (do-lab'-rāt) [L. *dola'bra* ax]. Ax-shaped.

dolabriform (do-lab'rif-orm). Dolabrate.

Dolérís's operation (dol-ar-ēz') [Jacques Amadée Dolérís, French gynecologist, born 1852]. See *operation*.

dollarin (do-le-a're-in). A derivative from the juice of *Ficus doliaria*, having vermifuge, purgative, and digestive properties.

dolichocephalic, dolichocephalous (dol'ik-o-se-fal'ik, dol'ik-o-sef'al-us) [Gr. δολιχός long + κεφαλή head]. Long-headed; having the antero-posterior, or cephalic, diameter relatively long.

dolichocephalism, dolichocephaly (dol'ik-o-sef'al-izm, dol'ik-o-sef'al-e). The quality of being dolichocephalic.

dolichogastry (dol'ik-o-gas'tre) [Gr. δολιχός long + γαστήρ stomach]. A term proposed as an improvement on the term "gastroptosis," because the condition is one of stretching of the center of the stomach.

dolichopellic, dolichopelvic (dol'ik-o-pel'ik, dol'ik-o-pel'vik) [Gr. δολιχός long + πέλλις pelvis]. Having an abnormally long pelvis.

Dolichos (dol'ik-os). Same as *Mucuna*.

dolichosigmoid, dolichosigmoid (dol'ik-o-sig'moid) [Gr. δολιχός long + sigmoid]. An abnormally long sigmoid flexure.

dolichostenomelia (dol'ik-o-ste-no-me'le-ah) [Gr. δολιχός long + στενός narrow + μέλος limb]. See *arachnodactylia*.

Döllinger's ring (del'ing-erz) [Johann Ignaz Josef Döllinger, German physiologist, 1770-1841]. See under *ring*.

doll's eye sign. See *Cantelli's sign* and *Widowit's sign*, under *sign*.

dolomol (dol'o-mol). Magnesium stearate, Mg. (CH₃(CH₂)₁₆CO.O)₂: used as a base for antiseptic dusting-powder, etc.

dolonephran (dol-o-nef'ran). A combination of alypin and suprarenin, used as an anesthetic.

dolor (dol'or), pl. *dolor'es*. Latin for *pain*. **d. cap'itis**, pain in the head.

dolo'res va'gi. Wandering pains. See under *pain*.

dolorogenic (do-lor-o-jen'ik) [L. *do'lor* pain + Gr. -γεν to produce]. Producing pain, as *d. zone*.

domatophobia (do'mat-o-fo-be-ah) [Gr. δῶμα house + φόβος fear]. Insane dread of being in a house.

dome-cells (dōm'selz). See *cell*.

domiciliary (do-mis-il'e-a-re) [L. *do'mus* house]. Pertaining to or carried on in the house, as domiciliary treatment.

domicilium (do-mis-il'e-um) [L. "a little house"]. A pneumatic chamber for the application of rarefied or compressed air.

dominance (dom'in-ans). The appearance, in a cross-bred organism, of one of two mutually antagonistic parental characters. See *Mendel's law*, under *law*.

dominant characteristics (dom'in-ant). See *Mendel's law*, under *law*.

Dominici's tube (dom-in-e-sēz) [Henri Dominici, contemporary French physician]. See *tube*.

donator (do'na-tor). A thing which gives something. **hydrogen d.**, a substance or compound which gives up hydrogen to another substance called *hydrogen acceptor*.

donda ndugu (don'dah ndoo'goo) [African for "brother ulcer" or "clinging ulcer"]. A disease occurring in Africa, in which the legs swell and slough.

Donders's glaucoma, law, etc. (don'derz) [Franz Cornelius Donders, Dutch physician, 1818-1889]. See *glaucoma, law*, etc.

Donec. alv. sol. fuerit. Abbreviation for *L. donec al'vus solu'ta fu'erit*, until the bowels are opened.

donee (do-ne'). The person who receives the transfused blood from the veins of the donor.

Donnan's equilibrium (don'an-z) [F. G. Donnan, contemporary English chemist]. See under *equilibrium*.

Donné's corpuscles, test (don-āz') [Alfred Donné, French physician, 1801-1878]. See *corpuscle and tests*.

donor (do'nor). The person who furnishes blood for transfusion. **universal d.**, a donor the cells of whose blood are not agglutinated by the blood of any patient.

Donovan's solution (don'o-vanz) [Edward Donovan, English pharmacist, 1789-1837]. See *solution*.

dopa (do'pah). A term coined from dioxyphenylalanin. According to Bloch's theory, skin pigment is formed by oxidation of dioxyphenylalanin in certain cells by dopa-oxydase.

dopa-oxydase (do-pah-ok'sid-ās). An enzyme in the protoplasm of the basal epidermal and hair-follicle cells which oxidizes dihydroxyphenylalanin with the formation of a dark brown pigment.

dope (döp). A slang name for a narcotic or stimulant drug.

Doppler's phenomenon (dop'lerz) [Christian Doppler, American mathematician, 1803-1853]. See under *phenomenon*.

doramad (dor'am-ad). A German proprietary ointment containing thorium-X.

doraphobia (do-raf-ok'be-ah) [Gr. *δώρα* hide + *φόβος* fear]. A morbid dread of the skin or fur of animals.

Dorendorf's sign (do'ren-dorfs) [H. Dorendorf, German physician, born 1866]. See under *sign*.

dormancy (dor'man-se). The state of being dormant; in bacteriology, the property exhibited by some bacteria of lying dormant for a time before starting growth.

dormant (dor'mant) [*L. dormi're* to sleep]. Sleeping, inactive, quiescent.

sleeping (dor'mij-ēn). A British make of bromural.

dormiol (dor'me-ol). A proprietary hypnotic and sedative liquid, $\text{CCl}_3\text{C}(\text{OH})_2(\text{CH}_3)_2\text{C}(\text{C}_6\text{H}_5)_2$, amylene chloral, or dimethylethyl-carbinol-chloral. Dose of 50 per cent. solution, 10-30 min. (0.8-2 c.c.).

dorsad (dor'sad). Toward the back or dorsal aspect.

dorsal (dor'sal) [*L. dorsa'lis*; from *dor'sum* back]. Pertaining to the back or to any dorsum.

dorsalgia (dor-sal'je-ah) [*L. dor'sum* back + Gr. *ἄλγος* pain]. Pain in the back.

dorsalis (dor-sa'lis) [*L. for dorsa[us]*]. Used as part of the name of various arteries, as *d. hallu'cis*, *d. in'dicis*, etc.

dorsicolumn (dor-se-kol'um). The dorsal column of the spinal cord.

dorsicommisssure (dor-se-kom-is'ur). The gray commissure of the spinal cord.

dorsicornu (dor-sik-or'nu). The dorsal cornu of the spinal cord.

dorsiduct (dor'sid-ukt) [*L. dor'sum* back + *du'cere* to draw]. To draw toward the back or dorsum.

dorsiflexion (dor-se-flek'shun) [*dorsum* + *flex-ion*]. Flexion or bending, as of toes, toward the dorsum.

dorsimesad (dor-sim'es-ad). Toward the dorsimeson.

dorsimesal (dor-sim'e-sal). Situated along the middle of the back.

dorsimeson (dor-sim'es-on) [*L. dor'sum* back +

Gr. *μέσων* middle]. The median longitudinal line of the back.

dorsispinal (dor-se-spi'nal). Pertaining to the back and vertebral column.

dorso- [*L. dor'sum* back]. A prefix signifying pertaining to the back.

dorso-anterior (dor'so-an-te're-or). Having the back directed forward.

dorsocephalad (dor-so-sefal-ad) [*L. dor'sum* back + Gr. *κεφαλή* head]. Toward the back of the head.

dorsodynia (dor-so-din'e-ah) [*L. dor'sum* back + Gr. *δύσιν* pain]. Pain in the back.

dorso-intercostal (dor'so-in-ter-kos'tal). Situated in the back and between the ribs.

dorsolateral (dor-so-lat'er-al). Pertaining to the back, or dorsal aspect, and to a side.

dorsolumbar (dor-so-lum'bar). Pertaining to the back and the loins.

dorsomedian, dorsomesal (dor-so-me'de-an, dor-so-me'sal). Pertaining to the median line of the back.

dorsonasal (dor-so-na'sal). Pertaining to the bridge of the nose.

dorsonuchal (dor-so-nu'kal). Pertaining to the back and the neck.

dorso-occipital (dor-so-ok-sip'it-al). Pertaining to the back of the head and the body.

dorsoposterior (dor'so-pos-te're-or). Having the back directed backward.

dorsoradial (dor-so-ra'de-al). Pertaining to the radial or outer side of the back of the forearm or hand.

dorsoscapular (dor-so-skap'u-lar). Pertaining to the posterior surface of the scapula.

dorsoventrad (dor-so-ven'trad) [*L. dor'sum* back + *ven'ter* belly]. From the dorsal toward the ventral aspect.

dorsum (dor'sum), pl. *dor'sa* [*L.*]. The back, also any part corresponding to the back in position, as of the foot, hand, tongue, ilium, penis. **d. pe'dis**, the back of the foot.

dosage (do'sāj). The determination and regulation of doses.

dose (dōs) [Gr. *δόσις*]. 1. The amount or proper portion of a medicine to be taken at once. 2. The quantity of x-ray or other radiation administered. The unit of x-ray dose is the quantity which causes temporary epilation and is known as 10X. **carcinoma d.**, a dose of Roentgen rays sufficient to cure carcinoma, said to be from 90 to 100 per cent. of the erythema skin dose. **daily d.**, the sum of all the doses to be given in twenty-four hours. **divided d.**, a small quantity of medicine to be taken at short intervals. **erythema d.**, that amount of x-ray energy which, when applied to the skin, will cause after a few days a slight reddening. **fractional d's**, doses of a drug less than the normal quantity, but given at shorter intervals than usual. **intoxicating d.**, the dose of sensitinogen required to bring on the allergic reaction. **L + d.**, the smallest amount of diphtheria toxin which will kill a 250-gm. guinea-pig within four days when mixed with one unit of diphtheria antitoxin before being injected subcutaneously. **lethal d.**, a dose which will or may cause death. **Lo d.**, the largest amount of diphtheria toxin which will produce no observable symptoms in a 250-gm. guinea-pig when mixed with one unit of diphtheria antitoxin before subcutaneous injection. **maximum d.**, the largest dose that may be safely administered. **minimum d.**, the smallest dose that is likely to produce an appreciable effect. **minimum lethal d.**, the smallest quantity of diphtheria toxin which will kill a guinea-pig of 250 gm. weight in from four to five days when injected subcutaneously. **reacting d.**, the second dose of protein or other sensitizing antigen in anaphylaxis. Cf. *sensitizing d. sen-*

sitizing d., the first dose of protein or other sensitizing antigen in anaphylaxis. Cf. *reacting d.*
dosimetric (do-sim-et'rik). Of or pertaining to dosimetry. **d. system**, a regular and determinate system of dosage.

dosimetry (do-sim'et-re) [Gr. *dosis* dose + *μέτρον* measure]. 1. The accurate and systematic determination of doses. 2. A system of therapeutics consisting in the administration of alkaloids in the form of granules of definite strength at definite intervals.

dosis (do'sis). Latin for *dose*. **d. curati'va**, the minimum dose of a drug that will cure. **d. re-fra'cta**, a fractional dose. **d. tolera'ta**, the largest dose that can be given with safety.

dot (dot). A small spot or speck. **Maurer's d's**, irregular dots, staining red with Leishman's stain, seen in red corpuscles infected with *Plasmodium falciparum*. **Schüffner's d's**, fine red-stained points seen in red blood-corpuscles infected with *Plasmodium vivax* when stained with Romanowsky stain.

dothienenteria, dothienenteritis (do'the-en-en-te're-ah, do'the-en-en-ter-i'tis) [Gr. *δοθίν* a boil + *έντερον* intestine]. Bretonneau's name for typhoid fever (1833).

dothienesia (do'the-en-e'se-ah) [Gr. *δοθίν* boil]. Furunculosis.

doublet (dub'let). A lens made up of a combination of two lenses. **Wollaston's d.**, a microscopic lens consisting of a combination of two planoconvex lenses for correcting chromatic aberration.

douche (doosh) [Fr.]. A stream of water directed against a part or into a cavity. **air-d.**, a current of air blown into a cavity, particularly into the tympanum, for opening the eustachian tube. **alternating d.**, transitional douche. **Plombières d.**, intestinal lavage by means of a soft rubber tube 10 to 12 inches long inserted into the rectum to a distance of from 3 to 5 inches. One to 3 pints of fluid are slowly injected by gravity, the force, quantity, and temperature of the fluid being carefully regulated. **Scotch d.** Same as *transition d.* **Tivoli d.**, a reclining bath in which the patient lies covered with warm mineral water while a hot wave douche is played upon his abdomen: used for constipation. **transition d.**, a douche of alternating hot and cold water. **Webster's d.**, a nasal douche.

Douglas's culdesac, pouch, semilunar fold [James Douglas, Scottish anatomist in London, 1675-1742]. See *culdesac, fold, pouch*.

douglasitis (dug-las-i'tis). Inflammation of Douglas's pouch.

doundaké (doon-dak'a). The bark of *Sarcocophalus esculentus*. It is tonic, febrifuge, and astringent. Dose of extract, 2-3 gr. (0.13-0.195 gm.).

dourahina (doo-rah-he'nah). A vegetable drug from Brazil: diaphoretic, diuretic, and cardiant.

dourine (doo-rén'). A contagious disease of horses and asses, characterized by swelling of lymph-glands, genital inflammation, and paralysis of hind limbs. It is caused by *Trypanosoma equiperdum*. It is spread by sexual contact and is called also *mal de coit*.

Dover's powder (do'verz) [Thomas Dover, English physician, 1660-1741]. Pulvis opii et ipecacuanhæ.

dowel (dow'l). A peg. A peg or pin, generally of metal, for fastening an artificial crown to the root of a natural tooth.

dawn. See *lanugo*.

Doyen's operation, serum (dwah-yahz') [Eugene Louis Doyen, surgeon in Paris, 1859-1916]. See *operation and serum*.

Doyère's eminence (dwa-yärz') [Louis Doyère, French physiologist, 1811-1893]. See *eminence*.

D. P. 1. *directio'ne prop'ria*, "with proper direction." 2. Abbreviation for *Doctor of Pharmacy*.

D. P. H. Abbreviation for *diploma in public health*.

DR. Abbreviation for *reaction of degeneration*.

dr. Abbreviation for *dram* or *drams*.

drachm (dram). See *dram*.

dracontiasis (drak on-ti'as-is) [Gr. *δρακόντιον* (little dragon) tapeworm]. The diseased state produced by the presence of *Dracunculus medinensis*. Called also *dracunculosis*.

Dracontium foetidum (dra-kon'she-um) [L.; Gr. *δρακόντιον* dragonwort]. The skunk-cabbage: an araceous plant; the root is stimulant and nervine. Dose of fluidextract, 30-60 min. (2-4 c.c.).

dracuncular (dra-kung'ku-lar). Pertaining to or caused by dracunculus.

dracunculosis (dra-kung-ku-lo'sis). Same as *dracontiasis*.

Dracunculus (dra-kung'ku-lus) [L. "little dragon"]. A genus of nematode filarial parasites. **D. medinensis** is the Guinea worm or Medina worm, a thread-like worm, 20-30 inches long, which inhabits the subcutaneous and intermuscular tissues of man and several domestic animals in India, Africa, and Arabia. Its embryos are discharged through an opening in the skin upon contact with water in which they enter the bodies of a small crustacean, *Cyclops*, where they pass their embryonic life. Formerly called *Filaria medinensis*.

draft, draught (drafft). A potion; a large dose of medicine to be taken at once. **black d.**, the compound infusion of senna. **effervescing d.**, one which contains an acid and sodium or potassium bicarbonate. **mustard d.**, a mild rubefacient paste of mustard and flour. **Riverius's d.**, potio riverii; the solution of sodium citrate.

dragée (dra'zha). A sugar-coated pill or medicated confection.

Dragendorff's test (drag'en-dorfs) [Johann Georg Noël Dragendorff, German physician, 1836-1898]. See under *tests*.

dragon's-blood (drag'unz-blud). An astringent resin of various origin; chiefly from *Calamus rotang* and *C. dra'co*, ratan-palms, and from *Draca'na dra'co* and *Pterocar'pus dra'co*, tropical trees.

drain (drän). An appliance or substance that affords a channel of exit or discharge from a wound. **cigarette d.**, a drain made by surrounding a strip of gauze with a protective covering of rubber, gutta-percha, etc. Larger drains of this character, i. e., those as thick as a cigar, are called *cigar d's*. **Mikulicz's d.**, a drain formed by pushing a single layer of gauze into a wound cavity, the layer of gauze being packed with several thick wicks of gauze as it is pushed into the cavity. **stab-wound d.**, drainage accomplished by making a small punctured wound at some distance from the operative incision and bringing out the drain through this wound; it is done to prevent infection of the operation wound.

Wylie d., a stem pessary of hard rubber having a groove along the stem.

drainage (drän'aj). The systematic withdrawal of fluids and discharges from a wound, sore, or cavity. **basal d.**, withdrawal of the cerebrospinal fluid from the basal subarachnoid space for the relief of intracranial pressure. **capillary d.**, drainage effected by strands of hair, catgut, spun glass, or other material which acts by capillary attraction. **funnel d.**, drainage by glass funnels inserted into edematous tissues. **through d.**, drainage effected by passing a perforated tube through the cavity, so that irrigation may be effected by injecting fluid into one aperture and letting it escape out of another.

dram, drachm (dram) [L. *drach'ma*; Gr. *δραχμή*]. An apothecaries' weight of 60 grains; also an avoirdupois weight of 27.34 grains.

dramatism (dram'at-izm). Pompous and dramatic speech and behavior in insanity.

drapetomania (drap'et-o-ma'ne-ab) [Gr. *δραπέτης* runaway + *μανία* madness]. The insane desire to wander away from home.

drastic (draz'tik) [Gr. *δραστικός* effective]. 1. Acting powerfully or thoroughly. 2. A violent purgative.

draught (draft). See *draft*.

draw-shave (draw-shāv). A drawing knife with a long handle for removing thin slices of tissue from the interior of a cavity.

draw-sheet (draw-shēt). A sheet so placed on a bed that it can easily be drawn from under a patient lying upon it.

dream-work. The mechanism by which the latent content of a dream is developed into a manifest content.

Drechsel's test (dreks'elz) [Edmund *Drechsel*, Swiss chemist, 1843-1897]. See *tests*.

drench (drensh). A draft of medicine given to an animal by pouring it into its mouth.

drenching (drensh'ing). The giving of a drench.

Drepanidium (drep-an-id'e-um) [Gr. *δρεπάνη* sickle]. A genus or larval stage of certain protozoa; certain species are entozoan and parasitic, but probably not in man. **D. rano'rum**, a cytozoön of frog's blood, probably parasitic.

dresser (dres'er). A surgical assistant who dresses wounds, etc.

dressing (dres'ing). The application of various materials for protecting a wound; also any material so applied. **air-d.**, open wound treatment. **antiseptic d.**, a dressing of gauze impregnated with an antiseptic solution. **Bavarian d.**, **bran-d.**, a fracture-box filled with bran sometime used for a compound fracture of the leg. **cocoon d.**, a wound dressing consisting of a layer of gauze and collodion. **dry d.**, the application to a wound of dry gauze, absorbent cotton, etc. **Lister's d.**, a covering of a wound with gauze impregnated with carbolic acid. **occlusive d.**, a dressing which completely closes a wound and prevents infection from without. **paraffin d.**, a dressing composed of resorcinol, 1 part; oil of eucalyptus, 2 parts; olive oil, 3 parts; white petrolatum, 12 parts; and paraffin, 82 parts. **protective d.**, a dressing to shield a part from injury or from septic infection. **Scott's d.**, compound mercury ointment. **tegnin d.**, a proprietary adhesive dressing: used like collodion. **water-d.**, a dressing kept wet with water.

Dreyer formula, vaccine (dri'er) [Georges *Dreyer*, English physician]. See under *formula* and *vaccine*.

drill (dril). An instrument for making holes in hard substances, such as bones or teeth. **dental d.**, an instrument of various forms for use in dentistry.

drip, Murphy. See *Murphy method*, 2d def., under *method*.

drip-sheet (drip-shēt'). A wet sheet from which the water is wrung out and which is then wrapped around a patient standing in a tub of water.

dromedary gait (drom'ed-a-re). See under *gait*.

dromograph (drom'o-graf) [Gr. *δρόμος* running + *γράφειν* to record]. A recording hemodrometer.

dromomania (drom-o-ma'ne-ab) [Gr. *δρόμος* running + *μανία* madness]. Insane vagabondage; a mania for roaming.

dromotropic (drom-o-trop'ik) [Gr. *δρόμος* running + *τρέπειν* to turn]. Affecting the course or conductivity, as of a nerve-fiber.

dromotropism (dro-mot'ro-pizm) [see *dromotropic*]. Interference with the conductivity of a nerve. **negative d.**, diminution of the conductivity of a nerve. **positive d.**, increased conductivity of a nerve.

drop (drop) [L. *gut'ta*]. 1. A minute mass or sphere of liquid as it hangs or falls. 2. A medicine to be taken in drops. 3. A spheric or spheroid solid mass, sometimes medicated; a kind of troche.

ague-d., solution of potassium arsenite. **Bate-man's d.**, a tincture of catechu, with opium and camphor; used for coughs. The same name is given to other similar mixtures. **black d.**, vinegar of opium, or acetum opii. **d.-culture**. See *culture*. **d.-finger**, paralysis of one finger, due to the rupture of a tendon. **d.-foot**, a paralysis of the toes and part of the foot: often due to alcoholic neuritis. **d.-hand**, wrist-drop; a hand paralysis due to lead-poisoning. **hang-ing d.** See under *culture*. **Hoffmann's d's**, Hoffmann's anodyne. See under *anodyne*. **d.-jaw**, the paralytic stage of rabies in a dog in which the jaw falls. **d.-phalangette**, a condition in which the terminal phalanx of a finger or toe is permanently flexed. **d. serene**. See *gutta serena*. **d.-shoulder**, depression of one shoulder below the level of the other. **stomach-d's**, a stomachic tincture; an aromatized tincture of gentian and century. **Thielemann's d's**. See *Thielemann's mixture*, under *mixture*. **toe-d.**, inability to lift the toes or the anterior portion of the foot. **wrist-d.** See *wrist-drop*. **Wustene-ey's d.**, an old German febrifuge: oil of turpentine 1 fl.oz., phosphorus 4 gr., oil of cloves $\frac{1}{2}$ fl.dr.

dropax (dro'pax). Pitch plaster used as a depila-tory.

dropping (drop'ing). The limping gait of a horse affected with elbow-disease.

dropsical (drop'sik-al). Affected with or per-taining to dropsy.

dropsy (drop'se) [L. *hy'drops*, from Gr. *ὑδωρ* water]. The abnormal accumulation of serous fluid in the cellular tissue or in a body-cavity. **abdominal d.**, ascites. **acute anemic d.** Same as *epidemic d.* **d. of amnion**, hydramnion. **articular d.**, hydrarthrosis. **d. of belly**, ascites. **d. of brain**, hydrocephalus. **cardiac d.**, that which is due to failure of compensation in cardiac disease. **d. of chest**, hydrothorax. **cuta-neous d.**, edema. **epidemic d.**, a disease epidemic in India among the natives only, characterized by fever, anemia, diarrhea, paresthe-sia, and followed by sudden edema. **famine d.** See *war edema*, under *edema*. **d. of head**, hydro-cephalus. **hepatic d.**, that which is due to dis-ease of the liver. **nutritional d.** See *war edema*, under *edema*. **ovarian d.**, ovarian cysto-ma. **d. of pericardium**. Same as *hydroperi-cardium*. **peritoneal d.**, hydroperitoneum, or ascites. **renal d.** 1. Anasarca due to kidney dis-ease. 2. Hydronephrosis. **subchoroid d.**, an accumulation of fluid between the choroid and the retina. **sub sclerotic d.**, an accumulation of fluid between the choroid and sclerotic coat of the eye. **tubal d.**, hydrosalpinx: the accumulation of fluid in an oviduct. **uterine d.**, hydrometra. **war d.** See *war edema*, under *edema*. **wet d.**, beri-beri.

Drosera (dros'e-rah) [Gr. *δρσορός* dewy]. A genus of plants; sundew. **D. rotundifolia** and **D. longifolia** have been found useful in tuberculosis and whooping-cough. Dose of tincture, 20-40 min. (1.33-2.66 c.c.).

droserin (dros'e-rin). An antiseptic and digest-ive ferment, not unlike pepsin, from *Drosera* and other insectivorous plants.

Drosophila (dro-sof'il-ah). A genus of flies of the family Muscidae. **D. melanogas'ter**, a small fly often seen about decaying fruit. It has been used extensively in the study of experimental genetics.

Drouot's plaster (drou-ōz') [Théophile *Drouot*, Parisian oculist, born 1803]. See *plaster*.

drug (drug). Any crude medicinal substance. **antagonistic d.**, a drug that tends to neutralize the effect of another. **crude d.**, the whole drug with all its ingredients; an unrefined drug.

drug-addiction. See under *addiction*.

drug-fast. Resistant to the action of drugs: said of bacteria.

drum (drum). The tympanum of the ear. **d.-belly**. See *tympanites*. **d.-head**, **d.-membrane**, the membrana tympani.

drumin (dru'min). An alkaloid from *Euphorbia drummondii*: said to be a local anesthetic.

Drummond's sign (drum'unds) [David Drummond, English physician of the nineteenth century]. See *sign*.

drumstick bacillus. A term applied to *Clostridium tetani* and *C. putrificum* because of their shape when in spore.

druse (drüz or dru'se) [Ger. "a rock cavity lined with crystals"]. 1. An affection marked by the formation, on the optic papilla, of small, globular, hyaline excrescences (drusen). 2. A lesion not reaching the surface or opening into an internal cavity or hollow organ. 3. Same as *strangles*.

dry-gripes. See *gripe*.

Drysdale's corpuscles (dri's'dälz) [Thomas Murray Drysdale, American gynecologist, 1831-1904]. See *corpuscle*.

Dt. Abbreviation for *duration telany*.

D. T. Abbreviation for *distance test*.

D. T. D. Abbreviation for *L. da'tur ta'lis do'sis*, give of such a dose.

D. T. N. An abbreviation for *diphtheria toxin normal*.

D. T. P. Abbreviation for *digital tingling on percussion*. See *Tinel's sign*, under *sign*.

dualistic (du-al-is'tik). Twofold.

Duane's test (du-änz') [Alexander Duane, oculist in New York, 1858-1926]. See under *tests*.

dubi (doo'be). The native name on the Gold Coast for *froesia*.

Dubini's disease (du-be'néz) [Angelo Dubini, Italian physician of 19th century]. Electric chorea.

dubo (du'bo). Pirquet's term for double strength nutrition (*lac duplex bovinum*, double cow's milk).

Dubois's abscess, disease (deb-wahz') [Paul Dubois, French obstetrician, 1795-1871]. See *abscess* and *disease*.

DuBois diet (doo-boyz') [Eugene Floyd DuBois, American physician, born 1882]. See under *diet*.

Duboisia (du-boi'se-ah). A genus of medicinal plants. *D. hopwoodii* yields piturin. *D. myoporoides*, corkwood elm; a tree of Australia which yields duboisin.

duboisin (du-boi'sin). An alkaloid, $C_{17}H_{23}NO_8$, from *Duboisia myoporoides*, a shrub of Australia. It is identical in composition with hyoscyamin, and is hypnotic, sedative, and mydriatic. **d. sulphate** is given hypodermically in doses of $\frac{1}{100}$ - $\frac{1}{50}$ gr. (0.0006-0.001 gm.).

DuBois-Reymond law (de-bwah-ri-mahw') [Emil Heinrich DuBois-Reymond, German physiologist, 1818-1896]. See under *law*.

Duchenne's disease (du-shenz') [G. B. A. Duchenne, a French neurologist, 1806-1875]. 1. Locomotor ataxia. 2. Pseudohypertrophy of muscles. **D's paralysis**, progressive bulbar paralysis. **D's trocar**, a trocar for procuring minute specimens of deep-seated tissues.

Duchenne-Aran disease, type (de-shen'ar-an') [See *Duchenne* and *Aran*]. See under *disease* and *type*.

Duchenne-Erb paralysis (de-shen'airb) [See *Duchenne* and *Erb*]. See under *paralysis*.

Duchenne-Landouzy type. See *Landouzy type*, under *type*.

duckering (duck'er-ing) [Mr. G. F. Duckering, the inventor]. A process for the disinfection of wool and hair against anthrax bacilli.

Duckworth's phenomenon (duk'worths) [Sir Dyce Duckworth, physician in London, born 1840]. See *phenomenon*.

Ducrey's bacillus (doo-kräz') [Augusto Ducrey, contemporary Italian physician]. See *bacillus*.

duct (dukt) [L. *duc'tus*, from *ducere* to draw or lead]. A passage with well-defined walls; especially, a tube for the passage of excretions or secretions. **aberrant d.**, any duct that is not usually present or that takes an unusual course or direction; especially, a small coiled tube extending from the lower part of the canal of the epididymis. **aberrant bile-d's**, minute ducts sometimes found in the triangular ligament of the liver. **acoustic d.**, the external meatus of the ear. **adipose d.**, an elongated sac in the cellular tissue filled with fat. **alimentary d.**, the thoracic duct. **alveolar d.**, any one of the infundibula of a bronchiole. **d. of Arantius**, the ductus venosus. **archinephric d.**, the mesonephric duct. **arterial d.**, the ductus arteriosus. **auditory d.**, a space in the cochlea, between the membrana tectoria and the membrana cochlearis. **d. of Bartholin**, the longer and larger of the sublingual ducts. **Bellini's d's**, the excretory ducts of the kidneys. **biliary d's**, comprise the *hepatic d.*, from the liver to the common bile-duct; the *cystic d.*, from the gall-bladder to the common bile-duct, or *duc'tus communis choled'ochus*, which conveys the bile to the duodenum. **Botalli's d.**, the ductus arteriosus. **canalicular d's**, any one of the smaller galactophorous ducts of the breast. **cloacal d.** See *Reichel's cloacal d.* **cochlear d.**, the cochlear canal. **common bile-d.** See under *biliary d's*. **Coschwitz's d.**, a supposed salivary duct forming an arch over the dorsum of the tongue, proved by von Haller to be a vein. **cow-perian d.**, the efferent duct of Cowper's glands. **d's of Cuvier**, two short venous trunks in the fetus opening into the auricle of the heart; the right one becomes the superior vena cava. **cyst-hepatic d.**, the hepatocystic duct. **cystic d.**, the excretory duct of the gall-bladder, extending to the ductus communis choledochus. **deferent d.**, the vas deferens. **definite d's**, the straight milk-ducts of a nipple. **efferent d.**, the duct which gives outlet to a glandular secretion. **ejaculatory d.**, the canal which passes from the vas deferens and seminal vesicle, conveying the semen to the urethra. **endo-lymphatic d.**, a tubular process from the sacculus endolymphaticus, through the aqueduct of the vestibule, into the membranous labyrinth of the ear. **excretory d.**, one which gives vent to an excretion. **galactophorous d's**, a set of from fifteen to twenty milk-ducts in the lobes of the mammary glands and in the nipples. **gall-d.**, any one of the biliary ducts. **Gärtner's d.**, a straight canal extending from the parovarium through the broad ligament to the vagina. **gas-serian d.**, the duct of Müller. **genital d.**, the genital canal. **guttural d.**, the eustachian tube. **hemithoracic d.**, a lymphatic duct which generally is a branch of the thoracic duct, but sometimes goes direct to the junction of the right internal jugular and right subclavian veins. **Hensen's d.** Same as *canal of Hensen*. **hepatic d.**, a duct formed by the union of the right and left hepatic ducts and passing to the common bile-duct. **hepatic d., left**, a branch of the hepatic duct arising in the left lobe of the liver. **hepatic d., middle**, an occasional branch of the hepatic duct arising in the quadrate lobe of the liver. **hepatic d., right**, a branch of the hepatic duct arising in the right lobe of the liver. **hepatopancreatic d.**, the common bile-duct after its junction with the pancreatic duct. **hepatocystic d.**, a biliary duct which discharges its secretion directly into the gall-bladder. **hermaphrodite d.**, in a true hermaphrodite a duct which represents a vas deferens and an oviduct. **Hoffmann's d.**, the pancreatic duct. **hypophyseal d.**, the duct of the pituitary body. **intrahepatic biliary d's**, minute branches of the bile-ducts forming a network in and around the liver-cells. **lacrimal d's**, convey the secretion from the lacrimal gland. **lactiferous d's**,

the galactophorous ducts. **Leyden's d.**, the mesonephric duct. **Leydig's d.**, the wolffian duct. **lingual d.**, a depression on the dorsum of the tongue at the apex of the terminal sulcus. **Luschka's d's**, tubular structures in the wall of the gall-bladder. **lymphatic d's**, the two principal lymph-canals of the body—the *right lymphatic d.*, from the right side of the head, arm, and thorax, and the *left or thoracic d.* **lymphatic d., left**, the thoracic duct. **lymphatic d., right**, a vessel which receives the lymph from the absorbent vessels of the right side above the liver, and discharges it 'at the junction of the right subclavian and the internal jugular veins. **mammary d's**, the canalicular and galactophorous ducts. **mesonephric d.**, an embryonic duct which in the male becomes the vas deferens, and in the female becomes nearly obsolete. **metanephric d's**, the ureters. **milk-d's**, the canalicular and galactophorous ducts. **mucous d.**, any duct lined with mucous membrane. **Müller's d's**, two ducts of the embryo which empty into the cloaca, and are developed into uterus, vagina, and oviducts. **nasal d.**, the passage which conveys the tears from the lacrimal sac into the inferior nasal meatus. **nasolacrimal d.**, the nasal duct. **nephric d.**, the duct of the kidney. **omphalomesenteric d.**, **vitelline d.**, connects the alimentary canal and uterine vesicle. **ovarian d.** See *oviduct*. **pancreatic d.**, the excretory duct of the pancreas, going either to the ductus choledochus communis or to the duodenum. **pancreatic d., accessory**, the excretory duct of the lesser pancreas. **pancreatic d., minor**, the accessory pancreatic duct. **pancreatic d., supplementary**, the accessory pancreatic duct. **parotid d.**, the duct of Steno. **d. of Pecquet**, the thoracic duct. **pronephric d.**, an early embryonic duct of the pronephron, probably becoming later the atrophied anterior segment of the duct of Müller. **prostatic d's**, the excretory ducts of the prostate gland, twelve to twenty in number. **Rathke's d.**, that part of the duct of Müller which lies between the main part of the latter and the sinus pocularis. **Reichel's cloacal d.**, the cleft between Douglas's septum and the cloaca in the embryo. **renal d.**, a ureter. **d. of Rivinus**, one of the ducts of the sublingual gland. **roriferous d.**, the thoracic duct. **sacculo-utricular d.** See *utriculosaccular d.* **salivary d's**, the ducts that convey the saliva: they are the parotid or Stenson's duct, the submaxillary or Wharton's duct, and the sublingual ducts (Rivinus' and Bartholin's ducts). **d. of Santorini**, the accessory pancreatic duct. **Schüller's d's**, the ducts of Skene's glands. **secretory d.**, any one of the smaller ducts which are tributary to the excretory ducts of a gland. **segmental d's**, a pair of canals in the embryo, extending from behind the body-cavity to the cloaca. **seminal d's**, conveyors of the semen, including the *vas deferens*, or excretory duct of the testis. **d. of the seminal vesicle** and the *ejaculatory d.* **Skene's d's**, the ducts of Skene's glands. **spermatic d.**, the vas deferens. **d. of Steno**, Stenson's d., the excretory duct of the parotid gland. **sublingual d's**, the duct of Bartholin and duct of Rivinus. **submaxillary d.** Same as *Wharton's d.* **tear-d.**, the nasal duct; also any one of the seven excretory ducts of the lacrimal gland. **testicular d.**, the vas deferens. **thoracic d.**, the canal which ascends from the receptaculum chyli to the junction of the left subclavian and left internal jugular veins. It acts as a channel for the collection of the lymph from the portions of the body below the diaphragm and from the left side of the body above the diaphragm. **thyroglossal d.**, **thyrolingual d.**, a duct in the embryo extending between the thyroid body and the posterior part of the tongue. Its opening is represented in the adult by the foramen cæcum. **umbilical d.**, a duct extending from the umbilical vesicle to the intestinal cavity of the embryo.

urogenital d., the duct of Müller and the wolffian duct. **utriculosaccular d.**, a narrow duct uniting the utriculus and the sacculus of the labyrinth. **vitelline d.**, the omphalomesenteric duct or structure connecting the alimentary canal with the umbilical vesicle in the embryo. **Walther's d's**, the ducts of the accessory sublingual glands. **Wharton's d.**, the excretory duct of the submaxillary gland. **d. of Wirsung**, the pancreatic duct. **wolffian d's**, two ducts of the embryo which connect the wolffian bodies with the cloaca.

ductile (duk'til) [L. *duc'tilis*, from *du'cere* to draw, to lead]. Susceptible of being drawn out, as into a wire.

ductless (dukt'les). Having no excretory duct; as, *ductless glands*.

ductule (dukt'ül). Any minute duct; also that part or branch of a duct which is nearest the alveolus of a gland.

ductus (dukt'us) [L.]. Any passage or duct, as of a gland. **d. aberrans**. See *aberrant duct*, under *duct*. **d. arterio'sus** [B N A], **d. arterio'sus [bot'alil]**, a channel in the fetus from the pulmonary artery to the aorta. **d. auditorius**, **d. cochlea'ris**, the membranous cochlea, or cochlear canal. **d. biliferi** [B N A], the biliary canaliculi. **d. choled'ochus** [B N A]. See *biliary ducts*, under *duct*. **d. coch'lea**, **d. cochlea'ris** [B N A], the lower part of the scala media, containing the organ of Corti. **d. cuvi'eri**. See *ducts of Cuvier*. **d. cysticus** [B N A], the cystic duct. **d. deferens** [B N A]. Same as *vas deferens*. **d. ejaculato'rius** [B N A], ejaculatory duct. **d. endolymphaticus** [B N A], a canal which connects the membranous labyrinth with the general cerebral lymph-spaces. **d. epididymid'is** [B N A], the canal of the epididymis. **d. epoöph'ori longitudina'lis**. Same as *Gärner's duct*, under *duct*. **d. hepat'icus** [B N A], the hepatic duct. **d. incisi'vus** [B N A], the extension of the incisive foramen between the palatine processes into the nose. **d. interlobula'ris** [B N A], interlobular ducts. **d. lacrima'lis** [B N A], lacrimal duct. **d. lactif'erous** [B N A], the galactophorous ducts. **d. lingua'lis** [B N A], lingual duct. **d. lymphaticus dex'ter** [B N A], the right lymphatic duct. **d. nasolacrimalis** [B N A], nasolacrimal duct. **d. pancreat'icus access'o'rius [santorini]** [B N A], the accessory pancreatic duct. **d. perilymphaticus** [B N A], a canal which connects the perilymphatic space of the osseous labyrinth with the general cerebral lymph-space. **d. prostat'ici** [B N A], the ducts of the prostate gland. **d. reun'niens** [B N A], **d. reun'niens [hensen]**, a small canal leading from the sacculus to the membranous labyrinth; the canalis reuniens. **d. utriculosaccular'is**. See *utriculosaccular duct*, under *duct*. **d. veno'sus**, **d. veno'sus [aran'til]** [B N A], a fetal blood-vessel connecting the umbilical vein with the postcava.

Duddell's membrane (dud'elz) [Benedict Duddell, English physician of the eighteenth century]. See *membrane*.

Dudley's operation (dud'lez) [Emilius Clark Dudley, gynecologist in Chicago]. See *operation*.

Dugas's test (du'gahz) [Louis Alexander Dugas, American physician, 1806-1884]. See under *tests*.

Duhring's disease (du'rings) [Louis Adolphus Duhring, dermatologist in Philadelphia, 1845-1913]. See *Dermatitis herpetiformis*.

Dührssen's operation, tampon, etc. (dehr'senz) [Alfred Dührssen, German gynecologist, born 1862]. See *operation*, *tampon*, etc.

duipara (du-ip'ah-rah). Same as *secundipara*.

Dukes's disease (düks) [Clement Dukes, English physician, 1845-1925]. See under *disease*.

dulcamara (dul-kam-a'rah) [L. *du'cis* sweet + *ama'rus* bitter]. Bittersweet, the young branches of *Sola'nium dulcamara*, possessing narcotic,

- diuretic, and diaphoretic properties: used chiefly in skin diseases, as lepra, psoriasis, etc. Dose of powder, 30 gr.—1 dr. (2–3.9 gm.); of fluidextract, 30 min.—1 fl.dr. (2–4 c.c.).
- dulcamarin** (dul-kam-a'rin). A yellow, amorphous alkaloid, $C_{22}H_{34}O_{10}$, from *dulcamara*. It has mydriatic properties.
- dulcin** (dul'sin) [L. *dulcis* sweet]. Same as *sucrol*.
- dulcinol** (dul'sin-ol). Mannite to which salt has been added to make it palatable.
- dulcite, dulcitol, dulcose** (dul'sit, dul'sit-ol, dul'-kōs) [L. *dulcis* sweet]. A polyhydric alcohol, $CH_2OH(CHOH)_4CH_2OH$, occurring in various plants and prepared by treating either milk-sugar or galactose with sodium amalgam. On oxidation it yields first galactose and later mucic acid.
- dull** (dul). Not resonant on percussion.
- dulness** (dul'nes). Diminished resonance on percussion; also a peculiar percussion-sound which lacks the normal resonance. **Grocco's triangular d.** See *Grocco's sign*, under *sign*. **post-cardiac d.**, dulness on percussion on the back over the site of the heart. **tympatric d.**, resonance of a dull and diminished quality.
- dumb-bells of Schäfer**. Microscopic dumb-bell-shaped bodies found in striated muscular tissue.
- dumbness** (dum'nes) [L. *surditas*]. Muteness, or aphasia.
- dumminess** (dum'e-nes). 'A dull, apathetic condition seen in horses after acute inflammation of the brain.
- dummy** (dum'e). In dentistry, a tooth in a bridge to take the place of a missing natural tooth.
- Dumontpallier's test** (de-maw-pal-yāz') [Alphonse *Dumontpallier*, French physician, 1826–1898]. See under *tests*.
- Dunbar's serum** (dun'barz) [William Phillips *Dunbar*, American physician in Hamburg, Germany, 1863–1922]. Pollantin.
- Duncan's folds, position, ventricle** (dun'kanz) [James Matthews *Duncan*, British gynecologist, 1826–1890]. See *fold*, *position*, *ventricle*, etc.
- Duncan's method** (dun'kanz) [Charles H. *Duncan*, physician in New York, born 1880]. See under *method*.
- Dunfermline scale** (dun-ferm'lin) [*Dunfermline*, a city in Scotland where the scheme was devised]. See under *scale*.
- Dunham's solution** (dun'amz) [Edward Kellogg *Dunham*, New York pathologist, 1860–1922]. See *solution*.
- duodenal** (du-o-de'nal). Of, pertaining to, or situated in, the duodenum.
- duodenectomy** (du-o-de-nek'to-me) [*duodenum* + Gr. *ἐκτομή* excision]. Excision of the duodenum, total or partial.
- duodenitis** (du'od-en-i'tis). Inflammation of the duodenum.
- duodenocholangitis** (du-o-de''no-ko-lan-jī'tis). Inflammation of the duodenum and common bile-duct.
- duodenocholecystostomy** (du-o-de''no-ko''le-sis-tos'to-me). The operation of forming a communication between the gall-bladder and the duodenum.
- duodenocholedochotomy** (du-o-de''no-ko''led-o-kot'o-me). Surgical incision of the duodenum and bile-duct.
- duodenocystostomy** (du-o-de''no-sis-tos'to-me) [*duodenum* + Gr. *κύστις* bladder + *στόμα* mouth]. The formation of an opening or communication between the duodenum and the bladder.
- duodeno-enterostomy** (du-o-de''no-en-ter-os'to-me). The artificial creation of a passage from the duodenum to another part of the small intestine.
- duodenohepatic** (du'od-e-no-hep-at'ik). Pertaining to the duodenum and the liver.
- duodenojejunostomy** (du-o-de''no-jej-u-nos'to-me). The operation of making an anastomosis between the duodenum and the jejunum.
- duodenopancreatotomy** (du-o-de''no-pan-kreat-ek'to-me). Same as *pancreatoduodenectomy*.
- duodenoscopy** (du'od-e-nos'ko-pe) [*duodenum* + Gr. *σκοπεῖν* to view]. Examination of the duodenum by an endoscopic tube.
- duodenostomy** (du'od-e-nos'to-me) [*duodenum* + Gr. *στόμα* mouth]. The surgical formation of a permanent orifice into the duodenum.
- duodenotomy** (du'od-en-ot'o-me) [*duodenum* + Gr. *τομή* cutting]. Incision of the duodenum.
- duodenum** (du-o-de'num) [L. *duodēni* twelve]. The first or proximal portion of the small intestine: so called because about twelve finger-breadths in length.
- duoparental** (du'o-par-en'tal) [L. *duo* two + *parens* parent]. From two parents or sexual elements.
- duotal** (du'o-tal). A white crystalline powder, the diguaicol ester of carbonic acid, $(CH_3O.C_6H_4O)_2CO$: used in tuberculosis and as an antipyretic and intestinal antiseptic. Dose, 5–8 gr. (0.3–0.5 gm.).
- duotonal** (du-o-to'nal). A combination of equal parts of calcium and sodium glycerophosphates. Dose, 5–10 gr. (0.3–0.6 gm.).
- Duplay's bursitis** (de-pla-ēz') [Simon *Duplay*, French surgeon, 1836–1924]. See *bursitis*.
- duplicitas** (du-plis'it-as) [L.]. A doubling; a monstrosity in which either the cephalic or pelvic end is doubled. **d. anterior**, the doubling of the cephalic portion of a monster-fetus. **d. posterior**, the doubling of a monster-fetus in the pelvic region.
- Dupré's bursitis, disease, syndrome** (de-prāz') [Ernest *Dupré*, French physician, 1862–1921]. See *bursitis*, *disease*, *syndrome*.
- Dupuytren's contraction, splint** (de-pwe-trahnz') [Baron Guillaume *Dupuytren*, a celebrated French surgeon, 1777–1835]. See *contraction* and *splint*.
- dura, dura mater** (du'rah, du'rah ma'ter) [L. "hard mother"]. The outermost, toughest, and most fibrous of the three meninges or membranes of the brain (*cerebral d.*) and spinal cord (*spinal d.*).
- dural** (du'ral). Pertaining to the dura.
- duralumin** (dur-al-u'min) [L. *durus* hard]. An alloy of aluminum and copper used for surgical appliances.
- duramatral** (du-rah-ma'tral). Same as *dural*.
- Durande's remedy** (dir-ahndz') [Jean François *Durande*, French physician, died 1794]. See under *remedy*.
- Durante's treatment** (doo-ran'tēz) [Francesco *Durante*, contemporary surgeon in Rome]. See under *treatment*.
- duraplasty** (du'rah-plas-te) [*dura mater* + Gr. *πλάσσειν* to form]. A plastic operation on the dura mater.
- Dur. dolor**. Abbreviation for *L. duran'te dolo're*, while the pain lasts.
- durematoma** (du'rem-ah-to'mah). Hematoma of the dura mater.
- durene** (du'rēn). A colorless compound, tetramethyl-benzene, $C_6H_2(CH_3)_4$, having a camphor-like odor, found in coal-tar.
- Durham's tube** (dur'hamz) [Arthur Edward *Durham*, English surgeon, 1834–1895]. See *tube*.
- duritis** (du'ri-tis). Inflammation of the dura mater; pachymeningitis.
- duro-arachnitis** (du'ro-ar-ak-ni'tis). Inflammation of the dura mater and arachnoid.
- durol** (du'rol). Tetra-methyl-benzene, $C_6H_2(CH_3)_4$.
- duroleum** (du-ro'le-um) [L. *durus* hard + *oleum* oil]. A petrolate resembling vaselin.

Duroziez's disease, sign (der-o-ze-áz') [Paul Louis Duroziez, French physician, 1826-1897]. See under *disease* and *D's murmur*, under *murmur*.

dust (dust). Fine, dry particles of earth or any other substance small enough to be blown by the wind. **blood d.** See *hemokonia*. **chromatin d.**, small red granules, smaller than Howell's bodies, sometimes seen at the periphery of stained erythrocytes.

dust-bodies, Müller's. See *hemokonia*.

dusting-powder (dust'ing-pow'der). Any fine powder to be sprinkled upon the skin.

Dutch-liquid, Dutch-oil (dutch-lik'wid). Ethylene dichlorid.

Dutton's disease (dut'unz) [J. Everett Dutton, contemporary English physician]. Trypanosomiasis.

Duttonella (dut-on-el'ah). A genus of trypanosomes.

Duval's nucleus (de-valz') [Mathias Marie Duval, French anatomist, 1844-1915]. See *nucleus*.

Duverney's gland (de-ver-náz') [Guichard Joseph Duverney, French anatomist, 1648-1730]. See *gland*.

d. v. Abbreviation for *double variations*, a unit for the measurement of sound waves.

dvi-manganesee. Same as *masurium*.

D.V.M. Abbreviation for *Doctor of Veterinary Medicine*.

D.V.M.S. Abbreviation for *Doctor of Veterinary Medicine and Surgery*.

D.V.S. Abbreviation for *Doctor of Veterinary Science* or *Doctor of Veterinary Surgery*.

dwarf (dwarf). An abnormally undersized person. **achondroplastic d.**, a dwarf showing short extremities, trunk of normal size, large globular head, stumpy nose, and trident hands. Such dwarfs represent a dwarfed adult condition of the skeleton. **asexual d.**, an adult dwarf with deficient sexual development. **ateliotic d.**, a dwarf whose skeleton is infantile in condition with persistent non-union between epiphyses and diaphyses. **deformed d.**, a person who is both abnormally undersized and deformed. **infantile d.**, a person with marked retardation of mental and physical development. **micromelic d.**, a dwarf with very small limbs. **normal d.**, a person who is merely undersized, but not deformed. **phocomelic d.**, a dwarf in whom the diaphyses of the long bones are abnormally short. **physiologic d.**, a normal dwarf. **primordial d.**, a normal dwarf. **pure d.**, a person of small stature, but well formed. **rachitic d.**, a person dwarfed by rickets, having a high forehead with prominent bosses, bent long bones, and Harrison's sulcus. **sexual d.**, a dwarf with normal sexual development.

dwarfishness, dwarfism (dwarf'ish-nes, dwarf'izm). The state of being a dwarf; underdevelopment of body.

Dy. Chemical symbol for *dysprosium*.

dyad (di'ad). 1. Any element capable of replacing or combining with two hydrogen atoms. 2. A double chromosome.

dyaster (di'as-ter). Amphiaser.

dye (di). A material used for staining or coloring. The dyes used in medicine may be divided into the following classes: 1, **acridin d's**, such as acriflavin and proflavin; 2, **azo d's**, such as scarlet red and dimazon; 3, **fluorescein d's**, fluorescein, flumerin, and mercurochrome; 4, **phenolphthalein d's**; 5, **triphenylmethane** or **rosanalin d's**, such as gentian-violet, crystal violet, methyl-violet, and fuchsin. See *stains*, *table of*.

dymal (di'mal). Didymium salicylate; a compound used in the form of ointment in burns, ulcers, eczema, pruritus, etc.

dynamic, dynamical (di-nam'ik, di-nam'ik-al)

[Gr. *δύναμις* power]. Pertaining to or manifesting force.

dynamics (di-nam'iks). The science of motion and the laws of force.

dynamization (di'nám-iz-a'shun). The hypothetical increase of medicinal effectiveness by dilution and trituration.

dynamo (di'nám-o). A dynamo-electric machine; a machine for converting mechanic force directly into current electricity.

dynamogen (di-nam'o-jen). A proprietary substance resembling hematogen: used in anemia and chlorosis.

dynamogenesis (di'nám-o-jen'es-is) [Gr. *δύναμις* force + *γένεσις* production]. The development of energy or force.

dynamogenic (di'nám-o-jen'ik) [Gr. *δύναμις* power + *γενῶν* to produce]. Producing or favoring the development of power; pertaining to the development of power.

dynamogeny (di-nam-o-jen-e). Dynamogenesis.

dynamograph (di-nam'o-graf) [Gr. *δύναμις* power + *γράφειν* to write]. A self-registering dynamometer.

dynamometer (di-nam-om'et-er) [Gr. *δύναμις* power + *μέτρον* measure]. An instrument for measuring the force of muscular contraction.

dynamoneure (di-nam'o-nür) [Gr. *δύναμις* power + *νεῦρον* nerve]. A spinal neuron which is connected with the muscles.

dynamopathic (di-nam-o-path'ik) [Gr. *δύναμις* power + *πάθος* disease]. Affecting function; functional.

dynamoscope (di-nam'o-sköp) [Gr. *δύναμις* power + *σκοπεῖν* to view]. A device for auscultation of the muscles.

dynamoscopy (di-nam-os'ko-pe). The auscultation of muscles.

dyne (dín). The cgs unit of force. It is the force which, when acting continuously upon a mass of 1 gram, will impart to it a uniform acceleration of 1 centimeter per second.

dys- [Gr. *δυσ-*]. A prefix signifying difficult, painful, bad, etc.

dysacousia, dysacousis, dysacusma (dis-ak-oo'ze-ah, dis-ak-oo'sis, dis-ak-ooz'mah) [Gr. *δυσ-* ill, bad + *ἀκουσις* hearing]. A condition in which certain sounds produce discomfort.

dysadrenia (dis-ad-re'ne-ah). Disorder of adrenal function.

dysæsthesia (dis-es-the'ze-ah). See *dysæsthesia*.

dysalbumose (dis-al'bu-mōs). A variety of albumose characterized by insolubility in water and hydrochloric acid.

dysantigraphia (dis-an-te-gra'fe-ah). Loss of power to copy writing. It is due to a lesion of the association path between the word-seeing center and the word-writing center.

dysaphia (dis-a'fe-ah) [Gr. *δυσ-* ill + *ἄφή* touch]. Impairment of the sense of touch.

dysarteriotomy (dis'ar-te-re-ot'o-ne) [Gr. *δυσ* bad + *ἀρτερία* artery + *τόμος* tension]. Abnormality of blood-pressure.

dysarthria (dis-ar'thre-ah) [Gr. *δυσ-* ill + *ἄρθρον* articulation]. Imperfect utterance. **d. litera'lis**, stammering. **d. syllaba'ris** spasmod'ica, stuttering.

dysarthric (dis-ar'thrik). Characterized by or pertaining to dysarthria.

dysarthrosis (dis-ar-thro'sis) [Gr. *δυσ-* ill + *ἄρθρωσις* joint]. 1. Deformity or malformation of a joint. 2. Dysarthria.

dysbasia (dis-ba'ze-ah) [Gr. *δυσ-* difficult + *βάσις* step]. Difficulty in walking, especially that due to nervous lesion. **d. intermittens angiosclerotic'a.** See *intermittent claudication*, under *claudication*. **d. lordot'ica** progressi'va. See

dystonia musculorum deformans. **d. neurasthenica intermit tens**, intermittent limping of neurasthenic origin.

dysbolism (dis'bo-lizm) [Gr. *dys-* ill + *metabolism*]. A condition of disturbed metabolism not necessarily of a diseased nature.

dysboulia, dysbulia (dis-bu'le-ah) [Gr. *dys-* ill + *βουλή* will]. Abnormal weakness or perversion of the will.

dysboulie, dysbulic (dis-bu'lik). Pertaining to weakness of will.

dyschesia (dis-ke'ze-ah) [Gr. *dys-* difficult + *χέειν* to go to stool]. Difficult or painful defecation.

dyschiria (dis-ki're-ah) [Gr. *dys-* badly + *χέειν* hand]. Derangement of the power to tell which side of the body has been touched. See *achiria, allochiria, and synchiria*.

dyscholia (dis-ko'le-ah) [Gr. *dys-* ill + *χολή* bile]. A depraved condition of the bile.

dyschondroplasia (dis''kon-dro-pla'ze-ah). See *achondroplasia* and *chondrodysplasia*.

dyschromatopsia (dis''kro-mat-op'se-ah) [Gr. *dys-* ill + *χρῶμα* color + *ὄψις* vision]. Imperfect discrimination of colors; incomplete color-blindness.

dyschromia (dis-kro'me-ah) [Gr. *dys-* ill + *χρῶμα* color]. Any disorder affecting the pigmentary layer of the skin.

dyscinesia (dis-sin-e'ze-ah). Same as *dyskinesia*.

dyscrasia (dis-kra'ze-ah) [Gr. *dys-* evil + *κράσις* mixture]. Abnormal composition of the blood and humors; a depraved state of the humors.

lymphatic d. 1. Status lymphaticus. 2. Hodgkin's disease.

dyscrasic (dis-kra'sik). Pertaining to a dyscrasia.

dyscratic (dis-krat'ik). Pertaining to dyscrasia.

dyscrinism (dis-kri'nizm) [Gr. *dys* bad + *κρίνειν* to secrete]. Endocrine disorder; perversion of the secretion of any endocrine gland or the state resulting from such perversion.

dysdiadochocinesia. *Dysdiadokokinesia*.

dysdiadokokinesia (dis''di-ah-dok''o-kin-e'se-ah). Derangement of the function of diadokokinesia. See *diadokokinesia*.

dysdiemorrhysis (dis''di-em-or'is-is) [Gr. *dys-* difficult + *διά* through + *αἷμα* blood + *ῥυσις* flow]. Retardation of the capillary circulation.

dyscecia (dis-e-ko'i'ah). Same as *dysacousia*.

dysembryoplasia (dis-em-bre-o-pla'se-ah) [Gr. *dys-* badly + *ἐμβρυον* embryo + *πλασία* formation]. Malformation occurring during embryonic life.

dysemia, dysæmia (dis-e'me-ah) [Gr. *dys-* bad + *αἷμα* blood]. Deterioration of the blood.

dysendocrinia (dis-en-do-krin'e-ah). *Disendocrisis*.

dysendocriniasis (dis-en''do-krin-i'as-is). *Dysendocrisis*.

dysendocrinism (dis-en-dok'rin-izm). *Dysendocrisis*.

dysendocrisis (dis-en''do-kris-i'as-is) [Gr. *dys-* bad + *ἐνδον* within + *κρίνειν* separate]. Disorder of the internal secretions.

dysenteric (dis-en-ter'ik). Pertaining to or of the nature of dysentery.

dysenteriform (dis-en-ter'if-orm). Resembling dysentery.

dysentery (dis'en-ter-e) [L. *dysenteria*, from Gr. *dys-* difficult + *έντερον* intestine]. A term given to a number of disorders marked by inflammation of the intestines, especially of the colon, and attended by pain in the abdomen, tenesmus, and frequent stools containing blood and mucus. The causative agent may be chemical irritants, bacteria, protozoa, or parasitic worms. There are two specific varieties, the *amebic* and the *bacillary*. **amebic d.**, a form of dysentery caused by *Entamoeba histolytica* and known also as *intestinal amebiasis*. **asylum d.**, dysentery occurring in

asylums for the insane. **bacillary d.**, an infectious disease caused by *Bacterium dysenteriae* and marked by intestinal pain, tenesmus, diarrhea with mucus and blood in the stools, and more or less toxemia. It is especially prevalent in tropical countries, but it frequently occurs elsewhere. **balantidial d.**, dysentery caused by *Balantidium coli*. **bilharzial d.**, dysentery caused by the parasitic worm *Bilharzia hematobia*. **catarrhal d.**, **chronic d.**, sprue. **chronic d. of cattle**, a chronic form of dysentery in cattle, with emaciation and anemia, finally ending in death. It is caused by the bacillus of Johnes. **ciliary d.**, **ciliate d.**, dysentery due to ciliate organisms, such as *Balantidium coli*. **epidemic d.**, a variety that becomes epidemic and is often very fatal. **flagellate d.**, dysentery due to a flagellate organism, such as *Lambia intestinalis* or *Trichomonas*. **Flexner's d.** See *bacillary d.* **institutional d.**, bacillary dysentery affecting patients in an institution, especially in hospitals for the insane. **Japanese d.**, bacillary dysentery. **malarial d.**, that which is complicated with intermittent febrile attacks. **malignant d.**, a form in which the symptoms are all very intense and progress rapidly to a fatal ending. **scorbutic d.**, that which is an accompaniment of scurvy. **spirillar d.**, dysentery caused by spirilla in the intestines. **sporadic d.**, dysentery occurring in scattered cases that have apparently no connection.

dyserethesia (dis-er-eth-e'ze-ah) [Gr. *dys-* bad + *ἐρεθίζω* to irritate]. Impairment of sensibility to stimuli.

dyserethism (dis-er'eth-izm). *Dyserethesia*.

dysergasia (dis-er-ga'ze-ah) [Gr. *dys-* difficult + *εργον* work]. Inability to functionate properly, as exhibited in neurasthenia.

dysergia (dis-er'je-ah) [Gr. *dys-* difficult + *εργον* work]. Motor incoördination due to defect of efferent nerve impulse.

dysesthesia (dis-es-the'ze-ah) [Gr. *dys-* difficult + *αἰσθάνεσθαι* to perceive]. 1. Impairment of any sense, especially of that of touch. 2. A painful and persistent sensation induced by a gentle touch of the skin. **auditory d.** Same as *dysacousia*.

dysfunction (dis-funk'shun) [Gr. *dys-* difficult + *function*]. Disordered functioning.

dysgalactia (dis-gal-ak'te-ah) [Gr. *dys-* ill + *γάλα* milk]. Disordered milk secretion.

dysgenesia (dis-jen-e'ze-ah) [Gr. *dys-* difficult + *γεννᾶν* to generate]. Impairment of the powers of procreation.

dysgenic (dis-jen'ik). Detrimental to the race or tending to counteract movements for race improvement.

dysgenics (dis-jen'iks) [Gr. *dys-* ill + *γεν-* to produce]. The intermarriage of persons of a defective heredity.

dysgenitalism (dis-jen'it-al-izm). The consequences of any abnormality of genital development, as eunuchism.

dysgeusia (dis-gu'ze-ah) [Gr. *dys-* ill + *γεῖσις* taste]. Perversion of the sense of taste.

dysglandular (dis-glan'du-lar). Due to or marked by disordered functioning of glands, particularly the glands of internal secretion.

dysgnosia (dis-gno'se-ah) [Gr. *dys-* difficult + *γνώσις* knowledge]. Disorder of intellectual function.

dysgonic (dis-gon'ik) [Gr. *dys-* poorly + *γονή* seed]. Seeding badly: said of bacterial cultures that grow poorly.

dysgraphia (dis-gra'fe-ah) [Gr. *dys-* ill + *γράφειν* to write]. Inability to write properly because of ataxia, tremor, or motor neurosis.

dyshematopoiesis (dis-hem''at-o-poi-e'sis). Defective blood-formation.

dyshidria (dis-hid're-ah). *Dyshidrosis*.

dyshidrosis, dysidrosis (dis-hid-ro'sis) [Gr. *δυσ-ill* + *ἰδρωσις* a sweating]. 1. Any disorder of the perspiratory apparatus. 2. Pompholyx or cheiropompholyx.

dysrhormonism (dis-hor'mōn-izm). Disturbance of the hormone secretions.

dysrhidrosis (dis-hid-ro'sis). Dyshidrosis.

dyshypophysis, dishypophysism (dis-hi-po-fiz'e-ah, dis-hi-pof'is-izm). Dypituitarism.

dysinsulinism (dis-in'su-lin-izm). An abnormal activity of the islands of Langerhans resulting in excessive or deficient secretion of insulin.

dyskinesia (dis-kin-e'ze-ah) [Gr. *δυσ-ill* + *κίνησις* motion]. Impairment of the power of voluntary movement. **d. algera**, a condition in which movement is painful: seen in hysteria. **d. intermit tens**, disability of the limbs, coming on intermittently, and due to impairment of the circulation. **occupational d.** Same as *occupation neurosis*. **uterine d.**, pain in the uterus on movement: a sign of displacement of the uterus.

dyskinetic (dis-kin-et'ik) [See *dyskinesia*]. Marked by derangement of the normal movement.

dyskoimesis (dis-koi-me'sis) [Gr. *δυσ-ill* + *κοιμησις* sleeping]. Difficulty in getting to sleep.

dyslalia (dis-la'le-ah) [Gr. *δυσ-ill* + *λαλέειν* to talk]. Impairment of utterance with abnormality of the external speech-organs (Kussmaul).

dyslexia (dis-leks'e-ah) [Gr. *δυσ-ill* + *λέξις* diction]. 1. An inability to read understandingly, due to a central lesion. 2. A condition in which reading is possible, but is attended with disagreeable sensations.

dyslochia (dis-lo'ke-ah) [Gr. *δυσ-ill* + *λόχια* lochia]. Disordered lochial discharge.

dyslogia (dis-lo'gi-ah) [Gr. *δυσ-ill* + *λόγος* understanding]. Impairment of the reasoning power; also impairment of the speech, due to mental disorders.

dyslysin (dis-lī'sin) [Gr. *δυσ-ill* + *λύσις* solution]. A resinous substance, $C_2H_3O_3$, derived from cholic acid by the loss of two molecules of water.

dysmasesia (dis-mas-e'ze-ah). Dysmasesis.

dysmasesis (dis-mas-e'sis) [Gr. *δυσ-ill* + *μασῆσις* mastication]. Difficult mastication.

dysmegalopsia (dis-meg-al-op'e-ah) [Gr. *δυσ-ill* + *μέγας* size + *ὄψις* vision]. A disturbance of the visual appreciation of the size of objects; dysmetropsia.

dysmenorrhea (dis'men-or-e'ah) [Gr. *δυσ-ill* + *μήν* month + *ρῆν* to flow]. Painful and difficult menstruation. **congestive d., plethoric d.**, that which is accompanied by great congestion of the uterus. **inflammatory d.**, that which comes from or is due to inflammation. **mechanical d.**, that which is due to mechanical interference with the flow, as from clots or flexion of the uterus. **membranous d.**, that which is characterized by membranous exfoliations derived from the uterus. **obstructive d.**, that which is due to mechanic obstruction to the discharge of the menstrual fluid. **ovarian d.**, that which is due to ovarian disease. **spasmodic d.**, that form which is due to spasmodic uterine contraction. **tubal d.**, that which is due to narrowness or closure of an oviduct. **uterine d.**, that which arises from a uterine disorder. **vaginal d.**, that which is due to a vaginal disease.

dysmetria (dis-me'tre-ah) [Gr. *δυσ-ill* + *μέτρον* measure]. A condition in which there is improper measuring of distance in muscular acts; disturbance of the power to control the range of movement in muscular action.

dysmetropsia (dis-met-rop'e-ah) [Gr. *δυσ-ill* + *μέτρον* measure + *ὄψις* vision]. Defect in the visual appreciation of the measure or size of objects.

dysmimia (dis-mim'e-ah) [Gr. *δυσ-ill* + *μιμῆσθαι* to imitate]. Impairment of the power of expressing thought by gestures.

dysmnnesia (dis-mnē'se-ah) [Gr. *δυσ-ill* + *μνήσις* memory]. Impaired memory.

dysmorphism (dis-mor'fizm) [Gr. *δυσ-ill* + *μορφή* form]. 1. Allomorphism. 2. Appearing under different forms; for example, some fungi grow so differently under parasitic and under saprophytic conditions that they have been taken for different species.

dysmorphophobia (dis'mor-fo-fō-be-ah) [Gr. *δυσ-ill* + *μορφος* deformed + *φόβος* fear]. Insane fear of becoming deformed.

dysneuria (dis-nū're-ah) [Gr. *δυσ-ill* + *νεῦρον* nerve]. Impairment of the nervous power.

Dyso dius luna'tus. A malodorous bug of South America which bites severely.

dysodontiasis (dis-o-don-ti'as-is) [Gr. *δυσ-ill* + *ὀδὸς* tooth]. Defective, delayed, or difficult dentition.

dysoemia (dis-o-e'me-ah). A medicolegal term for death from obscure causes, traceable to chronic mineral poisoning.

dysontogenesis (dis-on-to-jen'es-is) [Gr. *δυσ-ill* + *ontogenesis*]. Defective development of the organism.

dysopia, dysopsia (dis-o'pe-ah, dis-op'se-ah) [Gr. *δυσ-ill* + *ὄψις* vision]. Defective vision. **d. algera**, disturbances of vision due to pains in the eyes and head on looking at objects.

dysorexia (dis-o-rek'se-ah) [Gr. *δυσ-ill* + *ὄρεξις* appetite]. Impaired or deranged appetite.

dysosmia (dis-oz'me-ah) [Gr. *δυσ-ill* + *ὀσμή* smell]. Defect or impairment of the sense of smell.

dysosteogenesis (dis-os-te-o-jen'es-is). Defective bone formation; dysostosis.

dysostosis (dis-os-to'sis) [Gr. *δυσ-ill* + *ὀστέον* bone]. Defective ossification; defect in the normal ossification of fetal cartilages.

cleidocranial d. (Marie), a rare congenital condition in which there is defective ossification of the cranial bones and complete or partial absence of the clavicles, so that the shoulders may be brought together in front.

dysovarism (dis-o'va-rizm). Disorder of the internal secretion of the ovary.

dysoxidative (dis-oks'id-a-tiv). Due to deficient oxidation.

dysoxidizable (dis-oks'id-i-za-bl) [Gr. *δυσ-ill* + *οξιδίσις* oxidation]. Not easily oxidizable.

dyspancreatism (dis-pan'kre-at-izm). Disorder of the function of the pancreas.

dyspareunia (dis-pah-ru'ne-ah) [Gr. *δυσπάρευνος* badly mated]. Difficult or painful coitus.

dyspepsia (dis-pep'se-ah) [Gr. *δυσ-ill* + *πέπτειν* to digest]. Impairment of the power or function of digestion. **acid d.**, a variety associated with excessive acidity of the stomach. **appendix d.**, dyspeptic symptoms due to lesion of the appendix vermiformis. **atonic d.**, a form ascribed to a lack of tone in the digestive organs. **catarrhal d.**, a variety accompanied by gastric inflammation. **chichiko d.**, a condition of farinaceous malnutrition found in badly nourished infants of the poor in Japan which are fed mostly on solutions of polished rice powder. **cholelithic d.**, the sudden dyspeptic attacks characteristic of gall-bladder disturbance. **colon d.**, functional disturbance of the large intestine, giving rise to the symptoms of dyspepsia. **fermentative d.**, that characterized by the fermentation of ingested food. **flatulent d.**, that which is associated with the formation of gas in the stomach. **functional d.**, that which is either atonic or of reflex or nervous origin.

Cleidocranial
dysostosis.

gastric d., that which originates within the stomach. **intestinal d.**, that which has its seat in the intestine. **nervous d.**, that due to some disease of the nerves of the stomach. **ovarian d.**, a form of reflex indigestion due to ovarian disease. **reflex d.**, that which is due to reflex influence from some disease of an organ not directly concerned in digestion. **salivary d.**, dyspepsia due to defective or deficient saliva.

dyspeptic (dis-pep'tik). Pertaining to or affected with dyspepsia.

dyspeptin (dis-pep'tin). A preparation of the gastric juice of animals (swine) obtained through a gastric fistula.

dyspeptone (dis-pep'ton). A variety of insoluble peptone.

dysperistalsis (dis'per-is-tal'sis) [Gr. *dys-* painful + *peristalsis*]. Painful or abnormal peristalsis.

dyspermasia, dyspermatism, dyspermia (dis-per-ma'-ze-ah, dis-per-mat-izm, dis-per-me-ah). Impairment of the semen or of its discharge.

dysphagia (dis-fa'je-ah) [Gr. *dys-* ill + *φαγείν* to eat]. Difficulty in swallowing. **d. inflammatoria**, dysphagia due to inflammation of the esophagus. **d. luso'ria**, dysphagia believed to be due to compression of the esophagus by an unusually located right subclavian artery. **d. nervo'sa**, esophagism. **d. paralytica**, dysphagia due to paralysis of the esophageal muscles. **d. spas'tica**, esophagism. **tropical d.** See *εντολαζδο*. **d. valsalvina**, dysphagia due to subluxation of the major cornu of the hyoid bone.

dysphagy (dis-fa'-je). Dysphagia.

dysphasia (dis-fa'-ze-ah) [Gr. *dys-* ill + *φάσις* speech]. Impairment of speech, consisting in lack of coordination and failure to arrange words in their proper order. It is due to a central lesion.

dysphemia (dis-fe'me-ah). Stammering.

dysphonia (dis-to'ne-ah) [Gr. *dys-* ill + *φωνή* voice]. Any impairment of voice: a difficulty in speaking. **d. clericorum**, clergyman's sore throat: impairment of voice due to some public speaking. **d. pu'berum**, the harsh, irregular utterance of puberty, and of the change of voice in youth. **d. spas'tica**, spasm of the muscles of phonation, seen in public speakers.

dysphoria (dis-to're-ah) [Gr. *dys-* ill + *φέρειν* to bear]. Disquiet; restlessness; malaise.

dysphrasia (dis-fra'ze-ah) [Gr. *dys-* ill + *φράσις* speech]. Imperfection of utterance due to a central or cerebral defect.

dysphrenia (dis-fre'ne-ah) [Gr. *dys-* ill + *φρήν* mind]. Any secondary psychosis as distinguished from an idiopathic brain disease (Kahlbaum).

dysphylaxia (dis-fi-laks'e-ah) [Gr. *dys-* bad + *φύλαξις* watching]. A condition marked by too early waking.

dyspinealism (dis-pin'e-al-izm). Deficiency of the secretion of the pineal gland.

dyspituitarism (dis-pit-u'it-ar-izm). A condition due to disordered activity of the pituitary body. Cf. *hyperpituitarism* and *hypopituitarism*.

dysplasia (dis-pla'se-ah) [Gr. *dys-* ill + *πλάσσειν* to form]. Abnormality of development. **cretinoid d.**, the anatomical changes characteristic of cretinism, consisting of retarded ossification, smallness of the internal organs and sexual organs.

dyspnea, dyspnœa (disp-ne'ah) [Gr. *dys-* ill + *πνέειν* breathing]. Difficult or labored breathing. **cardiac d.**, a form due to cardiac disease. **expiratory d.**, hindrance to the free egress of air from the lungs. **inspiratory d.**, hindrance to the free ingress of air into the lungs. **renal d.**, a form ascribable to some renal disease. **Traube's d.**, dyspnea marked by slow respiratory movements and expansion and collapse of the thorax during inspiration and expiration. It is seen in diabetes mellitus.

dyspneic (disp-ne'ik). Affected with or due to dyspnea.

dyspragia (dis-pra'je-ah) [Gr. *dys-* ill + *πράγειν* to do; to perform]. Painful performance of any function. **d. intermit'tens angiosclerotica intestinalis**, a painful intestinal spasmodic affection, due to derangement of the intestinal blood-supply.

dyspraxia (dis-praks'e-ah) [Gr. *dys-* badly + *πράσσειν* to perform]. Partial loss of ability to perform coordinated movements.

dysprosium (dis-pro'se-um). A rare element, atomic weight 162.5, symbol Dy.

dysproteose (dis-pro'te-ös). Heteroproteose modified by treatment with water.

dysrhythmia (dis-rith'me-ah). Disturbance of rhythm.

dyspermia (dis-sper'me-ah) [Gr. *dys-* ill + *σπέρμα* seed]. See *dyspermasia*.

dyssynergia (dis-sin-er'je-ah) [Gr. *dys-* ill + *συν* together + *ἔργον* work]. Disturbance of muscular coordination. **d. cerebella'ris myoclon'ica**, a condition characterized by cerebellar dyssynergia, myoclonus, and epilepsy; called also *Hunt's disease*. **d. cerebella'ris progres'siva**, a condition marked by generalized tremors associated with disturbance of muscle tone and of muscular coordination; due to disorder of cerebellar function.

dyssystole (dis-sis'to-le) [Gr. *dys-* ill + *systole*]. Asystole.

dystaxia (dis-taks'e-ah) [Gr. *dys-* ill + *τάξις* arrangement]. Difficulty in controlling voluntary movements; partial ataxia. **d. ag'itans**, a tremor from irritation of the spinal cord resembling paralysis agitans, but without paralysis (Sanders, 1868).

dysthymia (dis-thim'e-ah) [Gr. *dys-* ill + *θυμός* mind]. 1. Mental depression; also, any intellectual anomaly. 2. The condition produced by disordered thymus secretion in childhood.

dysthyreosis (dis'thi-re-o'sis). Imperfect action of the thyroid body.

dysthyroidea (dis-thi-ro'i'de-ah). Dysthyroidism.

dysthyroidism (dis-thi'roi-dizm). Imperfect development and function of the thyroid gland.

dystithia (dis-tith'e-ah) [Gr. *dys-* bad + *τιθήναι* nursing]. Difficulty in breast feeding.

dystocia (dis-to'se-ah) [Gr. *dys-* ill + *τόκος* birth]. Painful or slow delivery or birth. **fetal d.**, that which is due to the shape, size, or position of the fetus. **maternal d.**, that which is due to some deformity on the part of the mother. **placental d.**, difficulty in delivering the placenta.

dystonia (dis-to'ne-ah) [Gr. *dys-* bad + *τόνος* tone]. Disordered tonicity of any tissue. **d. lentacula'ris**, dystonia due to a lesion of the lenticular nucleus. **d. musculo'rum deformans** (Oppenheim), a disorder characterized by muscular contractions which produce distortion of the spine and hips. The muscles are hypotonic when at rest and hypertonic when in action; the condition occurs chiefly in children. Called also *tortipelvis*, *Ziehen-Oppenheim disease*, *dystonia deformans progressiva*, and *dysbasia lordotica progressiva*.

dystopia, dystopy (dis-to'pe-ah, dis'to-pe) [Gr. *dys-* ill + *τόπος* place]. Malposition; faulty placement of an organ.

dystopic (dis-top'ik). Misplaced; out of its normal place.

dystrophia, dystrophy (dis-tro'fe-ah, dis'tro-fe) [Gr. *dys-* ill + *τρέφειν* to nourish]. Defective or faulty nutrition. **adiposogenital d.** See *Fröhlisch's syndrome*, under *syndrome*. **hypophyseal d.**, hypopituitarism. **d. hypophyso-privia chronica**, the condition produced by partial removal of the hypophysis cerebri and marked by obesity, increased carbohydrate tolerance, hypothermia, hypoplasia of the sex glands, retardation of skeletal growth, and mental dullness. **d. myoton'ica**. See *myotonia atrophica*. **papillary and pigmentary d.** (Darier), acan-

thosis nigricans. **progressive muscular d.**, progressive atrophy of the muscles with no discoverable lesion of the spinal cord.

dystrophic (dis-trof'ik). Pertaining to or of the nature of dystrophia.

dystrophodextrin (dis'trof-o-deks'trin) [Gr. *δυσ-ill* + τροφή nutrition + *dextrin*]. A starch-like material said to exist in normal blood.

dystrophoneurosis (dis-trof'o-nu-ro'sis) [Gr. *δυσ-ill* + τροφή nutrition + *neurosis*]. 1. Any nervous disorder due to poor nutrition. 2. Impairment of nutrition which is caused by nervous disorder.

dystrophy (dis'tro-fe). See *dystrophia*.

dys-tryp-sia (dis-trip'se-ah) [Gr. *δυσ-ill* + τρύψις digestion]. Derangement of the intestinal or pancreatic digestion due to lack of trypsin.

dysuresia (dis-u-re'se-ah). Same as *dysuria*.

dysuria (dis-u're-ah) [Gr. *δυσ-ill* + ούρον urine]. Painful or difficult urination. **spastic d.**, difficult urination due to spasm of the bladder.

dysuriac (dis-u're-ak). One who is affected with dysuria.

dysuric (dis-u'rik). Pertaining to dysuria.

dysury (dis-u're). Dysuria.

dyszoöamylia (dis-zo'o-am-i'le-ah) [Gr. *δυσ-bad* + *zoöamylon*]. Failure of the liver to store up glucose in the form of glycogen (zoöamylon).

E

E. Abbreviation for *emmetropia*, *eye*, and *electromotive force*; also chemical symbol of *erbium*.

e. Abbreviation for electron or for the amount of charge on an electron.

ead. Abbreviation for *L. ea'dem*, the same.

Eales's disease (elz). See under *disease*.

Ea. R. [G. *Entartungs Reaktion*]. Abbreviation for *reaction of degeneration* (R. D.).

ear (ēr) [L. *au'ris*; Gr. *οὔς*]. The organ of hearing. The *external ear* is composed of the *auricle*, or *pinna*, and the *external auditory canal*. The external curved border of the auricle is the *helix*, immediately in front of which is a hollow termed the *fossa of the helix*. In front of this fossa is the *anthelex*, a flattened, semicircular eminence on the cartilage of the external ear, situated before or within the helix, and immediately surrounding the concha posteriorly. Above the anthelex is a deep fossa, the *fossa of the anthelex*, which communicates with the *concha*, or large hollow of the auricle. Guarding the canal in front is a tent-like prominence, the *tragus*. Opposite the *tragus* is the *antragus*, a conic eminence of the lower posterior portion of the external ear, being part of the anthelex. The lower termination of the auricle is termed the *lobule*. The external auditory canal is about one inch and a fourth in depth, and is closed internally by the *membrana tympani*, or drum-membrane. The latter is composed of three layers—an outer or *dermoid*, a middle or *fibrous*, and an internal or *mucoous*, layer. The long process, or handle, of the malleus is inserted in the inner surface. The *middle ear* is the cavity on the inner side of the drum-membrane, containing the ossicles, and communicating with the post-nasal region by means of the eustachian tube. The *internal ear*, or *labyrinth*, is embedded in the petrous portion of the temporal bone, and consists of three *semicircular canals*, communicating by means of the vestibule with the *cochlea*, resembling a minute spiral shell. Within the bony labyrinth is the *membranous labyrinth*, surrounded by the perilymph and containing endolymph. It is a closed sac, with the same form as the bony labyrinth. The cavity of the cochlea is divided by a partition, partly bony (*lam'ina spiralis*) and partly membranous (*membra'na basila'ris*), into the two spiral canals, the *scala vestibuli* and the *scala tym'pani*. The *scala vestibuli* is divided by the membrane of Reissner into two portions, the lower of which, called the *cochlear duct*, contains the *organ of Corti*. This is made up of a series of rod-like bodies (*Corti's rods*, *Corti's fibers*, or *acoustic rods*) arranged in a double row, attached by their bases to the basilar membrane, and united by their upper extremities to form the *arches of Corti*, which inclose a triangular space (*Corti's canal* or *tunnel*). In connection with the rods of Corti are several rows of cervical

ciliated cells (*Corti's cells*). Stretching above the organ of Corti is a membranous structure called *Corti's membrane*, or *membrana tectoria*. **Aztec e.**, an ear in which the lobule is wanting, the whole ear looking as if it were pushed forward and downward. **Blainville e's**, asymmetry of the two ears. **bleeding e.** See *nambi-wu*. **Cagot e.**, an ear in which the lobule is wanting. **cat's e.**, an ear that is folded over on itself. **cauliflower e.**, a crumpled ear following the absorption of effusion after an injury. **Darwin's e.**, an ear having an eminence on the edge of the helix. **diabetic e.**, mastoiditis complicating diabetes. **external e.**, the pinna and external meatus together. **inner e.**, the labyrinth, comprising the vestibule, cochlea, semicircular canals, and the membranous canal. **insane e.**, hematoma of the ear. **middle e.**, the drum, or tympanum, comprising the *attic* above, and the *atrium* or lower space. **Morel e.**, a deformed ear marked by abnormal development of the helix, anthelex, and scaphoid fossa, so that the folds of the ear seem obliterated, and the ear is smooth, large, and often prominent, with a thin edge. **Stahl e., No. 1**, a deformed ear in which the helix is broad and coalesces with the anthelex; the fossa ovalis and fossa scaphoidea are scarcely to be seen, and the lower portion of the helix is obliterated. **Stahl e., No. 2**, multiplication of the divisions of the crura furcata, so that there are three instead of two crura. **tropical e.**, a local infection of the external auditory meatus prevalent in tropical and semitropical countries. **Wildermuth's e.**, a deformed ear with prominent anthelex and poorly developed helix.

earache (ēr'āk). See *otalgia*.

ear-bone. See *ossicle*.

ear-drum. The tympanum.

ear-dust. The otoliths.

ear-faint. A form of syncope observed in patients with aural disease.

ear-minded (ēr-min'ded). Remembering chiefly the impressions made on the sense of hearing.

ear-sponge. A sponge on a stick or handle: used for washing the ear.

earth (erth). 1. The soil and other pulverulent substances forming the ground. 2. Any amorphous, easily pulverizable mineral. **alkaline e.**, any oxid of a metal of the group to which calcium and magnesium belong. **fullers' e.**, a clay used as a dressing for sores. **infusorial e.**, a silicious earth composed mostly of the frustules and fragments of diatoms. By boiling with dilute hydrochloric acid, washing, and calcining it can be so purified as to be a very pure form of silica, SiO₂ (terra silicea purificata). **silicious e.** See *infusorial e.*

ear-wax. Same as *cerumen*.

Semidiagrammatic section through the right ear; *G*, external auditory meatus; *T*, membrana tympani; *Pt*, tympanic cavity; *o*, fenestra ovalis; *r*, fenestra rotunda; *B*, semicircular canal; *S*, cochlea; *Vt*, scala vestibuli; *Pt*, scala tympani.

The external ear: *a*, helix; *b*, fossa of anthelix; *c*, tragus; *d*, lobule; *e*, anti-tragus; *f*, concha; *g*, anthelix; *h*, fossa of helix.

Section of a single turn of the cochlea; *SV*, scala vestibuli; *SM*, scala media; *ST*, scala tympani; *a*, bony tissue; *b*, spiral lamina; *c*, basilar membrane; *d*, spiral ligament; *e*, flat lining cells; *f*, spiral prominence; *g*, stria vascularis; *h*, Reissner's membrane with epithelium (*i*) of cochlear duct and endothelium (*u*) of scala vestibuli; *j*, limbus of spiral lamina; *k*, tectorial membrane; *m*, tunnel of Corti; *r*, *s*, inner and outer hair-cells; *p*, cells of Claudius; *n*, spiral ganglion; *e*, nerves; *v*, blood-vessel.

Interior of Left Labyrinth: *a*, for semi-elliptica; *b*, fovea hemispherica; *c*, opening of superior and posterior semicircular canals; *d*, opening of aqueduct of vestibule; *f* and *g*, posterior and external semicircular canal; *h*, spiral tube of cochlea (scala tympani); *i*, opening of aqueduct of cochlea.

Section of the cochlea showing two and a half windings of its scala.

Section of the organ of Corti: *ST*, scala tympani; *TC*, tunnel of Corti; *a*, spiral lamina; *b*, substantia propria of basilar membrane; *c*, *c'*, protoplasmic pillars of Corti; *d*, endothelial plates; *f*, heads covering of pillars of Corti; *e*, *e'*, flat lining cells; *g*, stria vascularis; *h*, Reissner's membrane; *i*, *j*, inner and outer hair-cells; *m*, reticular membrane; *k*, *l*, cells of Hensen and Claudius; *n*, nerve-fibers; *s*, cells of Deiters (Piersol).

The small bones of the left ear; external view (enlarged) (after Gray).

Easton's syrup (ēs'tonz) [J. E. A. Easton, English physician, 1807-1865]. Syrup of iron, quinin, and strychnin phosphates.

Eb. Symbol for *eribium*.

ebb (eb). A gradual decline.

eberthemia, eberthemia (a-ber-the'me-ah) [*Eberth's* bacillus + Gr. αἷμα blood]. Typhemia.

eberthian (a-ber'the-an). Pertaining to or caused by Eberth's bacillus, the bacillus of typhoid fever.

Eberth's bacillus, lines, etc. (ā'berts) [Karl Joseph Eberth, pathologist in Halle, 1835-1926]. See *bacillus, line, etc.*

Eberthella (e-ber-thel'ah). [See *Eberth*.] A genus of the Bacteriaceae found in the intestinal canal of man in enteric inflammation. **E. dysenteriae**. Same as *Bacterium dysenteriae* Shiga. **E. paradyenteriae**. Same as *Bacterium dysenteriae* Flexner. **E. typhi**. Same as *Bacterium typhosum*.

Eberthus typhosus. Eberth's bacillus, *Bacterium typhosum*.

Ebner's glands (eb'nerz) [Victor Ebner, histologist in Vienna, born 1842]. See *gland*.

ebonation (e-bo-na'shun) [L. e out + bone]. The removal of fragments of bone after injury.

ébranlement (a-brahl-maw') [Fr.]. Removal of a polypus by revolving the tumor on its base.

ebriecation (e-bri-e-ka'shun) [L. ebrietas drunkenness]. Mental derangement due to alcoholic excess.

ebrietas (e-bri'et-as) [L.]. Drunkenness; alcoholic intoxication.

ebriety (e-bri'et-e). Drunkenness.

Ebstein's disease, etc. (eb'stinz) [Wilhelm Ebstein, physician in Göttingen, 1836-1912]. See under *disease, etc.*

ebullition (eb-ul-ish'un) [*L. ebulli're to boil*]. 1. The process or condition of boiling. 2. The motion of a boiling liquid.

e'bur den'tis [L.]. The dentin.

eburnation (e-bur-na'shun) [L. e'bur ivory]. The conversion of bone into an ivory-like mass.

eburneous (e-bur'ne-us). Resembling ivory.

eburnitis (e-bur-ni'tis) [L. eburnus of ivory + -itis]. Increased hardness and density of the tooth-enamel.

E-C method or mixture. See *mixture*.

écarteur (a-kar-ter'). An instrument for holding structures apart; a retractor.

ecatantulum (ek-at-an'tal-um). Protoactinium.

ecaudate (e-kaw'dāt) [L. e without + cau'da tail]. Without a tail.

Echallium (ek-bal'e-um) [Gr. ἐκβάλλειν to cast out]. A genus of cucurbitaceous plants. *E. elaterrum* affords the drug elaterium.

ecbolic (ek-bol'ik) [Gr. ἐκβολικός throwing out]. 1. Accelerating or causing parturition. 2. An agent which accelerates labor.

ecbolin (ek'bo-lin). An alkaloid from ergot.

eccain, eccaine (ek-a'in). An alkaloid of the cocaine series, said to be more active than cocaine as a local anesthetic, besides being non-toxic.

eccentric (ek-sen'trik). 1. Situated or occurring away from a center. 2. Proceeding from a center.

eccentropiesis (ek-sen'tro-pi-e'sis) [Gr. ἔκκεντρος from the center + πίεσις pressure]. Pressure from within outward.

eccephalosis (ek-sef-al-o'sis) [Gr. ἐκ out + κεφαλή head]. Removal of the brain of the fetus to aid delivery.

echonodroma, echondrosis (ek-on-dro'mah, ek-on-dro'sis) [Gr. ἐκ out + χόνδρος cartilage]. A cartilaginous tumor growing from a cartilage.

echonotome (ek-on-dro-tōm) [Gr. ἐκ out + χόνδρος cartilage + τομή cut]. A knife for excising cartilaginous tissue.

echordo'sis physaliph ora. Jelly-like noto-

chordal projections from the middle of the clivus blumenbachii into the interior of the cranium.

ecchymoma (ek-im-o'mah). A swelling due to a bruise and formed by subcutaneous extravasation of blood.

ecchymosed (ek'im-ōzd). Characterized by ecchymosis.

ecchymosis (ek-im-o'sis), pl. *ecchymo'ses* [Gr. ἐκ out + χύμος juice]. An extravasation of blood; also a discoloration of the skin caused by the extravasation of blood. **Bayard's e**. Same as *Roederer's e's*. **cadaveric e's**, stains on the body after death, resembling the effects of bruises. They are seen on the more dependent portions of the body. **Roederer's e's**, small capillary hemorrhages seen in the pleura and pericardium of infants who have attempted prematurely to breathe in utero.

ecchymotic (ek-im-ot'ik). Pertaining to or of the nature of an ecchymosis.

eccoprotic (ek-op-rot'ik) [Gr. ἐκ out + κόπρος dung]. Cathartic.

eccrinology (ek-rin-ol-o-je) [Gr. ἐκκρίνειν to secrete + λόγος treatise]. The study or science of secretions and excretions.

eccrisiology (ek-ris-e-ol-o-je). Same as *eccrinology*.

eccrisis (ek'ris-is) [Gr. ἐκ out + κρίσις separation]. The excretion or expulsion of waste-products.

eccritic (ek-rit'ik) [Gr. ἐκκριτικός]. 1. Promoting excretion. 2. A drug that promotes excretion.

eccyesis (ek-si-e'sis) [Gr. ἐκ out + κύσις pregnancy]. Extra-uterine fetation.

edemic (ek-dem'ik) [Gr. ἐκδημος away from home]. Not endemic; applied to a disease originating in a cause away from the place where it occurs.

edemomania (ek'de-mo-ma'ne-ah) [Gr. ἐκδημος abroad + μανία madness]. An insane desire to wander away from home.

edemonosus (ek-de-mon'o-sus) [Gr. ἐκδημος from home + νόσος illness]. Same as *edemomania*.

ecdéron (ek'der-on) [Gr. ἐκ out + δέρος skin]. The outer layer of the skin and the mucous membrane.

ecdysis (ek'dis-is) [Gr. ἐκδύειν to put off]. Desquamation or sloughing.

ecg. Abbreviation for *electrocardiogram*.

ecgonin (ek'go-nin). The final basic product obtained in the hydrolysis of cocaine and several related alkaloids. It is $\text{CHOH.C}_6\text{H}_5(\text{COOH})\text{N.C}_2\text{H}_5$.

echidnase (e-kid'nās) [Gr. ἐχίδνα viper]. A phlogogenic ferment found in the venom of vipers.

echidnin (e-kid'nin) [Gr. ἐχίδνα viper]. Serpentine poison, or a nitrogenous poisonous principle from serpent poison.

Echidnoph'aga gallina'cea. The sticktight flea of the family Sarcopsyllidae. It collects in dense masses on the heads of chickens, in the ears of other animals, and on man.

echidnotoxin (e-kid-no-tok'sin). A poisonous principle existing in the venom of vipers.

echidnovaccine (e-kid-no-vak'sēn) [Gr. ἐχίδνα viper + vacine]. Viper venom that has been deprived of its poisonous power by heating. It is used as a vaccine against venom.

Echinacea (ek-in-a-se-ah) [Gr. ἐχῖνος hedgehog]. A genus of composite plants. *E. angustifolia* and *E. purpurea* have tonic properties.

echinate (ek'in-āt). Same as *echinulate*.

Echinochasmus perfoleatus. A trematode worm parasitic in the human intestine in Japan.

echinochrome (ek-in'o-krōm). The red coloring-matter of echinoderms.

echinococcosis (ek-in'o-kok-o'sis). Infection with echinococci.

echinococcotomy (ek'in-o-kok-kot'o-me) [*echinococcus* + Gr. τομή cut]. Excision or evacuation of an echinococcus cyst.

Echinococcus (ek-in-o kok'us) [Gr. *ἐχῖνος* hedgehog + *κόκκος* berry]. A small tapeworm, *Tænia echinococcus*, found in the adult form in dogs, wolves, and jackals. The cysticercus stage is found in man, sheep, cattle, and swine in hydatid cysts. **e. alveola'ris**. Same as *e. multilocularis*. **e. cyst'icus**, echinococcus disease of the liver forming a single cyst. **e. granulo'sus**, the form of *Tænia echinococcus* which produces the usual vesicular form of cyst. **e. hydatido'sus**, a form of echinococcus marked by the presence of daughter-cysts. **e. multilocula'ris**, the form of *Tænia echinococcus* which produces a cyst made up of a great mass of separate vesicles varying in size from a pinhead to a pea. These may infiltrate the surrounding tissues and become neoplastic or ulcerative. **e. unilocula'ris**. Same as *e. cysticus*.

Echinococcus multilocularis
(Luschka).

echinoderm (e-kin'o-derm). One of the Echinodermata.

Echinodermata (e-ki-no-der-mat'ah). A division of the animal kingdom, including star-fishes, sea-eggs, etc.

echinophthalmia (e-kin-of-thal'me-ah) [Gr. *ἐχῖνος* hedgehog + *ophthalmia*]. Inflammation of the eyelids marked by projection of the lashes.

Echinorhynchus (e-kin-o-ring'kus) [Gr. *ἐχῖνος* hedgehog + *ῥύγχος* beak]. A genus of parasitic worms occasionally found in man. **E. gigas**. See *Giganthorhynchus gigas*. **E. hom'inis**, a species once found in a boy. **E. monilifor'mis** is parasitic in rats and mice.

echinosis (ek-in-o'sis) [Gr. *ἐχῖνος* hedgehog]. Irregularity in the form of an erythrocyte, in which it has a spiny appearance. Cf. *crenation*.

Echinostoma (ek-in-o-sto'mah). A genus of parasitic flukes. *E. echina'tum* is found in the intestines of ducks and geese and occasionally in man in the Philippine Islands. *E. iloca'num* has been found in the feces of natives of Luzon, Philippine Islands. *E. malaya'num* has been found in the natives of Singapore and the Malay States.

echinulate (e-kin'u-lät) [L. *echi'nus* hedgehog]. Having small prickles or spines; applied in bacteriology to cultures showing toothed or pointed outgrowths.

echitamin (ek-it'am-in). Ditain.

echitenin (ek-it'en-in). A brown amorphous alkaloid, $C_{20}H_{27}NO_4$, from the bark of *Alstonia constricta*.

echitone (ek'it-on). A preparation of echinacea, iris, and viola: used in eczema.

echo, amphoric (ek'o). The amphoric voice when it follows the oral voice at an appreciable interval. **metallic e.**, a peculiar ringing sound sometimes heard with the heart-sounds in pneumopericardium and pneumothorax.

echo-acousia (ek''o-ak-oo'ze-ah) [Gr. *ἤχώ* echo + *ἀκουσία* hearing]. The subjective experience of hearing echoes after normally heard sounds.

echographia (ek-o-gra'fe-ah) [Gr. *ἤχώ* echo + *γράφειν* to write]. An aphasic condition in which the patient can copy writing, but cannot write to express ideas.

echokinesis (ek''o-kin-e'sis) [Gr. *ἤχώ* echo + *κίνησις* motion]. The spasmodic and involuntary imitation of movements seen.

echolalia (ek-o-la'le-ah) [Gr. *ἤχώ* echo + *λαλία* speech, babble]. The meaningless repetition by a patient of words addressed to him.

echolalus (ek-o-la'lus), pl. *echola'li*. A person who in a hypnotized state repeats meaninglessly the words he hears.

echomatism (ek-o-mat-izm) [Gr. *ἤχώ* echo]. The purposeless imitation of an act.

echomimia (ek-o-mim'e-ah). Imitation of the movements of others.

echomotism (ek-o-mo'tizm) [Gr. *ἤχώ* echo]. Imitation of movements.

echopathy (ek-op'ath-e) [Gr. *ἤχώ* echo + *πάθος* disease]. A nervous disease marked by the senseless repetition of words or actions.

echophony (ek-of'o-ne) [Gr. *ἤχώ* echo + *φωνή* voice]. An echo-like sound heard immediately after a vocal sound on auscultation of the chest.

echophotony (ek-o-fot'o-ne) [Gr. *ἤχώ* echo + *φῶς* light + *τόνος* tone]. The association of certain colors with certain sounds.

echophrasia (ek-o-fra'se-ah). Same as *echolalia*.

echopraxia (ek-o-prak'se-ah). Echopraxis.

echopraxis (ek-o-prak'sis) [Gr. *ἤχώ* echo + *πράσσειν* to perform]. The meaningless and purposeless repetition, on the part of an insane patient, of motions which have been started by the examining physicians.

echo-speech (ek'o-spēch). Same as *echolalia*.

echtisia (ek-tis'e-ah). A proprietary antiseptic and alterative preparation of Echinacea, Baptisia, Thuja, and Phytolacca.

echugin (ek'u-jin). A poisonous glucosid, $C_8H_8O_2$, from the African shrub, *Adenium boehmia'dnum*.

eciomania (ek'e-o-ma'ne-ah). See *ecomania*.

Eck's fistula (eks) [Gottlieb Wilhelm Eck, Prussian physician, 1795-1848]. See *fistula*.

Ecker's convolution, fissure (ek'erz) [Alexander Ecker, German anatomist, 1816-1887]. See *convolution, fissure*.

elabium (ek-la'be-um) [Gr. *ἐκ* out + L. *lab'ium* lip]. Eversion of the lips or of a lip.

elampsia (ek-lamp'se-ah) [Gr. *ἐκ* out + *λάμπειν* to flash]. A sudden attack of convulsions, especially one of a peripheral origin. **infantile e.**, eclampsia of reflex origin, as from teething, worms, rickets, fever, or diarrhea, or from temporary cerebral congestion. **e. nu'tans**, nodding spasm, or salaam convulsion. See *convulsion*. **puer-peral e.**, occurs at or near the end of pregnancy, and is often uremic. **e. ro'tans**, gyrosptasm. **uremic e.**, eclampsia caused by uremia due to suppression of the urine.

elampsism (ek-lamp'sizm). Bar's term for puerperal eclampsia without convulsive seizures, but with other signs of blood intoxication.

elamptic (ek-lamp'tik). Pertaining to or of the nature of eclampsia.

elamptism (ek-lamp'tizm). The condition due to the autointoxication incident to pregnancy, and marked by headache, visual impairment, and sometimes by convulsions.

eclamptogenic, eclamptogenetic, eclamptogenous (ek-lamp-to-jen'ik, ek-lamp-to-jen-et'ik, ek-lamp-toj'en-us). Causing convulsions.

Eclec. Abbreviation for *eclectic*.

eclectic (ek-lek'tik) [Gr. *ἐκλεκτικός* selecting]. Designating a sect or school which professes to select what is best from all other systems of medicine. See *eclecticism*.

eclecticism (ek-lek'tis-izm) [Gr. *ἐκ* out + *λέγειν* to select]. A system of medicine which treats diseases by the application of single remedies to known pathologic conditions, without reference to nosology, special attention being given to developing indigenous plant remedies.

eclysis (ek'lis-is). Mild syncope.

ecmnesia (ek-mne'ze-ah) [Gr. *ἐκ* out of + *μνήσις* memory]. Forgetfulness of recent events with normal memory for more remote ones.

ecochleation (e-kok-le-a'shun). 1. Excision of the cochlea. 2. Enucleation.

ecoid (e'koid). The colorless framework of a red blood-corpuscle.

ecology, oölogy (e-kol'o-je) [Gr. *oikos* house + *logos* treatise]. The science of organisms as affected by the factors of their environment; the study of the environment and life-history of organisms.

ecomania (e-ko-ma'ne-ah) [Gr. *oikos* house + *mania* madness]. Mental disorder marked by unhappiness and bad temper on the part of the patient in his domestic relations.

Economo's disease (a-kon'o-mōz). Encephalitis lethargica.

ecoparasite (e-ko-par'as-it). Same as *ecosite*.

ecophobia (e-ko-fō'be-ah). Oikophobia.

ecophony (ek-of'o-ne). Same as *echophony*.

ecosite (e'ko-sit) [Gr. *oikos* house + *stos* food]. A stationary parasite to which the host is immune.

écouvillon (a-koo-ve-yon') [Fr.]. A stiff brush or swab used in removing débris from the uterus or for swabbing out cavities and sores.

écouvillonnage (a-koo-ve-yon-nahzh') [Fr.]. The scrubbing of a cavity or a sore.

ecphyadectomy (ek'fi-ad-ek-to-me) [Gr. *ékhnas* appendix + *éktomē* excision]. Excision of the vermiform appendix.

ecphyaditis (ek'fi-ad-i'tis) [Gr. *ékhnas* appendix]. Inflammation of the vermiform appendix.

ecphyllactic (ek-fi-lak'tik). Pertaining to or marked by ecphyllaxis.

ecphyllaxis (ek-fi-lak'sis) [Gr. *ék* out of + *phylaxis* protection]. A condition of impotency of the antibodies or phyllactic agents in the blood.

ecphyma (ek-fi'mah), pl. *ecphy'mata* [Gr. *ék* out + *phuma* growth]. An outgrowth or protuberance. **e. glob'ulus**, a contagious disease of Ireland, characterized by the formation on the skin of tubercles which soften, forming red swellings.

écrasement (a-krahz-maw') [Fr.]. Removal by means of the *écraseur*.

écraseur (a-krah-zer') [Fr. "crusher"]. An instrument containing a chain or cord to be looped about a part and then tightened so as to divide the inclosed part.

ecsolent (ek'so-lent). The name of certain proprietary preparations for treatment of eczema and other skin eruptions.

ecsomatics (ek-so-mat'iks) [Gr. *ék* out + *ōma* body]. The study by laboratory methods of the materials removed from the body.

ecstasy (ek'stas-e) [Gr. *ékstasis*]. A kind of trance or state of fixed contemplation with mental exaltation, partial abeyance of most of the functions, and rapt expression of countenance.

ecstatic (ek-stat'ik). Pertaining to or characterized by ecstasy.

ectrophy (ek'stro-fe) [Gr. *ékstrophē* a turning out]. The turning inside out of a part, as the bladder or uterus. Same as *extrophy*.

ectacolia, ectacoly (ek-ta-ko'le-ah, ek-tak'o-le). Ectasia of a portion of the colon.

ectad (ek'tad) [Gr. *ékτός* without]. Outward; the reverse of inward.

ectal (ek'tal) [Gr. *ékτός* without]. Superficial or external.

ectasia, ectasis (ek-ta'ze-ah, ek'tas-is) [Gr. *ék* out + *teinein* to stretch]. Dilatation, expansion, or distention. **alveolar e.**, alveolar emphysema. See *emphysema*, 2d def. **diffuse arterial e.**, circoid aneurysm. **hypostatic e.**, dilatation of a blood-vessel from the effect of gravity on the blood. **e. i'ridis**, a condition in which the iris is displaced, causing smallness of the pupil. **papillary e.**, a circumscribed dilatation of the capillaries, forming a red spot on the skin,

ectasin (ek'tas-in) [Gr. *ék* out + *teinein* to stretch]. A substance derivable from tuberculin and having the properties of a vasomotor dilator.

ectasy (ek'ta-se). Same as *ectasia*.

ectatic (ek-tat'ik). Distended or stretched; distensible.

ectental (ek-ten'tal) [Gr. *ékτός* without + *éntos* within]. Pertaining to the ectoderm and entoderm.

ecterograph (ek'ter-o-graf) [Gr. *ékτός* outside + *γράφειν* to write]. An apparatus for recording graphically the movements of the intestines.

ectethmoids (ek-teth'moidz) [Gr. *ékτός* without + *ethmoid*]. The lateral masses of the ethmoids.

ecthol (ek'thol). A remedy for erysipelas, prepared from *Echinacea angustifolia* and *Thuja occidentalis*. Dose, 1 dr. (3.9 c.c.).

ecthyma (ek-thi'mah) [Gr. *ék* out + *thuein* to rush]. A pustular eruption, usually seated on a hardened base, and encircled by an inflammatory area. The pustules discharge, leaving spots of pigmented cicatrization. It is often the result of filth, hunger, and parasites. **e. gangræno'sum**, dermatitis gangræna infantum. **e. syphilit'icum**, an ecthymiform eruption in tertiary syphilis. **tropical e.**, dermatitis cupuliformis.

ecthymatiform, ecthymiform (ek-thim-at'if-orm, ek-thi'mif-orm). Resembling ecthyma.

ecthyreosis (ek-thi-re-o'sis) [Gr. *ék* out + *thyroid*]. Absence of the thyroid gland or loss of the function of the gland.

ectiris (ek-ti'ris) [Gr. *ékτός* without + *iris*]. The external layer of the iris.

ecto- [Gr. *ékτός* without]. A prefix denoting situated on, without, or on the outside.

ecto-antigen (ek-to-an'te-jen). An antigen which seems to be loosely attached to the outside of bacteria so that it can be readily removed by shaking them in physiological salt solution. Cf. *immunogen*.

ectoblast (ek'to-blast) [Gr. *ékτός* out + *βλαστός* germ]. 1. The ectoderm or epiblast. 2. Any external membrane; a cell-wall.

ectocardia (ek-to-kar'de-ah) [Gr. *ékτός* out + *καρδία* heart]. Displacement of the heart.

ectochoroidea (ek'to-ko-roid'e-ah) [Gr. *ékτός* out + *χοριοιδής* choroid]. The outer layer of the choroid coat of the eye.

ectocinerea (ek'to-sin-e're-ah) [Gr. *ékτός* outer + *cinerea*]. The cortical gray matter of the brain.

ectocinereal (ek'to-sin-e're-al). Relating to the ectocinerea.

ectocolon (ek-to-ko'lon) [Gr. *ékstasis* dilatation + *κόλον* colon]. Dilatation of the colon.

ectocolostomy (ek-to-ko-los'to-me) [Gr. *ékτός* outside + *colostomy*]. The surgical formation of an opening into the colon through the abdominal wall.

ectocondyle (ek-to-kon'dil). The external condyle of a bone.

ectocornea (ek-tō-kor'ne-ah) [Gr. *ékτός* outer + *cornea*]. The outer layer of the cornea.

ectocuneiform (ek-to-ku'ne-if-orm) [Gr. *ékτός* outer + *cuneiform*]. The outer cuneiform bone.

ectoeytic (ek-to-si'tik) [Gr. *ékτός* outside + *κύτος* cell]. Outside the cell.

ectodactylism (ek-to-dak'til-izm) [Gr. *ékτός* without + *δάκτυλος* finger]. Absence of a digit or digits.

ectoderm (ek'to-derm) [Gr. *ék* out + *δέρμα* skin]. The epiblast or outer layer of the primitive (two-layered) embryo; from it develop the epidermis and the neural tube. See *epiblast*. **blastodermic e.**, primitive e. See *Rauber's layer*, under *layer*.

ectodermal (ek-to-der'mal) [Gr. *ékτός* outside + *δέρμα* skin]. Pertaining to or derived from the ectoderm.

ectodermic (ek-to-der'mik). Ectodermal.

ectodermoidal (ek''to-der-moid'al). Of the nature of or resembling the ectoderm.

ecto-entad (ek-to-en'tad). From without inward.

ecto-enzyme (ek-to-en'zim). An enzyme which is secreted from a cell into the surrounding medium; an extracellular enzyme. Cf. *endo-enzyme*.

ectogenic, ectogenous (ek-to-jen'ik, ek-toj'en-us) [Gr. *ektós* outer + *γενῶν* to produce]. Developed outside the organism.

ectoglia (ek-tog'le-ah) [Gr. *ektós* without + *γλῆα* glue]. The thin external layer of the early medullary tube of the embryo.

ectoglobular (ek-to-glob'u-lar) [Gr. *ektós* outer + *globule*]. Formed outside the blood-globules.

ectogluteus, ectogluteus (ek''to-glu-te'us). The gluteus maximus muscle.

ectokelostomy (ek''to-ke-los'to-me) [Gr. *ektós* without + *κήλη* hernia + *στόμα* mouth]. Operation of displacing a hernial sac through the abdominal wall and keeping it open with drainage, followed by operation for radical cure.

ectoloph (ek'to-lof). The external ridge on an upper molar tooth of the horse.

ectomere (ek'to-mēr) [Gr. *ektós* outer + *μέρος* part]. Any one of the blastomeres which share in the formation of the ectoderm.

ectomesoblast (ek-to-mes'o-blast). The layer of cells which has not yet become differentiated into ectoblast and mesoblast.

ectonuclear (ek-to-nu'kle-ar). Outside the nucleus of a cell.

ectopagus (ek-top'a-gus) [Gr. *ektós* without + *πάγος* union]. A twin monster-fetus laterally united by the chest-walls.

ectoparasite (ek'to-par'as-it) [Gr. *ektós* outer + *παράσιτε*]. A parasite which lives on the outside of the body.

ectopectoralis (ek''to-pek-to-ra'lis). The pectoralis major muscle.

ectoperitoneal (ek''to-per-it-o-ne'al). Relating to the external or abdominal surface of the peritoneum.

ectoperitonitis (ek''to-per-it-o-ni'tis) [Gr. *ektós* outer + *περιτονίτις*]. Inflammation of the external or attached side of the peritoneum.

ectophylaxination (ek''to-fi-laks-in-a'shun). The process of rendering immune by the transference to the animal of a prophylactic substance which has been developed in some other animal.

ectophyte (ek'to-fit) [Gr. *ektós* outward + *φυτόν* plant]. An external vegetable parasite.

ectopia, ectopy (ek-to-pe'ah, ek'to-pe) [Gr. *ἐκτοπος* displaced]. Displacement or malposition, especially if congenital. **e. cor'dis**, displacement of the heart outside the thoracic cavity. **e. len'itis**, displacement of the crystalline lens of the eye. **e. vesicæ**, extrophy of the bladder.

ectopic (ek-top'ik). Out of the normal place.

ectoplasm (ek'to-plazm) [Gr. *ektós* without + *πλάσμα* a thing formed]. The outer, stiffer portion or region of the cytoplasm of a cell which may be differentiated in texture from the inner portion or endoplasm. Called also *exoplasm*, *ectoplast*, and *plasma membrane*.

ectoplasmatic (ek''to-plaz-mat'ik). Pertaining to ectoplasm; outside of the cell plasma.

ectoplast (ek'to-plast). See *ectoplasm*.

ectoplastic (ek-to-plas'tik) [Gr. *ektós* outside + *πλάσσειν* to shape]. Having a formative power on the surface, as, *ectoplastic* cells. See *cell*.

ectopotomy (ek-to-pot'o-me) [Gr. *ἐκτοπος* out of place + *τομή* cut]. Excision of the fetus in extra-uterine pregnancy.

ectopterygoid (ek-to-ter'ig-oid). The external pterygoid muscle.

ectoretina (ek-to-ret'in-ah) [Gr. *ektós* outer + *retina*]. The outermost layer of the retina.

ectosarc (ek'to-sark) [Gr. *ektós* outer + *σάρξ* flesh]. The outer layer of *Amoeba* and *Gregarinidia*.

ectoscopy (ek-tos'ko-pe) [Gr. *ektós* outer + *σκοπεῖν* to examine]. Determination of the outlines of the lungs and of localized internal conditions by visual inspection.

ectoskeleton (ek-to-skel'et-on). Same as *exoskeleton*.

ectosphenoïd (ek-to-sfe'noid). The outer cuneiform bone.

ectosphere (ek'to-sfēr). The outer zone of the centrosphere.

ectosteal (ek-tos'te-al). Pertaining to or situated on the outside of a bone.

ectostosis (ek-tos-to'sis) [Gr. *ektós* outside + *ὀστέον* bone]. Ossification beneath the perichondrium.

ectosuggestion (ek''to-sug-jes'chun) [Gr. *ektós* without + *suggestion*]. A suggestion originating from outside; the reverse of autosuggestion.

ectothrix (ek'to-thrix) [Gr. *ektós* outer + *θρίξ* hair]. A form of trichophyton which does not invade the hair, but is found on the surface of the hair shaft.

ectotoxemia (ek''to-toks-e'me-ah) [Gr. *ektós* outer + *toxemia*]. Toxemia produced by a substance introduced from outside the body.

ectotoxic (ek-to-tok'sik). Secreting toxin freely: said of bacteria.

ectotoxin (ek-to-tok'sin). Exotoxin.

ectotriceps (ek-to-tri'seps). The outer head of the triceps muscle.

Ectotrichophyton (ek''to-tri-kof'it-on) [Gr. *ektós* outside + *θρίξ* hair + *φύτον* plant]. A genus of fungi which attack the surface of the hair shaft.

ectozoön (ek-to-zo'on), pl. *ectozoa* [Gr. *ektós* outward + *ζῷον* animal]. An animal ectoparasite.

ectrimma (ek-trim'ah) [Gr.]. An ulcer caused by friction; a bed-sore.

ectrodactylia, ectrodactylism (ek''tro-dak-til'e-ah, ek-tro-dak'til-izm) [Gr. *ἐκτρωμα* abortion + *δάκτυλος* finger]. Congenital absence of digits.

ectrogenic (ek-tro-jen'ik). Marked by ectrogeny.

ectrogeny (ek-troj'en-e) [Gr. *ἐκτρωμα* abortion + *γενῶν* to produce]. Congenital absence or defect of a part.

ectromelia (ek-tro-me'le-ah). Absence of a limb or limbs.

ectromelic (ek-tro-mel'ik). Having abortive limbs; of the nature of an ectromelus.

ectromelus (ek-trom-el-us) [Gr. *ἐκτρωμα* abortion + *μέλος* limb]. A monster characterized by defective limbs or no limbs.

ectropion, ectropium (ek-tro-pe-on, ek-tro-pe-um) [Gr. *ἐκ* out + *τρέπειν* to turn]. Eversion or turning out of the edge, as of an eyelid.

ectropionize (ek-tro-pe-on-iz). To put into a state of ectropion or eversion.

ectrosis (ek-tro'sis) [Gr.]. Abortion; abortive treatment of disease.

ectrosyndactyly (ek''tro-sin-dak'til-e) [Gr. *ἐκτρωμα* abortion + *σύν* together + *δάκτυλος* finger]. A condition in which some of the digits are missing and those that remain are coherent.

ectrotic (ek-trot'ik). Abortive; arresting the development of a disease.

eczema (ek'ze-mah) [Gr. *ἐκζεῖν* to boil out]. An inflammatory skin disease with vesiculation, infiltration, watery discharge, and the development of scales and crusts. The lesions vary much in character, and the disease is frequently attended with restlessness and fever and other symptoms of constitutional disturbance, as well as by local itching and burning. **e. a'ni** affects the surface of the anus. **bakers' e.** See *bakers' itch*, under *itch*. **e. bar'bæ** attacks the parts covered by the beard. **e. cap'itis**, eczema of the scalp.

e. crusto'sum, a variety with thinnish yellow crusts. **e. diabeticum**, a form which accompanies glycosuria. **e. epizootica**. See *foot-and-mouth disease*. **e. erythematousum**, a relatively mild form of eczema with erythematous patches. **e. fissum**, a variety with hardened and fissured skin. **e. hypertrophicum**, a disease characterized by enlargement of the skin papillae, resulting in a crop of warty outgrowths. **infantile e.**, a form common in young infants and occurring especially during dentition. **e. intertrigo**. Same as *intertrigo*. **lichenoid e.**, a variety characterized by thickening of the epidermis. **e. mad'idans**, a form, of various subvarieties, marked by hot, moist, and swollen skin. **e. marginatum**. See *linea cruris*. **e. neuriticum**, any eczema appearing in patches limited to defined areas supplied by particular cutaneous nerves. **e. papulosum**, a form accompanied by the formation of minute papules of firm consistence and deep red color and by severe itching. **e. parasiticum**, any form due to an animal or vegetable parasitic microorganism. **photographers' e.**, metol dermatitis. See *metol*. **e. pustulosum**, a form marked by the formation of pustules. **e. rubrum**, a form of eczema marked by infiltration, thickening, often with swelling and sometimes with intermittent edema and variable degrees of redness. The surface is usually oozing. **e. sclerosum**, keratosis of the palms and soles. **e. seborrhoeicum**. See *seborrhea*. **see-saw e.**, eczema alternating with some other disease. **e. solare**. Same as *lichen tropicus*. **e. squamosum**, a variety characterized by adherent scales of shed epithelium. **e. verrucosum**, a warty type, affecting chiefly aged or elderly persons. **e. vesiculosum**, eczema marked by the presence of vesicles. **weeping e.**, a form marked by fluid exudation on the surface.

eczematization (ek-zem'at-iz-a'shun). Persistent eczema-like lesions of the skin due to continued traumatism and scratching.

eczematoid (ek-zem'at-oid). Resembling eczema.

eczematosis (ek-zem-at-o'sis). Any eczematous disease.

eczematous (ek-zem'at-us). Affected with or of the nature of eczema.

eczemoline (ek-zem'o-lén). A proprietary preparation of zinc salts: used for skin diseases.

E. D. Abbreviation for *erythema dose*.

edea, œdea (e-de'ah), pl. [Gr. *αἰδοῖα*]. The genital organs.

Edebohls's operation, position (ed'eb-ōlz) [George M. *Edebohls*, New York surgeon, 1853-1908]. See under *operation* and *position*.

edeitis, œdeitis (e-de-i'tis) [Gr. *αἰδοῖα* genitals + *-itis* inflammation]. Inflammation of the genitals.

edema, œdema (e-de'mah) [Gr. *οἰδῆμα* swelling]. Swelling due to accumulation of fluid in the tissues or cavities of the body. **ambulant e.** See *Calabar swelling*, under *swelling*. **angioneurotic e.**, circumscribed edematous patches arising from an angioneurosis. **blue e.**, a puffed, bluish appearance of a limb in hysteric paralysis. **brown e.**, hardening and infiltration of the lung with a brownish fluid. **e. bullosum vesicæ**, a condition of the mucous lining of the bladder marked by the formation of clear vesicles with small white particles floating between them. **e. cal'idum**. Same as *inflammatory e.* **cardiac e.**, edema due to heart disease. **circumscribed e.**, angioneurotic edema. **collateral e.**, edema of one part of a paired organ, as the lungs, produced by overaction on account of disease of the other part. **e. ex vac'uo**, edema of a part resulting from the vacuum caused by atrophy of some structure in the part. **famine e.**, war edema. **flying e.**, temporary swellings in any part of the body, due to effusion of fluid. **e. frig'idum**. Same as *non-inflammatory e.* **e. fu'gax**, flying edema. **gase-**

ous e., subcutaneous emphysema. **hereditary e.**, a peculiar inherited tendency to the occurrence of acute attacks of local edema. **Huguenin's e.**, acute congestive edema of the brain. **hunger e.**, war edema. **hydremic e.**, edema in conditions marked by hydermia. **inflammatory e.**, a form due to inflammation, and attended with redness and pain. **lymphatic e.**, edema in which the effused liquid comes from the lymph-vessels. **malignant e.**, edema marked by rapid extension, with destruction of tissue and the formation of a gas. **mucous e.**, myxedema. **mycotic e.**, edema mycosis: the South African horse-sickness; a deadly epizootic of microbial origin. **e. neonatosum**, a disease of newborn children marked by spreading edema with cold, livid skin. **neuropathic e.** See *pseudolipoma*. **non-inflammatory e.**, edema without redness and pain, occurring from passive congestion or a watery condition of the blood. **nutritional e.**, war edema. **pulmonary e.**, an effusion of serous fluid into the air-vesicles and interstitial tissue of the lungs. **purulent e.**, a swelling due to the effusion of a purulent fluid. **Quincke's e.**, acute circumscribed edema of the skin. **renal e.**, edema due to nephritis. **rheumatismal e.**, painful red, edematous swellings on the limbs in rheumatism, due to subcutaneous exudation. **salt e.**, edema produced by an increase of sodium chlorid in the diet. **solid e.**, myxedema. **venous e.**, edema in which the effused liquid comes from the blood. **war e.**, a condition which occurred widely throughout Germany during the Great War, marked by suddenly developing edema, especially of the lower limbs, by polyuria, bradycardia, and asthenia. The scrotum is sometimes affected. The edema soon disappears when the patient is put to bed. It is caused by dietary deficiency. Called also *famine edema*, *famine dropsy*, *hunger edema*, and *nutritional dropsy*.

edematin, œdematin (e-dem'at-in). The substance composing the microsomes of a cell.

edematization (e-dem-at-iz-a'shun). The act of making edematous.

edematous (e-dem'at-us). Pertaining to or affected by edema.

edentulous (e-den'tu-lus) [L. *e* without + *dens* tooth]. Without teeth; lacking teeth.

edeology, œdeology (e-de-ol'o-je) [Gr. *αἰδοῖα* genitals + *λόγος* treatise]. The study of the genital organs.

edestan (e-des'tan). An insoluble form of edestin produced by an increase of the hydrogen-ion concentration.

edestin (e-des'tin). A pure crystalline protein obtained from hemp-seed, castor oil bean, and other seeds. It is used in estimating the peptic index according to the method of Fuld.

Edinger's law, nucleus, etc. (ed'in-gerz) [Ludwig *Edinger*, German neurologist, 1855-1918]. See under *law*, *nucleus*, etc.

Edlefsen's reagent (ed'lef-senz) [Gustav J. J. F. *Edlefsen*, German physician, born 1842]. See *reagent*.

Edsall's disease (ed'salz) [David Linn *Edsall*, physician in Boston, born 1869]. Heat-cramp. See under *cramp*.

educated corpuscle (ed'u-ka-ted). See under *corpuscle*.

educt (e'dukt). A substance extracted from organic matter without any alteration in its composition: opposed to product.

edulcorant (e-dul'ko-rant). Sweetening.

edulcorate (e-dul'ko-rāt). To sweeten.

eelworm (ē'l'wurm). Same as *ascaris*.

effect (ef-ekt'). The result produced by an action.

Compton e., a change in the wave length of scattered rays and emission of recoil electrons in deep radiation. **contrary e.**, Hata's phenomenon. **Danyasz e.**, Danyasz phenomenon. See

phenomenon. **Hallwacks e.**, photo-electric effect. **Mierzejewski e.**, the disharmonious development of gray and white-matter of the brain, the gray being in excess. **photo-electric e.**, the ejection of electrons from matter when light of short wave-lengths falls upon it. **Russall e.**, the rendering of a photographic plate developable by substances other than light. Called also *photoelectric effect*. **Soret e.**, when a solution is maintained for some time in a temperature gradient, the upper part being warmer than the lower, a difference in concentration between the two parts is set up. **Tyndall e.** See *Tyndall phenomenon*, under *phenomenon*. **Zeeman e.**, separation of a single line in the spectrum by suitable magnetic fields.

effector (ef-ek'tor). A nerve end-organ which serves to distribute impulses which activate muscle contraction and gland secretion. **somatic e.**, one of the nerve end-organs in the striated skeletal muscles. **visceral e.**, one of the end-organs in involuntary muscle.

effemination (ef-fem-in-a'shun). The condition in which a man has the feelings and tastes of a woman.

effertent (ef'er-ent) [L. *ex* out + *fer're* to bear]. Conveying blood or a secretion away from a part; conveying impulses away from a nerve-center.

effertient (ef-er-en'shal). Same as *effertent*.

effervescent, **effervescing** (ef-er-ves'ent, ef-er-ves'ing) [L. *efferves'cens*]. Bubbling; sparkling; giving off gas-bubbles.

effleurance (ef-lu-rahzh') [Fr.]. Stroking movement in massage.

efflorescence (ef-lo-res'ens) [L. *efflorescen'tia*]. 1. The fact or state of being efflorescent. 2. A rash or eruption; any skin lesion.

efflorescent (ef-lo-res'ent) [L. *efflores'cere* to bloom]. Becoming powdery in consequence of losing the water of crystallization.

effluve (ef-fluiv'). A spray-like electric discharge.

effluvium (ef-lu've-um), pl., *effluvia* [L. *e* out + *flu'ere* to flow]. An ill-smelling exhalation, especially if of noxious character. **telluric e.**, an exhalation arising from the earth.

effumability (ef-u-ma-bil'it-e) [L. *ex* out + *fu'mus* smoke]. The property of being volatilized easily.

effuse (ef-üz') [L. *effu'sus*, from *ex* out + *fu'n'dere* to pour]. Spread out, profuse; said of bacterial growth that is thin, veily, and unusually spreading.

effusion (ef-u'zhun) [L. *effu'sio* a pouring out]. 1. The escape of fluid into a part or tissue. 2. An effused material.

efunículate (e-fu-nik'u-lät) [L. *e* priv. + *funiculus*]. Having no funiculus or navel-string.

egagropilus (e-gag-röpil-us) [Gr. *aiξ* goat + *πiλος* ball]. A hairy tumor of the stomach; hair-ball.

eggersimeter (e-ger-sim'e-ter). An instrument for testing the electric excitability of nerves and muscles.

egesta (e-jes'tah) [L. *e* out + *ger'ere* to bear]. Excreted matter; waste material thrown out from the body.

egg (eg) [L. *o'vum*]. The animal ovum, especially one which is hatched outside the body. **e.-albumin**, a principle which constitutes 20 per cent. of the white of hens' eggs. **e.-flip**. See *mistura spiritus vini gallici*. **holoblastic e.**, one in which the entire yolk undergoes segmentation. **e.-membrane**, the membrane which surrounds the ovum, or egg; if derived from the ovum, it is called *primary*; if from neighboring structures, it is *secondary*. **meroblastic e.**, one in which the yolk contains much nutrient matter which does not take part in segmentation. **e.-shell**. See *testa ovi*. **e.-yolk**. See *vitellus*.

Eggleston's method (eg'el-stunz) [Carey Eggleston, New York physician]. See under *method*.

egilops (e'jil-ops) [Gr. *aiξ* goat + *ωψ* eye]. Perforating abscess at the inner canthus of the eye.

eglandulous (e-gland'u-lus) [L. *e* without + *glandula* glandule]. Having no glands.

eglatol (eg'lat-ol). A compound of the chloral group: used as a hypnotic and nervine. Dose, 7½-15 gr. (0.5-1 gm.) a day.

egmol (eg'mol). A proprietary egg emulsion with olive oil: used as a nutritive.

egobronchophony (e'go-bron-kof'o-ne) [Gr. *aiξ* goat + *bronchophony*]. The bleating and bronchial voice characteristic of pleuropneumonia.

egocentric (e-go-sen'trik) [L. *ego* I + *centric*]. Self-centered; having all the ideas centered about one's self.

egol (e'gol). Any orthotitroparasulphonate of mercury and potassium combined with a phenol; the egols are red-brown, soluble powders: antiseptic and emetic.

egomania (e-go-ma'ne-ah) [Gr. *έγω* I + *μανία* madness]. Morbid self-esteem.

egophony (e-gof'o-ne) [Gr. *aiξ* goat + *φωνή* voice]. A bleating quality of voice observed in auscultation in certain cases of lung consolidation (Laennec).

Egyptian chlorosis. See *chlorosis*.

Ehrenritter's ganglion (er'en-rit-erz) [Johann Ehrenritter, Austrian anatomist, died 1790]. See *ganglion*.

Ehret's disease (er'ets) [Heinrich Ehret, German physician, born 1870]. See *disease*.

Ehrlich's reaction (air-likes) [Paul Ehrlich, German scientist at Frankfurt-on-the-Main, 1854-1915]. See under *reaction*. **E's side-chain theory**. See under *theory*. **E's "606."** See *salvarsan*.

Ehrlich-Hatta preparation [Paul Ehrlich; S. Hatta, Japanese chemist]. See *salvarsan*.

Eichhorst's corpuscles, **neuritis** (ik'horsts) [Hermann Eichhorst, Swiss physician, 1849-1921]. See *corpuscle* and *neuritis*.

Eichstedt's disease (ik'stedz) [Karl Ferdinand Eichstedt, physician in Greifswald, 1816-1892]. Pityriasis versicolor.

eiconometer, **eikonometer** (i-ko-nom'et-er) [Gr. *εικων* image + *μετρον* measure]. An eye-piece micrometer for measuring a microscopic object.

eidetic (i-det'ik). A person who is able to reproduce exact visualization of events or of pictures or objects he has seen; a person who can objectify things at will.

eidoptometry (i-dop-tom'et-re) [Gr. *ειδος* form + *μετρον* to see + *μετρον* measure]. Measurement of the acuteness of vision for the perception of form.

eighth nerve. The auditory nerve.

eigon (i'gon). A general name for compounds of albumin with iodine: used as substitutes for iodine, iodoform, etc. **alpha-e.**, a light-brown powder containing 20 per cent. of iodine. Called also *iodo-albumin*. **beta-e.**, iodized pepsin, containing a 15 per cent. solution of iodine; it is a yellowish, odorless and tasteless powder: used internally as a substitute for iodine, especially where there is digestive weakness. Dose, 5-50 gr. (0.33-3.25 gm.).

eikonogen (i-kon'o-jen). A photographic developer, amino naphthol sulphate, $\text{OH.C}_{10}\text{H}_6.(\text{NH}_2)_2\text{SO}_4\text{OH}$.

eikonometer (i-ko-nom'et-er). See *eiconometer*.

eiloid (i'loid) [Gr. *ειλεω* to coil + *ειδος* form.] Having a coiled appearance.

eiloin (i-lo'in). A proprietary antirheumatic preparation.

Eimeria (i-me're-ah). A genus of coccidians in which an oöcyst contains four spores and each spore two sporozoites. Various species are parasitic in the epithelial cells of man and animals, the oöcysts being found in the feces. **E. a'vium**, a species found in birds. **E. clupearum** is found almost constantly in the livers of herrings (*Clupea harengus*) and to a lesser extent in the livers of

sprat (young herring) and mackerel (*Scomber scomber*). When these fish are eaten by man the sporocysts may pass through the intestinal tract and be found in the feces. This seems to be the origin of *E. wenyonii*. **E. falcifor'mis**, a species found in mice. **E. hom'inis**, a parasite found in the exudate in a case of purulent pleurisy. **E. oxy's-pora**, a rare species found in man. **E. sardi'næ** is found in large numbers in the testes of sprats (young herrings), to some extent in the "soft roes" of adult herring (*Clupea harengus*), and in tinned sardines. Probably this is the origin of *E. oxy'spora* and *E. snijdersi*. **E. snij'dersi**, reported from man in Sumatra. **E. sti'edæ** is found in the liver of rabbits. **E. weny'o'ni**, a parasite occasionally found in man.

Einhorn's saccharimeter, test (in'hornz) [Max Einhorn, physician in New York, born 1862]. See under *saccharimeter* and *tests*.

Einthoven's string galvanometer (in'to-venz) [Willem Einthoven, physiologist in Leyden, born 1860]. See under *galvanometer*.

eisanthema (is-an'them-ah) [Gr. *eis* into + *anthêin* to bloom]. An eruption on a mucous surface.

Eisenia (i-se'ne-ah). A genus of chælopod worms. *E. fo'tida* was found in the urine.

Eisenlohr's syndrome (i'sen-lörz) [Carl Eisenlohr, German physician, 1847-1898]. See under *syndrome*.

eisensajodin (i'sen-sa-i'o-din) [Ger.]. Iron iodobehenate, a reddish powder, used like ferrous iodid.

Eisenzucker (i'zen-tsook-er) [Ger.]. Ferric hydroxid made soluble by the addition of sugar and a small amount of sodium hydroxid: a chalybeate remedy. Dose, 10 gr. (0.65 gm.).

eisodic (is-od'ik) [Gr. *eis* into + *ôdô's* way]. Affertor or centripetal.

Eitelberg's test (i'tel-bergz) [Abraham Eitelberg, Austrian physician, born 1847]. See under *tests*.

Eiweissmilch (i'vis-mil'tsh) [Ger.]. Albumen milk. See under *milk*.

E.-j. Abbreviation for *elbow-jerk*.

ejaculatio (e-jak-u-la'she-o) [L.]. Ejaculation. **e. præ'cox**, ejaculation of the semen immediately after the beginning of the sexual act; premature ejaculation.

ejaculation (e-jak-u-la'shun) [L. *ejacula'tio*]. A sudden act of expulsion, as of the semen.

ejaculatory (e-jak'u-la-to-re) [L. *ejaculato'rius*]. Serving as a channel of ejaculation. **e. duct.** See under *duct*.

ejecta (e-jek'tah) [L. pl.; from *e* out + *ja'cere* to cast]. Excrementitious matters; refuse.

Ejusd. Abbreviation for *L. ejus'dem*, of the same.

EK, EKG. Abbreviation for *electrocardiogram*.

ekaiodoform (e'kah-i-o'do-form). Iodoform mixed with 0.05 per cent. of paraformaldehyd: a bactericide, used in dressing wounds.

ekamanganese (e'kah-man'gan-ës). Rhenium.

ekatatantalum (ek-ah-tan'tal-um). Same as *proto-actinium*.

ekiri (e-ki'ri). An acute and fatal form of endemic diarrhea occurring in Japan.

ekphonize (ek'fo-niz). To revive an engram into the consciousness.

ektebin (ek'te-bin). Moro's tuberculin in an ointment base containing a keratolytic substance: used for the percutaneous treatment of tuberculosis.

ektogan (ek'to-gan). Zinc peroxid.

ekzemin (ek'ze-min). A proprietary sulphur ointment.

elacin (el'as-in). Degenerated elastic tissue.

elæomyenchysis. See *elæomyenchysis*.

elæoptene (el-e-op'tên). See *elæopten*.

elæosaccharum. See *elæosaccharum*.

elaïdin (el-a'id-in) [Gr. *ἐλαϊον* oil]. A crystallizable fat, $C_{57}H_{104}O_6$, from various oils.

elaïometer (el-a-om'et-er). Same as *elæometer*.

elaïopathia (el-a-o-path'e-ah). Elaïopathy.

elaïopathy (el-a-op'ath-e) [Gr. *ἐλαϊον* oil + *πάθος* disease]. A diffuse fatty edema, usually attacking the joints of the lower extremities, the effect of contusions or distortions incurred in war, and attributed to the formation of an irritating oily substance and its action upon the subcutaneous cellular tissue (C. Blondi, 1917). **pathomimic e.**, the simulation of disease produced by the injection of liquid vaselin subcutaneously.

elaïoplast (el-a'o-plast) [Gr. *ἐλαϊον* oil + *πλάσσειν* to form]. A fat-producing plastid.

Elaps (e'laps). A genus of poisonous snakes, including the harlequin snakes of North America and the coral snakes of tropical America.

elarson (el-ar'son). Strontium chlorarsenobehenate: used in chlorosis, anemia, chorea, and skin diseases. Dose, $\frac{1}{8}$ gr. (0.008 gm.).

elastic (e-las'tik) [L. *elas'ticus*]. Susceptible of being stretched, compressed, or distorted, and then tending to assume its original shape.

elastica (e-las'tik-ah) [L.]. Gum-elastic or caoutchouc.

elasticin (e-las'tis-in). Same as *elastin*.

elasticity (e-las'tis'it-e). The quality or condition of being elastic.

elastin (e-las'tin). A yellow, albuminoid substance, the essential constituent of yellow, elastic tissue: when dry, it is brittle, but when moist, is flexible and elastic. Elastin is insoluble in water or in cold alkaline solutions, but dissolves in sulphuric acid and in alkaline solutions on boiling.

elastinase (e-las'tin-äs). An enzyme that dissolves elastic tissue.

elastoid (e-las'toid). A substance formed by the hyaline degeneration of the internal elastic lamina of blood-vessels: seen in the vessels of the uterus after delivery.

elastoma (e-las-to'mah). See *pseudoxanthoma elasticum*.

elastometer (e-las-tom'et-er) [L. *elas'ticus* elastic + *me'trum* measure]. An instrument for determining the elasticity of tissues, and thus measuring the degree of edema.

elastose (e-las'tôs). An albumose formed by treating elastin with ferments, acids, or alkalis.

elaterin (e-lat'er-in) [L. *elaterium*]. A crystalline principle, $C_{20}H_{28}O_6$, from elaterium: a violent hydragogue purgative. Dose, $\frac{1}{32}$ - $\frac{1}{16}$ gr. (0.002-0.004 gm.); of triturate, $\frac{1}{2}$ - $\frac{1}{4}$ gr. (0.03-0.04 gm.).

elaterium (el-at'e-re-um) [L.]. A deposit from the juice of *Ecballium elaterium*, a hydragogue cathartic and diuretic: it is used in dropsy, and as a revulsive in congestion of the brain. Dose, $\frac{1}{2}$ - $\frac{1}{4}$ gr. (0.01-0.016 gm.); of triturate, $\frac{1}{2}$ gr. (0.03 gm.); of compound powder, $\frac{1}{2}$ -5 gr. (0.03-0.3 gm.).

elayl (el'a-il). Ethylene.

elbon (el'bon). White crystals of cinnamoyl paroxyphenyl urea: used as an expectorant.

elbow (el'bo) [L. *cu'bitus*]. 1. The bend of the arm; the joint which connects the arm and forearm. 2. Any angular bend. **capped e.**, a swelling of the bursa or a hard, fibrous mass on the point of the elbow in horses or cattle. Called also *shoe-boil*. **miners' e.**, enlargement of the bursa over the point of the elbow caused by resting the weight of the body on the elbow in mining. **tennis e.**, epicondylalgia caused by strain in playing tennis.

elcosis (el-ko'sis). Same as *helcosis*.

elder (el'der). The plants, *Sambucus ni'gra*, of Europe, *S. canadensis*, of America, and other congeneric species: the flowers, which contain a volatile oil, are used in dressing wounds, burns, ulcers, etc. See *Sambucus*.

eldoform (el'do-form). A proprietary combination of yeast and tannin for use in diarrhea.

Elec. Abbreviation for *electricity* and *electuary*.

elecampa (el''kam-pān'). The *In'ula helle-nium*, a composite-flowered plant: its root is a stimulant, antieptic, and tonic, and is used in dyspepsia, bronchitis, and amenorrhea.

Electra complex (e-lek'trah). See under *complex*.

electrargol (e-lek-trar'gol). A proprietary colloid silver solution; antiseptic and germicidal. It is used subcutaneously, intravenously, and intramuscularly. Dose, 5 to 25 c.c.

electrauro (e-lek-traw'rol). A proprietary colloid gold solution.

electric, electrical (e-lek'trik, e-lek'trik-al). Pertaining to electricity.

electricity (e-lek-tris'it-e) [Gr. *ἤλεκτρον* amber]. One of the fundamental forms of energy. It exists as negative and as positive electricity, both of which are ultimately granular or atomic. The atom of negative electricity is the electron and the atom of positive electricity seems to be the proton. From these two units all matter seems to be built up. See *atom*. Electricity may be developed by friction (**static e.**, **frictional e.**, **franklinic e.**) or by various chemical or mechanical means. **negative e.**, **resinous e.**, static electricity of the kind that is generated by rubbing resin, amber, sulphur, or sealing-wax with flannel. **positive e.**, **vitreous e.**, static electricity of the kind that is produced by rubbing glass with silk. When not static, it is called **dynamic e.** or **current e.**; if aroused by chemical reaction, it is called **galvanic e.** or **voltic e.**; induction develops **faradic e.**, and a magnet, **magnetic e.**

electrify (e-lek'trif-i). To charge with electricity.

electrization (e-lek-tri-za'shun). The act of charging with or treatment by electricity. **direct e.**, electrization by applying one electrode to a muscle or to its motor point, and the other to an indifferent point.

electro- [Gr. *ἤλεκτρον* amber]. A prefix denoting some connection with or relation to electricity.

electro-affinity (e-lek''tro-af-in'it-e). The degree of tenacity with which the ions of an element hold their charges.

electro-analysis (e-lek''tro-an-al'is-is). Chemical analysis performed by the aid of the electric current.

electro-anesthesia (e-lek''tro-an-es-the'ze-ah). Anesthesia induced by electricity.

electrobiolgy (e-lek''tro bi-ol'oj-e) [*electro- + biolgy*]. The study of electric phenomena in the living body, whether developed by vital or other processes.

electrobioscropy (e-lek''tro-bi-os'ko-pe) [*electro- + Gr. *bios* life + σκοπεῖν to see*]. The determination of the presence or absence of life by means of an electric current.

electrocardiogram (e-lek''tro-kar'de-o-gram). A cardiogram or record of electromotive variations in the action of the heart. The normal electrocardiogram shows upward and downward deflections, the result of auricular and ventricular activity. The first upward deflection, P, is due to contraction of the auricles and is known as the *auricular complex*. The other deflections, Q, R, S, T, are all due to the action of the ventricles, and are known as the *ventricular complexes*.

Scheme of the normal electrocardiogram (Stevens).

electrocardiograph (e-lek''tro-kar'de-o-graf). An instrument, consisting of a string galvanometer, for performing electrocardiography.

electrocardiography (e-lek''tro-kar-de-og'raf-e). The making of graphic records of the electric cur-

rents emanating from heart muscle, as a method for studying the action of the heart muscle.

electrocardiophonogram (e-lek''tro-kar'de-o-fō'no-gram). A record of the heart-sounds made by an electrocardiophonograph.

electrocardiophonograph (e-lek''tro-kar'de-o-fō'no-graf). An apparatus for recording electrically the heart-sounds.

electrocatalysis (e-lek''tro-kat-al'is-is). The catalytic effect produced by electricity on the bodily processes.

electrocautery (e-lek-tro-kaw'ter-e). Same as *galvanocautery*.

electrochemistry (e-lek-tro-kem'is-tre). The study of chemic changes produced by electric action.

electrocision (e-lek-tro-sizh'un). Excision of malignant growths after the application to them of oscillatory electricity.

electrocoagulation (e-lek''tro-ko-ag-u-la'shun). The cooking and destruction of a tumor by passing through it a bipolar high-frequency current; surgical diathermy.

electrocontractility (e-lek''tro-kon-trak-til'it-e). Contractility in response to electric stimulation.

electrocuprol (e-lek''tro-ku'prol). Colloidal copper: used in tuberculosis.

electrocystoscope (e-lek-tro-sis'to-skōp). A cystoscope which utilizes the electric light.

electrode (e-lek'trōd) [Gr. *ἤλεκτρον* amber + *δῶς* way]. The way by which electricity passes in or out; the terminal pieces fastened to the cords of an electric battery. **active e.** Same as *therapeutic e.* **brush e.**, a wire brush connected with one of the poles of an electric battery: used for applying electricity to the body. **calomel e.**, an electrode used as a standard in the determination of hydrogen-ion concentration because it develops a constant potential. It consists of metallic mercury in contact with calomel and hydrochloric acid. **depolarizing e.**, one which has a resistance greater than that of the portion of the body inclosed in the circuit. **exciting e.** Same as *therapeutic e.* **hydrogen e.**, an electrode made by depositing platinum black on platinum and then allowing it to absorb hydrogen gas to saturation. It is used in the determination of hydrogen-ion concentration. **indifferent e.** Same as *silent e.* **negative e.**, the cathode. **positive e.**, the anode. **silent e.**, the electrode which is not therapeutically active. **therapeutic e.**, the electrode used in making the therapeutic application.

electrodesiccation (e-lek''tro-des-ik-a'shun). Dehydration of tissue by the use of a monopolar current through a pointed needle electrode.

electrodiagnosis (e-lek''tro-di-ag-no'is). The use of electricity in the diagnosis of diseases.

electrodiaphane (e-lek-tro-di'af-ān). Same as *diaphanoscope*.

electrodiaphany (e-lek''tro-di-af'an-e) [*electro- + Gr. *diaphainein* to show through*]. Same as *diaphanoscopy*.

electrodynamometer (e-lek''tro-di-nam-om'et-er). An instrument used in measuring the intensity of faradic currents.

electro-endosmosis (e-lek''tro-en-dos-mo'sis). Cathoresis in which the solid remains stationary and the water of the solution passes toward the electrodes.

electrogastrogram (e-lek''to-gas'tro-gram). A tracing of the electric changes caused by contractions of the stomach muscles.

electrogenesis (e-lek-tro-jen'es-is) [Gr. *ἤλεκτρον* amber + *γενεσις* production]. The production of electricity.

electrograph (e-lek'tro-graf). 1. Same as *skiagraph*. 2. A tracing of the electric changes caused

by the contractions of the muscles of an organ, such as the heart or stomach.

electrography (e-lek-'tro-g'raf-e) [*electricity* + Gr. *γράφειν* to record]. 1. The employment of the Roentgen rays in skiagraphy. 2. The making of electrographs.

electrohemostasis (e-lek''tro-he-mos'ta-sis) [*electro* + *hemostasis*]. The arrest of hemorrhage by means of electricity.

electro-ionic (e-lek''tro-i-on'ik). A term applied to medication by driving ions into the skin with the electric current.

electrokinetic (e-lek''tro-kin-et'ik). Pertaining to motion produced by an electric current.

electrolepsy (e-lek'tro-lep-se). Electric chorea.

electrolithotripsy (e-lek'tro-lith-ot'rit-e). The disintegration of calculi by an electric current.

electrology (e-lek-trol'o-j-e) [*electro* + Gr. *λόγος* science]. The science of the phenomena and properties of electricity.

electrolysis (e-lek-trol'is-is) [*electricity* + Gr. *λύειν* to loose]. Chemic decomposition produced by passing a current of electricity through the compound.

electrolyte (e-lek'tro-lit) [*electricity* + Gr. *λυτός* soluble]. Any substance which in solution conducts the electric current and is decomposed by it; decomposable by electricity. **amphoteric e.**, an electrolyte which dissociates to produce both hydrogen (H') and hydroxyl (OH') ions. Called also *ampholyte*.

electrolytic (e-lek-tro-lit'ik). Pertaining to electrolysis.

electrolyzable (e-lek'tro-li-zab'l). Susceptible of being decomposed by the electric current.

electrolyzer (e-lek'tro-li-zer). An instrument for reducing urethral strictures by electrolysis.

electromagnet (e-lek-tro-mag'net). A temporary magnet made by passing an electric current through a piece of soft iron.

electromagnetism (e-lek-tro-mag'net-izm). Magnetism produced by a galvanic current.

electromartiol (e-lek''tro-mar'te-ol). Colloidal iron: used in the anemias.

electromassage (e-lek''tro-mas-ahzh'). Massage combined with the application of electricity.

electromercurool (e-lek-tro-mer'ku-rol). A colloidal suspension of metallic mercury containing a small amount of sodium arabate: used like the soluble salts of mercury intravenously or intramuscularly.

electrometer (e-lek-trom-et'er) [*electricity* + Gr. *μέτρον* measure]. An instrument for measuring static or other electricity or differences in electric potential. **gold-leaf e.**, an instrument for detecting the presence of electricity by the divergence of two slips of gold leaf. **Lippmann's capillary e.**, an instrument for measuring small differences of electric potential (up to 0.95 volt).

electrometrogram (e-lek'tro-met'ro-gram) [*electric* + Gr. *μήτρα* uterus + *γράφμα* mark]. An electric apparatus for recording uterine contractions.

electromotive (e-lek-tro-mo'tiv). Causing electric activity to be propagated along a conductor.

electromuscular sensibility (e-lek-tro-mus'ku-lar). Sensibility of muscles to electric stimulation.

electromyogram (e-lek''tro-mi'o-gram). A tracing which records the electric response in a contracting muscle.

electromyography (e-lek''tro-mi-og'raf-e) [*electric* + *myography*]. The recording by tracings of the electric currents set up by muscular action.

electron (e-lek'tron). The unit or "atom" of negative electricity. It is equivalent to 4.77×10^{-10} absolute electrostatic units or 1.59×10^{-20} absolute electromagnetic units, and its mass when moving at moderate speed is $\frac{1}{1845}$ that of a hy-

drogen atom or 9×10^{-28} grams. Electrons flowing in a conductor constitute an electric current; when ejected from a radio-active substance, the beta rays; and when revolving about the nucleus of an atom they determine all of its physical and chemical properties except mass and radioactivity. Cf. *atom*. **emission e.**, one of the electrons which give radio-activity to the atom. **free e.**, one of the electrons which give electric conductivity to a metal. **valency e.**, one of the electrons concerned in the chemic reaction of the atom.

electronation (e-lek-tro-na'shun). The addition of an electron or electrons to an element; a term equivalent to "reduction."

electronegative (e-lek-tro-neg'at-iv). Negatively electric; bearing a negative electric charge; appearing at the positive pole in electrolysis.

electroneurotome (e-lek-tro-nu'ro-tōn). A proprietary electromassage apparatus.

electric (e-lek-tro-n'ik). Pertaining to or carrying electrons.

electronization (e-lek-tro-niz-a'shun). The procedure of restoring electrical equilibrium (healthy cell structure) to diseased cells by radiation.

electropath (e-lek'tro-path). One who is skilled in electrotherapy.

electropathology (e-lek''tro-path-ol'o-j-e) [*electricity* + Gr. *πάθος* disease + *λόγος* discourse]. The study of the pathologic effects of electricity on the body.

electrophonoid (e-lek''tro-fo'noid). An apparatus which reproduces the tones of the human voice by means of mechanical larynxes. It is used in treating chronic deafness.

electrophotherapy (e-lek''tro-fo-to-ther'ap-e). Treatment of disease with the electric light.

electrophysiology (e-lek''tro-fiz-e-ol'o-j-e). The science of physiology in its relations to electricity; the study of the electric reactions of the body in health.

electropism (e-lek'tro-pizm). Electrotropism.

electroplatinol (e-lek-tro-plat'in-ol). A proprietary electric colloid platinum solution.

electropositive (e-lek-tro-poz'it-iv) [*electro* + *positive*]. 1. Bearing a positive electric charge; appearing at the negative electrode. 2. Having the property of becoming positively electrified under suitable conditions.

electroprognosis (e-lek''tro-prog-no'sis). The employment of electricity for the purpose of prognosis.

electropuncture, electropuncture (e-lek''tro-pungk-tu-ra'shun, e-lek'tro-pungk-tūr). Electrization by means of needles thrust into the tissues.

electroradiometer (e-lek''tro-ra-de-om-et'er). An electroscope for measuring radiant energy.

electrorhoidiol (e-lek-tro-ro'de-ol). A form of colloidal rhodium.

electroscission (e-lek-tro-siz'h'un). Cutting of tissue by the electric cautery.

electroscope (e-lek'tro-skōp) [*electricity* + Gr. *σκοπεῖν* to see]. A device for determining the presence and nature of static electricity.

electrosilenium (e-lek-tro-sil-e'ne-um). A form of colloidal silenium.

electrosol (e-lek'tro-sol). A colloidal solution of a metal obtained by passing electric sparks through distilled water between poles formed of the metal.

electrosome (e-lek'tro-sōm). A chondriosome considered as a center of chemical activity.

electrostatic (e-lek-tro-stat'ik). Pertaining to static electricity.

electrostatics (e-lek-tro-stat'iks) [*electricity* + Gr. *στατικός* standing]. The sum of knowledge regarding static electricity.

electrosurgery (e-lek-tro-sur'jer-e). The surgical employment of electricity.

electrosynthesis (e-lek-tro-sin'thes-is). Chemically effected by means of electricity.

electrotaxis (e-lek-tro-tak'sis) [electricity + Gr. *τάξις* arrangement]. The movement of organisms or cells under the influence of electric currents.

electrothanasia (e-lek''tro-than-a'ze-ah) [electricity + Gr. *θάνατος* death]. Death by electricity.

electrotherapeutics, electrotherapy (e-lek''tro ther-ap-u'tiks, e-lek-tro ther'ap-e). Treatment of disease by means of electricity.

electrotherm (e-lek''tro-therm) [electricity + Gr. *θέρμη* heat]. An electric appliance for heating the skin and thus relieving pain.

electrotonic (e-lek-tro-ton'ik). Pertaining to electrotonus.

electrotonus (e-lek-trot'o-nus) [electric + Gr. *τόνος* tone]. The irritability of a motor nerve as modified by the passage through it of an electric current.

electrotrephine (e-lek-tro-tre'fin). A form of trephine operated by electricity.

electrotropism (e-lek-trot'ro-pizm) [electric + *τροπή*, from *τρέπω* to turn]. The attractive or repulsive influence of electric stimuli upon organisms.

electrovagogram (a-lek''tro-va'go-gram). See *vagogram*.

electrovital current (e-lek-tro-vi'tal). See under *current*.

electrozone (e-lek'tro-zōn) [electricity + *ozone*]. A nascent oxygen or ozone produced by the electrolysis of salt water, and used as a disinfectant.

electuary (e-lek'tu-a-re) [L. *electuarius*, from *e* out + *legere* to select]. A medicinal preparation consisting of a powdered drug made into a paste with honey, syrup, or a conserve. **e. of senna**, a mixture of senna, syrup, and tamarind pulp.

eleidin (el-e'id-in). A substance of peculiar nature, allied to keratin and protoplasm, found in the cells of the stratum granulosum of the skin.

element (el'e-ment) [L. *elemen'tum*]. 1. Any one of the primary parts or constituents of a thing. 2. In chemistry, a simple substance which cannot be decomposed by chemical means and which is made up of atoms which are alike in their peripheral electronic configurations and so in their chemical properties, but which may differ in their nuclei and so in their atomic weight and in their radio-active properties. [For *table of elements*, see pages 394, 395.] **anatomic e.** Same as *morphologic e.* **appendicular e's**, a set of cartilaginous rods attached to the chondral skull of the embryo; from them are developed the ear bones, the hyoid, and the styloid process. **electronegative e.**, any chemic element which seeks the positive pole in electrolysis. **electropositive e.**, a chemic element which seeks the negative pole or cathode in electrolysis. **galvanic e.**, the essential parts of an electric battery; the substances which form the generating and collecting plates of a battery. **labile e.**, tissue cells which continue to multiply during the life of the individual. **morphologic e.**, any cell, fiber, or other of the ultimate structures which go to make up tissues and organs. **sarcous e.**, any one of the elementary granules into which the primitive fibril of an elementary muscle-fiber is divisible. **tissue e.** Same as *morphologic e.*

elementary (el-em-en'ta-re). Not resolvable or divisible into simpler parts or components.

elemi (el'em-e) [Turkish *elem* hand-picked]. A resinous substance, of extremely varying origin, the best coming from *Cana'dium commu'ne*, of the Philippine Islands. It furnishes a volatile oil, and is used externally, generally in an ointment, for ulcers and sores. **Brazilian e.** is derived from *Protium heptaphyllum*. **Mexican e.** from *Am'yris elemifera*, and **Yucatan e.** from *Am'yris plumifera*.

eleometer (el-e-om'et-er) [Gr. *ἤλαιον* oil + *μέτρον* measure]. An instrument for determining the per-

centage of oil in a mixture, also the specific gravity of oils.

eleomyenchnysis (e''le-o-mi-en'kis-is) [Gr. *ἔλαιον* oil + *μῦς* muscle + *ἐγχύσις* infusion]. The injection of oils into muscles for therapeutic purposes, especially for treatment of chronic local spasm.

eleopathy (e-le-op'ath-e). See *elaiopathy*.

eleoplast (e-le'o-plast) [Gr. *ἔλαιον* oil + *πλαστός* formed]. A globular body made up of granular protoplasm and containing drops of oil.

eleopten, elaeoptene (e-le-op'ten, el-e-op'tēn) [Gr. *ἔλαιον* oil + *πτηνός* volatile]. The more volatile constituent of a volatile oil, as distinguished from its stearopten.

eleosaccharum (e''le-o-sak'ar-um), pl. *eleosacchara* [Gr. *ἔλαιον* oil + *σάκχαρον* sugar]. A mixture of sugar with a volatile oil; an oil-sugar.

elephantiasis (el''ef-an-te-as'ik). Pertaining to elephantiasis.

elephantiasis (el''ef-an-ti'as-is) [Gr. for "elephant disease"]. A chronic disease characterized by inflammation and obstruction of the lymphatics and hypertrophy of the skin and subcutaneous tissues. The legs and external genitals are principally affected, the disease beginning with attacks of dermatitis with enlargement of the part, followed by the formation of ulcers and tubercles, with thickening, discoloration, and fissuring of the skin. The disease is most common in tropical regions near the coast (Galen). **e.**

Elephantiasis of the legs and of the scrotum (Rivas).

ar'abum, true elephantiasis. **e. asturien'sis**, pellagra. **e. græco'rum**, true leprosy. **e. neuroma'tosa**, elephantiasis in which the nerves are involved in a way resembling that seen in multiple neurofibroma. **nevoid e.**, a variety marked by great dilatation of the lymph-vessels. **e. oc'uli**, thickening and protrusion of the eyelids. **e. scro'ti**, that in which the scrotum is the principal seat of the disease. **e. telangiecto'des**, a variety marked by circumscribed hypertrophy of skin and subcutaneous tissue, causing the skin to hang in folds, as in dermatolysis.

elephantoid (el-e-fan'toid). Relating to or resembling elephantiasis.

elevation, dicrotic (el-e-va'shun). The secondary rise of a dicrotic pulse-wave in the sphygmogram.

elevator (el'e-va-tor) [L. *elevare* to lift]. An instrument for lifting a depressed part or for removing roots of teeth. **periosteum e.**, a flat steel bar for separating the attachments of the periosteum to bone. **screw e.**, an instrument for extracting the roots of broken teeth.

eliminant (el-im'in-ant). 1. Causing an evacuation. 2. An evacuating remedy.

elimination (el-im-in-a'shun) [L. *elimina'tio*, from *e* out + *limen* threshold]. The act of expulsion or of extrusion, especially of expulsion from the body.

elinguation (e-lin-gwa'shun) [L. *e* out + *lin'gua* tongue]. The removal of the tongue.

A TABLE OF THE CHEMICAL ELEMENTS

REVISED TO 1927

NAME AND SYMBOL.	ATOMIC NUM- BER.	ATOMIC WEIGHT.	SPECIFIC GRAV- ITY.	REMARKS.
Actinium, Ac.	89	226		
Actinon.	86	218		
Aluminum, Al.	13	26.92	2.7	A white metal from clay and various rocks.
Antimony, Sb.	51	121.77	6.6	A white metal from stibnite.
Argon, A.	18	39.91	An inert gas from the atmosphere.
gas.	1.38	
liquid.	1.4	
Arsenic, As.	33	74.96	5.73	A steel gray crystalline substance from various ores.
Barium, Ba.	56	137.37	3.78	A pale yellow metal from barite.
Beryllium, Be.	4	9.02	1.85	A white metal from beryl.
Bismuth, Bi.	83	209.0	9.7	A grayish-white metal found native and in ores.
Bohemium.	75			
Boron, B.	5	10.82	2.45	An amorphous black powder from borax.
Bromin.	35	79.916	2.99	A reddish-brown liquid.
Cadmium, Cd.	48	112.41	8.6	A white metal from zinc ores.
Calcium, Ca.	20	40.07	1.54	A white metal from lime.
Carbon, C.	6	12.0		Found native as diamond, graphite, and coal; as CO ₂ in the air; and in organic compounds.
diamond.	3.52	
graphite.	2.25	
Celtium. Same as Hafnium.				
Cerium, Ce.	58	140.25	7.02	One of the rare earths.
Cesium, Cs.	55	132.81	1.87	A white metal from various minerals.
Chlorin, Cl.	17	35.457	A yellowish-green gas obtained from ordinary salt.
gas.	2.49	
liquid.	1.5	
Chromium, Cr.	24	52.01	6.92	A steel-gray metal from chromite.
Cobalt, Co.	27	58.94	8.71	A white metal from various ores.
Columbium, Cb.	41	93.5	8.4	One of the rare earths.
Copper, Cu.	29	63.57	8.9	A reddish-brown metal found native and in ores.
Dysprosium, Dy.	66	162.52	One of the rare earths.
Erbium, Er.	68	167.7	4.77	One of the rare earths.
Europium, Eu.	63	152.0	One of the rare earths.
Fluorine, F.	9	19.0	A canary-yellow gas from fluorite.
gas.	1.31	
liquid.	1.14	
Gadolinum, Gd.	64	157.26	1.3	One of the rare earths.
Gallium, Ga.	31	69.72	5.93	A rare metal from zinc blend.
Germanium, Ge.	32	72.60	5.46	A rare metal from argyrodite.
Glucinum, Gl.	4	9.1	1.85	See <i>Beryllium</i> .
Gold, Au.	79	197.2	19.3	A yellow metal found free.
Hafnium.	72	178.6	Discovered in 1922 in extracts of zirconium min- erals.
Helium, He.	2	4.0	An inert gas from crude petroleum.
gas.	0.138	
liquid.	0.15	
Holmium, Ho.	67	163.4	One of the rare earths.
Hydrogen, H.	1	1.008	The lightest known gas; found in water and in or- ganic substances.
gas.	0.0695	
liquid.	0.07	
Illium, Il.	61			
Indium, In.	49	114.8	7.28	A rare metal from zinc ores.
Iodin, I.	53	126.932	4.94	A bluish-black crystalline substance from sea- weeds and from brines.
Ionium.	90	230		
Iridium, Ir.	77	193.1	22.42	A grayish-white metal found along with platinum.
Iron, Fe.	26	55.84	7.58- 7.88	A gray metal found in various ores.
Krypton, Kr.	36	82.9	2.868	An inert gas found in the atmosphere.
liquid.	2.16	
Lanthanum, La.	57	138.90	6.15	One of the rare earths.
Lead, Pb.	82	207.2	11.34	A bluish-gray metal from galena.
Lithium, Li.	3	6.94	0.534	A white metal from various ores.
Lutecium, Lu.	71	175.0	One of the rare earths.
Magnesium, Mg.	12	24.32	1.74	A white metal from various minerals.
Manganese, Mn.	25	54.93	7.4	A gray metal from various ores.
Masurium.	43			Detected in 1926 by its x-ray spectrum in con- centrated solutions of rare minerals.
Mercury, Hg.	80	200.61	13.59	A white liquid metal from cinnabar.
Molybdenum, Mo.	42	96.0	9.01	A white metal from molybdenite.

A TABLE OF THE CHEMICAL ELEMENTS—*Continued*

NAME AND SYMBOL.	ATOMIC NUM- BER.	ATOMIC WEIGHT.	SPECIFIC GRAV- ITY.	REMARKS.
Moseleyum. Same as <i>Mesurium</i>				
Neodymium, Nd.	60	144.27	6.06	One of the rare earths.
Neon, Ne.	10	20.2	0.07	An inert gas found in the atmosphere.
Nickel, Ni.	28	58.69	8.9	A white metal from various ores.
Niobium, Nb.	41	93.5	8.4	See <i>Columbium</i> .
Nitron, Nt.	86	222.0	An inert gas, called also <i>Radium emanation</i> .
Nitrogen, N.	7	14.008	0.007	A gas constituting four-fifths of the atmosphere.
liquid.			0.85	
Osmium, Os.	76	100.8	22.48	A grayish-white metal found along with platinum.
Oxygen, O.	8	16.0	1.1	A gas constituting one-fifth of the atmosphere.
liquid.			1.14	
Palladium, Pd.	46	106.7	12.10	A grayish-white metal found along with platinum.
Phosphorus, P.	15	31.027	A substance occurring in two or more allotropic forms; from bones and from several minerals.
metallic.			2.34	
red.			2.20	
white.			1.83	
Platinum, Pt.	78	195.23	21.37	A grayish-white metal found free in several places.
Polonium. Same as <i>Radium</i>				
Potassium, K.	19	39.096	0.87	A soft white metal found in many minerals.
liquid.			0.83	
Praseodymium, Pr.	59	140.92	6.475	One of the rare earths.
Protoactinium, Pa.	91	230	
Radium, Ra.	88	225.95	A radio-active metal from pitchblend.
Radon.		222	
Rhenium, Rn.	86	222	Discovered in 1926 in solutions of platinum ores and other raw minerals.
Rhodium, Rh.	45	102.02	12.44	A grayish-white metal found along with platinum.
Rubidium, Rb.	37	85.44	1.53	A white metal from various minerals.
Ruthenium, Ru.	44	101.7	12.06	A grayish-white metal found along with platinum.
Samarium, Sa.	62	150.43	7.8	One of the rare earths.
Scandium, Sc.	21	45.1	2.48	A rare metal from various minerals.
Selenium, Se.	34	79.2	4.8	A reddish-brown powder found along with sulphur.
Silicon, Si.	14	28.3	2.42	A dark brown amorphous powder or dark gray crystals from quartz.
amorphous.			2.35	
Silver, Ag.	47	107.88	10.5	A white metal found free and in many ores.
Sodium, Na.	11	22.997	0.95	A soft white metal obtained from ordinary table salt.
liquid.			0.9287	
Strontium, Sr.	38	87.63	2.58	A dark yellow metal from several minerals.
Sulphur, S.	16	32.064	2.1	A yellow substance found free and in various minerals.
liquid.			1.8	
Tantalum, Ta.	73	181.5	16.62	A rare metal found in various minerals.
Tellurium, Te.	52	127.5	6.25	A silver-gray solid found along with gold and silver ores.
Terbium, Tb.	65	150.2	One of the rare earths.
Thallium, Tl.	81	204.30	11.86	A rare metal found along with zinc ores.
Thorium, Th.	90	232.15	12.16	A rare element found in several minerals.
Thulium, Tm.	69	169.4	One of the rare earths.
Tin, Sn.	50	118.7	7.18	A bluish-white metal from various ores.
Titanium, Ti.	22	48.1	3.5	A dark gray metallic powder widely distributed.
Tungsten, W.	74	184.0	18.7	A hard, gray metal from wolframite.
Uranium, U.	92	238.17	18.68	A hard, white metal from pitchblend.
Vanadium, V.	23	50.96	5.69	A white metal from vanadinite.
Wolframium, W.	74	184.0	18.7	See <i>Tungsten</i> .
Xenon, Xe.	54	130.2	4.525	One of the inert gases from the air.
liquid.			3.52	
Ytterbium, Yb.	70	173.6	One of the rare earths.
Yttrium, Yt.	39	88.9	3.8	One of the rare earths.
Zinc, Zn.	30	65.38	7.16	A white metal from various ores.
Zirconium, Zr.	40	91.0	6.44	A black metallic powder or crystals from zircon.

elixir (e-lik's'er) [L., from Arabic]. A compound tincture, especially if sweetened and aromatized. **acid e. of Haller**, a mixture of 1 part of sulphuric acid with 3 parts of alcohol. **e. ad'juvans**, **adjuvant e.**, elixir of glycyrrhiza. **e. ad lon'-gam vi'tam**, compound tincture of aloes. **aro-matic e.** (U. S. P.), a preparation of compound spirit of orange, syrup, purified talc, alcohol, and water. **bitter e.** contains wormwood, eleosaccharum of peppermint, bitter tincture, and aromatic tincture. **Brown-Séguard e.**, steril-

ized testicular fluid for the treatment of nervous and mental diseases. **Daffy's e.**, compound tincture of senna. **e. fer'ri, quini'næ et strychni'næ phospha'tum**, elixir of iron, quinin, and strychnin phosphates. **e. of glycyrrhiza** (U. S. P.), a mixture of the fluidextract of glycyrrhiza and aromatic elixir. **McMunn's e.**, an aqueous solution of opium of the same strength as laudanum. **e. mirab'ilis**, a celebrated Italian secret poison of the seventeenth century. **Paracelsus's e.**, tincture of aloes and myrrh. **paregoric e.**, camphor-

ated tincture of opium. **e. proprieta'tis**, **e. pro.**, an alcoholic tincture of aloes, myrrh, and saffron with vinegar. **e. rob'orans whit'tii**, compound tincture of cinchona. **e. sabi'tis**, the wine of rhubarb. **Stoughton's e.**, a tincture made of 25 parts each of rhubarb, gentian, wormwood, germander, and bitter orange-peel, 5 parts each of aloes and cascarilla, and alcohol a sufficient quantity.

elkoplasty (el'ko-plas-te). Same as *helcoplasty*.

elkosis (el'ko-sis). Same as *helcosis*.

elkossan (el'kos-an). A proprietary astringent preparation from the seeds of *Bruea sumatrana*.

Elliot's operation (el'e-ots) [Lieut.-Col. R. H. Elliot, of the Indian Medical Service, Madras]. See under *operation*.

Elliot's position (el'e-ots) [John W. Elliot, surgeon in Boston, born 1852]. See *position*.

Elliot's sign (el'e-ots) [George T. Elliot, dermatologist in New York, born 1851]. See *sign*.

elm (elm) [L. *ul'mus*]. Any tree of the genus *Ulmus*. *U. ful'va*, the slippery elm, affords a valuable mucilaginous, demulcent bark, from which a mucilage is prepared that is used as a demulcent in inflammations of the skin and mucous membranes. **corkwood e.** See *Ulmus fulva*.

Elsner's medium (els'nerz) [Ottomar Elsner, German histologist, born 1860]. See *medium*.

elurophobia (e-lu-ro-fo'be-ah). Same as *elurophobia*.

elutriation (e-lu-tre-a'shun) [L. *elutri'are* to wash out]. The operation of pulverizing substances and mixing them with water, so as to separate the lighter parts from the heavier, by the subsiding of the heavier parts.

elytritis (el-it-ri'tis) [Gr. *ελυτρον* vagina + *-itis* inflammation]. Inflammation of the vagina.

elytrocele (el'it-ro-sel) [Gr. *ελυτρον* vagina + *κήλη* hernia]. Hernia into the vagina; colpocele.

elytroclasia (el'it-ro-kla'ze-ah) [Gr. *ελυτρον* vagina + *κλάσις* rupture]. Rupture of the vagina.

elytrocleisis, elytroclisis (el'it-ro-kl'i'sis, el'it-ro-kliz'e-ah) [Gr. *ελυτρον* vagina + *κλείσις* closure]. The obliteration of the vagina.

elytrone (el'it-rōn). A proprietary vaginal suppository for use in leukorrhea.

elytronitis (el-e-tro-ni'tis) [Gr. *ελυτρον* sheath, capsule]. 1. Capsulitis. 2. Vaginitis.

elytropy (el'it-ro-plas-te) [Gr. *ελυτρον* vagina + *πλάσσειν* to form]. Plastic surgery of the vagina; surgical repair of defects or redundancies in the vagina.

elytropsis (el'it-rop-to'sis) [Gr. *ελυτρον* vagina + *πτῶσις* fall]. Prolapse of the vagina.

elytorrhaphy (el-it-rot'af-e) [Gr. *ελυτρον* vagina + *ραφή* suture]. The suture of the vaginal wall, especially of a fissure of the vaginal wall.

elytostenosis (el'it-ro-ste-no'sis) [Gr. *ελυτρον* vagina + *στένωσις* narrowing]. Same as *colpostenosis*.

elytrotomy (el-it-rot'o-me) [Gr. *ελυτρον* vagina + *τομή* cut]. Incision of the vaginal wall; colpoctomy.

Elzholz's bodies, mixture (elz'holz) [A. Elzholz, alienist in Vienna, 1863-1925]. See *body* and *mixture*.

Em. Abbreviation for *emmetropia*.

emaciation (e-ma-se-a'shun) [L. *emaci'are* to become lean]. Leanness; a wasted condition of the body.

emaculation (e-mak-u-la'shun) [L. *e* out + *mac'ula* spot]. The removal of freckles and spots from the face.

emailloblast (e-mäl'o-blast) [Fr. *émail* enamel + Gr. *βλάστος* bud]. Same as *ameloblast*.

emailloid (em-a'loid) [Fr. *émail* enamel]. A tumor developing from the enamel of a tooth.

eman. A unit of radium emanation.

emanation (em-an-a'shun) [L. *e* out + *mana're* to flow]. 1. That which is given off; an effluvium. 2. A gaseous disintegration product given off from radio-active substances. **actinium e.**, one member of the radio-active series derived from actinium. It is produced from actinium X, has an atomic weight of 218, its atomic number is 86, and by the loss of alpha particles it becomes actinium A. Called also *actinon*. **radium e.**, a member of the radio-active series derived from radium. It has an atomic weight of 222, its atomic number is 86, and by the loss of alpha particles it becomes radium A. Called also *niton* and *radon*. **thorium e.**, one member of the radio-active series derived from thorium. It is produced from thorium X, has an atomic weight of 220, its atomic number is 86, and by the loss of alpha particles it changes into thorium A. Called also *thoron*.

emanatorium (em-an-a-to're-um). An institute for treating disease by radio-active emanations.

emanosol (em-an'os-ol). A proprietary tablet said to contain radium emanations in a permanent form: used in hydropathic treatment of arthritis, neuralgia, sciatica, etc.

emansio mensium (e-man'se-o men'se-um) [L. "tardiness of the menses"]. The condition in which menstruation has never taken place.

emarin (em'ar-in). A preparation of 6.6 per cent. of sodium mercurisulphate made up with 0.5 per cent. acoin as an anesthetic: used by intramuscular injection in syphilis.

emasculation (e-mas-ku-la'shun) [L. *emascula're* to castrate]. Removal of the testicles, or of the testicles and penis.

Emb. Abbreviation for *embryology*.

Embadomones (em-bad-om'o-nas). A genus of biflagellate protozoa. **E. intestinalis**, a slipper-shaped parasite found in Egypt and in America in diarrheal stools and in the intestinal tract. **E. sinen'sis**, a larger species found in China.

embalming (em-bahm'ing). The prevention of the natural decay of a dead body.

embalment (em-bahm'ment). See *Mercièr's method*, under *method*.

embarin (em'bar-in). A proprietary solution of sodium mercuric salicylsulphonate with acoin added.

embarras gastrique (em-bar-rah' gas-treek') [Fr. for "bilious attack"]. An acute gastric attack.

embedding (em-bed'ing). The fixation of a tissue specimen in a firm medium, in order to keep it intact during the cutting of thin sections.

embelate (em'bel-ät). Any salt of embelic acid.

Embelia ribes (em-be'le-ah ri'béz). A myrtaceous East Indian climbing plant: anthelmintic and cathartic.

embial (em-bi'al). An oily solution of bismuth containing 8 per cent. of the metal: used in syphilis.

embolalia (em-bo-la'le-ah). Same as *embololalia*.

embole (em'bo-le) [Gr. *εμβολή* a throwing in]. 1. The reducing of a dislocated limb. 2. The process of invagination which transforms the archenteron into the primitive embryo.

embolotomy (em-bo-lek'to-me) [*embolus* + Gr. *ἐκτομή* excision]. Operative removal of an embolus.

embolemia (em-bo-le'me-ah) [*embolus* + Gr. *αἷμα* blood]. The presence of emboli in the blood.

embolia (em-bo'le-ah). Same as *embole*.

embolic (em-bol'ik). Pertaining to an embolus or to embolism.

emboliform (em-bol'if-orm). 1. Shaped like a wedge. 2. Resembling an embolus.

embolism (em'bol-izm) [L. *embolis'mus*, from Gr. *ἐν* in + *βάλλειν* to throw]. The plugging of an

artery or vein by a clot or obstruction which has been brought to its place by the blood-current (Virchow). **air-e.**, embolism by air-bubbles. **bacillary e.**, obstruction of a vessel by an aggregation of bacilli. **bland e.**, embolism in which the plug is composed of non-septic material. **capillary e.**, blocking of the capillaries with bacteria. **crossed e.**, embolism in which the embolus passes through an open foramen ovale or an unclosed ductus arteriosus. **direct e.**, embolism occurring in the direction of the blood-stream. **fat-e.**, embolism of fat that has entered the circulation. **hematogenous e.**, embolism in a blood-vessel. **infective e.**, embolism in which the embolus is infective. **lymph-e.**, **lymphogenous e.**, embolism of a lymph-vessel. **miliary e.**, that which affects at the same time many small blood-vessels. **multiple e.**, embolism by a number of small emboli. **oil-e.** Same as *fat-e.* **paradoxical e.**, embolism of an artery caused by a venous thrombus. **pyemic e.** Same as *infective e.* **retinal e.**, embolism of the central artery of the retina. **retrograde e.**, one which moves in a direction opposite to that of the blood-current. **spinal e.**, embolism of an artery in the spinal cord. **trichinous e.**, embolism due to trichinae. **venous e.**, embolism of a vein.

embololalia (em'bol-o-la'le-ah) [Gr. *ἐμβολον* intercalation + *λαλία* babble]. The interpolation of meaningless words into the speech.

embolomycotic (em'bol-o-mi-kot'ik). Pertaining to or marked by an infectious embolus.

embolophrasia (em'bol-o-fra'ze-ah) [Gr. *ἐμβολον* intercalation + *φράσις* utterance]. Same as *embololalia*.

embolus (em'bo-lus) [Gr. *ἐμβολος* plug]. 1. A clot or other plug brought by the blood-current from a distant vessel and forced into a smaller one so as to obstruct the circulation. 2. The nucleus emboliformis. **air-e.**, an air-bubble in a vein. **cancer e.**, one of the small fragments broken off from a cancer and carried by the blood-stream to lodgment in a distant location. **cellular e.**, an embolus consisting of tissue-cells of various kinds, occurring in various acute infectious diseases. **fat e.**, an embolus made up of oil or fat. **obturating e.**, an embolus completely blocking a vessel. **riding e.**, **straddling e.**, an embolus at the bifurcation of an artery, blocking both branches.

Embolus impacted at bifurcation of a branch of an artery (Green).

emboly (em'bo-le) [see *embole*]. The invagination of the blastula by which the gastrula is formed.

embouchement (aw-boosh-maw) [Fr.]. The opening of one vessel into another.

embrasure (em-bra'zhur). An opening with sloping sides; the sloping space on either side of the proximal surfaces of the teeth. **buccal e.**, the embrasure opening out toward the cheek in molar and bicuspid teeth. **labial e.**, the embrasure opening toward the lips in cuspid and insisor teeth. **lingual e.**, one of the embrasures on the lingual sides of the teeth. **occlusal e.**, the space between the marginal ridges of approximating teeth, mesially and distally, and the point of contact and the occlusal plane (A. D. A.).

embrocation (em-bro-ka'shun) [L. *embroca'tio*]. 1. The application of a liquid medicament to the surface of the body. 2. A liquid medicine for external use.

embryectomy (em-bre-ek'to-me) [Gr. *ἐμβρυον* embryo + *ἐκτομή* excision]. Excision of the embryo in extra-uterine pregnancy.

embryo (em'bre-o) [Gr. *ἐμβρυον*, from *ἐν* within + *βρῦναι* to grow]. The fetus in its earlier stages of development, especially before the end of the third month. **Spee's e.**, an embryo described by Spee as being between one and two weeks old.

embryocardia (em'bre-o-kar'de-ah) [Gr. *ἐμβρυον* embryo + *καρδία* heart]. A symptom in which the sounds of the heart resemble those of fetal life. **jugular e.**, auricular flutter.

embryotony (em-bre-ok'to-ne) [Gr. *ἐμβρυον* fetus + *κτείνειν* to kill]. The artificial destruction of the living embryo, or of the unborn fetus.

embryogenesis (em'bre-o-jen'es-is). The development of adult structures from embryonic ones.

embryogenic, embryogenetic (em'bre-o-jen'ik, em'bre-o-jen-et'ik). 1. Pertaining to the development of the embryo. 2. Producing an embryo.

embryogeny (em-bre-oj'en-e) [Gr. *ἐμβρυον* embryo + *γεννᾶν* to produce]. The production or origin of the embryo.

embryograph (em'bre-o-graf) [Gr. *ἐμβρυον* embryo + *γράφειν* to write]. A combination of a microscope and a camera lucida; used in drawing figures of the embryo.

embryography (em-bre-og'ra-fe) [Gr. *ἐμβρυον* embryo + *γράφειν* to write]. A treatise or description of the embryo.

embryoid (em'bre-oid) [Gr. *ἐμβρυον* embryo + *εἶδος* form]. Resembling the embryo.

embryoism, embryonism (em'bre-o-izm, em'bre-o-nizm). The condition of being an embryo.

embryologist (em-bre-ol'o-jist). An expert in embryology.

embryology (em-bre-ol'o-je) [Gr. *ἐμβρυον* embryo + *λόγος* treatise]. The science which treats of the development of the embryo. **experimental e.**, the study of the development of eggs and embryos under artificial conditions.

embryoma (em-bre-o'mah). A tumor containing embryonic elements or those derived from a rudimentary contained twin parasite.

embryomorphous (em'bre-o-mor'fus) [Gr. *ἐμβρυον* embryo + *μορφή* form]. Noting certain abnormal tissue elements supposed to be relics of a conception.

embryonal, embryonary (em'bre-o-nal, em'bre-o-na-re). Pertaining to the embryo.

embryonate (em'bre-o-nāt). 1. Pertaining to or resembling an embryo. 2. Containing an embryo. 3. Impregnated; fecundated.

embryonic (em'bre-on'ik). Pertaining to or in the condition of being an embryo.

embryoniform (em-bre-on'if-orm). Resembling an embryo.

embryonization (em'bre-o-niz-a'shun). Change to embryonic form on the part of a tissue or cell.

embryonoid (em'bre-o-noid). Resembling an embryo.

embryopathology (em'bre-o-path-ol'o-je). The study of abnormal embryos or of defective development.

embryophore (em'bre-o-för). A second egg shell formed by the embryo after loss of the first, as seen in the eggs of *Tenia* as they are found in the feces.

embryoplastic (em'bre-o-plas'tik) [Gr. *ἐμβρυον* embryo + *πλάσσειν* to shape]. Pertaining to or concerned in the formation of an embryo.

embryoscope (em'bre-o-sköp) [Gr. *ἐμβρυον* embryo + *σκοπεῖν* to see]. An instrument for observing the development of the embryo, as of birds.

embryotocia (em'bre-o-to'se-ah) [Gr. *ἐμβρυον* embryo + *τόκος* birth]. The delivery of the embryo; abortion.

embryotome (em'bre-o-töm). A cutting instrument used in embryotomy.

embryotomy (em-bre-ot'o-me) [Gr. *ἐμβρυον* embryo + *τομή* a cutting]. 1. The cutting up of a

fetus to facilitate delivery. 2. The dissection of embryos and fetuses.

embryotoxon (em'bre-o-toks'on) [Gr. *ἐμβρυον* embryo + *τόξον* bow]. A congenital opacity of the margin of the cornea: called also *arcus juvenilis*.

embryotrophy (em-bre-ot'ro-fe) [Gr. *ἐμβρυον* embryo + *τροφή* nourishment]. The nutrition of the embryo.

embryulcia (em-bre-ul'se-ah) [Gr. *ἐμβρυον* embryo + *ἔλκεν* to draw]. The instrumental removal of the fetus from the uterus.

embryulcus (em-bre-ul'kus) [Gr. *ἐμβρυουλκός*]. A blunt hook for use in embryulcia.

emedullate (e-me-dul'at) [L. *e* out + *medulla* marrow]. To remove the marrow from.

emergency (e-mer'jen-se) [L. *emer'gere* to raise up]. An unlooked for or sudden occasion; an accident; an urgent or pressing need.

emergent (e-mer'jent). Occurring unexpectedly and demanding immediate action.

emesia, emesis (em-e'ze-ah, em'e-sis) [Gr. *ἐμεῖν* to vomit]. Vomiting; an act of vomiting.

emetamin (e-met'am-in). A crystalline alkaloid, $C_{29}H_{36}N_2O_4$, from ipecac.

emetatrophia (em'tet-at-ro'fe-ah) [Gr. *ἐμεσις* vomiting + *ἀτροφία* atrophy]. Atrophy or wasting due to persistent vomiting.

emetic (e-met'ik) [Gr. *ἐμετικός*; L. *emet'icus*]. 1. Bringing on or causing the act of vomiting. 2. A medicine that causes vomiting. **direct e.**, **mechanic e.**, one that acts directly on the nerves of the stomach. The chief direct emetics are yellow sulphate of mercury, zinc sulphate, alum, copper sulphate, and mustard. **indirect e.**, **systemic e.**, one that acts on the vomiting center through the blood. The chief are ipecac, tartar emetic, lobelia, apomorphin, tobacco, veratrum viride, squill, and sanguinaria. **tartar e.** See *antimony* and *potassium tartrate*.

emetichology (e-met-ik-ol'o-je) [Gr. *ἐμετικός* emetic + *λόγος* account]. The sum of knowledge regarding emetics.

emetin (em-et'in). A white, powdery alkaloid, $C_{29}H_{40}N_2O_4$, from ipecac. It is bitter and odorless, soluble in alcohol and chloroform, and sparingly in water, and is a powerful and dangerous emetic, with properties like those of ipecac, but more violent and dangerous in overdoses. It is used in amebic dysentery and hepatitis, in cholera, the hemorrhages of typhoid and diabetes, and in pyorrhea alveolaris. Expectoant dose, $\frac{1}{10}$ – $\frac{1}{10}$ gr. (0.0066–0.0066 gm.); emetic dose, $\frac{1}{10}$ – $\frac{1}{2}$ gr. (0.0066–0.016 gm.). **alcresta e.**, a proprietary preparation of emetin which remains inactive in the stomach and is not set free until it reaches the alkaline intestinal juices. **e. bismuth iodid**, $C_{29}H_{40}O_4N_2 \cdot 2HI \cdot BI_3 \cdot H_2O$, an orange-red powder containing from 17 to 23 per cent. of anhydrous emetin and from 15 to 20 per cent. of bismuth: used in the treatment of amebic dysentery in 3-gr. doses (0.2 gm.). **e. hydrochlorid**, a salt of emetin, $C_{29}H_{44}O_4N_2 \cdot 2HCl$, sometimes employed in medicine.

emetism (em-et-izm). Ipecac-poisoning.

emetocathartic (em'tet-o-kath-ar'tik). 1. Both emetic and cathartic. 2. A drug that purges and causes vomiting.

emetology (em-et-ol'o-je). Same as *emetichology*.

emetomorphin (em'tet-o-mor'fin). Same as *apomorphin*.

emetren (em-et-ren). A compound of yatren and emetin: used for intramuscular injection.

E. M. F. Abbreviation of *electromotive force*.

emictory (e-mik'to-re) [L. *e* out + *min'gere* to urinate]. 1. Diuretic. 2. A diuretic medicine.

emigration (em-ig-ra'shun) [L. *e* out + *migra're* to wander]. The escape of leukocytes through the walls of the blood-vessels; diapedesis.

eminence (em'in-ens) [L. *eminen'tia*, from *e* out + *mine're* to hang on]. A prominence or projection, especially one upon the surface of a bone. **antithenar e.**, the border of the palm on the side opposite the thumb; called also *hypothenar e.* **arcuate e.**, an eminence on the upper surface of the petrosa, marking the location of the superior semicircular canal. **auditory e.** See *eminentia acustica*. **bicipitale e.** See *bicipital tuberosity*. **canine e.**, a prominence on the outer side of the upper jaw bone. **collateral e.**, a projection in the lateral ventricle of the brain, between the posterior and middle horns. **deltoid e.**, the portion of the humerus to which the deltoid muscle is attached. **Doyère's e.**, the papilla where a nerve filament enters a muscle-fiber. **facial e.**, an eminence in the angle formed by the striae and sulcus ventriculi. **frontale e.**, either one of the two eminences on the frontal bones above the superciliary ridges. **iliopectineal e.**, an eminence in the horizontal ramus of the os pubis, in front of the acetabulum. **intercondyloid e.**, the tubercle between the two condyles of the tibia. **mammillary e.** Same as *corpora albicantia*. **medial e.**, the eminentia teres. **nasal e.**, the prominence above the root of the nose. **occipital e.**, a ridge in the paracete of the embryo, corresponding to the occipital fissure in the adult. **olivary e.**, an elevation in front of the pituitary fossa on the body of the sphenoid bone. **parietal e.**, the prominent rounded part of the parietal bone. **postchiasmatic e.**, a protuberance on the floor of the third ventricle posterior to the optic chiasm. **postfundibular e.**, a protuberance on the floor of the interbrain posterior to the tuber cinereum. **terete e.** See *eminentia teres*. **thenar e.**, the eminence on the palm at the base of the thumb. **thyroid e.**, Adam's apple. **triangular e.** Same as *eminentia fossa triangularis*. **vagal e.** See *ala cinerea*.

eminentia (em-in-en'she-ah) [L.]. Same as *eminence*. **e. abducen'tis**. Same as *e. medialis*. **e. acustica**, a prominence on the floor of the fourth ventricle of the brain at the lateral triangles marking the position of the acoustic nucleus. **e. annularis**, the pons varolii. **e. arcua'ta** [B N A], an arched prominence on the upper or anterior surface of the petrous bone, above the superior semicircular canal. **e. articula'ris**, a cylindric elevation on the temporal bone, in front of the glenoid fossa. **e. capita'ta**, the head of a bone: especially the capitulum of the humerus. **e. car'pi radia'lis** [B N A], an eminence on the radial side of the front of the wrist formed by the tuberosity of the scaphoid and a ridge on the trapezium. **e. car'pi ulna'ris** [B N A], an eminence on the ulnar side of the front of the wrist caused by the fusiform bone. **e. cine'rea**. Same as *lamina cinerea*. **e. collatera'lis** [B N A], the pes accessorius; a white ridge on the inferior cornu of the lateral ventricle of the brain. **e. con'cha'e** [B N A], a projection on the convex medial surface of the external ear. **e. crucia'ta** [B N A], a protuberance formed by the conjunction of the two intersecting ridges of the upper surface of the occipital bone. **e. facia'lis**, a prominence in the angle formed by the striae and the sulcus ventriculi. **e. fallo'pii**, a ridge on the inner wall of the tympanum, showing the position of the facial nerve. **e. fos'sæ triangula'ris** [B N A], the protuberance on the posterior surface of the auricle which corresponds to the triangular fossa. **e. gra'cilis**. See *clava*. **e. hypoglos'si**, an elevation in the caudal triangle of the floor of the fourth ventricle marking the position of the hypoglossal nucleus; called also *trigonum hypoglossi*. **e. iliopectin'ea** [B N A], the iliopectineal eminence. **e. intercondylo'dea** [B N A], the spinous process of the tibia. **e. jugula'ris**, the jugular spine, the end of the jugular process of the occipital bone. **e. latera'lis** [B N A], a tubercle on the cricoid cartilage articulating with the inferior horn of the thyroid cartilage. **e. latera'lis mecke'lii**.

Same as *pes accessorius*. **e. media'lis** [B N A], an eminence in the floor of the fourth ventricle produced by the sixth nucleus and the genu of the facial nerve. Called also *eminentia abducentis*, *eminentia leres*, and *funiculus leres*. **e. papillar'is**, the pyramid of the tympanum. **e. pyramida'lis** [B N A], the pyramid of the middle ear. **e. resti-for'mis**, an enlargement on the dorsolateral aspect of the medulla oblongata marking the position of the inferior cerebellar peduncle. **e. scaphæ** [B N A], a prominence on the back of the pinna of the ear, corresponding to the scaphoid fossa in front. **e. styloid'ea**, a prominence on the posterior wall of the tympanum. **e. sym'physis**, the prominent lower border of the middle of the chin. **e. te'res**. See *e. medialis*. **e. triangula'ris**. Same as *e. fossa triangularis*. **e. trigem'ini**, an elevation on the lateral surface of the medulla oblongata marking the position of the descending root of the fifth nerve. **e. va'gi**. See *ala cinerea*.

emissarium (em-is-a're-um). The B N A term for an emissary vein. They are *e. condylo'id'eum*, *e. mastoi'd'eum*, *e. occipita'le*, *e. parietale*.

emissary (em-is-a-re) [L. *emissarium* drain]. 1. An outlet or efferent duct. 2. Affording an outlet. **e. veins**. See under *vein*.

emission (e-mish'un) [L. *emis'sio* a sending out]. A discharge: specifically, an involuntary discharge of semen. **nocturnal e.**, reflex emission of the semen during sleep. **thermionic e.**, the emission of electrons and ions by incandescent bodies.

emmenagogic (em-en-ag-oj'ik). Pertaining to or aiding the process of menstruation.

emmenagogue (em-en-ag'og) [Gr. *ἐμμηνα* menses + *ἀγειν* to lead]. 1. Any agent which stimulates or favors the menstrual discharge. 2. Aiding the function of menstruation. **direct e.**, one that acts directly upon the reproductive organs, such as apiol, ergot, rue, savin, or tansy. **in-direct e.**, one which acts by relieving some causative condition.

emmenia (em-e'ne-ah) [Gr.]. The menses.

emmenic (em-en'ik). Pertaining to the menses.

emmenio'pathy (em-e-ne-op'ath-e) [Gr. *ἐμμηνα* menses + *πάθος* disease]. Any disorder of menstruation.

emmenology (em-en-ol'o-je) [Gr. *ἐμμηνα* menses + *λόγος* discourse]. The sum of knowledge regarding menstruation and its disorders.

Emmerich's bacillus (em'er-iks) [Rudolf *Emmerich*, bacteriologist in Munich, 1852-1914]. The *Bacillus neapolitanus*.

emmetrope (em-et-rōp). A person who is emmetropic.

emmetropia (em-et-ro'pe-ah) [Gr. *ἐμμετρος* in proper measure + *ὄψις* vision]. The normal condition of the eye as respects refraction; that condition of the eye in which, with relaxed accommodation, the refraction is accurately adjusted for parallel rays, so that there is perfect vision (Donders).

emmetropic (em-et-rop'ik). Normal as respects accommodation and refraction.

Emmet's needle, operation (em'ets) [Thomas Addis *Emmet*, gynecologist in New York, 1828-1919]. See *needle* and *operation*.

emodin (em'o-din) [from *Rhe'um em'od'is*, a Himalayan rhubarb]. 1. A purgative resin, (C₁₄H₄)(CH₃)(OH)₂O₂, from rhubarb and the buckthorn. 2. Any one of a series of principles isomeric with the emodin of rhubarb. **aloe-e.**, a variety of emodin found in Socotrine, Barbados, and Zanzibar aloes, but not in Natal aloes.

emol (e'mol). An emollient, soapy mineral from Perthshire in Scotland: used in various chronic skin diseases and for removing thickened epidermis.

emollient (e-mol'e-ent) [L. *emol'liens* softening, from *e* out + *mol'lis* soft]. 1. Softening or soothing. 2. An agent which softens or soothes the skin, or soothes an irritated internal surface. The principal emollients are gelatin, gum arabic, starch, linseed, slippery elm, Irish moss, Iceland moss, and marshmallow.

emotiometabolic (e-mo'she-o-met-ab-ol'ik). Inducing some metabolism as a result of emotion.

emotiomotor (e-mo'she-o-mo'tor). The production of some activity as a result of emotion.

emotiomuscular (e-mo'she-o-mus'ku-lar). Pertaining to muscular activity which results from emotion.

emotion (e-mo'shun) [L. *emove're* to disturb]. Mental excitement; agitation of the passions or sensibilities.

emotional (e-mo'shun-al). Pertaining to the emotions.

emotiovascular (e-mo'she-o-vas'ku-lar). Producing a vascular change as a result of emotion.

emotivity (e-mo-tiv'it-e). The capacity for emotion; the capacity for reacting to a stimulus.

Emp. Abbreviation for *L. emplas'trum*, a plaster.

Emp. vesic. Abbreviation for *L. emplas'trum vesicato'rium*, a blister.

empacho (em-patsh'o). A Mexican term for chronic indigestion in children with diarrhea.

empasma (em-paz'mah) [Gr. *ἐν* in + *πάσσειν* to sprinkle]. A powder for external use.

empathic (em-path'ik). Pertaining to or characterized by empathy.

empathize (em'path-iz). To experience or feel empathy; to enter into another person's feelings.

empathy (em'path-e) [Gr. *ἐν* into + *πάθος* feeling]. The entering into the feelings of another person or object.

emphlysis (em'flis-is) [Gr. *ἐν* in + *φλύσις* eruption]. Any exanthematous disease in which the lesions become scabby.

emphractic (em-frak'tik). 1. Tending to obstruct the pores. 2. An agent which closes the pores of the skin.

emphraxis (em-fraks'is) [Gr. *ἐμφραξις*]. A stoppage, obstruction, or infarction.

emphysatherapy (em-fiz-ah-ther'ap-e) [Gr. *ἐμφυσᾶν* to inflate + *θεραπεῖα* treatment]. The injection of gas into an organ for therapeutic purposes.

emphysema (em-fis-e'mah) [Gr. *ἐμφύσημα*]. 1. A swelling or inflation due to the presence of air in the interstices of the connective tissues. 2. The presence of air in the alveolar tissue of the lungs. It may be *interstitial* (*interlobular*) as a result of the escape of air from the lungs into the interstitial tissue between the alveoli; or *vesicular* (*alveolar*) when due to distention of the alveoli with air. **alveolar e.** See *emphysema* (2d def.). **atrophic e.**, a senile emphysema with wasting of the lung substance. **compensating e.**, **compensatory e.**, dilatation of one part of the lung to compensate for the consolidation of another part. **cutaneous e.**, the presence of gas or air in the connective tissues underlying the skin. **ectatic e.**, emphysema due to stretching of the pulmonary alveoli. **false e.**, gas in the tissues due to septic poison or gangrene. **gangrenous e.**, a malignant emphysema of microbic origin. **hypertrophic e.**, vesicular emphysema in which from overstretching the contractile energy of the lungs is destroyed, so that they become permanently enlarged, giving to the thorax a characteristic barrel shape. **interlobular e.** See *emphysema* (2d def.). **interstitial e.**, the presence of air or a gas in the interstices of the connective tissue. **mediastinal e.**, the presence of air in the mediastinal tissue. **pulmonary e.**, **vesicular e.**, unnatural distention and rupture of the air-vesicles of the lungs: it is usually due to excessive effort in expiration. Called also *alveolar eciasia*. **senile**

e., emphysema due to senile dilatation of the alveoli. **small-lunged e.**, atrophic emphysema. **subcutaneous e.**, distention of spaces in the subcutaneous tissues of the body with air or with any other gas. **substantial e.** Same as *pulmonary e.* **surgical e.**, aerodersectasia; subcutaneous emphysema following traumatism. **vesicular e.** See *emphysema* (2d def.).

emphysematous (em-fis-em-at-us). Of the nature of or affected with emphysema.

empiric (em-pir'ik) [Gr. *ἐμπειρικός* experimental]. 1. Based on experience. 2. A practitioner whose skill is based on experience.

empirical (em-pir'ik-al). Same as *empiric* (1st def.).

empiricism (em-pir'is-izm) [Gr. *ἐμπειρία* experience]. 1. Reliance on mere experience; empiric practice. 2. Quackery.

Empirics (em-pir'iks). The second of the post-Hippocratic schools of medicine, which arose in the second century, B. C., under the leadership of Philenos of Cos and Serapion of Alexandria (280 B. C.). As opposed to the Dogmatists, they declared that the search for the ultimate causes of phenomena was vain, but they were active in endeavoring to discover the immediate causes. They paid particular attention to the totality of symptoms. In their search for a line of treatment to benefit a particular set of symptoms they employed the "tripod of the Empirics": 1, one's own chance observations; 2, learning obtained from contemporaries and predecessors; 3, in cases of new diseases, forming conclusions from other diseases which resemble them—analogy. They paid great attention to clinical observation, and were guided in their therapeutics almost entirely by experience.

empirin (em-pi'rin). A proprietary pure acetylsalicylic acid.

emplastie (em-plas'tik) [Gr. *ἐμπλαστικός* daubed]. 1. Adhesive or glutinous. 2. A constipating medicine.

emplastrum (em-plas'trum) [L.; Gr. *ἐμπλαστρον*]. A plaster; an adhesive, flat, solid, medicated preparation for external use. See *plaster*. **e. adhaesivum** (U. S. P.), adhesive plaster. **e. belladonnae** (U. S. P.), belladonna plaster. **e. cantharidis** (U. S. P.), cantharides plaster. **e. capsici** (U. S. P.), capsicum plaster. **e. hydragryri**, mercurial plaster. **e. opii**, opium plaster. **e. plumbi oleatis** (U. S. P.), lead plaster. **e. saponis**, soap plaster. **e. sinapis** (U. S. P.), mustard plaster.

emprosthotonos (em-pros-thot'o-nos) [Gr. *ἐμπροσθεν* forward + *τείνειν* to stretch]. A form of spasm in tetanus which brings the head and feet forward and renders the body tense.

emptysis (emp'tis-is) [Gr. *ἐμπτυσις*]. Expectoration, especially of blood; hemoptysis.

Empusa (em-pu'sah). A genus of parasitic fungi. **E. muscae**, a species developing in the bodies of flies, thus destroying them.

empyema (em-pi-e'mah) [Gr. *ἐν* within + *πύον* pus]. Accumulation of pus in a cavity of the body, especially the chest. **e. benignum**, a variety in which fever is absent and there is a fair condition of general health, but which is usually incurable. **e. of the chest**, suppurative in the pleural cavity, due to pleurisy or traumatism; pyothorax. The disease is attended by dyspnea, fever, loss of strength, and emaciation. **interlobar e.**, empyema situated between two lobes of the lung. **latent e.**, empyema unaccompanied by any symptoms. **loculated e.**, pus in a group of loculi. **mastoid e.**, suppurative inflammation of the mucous lining of the cavities of the mastoid process. **e. necessitatis**, empyema in which the pus can make a spontaneous escape. **e. of pericardium**, purulent pericarditis. **pneumococcal e.**, that which is

due to the pneumococcus. **pulsating e.**, pyothorax in which the heart movements cause a visible vibration of the chest-walls. **putrid e.**, a form in which the pus has become more or less decomposed. **streptococcal e.**, a form due to the streptococcus of erysipelas. **tuberculous e.**, a rare form due to the bacillus of tuberculosis.

empyematic, **empyemic** (em'pi-e-mat'ik, em'pi-em'ik). Pertaining to or of the nature of empyema.

empyema (em-pi-e'sis) [Gr. *ἐμπύειν* to suppurate]. 1. Any disease characterized by phlegmonous vesicles becoming filled with purulent fluid. 2. Pus behind the iris (Marchart); hypopyon (Himly).

empyocoele (em'pi-o-sēl) [Gr. *ἐν* in + *πύον* pus + *κῆλη* tumor]. A collection of pus at the navel.

empyreuma (em-pi-ru'mah) [Gr. *ἐμπυρέειν* to kindle]. The peculiar odor of animal or vegetable matter when charred in a closed vessel.

empyiform (em-pi'ro-form). A brownish powder, a product of birch tar and formaldehyd: used in eczema and other skin diseases in a 5 per cent. ointment, or in a 1 per cent. solution with chloroform and acetone.

emulgent (e-mul'jent) [L. *emulge're* to milk or drain out]. 1. Effecting a straining or purifying process. 2. A renal artery or vein. 3. A medicine which stimulates the flow of bile or urine.

emulsifier (e-mul'si-er). A substance used to produce an emulsion of a fixed oil.

emulsify (e-mul'se-fi). To convert into an emulsion; to be changed into an emulsion.

emulsin (e-mul'sin). Synaptase: a hydrolyzing enzyme which splits amygdalin and other glucosids.

emulsion (e-mul'shun) [L. *emul'sio*, *emul'sum*]. An oily or resinous substance divided and held in suspension through the agency of an adhesive, mucilaginous, or other substance. The official emulsions are those of *asafoetida*, *cod-liver oil*, and *oil of turpentine*. **bacillary e.** See *new tuberculin*, Koch, under *tuberculin*. **Bütschli's e.**, a preparation of potassium carbonate and rancid olive oil: used in microscopic work. **kerosene e.** (as an insecticide): dissolve $\frac{1}{2}$ pound of hard soap in 1 gallon of water; while boiling hot pour it into 2 gallons of kerosene. Churn this with a spray pump till it changes to a creamy and then into a soft butter-like mass. For use, add 1 part to 9 parts of water. **Pusey's e.**, powdered tragacanth, 1 dr.; glycerin, phenol, oil of bergamot, each, 5 min.; olive oil, 4 oz.; water sufficient to make 1 pint: used in infantile eczema.

emulsive (e-mul'siv). 1. Capable of emulsifying a substance. 2. Susceptible of being emulsified. 3. Affording an oil on pressure.

emulsoïd (e-mul'soid). An emulsion colloid. See under *colloid*.

emulsol (e-mul'sol). A proprietary agent used in emulsifying cod-liver oil.

emulsum (e-mul'sum), pl. *emul'sa* [L. for "emulsion"]. An emulsion.

emunctory (e-munk'to-re) [L. *emun'gere* to cleanse]. 1. Excretory or depurant. 2. Any excretory organ or duct.

emundation (e-mun-da'shun) [L. *emunda'tio* a cleansing]. The rectification and garbling of drugs.

emydin (em'id-in). A protein found in the eggs of the tortoise.

enamel (en-am'el). The white, compact, and very hard substance that covers and protects the dentin of the crown of the teeth. **e.-cap**, the enamel-organ during that stage of its development in which it covers the top of the dental papilla like a cap. **e.-cell**. See *ameloblast*. **e.-column**, the enamel-rod or prism; any one of the set of long, prismatic bodies which make up

- the substance of the enamel. **curled e.**, enamel in which the columns are bent. **e.-cuticle**. See *cuticula dentis*. **e.-fiber**. See *e.-column*. **e.-germ**, the epithelial rudiment of the enamel-organ. **e.-jelly**, the soft material whence the dental enamel is developed. **e.-membrane**, the *cuticula dentis*. **e.-organ**, an embryonic organ connected with the dental groove whence the enamel-cap is first developed, and afterward the enamel itself. **e.-prism**. Same as *e.-column*. **e.-pulp**. Same as *e.-jelly*. **e.-rod**. See *e.-column*. **e.-sac**, the enamel-organ during the stage in which its outer layer forms a sac inclosing the whole dental germ.
- enameloma** (e-nam-el-o'mah) [*enamel* + Gr. *-oma* tumor]. An embryonal tumor of enamel tissue.
- enanthem** (en-an'them). Same as *enanthema*.
- enanthema** (en-an'them-ah), pl. *enanthem'ata* [Gr. *ἐν* in + *ἀνθημα* a blossoming]. An eruption upon a mucous surface.
- enanthematous** (en-an-them'at-us). Pertaining to or of the nature of an *enanthema*.
- enanthesis** (en-an-the'sis) [Gr. *ἐν* in + *ἀνθεῖν* to bloom]. Any skin eruption due to an internal disease.
- enanthin, œnanthin** (e-nan'thin). A poisonous and emetic resin from *Enanthe fistulosa*.
- enanthotoxin, œnanthotoxin** (e-nan-tho-toks'-in). A poisonous resin, $C_{17}H_{22}O_5$, from *Enanthe crocata*.
- enanthrope** (en-an'thrōp) [Gr. *ἐν* in + *ἄνθρωπος* man]. Any source of disease that does not originate outside the body.
- enantiobiosis** (en-an'te-o-bi-o'sis) [Gr. *ἐναντίος* opposite + *βίος* life]. The condition in which organisms living together antagonize one another's development. Cf. *symbiosis*.
- enantiomorphic** (en-an'te-o-mor'fik) [Gr. *ἐναντίος* opposite + *μορφή* form]. Similar but reversed, as the two hands; said of certain crystals.
- enantiopathia, enantiopathy** (en-an'te-o-path'-e-ah, en-an-te-op'ath-e) [Gr. *ἐναντίος* opposite + *πάθος* suffering]. 1. Any disease or morbid process antagonistic to or curative of another. 2. The curing of one disease by inducing another of an opposite kind.
- enanthothamnosis** (en-an'te-o-tham-no'sis). Infection by the fungus *Enanthothamnus*.
- Enanthothamnus** (en-an'te-o-tham'nus). A genus of fungi. *E. brautii* causes a condition marked by the development of nodules which have a central opening from which pus exudes.
- enarkyochrome** (en-ar'ke-o-krōm) [Gr. *ἐν* in + *ἄρκυς* network + *χρῶμα* color]. An arkyochrome nerve-cell containing a single network of chromatin substance.
- enarthrits** (en-ar-thri'tis) [Gr. *ἐν* in + *ἄρθρον* joint]. Inflammation of an enarthrodial joint.
- enarthrodial** (en-ar-thro'de-al). Of or pertaining to an enarthrosis.
- enarthrosis** (en-ar-thro'sis) [Gr. *ἐν* in + *ἄρθρον* joint]. A ball-and-socket joint; a joint in which the globular head of one bone is received into a socket in another, such as in the hip-joint.
- en bissac** (aw bis-sahk') [Fr.]. A method of reducing strangulated hernia by forcing a congenital hernia into a pouch or diverticulum.
- encanthis** (en-kan'this) [Gr. *ἐν* in + *κάνθος* the angle of the eye]. A small red excrescence on the semilunar fold of the conjunctiva and inner lacrimal caruncle.
- Encapsulatæ** (en-kap-su-la'te-e). A genus of the Bacteriaceæ; they are short, encapsulated, non motile, Gram-negative rods found principally in the respiratory tract of man. **E. pneumoniæ**. Same as *Bacterium mucosum capsulatum*.
- encapsulation** (en-kap-su-la'shun). 1. Any act of inclosing in a capsule. 2. A physiologic process of inclosure in a sheath made up of a substance not normal to the part.
- encapsuled** (en-kap'suld). Inclosed, as in a capsule.
- endocarditis** (en-kar-di'tis). Same as *endocarditis*.
- encatarrhaphy** (en-kat-ar'af-e). See *enkatar-rhaphy*.
- enceinte** (aw-sont') [Fr.]. Pregnant; with child.
- enceliagia, encœliagia** (en-se-le-al'je-ah) [Gr. *ἐν* in + *κοιλία* belly + *ἄλγος* pain]. Pain in an abdominal viscus.
- encelitis, encelilitis** (en-se-li'tis, en-se-le-i'tis) [Gr. *ἐν* in + *κοιλία* belly + *-itis* inflammation]. Inflammation of any intra-abdominal organ.
- encephalalgia** (en-sef-al-al'je-ah) [Gr. *ἐγκέφαλος* brain + *ἄλγος* pain]. Pain within the head.
- encephalasthenia** (en-sef'al-as-the'ne-ah) [Gr. *ἐγκέφαλος* brain + *ἀσθένεια* weakness]. Lack of brain power.
- encephalatrophy** (en-sef-al-at'ro-fe) [Gr. *ἐγκέφαλος* brain + *atrophy*]. Atrophy of the brain.
- encephalauze** (en'sef-al-awks'e) [Gr. *ἐγκέφαλος* brain + *αὐξή* increase]. Hypertrophy of the brain.
- encephalemia, encephalæmia** (en-sef-al-e'me-ah) [Gr. *ἐγκέφαλος* brain + *αἷμα* blood]. Congestion of the brain.
- encephalic** (en-sef-al'ik). Pertaining to the encephalon, or to the cavity within the skull.
- encephalin** (en-sef-al-in). A nitrogenous principle said to be obtainable from brain tissue.
- encephalitic** (en'sef-al-i'tik). Pertaining to or affected with encephalitis.
- encephalitis** (en'sef-al-i'tis) [Gr. *ἐγκέφαλος* brain + *-itis* inflammation]. Inflammation of the brain.
- cortical e., e. corticalis**, chronic encephalitis affecting the cortex of the brain only. **enzootic e. of horses**, Borna's disease. **e. epidem'ica, epidemic e.**, encephalitis lethargica. **hemorrhagic e.**, inflammation of the brain with hemorrhagic exudate. Called also *Strümpell-Leichtenstern type of encephalitis*. **e. hyperplas'tica**, acute non-suppurating encephalitis. Called also *Hayem's type of encephalitis*. **infantile e.**, inflammation of the brain in children from infectious disease, injury, etc., and causing the cerebral palsies of children. **influenzal e.**, encephalitis lethargica. **e. lethar'gica, lethargic e.**, an acute infectious and mildly contagious disease of obscure pathology and showing unusual cerebral symptoms, the distinctive features being an increasing languor, apathy, and drowsiness, passing into lethargy. There is progressive muscular weakness and various cranial nerve palsies. Called also *epidemic encephalitis, sleeping sickness*, and *nona*. **e. neonato'rum**, encephalitis of the newborn. **e. periaxia'lis**, massive inflammation of the white matter of the cerebral hemispheres, beginning in the occipital lobes and characterized by early disappearance of the myelin. The disease occurs mostly in children and young subjects and begins with occipital blindness. Called also *Schilder's disease*. **purulent e., pyogenic e.**, encephalitis characterized by the presence of milary abscesses and small blood extravasations in the brain. **e. subcortica'lis chron'ica**, sclerotic changes in the vessels of the subcortical white matter of the brain.
- Encephalitozoön** (en-sef-al'i'to-o-zo'on) [*encephalitis* + Gr. *ζῷον* animal]. A microsporidian parasite. **E. Cuniculi**, the causative agent in spontaneous encephalomyelitis of the rabbit. They are found in intracellular cysts as well as free in the brain, kidney, and other organs. **E. rab'iei**, bodies found in the cells of the central nervous system and in the cells of the salivary glands and which are thought to be the agents which cause rabies.
- encephalization** (en-sef-al-iz-a'shun). The developmental process which resulted in the formation of the head.

encephalocle (en-sef'al-o-sēl) [Gr. ἐγκέφαλος brain + κήλη hernia]. Hernia of the brain, manifested by protrusion through a congenital or traumatic opening of the skull.

encephalocœle (en-sef'-al-o-sē'le) [Gr. ἐγκέφαλος brain + κοῖλος hollow]. 1. The entire cavity of the cranium. 2. The ventricles and other spaces of the brain.

encephalocystocoele (en-sef'-al-o-sis'to-sēl) [Gr. ἐγκέφαλος brain + κύστις bladder + κήλη hernia]. Hernia of the brain, the protrusion being distended by a collection of fluid communicating with the ventricle. Called also *hydrencephalocoele*.

encephalodialysis (en-sef'-al-o-di'al'is-is) [Gr. ἐγκέφαλος brain + διάλυσις loosening]. Softening of the brain.

encephalography (en-sef-al-og'raf-e) [Gr. ἐγκέφαλος brain + γράφειν to unite]. Roentgenographic photograph of the brain.

encephaloid (en-sef'al-oid) [Gr. ἐγκέφαλος brain + εἶδος form]. 1. Resembling the brain or brain substance. 2. Encephaloma.

encephalolith (en-sef'al-o-lith) [Gr. ἐγκέφαλος brain + λίθος stone]. A brain calculus.

encephalology (en-sef-al-o'lo-je) [Gr. ἐγκέφαλος brain + λόγος discourse]. The sum of knowledge regarding the brain, its functions, and its diseases.

encephaloma (en-sef'al-o'mah). 1. Hernia of the brain. 2. Encephaloid cancer; a malignant growth of brain-like texture. See *carcinoma*.

encephalomalacia (en-sef'al-o-mal-a'se-ah) [Gr. ἐγκέφαλος brain + μαλακία softening]. Morbid softness, or softening, of the brain.

encephalomeningitis (en-sef'al-o-men-in-jī'tis) [*encephalitis* + *meningitis*]. Inflammation of the brain and its membranes.

encephalomeningocoele (en-sef'-al-o-men-in'go-sēl) [Gr. ἐγκέφαλος brain + μῆνιγξ membrane + κήλη hernia]. Protrusion of the cerebral membranes and brain substance through the skull.

encephalomere (en-sef'al-o-mēr) [Gr. ἐγκέφαλος brain + μέρος part]. Any one of the succession of segments which make up the primary or embryonic brain.

encephalometer (en-sef-al-om'et-er) [Gr. ἐγκέφαλος brain + μέτρον measure]. An instrument for measuring the skull, and used in locating certain of the regions of the brain.

encephalomyelitis (en-sef'al-o-mi-el-i'tis). A combination of encephalitis and myelitis.

encephalomyelopathy (en-sef'-al-o-mi-el-op'-ath-e) [Gr. ἐγκέφαλος brain + μυελός marrow + πάθος disease]. Any disease or diseased condition of the brain and spinal cord.

encephalon (en-sef'al-on) [Gr. ἐγκέφαλος brain]. That portion of the central nervous system which is contained within the cranium. **epichordal e.**, that portion of the brain situated posterior to the notochord.

encephalonarcosis (en-sef'al-o-nar-ko'sis) [Gr. ἐγκέφαλος brain + νάρκη stupor]. Stupor due to brain disease.

encephalopathic (en-sef'al-o-path'ik). Pertaining to a brain disease.

encephalopathy (en-sef-al-op'ath-e) [Gr. ἐγκέφαλος brain + πάθος illness]. Any disease of the brain. **lead-e.**, any brain disorder caused by lead-poisoning.

encephalophyma (en-sef'al-o-fi'mah) [Gr. ἐγκέφαλος brain + φύμα growth]. Any tumor of the brain.

Encephalocle.

encephalopsis (en-sef'al-op-se) [Gr. ἐγκέφαλος brain + ὄψις vision]. A condition in which the patient associates certain colors with certain words, numbers, flavors, etc. See *phobism* and *psychochrome*.

encephalopsychosis (en-sef'-al-o-si-ko'sis) [Gr. ἐγκέφαλος brain + *psychosis*]. Any mental disease due to focal brain lesion (Southard).

encephalopyosis (en-sef'al-o-pi-o'sis) [Gr. ἐγκέφαλος brain + πύωσις suppuration]. Suppuration or abscess of the brain.

encephalorachidian (en-sef'al-o-ra-kid'e-an) [Gr. ἐγκέφαλος brain + ράχις spine]. Same as *cerebrospinal*.

encephalorrhagia (en-sef'al-or-a'je-ah) [Gr. ἐγκέφαλος brain + ῥήγνυναι to burst out]. Hemorrhage within the brain or from the brain.

encephalosclerosis (en-sef'al-o-skle-ro'sis) [Gr. ἐγκέφαλος brain + σκλήρωσις hardness]. Hardening of the brain.

encephaloscope (en-sef'al-o-skōp). A speculum for examining cavities (such as abscess cavities) in the brain.

encephaloscopy (en-sef-al-os'ko-pe) [Gr. ἐγκέφαλος brain + σκοπεῖν to view]. Inspection or examination of the brain.

encephalosepsis (en-sef'al-o-sep'sis) [Gr. ἐγκέφαλος brain + σήψις decay]. Gangrene of brain tissue.

encephalosis (en-sef-al-o'sis) [Gr. ἐγκέφαλος brain]. Any organic brain disease.

encephalospinal (en-sef'al-o-spi'nal). Pertaining to the brain and spinal column.

encephalothlipis (en-sef'al-o-thlip'sis) [Gr. ἐγκέφαλος brain + θλίψις pressure]. Brain compression.

encephalotome (en-sef'al-o-tōm). An instrument for performing encephalotomy.

encephalotomy (en-sef-al-ot'o-me) [Gr. ἐγκέφαλος brain + τομή a cutting]. 1. The operation of destroying the brain of a fetus in order to facilitate delivery. 2. The dissection or anatomy of the brain.

encheiresis (en-ki-re'sis) [Gr. ἐν in + χεῖρ hand]. Any manipulation, especially the introduction of a bougie, sound, or catheter.

enchondral (en-kon'dral). Endochondral.

enchondroma (en-kon-dro'mah) [Gr. ἐν in + χόνδρος cartilage]. A tumor made up of cartilaginous tissue. **e. petrificum**, a cartilaginous tumor with osseous infiltration; osteo-enchondroma.

enchondromatous (en-kon-dro'mat-us). Of the nature of or pertaining to enchondroma.

enchondrosarcoma (en-kon'dro-sar-ko'mah). A sarcoma containing cartilaginous tissue.

enchondrosis (en-kon-dro'sis) [see *enchondroma*]. An outgrowth from cartilage; also an enchondroma.

enchylema (en-ki-le'mah) [Gr. ἐν in + χυλός juice]. See *hyaloplasm*.

enchyma (en'ki-mah) [Gr. ἐν in + χεῖν to pour]. The substance elaborated from absorbed nutritive materials; the formative juice of the tissues.

enclave (en'klāv; Fr. aw-klahv') [Fr.]. A substance detached from its normal connection and inclosed within another organ or tissue.

enclavement (en-klāv'ment). 1. Impaction, as of a fetus in the pelvic strait. 2. Retention due to constriction.

enclitic (en-klit'ik) [Gr. ἐγκλίθειν to incline]. Having the planes of the fetal head inclined to those of the maternal pelvis; not synclitic.

encelialgia, encœlitis. See *encelialgia* and *encelitis*.

encolpism (en-kol'pizm) [Gr. ἐν in + κόλπος vagina]. Medication by vaginal suppositories and injections.

encolpitis (en-kol-pi'tis) [Gr. *έν* in + *κόλπος* vaginal]. See *endocolpitis*.

encopresis (en-kop-re'sis). Incontinence of stools.

encranial (en-kra'ne-al). Situated within the cranium.

encyesis (en-si-e'sis) [Gr. *έν* in + *κύσις* pregnancy]. Normal uterine pregnancy.

encyclopelitis (en-si'o-pi-e-li'tis) [*encyesis* + *πυελίτις*]. Inflammation of the renal pelvis occurring in normal pregnancy.

encysted (en-sis'ted) [Gr. *έν* in + *κύστις* cyst]. Inclosed in a sac, bladder, or cyst.

encystment (en-sist'ment). The process or condition of being or becoming encysted.

endadelphos (end-ad-el'fos) [Gr. *ένδον* within + *ἀδελφός* brother]. A monster in which a parasitic twin is inclosed within the body of the auto-site, or within a tumor upon the larger twin.

Endameba, Endamoeba (end-am-e'bah). Same as *Entamoeba*.

endamebiasis (end-am-e-bi'as-is). Infestation with *Endameba*.

endangeitis, endangitis (end-an-je-i'tis, end-an-ji'tis). Inflammation of the endangium; intimitis.

endangium (end-an'je-um) [Gr. *ένδον* within + *ἀγγείον* vessel]. The intima, or innermost coat of a blood-vessel.

endaortic (end-a-or'tik). Pertaining to the interior of the aorta.

endaortitis (end'a-or-ti'tis). Inflammation of the lining membrane of the aorta.

endarterial (end-ar-te're-al). Within an artery.

endarteritis (end'ar-te-r-i'tis) [Gr. *ένδον* within + *ἀρτηρία* artery]. Inflammation of the intima of an artery. **e. deformans**, chronic endarteritis characterized by fatty degeneration of the arterial tissues, with the formation of deposits of lime-salts. **e. obliterans**, endarteritis followed by collapse and closure of the smaller branches. **e. proliferans**, overgrowth of fibrous tissue in the internal layers of the aorta.

endarterium (end-ar-te-re-um) [Gr. *ένδον* within + *ἀρτηρία* artery]. The intima or innermost coat of an artery.

end-artery (end'ar-ter-e). An artery which does not anastomose with other arteries, either of itself or by its branches.

endaxoneuron (end'aks-o-nu'ron) [Gr. *ένδον* within + *αξονεύρον*]. A neuron the process of which remains within the spinal cord.

end-body (end'bod-e). See under *body*.

end-brain (end'brän). The telencephalon; that part of the anterior cerebral vesicle whence are developed the pars optica, hypothalami, striatum, rhinencephalon, and pallium.

end-brush (end'brush). The brush-like or tufted arrangement sometimes forming the termination of the process of a nerve-cell.

end-bud, end-bulb (end'bud, end'bulb). An ovoid or spheroid body found in certain parts of the mucous membrane, at the ends of a branch of a sensitive nerve.

endochondral (end-kon'dral). Same as *endochondral*.

endeictic (en-dik'tik) [Gr. *ένδειξις* a pointing out]. Symptomatic.

endemia (en-de'me-ah). Any endemic disease.

endemic (en-de'me-al). Endemic.

endemic (en-dem'ik) [Gr. *έν* in + *δῆμος* people, district]. 1. Pertaining to or prevalent in a particular district or region. 2. An endemic disease; a disease which is local, or which is neither epidemic nor sporadic.

endemo-epidemic (en'de-mo-ep-id-em'ik). Endemic, but occasionally becoming epidemic.

endepidermis (end'ep-id-er'mis). The epithelium or internal epidermis.

endermic, endermatic (en-der'mik, en-der-mat'ik) [Gr. *έν* in + *δέρμα* skin]. Acting by absorption through the skin.

endermically (en-der'mik-al-e). By direct application to the skin.

endermism (en'der-mizm). The endermic administration of medicines.

endermol (en-der'mol). 1. A proprietary ointment-base, a compound of stearamid with hydrocarbons of the paraffin series. 2. Nicotin salicylate, $\text{OH.C}_6\text{H}_4.\text{COOH.C}_{10}\text{H}_{14}\text{N}_2$; a crystalline substance free from water and containing 75 per cent. of nicotin.

endermosis (en-der-mo'sis) [Gr. *έν* in + *δέρμα* skin]. 1. The endermic administration of medicines. 2. Any herpetic affection of the mucous membranes.

enderon (en'der-on) [Gr. *έν* in + *δέρω* skin]. The deeper part of the skin or mucous membrane, as distinguished from the epithelium or epidermis.

enderonic (en-der-on'ik). Pertaining to the enderon or derived from it.

end-flake (end'flak). Same as *end-plate*.

end-lobe (end'löb). The occipital lobe.

end-nucleus. See *terminal nucleus*, under *nucleus*.

endo- (en'do-) [Gr. *ένδον* within]. A prefix denoting an inward situation.

endo-abdominal (en'do-ab-dom'in-al). Pertaining to the interior of the abdomen.

endo-aneurysmorrhaphy (en'do-an-u-riz-mor'af-e) [Gr. *ένδον* within + *ἀνεύρυσμα* aneurysm + *ράφη* suture]. Matas' operation for aneurysm by opening the aneurysmal sac and closing the internal orifices by suture.

endo-angiitis (en'do-an-je-i'tis) [Gr. *ένδον* within + *αγγίτις*]. Inflammation of the intima of a blood-vessel.

endo-antitoxin (en'do-an-te-tok'sin). An antitoxin contained within the elaborating cell.

endo-aortitis (en'do-a-or-ti'tis). See *endaortitis*.

endo-appendicitis (en'do-ap-en-dis-i'tis). Inflammation of the mucous membrane which lines the appendix vermiformis; catarrhal appendicitis.

endo-arteritis (en'do-ar-ter-i'tis). Same as *endarteritis*.

endo-auscultation (en'do-aws-kul-ta'shun). Auscultation of the stomach and thoracic organs by means of a tube passed into the stomach.

endobacillary (en-do-bas'il-a-re). Contained within a bacillus, as, *endobacillary* albuminoid.

endobiotic (en-do-bi-ot'ik) [Gr. *ένδον* within + *βίωσις* living]. Living parasitically within the tissues of the host.

endoblast (en'do-blast) [Gr. *ένδον* within + *βλαστός* germ]. The endoderm or hypoblast; the more internal of the primary blastodermic layers.

endoblastic (en-do-blast'ik). Pertaining to the endoblast; hypoblastic.

endobronchitis (en'do-brong-k'i'tis). Inflammation of the epithelial lining of the bronchi or of the bronchia.

endocardiac, endocardial (en-do-kar'de-ak, en-do-kar'de-al) [Gr. *ένδον* within + *καρδία* heart]. 1. Situated or occurring within the heart. 2. Pertaining to the endocardium.

endocarditic (en'do-kar-dit'ik). Pertaining to endocarditis.

endocarditis (en'do-kar-di'tis). Inflammation of the endocardium (Bouillaud); a disease generally associated with acute rheumatism, sometimes with other acute febrile diseases, and marked by dyspnea, rapid heart action, and peculiar systolic murmurs. **chronic e.**, a form associated with disease of the heart valves. **fetal e.** See *right-sided e.* **infectious e.** Same as *ulcerative e.* **lenticular**, malignant endocarditis of a slow course,

- frequently connected with the presence of *Streptococcus viridans*. **malignant e.**, endocarditis with ulceration of the valves; generally secondary to suppurative in some other part of the body. **mural e.**, endocarditis affecting the heart chambers as distinguished from *valvular e.* **plastic e.**, endocarditis with the formation of a fibrous exudate which causes adhesion of the valves to surrounding parts. **polypous e.**, ulcerative endocarditis with the formation of polypoid masses of fibrin. **pustulous e.**, ulcerative endocarditis in which minute abscesses occur in the substance of the valves. **right-sided e.**, primary acute endocarditis of the right side of the heart. Called also *fetal e.* **ulcerative e.**, a rapidly fatal form which may follow septic poisoning. It is attended with symptoms of pyemia, and results in ulceration and erosion of the valves. Called also *infected*, *malignant*, and *septic e.* **valvular e.**, endocarditis affecting the membrane over the valves of the heart only. **vegetative e.**, **verrucous e.**, endocarditis with the formation of shreds of fibrin on the ulcerated valves.
- endocardium** (en-do-kar'de-um) [Gr. *ἐνδον* within + *καρδία* heart]. The epithelial lining membrane of the heart.
- endoceliac** (en-do-se'le-ak) [Gr. *ἐνδον* within + *κοιλία* cavity]. Inside one of the body cavities.
- endocellular** (en-do-sel'u-lar). Within a cell.
- endocervical** (en-do-ser'vik-al). Pertaining to the interior of the cervix uteri.
- endocervicitis** (en'do-ser-vis-i'tis) [Gr. *ἐνδον* within + *L. cervix* neck]. Inflammation of the lining membrane of the neck of the uterus.
- endochondral** (en-do-kon'dral). Developed within cartilage, as, an *endochondral* bone.
- endochorion** (en-do-ko're-on) [Gr. *ἐνδον* within + *χόριον* chorion]. The inner chorionic layer.
- endochrome** (en'do-krōm) [Gr. *ἐνδον* within + *χρῶμα* color]. The coloring-matter within a cell.
- endocolitis** (en'do-ko-li'tis). Inflammation of the mucous membrane of the colon.
- endocolpitis** (en'do-kol-pi'tis) [Gr. *ἐνδον* within + *κόλπος* vagina]. Inflammation of the mucous membrane of the vagina.
- endocomplement** (en-do-kom'ple-ment). An endocellular complement; a complement contained in the erythrocytes as distinguished from that contained in the serum.
- endocorpuscular** (en-do-kor-pus'ku-lar). Within a corpuscle.
- endocranial** (en-do-kra-ne-al). Within the cranium.
- endocranitis** (en'do-kra-ni'tis). Inflammation of the endocranium; external pachymeningitis.
- endocranium** (en-do-kra-ne-um) [Gr. *ἐνδον* within + *κράνιον* skull]. The dura mater of the brain.
- endocrin** (en'do-krin) [Gr. *ἐνδον* within + *κρίνειν* to separate]. The internal secretion of a gland.
- endocrinasthenia** (en-do-krin-as-the'ne-ah). Endocrine exhaustion resulting in a psychosis or psychoneurosis.
- endocrinasthenic** (en-do-krin-as-then'ik). Pertaining to or marked by endocrine exhaustion.
- endocrine** (en'do-krin). 1. Secreting internally; applied to organs whose function is to secrete into the blood or lymph a substance which plays an important rôle in metabolism. See *internal secretion*, under *secretion* and *hormone*. 2. Pertaining to internal secretions.
- endocrinic** (en-do-krin'ik). Endocrinous.
- endocrinism** (en-dok'rín-izm). Endocrinopathy.
- endocrinodontia** (en-do-krin-o-don'she-ah) [*endocrine* + Gr. *ὀδούς* tooth]. The study of the relation of internal secretions to tooth formation and development.
- endocrinologist** (en'do-krin-ol'o-jist). A worker in the subject of endocrinology or a physician who treats diseases arising from disordered internal secretions.
- endocrinology** (en'do-krin-ol'o-je) [*endocrin* + Gr. *λόγος* treatise]. The study of the internal secretions.
- endocrinopath** (en-do-krin'o-path). A person with disorder of the glands of internal secretion.
- endocrinopathic** (en'do-krin-o-path'ik). Pertaining to or affected with endocrinopathy; also a person so affected.
- endocrinopathy** (en'do-krin-op'ath-e) [*endocrine* + Gr. *πάθος* disease]. Any disease due to disorder of any of the internal secretions.
- endocrinotherapy** (en-do-krin-o-ther'ap-e). Treatment of disease by the administration of endocrine preparations.
- endocrinous** (en-dok'rín-us). Of or pertaining to an internal secretion or to a gland producing such a secretion.
- endocrisines** (en-dok'ris-inz). A proprietary preparation, being total extracts of all the internal secretory glands.
- endocritic** (en-do-krit'ik). Same as *endocrine*.
- endocyclic** (en-do-sik'lik). A term applied to cyclic compounds in which the bond occurs in the nucleus.
- endocystitis** (en'do-sis-ti'tis). Inflammation of the lining membrane of the bladder.
- endocyte** (en'do-sit) [Gr. *ἐνδον* within + *κύτος* cell]. Any cell-inclusion.
- endoderm** (en'do-derm) [Gr. *ἐνδον* within + *δέρμα* skin]. The hypoblast, or inner layer of the blastoderm, or of the two-layered embryo.
- Endodermophyton** (en-do-der-mof'it-on). A genus of fungi closely resembling *Trichophyton* which attacks the skin rather than the hair and dissects the horny layer of the epidermis from the rete without giving rise to suppuration. **E. castella'ni**, the form which causes *Tinea intersecta*. **E. concentricum**, the form which causes *Tinea imbricata*.
- endodiascope** (en-do-di'as-kōp). An x-ray tube which may be placed inside a body cavity for radiography and radiotherapy.
- endodiascopy** (en-do-di-as'ko-pe) [Gr. *ἐνδον* within + *διά* through + *σκοπεῖν* to view]. Skiascopic examination of a body cavity.
- endodontitis** (en'do-don-ti'tis) [Gr. *ἐνδον* within + *ὀδός* tooth]. Inflammation of the dentinal pulp.
- endo-ectothrix** (en-do-ek'to-thriks). A ring-worm fungus which produces spores both on the interior and exterior of the hairs.
- endo-enteritis** (en'do-en-ter-i'tis). Inflammation of the mucous membrane of the intestine.
- endo-enzyme** (en-do-en'zim). An intracellular enzyme; an enzyme which is retained in a cell and not excreted into the surrounding medium. Cf. *exo-enzyme*.
- endo-erepsin** (en-do-e-rep'sin). Endocellular erepsin.
- endo-esophagitis** (en'do-e-sof-aj-i'tis). Inflammation of the lining membrane of the esophagus.
- endo-exoteric** (en'do-eks-o-ter'ik) [Gr. *ἐνδον* within + *ἐξωτερικός* pertaining to the outside]. Resulting from certain causes internal to the body, and from others of external origin.
- endofaradism** (en-do-far'ad-izm). Internal faradism, as of the stomach.
- endogalvanism** (en-do-gal'van-izm). Internal galvanism, as of the stomach.
- endogamy** (en-dog'am-e) [Gr. *ἐνδον* within + *γάμος* marriage]. Fertilization by the union of separate cells having the same chromatin ancestry. Called also *pedogamy*. Cf. *autogamy* and *exogamy*.
- endogastrectomy** (en'do-gas-trek'to-me) [Gr. *ἐνδον* within + *γαστήρ* stomach + *ἐκτομή* excision]. Extirpation of the mucosa of the stomach.

endogastric (en-do-gas'trik). Pertaining to the interior of the stomach.

endogastritis (en''do-gas-tri'tis). Inflammation of the mucous membrane of the stomach.

endogen (en'do-jen). An obsolete term for the monocotyledonous plants.

endogenic (en-do-jen'ik). Endogenous.

endogenous (en-doj'en-us) [Gr. *ἔνδον* within + *γεννᾶν* to produce]. Originating within the organism.

endoglobar (en-do-glo'bar). Endoglobular.

endoglobular (en''do-glob'u-lar). Situated or occurring within the blood-corpuscles.

endognathion (en-do-gna'the-on) [Gr. *ἔνδον* within + *γνάθος* jaw]. The inner segment of the incisive bone.

endogonidium (en''do-go-nid'e-um). A gonidium developed within a cell.

endo-intoxication (en''do-in-toks-ik-a'shun). Poisoning caused by an endogenous toxin.

endolabyrinthitis (en''do-lab-i-rin-thi'tis). Inflammation of the membranous labyrinth.

endolaryngeal (en''do-lar-in'je-al) [Gr. *ἔνδον* within + *λάρυγξ* larynx]. Situated on or occurring within the larynx.

Endolimax na'na. A non-pathogenic ameba found in the intestines and characterized by a nucleus containing two or more large masses of chromatin connected by strands.

endolumbar (en-do-lum'bar). Within the lumbar portion of the spinal cord.

endolymph (en'do-limf) [Gr. *ἔνδον* within + *lymph*]. The liquor scarpæ, a fluid contained in the membranous labyrinth of the ear.

endolymphatic, endolymphic (en''do-lim-fat'ik, en-do-lim'fik). Pertaining to the endolymph.

endolysin (en-dol'is-in) [Gr. *ἔνδον* within + *lysin*]. A bactericidal substance existing in leukocytes, which acts directly on bacteria. **leukocytic e.** See *leukin*.

endomastoiditis (en''do-mas-toid-i'tis). Inflammation within the mastoid cavity and cells.

endometrectomy (en''do-me-trek'to-me) [Gr. *ἔνδον* within + *μήτρα* womb + *ἐκτομή* excision]. Extirpation of the uterine mucosa.

endometrial (en-do-me'tre-al). Pertaining to the endometrium.

endometrioma (en-do-me-tre-o'mah). A tumor containing endometrium. See *adenomyoma*.

endometritis (en''do-me-tri'tis) [Gr. *ἔνδον* within + *μήτρα* uterus + *-itis* inflammation]. Inflammation of the endometrium, or lining membrane of the uterus. Endometritis is of various kinds: it may be *catarrhal*, *croupous*, *diphtheric*, *fungous*, *gangrenous*, *hemorrhagic*, or *septic*. It is *cervical* or *corporeal*, according as it affects the cervix or body of the uterus. **bacteriotoxic e.**, endometritis caused by the toxins of bacteria, as distinguished from that caused by the presence of the organisms themselves. **decidual e.**, inflammation of the decidual membranes of pregnancy. **e. dis'secans**, endometritis with a tendency to the formation of large, deep ulcers. **exfoliative e.**, endometritis with the casting off of portions of the membrane. **membranous e.**, endometritis with an exudate which forms a false membrane.

endometrium (en-do-me'tre-um). The mucous membrane that lines the cavity of the uterus.

endometry (en-dom'et-re) [Gr. *ἔνδον* within + *μέτρον* measure]. The measurement of the capacity of a cavity.

endomixis (en-do-miks'is) [Gr. *ἔνδον* within + *μίξις* mixture]. The disintegration and subsequent reorganization of the macronucleus occasionally observed in a protozoan organism. It may to some extent take the place of conjugation.

Endomyces (en-do-mi'sēz). A genus of the Sacccharomycetes in which the mycelium is segmented. **E. al'bicans**, a species found in thrush. Called also *Monilia albicans*. *E. rhoi* and *E. subtilis* have also been found parasitic in man. **E. vuillemini**, one of the organisms causing thrush.

endomyocarditis

(en''do-mi-o-kar-di'tis) [Gr. *ἔνδον* within + *μῦς* muscle + *καρδία* heart]. Inflammation of the endocardium and myocardium.

endomysium (en-do-mis'e-um) [Gr. *ἔνδον* within + *μῦς* muscle]. The areolar tissue which separates the fibers of any muscular fasciculus.

Endomyces (Rivas).

endonasal (en-do-na'zal). Within the nose.

endonephritis (en''do-nef-ri'tis) [Gr. *ἔνδον* within + *nephritis*]. Same as *pyelitis*.

endoneuritis (en''do-nu-ri'tis). Inflammation of the endoneurium.

endoneurium (en-do-nu're-um) [Gr. *ἔνδον* within + *νεῦρον* nerve]. The delicate connective tissue between the fibers of any funiculus of a nerve.

endonuclear (en-do-nu'kle-ar). Within a cell nucleus.

endonucleolus (en''do-nu-kle'o-lus). A non-staining spot near the center of the nucleolus.

endo-oxidase (en-do-ok'sid-ās). Oxidase occurring within a cell, such as a bacterium.

endoparasite (en-do-par'as-it) [Gr. *ἔνδον* within + *παράσιτος* parasite]. A parasite which lives within the body of its host.

endopelvic (en-do-pel'vik). Within the pelvis.

endoperiarteritis (en''do-per'e-ar-ter-i'tis). Endarteritis combined with periarteritis.

endopericardial (en''do-per-e-kar'de-al). Pertaining to the endocardium and pericardium.

endopericarditis (en''do-per-ik-ar-di'tis). Endocarditis combined with pericarditis.

endoperimyocarditis (en''do-per-e-mi''o-kar-di'tis). Inflammation of the endocardium, pericardium, and myocardium.

endoperineuritis (en''do-per-e-nu-ri'tis). Inflammation of the endoneurium and perineurium.

endoperitonitis (en''do-per-it-o-ni'tis). Inflammation of the serous lining of the peritoneal cavity.

endophlebitis (en''do-fle-bi'tis) [Gr. *ἔνδον* within + *φλέψ* vein + *-itis* inflammation]. Inflammation of the intima of a vein.

endophthalmitis (en-dof-thal-mi'tis) [Gr. *ἔνδον* within + *ophthalmis*]. Inflammation of the internal structures of the eye. **e. phacogenet'ica**, endophthalmitis occurring as a reaction to the injection of lens substance.

endophylaxiation (en''do-fi-lak-sin-a'shun). Resistance to intoxication developed entirely within the body of the animal possessing it.

endophyte (en'do-fit) [Gr. *ἔνδον* within + *φυτόν* plant]. A vegetable organism growing within an animal or a plant.

endoplasm (en'do-plazm) [Gr. *ἔνδον* within + *πλάσμα* something formed]. The central portion of the cytoplasm of a cell. Cf. *ectoplasm*.

endoplast (en'do-plast) [Gr. *ἔνδον* within + *πλάσσω* to form]. The nucleus of a cell.

endoplastic (en-do-plas'tik). Same as *entoplastic*.

endorachis (en-dor'ak-is) [Gr. *ἔνδον* within + *ράχis* spine]. A delicate membrane lining the spinal canal.

end-organ (end'or-gan). Any end-bud, end-plate, or other similar terminal nerve expansion. **e. of Ruffini**, any of the peculiar nerve end-organs occurring in the corium, side by side with pacinian corpuscles. They consist of a connective-tissue framework supporting a rich arborization of telodendria.

endorhachis (en-do-ra'kis) [Gr. *ἔνδον* within + *ράχις* spine]. The spinal dura mater.

endorhinitis (en'do-rin-i'tis) [Gr. *ἔνδον* within + *ῥίς* nose]. Inflammation of the lining membrane of the nasal passages.

endosalpingitis (en'do-sal-pin'ji'tis) [Gr. *ἔνδον* within + *σάλπιγξ* tube + *-itis* inflammation]. Inflammation of the lining membrane of the oviduct.

endosarc (en'do-sark). See *entosarc*.

endoscope (en'do-skōp) [Gr. *ἔνδον* within + *σκοπεῖν* to examine]. An instrument for the examination of the interior of a hollow viscus, such as the bladder.

endoscopy (en-dos'ko-pe). Inspection of any cavity of the body by means of the endoscope.

endosecretory (en-do-se'kre-to-re) [Gr. *ἔνδον* within + *secretory*]. Pertaining to the internal secretions, as, *endosecretory* organs.

endosepsis (en-do-sep'sis). Septicemia originating within the organism.

endoskeleton (en-do-skel'et-on) [Gr. *ἔνδον* within + *σκελετόν* skeleton]. The bony and cartilaginous structures of the body, exclusive of that part of the skeleton only which is of dermal origin.

endosmometer (en-dos-mom'et-er) [*endosmosis* + Gr. *μέτρον* measure]. An instrument for determining the rate and extent of endosmosis.

endosmose, endosmosis (en'dos-mōs, en-dos-mō'sis) [Gr. *ἔνδον* within + *ὥσμος* impulsion]. A movement in liquids separated by a membranous or porous septum, by which one fluid passes through the septum into the cavity which contains another fluid of a different density. Cf. *exosmosis*.

endosmotic (en-dos-mot'ik). Of the nature of endosmosis.

endosoma (en-do-so'mah) [Gr. *ἔνδον* within + *σῶμα* body]. The matter which fills a red blood-corpuscle.

endosperm (en'do-sperm). A substance containing reserve food materials, formed within the embryo sac of plants.

endospore (en'do-spōr) [Gr. *ἔνδον* within + *σπόρος* seed]. See under *spore*.

endosporium (en-do-spōr'e-um). The inner layer of the envelop of a spore.

endosteitis, endostitis (en'dos-te-i'tis, en-dos-ti'tis). Inflammation of the endosteum.

endosteoma (en-dos-te-o'mah) [Gr. *ἔνδον* within + *ὀστέον* bone + *-ωμα* tumor]. A tumor in the medullary cavity of a bone.

endostethoscope (en-do-steth'o-skōp). A stethoscope passed into the esophagus for auscultating the heart.

endosteum (en-dos'te-um) [Gr. *ἔνδον* within + *ὀστέον* bone]. The tissue surrounding the medullary cavity of a bone.

endostoma (en-dos-to'mah) [Gr. *ἔνδον* within + *ὀστέον* bone]. A bony tumor within a bone.

endonoten (en-do-ten'on) [Gr. *ἔνδον* within + *τενὼν* tendon]. The delicate connective tissue separating the structural bundles of a tendon.

endothelial (en-do-the'le-al). Pertaining to or made up of endothelium.

endothelioblastoma (en-do-the'li-o-blas-to'mah) [*endothelium* + Gr. *βλάστος* germ + *-ωμα* tumor]. A tumor of mesenchymal origin, the cells of which tend to differentiate into flat endothelial cells and to line vessels, cavities, and surfaces (Mallory).

The term includes angioma, hemangioma, endothelioma, and lymphangioma.

endotheliocyte (en-do-the'le-o-sit) [*endothelial* + Gr. *κύτος* cell]. A term for the large mononuclear phagocytic wandering cells of the circulating blood and tissues which are supposed to be derived from proliferating vascular endothelium. The term is a general one to include the cells variously named primitive wandering cell, clasmatocyte, polyblast, adventitial cell, histiocyte, macrophage, and transitional cell. Called also *endothelial phagocyte*.

endotheliocytosis (en-do-the'le-o-si-to'sis). An abnormal increase in the number of endotheliocytes.

endothelioid (en-do-the'le-oid). Resembling endothelium. **e. cells**. See under *cell*.

endothelioma (en'do-the-le-o-i-no'mah). A fibrous tumor on the endothelium.

endotheliolysin (en'do-the-le-o'is-in). An antibody capable of causing disintegration of endothelial tissue.

endotheliolytic (en'do-the-le-o-lit'ik). Capable of destroying endothelial tissue.

endothelioma (en'do-the-le-o'mah) [Gr. *ἔνδον* within + *θηλή* nipple + *-ωμα* tumor]. A tumor arising from the endothelial linings of blood-vessels (*hemangio-endothelioma*), lymphatics (*lymphangio-endothelioma*), or serous cavities. **e. capitis**, a large multiple endothelioma on the scalp. **dural e.**, a tumor formed from the endothelial cells lining the arachnoid or subdural space.

endotheliomyoma (en-do-the'le-o-mi-o'mah). A myomatous tumor arising from endothelium.

endotheliomyxoma (en-do-the'le-o-miks-o'mah). A myxomatous tumor arising from endothelium.

endotheliotoxin (en'do-the-le-o-toks'in). A specific toxin which acts on the endothelium of capillaries and small veins, producing hemorrhage. Cf. *hemorrhagin*.

endothelium (en-do-the'le-um) [Gr. *ἔνδον* within + *θηλή* nipp'e]. The membrane that lines the serous cavities, lymphatic cavities, joint cavities, and other closed cavities of the body. It consists of a layer of thin, flat, connective-tissue cells. **Débove's e.**, the membrana propria upon which the epithelium of the small intestine rests.

endothermal (en-do-ther'mal). Endothermic.

endothermic (en-do-ther'mik) [Gr. *ἔνδον* within + *θερμη* heat]. Characterized by or accompanied by the absorption of heat; heat absorbing; storing up heat or energy in a potential form.

endothermy (en'do-ther-me) [See *endothermic*]. The production of heat in the tissues from within by the resistance offered by the tissues to the passage of the high-frequency current.

endothrix (en'do-thriks) [Gr. *ἔνδον* within + *θρίξ* hair]. A form of Trichophyton which invades the hair and is found within the hair shaft.

endothyropexy, endothyreopexy (en-do-thi'-ro-pek-se, en-do-thi're-o-pek-se). The operation of freeing the thyroid from the trachea, dislocating it forward, and fixing it to one side in a pocket between the sternocleidomastoid muscle and the skin.

endotin (en-do'tin). A purified extract of a filtrated culture of human tubercle bacilli in 50 per cent. glycerin. Called also *tuberculinum purum*.

endotoscope (en-do'to-skōp) [Gr. *ἔνδον* within + *οὖς* ear + *σκοπεῖν* to view]. An endoscope for the ear.

endotoxic (en-do-tok'sik). Retaining its toxin within itself: said of bacteria.

endotoxicosis (en'do-toks-ik-o'sis). Poisoning caused by an endotoxin.

endotoxin (en-do-toks'in). A toxin that is retained within the body of the bacterium, as distinguished from the extracellular or true toxin.

endotracheitis (en'do-tra-ke-i'tis). Inflammation of the mucosa of the trachea.

- endotrachelitis** (en-'do-trak-el-i'tis) [Gr. *ἐνδον* within + *τράχηλος* neck]. Inflammation of the lining membrane of the cervix uteri.
- endotrypsin** (en-do-'trip'sin) [Gr. *ἐνδον* within + *trypsin*]. A digestive ferment derived from yeast and resembling trypsin in its action.
- endotryptase** (en-do-'trip'tās). An intracellular ferment from yeast, capable of digesting zymase.
- endovaccination** (en-'do-vak-sin-a'shun) [Gr. *ἐνδον* within + *vaccination*]. The administration of vaccines by the mouth.
- endovasculitis** (en-'do-vas-ku-li'tis) [Gr. *ἐνδον* within + *L. vas'culum* vessel]. Inflammation of the intima of a blood-vessel.
- endovenous** (en-do-ve-'nus). Same as *intravenous*.
- end-piece** (en'pēs). 1. Same as *complement*. 2. The albumin or soluble portion in complement splitting.
- end-plate** (end'plāt). A flattened terminal discoid expansion at the ending of a motor nerve-fiber upon a muscle-fiber.
- endyma** (en'dim-ab). Same as *ependyma*.
- enelectrolysis** (en-e-lek-trol'is-is). Removal of superfluous hair by pulling out the hair and passing a current through the electric needle into the hole left.
- Enem.** Abbreviation for *enema*.
- enema** (en'em-ah) pl. *enem'ata* or *enemas* [Gr. *ἐνέμια*]. A clyster or injection; a liquid thrown or to be thrown into the rectum. **analeptic e.**, an enema consisting of a pint of tepid water containing $\frac{1}{2}$ teaspoonful of salt. Called also *thirst e. blind e.*, the insertion of a soft-rubber tube into the rectum to aid in the expulsion of flatus. **Dobell's e.**, a nutrient enema containing scraped boiled meat, pancreas emulsion, boiled arrowroot, pepsin, and pancreatin. **Ewald's e.**, a nutrient enema containing eggs, wheat flour boiled in a 20 per cent. grape-sugar solution, and red wine. **Leube's e.**, an enema containing boiled meat, fat, and pancreatin. **pancreatic e.**, an enema containing pancreatin. **Rosenheim's e.**, a nutrient enema consisting of peptone, cod-liver oil, and sugar in a 0.3 per cent. soda solution. **thirst e.**, analeptic enema.
- enemator** (en'em-a-tor). An apparatus for giving enemas.
- enemose** (en'em-ōz). A proprietary liquid preparation of nitrogenous substances from beef and wheat; used especially for colonic feeding.
- enepidermic** (en-ep-e-der'mik). Used upon or applied to the skin.
- energetics** (en-er-jet'iks). The study of enery; the science of energy.
- energid** (en'er-jid). Living, active protoplasm, as distinguished from deutoplasm.
- energin** (en'er-jin). A nutrient preparation from the proteins of rice.
- energometer** (en'er-gom'et-er). An apparatus for studying the pulse, measuring—(1) The pressure sufficient to overcome the pulse-wave; (2) the energy expended in the cuff to counteract this pressure; (3) the pressure at which the maximal volume of blood meets the cuff; (4) the value of this maximal blood volume; (5) the press at which the energy expanded in the cuff becomes maximal; and (6) the volume of this maximal energy.
- energy** (en'er-je) [Gr. *ἐνέργεια*]. Ability to operate or work; power to produce motion, to overcome resistance, and to effect physical changes. **biotic e.**, the form of energy peculiar to living matter. **chemical e.**, energy which shows itself in chemical transformations. **conservation of e.**, the principle that in the conversion of one kind of energy into another no energy is ever lost or created. **kinetic e.**, energy in action or engaged in producing work or motion. **potential e.**, **e. of position**, energy at rest or not manifested in actual work.
- enervation** (en-er-va'shun) [L. *enerva'tio*]. Lack of nervous energy; languor.
- enesol** (en-e'sol) [Gr. *ἐνεσις* injection]. Mercury salicylarsenate, $(\text{OH}.\text{C}_6\text{H}_4.\text{CO}.\text{O})_2\text{AsHg}$, a compound said to combine the actions of mercury and arsenic. It is used by intramuscular injection in doses of 15–30 min. (1–2 c.c.) of a 3 per cent. solution.
- enflagellation** (en-flag-el-a'shun). The formation of flagella; flagellation.
- engastrius** (en-gas'tre-us) [Gr. *ἐν* in + *γαστήρ* belly]. A double monstrosity in which one fetus is contained within the abdomen of the other.
- Engel's alkalimetry** (eng'elz) [Rodolphe Charles Engel, Alsatian chemist, 1850–1916]. See *alkalimetry*.
- Engelmann's disks** (eng'el-mahnz) [Theodor Wilhelm Engelmann, a German physiologist, 1843–1909]. See under *disk*.
- engine, dental** (en'jin). A machine operated by foot-power or by electricity for giving a swift rotatory motion to drill bits, burrs, burnishers, etc.; much employed by dentists. **surgical e.**, a similar machine to the dental engine, used in operative surgery.
- englobe** (en-glōb'). To absorb within the substance of a globe, such as an ameba, leukocyte, or other cell.
- Engman's disease** (eng'manz) [Martin F. Engman, dermatologist in St. Louis, born 1868]. Dermatitis infectiosa eczematoides.
- engorged** (en-gorj'd). Distended or swollen with fluids.
- engorgement** (en-gorj'ment). Hyperemia; local congestion; excessive fullness of any organ or passage.
- engram** (en'gram) [Gr. *ἐν* upon + *γράμμα* mark]. A lasting mark or trace. The term is applied to the definite and permanent trace left by a stimulus in the protoplasm of a tissue. In psychology it is the lasting trace left in the psyche by anything that has been experienced psychically; a latent memory picture.
- enhematospore** (en-hem'at-o-spōr) [Gr. *ἐν* in + *αἷμα* blood + *σπόρος* spore]. A spore of the malarial parasite formed in the blood by the breaking up of the amebula and the red corpuscle containing it.
- enhemospore** (en-hem'o-spōr). Same as *enhematospore*.
- enkatarrhaphy** (en-kat-ar'af-e) [Gr. *ἐγκατάρραπτειν* to sew in]. The operation of burying a structure by suturing together the sides of the tissues alongside of it.
- enol** (e'nol). One of two tautomeric forms of a substance, the other being the keto form. The enol is formed from the keto by migration of hydrogen from the adjacent carbon atom to the carbonyl group:
- | | |
|------------------------------|-------------------------------|
| $\text{R}.\text{CH}_2$ | $\text{R}.\text{CH}$ |
| $\text{R}.\text{C}:\text{O}$ | $\text{R}.\text{C}.\text{OH}$ |
| keto form | enol form |
- enomania, œnomania** (e-no-ma'ne-ah) [Gr. *οἶνος* wine + *μανία* madness]. 1. A periodic or manic-al craving for strong drink. 2. Delirium tremens.
- enophthalmin** (en-of-thal'min). Oxytoluylmethyl-vinylidiacetonalkamin hydrochlorate, a mydriatic substance, used like eucain, in 2–5 per cent. solution.
- enophthalmos, enophthalmus** (en-of-thal'mos, en-of-thal'mus) [Gr. *ἐν* in + *ὀφθαλμός* eye]. Abnormal retraction of the eye into the orbit.
- enorganic** (en-or-gan'ik). Existing as a permanent quality of the organism.
- enosimania** (en'os-im-a'ne-ah) [Gr. *ἐνοσις* a quaking + *μανία* madness]. Insanity characterized by extreme terror.
- enostosis** (en-os-to'sis) [Gr. *ἐν* in + *ὀστέον* bone]. A morbid bony growth developed within the cavity of a bone or within the cranium.

enoxidase, œnoxidase (e-nok'-sîd-ās) [Gr. οἶνος wine + οξιδάω to oxidize]. An oxidizing ferment found in spoiled wines.

ensiform (en'sîf-orm) [L. *en'sis* sword + *for'ma* form]. Shaped like a sword.

ensisternum (en-sis-ter-num) [L. *en'sis* sword + *sternum*]. The ensiform appendix; the lowest piece of the sternum.

ens morbi (enz mor'bi) [L.]. The nature or essential principle of a disease considered apart from its causation; the pathology of a disease as distinguished from its etiology.

ensomphalus (en-som'fal-us) [Gr. ἐν in + σῶμα a body + ὀμφαλός navel]. A double monstrosity having blended bodies, two separate navels, and two umbilical cords.

enstrophe (en'stro-fē) [Gr. ἐν in + στρέφω to turn]. Inversion, especially of the margin of the eyelids.

entacoustic (en-tah-koos'tik) [Gr. ἐντός within + ἀκουστικός of hearing]. Pertaining to the organ of hearing.

entad (en'tad). Toward the center; inwardly.

Entada (en'tad-ah). See *bayogo*.

ental (en'tal) [Gr. ἐντός within]. Inner; central.

entalagão (en-tal-as-ah'yo). A disease of Brazil characterized by recurrent attacks of severe difficulty in swallowing. Called also *tropical cardiospasm*, *tropical dysphagia*, and *mal d'engaso*.

Entameba, Entameba (ent-am-e'bah). A genus of amebæ, including three of the species that are internal parasites of the human body. This genus is differentiated from *Amœba* by the absence of a contractile vacuole and the formation of multinucleated cysts. See *Amœba*. **E. buetschlii**. Same as *Iodameba buetschlii*. **E. coli**, a non-pathogenic form found normally in the intestinal tract of man. **E. gingiva'lis**, a species found in the mouth and about the gums. **E. histolytica**, a species which is the cause of amebic or tropical dysentery and tropical abscess of the liver. Called also *Amœba dysenterica*. **E. kartul'isi**, found in the pus of necrotic bone abscesses. **E. na'na**, Endolimax nana. **E. nippon'ica**, a species from cases of tropical dysentery in Japan. **E. tetragē'na**, a species found by Viereck in the stool of tropical dysentery in Africa and Asia, now known to be *E. histolytica*. **E. tropica'lis**. Same as *E. histolytica*. **E. un'dulans**, an oval body with an undulating membrane found in the human intestine. Other species (?) probably identical with *E. gingivalis* are: *E. buccalis*, *E. kartulis*, *E. pulmonalis*, *Amœba buccalis*, *A. denialis*, *A. maxillaris*. Other species (?) very similar to or identical with *E. coli* are: *E. tropicalis*, *phagocytoides*, *E. brasiliensis*, *E. urogenitalis*, *E. vaginalis*. Other species (?) not well defined are: *E. mirai*, *E. mortinatalium*.

entamebiasm (en'tam-e-bî-as-is). Infestation with Entameba.

entasia, entasis (en-ta'ze-ah, en'tas-is) [Gr. ἐντασις]. A constrictive spasm; spasmodic muscular action.

entelechy (en-tel'ek-e) [Gr. ἐντελεχεία actuality]. 1. Completion; full development or realization; the complete expression of some function. 2. A supposed vital principle operating in living creatures as a directive spirit.

entepicondyle (en-tep-e-kon'dil). The internal epicondyle of the humerus.

enteque (en-ta'ka). A disease of animals in South America, characterized by the formation of horny structures in the lungs.

enteraden (en-ter'ad-en) [Gr. ἔντερον bowel + ἀδήν gland]. Any intestinal gland.

enteradenitis (en-ter-ad-en-î'tis) [see *enteraden*]. Inflammation of the intestinal glands.

enteral (en'ter-al) [Gr. ἔντερον intestine]. Within, or by way of, the intestine.

enteralgia (en-ter-al'-je-ah) [Gr. ἔντερον intestine + ἄλγος pain]. Pain or neuralgia of the intestine.

enterangiemphraxia (en-ter-an-je-em-fraks-îs) [Gr. ἔντερον intestine + ἀγγεῖον vessel + ἔμφραξις stoppage]. Obstruction of the intestinal blood-vessels.

enterauxe (en-ter-awks'e) [Gr. ἔντερον intestine + αὐξή increase]. Hypertrophy of the intestinal wall.

enterectasis (en-ter-ek'tas-is) [Gr. ἔντερον intestine + ἑκτασις extension]. Distention of the intestines.

enterectomy (en-ter-ek'to-me) [Gr. ἔντερον intestine + ἐκτομή a cutting out]. The excision of a part of the intestine.

enterelcrosis (en-ter-el-ko'sis) [Gr. ἔντερον intestine + ἑλκος ulceration]. Ulceration of the intestine.

enterepiplocele (en'ter-e-pip'lo-sel) [Gr. ἔντερον intestine + ἐπίπλοον omentum + κήλη hernia]. See *entero-epiplocele*.

enteric (en-ter'ik) [Gr. ἐντερικός]. Pertaining to the intestines.

entericin (en-ter'es-in). A preparation obtained from the plant, *Monso'nia biflo'ra*, which grows in the high yelds of South Africa; said to be useful for intestinal ulceration in typhoid fever. Dose, 60 gr. (4 gm.).

entericoid (en-ter'ik-oid). Resembling enteric or typhoid fever.

enterin (en'ter-in). Hexamethylentetramin protein, used as an intestinal antiseptic and astringent. Dose, 15 gr. (1 gm.).

enteritis (en-ter-î'tis) [Gr. ἔντερον intestine]. Inflammation of the intestine—chiefly of the small intestine. **e. anaphylactica**, hemorrhagic inflammation of both the large and small intestines following a second but not a fatal dose of anaphylactogen in sensitized dogs. **e. cystica chron'ica**, a form marked by cystic dilatations of the intestinal glands, due to closure of their mouths. **diphtheric e.**, diphtheria of the intestines. **e. membranacea**, membranous enteritis. **mucous e.**, **mucumembranous e.**, enteritis marked by painful diarrhea, with the presence of tubular casts of albuminous matter in the evacuations. **e. nodularis**, enteritis with enlargement of the lymph-nodes. **pellicular e.**, mucous enteritis. **phlegmonous e.**, a condition with symptoms resembling those of peritonitis, and secondary to other intestinal diseases, as chronic obstruction, strangulated hernia, carcinoma, etc. **e. polyp'osa**, enteritis marked by polypoid growths in the intestine, due to proliferation of the connective tissue. **protozoan e.**, enteritis in which the intestine is infested with protozoan organisms of various species. **pseudomembranous e.**, enteritis without fever and with profuse exudate of mucin. **streptococcous e.**, primary phlegmonous enteritis, due to *Streptococcus pyogenes*.

entero- (en'ter-o-) [Gr. ἔντερον intestine]. A prefix denoting some relation to the intestine.

entero-anastomosis (en'ter-o-an-as-to-mo'sis). The joining of two portions of the small intestine so as to form a single continuous tube.

entero-antigen (en'ter-o-an'te-jen). An antigen derived from the stools.

entero-apokleisis (en'ter-o-ap-o-klî'sis) [Gr. ἔντερον bowel + ἀπόκλεισις a shutting out]. The surgical exclusion of a part of the intestine.

enterobacteriotherapy (en'ter-o-bak-te-re-o-ther'ap-e). Treatment by vaccine made from intestinal bacteria.

enterobiasis (en'ter-o-bî-as-is). Infection by *Enterobius vermicularis*.

enterobiliary (en'ter-o-bil'e-a-re). Connecting the intestine and the bile-passages.

Enterobius vermicularis. Same as *Oxyuris vermicularis*.

enterobrosia, enterobrosis (en'ter-ô-bro'se-ah, en'ter-o-bro'sis) [Gr. ἔντερον bowel + βρῶσις eating]. Intestinal perforation.

enterocele (en'ter-o-sēl) [Gr. *ἐντερον* bowel + *κήλη* hernia]. 1. Any hernia of the intestine. 2. Posterior vaginal hernia. See under *hernia*.

enterocentesis (en'ter-o-sen-te'sis) [Gr. *ἐντερον* bowel + *κέντησις* puncture]. Surgical puncture of the intestine.

enterochirurgia (en'ter-o-ki-ru'je-ah) [Gr. *ἐντερον* intestine + *χειρουργία* surgery]. Surgery of the intestine.

enterocholecystostomy (en'ter-o-ko'le-sis-to's-to-me) [Gr. *ἐντερον* bowel + *χολή* bile + *κύστις* bladder + *στόμα* mouth]. The surgical creation of an opening from the gall-bladder to the small intestine.

enterocholecystotomy (en'ter-o-ko'le-sis-tot'o-me) [enterotomy + cholecystotomy]. Incision of the gall-bladder and the intestine.

enterocinesia (en'ter-o-sin-e'ze-ah) [Gr. *ἐντερον* intestine + *κίνησις* motion]. Peristalsis.

enterocinetic (en'ter-o-sin-et'ik). Pertaining to peristalsis; stimulating bowel activity.

enterocleaner (en'ter-o-kle'ner). An apparatus for flushing the intestines while the patient is in a full bath.

enterocleisis (en-ter-o-klī'sis) [Gr. *ἐντερον* intestine + *κλείσις* closure]. 1. Closure of a wound in the intestine. 2. Occlusion of the lumen of the intestine. **omental e.**, closure of an intestinal perforation by covering it with omentum.

enterocolysis (en-ter-ok'lis-is) [Gr. *ἐντερον* bowel + *κλύσις* injection]. The injection of a nutrient or medicinal liquid into the bowel.

enteroclysm (en'ter-o-klizm) [Gr. *ἐντερον* bowel + *κλύσμις* injection]. Material used in enterocolysis.

enterococcus (en'ter-o-kok'us) [Gr. *ἐντερον* intestine + *κόκκος*]. A Gram-positive, capsulated streptococcus which may appear as a diplococcus or as a diplobacillus. It is not known to be pathogenic.

enterocœle (en'ter-o-se'le) [Gr. *ἐντερον* bowel + *κοιλία* hollow]. The abdominal cavity or body-cavity.

enterocolitis (en'ter-o-ko-li'tis) [enteritis + *κολίτις*]. Inflammation of the small intestine and the colon.

enterocolostomy (en'ter-o-ko-lo's-to-me) [Gr. *ἐντερον* intestine + *κόλον* colon + *στόμα* mouth]. The operative formation of a communication between the small intestine and the colon.

enterocyst (en'ter-o-sist) [Gr. *ἐντερον* bowel + *κύστις* cyst]. A benign cyst proceeding from the subperitoneal tissue.

enterocystocele (en'ter-o-sis-to-sēl) [Gr. *ἐντερον* intestine + *κύστις* bladder + *κήλη* hernia]. Hernia of the bladder and intestine.

enterocystoma (en'ter-o-sis-to'mah) [Gr. *ἐντερον* intestine + *κύστις* cyst + *-ωμα* tumor]. A congenital cyst formed by the segmentation or irregular development of an intestine.

enterodynia (en'ter-o-din'e-ah) [Gr. *ἐντερον* bowel + *ὀδύνη* pain]. Pain in the intestine.

entero-enterostomy (en'ter-o-en-ter-os'to-me) The artificial creation of a permanent opening between two parts of the intestine not normally in relation with each other.

entero-epiplocele (en'ter-o-e-pip'lo-sēl) [Gr. *ἐντερον* bowel + *ἐπιπλόον* omentum + *κήλη* hernia]. Hernia of the small intestine and omentum.

enterogastritis (en'ter-o-gas-tri'tis) [Gr. *ἐντερον* bowel + *γαστήρ* stomach + *-ιτις* inflammation]. Inflammation of the small intestine and stomach.

enterogenous (en-ter-oj'en-us) [Gr. *ἐντερον* intestine + *γενᾶν* to produce]. Arising within the intestine.

enterogram (en'ter-o-gram). A tracing made by an instrument of the movements of the intestine.

enterograph (en'ter-o-graf) [Gr. *ἐντερον* intestine + *γράφειν* to write]. An instrument for recording the intestinal movements.

enterography (en-ter-og'raf-e) [Gr. *ἐντερον* intestine + *γράφειν* to record]. A description of the intestines.

enterohepatitis (en'ter-o-hep-at-i'tis) [Gr. *ἐντερον* bowel + *ἥπαρ* liver + *-ιτις* inflammation]. 1. Inflammation of the bowel and liver. 2. An infectious disease of turkeys with lesions of the intestine and liver, and a dark discoloration of the comb. Called also *blackhead of turkeys*.

enterohydrocele (en'ter-o-hi'dro-sēl) [Gr. *ἐντερον* bowel + *hydrocele*]. Hernia complicated with hydrocele.

enteroidea (en-ter-o'i'de-ah). The intestinal fevers; the fevers caused by intestinal bacteria, including typhoid fever, paratyphoid fever, and para-enteric fever.

entero-intestinal (en'ter-o-in-tes'tin-al) [Gr. *ἐντερον* intestine + *intestine*]. Pertaining to two different portions of the intestine; as, *entero-intestinal fistula*.

enterokinase (en'ter-o-kin'ās). An enzyme of the intestinal juice which activates the proteolytic enzyme of the pancreatic juice by converting trypsinogen into trypsin.

enterokinesia (en'ter-o-kin-e'se-ah). Enterocinesia.

enterokinetic (en'ter-o-kin-et'ik). Enterocinetic.

enterol (en'ter-ol) [Gr. *ἐντερον* intestine]. An internal antiseptic. It is a brownish liquid, a combination of various cresols. Daily dose, 15-75 min. (1-5 c.c.).

enterolith (en'ter-o-lith) [Gr. *ἐντερον* intestine + *λίθος* stone]. An intestinal calculus; any concretion found in the intestine.

enterolithiasis (en'ter-o-lith-i'as-is) [Gr. *ἐντερον* bowel + *λίθιασις*]. The formation of intestinal concretions.

enterology (en-ter-o'l'o-je) [Gr. *ἐντερον* bowel + *λόγος* word]. The sum of what is known regarding the intestines.

enteromegalia, enteromegaly (en'ter-o-meg-a'le-ah, en'ter-o-meg'a'le) [Gr. *ἐντερον* intestine + *μέγας* large]. Enlargement of the intestine.

enteromere (en'ter-o-mēr) [Gr. *ἐντερον* intestine + *μέρος* part]. Any segment or metamere of the embryonic alimentary tract.

enteromerocele (en'ter-o-me'ro-sēl) [Gr. *ἐντερον* intestine + *μηρός* thigh + *κήλη* hernia]. Femoral hernia.

enterometer (en-ter-om'et-er) [Gr. *ἐντερον* intestine + *μέτρον* measure]. An instrument for measuring the lumen of the small intestine in operations.

Enteromō'nas hom'inis. A minute flagellate protozoan, a rare parasite in the intestine of man.

enteromycodermatitis (en'ter-o-mi-ko-der-mi'tis) [Gr. *ἐντερον* intestine + *μύκος* mucus + *δέρμα* skin]. Inflammation of the mucosa of the intestine.

enteromycosis (en'ter-o-mi-ko'sis) [Gr. *ἐντερον* bowel + *μύκης* fungus]. Disease of the intestine due to bacteria or fungi. **e. bacteria'cea**, a general name for certain infections of the intestine due to non-specific bacteria.

enteromyiasis (en'ter-o-mi-i'as-is) [Gr. *ἐντερον* intestine + *μύια* fly]. Presence of larvæ of flies in the intestine.

enteron (en'ter-on) [Gr. *ἐντερον*]. The intestine or alimentary canal.

enteroneuritis (en'ter-o-nu-ri'tis). Inflammation of the nerves of the intestine.

enteronol (en-ter'o-nol). A preparation said to be a mixture of alum and opium, and claimed to be an intestinal antiseptic and germicide.

enteroparesis (en'ter-o-par'e-sis) [Gr. *ἐντερον* intestine + *πάρεσις* relaxation]. Relaxation of the intestine resulting in dilatation.

enteropathy (en-ter-op'ath-e) [Gr. *ἐντερον* bowel + *πάθος* illness]. Any disease of the intestine.

enteropexy (en'ter-o-peks-e) [Gr. *ἔντερον* intestine + *πήξις* fixation]. Surgical fixation of the intestine to the abdominal wall.

enteroplasty (en'ter-o-plas-te) [Gr. *ἔντερον* bowel + *πλάσσειν* to mold]. Plastic surgery of the intestine, especially an operation for enlarging the caliber of the constricted bowel.

enteroplegia (en'ter-o-ple'je-ah) [Gr. *ἔντερον* intestine + *πληγή* stroke]. Paralysis of the intestine.

enteroplex (en'ter-o-pleks) [Gr. *ἔντερον* bowel + *πλέξις* weaving]. A device for joining the edges of a divided intestine.

enteroplexy (en'ter-o-pleks-e) [Gr. *ἔντερον* bowel + *πλέξις* weaving]. The union of two portions of the intestine by means of aluminum rings and elastic pegs.

enteroproctia (en'ter-o-prok'she-ah) [Gr. *ἔντερον* bowel + *πρωκτός* anus]. The condition of having an artificial anus.

enteroptosis (en'ter-op-to'se-ab). Enteroptosis.

enteroptosis (en'ter-op-to'sis) [Gr. *ἔντερον* bowel + *πτῶσις* fall]. Descent or downward displacement of the intestine in the abdominal cavity. Cf. *Glénard's disease*, under *disease*.

enteroptotic (en'ter-op-to'tik). Pertaining to or affected with enteroptosis.

enterorose (en'ter-o-rös). A food-preparation in a yellowish powder: for use in gastro-enteric affections. Dose, 2 dr. (8 gm.).

enterorrhagia (en'ter-or-a'je-ah) [Gr. *ἔντερον* intestine + *ρῆγνύναι* to burst forth]. Hemorrhage from the intestine.

enterorrhaphy (en-ter-or-af-e) [Gr. *ἔντερον* intestine + *ραφή* suture]. The act of sewing up a gap or wound of the intestine. **circular e.**, the sewing together of two completely divided portions of intestine by the invagination of one portion over the other and stitching or otherwise joining them end to end.

enterorrhixis (en'ter-or-rek'sis) [Gr. *ἔντερον* intestine + *ρήξις* rupture]. Rupture of the intestine.

enteroscope (en'ter-o-sköp) [Gr. *ἔντερον* bowel + *σκοπεῖν* to inspect]. An instrument for inspecting the inside of the intestine.

enterosepsis (en'ter-o-sep'sis) [Gr. *ἔντερον* intestine + *σῆψις* putrefaction]. Intestinal sepsis due to putrefaction of the contents of the intestines.

enteroseptol (en'ter-o-sep'tol). Betatrinaphthyl phosphate, an intestinal antiseptic.

enterospasm (en'ter-o-spazm) [Gr. *ἔντερον* bowel + *σπασμός* spasm]. A spasm of the intestine.

enterostasis (en'ter-o-sta'sis) [Gr. *ἔντερον* intestine + *στάσις* stoppage]. Intestinal stasis; the stoppage of the food in its passage through the intestine.

enterostaxis (en'ter-o-staks'is) [Gr. *ἔντερον* intestine + *στάξις* dripping]. Slow hemorrhage through the intestinal mucous membrane.

enterostenosis (en'ter-o-sten-o'sis) [Gr. *ἔντερον* bowel + *στένωσις* contraction]. Narrowing or stricture of the intestine.

enterostomy (en-ter-os'to-me) [Gr. *ἔντερον* bowel + *στόμα* mouth]. The artificial formation of a permanent opening into the intestine through the abdominal wall.

enterotome (en'ter-o-töm) [Gr. *ἔντερον* intestine + *τομή* a cut]. A knife or scissors for slitting the intestine. **Dupuytren's e.**, a cutting forceps used in making an artificial anus.

enterotomy (en-ter-o'to-me) [Gr. *ἔντερον* bowel + *τέμνειν* to cut]. 1. Any cutting operation upon the living intestine. 2. The anatomy or dissection of the intestine.

enterotoxiation (en'ter-o-tok-sik-a'shun). Enterotoxism.

enterotoxin (en-ter-o-tok'sin). A toxin specific for the cells of the intestinal mucosa.

enterotoxism (en'ter-o-tok'sizm). Autointoxication of enteric origin.

enterovaccine (en'ter-o-vak'sin). A proprietary polyvalent antityphocolic vaccine for oral administration. **Danysz's e.**, a stock vaccine containing the bacteria found in feces. It is used in treating non-infectious diseases of the skin, including eczema and asthma.

enterozoic (en'ter-o-zo'ik) [see *enterozoön*]. Inhabiting the intestine: said of parasites.

enterozoön (en'ter-o-zo'on), pl. *enterozoa* [Gr. *ἔντερον* bowel + *ζῶον* animal]. An animal parasite or species inhabiting or infesting the intestinal canal.

entheomania (en'the-o-ma'ne-ah) [Gr. *ἐνθεος* inspired + *μανία* madness]. Religious insanity.

enthesis (en'thes-is) [Gr. *ἐν* in + *τιθέναι* to place]. The employment of non-living material to remedy a defect or deformity of the body.

enthetic (en-thet'ik) [Gr. *ἐν* in + *τιθέναι* to place]. Introduced from without; exogenous.

enthlasis (en'thlasis-is) [Gr. *ἐν* in + *θλάν* to crush]. Comminuted fracture of the skull, with depression of the bony fragments.

entiris (en-tí'ris) [Gr. *ἐντός* within + *ἶρις* iris]. The posterior pigment layer of the iris.

entity (en'tit-e) [L. *ens* being]. An independently existing thing; a reality.

entoblast (en'to-blast) [Gr. *ἐντός* within + *βλαστός* germ]. 1. The inner of the two primitive embryonic layers; the hypoblast. 2. A cell nucleolus. 3. Any one of the segmentational spheres whence the endodermal cells arise.

entocoele (en'to-sēl) [Gr. *ἐντός* inward + *κήλη* hernia]. An internal hernia.

entochondrostosis (en'to-kon-dros-to'sis) [Gr. *ἐντός* within + *χόνδρος* cartilage + *ὀστώσις* ossification]. The development of bone taking place within cartilage.

entochoroidea (en'to-ko-roid'e-ah) [Gr. *ἐντός* inward + *χοριοειδής* choroid]. The inner layer of the choroid coat of the eye.

entocineria (en'to-sin-e're-ah). The internal or non-cortical gray substance of the brain and cord.

entocnemial (en-tok-ne'me-al). On the inner side of the tibia.

entocone (en'to-kōn) [Gr. *ἐντός* within + *κῶνος* cone]. The inner posterior cusp of an upper molar tooth.

entoconeid (en-to-ko'nid) [Gr. *ἐντός* inner + *κῶνος* cone]. The internal posterior cusp of a lower molar tooth.

entocornea (en-to-ko'r-ne-ah) [Gr. *ἐντός* inner + *cornea*]. Descemet's membrane.

entocuneiform (en-to-ku'ne-if-orm). The inner cuneiform bone of the foot.

entocyte (en'to-sit) [Gr. *ἐντός* inner + *κύτος* cell]. The cell-contents.

entoderm (en'tō-derm) [Gr. *ἐντός* within + *δέρμα* skin]. The hypoblast, or innermost layer of the blastoderm.

ento-ectad (en-to-ek'tad) [Gr. *ἐντός* within + *ἐκτός* without]. From within outward.

entome (en'töm) [Gr. *ἐν* within + *τομή* cut]. An instrument for cutting urethral strictures.

entomion (en-to-me-on) [Gr. *ἐντομή* notch]. The point at the tip of the mastoid angle of the parietal bone in the parietal notch of the temporal bone.

entomology (en-to-mol'o-je) [Gr. *έντομον* insect + *λόγος* treatise]. The scientific study of insects.

entophthalmia (en-tof-thal'me-ah). Inflammation of the inner parts of the eyeball.

entophyte (en'to-fit) [Gr. *ἐντός* within + *φυτόν* plant]. A parasitic plant-organism living within the body.

entopic (en-top'ik) [Gr. *ἐν* in + *τόπος* place]. Occurring in the proper place; as, *entopic* gestation.

entoplasm (en'to-plazm) [Gr. *ἐντός* within + *πλάσ-* μος something formed]. 1. Same as *endoplasm*. 2. The blue-staining, or non-chromatinic, portion of certain bacteria.

entoplastic (en-to-plas'tik) [Gr. *ἐντός* within + *πλαστικός* formative]. Having a formative power lodged within.

entoptic (en-top'tik) [Gr. *ἐντός* within + *ὀπτικός* seeing]. Noting visual phenomena which have their seat within the eye.

entoptoscope (en-top'to-skōp) [see *entoptoscopy*]. An instrument for examining the media of the eyes, to ascertain their transparency.

entoptoscopy (en-top-tos'ko-pe) [Gr. *ἐντός* within + *ὤψ* eye + *σκοπεῖν* to view]. The observation of the interior of the eye and its lights and shadows.

entoretina (en-to-ret'in-ah) [Gr. *ἐντός* inner + *retina*]. The internal or nervous portion of the retina, disposed in five layers, which are named respectively outer molecular, inner nuclear, inner molecular, ganglion, and nerve-fiber layers. Called also *lamina vasculosa retinae* and *nervous layer of Henle*.

entorganism (en-or'gan-izm) [Gr. *ἐντός* within + *organism*]. An internal parasite.

entosarc (en'to-sark) [Gr. *ἐντός* within + *σάρξ* flesh]. The inner fluid part of *Amoeba* and *Gregarina*.

entosthoblast (en-tos'tho-blast) [Gr. *ἐντοσθε* from within + *βλαστός* germ]. The nucleus of the nucleolus.

entostosis (ent-os-to'sis) [Gr. *ἐντός* within + *ὀστέον* bone]. Same as *enosstosis*.

entotic (en-tot'ik) [Gr. *ἐντός* within + *ωτικός* auditory]. Situated in or arising within the ear.

entotympanic (en-to-tim-pan'ik). Within the tympanum of the ear.

entozoal (en-to-zo'al). Caused by entozoa.

entozoön (en-to-zo'on), pl. *entozoa* [Gr. *ἐντός* within + *ζῷον* animal]. Any animal parasite or species living within the body of its host.

entropion, entropium (en-tro'pe-on, en-tro'pe-um) [Gr. *ἐν* in + *τρέπειν* to turn]. The introversion of the edge of the eyelid or of any similarly situated structure.

entropionize (en-tro'pe-on-iz). To put into a condition of introversion; to turn inward.

entropy (en'tro-pe). The measure of that part of the heat or energy of a system which is not available to perform work. Entropy increases in all irreversible mechanical processes.

enucleate (e-nu'kle-ät) [L. *enucleare*]. To remove whole and clean, as a tumor from its envelop.

enucleation (e-nu-kle-a'shun) [L. *e* out + *nu-*cleus kernel]. The removal of a tumor or other body in such a way that it comes out clean and whole, like a nut from its shell.

enule (en'yūl). A proprietary form of suppository containing a definite dosage.

enuresis (en-u-re'sis) [Gr. *ἐνουρεῖν* to void urine]. Involuntary discharge of the urine. **nocturnal e.**, that which occurs at night and during sleep.

environment (en-vi'ron-ment). The external surroundings and influences.

enzoötic (en-zo-ot'ik) [Gr. *ἐν* in + *ζῷον* animal]. Occurring endemically among animals.

enzygotic (en-zi-got'ik). Developed from the same fertilized ovum.

enzymatic (en-zim-at'ik). Relating to an enzyme.

enzyme (en'zim) [Gr. *ἐν* in + *ζύμη* leaven]. A chemical ferment formed by living cells. Enzymes are complex organic chemical compounds capable of producing, by catalytic action, the transformation of some other compound or compounds. **amylolytic e.**, one which converts starch into sugar,

such as ptyalin, amyllopsin, malt-diastase. **autolytic e.**, an enzyme which produces autolysis or digestion of the cell in which it exists. **bacterial e.**, an enzyme existing in or secreted by a bacterium. **clotting e.**, coagulose. **coagulating e.**, one which converts soluble proteins into insoluble ones, such as rennin and fibrin-ferment. **deamidizing e.**, an enzyme which splits up the amino-acids into ammonia compounds. **extracellular e.**, an enzyme which exists outside of the cell secreting it. **glycolytic e.**, an enzyme which oxidizes sugar. **hydrolytic e.**, an enzyme which produces hydrolysis. **inhibitory e.**, antienzyme. **inorganic e.**, a colloidal solution of a metal (called a *metalsol*) which has an action similar to that of enzymes. **intracellular e.**, an enzyme which is contained within the cell protoplasm. **inverting e.**, an enzyme which splits up sugar, as invertin. **lipolytic e.**, an enzyme which splits up fat. **oxidation e.**, oxidase. **peptolytic e.**, an enzyme which splits up peptone. **protective e.** See *protective ferment*, under *ferment*. **proteolytic e.**, one which converts a protein into a peptone, as pepsin, trypsin, and papain-enzyme. **reducing e.**, reductase. **Schardinger's e.** See *Schardinger's reductase*, under *reductase*. **steatolytic e.**, one which splits up fat, as steapsin. **sucroclastic e.**, an enzyme which splits up or decomposes sugar. **uricolytic e.**, an enzyme which metabolizes uric acid into urea.

enzymic (en-zim'ik). Of the nature of an enzyme.

enzymol (en'zi-mol). A proprietary preparation from the glands of the stomach of animals, designed to represent the gastric juice; used as a solvent and antiseptic, especially in the external treatment of nasal and aurial diseases.

enzymology (en-zim-ol-o'je) [enzyme + Gr. *λόγος* treatise]. The study of enzymes.

enzymolysis (en-zi-mol'is-is) [enzyme + Gr. *λύσις* solution]. The disintegrative action or reaction produced by an enzyme.

enzymosis (en-zi-mo'sis) [Gr. *ἐν* in + *ζύμη* leaven]. Fermentation induced by an enzyme.

enzymuria (en-zi-mu're-ah) [enzyme + *urine*]. The presence of enzymes in the urine.

enzytol (en'zi-tol). A proprietary borate of cholin; used by intravenous injection, along with radioactive treatment, in cancer.

eolipyle, æolipile (e-ol'ip-il). A form of spirit-lamp used to heat cautery irons.

eosin* (e'o-sin) [Gr. *ῥῶς* dawn]. A rose-colored stain or dye, the potassium and sodium salts of tetrabromofluorescein, $C_{20}H_8Br_4O_5$; commercially, several other red coal-tar dyes are called eosin, the eosins being bromin derivatives of fluorescein.

water-soluble e., **e. W** or **W S**, **yellowish e.**, **e. Y**, a very important plasma stain, used especially with hematoxylin, methylene blue, and methyl green. It is tetrabromofluorescein, $NaO-(C_6HBr_2O)_2C_6H_4COONa$.

eosinoblast (e-o-sin'o-blast). Same as *myeloblast*.

eosinopenia (e-o-sin-o-pe'ne-ah) [eosinophil + Gr. *πενία* poverty]. Abnormal deficiency of eosinophil cells in the blood.

eosinophil (e-o-sin'o-fil) [eosin + Gr. *φιλεῖν* to love]. A structure, cell, or histologic element readily stained by eosins; particularly an eosinophilic leukocyte.

eosinophile, eosinophilic, eosinophilous (e-o-sin'o-fil, e'o-sin-o-fil'ik, e'o-sin-o-fil'us). Readily stainable with eosin.

eosinophilia (e'o-sin-o-fil'e-ah) [eosin + Gr. *φιλεῖν* to love]. 1. The formation and accumulation of an unusual number of eosinophil cells in the blood. 2. The condition of being readily stained with eosin.

eosinotactic (e-o-sin-o-tak'tik) [eosinophil + Gr. *τακτικός* arranged]. Exhibiting an attractive or repulsive influence on eosinophil cells.

eosolate (e-o'-so-lät). A salt of a creosote ester.

eosote (e'o-söt). Creosote valerianate, an antiseptic fluid: useful in intestinal diseases and tuberculosis. Dose, $7\frac{1}{2}$ min. (0.5 c.c.) in a capsule.

epactal (e-pak'täl) [Gr. *επακτός* brought in]. 1. Supernumerary. 2. A wormian bone.

eparsalgia (ep-ar-sal'je-ah) [Gr. *ἐπαίρειν* to lift + *ἄλγος* pain]. Any disorder or trouble due to overstrain of a part including dilatation of the heart, hernia, enteroptosis, hemoptysis, etc. (Sterling).

eparseno (ep-ar'sen-o). Amino-arsenophenol, a glucose compound of arsphenamin: used by intramuscular injection in syphilis.

eparterial (ep-ar-te're-al) [Gr. *ἐπί* upon + *ἀρτηρία* artery]. Over an artery. **e. bronchus**. See *bronchus*.

epauxesiectomy (ep'awk-se-ze-ek'to-me) [Gr. *ἐπαύξησης* outgrowth + *ἐκτομή* excision]. The surgical removal of a growth.

epaxial (ep-aks'e-al) [Gr. *ἐπί* upon + *axis*]. Situated upon or above the axis.

epencephal, **epencephalon** (ep-en-sef'al, ep-en-sef'al-on) [Gr. *ἐπί* upon + *ἐγκεφαλος* brain]. The hind-brain; the anterior part of the posterior cerebral vesicle of the embryo, whence are developed the pons and a part of the cerebellum. The term is also used as synonymous with cerebellum.

epencephalic (ep-en-sef-al'ik). Pertaining to the epencephalon.

ependyma (ep-en'dim-ah) [Gr. *ἐπένδυμα* wrap]. The lining membrane of the ventricles of the brain and of the central canal of the spinal cord.

ependymal (ep-en'dim-al). Pertaining to or composed of ependyma.

ependymitis (ep'en-dim-i'tis). Inflammation of the ependyma.

ependymoma (ep-en-dim-o'mah). A tumor containing ependymal elements.

epersalgia (ep-ar-sal'je-ah) [Gr. *ἐπαίρειν* to lift + *ἄλγος* pain]. Eparsalgia.

epharmony (ep-har'mo-ne). Development in complete harmony with environment; harmonic relation between structure and environment.

ephebic (ef-eb'ik) [Gr. *ἐφηβικός* pertaining to puberty]. Pertaining to youth or the period of puberty.

ephebolergy (ef-e-bol'er-je) [Gr. *ἐφηβος* puberty + *λόγος* treatise]. The study of puberty.

Ephedra (ef'ed-rah) [Gr. *ἐπί* upon + *ἔδρα* seat]. A genus of gnetaceous plants. *E. antisiphilitica*, *E. vulgaris*, and others furnish the Chinese drug ma huang, which is used in syphilis, rheumatism, and diseases of the bladder.

ephedrin, **ephedrine** (ef'ed-rin). A mydriatic alkaloid from the *Ephedra vulgaris* and other species of Ephedra. It is related in chemical constitution and in physiologic action to epinephrin, being $C_6H_5.CHOH.CH(CH_3).NH.CH_3$. It has an effect on smooth muscle, on secretion, and on the circulation similar to that of epinephrin, and is used in states of low blood-pressure, shock, hemorrhage, and Addison's disease, also in asthma and as a mydriatic. Dose of hydrochlorid or sulphate, 1 gr. (0.06 gm.). **e. -homatropin**, a compound of ephedrin hydrochlorate, 1 part; homatropin hydrochlorate, 160 part; water, 10 parts: a good mydriatic.

ephelis (ef-e'lis), pl. *ephelides* [Gr. *ἐφηλιδες*]. A freckle.

ephem'era Britan'nica. Miliary fever.

ephemeral (ef-em'er'al) [Gr. *ἐπί* on + *ἡμέρα* day]. 1. Enduring but one day or less. 2. Transient.

ephidrosis (ef-id-ro'sis) [Gr. *ἐφιδρωσις*]. Excessive sweating; hyperidrosis. **e. cruen'ta**, the excretion of bloody sweat.

ephippium (ep-hip'e-um) [Gr. *ἐπί* upon + *ἵππος* horse]. The sella turcica.

epiblast (ep'e-blast) [Gr. *ἐπί* on + *βλαστός* germ]. The ectoderm, or outermost of the three layers

of the blastoderm. From it are developed the epidermis and the epidermic tissues, such as the nails, hair, and glands of the skin, the nervous system, the external sense-organs, as the ear, eye, etc., and the mucous membrane of the mouth and anus.

epiblastic (ep-e-blas'tik). Pertaining to or arising from the epiblast.

epibole, **epiboly** (ep-ib'o-le) [Gr. *ἐπιβολή* cover]. In embryology, the inclusion of a set of segmenting cells within another set by reason of the more rapid division of the latter.

epibulbar (ep-e-bul'bar). Upon the eyeball.

epicanthus (ep-ik-an'thus) [Gr. *ἐπί* on + *καθός* canthus]. A fold of the skin which sometimes covers the inner canthus.

Epicanthus.

epicardia (ep-e-kar'de-ah). The portion of the esophagus extending from the cardia to the hiatus esophagi.

epicardium (ep-ik-ar'de-um) [Gr. *ἐπί* upon + *καρδία* heart]. The innermost layer of the pericardium; visceral pericardium.

epicarín (ep-e-ka'rin). A basic and non-toxic condensation-product, oxynaphthylloxymetatolulic acid, $OH.C_{10}H_6.CH_2.C_6H_3(OH)COOH$, of creosotinic acid and beta-naphthol. It is a soluble, reddish-yellow powder. Epicarín and its sodium salt are used in skin diseases in a 10 per cent. solution or a 10-20 per cent. ointment.

epicele, **epicöle** (ep'is-ël) [Gr. *ἐπί* upon + *κοιλία* hollow]. The fourth ventricle of the brain.

epicentral (ep-is-en'tral). Attached to the centrum of a vertebra.

epichetosamin (ep'e-ke-to'sam-in). A hexosamin homologous with glucosamin, but containing mannose instead of glucose.

epichordal (ep-ik-or'dal). Situated dorsad of the notochord.

epichorion (ep-e-ko're-on) [Gr. *ἐπί* upon + *chorion*]. That part of the uterine mucosa which incloses the fertilized ovum.

epicöeloma (ep-e-se-lo'mah). The portion of the cöeloma nearest the notochord.

epicomus (ep-ik'o-mus) [Gr. *ἐπί* upon + *κόμη* hair]. A monster with a parasitic twin joined at the summit of the head.

epicondylalgia (ep'ik-on-dil-al'je-ah) [*epicondyle* + Gr. *ἄλγος* pain]. Pain in the muscles attached to the epicondyle of the humerus. It is a functional neurosis due to strains on the forearm.

epicondyle (ep-ik-on'dil) [Gr. *ἐπί* upon + *κόνδυλος* condyle]. An eminence upon a bone and above its condyle. **lateral e.** 1. The external condyle of the humerus. 2. The external tuberosity of the femur. **median e.** 1. The internal condyle of the humerus. 2. The inner tuberosity of the femur.

epicondylían, **epicondylíc** (ep-e-kon-dil'e-an, ep-e-kon-dil'ik). Pertaining to an epicondyle.

epicondylitis (ep'e-kon-dil-i'tis). Inflammation of the tissues adjoining the epicondyle of the humerus.

epicoracoid (ep-ik-or'ak-oid). Situated above the coracoid process.

epicorneascleritis (ep-e-kor'ne-ah-skle-rí'tis). A chronic inflammatory condition affecting the cornea and sclera.

epicostal (ep-e-kos'tal) [Gr. *ἐπί* upon + *L. costä* rib]. Situated upon a rib.

epicranium (ep-ik-ra'ne-um) [Gr. *ἐπί* on + *κράνιον* skull]. The integument, aponeurosis, and muscular expansions of the scalp.

epicraníus (ep-ik-ra'ne-us) [Gr. *ἐπί* upon + *κράνιον* cranium]. The occipitofrontalis muscle.

epicrisis (ep-ik'ris-is) [Gr. *ἐπί* upon + *κρίσις* crisis]. A second or supplementary crisis.

epicritic (ep-ik-rī't'ik) [Gr. *ἐπικρίσις* determination]. Relating to or serving the purpose of accurate determination: applied to cutaneous nerve-fibers that serve the purpose of perceiving fine variations of touch or temperature. See *epicritic sensibility*, under *sensibility*.

epicystitis (ep'i-sis-ti'tis) [Gr. *ἐπὶ* upon + *κυστίς* bladder]. Inflammation of the structures above the bladder.

epicystotomy (ep'i-sis-tot'o-me) [Gr. *ἐπὶ* over + *κυστίς* bladder + *τομή* a cut]. Suprapubic operation for stone in the bladder.

epicyte (ep'is-it) [Gr. *ἐπὶ* on + *κύτος* cell]. 1. The membrane which invests a cell. 2. An epithelial cell. 3. The external protective layer of the ectoplasm of a protozoön.

epicytoma (ep-e-si-to'mah). A malignant epithelioma.

epidemic (ep-id-em'ik) [Gr. *ἐπὶ* on + *δῆμος* people]. 1. Attacking many people in any region at the same time; widely diffused and rapidly spreading. 2. A disease which is widely prevalent in a community. 3. A season of the extensive prevalence of any particular disease.

epidemicity (ep'id-em-is'it-e). The quality or fact of being epidemic.

epidemiography (ep'id-em-e-og'raf-e) [*epidemic* + Gr. *γράφειν* to write]. A treatise upon or an account of epidemics.

epidemiology (ep'id-em-e-ol'o-je) [*epidemic* + Gr. *λόγος* treatise]. The sum of what is known regarding epidemics.

epiderm (ep'id-erm). Epidermis.

epidermal, epidermic (ep-id-er'mal, ep'id-er'mik). 1. Pertaining to the epidermis. 2. Same as *scarlet red*.

epidermatic, epidermatous (ep'e-der-mat'ik, ep-e-der'mat-us). Same as *epidermal*.

epidermatomycosis (ep-e-der'mat-o-mi-ko'sis). Same as *dermatomycosis*.

epidermatoplasty (ep-e-der-mat'o-plas-te) [*epidermis* + Gr. *πλάσσειν* to form]. Skin-grafting done with pieces of epidermis with the underlying outer layer of the corium.

epidermidalization (ep-id-er'mid-al-i-za'shun). Development of epidermic cells (stratified epithelium) from mucous cells (columnar epithelium).

epidermidolysis (ep-e-der-mid-ol'is-is). See *epidermolysis*.

epidermidosis (ep'id-er-mid-o'sis). Any skin disease affecting primarily the epidermis.

epidermin (ep-id-er'min). A cerate used as a vehicle for certain external medicaments.

epidermis (ep-id-er'mis) [Gr. *ἐπὶ* on + *δέρμα* skin]. The outermost and non-vascular layer of the

horny layer (*stratum corneum*), which consists of flattened horny cells; (2) the *stratum lucidum*, or layer of *Oehl*, consisting of several layers of transparent nucleated cells; (3) the *stratum granulosum*, or layer of *Langerhans*, composed of flattened granular cells; and (4) the *stratum mucosum* (layer of *Malpighi*, rete mucosum), composed of rounded or polygonal pigmented cells.

epidermization (ep'id-er-miz-a'shun). 1. The process of covering or of becoming covered with epidermis. 2. Skin-grafting.

epidermoid (ep-id-er'moid). 1. Resembling the epidermis. 2. A cerebral or meningeal tumor formed by inclusion of epidermal cells from the skin or mucous membrane.

epidermolysis (ep'id-er-mol'is-is) [Gr. *ἐπιδερμῖς* skin + *λύσις* loosening]. A loosened state of the epidermis. **e. bullo'sa**, a variety marked by the formation of deep-seated bullæ, which appear after irritation or rubbing of the parts.

epidermoma (ep-e-der-mo'mah). A cutaneous outgrowth, such as a wart.

epidermomycosis (ep-e-der'mo-mi-ko'sis). A general name for any dermatitis caused by microscopic fungi and yeasts.

Epidermophyton (ep-e-der-mof'it-on) [*epidermis* + Gr. *φυτὸν* plant]. A genus of fungi closely resembling *Trichophyton* except that they attack the skin rather than the hair. **E. cru'ris**, **E. ingui'na'le**, the cause of *tinea cruris* or *Dhobie itch*.

epidermophytosis (ep-e-der-mo-fi-to'sis). Infection by fungi of the genus *Epidermophyton*. **e. cru'ris**. See *tinea cruris*.

epidermosis (ep-e-der-mo'sis). A skin disease affecting chiefly the epidermis.

epidiascope (ep-e-di'as-kōp) [Gr. *ἐπὶ* upon + *διά* through + *σκοπεῖν* to view]. A lantern for projecting the images of opaque bodies upon a screen by reflected or transmitted light.

epididymal (ep-id-id'im-al). Pertaining to the epididymis.

epididymectomy (ep'id-id-im-ek'to-me) [*epididymis* + Gr. *ἐκτομή* excision]. Surgical removal of the epididymis.

epididymis (ep-id-id'im-is) [Gr. *ἐπὶ* on + *διόδυμος* testis]. An oblong body attached to the upper part of each testicle, consisting of a globus major and a globus minor—the former composed of the convoluted vasa efferentia, and the latter containing the efferent duct.

epididymitis (ep'id-id-im-i'tis). Inflammation of the epididymis.

epididymodeferentectomy (ep-e-did'im-o-def-er-en-ek'to-me). Excision of the epididymis and vas deferens.

epididymodeferential (ep-e-did'im-o-def-en-shal). Pertaining to the epididymis and vas deferens.

epididymo-orchitis (ep'id-id-im-o-or-ki'tis). Inflammation of the epididymis and testis.

epididymotomy (ep'e-did-e-mot'o-me) [*epididymis* + Gr. *τομή* cut]. The operation of making an opening into the epididymis.

epididymovasostomy (ep-e-did'im-o-vaz-os'to-me). The operation of severing the vas deferens and suturing the distal part to the epididymis: done for sterility due to obstruction of the vas.

epidor (ep'id-or). A proprietary ointment base.

epidural (ep-e-du'ral). Situated upon or outside the dura.

epifascial (ep-e-fash'e-al). Upon the fascia.

epifolliculitis (ep'e-fol-ik-u-li'tis). Inflammation of the hair-follicles.

Epigæa (ep-e-je'ah) [L.; Gr. *ἐπὶ* on + *γαῖα* earth]. A genus of trailing ericaceous plants: *E. repens*, the trailing arbutus, ground-sweet, or May-flower, of North America, is diuretic. Dose of fluidextract, 30–60 min. (2–4 c.c.).

Section of epidermis (Hill).

skin; the cuticle or scarf-skin. It is made up from without inward of four layers: (1) The

epigamous (ep-ig'am-us) [Gr. *ἐπί* after + *γάμος* marriage]. Occurring after conception; a term descriptive of the theory that the sex of an embryo is determined by factors acting on the embryo during its development.

epigaster (ep-e-gas'ter) [Gr. *ἐπί* upon + *γαστήρ* belly]. The hind-gut; the embryonic structure whence the colon is formed.

epigastralgia (ep'e-gas-tral'je-ah) [Gr. *ἐπιγάστριον* epigastrium + *ἄλγος* pain]. Pain in the epigastrium.

epigastric (ep-e-gas'trik) [Gr. *ἐπί* on + *γαστήρ* belly]. Pertaining to the epigastrium.

epigastrium (ep-e-gas'tre-um). The epigastric region; the upper middle portion of the abdomen, over or in front of the stomach.

epigastrius (ep-e-gas'tre-us) [Gr. *ἐπιγάστριον* epigastrium]. A double monster in which the parasite is small and forms a tumor upon the epigastrium of the autosite.

epigastrocele (ep-e-gas'tro-sēl) [Gr. *ἐπιγάστριον* epigastrium + *κῆλη* hernia]. Hernia in the epigastric region.

epigastrorrhaphy (ep'e-gas-tor'af-e) [*epigastrium* + Gr. *ράφῃ* suture]. The closure of an epigastric wound by stitches.

epigenesis (ep-e-jen'es-is) [Gr. *ἐπί* on + *genesis*]. 1. Generation by successive formations; the theory that development starts from a structureless cell, and consists in the successive formation and addition of new parts which do not preëxist in the fertilized egg; this theory is opposed to that of evolution. 2. An accessory symptom.

epigenetic (ep'ij-en-et'ik). Pertaining to epigenesis.

epiglottectomy (ep-e-glot-ek'to-me). Epiglottidectomy.

epiglottidean (ep'e-glot-id'e-an). Pertaining to the epiglottis.

epiglottidectomy (ep'e-glot-id-ek'to-me) [*epiglottis* + Gr. *ἐκτομή* excision]. Excision of the epiglottis.

epiglottiditis (ep'e-glot-id-i'tis). Same as *epiglottitis*.

epiglottis (ep-e-glot'is) [Gr. *ἐπί* upon + *γλωττίς* glottis]. The lid-like structure which covers the entrance to the larynx.

epiglottitis (ep'e-glot-i'tis). Inflammation of the epiglottis.

epignathous (ep-ig'nath-us). Of the nature of an epignathus.

epignathus (ep-ig'nath-us) [Gr. *ἐπί* on + *γνάθος* jaw]. A parasitic monster attached to the jaw of an autositic fetus.

epigonal (ep-ig'on-al) [Gr. *ἐπί* on + *γονή* seed]. Situated on an embryonic germ gland.

epiguanin (ep-e-gwan'in). One of the purin bodies found in the urine after the ingestion of theobromin (cocoa). It is 7-methyl-2-amino-6-oxy-purin, $C_8H_7N_5O$.

epiphyal bone (ep-e-hi'al) [Gr. *ἐπί* on + *hyoid*]. The stylohyoid ligament when ossified.

epilamellar (ep-e-lam-el'ar). Situated outside of the basement-membrane.

epilation (ep-il-a'shun) [L. *e* out + *pilus* hair]. The removal of hair by the roots.

epilatory (ep-il'a-to-re). 1. Pertaining to the removal of hairs. 2. An agent which effects the destruction of hairs.

epilemma (ep-e-lem'ah) [Gr. *ἐπί* upon + *λέμμα* scale]. The sheath of a terminal nerve-fibril.

epilemmal (ep-e-lem'al). Relating to the epilemma.

epilepidoma (ep-e-lep-id-o'mah) [Gr. *ἐπί* upon + *λεπίς* rind + *-ωμα* tumor]. A tumor composed of hyperplastic tissue derived from the epiblast.

epilepsia (ep-e-lep'se-ah). See *epilepsy*. **e. cursiva**, epilepsy marked at first by an irresistible desire to run. **e. gravior**, haut mal: the more violent and typical variety of epilepsy. **e. larva'ta**, masked epilepsy: that in which the unconscious stage is very brief, and the movements, though automatic, seem to be voluntary. **e. media**, epilepsy of moderate severity, showing muscular spasms of tonic character, but without clonic spasms following. **e. mitior**, petit mal: that in which there are no decided period of unconsciousness and no obvious spasm, or only a slight one. **e. partialis continua**, continuous epilepsy. See under *epilepsy*. **e. procur'siva**, procursive epilepsy. **e. retinæ** (Hughlings Jackson), ischemia retinae. **e. tar'da**, epilepsy beginning after the age of thirty; usually due to syphilis or brain tumor.

epilepsy (ep'il-ep-se) [Gr. *ἐπιληψία* seizure]. A chronic functional disease characterized by fits or attacks in which there is loss of consciousness, with a succession of tonic or clonic convulsions (Hippocrates). The fit lasts from five to twenty minutes, and the attacks vary greatly in frequency. A fit in which there are severe convulsions and loss of consciousness, or coma, is termed *haut mal* or *grand mal*. The mild form, in which vertiginous or other sensations take the place of convulsions, is termed *petit mal*. **abortive e.**, petit mal. See *epilepsy*. **accelerative e.** Same as *procursive e.* **Bravais-Jacksonian e.**, Jacksonian epilepsy. **Brown-Séquard e.**, epileptiform convulsions occurring after experimental injuries of the spinal cord in animals. **cardiac e.**, that which is accompanied by profound disturbance of the heart's actions: probably due to disease of the heart or its nerves. **continuous e.**, a rare form of epilepsy, marked by characteristic major attacks, but also showing at intervals persistent clonic movements. Called also *epilepsia partialis continua*. **cortical e.** Same as *Jacksonian e.* **cur'sive e.**, epilepsy marked by an impulse to run. **delayed e.**, epilepsy coming on late in life, at least after puberty. **diurnal e.**, epilepsy in which the attacks come on in the daytime. **focal e.** Same as *Jacksonian e.* **gastric e.**, epilepsy caused by gastric irritation. **hysteric e.**, a severe form of hysteric seizure, more or less closely approaching the type of a true epilepsy. **idiopathic e.**, true or typical epilepsy. **Jacksonian e.** is marked by localized spasm, and is mainly limited to one side and often to one group of muscles; called also *partial e.* **laryngeal e.**, laryngeal vertigo. See *vertigo*. **latent e., masked e.** See *epilepsia larvata*. **matutinal e.**, epilepsy with attacks occurring on waking in the morning. **menstrual e.**, epileptic fits associated with menstruation. **myoclonus e.**, a rare disease in which in the intervals of major epileptic seizures there are paroxysmal clonic contractions of the muscles of the extremities, especially of the proximal portions, and more or less persistent fibrillary tremors. Called also *Unverricht's disease*, *myoclonia epileptica*, and *association disease*. **nocturnal e.**, a variety in which the attack usually occurs at night, often in sleep. **partial e.** See *Jacksonian e.* **partial constant e.** See *continuous e.* **peripheral e.**, Jacksonian epilepsy. **pleural e.**, epileptic attacks brought on by irrigation of the pleural cavity. **procursive e.**, a form in which the patient runs forward swiftly before falling in a fit. **psychic e.** Same as *epilepsia larvata*. **reflex e.**, a form due to peripheral irritation. **retinal e.**, temporary blindness, often occurring in epilepsy. **retrocur'sive e.**, epilepsy in which

Epignathus (Gould and Pyle).

the motor disorder consists in stepping backward. **saturnine e.**, epileptoid seizures seen in connection with lead-poisoning. **senile e.**, senile bradycardia, coming on in paroxysms, and resulting from coronary sclerosis or from fibrous myocarditis. **sensory e.**, a form in which the convulsions are replaced by delusions of sense and by hallucinations: supposed to be due to lesion of the thalamus, and therefore sometimes called **thalamic e.** **serial e.**, epilepsy occurring in frequent attacks. **sleep e.** Same as **narcolepsy**. **spinal e.**, spastic paraplegia from lateral sclerosis of the spinal cord, with tonic spasms followed by clonic ones. **symptomatic e.**, jacksonian epilepsy. **tardy e.**, delayed epilepsy. **thalamic e.**, a kind of sensory epilepsy from disease of the optic thalamus. **toxemic e.**, a form which is due to a toxic influence in the blood. **traumatic e.**, epilepsy caused by injury, especially injury of the skull.

epileptic (ep-e-lep'tik) [Gr. *ἐπιληπτικός*]. 1. Pertaining to or affected with epilepsy. 2. A person affected with epilepsy.

epilepticococcus (ep-e-lep-tik-ok'us). Same as *Bacillus epilepticus*.

epileptiform (ep-e-lep'te-form) [*epilepsy* + *L. forma* shape]. Resembling epilepsy or its manifestations; recurring in severe and sudden paroxysms.

epileptogenic, epileptogenous (ep'e-lep-to-jen'ik, ep'e-lep-toj'en-us) [*epilepsy* + Gr. *γενᾶν* to produce]. Producing epileptic attacks.

epileptoid (ep-e-lep'toid). Resembling epilepsy; epileptiform.

epileptol (ep-e-lep'tol). A condensation product of formamid and formaldehyd, setting free formic acid, recommended by Josef Rosenberg for epilepsy.

epileptologist (ep-e-lep-to'l-o-jist). A practitioner who makes a special study of epilepsy.

epileptology (ep-e-lep-to'l-o-je). The study of epilepsy.

epileptosis (ep-e-lep-to'sis). Any mental disease belonging to the epileptic group (Southard).

Epilobium (ep-e-lo'be-um). A genus of plants including the willow herb, which is used as a demulcent tonic and astringent in diarrhea and dysentery.

epiloia (ep-il-o'i'ah). A syndrome characterized by mental deficiency, adenoma sebaceum, and epileptic attacks, associated with hypertrophic sclerosis of the cerebral cortex, nodules on the floor of the fourth ventricle, and tumors in the kidneys, and more rarely in the spleen and lungs.

epimandibular (ep'e-man-dib'u-lar) [Gr. *ἐπὶ* on + *L. mandibulum* jaw]. Situated upon the lower jaw.

epimenorrhagia (ep'e-men-o-ra'je-ah). Too frequent and too excessive menstruation.

epimere (ep'e-mēr). A part of the mesodermal wall of the epiceloma of the embryo.

epimerite (ep-e-mēr'it) [Gr. *ἐπὶ* upon + *μέρος* part]. An organ of certain gregarine protozoa by which they are attached to epithelial cells.

epimorphosis (ep-e-mor'fo'sis) [Gr. *ἐπὶ* upon + *μορφή* form]. The regeneration of a piece of an organism by proliferation at the cut surface.

Epimys (ep'im-is). A genus of rats. *E. norvegicus* is the ship rat; *E. rattus* is the plague rat of India.

epimysium (ep-e-mis'e-um) [Gr. *ἐπὶ* on + *μῦς* muscle]. The fibrous sheath of a muscle.

epinasty (ep'in-as-te) [Gr. *ἐπὶ* upon + *ναστός* pressed close]. Downward curvature produced by excessive growth on the upper side of an extended organ.

epinephrectomy (ep-e-nef-rek'to-me). Excision of the adrenals; adrenalectomy.

epinephrin (ep-e-nef'rin) [Gr. *ἐπὶ* upon + *νεφρός* kidney]. The active principle of the medulla of

the adrenal bodies (suprarenal capsules) whose specific action on the system is to slow the heart-rate and increase the blood-pressure. It also increases the output of sugar in the urine. It is employed in medicine as an astringent and hemostatic, and an adjuvant in local anesthesia. In pure form it is a crystalline powder, $C_6H_5(OH)_2 \cdot CHOH \cdot CH_2NHCH_3$. Dose of 1:1000 solution, 5-30 min. (0.3-2 c.c.) every two or three hours; hypodermically, 1-15 min. (0.065-1 c.c.). Locally it is used in 1:10,000 to 1:1000 solution. It is usually sold in a solution containing one-tenth of 1 per cent. of the substance, and appears under various trade names as adrenalin, adrin, adnephryn, suprarenalin, suprapsulin, paranephryn, etc. **e. hydrate**, adrin.

epinephrina (ep-e-nef-ri'nah). The U. S. P. name for *epinephrin*.

epinephrinemia (ep-e-nef-rin-e'me-ah). The presence of epinephrin in the blood.

epinephritis (ep'e-nef-ri'tis) [Gr. *ἐπὶ* upon + *νεφρός* kidney]. Inflammation of a suprarenal body.

epinephroma (ep'e-nef-ro'mah). Hypernephroma.

epineural (ep-e-nu'ral). Situated upon a neural arch.

epineurial (ep-e-nu're-al). Pertaining to the epineurium.

epineurium (ep-e-nu're-um) [Gr. *ἐπὶ* on + *νεῦρον* nerve]. The sheath or envelop of a nerve-trunk.

epinin (ep'in-in). Dihydroxyphenylethylmethylamin, a proprietary synthetic preparation said to have the action of suprarenal extract.

epionychium (ep'e-o-nik'e-um). See *eponychium*.

epiornitic (ep'e-or-nit'ik). Same as *epornitic*.

epiosin (ep-e-o'sin). A hypnotic and analgesic base, methyl-diphenylene-amido-azol. Dose, 1-2 gr. (0.065-0.13 gm.).

epiotic (ep-e-o't'ik) [Gr. *ἐπὶ* over + *οὖς* ear]. Situated on or above the ear.

epipastic (ep-e-pas'tik) [Gr. *ἐπὶ* on + *πάσσειν* to sprinkle]. 1. Suitable for use as a dusting-powder. 2. A powder to be sprinkled upon the surface of the body.

epipephysitis (ep'e-pef-is-i'tis). Conjunctivitis.

epiphanin reaction (ep-if'an-in). See under *reaction*.

epipharyngitis (ep'e-far-in-j'i'tis). Inflammation of the nasal portion of the pharynx.

epipharynx (ep-e-far'inks). The nasal portion of the pharynx; the rhinopharynx.

epiphenomenon (ep'e-fe-nom'en-on) [Gr. *ἐπὶ* on + *φαινόμενον* phenomenon]. An accessory, exceptional, or accidental occurrence in the course of an attack of any disease.

epiphora (e-pi'o-rah) [Gr. *ἐπιφορά* downflow]. An abnormal overflow of tears down the cheek; mainly due to stricture of the lacrimal passages.

epiphyllactic (ep-e-fi-lak'tik). Pertaining to or marked by epiphyllaxis.

epiphyllaxis (ep-e-fi-lak'sis) [Gr. *ἐπὶ* upon + *φύλαξις* protection]. Increase or reinforcement of normal phyllaxis, as seen in the positive phase by opsonic or vaccine therapy.

epiphyseal, epiphysial (ep-if-iz'e-al). Pertaining to or of the nature of an epiphysis.

epiphyseolysis (ep'e-fiz-e-ol'is-is) [*epiphysis* + Gr. *λύνειν* loosening]. Separation of an epiphysis from its bone.

epiphyseopathy (ep-e-fiz-e-op'ath-e) [*epiphysis* + Gr. *πάθος* disease]. 1. Any disease of the pineal gland. 2. Any disease of an epiphysis of a bone.

epiphysis (ep-if'is-is) [Gr. *ἐπίφυσις*]. 1. [BNA] A piece of bone separated from a long bone in early life by cartilage, but later becoming a part of the larger bone. 2. The pineal body. See under *body*.

epiphysitis (ep'if-is-í'tis). Inflammation of an epiphysis or of the cartilage which separates it from the main bone.

epiphyte (ep'e-fit) [Gr. *ἐπί* on + *φυτόν* plant]. 1. A plant organism growing upon another plant. 2. A vegetable organism parasitic upon the exterior of the human or an animal body.

epiphytic (ep-e-fit'ík). 1. Pertaining to or caused by epiphytes. 2. A widely diffused outbreak of an infectious disease in plants.

epipial (ep-e-pi'al). Situated on the pia.

epipleural (ep-e-plu'al). Situated upon a pleural element, or pleurapophysis.

epiplocele (ep-ip'lo-sél) [Gr. *ἐπίπλοον* omentum + *κῆλη* hernia]. A hernia which contains omentum.

epiplo-enterocele (ep-ip'lo-en'ter-o-sél) [Gr. *ἐπίπλοον* omentum + *ἐντέρον* intestine + *κῆλη* hernia]. Hernia containing intestine and omentum.

epiploic (ep-e-plo'ík). Pertaining to the epiploön.

epiploitis (ep'ip-lo-í'tis). Inflammation of the epiploön.

epiplomerocele (ep'ip-lo-me'ro-sél) [Gr. *ἐπίπλοον* omentum + *μηρός* thigh + *κῆλη* hernia]. Femoral hernia containing omentum.

epiplomphalocele (ep'ip-lom-fal'o-sél) [Gr. *ἐπίπλοον* omentum + *ὄμφαλος* navel + *κῆλη* hernia]. Umbilical hernia containing omentum.

epiploön (ep-ip'lo-on) [Gr. *ἐπίπλοον*]. The omentum: usually the great omentum.

epiplopexy (ep-pip'lo-pek-se) [*epiploön* + Gr. *πῆξις* fixation]. Suture of the omentum to the abdominal wall for the establishment of collateral circulation in cirrhosis of the liver.

epiplorrhaphy (e-pip-lor'af-e) [Gr. *ἐπίπλοον* omentum + *ράφή* suture]. Same as *epiplopexy*.

epiplosarcomphalocele (ep-ip'lo-sar-kom-fal'o-sél) [Gr. *ἐπίπλοον* omentum + *σάρξ* flesh + *ὄμφαλος* navel + *κῆλη* hernia]. An umbilical hernia complicated with a local fleshy excrescence.

epiploscheocele (ep-ip'los'ke-o-sél) [Gr. *ἐπίπλοον* omentum + *σχέον* scrotum + *κῆλη* hernia]. Scrotal hernia containing omentum.

epipygus (ep-e-pi'gus). Same as *pygometus*.

epirotulian (ep-e-ro-tu'le-an) [Gr. *ἐπί* upon + L. *rotula* patella]. Upon the patella.

episaccharic acid (ep-e-sak-ar'ík). See under *acid*.

episarkin (ep-e-sar'kin). One of the alloxur bases, $C_4H_8N_2O$, occurring in the normal urine and the urine of leukemia.

episclera (ep-e-skle'rah). The loose connective tissue between the sclera and the conjunctiva.

episcleral (ep-e-skle'ral). Overlying the sclera.

episcleritis, episcleritis (ep'is-kle-ri'tis, ep-e-skle-ro-ti'tis). Inflammation of tissues overlying the sclera; also inflammation of the outermost layers of the sclera. **e. partialis fulgax**, sudden hyperemia of the sclera and overlying conjunctiva, lasting a short time.

episcopes (ep'es-köp). 1. A projecting lantern for throwing images of solid objects on a white screen in natural colors. 2. An instrument for examination of the surface of objects.

episioclisia (e-piz'e-o-kli-z-ah) [Gr. *ἐπίσειον* pubes + *κλείσις* closure]. Surgical closure of the vulva.

episio-elytrorrhaphy (ep-iz'e-o-el-it-ror'af-e) [*episiorrhaphy* + *elytrorrhaphy*]. The operation of narrowing the vulva and vagina to support a prolapsed uterus.

episioperineorrhaphy (ep-iz'e-o-per'in-e-or'af-e). The suturing of the vulva and perineum for the support of a prolapsed uterus.

episioplasty (ep-iz'e-o-plas-te) [Gr. *ἐπίσειον* pubes + *πλάσσειν* to shape]. Plastic surgery of the vulva or pubic region.

episiorrhaphy (ep-iz-e-or'af-e) [Gr. *ἐπίσειον*

pubes + *ράφή* suture]. 1. The sewing up of a lacerated perineum. 2. The suturing of the labia majora.

episiostenosis (ep-iz'e-o-sten-o'sis) [Gr. *ἐπίσειον* pubes + *στενωσις* contraction]. The narrowing of the vulvar slit.

episiotomy (ep-iz-e-ot'o-me) [Gr. *ἐπίσειον* pubes + *τομή* a cutting]. Surgical incision of the vulvar orifice laterally for obstetric purposes (Carl Braun, 1857).

epispadia (ep-is-pa'de-ah). Epispadias.

epispadiac (ep-e-spa'de-ak). 1. Pertaining to or affected with epispadias. 2. A person affected with epispadias.

epispadiad (ep-e-spa'de-al). Same as *epispadiac*.

epispadias (ep-is-pa'de-as) [Gr. *ἐπί* on + *σπάδων* a rent]. A congenital defect in which the urethra opens on the dorsum of the penis. **female e.**, a fissure of the upper wall of the female urethra.

epispastic (ep-e-spas'tik) [Gr. *ἐπί* on + *σπᾶν* to draw]. 1. Causing a blister or serous discharge from a superficial lesion. 2. A blistering agent.

epispinal (ep-e-spi'nal). Situated upon the spinal cord or the spinal column.

episplenitis (ep'e-sple-ni'tis) [Gr. *ἐπί* on + *σπλήν* spleen + *-itis* inflammation]. Inflammation of the capsule of the spleen.

epistasis (ep-is'tas-is) [Gr. *ἐπί* on + *στάσις* a standing]. 1. The checking of any discharge, as of blood, menses, or lochia. 2. A scum or pellicle, as on the surface of urine.

epistasy (ep-is'tas-e) [Gr. *ἐπί* upon + *στάσις* position]. The concealing of one hereditary character by another superposed upon it.

epistatic (ep-e-stat'ík). Superimposed: said of a mendelian character which is superimposed upon another, hiding the appearance of the latter.

epistaxis (ep-e-staks'is) [Gr. *ἐπίσταξις*]. Nose-bleed; hemorrhage from the nose. **Gull's renal e.**, a disease of middle adult life marked by renal hemorrhage, but with no known lesion. Called also *essential renal hematuria*, *angioneurotic hematuria*, and *renal hemophilia*.

episternal (ep-e-ster'nal). Situated on or over the sternum.

episternum (ep-e-ster'num) [Gr. *ἐπί* on + *στέρνον* sternum]. The manubrium, or first piece of the sternum.

epistropheus (ep-e-stro'fe-us). The axis.

epitarsus (ep-e-tar'sus) [Gr. *ἐπί* upon + *tarsus*]. An anomaly of the eye consisting of a fold of conjunctiva passing from the fornix to near the lid-border. Called also *congenital pterygium*.

epitela (ep-e-te'lah) [Gr. *ἐπί* on + L. *te'la* web]. The delicate tissue of Veussen's valve.

epitendineum (ep-e-ten-din'e-um). The fibrous sheath covering a tendon.

epitenon (ep-e-te'non) [Gr. *ἐπί* upon + *τενών* tendon]. The connective tissue covering a tendon within its sheath.

epithalamic (ep-e-thal-am'ík). Upon the thalamus.

epithalamus (ep-e-thal'am-us) [Gr. *ἐπί* upon + *thalamus*]. That part of the thalamencephalon which is composed of the posterior commissure, the habenula, and the pineal body.

epithalaxia (ep-e-thal-ak'se-ah) [*epithelium* + Gr. *ἄλλαξις* falling]. Desquamation of the epithelium, especially of the intestinal mucosa.

epithella (ep-e-the'le-ah). The epithelial cells or the layer which they compose.

epithelial (ep-e-the'le-al). Pertaining to or composed of epithelium. **e. inlay, e. outlay**. See under *inlay* and *outlay*.

epithelioblastoma (ep-e-the'le-o-blas-to'man) [*epithelium* + Gr. *βλάστος* cell + *-ωμα* tumor].

An epithelial tumor; a tumor made up of epithelial cells. The term includes papilloma, adenoma, and carcinoma.

epithelioceptor (ep-e-the''le-o-sept'or). The structure in a gland cell which receives a nerve stimulus from the end-organ of the nerve-fibril.

epitheliogenic (ep-e-the''le-o-jen-et'ik) [*epithelium* + Gr. *γενῶν* to produce]. Due to epithelial proliferation.

epithelioglandular (ep-e-the''le-o-glan'du-lar). Pertaining to the epithelial cells of a gland.

epithelioid (ep-e-the'le-oid). Resembling epithelium.

epitheliolysin (ep''e-the-le-ol'is-in). A cytotoxin formed in the serum of an animal when epithelial cells from an animal of different species are injected. The epitheliolysin has the power of destroying epithelial cells of an animal of the same species as that from which the epithelial cells were originally taken.

epitheliolysis (ep''e-the-le-ol'is-is) [*epithelium* + Gr. *λύσις* solution]. Destruction of epithelial cells by epitheliolysins.

epitheliolytic (ep-e-the''le-o-lit'ik). Causing destruction of epithelial tissue.

epithelioma (ep''e-the-le-o'mah). An epithelial cancer; a malignant tumor consisting mainly of epithelial cells and primarily derived from the skin or mucous surface. See *carcinoma*. **e. adamantinum**. See *adamantinoma*. **e. adenoides cysticum**, spiradenoma. **columnar e.**, **cylindric e.**, is composed of columnar cells arranged in gland-like tubules. **e. contagiosum**, a contagious disease of birds characterized by the formation of nodules that contain glistening corpuscles. Called also *fowl-pox* and *sore head*. **diffuse e.**, a variety in which the adjacent tissue is infiltrated with the malignant cells. **glandular e.**, a variety consisting of gland-cells and affecting mucous surfaces. **e. molluscum**. Same as *molluscum epitheliale*. **multiple benign cystic e.** Same as *spiradenoma*. **e. myxomatodes psammomum**, a form occurring in the third ventricle of the brain, composed of myxoma-like tissue containing hard, granular matter. **suprarenal e.**, a hypernephroma.

epitheliomatous (ep''ith-e-le-o'mat-us). Pertaining to or of the nature of epithelioma.

epitheliomuscular (ep-e-the''le-o-mus'ku-lar). Composed of epithelium and muscle.

epitheliosis (ep-e-the-le-o'sis). Proliferation of the epithelium of the conjunctiva. **e. desquamativæ conjunctivæ**, a condition resembling trachoma occurring in the Samoan Islands.

epitheliotoxin (ep-e-the''le-o-tok'sin). A cytotoxin which destroys epithelial cells.

epithelium (ep-ith-e'le-um) [Gr. *ἐπί* on + *θηλή* nipple]. The covering of the skin and mucous membranes, consisting wholly of cells of varying form and arrangement (Henle, 1837). Epithelium is derived from the epiblast and the hypoblast. The four principal varieties, named according to the shape of the cells, are *columnar*, *modified*, *specialized*, and *squamous*. Columnar and squamous epithelium are either simple or stratified; modified epithelium includes the *ciliated*, *goblet*, and *pigmented* varieties. Specialized epithelium includes *glandular e.* and *neuro-epithelium*. The *columnar* and *squamous* varieties are polyhedral, pavement, or tessellated. **cubic e.**, epithelium the cells of which have a cubic shape. **germinal e.**, a layer of epithelial cells along each side of the mesentery of the primitive intestinal tube. It develops into the sperm cells in the male and into a mass of cells over the ovary in the female. **glandular e.**, epithelium made up of glandular or secreting cells. **laminated e.** Same as *stratified e.* **nucleated e.**, a form made up of hexagonal or circular nucleated cells. **pavement e.**, epi-

thelium composed of a single layer of flat cells. **pigmentary e.**, **pigmented e.**, epithelium containing granules of pigment. **protective e.**, epithelium that forms a protective covering, as the epidermis. **pyramidal e.**, columnar epithelium. **rod-e.**, epithelium the cells of which are rod shaped. **sense-e.**, **sensory e.**, epithelium having relation with a special sense-organ; neuro-epithelium. **stratified e.**, epithelium in which the cells are arranged in several layers. **subcapsular e.** 1. The internal lining of the capsule of the spinal ganglion. 2. A single layer of epithelial cells over the posterior surface of the anterior capsule of the lens. **tailed e.**, the transitional epithelium seen in cases of pyelitis and pyelonephritis. **tessellated e.**, the simplest form in which the flattened cells overlap one another at the edges. **transitional e.**, epithelium composed of cells in layers of different kinds, each of which represents a transition to the layer adjoining.

epithelization (ep-e-the-liz-a'shun). Conversion into epithelium.

epithem (ep'ith-em) [Gr. *ἐπί* on + *τιθέναι* to place]. Any poultice, embrocation or external application other than ointment, blister, salve, or plaster.

epithermol (ep-e-ther'mol). Amido-azotoluol.

epithesis (ep-ith'e-sis) [Gr. *ἐπιθεσις*]. 1. The surgical correction of deformity or of crooked limbs. 2. A splint or other appliance to be worn.

epitonic (ep-e-ton'ik) [Gr. *ἐπιτονος* strained]. Abnormally tense or tonic; exhibiting an abnormal degree of tension or of tone.

epitoxoid (ep-e-toks'oid). Any toxoid which has less affinity for an antitoxin than the toxin has. See *toxoid*.

epitoxonoid (ep-e-toks'o-noid). A toxonoid which has the least affinity for its corresponding antitoxin.

epitrichium (ep-e-trik'e-um) [Gr. *ἐπί* on + *τρίχων* hair]. The large-celled outer layer of the embryonic and fetal epidermis; a membrane which overlies the epidermis and hair during fetal life, and generally disappears before birth.

epitrochlea (ep-e-trok'le-ah) [Gr. *ἐπί* on + *τροχαλία* pulley]. The inner condyle of the humerus.

epiturbinate (ep-e-ter'hin-āt). The soft tissue covering the turbinate bone.

epitympanic (ep''e-tim-pan'ik). Situated upon or over the tympanum.

epitympanum (ep-e-tim'pan-um). The attic.

epityphlitis (ep''e-tif-li'tis) [Gr. *ἐπί* on + *τυφλόν* cecum + *-ιτις* inflammation]. Same as *appendicitis*.

epityphlon (ep-e-ti'flon) [Gr. *ἐπί* upon + *τυφλόν* cecum]. The vermiform appendix.

epizoic (ep-e-zo'ik). Parasitic on the exterior of the body.

epizoicide (ep-e-zo'is-id) [*epizoa* + L. *cādere* to kill]. An agent which destroys epizoa.

epizöology (ep-e-zo-öl'o-je) [*epizootic* + Gr. *λόγος* treatise]. The study of epidemic diseases among animals.

epizoön (ep-e-zo'on), pl. *epizoa* [Gr. *ἐπί* on + *ζῶον* animal]. An animal parasite upon the exterior of the body.

epizootic (ep''e-zo-ot'ik) [Gr. *ἐπί* on + *ζῶον* animal]. 1. Occurring as an epidemic disease among animals. 2. A disease of animals, rapidly spreading and widely diffused.

épluchage (a-plësh-azh') [Fr. "paring"]. Wound excision; the cutting and paring away of the contused and contaminated tissues of a wound. Cf. *débridement*.

epocol (ep'o-kol). A creosote preparation, used in diseases of the respiratory tract and in infections. Dose, 15-100 min. (1-8 c.c.).

eponychium (ep-o-nik'e-um) [Gr. *ἐπί* on + *ὄνυξ* nail]. 1. The horny embryonic structure whence the nail is developed. 2. The nail-skin; a film of epidermis which covers the body of the nail for a limited distance.

eponym (ep'o-nim). A name for a part, organ, disease, or other thing derived from the name of a person.

eponymic (ep-o-nim'ik) [Gr. *ἐπώνυμος*]. Named from some person.

epöophorectomy (ep'ö-o-fö-rek'to-me) [Gr. *ἐπί* on + *φωφόν* ovary + *ἐκτομή* excision]. Surgical removal of the parovarium.

epöophoron (ep-o-ö'ö-ron) [Gr. *ἐπί* on + *φωφόν* ovary]. The parovarium, or body of 'Rosenmüller.

epornitic (ep-or-nit'ik) [Gr. *ἐπί* upon + *ὄρνιθος* bird]. An epidemic affecting fowls.

Epsom salt (ep'sum). Magnesium sulphate.

Epstein's pearls (ep'stinz) [Alois *Epstein*, a pediatricist in Prague, 1849-1918]. See under *pearl*.

epulis (ep-u'lis) [Gr. *ἐπί* on + *ὄλον* gum]. A fibrous tumor of the gums, usually seated on the periosteum or bone of the jaw. **malignant e.**, giant-cell sarcoma of the jaw.

epulo-erectile (ep'u-lo-e-rek'til). Both epuloid and erectile.

epulofibroma (ep'u-lo-fi-brö'mah). A fibroma of the gum.

epuloid (ep'u-loid). Resembling an epulis.

epulosis (ep-u-lo'sis) [Gr.]. Cicatrization.

epulotic (ep-u-lot'ik). Promoting cicatrization.

equate (e'kwät). To make equal or equivalent. In color vision, the physiologic faculty of combining two colors to match a third, as to combine red and green to make a homogeneous yellow.

equation (e-kwä'shun) [L. *æquatio*, from *æquāre* to make equal]. An expression made up of two members connected by the sign of equality, =.

Ambard's e. See *Ambard's formula*, under *formula*. **chemic e.**, an equation which expresses a chemic reaction, the symbols on the left of the equation denoting the substances before, and those on the right after, the reaction. **personal e.**, the more or less constant difference between the results of observation depending upon the personal qualities of observers.

equator (e-kwä'tor) [L. *æquator* equalizer]. A great circle; a line which divides the surface of a spheroid organ, as the eye, into two nearly equal parts. **e. of a cell**, the plane which divides a cell or its boundary. **e. of the eye**, the circle or plane which divides the eye into anterior and posterior halves. **nervous e.**, that section of a muscle in which the common center of gravity of all the nerve-endings would fall if these last have a certain uniform equilibrium. In the forearm it lies near the elbow.

equiaxial (e-kwe-aks'e-al). Having axes of the same length.

equilibrating operation (e-kwil'ib-ra-ting). Tenotomy of a healthy eye-muscle when its antagonist is affected with paresis.

equilibration (e-kwe-li-brä'shun). Maintenance or restoration of normal equilibrium.

equilibrium (e-kwe-lib're-um) [L. *æquus*, equal + *libra* balance]. A state of balance or equipoise; a condition in which opposing forces exactly counteract each other. **body e.**, the condition in which the material taken into the body are balanced by corresponding excretions. **carbon e.**, the condition in which the total carbon of the excreta is balanced by the carbon of the food. **Donnan e.**, the conditions which exist at equilibrium when two solutions are separated by a membrane which is permeable to some of the ions of the solutions, but not to all of them. There is an irregular distribution of the ions between the two solutions, an electrical potential develops between the two sides of the membrane, the two solutions vary in osmotic and in hydrostatic pressure. **dynamic e.**, the condition of balance between varying, shifting, and opposing forces which is characteristic of living processes. **nitrogen e.**, ni-

trogenous e., the condition in which the body is metabolizing and excreting as much nitrogen as it is receiving in the food; called also *protein e.* **nutritive e.** Same as *physiologic e.* **physiologic e.**, the condition in which the amount of material taken into the body exactly equals the amount discharged. **protein e.**, nitrogen equilibrium.

equination (e-kwin-a'shun) [L. *equinus* equine]. Inoculation with the virus of horse-pox.

equinia (e-kwin'e-ah) [L. *equus* horse]. See *glanders*. **e. mitis**, a mild form of glanders sometimes seen in man and contracted from horses.

equinism (e'kwin-izm). A horse-like gait resulting from gunshot wounds of the legs.

equinovarus (e-kwi'no-va'rus). A blending of pes equinus with pes varus.

equinus (e-kwi'nus). Same as *talipes equinus*.

equisetosis (e-kwi-se-to'sis). Poisoning of horses from eating horsetail, *equisetum*.

equisetum (e-kwi-se'tum). A common weed, *E. arven'se*, horsetail or jointed rush. It causes a form of poisoning in horses who eat it with hay. It is used as a diuretic drug in electric practice.

equivalence (e-kwi'val-ens). 1. The condition of being equivalent. 2. Quantivalence; the amount of hydrogen which a chemic element can replace in a compound.

equivalent (e-kwi'val-ent) [L. *æquivalens*, from *æquus* equal + *valere* to be worth]. 1. Having the same value; neutralizing or counterbalancing each other. 2. A number showing the amount of one thing which will in its effects just balance another. **balanotherapeutic e.**, the amount of the chemical constituents of a mineral water which must be taken by an adult in twenty-four hours in order to get the desired therapeutic effect (Kisch). **chemic e.**, the weight of an element capable of combining with a unit weight of hydrogen. **combustion e.**, the heat value of a gram of fat or carbohydrate burnt outside the body. It measures the amount of potential energy of the substance available, in the form of food, for the production of heat or the supply of energy. **endosmotic e.**, the number which represents the quantity of water that will pass through a diaphragm by endosmosis in the same time that a unit of any other given substance will pass in the other direction by exosmosis. **epileptic e.**, a disturbance, mental or bodily, that may take the place of an epileptic attack. **gold e.**, the amount of protective colloid, expressed in milligrams, which is just enough to prevent the precipitation of 10 c.c. of a 0.005 per cent. gold solution by 1 c.c. of a 10 per cent. sodium chlorid solution. **isodynamic e.**, the ratio, from a food-energy standpoint, between carbohydrate and fat. It is 0.3 to 4.1 or 2.3 to 1; that is, one part of fat is equivalent to 2.3 parts of sugar or starch. **Joule's e.**, the mechanic equivalent of heat or the amount of work expended in raising a pound of water through 1° F.; 772 foot-pounds. **psychic e.**, a temporary mental disturbance which occurs in place of an ordinary epileptic attack. **starch e.**, a number (nearly 2.4) expressing the amount of oxygen which a given weight of fat will require for its complete combustion as compared with the amount required by the same weight of starch. **toxic e.**, the amount of poison able to kill one kilogram of animal. **water e.**, the product of the weight of an animal by its specific heat, it being also the number which represents the specific heat of an equal weight of water.

Er. Symbol of erbium.

E. R. Abbreviation for *external resistance*.

eration (e-ra'zhun) [L. *eratio*]. Removal by scraping away. **e. of a joint**, arthrectomy.

Erasistratus (er-as-is'trat-us). A celebrated Greek anatomist and physician who practised chiefly at

Alexandria. He was born, it is believed, about 300 B. C. and died about 250 B. C.

Erb's atrophy, paralysis, point, etc. [Wilhelm Heinrich Erb, physician in Heidelberg, 1840-1921]. See *atrophy, paralysis, point*, etc.

Erb-Charcot disease. Spastic spinal paralysis.

Erb-Goldflam disease. Myasthenia gravis pseudoparalytica.

Erb-Westphal sign. See under *sign*.

Erben's phenomenon (er'benz) [Siegmond Erben, physician in Vienna, born 1863]. See *phenomenon*.

erbium (er'be-um). A rare metallic element: symbol, Er; atomic weight, 167.7.

ercedylate (er-sed'il-at). A soluble cacodylate of bismuth. It is given by subcutaneous or intramuscular injection in doses of 0.12 gm. in the treatment of syphilis.

erecpalmine (er-sep'al'min). A neutral palmitate of bismuth. The intramuscular dose in the treatment of syphilis is 1 ampule equivalent to 0.04-0.08 gm. of Bi.

Erdmann's reagent (erd'manz) [H. Erdmann, German chemist, born 1862]. See under *reagent*.

erdol (er'dol). Quinolin salicylate: used in rheumatism.

erectile (e-rek'til). Capable of erection. **e. tissue**. See *tissue*.

erection (e-rek'shun) [L. *erectio*]. The condition of being made rigid and elevated.

erector (e-rek'tor) [L.]. A muscle which produces erections or which holds up a part. **e. pili**. See *arrectores pilorum*.

eremacausis (er'em-ak-aw'sis) [Gr. *ἡρέμα* slowly + *καύσις* burning]. The slow oxidation, combustion, or decay of organic matter.

eremophobia (er-e-mo-fō'be-ah) [Gr. *ἔρημος* solitary + *φόβος* fear]. Morbid fear of being alone.

erepsin (e-rep'sin). A ferment of the intestinal mucous membrane which breaks up peptones and deuto-albumins, but has no effect on unaltered albumin.

ereptase (e-rep'tās). Same as *erepsin*.

ereptic (e-rep'tik). Pertaining to or containing erepsin.

erepton (e-rep'ton). A proprietary preparation obtained by the action of intestinal and pancreatic ferments on fat-free meat: used for rectal enemas.

eresiphake (er-e-sif'ak-e) [Gr. *ἔρησις* removal + *φακός* lens]. Barraquer's instrument for removing the lens in cataract by suction. Cf. *phaco-eresis*.

erethin (er'eth-in) [Gr. *ἐρεθίζειν* to irritate]. The poisonous principle of tuberculin.

erethism (er'e-thizm) [Gr. *ἐρεθισμα* stimulation]. Excessive irritability or sensibility.

erethismic (er-e-thiz'mik). Pertaining to erethism.

erethistic (er-e-this'tik) [Gr. *ἐρεθιστικός*]. 1. Pertaining to or affected with erethism. 2. Provocative of or increasing irritation.

ereuth-. For words beginning thus, see *eryth-*.

ereuthrophobia (er'uth-ro-fō'be-ah). Erythrophobia.

erg (erg) [Gr. *ἔργον* work]. A unit of work; the work done in moving a body one centimeter against a force of one dyne.

ergamin (er'gam-in). See *histamin*.

ergapiol (er-ga'pe-ol). A proprietary remedy containing apiol (5 parts), ergotin (1 part), oil of savin ($\frac{1}{2}$ part), aloin ($\frac{1}{8}$ part): used in disorders of menstruation. Dose, 7-14 min. (0.45-0.9 c.c.), in capsules.

ergasiomania (er-gas'e-o-ma'ne-ah) [Gr. *ἐργασία* work + *μανία* madness]. An insane desire to be continually at work; also, extreme eagerness to perform operations.

ergasiophobia (er-gas'e-o-fō'be-ah) [Gr. *ἐργασία* work + *φόβος* fear]. Morbid aversion to work; also extreme timidity as to operating surgically.

ergasthenia (er-gas-the'ne-ah) [Gr. *ἔργον* work + *ἀσθένεια* weakness]. A condition of debility from overwork.

ergastic (er-gas'tik) [Gr. *ἔργον* work]. Having potential energy; a term applied to passive material formed or stored by a cell, such as starch, fat, and cellulose.

ergastoplasm (er-gas'to-plazm) [Gr. *ἔργον* work + *πλάσμα*]. Same as *archiplasm*.

ergin (er'gin) [Gr. *ἔργον* work]. A substance supposed to be present in the body fluids which unites with the allergin of the infecting matter to produce allergy.

ergo-apiol (er-go-a'pe-ol). Ergapiol.

ergochrysin (er-go-kri'sin). A principle from ergot: combined with sphacelotoxin it forms chrysotoxin; with secalin it forms secalintoxin.

ergo-esthesiograph (er'go-es-the'se-o-graf) [Gr. *ἔργον* work + *αἰσθησις* sensation + *γράφειν* to record]. An apparatus for recording graphically the muscular aptitude of candidates for aviation.

ergogram (er'go-gram) [Gr. *ἔργον* work + *γράμμα* a mark]. A tracing made by an ergograph.

ergograph (er'go-graf) [Gr. *ἔργον* work + *γράφειν* to record]. An instrument for recording work done in muscular exertion. **Mosso's e.** (1890, an apparatus for recording the force and frequency of flexion of the fingers.

ergographic (er-go-graf'ik). Pertaining to the ergograph.

ergomania (er-go-ma'ne-ah). Ergasiomania.

ergometer (er-gom'et-er) [Gr. *ἔργον* work + *μέτρον* measure]. A dynamometer.

ergone (er'gōn). A non-irritating sterile preparation of ergot.

ergophobia (er-go-fō'be-ah) [Gr. *ἔργον* work + *φόβος* fear]. Morbid dread of work.

ergophore (er'go-fōr) [Gr. *ἔργον* work + *φόρος* bearing]. Same as *toxophore*.

ergoplasm (er'go-plazm). Same as *kinoplasm*.

ergosol (er'go-sol). A proprietary fluidextract of ergot.

ergostat (er'go-stat). A machine to be worked for muscular exercise, for the cure of obesity, etc.

ergosterin (er-gos'ter-in). A compound, $C_{28}H_{46}O \cdot H_2O$, from ergot of rye.

ergot (er'got) [Fr.; L. *ergota*]. 1. A fungus which affects and finally replaces the seed of a cereal grass; especially the sclerotium of *Claviceps purpurea*, ergot of rye. Ergot contracts the arterioles and unstriated muscle-fibers, and is a powerful echolic and hemostatic. It is used to check hemorrhage after parturition; to hasten labor; to arrest internal hemorrhage; in spinal and cerebral congestion; in paralysis of the bladder, and diabetes mellitus. Dose of aqueous and alcoholic extracts, 13-8 min. (0.099-0.53 c.c.); of fluidextract, 15-60 min. (1-4 c.c.); of wine, 1-4 dr. (4-16 c.c.). 2. A small mass of horn in the tuft of hair at the flexion surface of the fetlock in horses.

ergotamin (er-go-tam'in). A crystalline alkaloid, $C_{33}H_{35}N_5O_6$, with the characteristic action of ergot. Dose, 0.12-0.25 mg. by intravenous administration.

ergotherapy (er-go-ther'ap-e) [Gr. *ἔργον* work + *θεραπεία* treatment]. Treatment of disease by physical effort.

ergothionein (er-go-thi-o'ne-in). The trimethylbetain of thio-histidin, $C_3H_9N_2(SH) \cdot CH_2 \cdot CH \cdot CO \cdot ON(CH_3)_3$, found in ergot.

ergothionone (er'go-thi-o'nōn). A sulphur-containing base obtained from ergot.

ergotin (er'go-tin) [L. *ergoti'num*]. One of the alkaloids of ergot; also a proprietary ergotin preparation. Dose of alkaloid, $\frac{1}{15}$ - $\frac{1}{2}$ gr. (0.0042-0.033 gm.); of extract, 3-15 gr. (0.2-1 gm.). **Bonjean's e.**, a purified extract of ergot.

ergotin (er-got'in-in). A crystalline alkaloid, $C_{35}H_{39}N_5O_5$, from ergot. Styptic dose, $\frac{1}{32}$ – $\frac{1}{4}$ gr. (0.005–0.016 gm.). **e. citrate** is used like ergot. Dose, $\frac{3}{16}$ – $\frac{1}{10}$ gr. (0.00033–0.00066 gm.).

ergotinol (er-got'in-ol). A proprietary ammoniated solution of ergotin.

ergotism (er'got-izm). Chronic poisoning from excessive or misdirected use of ergot as a medicine, or from eating ergotized grain. It is marked by cerebrosplinal symptoms, spasms, and cramps, or by a kind of dry gangrene.

ergotized (er'got-izd). Diseased or otherwise affected by ergot.

ergotol (er'got-ol). A liquid preparation of ergot for hypodermic use. Dose, 5–20 min. (0.33–1.33 c.c.).

ergotoxin (er-go-tok'sin). An alkaloid, $C_{35}H_{41}O_6N_5$, from ergot.

ergotropic (er-go-trop'ik) [Gr. *ἐργον* work + *τρόπος* a turning]. The reaction of the body cells to the application of non-specific agents, such as the injection of proteins, counterirritation, baths, etc. As applied in clinical therapeutics the object is to stimulate the general defenses of the body rather than to develop specific antibodies.

ergoxanthin (er-go-zan-the'in). A proprietary ergot derivative said to have an effect on the blood-pressure.

ergusia (er-ju'se-ah). A hypothetical lipid substance which liberated from a cell reduces surface tension and enables the cell to migrate. It seems to be similar to vitamin A.

Erichsen's disease, ligature (er'ik-senz) [John Erichsen, English surgeon, 1818–1896]. See under *disease, ligature*.

ericin (er'is-in). Mesotan.

Erigeron (e-rij'er-on) [Gr. *ἑριγέρων* early old]. Fleabane; a genus of composite-flowered plants. The leaves and tops of *E. canadensis*, *E. philadelphicus*, etc., are diuretic, and are used in urinary diseases, dropsy, irritation of the bladder, gonorrhea, etc. Dose of fluidextract of *E. canadensis*, 30–60 min. (2–4 c.c.). **oil of e.**, a dense, yellow, hemostatic oil from *E. canadensis*. Dose, 8–15 min. (0.533–1 c.c.).

Eriodictyon (er'e-o-dik'te-on) [Gr. *ἑριον* wool + *δίκτυον* net]. A genus of dryophyllaceous plants. *E. californicum*, yerba santa, or mountain-balm, is useful in bronchitis. Dose of fluidextract, 15–30 min. (1–2 c.c.); of solid extract, $2\frac{1}{2}$ – $7\frac{1}{2}$ gr. (0.16–0.45 gm.).

Eristalis texan. The "drone fly"; the "rat-tailed" larvæ of this fly may cause severe intestinal myiasis.

Erlangen method or treatment (air'lang-en). See under *treatment*.

Erlenmeyer's mixture (er'len-mi-erz) [F. A. Erlenmeyer, German physician, born 1849]. See under *mixture*.

Erndtefeber (ern'te-fe-ber) [Ger. for "harvest-fever"]. Same as *Schlammfieber*.

ernutin (er-nu'tin). A proprietary preparation said to represent the active therapeutic principle of ergot.

erobic (e-ro'bik). An improper spelling of *aërobic*.

erode (e-röd'). To wear away.

Erodium (e-ro'de-um). A genus of plants. *E. cicutarium* is used as a diuretic in menorrhæa and uterine hemorrhage. Dose of fluidextract, 30–40 min. (2–2.6 c.c.).

erogenous (e-roj'en-us). Erotogenic.

eronimin (er-on'im-in). An agent in colorless crystals; used like digitalin. Dose, $\frac{3}{4}$ gr. (0.05 gm.).

erose (e-rös') [L. *ero'dere* to gnaw off]. Gnawed; having an irregularly toothed edge.

erosin (e-ro'sin). A golden-brown, crystalline

substance derived from *Chadamicum luteum*. It is tonic, diuretic, and vermifuge.

ero'sio interdigitalis blastomycet'ica. An eroded lesion occurring in the interdigital webs of the fingers and toes, and caused probably by an *oidium*.

erosion (e-ro'zhun) [L. *ero'sio*, from *ero'dere* to eat out]. An eating or gnawing away; a kind of ulceration. In dentistry, the wearing away or loss of substance of a tooth, upon surfaces free from attrition by mastication, beginning in the enamel and slowly spreading inward.

erosive (e-ro'siv). 1. Causing or characterized by erosion. 2. An eroding agent.

erotic (e-rot'ik) [Gr. *ἑρωτικός*]. Pertaining to love or to lust.

eroticism, erotism (er-ot'is-izm, er'ot-izm). A morbid sexual instinct or desire. **anal e.**, sexual sensation from the anus in connection with defecation.

eroticomania (er-ot'ik-o-ma'ne-ah). Same as *erolomania*.

erotogenic (e-rot-o-jen'ik) [Gr. *ἔρω* love + *γεννᾶν* to produce]. Producing erotic feelings.

erotomania (e-rot-o-ma'ne-ah) [Gr. *ἔρω* love + *μανία*]. Emotional insanity characterized by exhibitions of extravagant affection for persons of the opposite sex, or by exhibitions of sexual desire.

erotomaniac (e-rot-o-ma'ne-ak). A person affected with erotomania.

erotopath (e-rot'o-path). A person with disordered sexual impulse.

erotopathy (er-o-top'ath-e) [Gr. *ἔρω* love + *πάθος* disease]. Disorder of the sexual impulse.

erotophobia (e-rot-o-fō'be-ah) [Gr. *ἔρω* love + *φόβος* fear]. Morbid dislike for sexual love.

erotopsychic (e-rot-o-si'kik) [Gr. *ἔρω* love + *ψυχῆ* mind]. Marked by perversion of the sexual impulse.

erosexual (er-ot-o-seks'u-al). Pertaining to the genic impulse.

erpiol (er'pe-ol). A proprietary preparation of apiol, ergotin, and gossypin; used in dysmenorrhea and amenorrhea.

erratic (er-at'ik) [L. *errare* to wander]. 1. Roving or wandering. 2. Eccentric; of an unusual type.

errhine (er'in) [Gr. *ἔρ* in + *ῥίς* nose]. 1. Sternutatory: promoting a nasal discharge. 2. A medicine which promotes nasal discharge or secretion.

erseol (er-se'ol). A white, crystalline compound, quinolin sulphosalicylate, used in rheumatism, influenza, and neuralgia.

erubescence (er-u-bes'ens) [L. *erubes'cere* to grow red]. A flushing of the skin.

erucic acid (e-ru'sik). See under *acid*.

eruclation (e-ruk-ta'shun) [L. *eructa'tio*, from *eructare* to belch]. The act of belching, or of casting up wind from the stomach.

eruption (e-rup'shan) [L. *erup'tio* a breaking out].

1. The act of breaking out, appearing, or becoming visible. 2. A visible lesion of the skin due to disease, and marked by redness, prominence, or both. **bullous e.**, an eruption of large blebs or blisters. **creeping e.**, a peculiar skin eruption having the feature of traversing the surface and due to the presence of a parasitic larva (probably of the genera *Gastrophilus*, *Gnathostoma*, or *Agamonemalodium*), which burrows beneath the skin. Called also *hyponomoderma*, *larva migrans*, and *dermatomyiasis linearis migrans aestrosa*. **crustaceous e.**, an eruption consisting of crusts. **drug-e.** See *dermatitis medicamentosa*. **erythematous e.**, an eruption consisting of patches of redness. **iodin e.**, an eruption on the skin resulting from the internal use of iodine. **macular e.**, an eruption in the form of spots, and due to hem-

orrhage, congestion, or pigmentation. **medicinal e.**, an eruption due to the ingestion of medicines; a drug eruption. **papular e.**, an eruption of small solid elevations. **petechial e.**, an eruption in spots, due to hemorrhage. **pustular e.**, an eruption of pustules. **scaly e.**, **squamous e.**, an eruption consisting of scales. **serum e.**, an eruption or exanthem following the injection of a serum. **tubercular e.**, an eruption of large elevations.

eruptive (e-rup'tiv). Pertaining to or characterized by eruption.

eryasin (er'vas-in). Acetylcresotinic acid, $\text{CH}_3\text{C}_6\text{H}_3(\text{O.CO.CH}_3)\text{COOH}$, a crystalline compound used in rheumatism. Dose, 10-20 gr. (0.6-1.2 gm.).

Erwinia (er-win'e-ah). A genus of bacterial organisms pathogenic for plants.

Eryngium (er-in'je-um). A genus of plants. *E. aquilicium* and *E. compestre* are used as aphrodisiacs and for the treatment of vesical irritation.

eryngo (er-in'go). A plant of the genus *Eryngium*.

erysimin (er-is'im-in'). A glucosid from the seeds of a plant, *Erysimum aurium*: used like digitalis.

Erysimum (er-is'im-um). A genus of plants. The seeds of certain species are used as a cardiac tonic and as a demulcent in local congestion.

erysipelas (er-is-ip'el-as) [Gr. *ἐρύσιπλος* red + *πᾶλλα* skin]. An acute febrile, somewhat contagious disease, due to the presence of the hemolytic streptococcus (*Streptococcus erysipellatis*), and marked by chill, fever, and intense local redness of the skin and mucous membranes. The eruption, which begins on the first or second day, consists of dark red, spreading patches of erythema, with edema and infiltration of the underlying tissues. The affected parts become swollen and painful, and there are intense itching and burning. The eruption begins to disappear about the fourth day, and the patient begins to convalesce after eight days. The disease is frequently complicated by the presence of suppression of urine, albuminuria, pyemia, and edema of the glottis. Idiopathic erysipelas generally ends in recovery; but the traumatic and phlegmonous varieties are often fatal, and the gangrenous is always so. **ambulant e.** is marked by the eruption recurring at various points. **coast e.** (erisipela de la costa), a disease of Guatemala caused by the filarial worm *Onchocerca caeciliens*, marked by the formation of subcutaneous nodules on the head. **facial e.**, erysipelas that affects the face, which is marked by an area of swelling, redness, and itching. **gangrenous e.**, a variety which is characterized by sloughing. It is always fatal. **e. grave internum**, erysipelas in the vagina, uterus, and peritoneum: a form of puerperal fever. **idiopathic e.**, that which does not follow a trauma. It occurs usually on the face or scalp, and follows the usual mild course, invariably ending in recovery unless complicated with some other affection. **malignant e.**, one of the forms of puerperal fever. **migrant e.**, a form in which the morbid process disappears successively from various parts of the body, to reappear elsewhere. Called also *wandering e.* **persistans**, an erysipelas-like eruption sometimes seen in conjunction with lupus erythematosus. **phlegmonous e.**, that which is marked by subcutaneous suppuration. **e. pustulo-sum**, vesicular erysipelas in which the vesicles become filled with pus. **recurrent e.**, a mild form, chiefly facial, and prone to recur: considered by some a pseudo-erysipelas. **relapsing e.**, a chronic type of erysipellatous disease, often associated with deep-seated suppuration. **surgical e.**, **traumatic e.**, follows a wound or surgical operation. **swine e.**, a contagious disease of young swine attended with fever and the formation of red blotches on the neck and body. Called also *rouget du porc* and

red fever of swine. **e. toxin**, a toxin obtained from cultures of the *Streptococcus erysipellatis*, and used in treating malignant growths. **e. verrucosum**, erysipelas having a warty appearance. **e. vesiculolum**, a variety marked by vesicles or bullae. **wandering e.** See *migrant e.* **white e.**, edema of an erysipellatous nature, but without apparent dilatation of the blood-vessels. **zoönotic e.** Same as *erysipeloid*.

erysipellatous (er'is-ip-el-at-us). Pertaining to or of the nature of erysipelas.

erysipelococcus (er-is-ip'el-o-kok'us). The streptococcus of erysipelas.

erysipeloid (er-is-ip'el-oid) [*erysipelas* + Gr. *εἶδος* form]. An infective dermatitis due to the absorption of putrescent animal matter by the skin: it resembles erysipelas, but is without fever. It is caused by *Streptothrix rosenbachii*.

Erysipelothrix (er-is-ip'el-o-thrix). A genus of Actinomycetaceae. They are Gram-positive microaerophilic, non-motile, non-sporogenic, usually parasitic, rod-shaped organisms forming long threads which may show branching. **E. erysipellatosus**, the organism which causes the erysipelas of swine. Called also *Bacillus erysipellatosus*, *B. murisepicus*, *B. minimus*, *B. rhusiopathicus*, *bacillus of swine plague*, *Erysipelothrix porci*, and *Mycobacterium rhusiopathica*.

erysipelotoxin (er-is-ip'el-o-tok'sin). The toxin of erysipelas.

erythema (er-ith-e'mah) [L., from Gr. *ἐρυθμα* redness]. A morbid redness of the skin of many varieties, due to congestion of the capillaries; rose-rash. **e. ab igne**, a dermatitis affecting persons exposed to radiant heat, such as bakers, stokers, etc. **acrodynic e.**, a form characterized by red spots on the hands and soles, due to a toxic action upon the spinal cord. **e. annulare**, a form with rounded lesions, each with a raised margin. **e. arthriticum epidemicum**. Same as *erythredema*. **e. calorikum**, a form resulting from exposure to heat or cold, or both; also to exposure to the chemic rays of light. **e. circinata**, erythema multiforme marked by circular grouping of the lesions. **e. congestivum**, a variety with congestion of the skin. Called also *simple e.* **desquamative exfoliative e.** Same as *e. scarlatiniforme*. **e. elevatum diutinum**, erythema having firm, persistent, nodular elevations. **endemic e.**, pellagra. **frost e.**, dark patches on the skin of those who have been frozen to death (Ogston). **e. gyratum**, erythema in which the lesions occur in overlapping rings. **Hutinel's e.**, erythema infectiosum. **e. hyperemicum**. Same as *e. simplex*. **e. induratum**, a rare disease, marked by one or more deep-seated nodules, generally on the legs. The nodules enlarge, becoming red, violaceous, or livid in color. The indurations may break down, resulting in an indolent, deep-seated ulcer. **e. infectiosum**, a mildly contagious disease, sometimes occurring in epidemics, and marked by a rose-colored maculopapular rash. It occurs chiefly between the ages of four and twelve. Called also *fifth disease*. **inflammatory e.**, any form of erythema in which dermatitis is a pronounced feature. **e. intertrigo**, intertrigo. **e. iris**, erythema in which the eruption forms in concentric rings. **e. marginatum**, erythema occurring in round patches with elevated edges. **e. multifor-me**, an acute skin disease with variously formed papules, tubercles, and macules, which last for several days and are attended with slight burning and itching. The disease is accompanied by headache and gouty pains, and results from rheumatic or gouty states, from disturbances of digestion, etc. The lesions may appear as separate rings (*e. annula're*), as concentric rings (*e. iris*), in disk-shaped patches with elevated edges (*e. marginatum*), or in a variously figured arrangement (*e. figura'tum*). **e. neonatorum**, a diffuse redness of the skin of a very young

infant: usually temporary. **e. nodo'sum**, an acute inflammatory skin disease marked by tender red nodules, due to exudation of blood and serum, and accompanied by intense itching and burning. The lesions appear in successive patches, and the disease lasts several weeks. **e. nodo'sum syphiliticum**, a condition resembling erythema nodosum, being a malignant form of syphilis: called also *Mauriac's disease*. **e. paratrim'ma**, a skin inflammation, the first stage of an incipient bed-sore. **e. per'nio**, chilblain. **e. per'stans**, erythema in which the eruption is permanent or nearly so. **e. pu-dicit'iae**, morbid flushing. **e. scarlatini-forme**, a febrile affection attended with a rash much resembling that of scarlatina: it is liable to frequent recurrence and is sometimes an exfoliative dermatitis. **e. sim'plex**, a disease marked by the development of patches of redness, with little or no itching. It may be due to irritation, to pressure, to excessive heat, to poisons, to digestive disturbance, or may occur idiopathically. **symptomatic e.**, skin hyperemia in non-elevated patches: it may be either idiopathic or symptomatic. **e. traum'aticum**, a local affection due to friction or pressure. **vas-cular e.**, a circumscribed erythema on the chest and back of soldiers. **e. venena'tum**, simple erythema caused by the irritation of various mineral and vegetable substances.

erythematous (er-ith-em'at-us). Of the nature of erythema.

erythis'mus mercura'lis. A psychic disturbance noted in persons poisoned with mercury. It is characterized by timidity, especially in the presence of strangers.

erythra (er'ith-rah). An eruption of the skin; also the menstrua vera.

Erythræa (er-ith-re'ah) [Gr. *ἐρυθραῖος* red]. A genus of red-flowered gentianaceous plants. *E. centaurium* is the lesser (European) centaury. This and various other species are tonic and stomachic. See *centaury*.

erythrasma (er-ith-raz'mah) [Gr. *ἐρυθρός* red]. A chronic contagious skin disease due to the presence of *Microsporon minutissimum* (*Discomyces minutissimus*). It is marked by the development of red or brownish patches on the inner side of the thigh, on the scrotum, and in the axilla. **Baerensprung's e.**, eczema marginatum affecting the thighs.

erythredema (er-ith-re-de'mah) [Gr. *ἐρυθρός* red + *οἶδμα* swelling]. A condition occurring in infants marked by swollen, bluish-red hands and feet and disordered digestion, followed by multiple arthritis and muscular weakness (W. Swift). Called also *pink disease*, *Swift's disease*, *erythema arthriticum epidemicum*, *Haverill fever*, and *dermatopolyneuritis*.

erythremia, erythramia (er-ith-re'me-ah) [Gr. *ἐρυθρός* red + *αἷμα* blood]. A disease marked by persistent polycythemia (increase of the red blood-corpuscles), due to excessive formation of erythroblasts by the bone-marrow. It is attended by increased viscosity of the blood, enlargement of the spleen, and cyanotic appearance of the patient. The disease extends over many years, and gradually asthenia, edema, cardiac dilatation, and albuminuria appear. Called also *erythrocythemia*, *spleno-megalic polycythemia*, *myelopathic polycythemia*, *polycythemia rubra*, *polycythemia vera*, *erythrocytosis*, *megalosplenica*, *Osler's disease*, *Vaquez's disease*, and *Vaquez-Osler disease*.

erythremomegalalgia, erythremomelalgia (er'ith-re-mo-meg-al-al'-je-ah, er-ith're-mo-mel-al'-je-ah) [Gr. *ἐρυθρός* red + *μέλος* limb + *ἄλγος* pain]. See *erythromelalgia*.

erythrin (er'ith-rin). A chromogen from *Roccella tinctoria* and other lichens.

erythrism (er'ith-rizm) [Gr. *ἐρυθρός* red]. Redness of the hair and beard with a ruddy complexion.

erythristic (er-e-thris'tik). Characterized by erythrism.

erythrite, erythritol, erythrol (er'ith-rít, er'ith-ri-tol, er'ith-rol). A tetrahydric alcohol, $\text{CH}_2\text{OH}(\text{CHOH})_2\text{CH}_2\text{OH}$, from lichens and from the red-snow micro-organism.

Erythrobacillus (er-ith'ro-bas-il'us). A genus of small aerobic non-pathogenic bacterial organisms which produce red or pink pigments. Same as *Serratia*.

erythroblast (er-ith-ro-blast) [Gr. *ἐρυθρός* red + *βλαστός* germ]. One of the nucleated cells of the type from which red blood-corpuscles (erythrocytes) are developed. They occur normally in the bone-marrow and appear in the circulatory blood only in disease. Three varieties, classed according to size, are recognized: *microblasts*, $5\ \mu$ or less in diameter; *normoblasts*, 5 to $10\ \mu$, and *megaloblasts*, $11\ \mu$ or over. Erythroblasts are found in the blood in anemia, leukemia, and pernicious anemia, megaloblasts, especially, being characteristic in the last named disease. **tracheochromatic e.**, normoblast.

erythroblastic (er-ith-ro-blas'tik). Of or relating to erythroblasts.

erythroblastoma (er'ith-ro-blas-to'mah). A tumor arising from erythroblasts.

erythroblastomatosis (er'ith-ro-blas-to-mat-o'-sis). A condition marked by the formation of erythroblastomas.

erythroblastosis (er'ith-ro-blas-to'sis). Excessive formation of erythroblasts.

erythrocatalysis (er'ith-ro-kat-al'is-is). Erythrocatalysis.

erythrochloropia (er-ith'ro-klo-ro'pe-ah) [Gr. *ἐρυθρός* red + *χλωρός* green + *ὥψ* eye]. Ability to distinguish red and green, but not blue or yellow.

erythrochloropsia (er'ith-ro-klo-rop'se-ah). Erythrochloropia.

erythrochromia (er'ith-ro-kro'me-ah) [Gr. *ἐρυθρός* red + *χρῶμα* color]. Hemorrhagic pigmentation of the spinal fluid in which the color is red.

erythroclasis (er-ith-rok'las-is) [Gr. *ἐρυθρός* red (corpuscle) + *κλάσις* a breaking]. Fragmentation or splitting up of red blood-cells.

erythroclastic (er-ith-ro-klas'tik) [Gr. *ἐρυθρός* red + *κλᾶν* to break]. Pertaining to the destruction of red blood-corpuscles.

erythrocruorin (er-ith-ro-kru'o-rin). Hemoglobin.

erythrocyte (er-ith-ro-sít) [Gr. *ἐρυθρός* red + *κύτος* cell]. A red blood-corpuscle. They are circular, biconcave disks, from 6 to $9\ \mu$ in diameter and about $1\ \mu$ thick, and contain hemoglobin, which carries the oxygen of the blood. **orthochromatic e.**, an erythrocyte that stains with acid stains only.

erythrocythemia (er'ith-ro-si-the'me-ah). Same as *erythremia*.

erythrocytic (er'ith-ro-sít'ik). Pertaining to red corpuscles.

erythrocytoblast (er'ith-ro-sít-to-blast). Erythroblast.

erythrocytolysin (er'ith-ro-si-tol'is-in). Same as *hemolysin*.

erythrocytolysis (er'ith-ro-si-tol'is-is) [*erythrocyte* + Gr. *λίσσις* solution]. Dissolution of red blood-corpuscles and escape of the hemoglobin. Called also *plasmolysis*. **e. megalosplen'ica**. See *erythremia*.

erythrocytometer (er'ith-ro-si-tom'et-er) [*erythrocyte* + Gr. *μέτρον* measure]. A device for numbering the red blood-corpuscles.

erythrocyto-opsonin (er'ith-ro-sít-to-op-so'nin) [*erythrocyte* + *opsonin*]. An opsonin that has opsonic action on red blood-corpuscles. Called also *hemopsonin*.

erythrocytorrhexis (er'ith-ro-si-to-rek'sis) [*erythrocyte* + Gr. *ῥήξις* rending]. A morphologic change in red blood-corpuscles, consisting in the escape from the corpuscles of round, shining granules and splitting off of particles. Called also *plasmorrhaxis*.

erythrocytoschisis (er'ith-ro-si-tos'kis-is) [*erythrocyte* + Gr. *σχίσις* division]. A morphologic change in red blood-corpuscles, in which the corpuscles degenerate into disk-like bodies similar to the blood-platelets. Called also *plasmoschisis*.

erythrocytosis (er'ith-ro-si-to'sis). Increase in the number of red blood-corpuscles; polycythemia.

erythrodegenerative (er'ith-ro-de-jen'er-a-tiv). Characterized by degeneration of erythrocytes.

erythroderma (er-ith-ro-der'mah). Erythrodermia.

erythrodermatitis (er'ith-ro-der-mat-i'tis) [Gr. *ἐρυθρός* red + *δερματίτις*]. Inflammation of the skin, with redness.

erythrodermia (er'ith-ro-der'me-ah) [Gr. *ἐρυθρός* red + *δέρμα* skin]. Abnormal redness of the skin. **e. desquamativa**, a disease in breast-fed children with symptoms resembling a generalized eczema seborrhoeicum. **lymphoblastic e.**, a condition marked by chronic redness of the skin associated with absolute leukocytosis with great relative increase in the lymphocytes. **maculopapular e.**, a reddish eruption composed of macules and papules. **e. squamosum**, an eruption of scaly groups of papules.

erythrodextrin (er'ith-ro-deks'trin). A dextrin which is turned red by iodine and changed by various digestive ferments into maltose.

erythroedema. See *erythroedema*.

erythrogen (er-ith-ro-jen). A fatty, crystalline compound from diseased bile.

erythrogenesis (er'ith-ro-jen'es-is). The production of red blood-corpuscles.

erythrogenic (er-ith-ro-jen'ik) [Gr. *ἐρυθρός* red + *γεννᾶν* to produce]. Producing red blood-corpuscles; also producing a sensation of red.

erythronium (er'ith-ro-go'ne-um) [*erythrocyte* + Gr. *γωνή* seed]. See *hematoblast*.

erythrogranulose (er'ith-ro-gran'u-lōs). A granulose which is colored red by iodine.

erythroid (er'ith-roid). Of a red color; reddish.

erythrokatalysis (er'ith-ro-kat-al'is-is) [Gr. *ἐρυθρός* red + *καταλύσις* dissolution]. Phagocytosis of red blood-corpuscles.

erythrol (er'ith-rol). 1. Same as *erythrole*. 2. A double iodid of bismuth and cinchonidine: antiseptic and tonic. **e. nitrate**, nitro-erythrol (q. v.): it has been employed as a vasodilator. **e. tetrannitrate**, a crystalline compound, $\text{CH}_2\text{O} \cdot \text{NO}_2(\text{CHO} \cdot \text{NO}_2)_2 \cdot \text{CH}_2\text{O} \cdot \text{NO}_2$, a product of the nitration of erythrite. It is used, like nitroglycerin, as a vasodilator in asthma, angina pectoris, heart affections, etc. Dose, $\frac{1}{4}$ -1 gr. (0.03-0.06 gm.).

erythrolues (er'ith-ro-lu'e-z). Same as *quinby*.

erythrolysin (er-ith-rol'is-in). Any substance capable of causing erythrolysis.

erythrolysis (er-ith-rol'is-is). Erythrocytolysis.

erythromelalgia (er'ith-ro-mel-al'je-ah) [Gr. *ἐρυθρός* red + *μέλος* limb + *ἄλγος* pain]. A disease affecting chiefly the extremities of the body, the feet more often than the hands, and marked by burning pain, redness of the skin, throbbing of the arteries, swelling, and elevation of temperature. The pain is increased on walking and by a dependent position of the limb. The disease is very obstinate, and its pathology is uncertain, it being variously attributed to disease of the spinal cord, neuritis of peripheral nerves, and vasomotor neurosis (Weir Mitchell, 1878).

erythromelia (er'ith-ro-me'le-ah) [Gr. *ἐρυθρός* red + *μέλος* limb]. A disease distinct from erythromelalgia, marked by painless progressive redness of the skin, radiating from the central

part to the periphery, and situated on the extensor surfaces of the legs and arms.

erythrometer (er-ith-rom'et-er) [Gr. *ἐρυθρός* + *μέτρον* measure]. An instrument or color scale for measuring degrees of redness.

erythroneocytosis (er-ith'ro-ne'o-si-to'sis) [Gr. *ἐρυθρός* red + *νέος* new + *κύτος* cell]. The presence of regenerating forms of red blood-cells in the blood.

erythropenia (er'ith-ro-pe'ne-ah) [Gr. *ἐρυθρός* red + *πενία* poverty]. Deficiency in the number of erythrocytes.

erythrophage (er'ith-ro-faj) [Gr. *ἐρυθρός* red + *φαγῆν* to eat]. A phagocyte which absorbs the blood-pigments and destroys the red corpuscles.

erythrophagous (er-ith-rof-ag-us) [Gr. *ἐρυθρός* red + *φαγῆν* to eat]. Destructive to the red corpuscles and blood-pigment.

erythrophil (er'ith-ro-fil) [Gr. *ἐρυθρός* red + *φιλεῖν* to love]. 1. Easily taking red stains. 2. A cell or other element that is easily stained red.

erythrophilous (er-ith-rof'il-us). Easily stained with red.

erythrophlein (er-ith-ro-fle'in) [Gr. *ἐρυθρός* red + *φλοιός* bark]. A poisonous alkaloid, $\text{C}_{28}\text{H}_{43}\text{NO}_7$, from casca bark, with local anesthetic, cardiant, and paralyzant properties.

Erythrophlœum (er-ith-ro-fle'um) [Gr. *ἐρυθρός* red + *φλοιός* bark]. A genus of leguminous trees. *E. guineen'se* affords casca, mancona, or sassybark, an African ordeal poison. Dose of fluidextract, 5-15 min. (0.333-1 c.c.).

erythrophobia (er'ith-ro-fo'be-ah) [Gr. *ἐρυθρός* red + *φοβός* fear]. 1. A neurotic manifestation marked by blushing on the slightest provocation. 2. Morbid aversion to red.

erythrophose (er'ith-ro-fōz) [Gr. *ἐρυθρός* red + *φῶς* light]. Any red phase. See *phase*.

erythrophthoric (er'ith-ro-thor'ik) [*erythrocyte* + Gr. *φθείρειν* to destroy]. Pertaining to rapid total destruction of the erythrocytes by a process other than hemolysis.

erythrophyl (er-ith-ro-fil) [Gr. *ἐρυθρός* red + *φύλλον* leaf]. A red coloring-matter occurring in plants, which gives color to the leaves in autumn.

erythropia (er-ith-ro'pe-ah) [Gr. *ἐρυθρός* red + *ὄψις* vision]. A state in which objects appear to have a red tinge.

erythroplastid (er'ith-ro-plas'tid). A red blood-corpuscle of mammalian animals, characterized by having no nucleus.

erythropoiesis (er'ith-ro-poi-e'sis) [Gr. *ἐρυθρός* red + *ποίησις* making]. The manufacture of red blood-cells.

erythropoietic (er'ith-ro-poi-et'ik). Forming red blood-cells.

erythroprecipitin (er'ith-ro-pre-sip'it-in). A precipitin specific for red blood-corpuscles.

erythrosopalgia (er'ith-ro-pro-sal'je-ah) [Gr. *ἐρυθρός* red + *πρόσωπον* face + *ἄλγος* pain]. A nervous disorder, analogous to erythromelalgia, marked by redness and pain in the face.

erythropsia (er-ith-rop'se-ah). Same as *erythrophia*.

erythropsin (er-ith-rop'sin) [Gr. *ἐρυθρός* red + *ὄψις* vision]. The visual purple. See *rhodopsin*.

erythropyknosis (er'ith-ro-pik-no'sis) [Gr. *ἐρυθρός* red + *γκνῶσις*]. Same as *pyknosis*.

erythrorrhexis (er'ith-ro-reks'is) [Gr. *ἐρυθρός* red + *ῥήξις* rupture]. Same as *erythrocytorrhexis*.

erythrose (er'ith-rōz). Same as *telrose*.

erythrosin (er-ith-ro-sin) [Gr. *ἐρυθρός* red]. A dye-stuff, being an iodine substitution compound of fluorescein. **e. B.** Same as *bluish erythrosin*. **e. B. B.**, phloxin. **bluish e.**, tetraiodofluorescein, $\text{NaO}(\text{C}_6\text{H}_3\text{O})_2\text{C} \cdot \text{C}_6\text{H}_4 \cdot \text{COONa}$. **yellowish e.**, a diiodofluorescein, $\text{NaO}(\text{C}_6\text{H}_2\text{I}_2\text{O})_2\text{C} \cdot \text{C}_6\text{H}_4 \cdot \text{COONa}$.

erythrosinophil (er'ith-ro-sin'o-fil) [*erythrosin* + Gr. *φιλεῖν* to love]. Readily stainable with erythrosin.

erythrosis (er-e-thro'sis) [Gr. *ἐρυθρός* red]. A reddish or purplish discoloration of the skin and mucous membranes seen in polycythemia or erythemia.

erythroxin (er-ith-ro-tok'sin). Same as *erythroxysin*.

erythroxilin (er-ith-roks'il-in) [Gr. *ἐρυθρός* red + *ξύλον* wood]. Same as *cocain*.

Erythroxylon (er-ith-roks'il-on) [Gr. *ἐρυθρός* red + *ξύλον* wood]. A genus of South American shrubs and trees. *E. coca* furnishes coca-leaves, which contain the alkaloids cocaine and hygrin; the leaves are tonic and cerebral stimulants, and are said to make the user withstand fatigue and hunger. Dose of fluidextract, 1-2 dr. (4-8 c.c.). See *coca*.

erythruria (er-ith-ru're-ah) [Gr. *ἐρυθρός* red + *οὐρον* urine]. The passing of red urine.

es (es) [L. *es'se* to be]. Nietzsche's term for the metaphysical incomprehensible something at the very bottom of human nature, being lower than the conscious ego and even lower than the Freudian subconscious.

Esbach's reagent (es'bahks) [Georges Hubert Esbach, a physician in Paris, 1843-1890]. See under *reagent*.

escalin (es'kal-in). A paste of powdered metallic aluminum and glycerin: used in gastric ulcer.

eschar (es'kar) [Gr. *ἐσχάρα* scab]. A slough produced by burning or by a corrosive application. **neuropathic e.**, a bed-sore in disease of the spinal cord.

escharotic (es-kar-ot'ik) [Gr. *ἐσχαρωτικός*]. 1. Corrosive; capable of producing an eschar. 2. A corrosive or caustic agent.

Escherich's bacillus (esk'er-iks) [Theodor Escherich, German physician, 1857-1911]. The *Bacillus coli*.

Escherichia (esh-er-ik'e-ah). A genus of the Bacteriaceæ found in the intestinal canal of normal animals. They ferment carbohydrates, but do not produce acetyl-methyl-carbinol. **E. acidilactici**. Same as *Bacterium acidilactici*. **E. coli**. Same as *Bacterium coli*. **E. communior**. Same as *Bacterium coli communior*.

eschrolalia, eschrolalia (es-kro-la'le-ah) [Gr. *αἰσχροῦς* indecent + *λαλιά* babble]. Same as *coprolalia*.

Eschscholtzia (esh-skolt'ze-ah). A genus of papaveraceous plants. *E. californica* (California poppy) is a hypnotic and anodyne. Dose of fluidextract, 12-30 min. (0.77-2 c.c.).

escoquinin (es-ko-kwin'in). A yellowish powder, a compound of quinin and glucosids of horse-chestnut: used like quinin.

escorcin (es-kor'sin). A product, $C_9H_9O_6$, of the action of sodium amalgam on esculetin. It is used in detecting corneal and conjunctival lesions.

esculapian (es-ku-la'pe-an). Æsculapian.

esculetin (es-ku-le'tin). A substance, $C_6H_2(OH)_2 \cdot O \cdot CO(CH_3)_2$, from ceculin by hydrolysis.

esculin (es'ku-lin) [L. *æsculus* horse-chestnut]. A glucosid, $C_{17}H_{19}O_9$, from horse-chestnut bark: a febrifuge. Dose, 10-15 gr. (0.66-1 gm.).

E. S. E. German abbreviation for *electrostatic units*.

eseramin (es-er'am-in). A crystalline alkaloid, $C_{16}H_{25}N_3O_3$, from Calabar bean.

eseridin (es-er'id-in). An alkaloid, $C_{15}H_{23}N_3O_3$, from Calabar bean, in colorless crystals: it acts like eserin, but is much milder, and is a cathartic. Dose, $\frac{1}{10}$ - $\frac{1}{2}$ gr. (0.006-0.02 gm.).

eserin (es'er-in) [*esere*, an African name of the Calabar bean]. Same as *physostigmin*. **e.-pi-**

locarpin, a preparation used as a colic powder for horses and as a purge for cows. Hypodermic dose, 6 gr. (0.4 gm.).

eserolin (es-er'o-lin). A crystalline alkaloid, $C_{13}H_{18}N_2O$, formed when physostigmin is heated.

esmarch (es'mark). 1. An Esmarch bandage. See *bandage*. 2. To treat with an Esmarch bandage.

Esmarch's bandage, etc. (es'marks) [Johannes Friedrich August von Esmarch, German surgeon, 1823-1908]. See under *bandage*, etc.

esocataphoria (es-o-kat-af-o're-ah) [Gr. *ἔσω* inward + *κατὰ* downward]. The condition in which the visual axis turns downward and inward.

esocin (es'o-sin). A protamin from the sperm of the pike, *Esox lucius*.

esodic (es-od'ik) [Gr. *ἔσω* within + *ὁδός* way]. Afferent or centripetal.

eso-ethmoiditis (es'o-eth-moid-i'tis) [Gr. *ἔσω* inward + *εθμοΐδιτις*]. Inflammation within the sinuses of the ethmoid bone.

esogastritis (es'o-gas-tri'tis) [Gr. *ἔσω* within + *γαστρίτις*]. Inflammation of the mucous membrane of the stomach.

esophalgia (es-og-al'je-ah) [*esophagus* + Gr. *ἄλγος* pain]. Pain in the esophagus.

esophageal (e-so-fa'je-al). Pertaining to or belonging to the esophagus.

esophagectasia, esophagectasis (e-sof-aj-ek-ta'se-ah, -ek'tas-is) [*esophagus* + Gr. *ἐκτασις* distention]. Dilatation of the esophagus.

esophagectomy (e-sof-aj-ek'to-me) [*esophagus* + Gr. *ἐκτομή* excision]. Excision of a portion of the esophagus.

esophagism, esophagismus (e-sof-aj-izm, e-sof-aj-is'mus). Spasm of the circular muscular fibers of the esophagus. **hiatal e.** Same as *cardiospasm*.

esophagitis (e-sof-aj-i'tis) [*esophagus* + Gr. *-ιτις* inflammation]. Inflammation of the esophagus.

esophagocoele (e-sof-ag-o-sē) [Gr. *οισοφάγος* esophagus + *κῆλη* hernia]. Abnormal distention of the esophagus; hernia of the esophagus; protrusion of the mucous and submucous coats of the esophagus through a rupture in the muscular coat, producing a pouch or diverticulum.

esophagodynia (e-sof'ag-o-din'e-ah) [*esophagus* + Gr. *ὀδύνη* pain]. Pain in the esophagus.

esophago-enterostomy (e-sof'ag-o-en-ter-os'to-me) [Gr. *οισοφάγος* esophagus + *ἐντερον* intestine + *στόμα* mouth]. The operation of suturing the esophagus to the duodenum and excising the stomach. This is Schlatter's operation for total extirpation of the stomach.

esophagogastroscope (e-sof'ag-o-gas-tros'ko-pe) [Gr. *οισοφάγος* esophagus + *γαστήρ* stomach + *σκοπεῖν* to examine]. Instrumental inspection of the esophagus and the stomach.

esophagogastrostomy (e-sof'ag-o-gas-tros'to-me) [Gr. *οισοφάγος* esophagus + *γαστήρ* stomach + *στόμα* mouth]. The operation of forming an artificial communication between the stomach and the esophagus.

esophagojejunogastrostomosis (e-sof'ag-o-je'-ju-no-gas'tros-to-mo'sis). The operation of mobilizing a loop of jejunum and implanting its proximal end in the esophagus and its distal end in the stomach: done in cases of esophageal stricture.

esophagojejunogastrostomy (e-sof'ag-o-je'-ju-no-gas-tros'to-me). Esophagojejunogastrostomosis.

esophagomalacia (e-sof'ag-o-mal-a'se-ah) [Gr. *οισοφάγος* esophagus + *μαλακία* softness]. Softening of the walls of the esophagus.

esophagometer (e-sof-ag-on't-er) [*esophagus* + Gr. *μέτρον* measure]. An instrument for measuring the length of the esophagus.

esophagomycosis (e-sof'ag-o-mi-ko'sis) [Gr. *οισοφάγος* esophagus + *μύκης* fungus]. Any disease of the esophagus caused by fungi.

esophagoplasty (e-sof-ag'o-plas-te) [*esophagus* + Gr. *πλάσσειν* to form]. A plastic operation on the esophagus.

esophagoplication (e-sof'ag-o-pli-ka'shun). The operation of treating an esophageal pouch by folding in its wall.

esophagoptosis (e-sof-ag-op-to'sis) [*esophagus* + Gr. *πτώσειν* falling]. Prolapse of the esophagus.

esophagoscope (e-so-fag'os-kōp) [*esophagus* + Gr. *σκοπεῖν* to view]. An instrument for examining the interior of the esophagus by artificial light.

esophagoscopy (e-sof-ag-os'ko-pe). The exploration of the esophagus.

esophagospasm (e-so-fag'o-spazm) [*esophagus* + *spasm*]. Spasm of the esophagus.

esophagostenosis (e-sof'ag-o-sten-o'sis) [Gr. *οισοφάγος* esophagus + *στενωσις* constriction]. Stricture or constriction of the esophagus.

esophagostoma (e'sof-ag-os'to-mah) [Gr. *οισοφάγος* esophagus + *στόμα* mouth]. 1. An abnormal opening or passage leading into the esophagus. 2. See *Esophagostoma*.

esophagostomiasis. See *esophagostomiasis*.

esophagostomy (e-sof-ag-os'to-me) [Gr. *οισοφάγος* esophagus + *στόμα* mouth]. The creation of an artificial opening into the esophagus.

esophagotomy (e-sof-ag'o-tōm). A cutting instrument for use in esophagotomy.

esophagotomy (e-sof-ag-ot'o-me) [Gr. *οισοφάγος* esophagus + *τομή* a cut]. The opening of the esophagus by an incision.

esophagus, œsophagus (e-sof'ag-us) [Gr. *οἶσεν* to carry + *φάγμα* food]. The gullet; a musculo-membranous canal extending from the pharynx to the stomach.

esophoria (es-o-fo're-ah) [Gr. *ἔσω* inward + *φέρειν* to bear]. Convergent strabismus or a tendency thereto; abnormal tendency of the visual axes to converge.

esophoric (es-o-for'ik). Characterized by esophoria.

esophylactic (es-o-fi-lak'tik) [Gr. *ἔσω* within + *φυλάξις*]. Exerting a phylactic or protective influence from within, such as that of the fluids and cells of the body. Cf. *exophylaxis*.

esophylaxis (es-o-fil-ak'sis). Esophylactic protection.

esosphenoiditis (es'o-sfe-noid-i'tis) [Gr. *ἔσω* within + *sphenoid* -itis]. Osteomyelitis of the sphenoid bone.

esoteric (es-o-ter'ik) [Gr. *ἔσωτερός* within]. Arising within the organism.

esothyropexy (es-o-thi'ro-peks-e). See *exothyropexy*.

esotropia (es-o-tro'pe-ah) [Gr. *ἔσω* inward + *τρέπειν* to turn]. A manifest turning inward of the eyes; convergent strabismus, or cross-eye.

esotropic (es-o-trop'ik). Characterized by esotropia.

espnoic (esp-no'ik) [Gr. *ἐς* into + *πνῶ* vapor, blast]. Pertaining to the injection of vapors or gases.

esponja (es-pong'ah). A granular inflammation of the skin in Brazilian horses, probably due to larval infection by *Habronema muscæ* (Ercolani, 1859; Descareaux, 1916).

espuandia (es-poon'de-ah). The ulcerative type of dermal leishmaniasis, with secondary manifestations in the nose and mouth, occurring in parts of South America and caused by *Leishmania americana*.

esquillectomy (es-kwil-ek'to-me) [Fr. *esquille* fragment + Gr. *ἐκτομή* excision]. Excision of fragments of bone following fractures caused by projectiles.

essence (es'ens) [L. *essentia* quality or being]. 1. That which is or necessarily exists as the cause

of the properties of a body. 2. A solution of a volatile oil in alcohol.

essentia (es-en'she-ah). Essence.

essential (es-en'shal) [L. *essentia*'lis]. 1. Constituting the necessary or inherent part of a thing; giving a substance its peculiar and necessary qualities. 2. Idiopathic; self-existing; having no obvious external exciting cause.

ester (es'ter). Any compound formed from an alcohol and an acid by the removal of water. The esters are named as if they were salts of the alcohol radicals. Called also *compound ether* and *etheral salt*. **aceto-acetic a.**, the ethyl ester of aceto-acetic acid, $\text{CH}_3\text{CO}\cdot\text{CH}_2\text{CO}\cdot\text{O}\cdot\text{C}_2\text{H}_5$, a colorless liquid; used for the synthesis of a great variety of compounds.

esterase (es'ter-ās). A ferment which splits up esters.

esterification (es-ter-if-ik-a'shun). The process of converting an acid into an ester.

esterize (es'ter-iz). To convert, or be converted, into an ester.

esterol (es'ter-ol). 1. An ester of sterol. 2. A proprietary brand of benzyl succinate.

estevin (es'te-vin). A glucosid, sweet in taste, found in Eupatorium rebaudianum.

esthematology, æsthematology (es-them-at-ol'-o-je) [Gr. *αἴσθημα* sensation + *λόγος* treatise]. The science of the senses and sense organs.

esthesis (es-the'sik) [Gr. *αἴσθησις* feeling]. Pertaining to the mental perception of sensations.

esthesioblast (es-the'ze-o-blast) [Gr. *αἴσθησις* feeling + *βλαστῆς* germ]. A ganglioblast; an embryonic cell of the spinal ganglia.

esthesiodic (es-the-se-od'ik). Same as *esthesodic*.

esthesiogen (es-the'ze-o-jen) [Gr. *αἴσθησις* feeling + *γενής* producing]. A substance which in certain conditions of the body is supposed to produce symptoms of excitation when brought near or into contact with the person.

esthesiogenic (es-the'ze-o-jen'ik). Producing sensation.

esthesiology (es-the-ze-o-l'-o-je) [Gr. *αἴσθησις* sensation + *λόγος* treatise]. The science of sensation and the senses.

esthesiomania (es-the-ze-o-ma'ne-ah) [Gr. *αἴσθησις* feeling + *μανία* madness]. Insanity with perversion of the senses.

esthiomene (es-the-ze-om'en-e). An incorrect form of *esthiomene*.

esthiometer (es-the-ze-om'et-er) [Gr. *αἴσθησις* sensation + *μέτρον* measure]. An instrument for measuring tactile sensibility.

esthesioneure (es-the'ze-o-nūr) [Gr. *αἴσθησις* sensation + *νεῦρον* nerve]. A sensory neuron.

esthesioneurosis (es-the'ze-o-nu-ro'sis) [Gr. *αἴσθησις* feeling + *neurosis*]. Any disorder of the sensory nerves.

esthesionosis (es-the-ze-on'os-us) [Gr. *αἴσθησις* sensation + *νόσος* disease]. Esthesioneurosis.

esthesiophysiology (es-the'ze-o-fiz-e-ol'-o-je) [Gr. *αἴσθησις* feeling + *physiology*]. The physiology of the perceptive faculties.

esthesioscopy (es-the-ze-os'ko-pe) [Gr. *αἴσθησις* sensation + *σκοπεῖν* to examine]. Delimitation on the skin of areas in which pain is felt or the tissues are tender.

esthesodic (es-the-sod'ik) [Gr. *αἴσθησις* feeling + *ὁδός* path]. Conveying sense impressions.

esthetic (es-thet'ik) [Gr. *αἴσθησις* sensation]. Pertaining to sensation.

esthetico kinetic (es-thet'ik-o-kin-et'ik). Both sensory and motor.

esthiomene, esthiomenus (es-the-om'en-e, es-the-om'en-us) [Gr. *ἔσθιδιμενος* eating]. 1. An old name for lupus and other rodent skin diseases. 2. Tubercular lupus of the genital organs.

esthophysiology (es-tho-fiz-e-ol'-o-je). The physiology of sensation and sense organs.

estival, æstival (es'tiv-al) [L. *æstivus*, from *æs'tas* summer]. Pertaining to or occurring in summer.

estivo-autumnal (es'tiv-o-aw-tum'nal). Pertaining to the summer and autumn: a term applied to a form of malarial fever. See under *fever*.

Estlander's operation [Jakob August *Estlander*, Finnish surgeon, 1831-1881]. See *operation*.

eston (es'ton). Monobasic aluminum acetate.

estoral (es'to-ral). A white, crystalline compound, boric acid menthol ester, $B(C_{10}H_{19}O)_3$: used by insufflation in rhinitis and coryza.

estriasis (es-tri'as-is). See *æstriasis*.

Estridæ (es'tri-de). See *Æstridæ*.

estral, oestral (es'tru-al) [L. *æstrum* gadfly, orgasm]. Pertaining to the rutting of animals.

estruation (es-tru-a'shun) [L. *æstrum*; Gr. *ostrapos* gadfly, rut]. The sexual ardor of animals at the season of copulation; rutting.

estrum, oestrum (es'trum) [L. *æstrum* gadfly, orgasm; Gr. *ostrapos*]. The period of heat or sexual excitement in the female of animals.

état (a-tah'). French for *state, condition*.

criblé (a-tah' krib-lä'), a condition in which the necrotic Peyer's patches in typhoid fever are riddled with small, irregular perforations. **é. mammelonné** (a-tah' mah-ma-yo-nä'), hyperplasia of the mucous membrane of the stomach in chronic gastritis, resulting in the formation of small elevations.

ethal (eth'al). Cetyl alcohol.

ethanesal (eth-an-e'sal). A modified anesthetic ether produced by Wallis and Hewer, composed of pure ether with the addition of 2 per cent. of ketones.

ethanol (eth'an-ol). Ethyl alcohol.

ethanolysis (eth-an-ol'is-is). Alcoholysis of ethyl alcohol.

ethene chlorid (eth-ën'). Same as *ethylene dichlorid*.

ethenoid (eth'en-oid). Containing an ethene or ethylene linkage.

ethogenesis (e-the-o-jen'es-is) [Gr. *ἠθεος* bachelor + *γένεσις* production]. Non-sexual reproduction in male gametes of protozoa.

ether (e'ther) [Gr. *αἰθήρ* air; L. *æ'ther*]. 1. A fluid of the utmost tenuity, which is conceived to fill all space, and to serve as a medium for the transmission of waves of heat and light. Called also *luminiferous ether*. 2. Ethyl oxid, $(C_2H_5)_2O$, a highly volatile liquid, obtained by the action of strong sulphuric acid upon ordinary alcohol. 3. A term applied to various volatile liquids, mostly containing ethylic ether or resembling it. 4. Any member of a group of compounds derived from two alcohol molecules by the elimination of water. If the alcohol radicals are identical, the compound is a *simple ether*; if they are different it is a *complex* or *mixed ether*. **absolute e.**, a liquid of peculiar odor and burning taste, with a specific gravity of 0.71. *Ordinary ether*, or *dilute ether*, contains 83 per cent. of ether and 17 per cent. of alcohol. *Stronger ether* (*æ'ther fortior*) contains 4 per cent. of alcohol. Ether is used chiefly as an anesthetic, by inhalation: it is used also internally as an antispasmodic and heart stimulant; hypodermically as an anodyne and a stimulant in collapse; and in the form of spray to produce local anesthesia by chilling. Dose, 30 min.- $\frac{1}{2}$ fl.oz. (2-16 c.c.); hypodermically, 1 dr. (4 c.c.). Dose of spirit of ether, 1 dr. (4 c.c.); compound spirit of ether (Hoffmann's anodyne), $\frac{3}{4}$ -1 dr. (2-4 c.c.). **acetic e.**, ethyl acetate. **chloric e.**, a mixture of chloroform and alcohol. **complex e.** See *ether* (4th def.). **compound e.** Same as *ester*. **e.-cone**, an apparatus for the administration of ether by inhalation. **Cotton-process e.**, ether freed

from its two impurities, one of which produces anesthesia and the other the unpleasant effects. This pure ether is then recharged with the impurity that produces anesthesia. To the purified ether is added, 2 per cent. of ethylene, $\frac{1}{2}$ per cent. of carbon dioxide, and 1 per cent. of ethyl alcohol. A new type of anesthesia is produced in which the patient has abolition of sensation, but perfect consciousness is preserved. **enanthic e.**, pelargonic ether. **ethyl e.**, ethyl oxid, $(C_2H_5)_2O$. **formic e.**, ethyl formate. **hydramyl e.**, hydramyl and ethylic ether in equal parts: a local and general anesthetic. **hydriodic e.**, ethyl iodid. **hydrobromic e.**, ethyl bromid. **hydrochloric e.**, ethyl chlorid. **luminiferous e.** See *ether* (1st def.). **methyl e.**, methyl oxid, $(CH_3)_2O$: a liquid anesthetic. **mitigated e.** See *E.-C. mixture*, under *mixture*. **mixed e.**, any ether containing two distinct hydrocarbons. **nitrous e.**, ethyl nitrite. **œnanthic e.**, pelargonic ether. **pelargonic e.**, an ether of pelargonic acid. It is an oily liquid with the odor of quinces. **petroleum e.**, a colorless liquid derived from petroleum by distillation. It is a mixture of pentane and hexane, and is used to produce cold by its rapid evaporation. **simple e.** See *ether* (4th def.). **stronger e.**, ethylic ether with 4 per cent. of alcohol. **sulphur e.** See *thio-e.* **sulphuric e.**, ordinary ether; so called because made with sulphuric acid. **thio-e.**, a sulphur ether; an ether in which sulphur replaces oxygen.

ethereal (e-the're-al). 1. Pertaining to, prepared with, containing, or resembling ether. 2. Evanescent; delicate.

etherification (e'ther-if-ik-a'shun). The process of forming an ether from alcohol.

etherin (e'ther-in). A poison extractable by ether from the bodies of tubercle bacilli. Called also *etherobacillin*. See *benzenin*, *chloroformin*, and *xilenin*.

etherion (e-the're-on). 1. A gas said to have been discovered in 1898 in the atmosphere: said to be about $\frac{1}{1000}$ part as dense as hydrogen, and to exist in less than $\frac{1}{1000000}$ part of its proportion in the air. 2. Mathews's name for one of the minute spheres which make up the ether.

etherization (e'ther-iz-a'shun). The administration of ether by inhalation, and the consequent production of anesthesia.

etherize (e'ther-iz). To put under the anesthetic influence of ether.

etherobacillin (e'ther-o-bas-il'in). See *etherin*.

etheromania (e'ther-o-ma'ne-ah). Uncontrollable addiction to the use of ether as a stimulant.

etherometer (e'ther-om'et-er) [*ether* + Gr. *μέτρον* measure]. A device for administering ether by which the number of drops per minute can be accurately controlled.

Etherrausch (a'ter-rowsh) [Ger.]. See *Rausch*.

ethic, ethical (eth'ik, eth'ik-al). In accordance with ethics or the rules governing conduct.

ethics (eth'iks) [Gr. *ἠθος* character]. The science of right conduct; also a system of rules regulating conduct. **medical e.**, the rules or principles governing the professional conduct of medical practitioners.

ethidene (eth'id-ën). The bivalent radical, C_2H_4 ; ethylidene. **e. chlorid**, a colorless, volatile, anesthetic fluid, CH_3CHCl_2 , with the taste and smell of chloroform. It is used like chloroform, but is more dangerous. **e. diamin**, a harmful ptomain, $C_2H_5N_2$, from fish.

ethidol (eth'id-ol). A proprietary name for ethyl iodoricinoleate: used locally for its high iodine content.

ethiopification (e-the-op'if-ik-a'shun) [Gr. *Αἰθίοψ* an Æthiop + L. *facere* to make]. The blackening of the skin by the use of silver or other metallic agents.

ethmocarditis (eth'-'mo-kar di'tis) [Gr. ἠθμός sieve + καρδία heart + -itis inflammation]. Inflammation of the connective tissue of the heart.

ethmocephalus (eth-mo-sef'al-us) [Gr. ἠθμός sieve + κεφαλή head]. A monster with an imperfect head, more or less union of the eyes, and a rudimentary nose, often displaced upward.

ethmo cranial angle (eth-mo-kra'ne-al). See *angle*.

ethmoid frontal (eth-mo-fron'tal). Pertaining to the ethmoid and frontal bones.

ethmoid (eth'moid) [Gr. ἠθμός sieve + εἶδος form]. 1. Cribriform; sieve-like. 2. Pertaining to the ethmoid bone. **e. bone**. See *bone*.

ethmoidal (eth-moid'al). Of or pertaining to the ethmoid bone.

ethmoidectomy (eth-moi-dek'to-me) [*ethmoid* + Gr. ἐκτομή excision]. Excision of the ethmoid cells or of a portion of the ethmoid bone.

ethmoiditis (eth-moid-i'tis). Inflammation of the ethmoid bone.

ethmoturbinal (eth-mo-ter'bin-al). The superior and middle turbinated bones.

ethmyphitis (eth-me-fi'tis) [Gr. ἠθμός sieve + ὕψις tissue]. Inflammation of the cellular tissue; cellulitis.

ethnics (eth'niks) [Gr. ἔθνος race]. Ethnology.

ethnography (eth-nog'raf-e) [Gr. ἔθνος race + γράφειν to write]. A description of the races of men.

ethnology (eth-nol'o-je) [Gr. ἔθνος race + λόγος treatise]. The science which deals with the races of men, their descent, relationship, etc.

ethocain (eth'o-kān). Same as *novocain*.

ethology (eth-ol'o-je). Same as *bionomics*.

ethoxycaffeine (e-thoks-e-kaf'e-in) [*ethyl* + *oxygen* + *caffeine*]. A crystalline substance, $C_{10}H_{14}N_4O_3$. It is narcotic and diuretic, and is recommended for hemicrania and the pains of herpes zoster. Dose, 4 gr. (0.25 gm.).

ethoxymethyl salicylate. A compound, $OH-C_6H_4CO_2CH_2O.C_2H_5$; used as a substitute for aspirin, as it is more soluble and less irritating. Dose, 15 gr. (1 gm.).

ethrisin (eth'ris-in). See *acetylsalicylamid*.

ethydene (eth'id-ēn). See *ethidene*.

ethyl (eth'il) [*ether* + Gr. ἔλγ matter]. The univalent alcohol radical, CH_3CH_2 . **e. acetate**, a liquid, $CH_3COOCH_2CH_3$, with odor like ether and a taste like vinegar. It is employed by inhalation, occasionally internally, as a stimulant and antispasmodic in colic, bronchial irritation, and syncope. Dose, 30 min. (2 c.c.). Called also *acetic ether*. **e. alcohol**, the ordinary alcohol of commerce and pharmacy. See *alcohol*. **e. aminobenzoate**, benzocain; a white crystalline substance, $C_6H_4NH_2COO(C_2H_5)1:4$; used as a local anesthetic for ulcers, wounds, and mucous surfaces as a dusting-powder or in ointment, also internally to relieve pain in gastric ulcer and cancer. Dose, 5-8 gr. (0.3-5 gm.). **e. bromid**, a colorless volatile liquid, C_2H_5Br , of sweetish taste and ethereal odor; an anesthetic: used like chloroform, especially for minor operations; also as a sedative in hysteria, epilepsy, etc. **e. butyrate**, the butyric acid ester of ethyl alcohol, $C_3H_7COO.C_2H_5$. It has the odor of pineapple. **e. carbamate**. See *urethan*. **e. carbanilid**. See *euphorin*. **e. carbinol**, propyl alcohol. **e. chaulmoograte**, the ethyl esters of the fatty acids of chaulmoogra oil: used in the treatment of leprosy. Dose, 5 min. (1 c.c.). **e. chlorid**, a colorless inflammable liquid, CH_3CH_2Cl , used as a local anesthetic and stimulant. It is applied in the form of a spray, impelled from the containing tube by the heat of the hand. Called also *hydrochloric ether*. **e. cyanid**, a colorless, very poisonous liquid, C_2H_5CN , similar in therapeutic

action to hydrocyanic acid. **e. diacetate**, a material which has been used in urinary tests. **e. diiodosalicylate**, white crystals of $OH.C_6H_2I_2.CO.O.C_2H_5$; used in place of iodoform. **e. formate**, a volatile antispasmodic and anesthetic liquid, $HCOOC_2H_5$. Called also *formic ether*. **e. hydrate**, ordinary or ethylic alcohol. **e. hydrocuprein**, optochin. **e. iodid**, a colorless liquid, CH_3CH_2I ; used as an antispasmodic, alterative, and resorbent by inhalation and by the mouth for relieving asthma, dyspnea, etc. Dose, 15 min. (1 c.c.). Called also *hydriodic ether*. **e. mercaptan**, a thio-alcohol, C_2H_5SH , which has a revolting odor and which helps to give the odor to feces. **e. methyl-alpha-aminopropionic acid**. Same as *iso-leucine*. **e. nitrate**, $CH_3CH_2NO_3$, has been employed as a vasodilator, but is not very effective. **e. nitrite**, nitrous ether, $C_2H_5NO_2$; a liquid which is mixed with alcohol to form sweet spirit of niter (*spiritalus eth'ris nitrosi*), which is used as a diuretic, diaphoretic, anodyne, and antispasmodic. Dose, 20-60 min. (1.33-4 c.c.). **e. orange**, a dye, the sodium salt of diethyl-aniline-azo-benzene-sulphonic acid, $C_6H_4.N(C_2H_5)_2.N_2.C_6H_4.SO_3.ONa$. It is used as an indicator, being turned red by acids and yellow by alkalis. **e. oxid**, ether. **e. pelargonate**, the pelargonic acid ester of ethyl alcohol, $C_8H_{17}COO.C_2H_5$. **e. phenacetin**, a yellow oil, $C_6H_4(OC_2H_5)N(C_2H_5)CH_2CO$; hypnotic. **e. phenylcinchoninate**, a yellowish powder: used to promote elimination of uric acid. **e. pyoktanin**, an auramin derivative: actively antiseptic. **e. salicylate**, the salicylic acid ester of ethyl alcohol, $C_6H_4.OH.COOC(C_2H_5)$; used like the salicylates. Dose, 5-10 min. (0.3-0.6 c.c.), three or four times a day. **e. sulphid**, a strong-smelling principle, $(C_2H_5)_2S$, which exists in dogs' urine.

ethylamin (eth-il-am'in). A liquid ptomain, $CH_3CH_2NH_2$, from decaying plant tissue, possessing many of the properties of ammonia. **e. sulphonic acid**, taurin. **e. urate** is employed as a remedy in the treatment of gout and gravel.

ethylate (eth'il-āt). Any compound of ethyl alcohol in which the hydrogen of the hydroxyl is replaced by a base.

ethylation (eth-il-a'shun). The act of combining or causing to combine with the ethyl radical.

ethylchloralurethan (eth'il-klo'ral-u'reth-ān). Same as *somnul*.

ethyldichlorarsin (eth'il-di-klor-ar'sin). An arsenical gas, $C_2H_5AsCl_2$: used in the Great War. It is sternutatory and vesicant, producing pulmonary edema.

ethylene (eth'il-ēn). Olefiant gas; a colorless, poisonous inflammable gas, C_2H_4 or CH_2CH_2 , forming the essential part of illuminating gas. It has been suggested for use as a general anesthetic. **e. bichlorid**, **e. dichlorid**, Dutch liquid; an oily liquid compound, $C_2H_4Cl_2$: used as a local and general anesthetic, but not much employed. **e. bromid**, a brownish, oily liquid, $CH_2Br.CH_2Br$, used in epilepsy. Dose, 4-6 min. (0.24-0.36 c.c.); for children, 10-20 min. (0.666-1.33 c.c.) of 5 per cent. solution. **e. glycol**. See *glycol*. **e. periodid**, diiodoform.

ethylenediamin (eth'il-ēn-di-am'in). A non-poisonous base, $CH_2NH_2.CH_2NH_2$: it is used in preparing lysidin and piperazin and also as a solvent for false membrane in diphtheria and similar affections. **e. cresol**, **e. tricresol**, a colorless antiseptic fluid for external use.

ethylene-ethenyldiamin (eth'il-ēn-eth-en'il-di-am'in). Same as *lysidin*.

ethylene-imid, **ethylene-imin** (eth'il-ēn'im-id, eth'il-ēn'im'in). A non-poisonous base, C_2H_4NH , obtainable from cholera bacillus cultures.

ethylhydrocuprein (eth-il-hi'dro-ku-pre'in). See *optochin*.

ethylidene (eth-il'id-ēn). A bivalent radical, CH_3CH_2 , ethidene. See *ethidene*. **ε-diamin**, a highly poisonous base, $\text{C}_2\text{H}_8\text{N}_2$ or $\text{CH}_3\text{CH}(\text{NH}_2)_2$, from decaying fish.

ethylodacetate (eth-il-i-o-do-as'et-āt). $\text{C}_2\text{H}_5\text{-CO}_2\text{CH}_2\text{I}$, a lacrimating war gas.

ethylism (eth'il-izm). Poisoning or intoxication by ethyl alcohol.

ethylmorphin hydrochlorid. Same as *dionin*.

ethylphenylcarbamate (eth'il-fen-il-kar'bam-āt). See *euphorin*.

ethylthallin (eth-il-thal'in). A basic phenol derivative, $\text{C}_{12}\text{H}_{17}\text{NO}$: antipyrctic.

ethylurethan (eth-il-u'reth-an). See *urethan*.

etincelage (a-tin-se-lahzh) [Fr.]. Treatment by sparking with high-frequency current.

etiolation (e'te-o-la'shun). Paleness due to the exclusion of light.

etiologic, etiologial (e'te-o-loj'ik, -al). Pertaining to etiology, or to the causes of disease.

etiology (e-te-o-l'o-je) [Gr. *airia* cause + *λόγος* discourse]. The study or theory of the causation of any disease; the sum of knowledge regarding causes.

etiotropic (e'te-o-trop'ik) [Gr. *airia* cause + *τρόπος* turning]. Directed against the cause of a disease: said of a remedy which attacks the causal factor of a disease.

etiquette, professional (et'e-ket). Medical ethics.

etrohysterectomy (e'tro-his-ter-ek'to-me) [Gr. *ήτρον* hypogastrium + *hysterectomy*]. Hypogastric excision of uterus.

etrotomy (e-trot'o-me) [Gr. *ήτρον* hypogastrium + *τέμνειν* to cut]. Pelvic section.

Eu. The chemical symbol for *europium*.

eumesthesia (u-es-the'ze-ah). Same as *eesthesia*.

euangiotic (u-an-je-ot'ik) [Gr. *εὖ* well + *ἀγγείον* vessel]. Having the retinal disk well supplied with blood-vessels.

Eubacteriales (u-bak-te-re-a'les) [Gr. *εὖ* well + *bacteria*]. An order of Schizomycetes; the true bacteria, including the families *Coccaceae*, *Bacillaceae*, *Bacteriaceae*, *Nitrobacteriaceae*, and *Spirillaceae*.

eubiose (u-bi'ōz). A proprietary preparation of hematogen.

eubiotics (u-bi-ot'iks) [Gr. *εὖ* well + *βίος* life]. The science of healthy living.

eubolism (u'bo-lizm) [Gr. *εὖ* well + *metabolism*]. A condition of normal body metabolism.

eubornyl (u-bor'nil). The borneol ester of alpha-bromiso-valerianic acid: used as a nervous sedative.

eucaform (u'kaf-orm). A proprietary liquid antiseptic preparation of eucalyptol, formaldehyd, and other disinfectants. Dose, 1 dr. (4 c.c.).

eucain (u-ka'in). A preparation recommended as a valuable local anesthetic. It is said to be methyl-benzoyl-tetramethyl-oxy-piperidin-carboxylic acid methyl ester. **alpha-e**, **eucain a**, a crystalline compound, $\text{C}_{19}\text{H}_{27}\text{NO}_4$, or benzoyl-methyl-tetra-methyl-γ-oxy-piperidin-carboxylic-methyl ester. Its hydrochlorate is used as a local anesthetic. **beta-e**, **eucain b**, a crystalline compound, $\text{C}_8\text{H}_7\text{N}(\text{CH}_3)_2\text{C}_6\text{H}_5\text{COO.HCl}$, or benzoylvinyldiacetone-alkalin hydrochlorid. It is used like cocain as a local anesthetic in 2 per cent. solution for the eye, and a 5-10 per cent. solution for the nose and throat. It is said to be more active and less toxic than the latter. **beta-e**, **lactate** is used like *beta-e*, but is more soluble.

eucaloid (u'kal-oid). A gelatin capsule containing 5 min. (0.3 c.c.) of oil of eucalyptus.

eucalol (u'kal-ol). A proprietary antiseptic and catarrh cure.

eucalyptene (u-kal-ip'tēn). A hydrocarbon, $\text{C}_{10}\text{H}_{16}$,

obtainable from eucalyptol. **ε. hydrochlorid**, an intestinal antiseptic. Dose, 20-30 gr. (1.33-2 gm.).

eucalyptol (u-kal-ip'te-ol). A white, crystalline substance, $\text{C}_{10}\text{H}_{16}\text{.2HCl}$, or terpene dihydrochlorate: used as an intestinal antiseptic.

eucalyptol (u-kal-ip'tol). A thin, colorless liquid, a cis-terpene oxid, $\text{C}_{10}\text{H}_{16}\text{O}$, with a camphor-like odor, obtainable from the volatile oil of eucalyptus. It is deodorant, disinfectant, and antiperiodic, and is used in malaria, asthma, bronchitis, urethritis, diseases of the ear, and externally as an antiseptic in wounds, ulcers, and various discharges (as leukorrhea), as an antiseptic by inhalation and atomization in fetid bronchitis, diphtheria, etc. Called also *cineol*. Dose, 5-15 min. (0.333-1 c.c.).

eucalyptoresorcin (u-kal-ip'to-re-sor'sin). An antiseptic compound of eucalyptol and resorcinol.

Eucalyptus (u-kal-ip'tus) [Gr. *εὖ* well + *καλυπτός* covered]. A genus of myrtaceous trees and shrubs, chiefly Australian, of many species. The leaves of *E. glob'ulus*, or blue-gum, and other species afford oil of eucalyptus. It is astringent, tonic, antiseptic, deodorant, all its medicinal properties depending on the eucalyptol that it contains. It is used as a diaphoretic and stimulant, an antispasmodic in asthma, bronchitis, and malaria, as an antiseptic in wound discharges, and in chronic catarrhs. The fluidextract, prepared from the leaves of *E. glob'ulus*, is antiperiodic, alterative, and antiseptic. Dose, 10-60 min. (0.666-4 c.c.); of the tincture, 30-120 min. (2-8 c.c.); of the fluidextract, 30 min. (2 c.c.). **oil of ε.**, a volatile oil obtained from the leaves of many of the eucalypts, chiefly *E. glob'ulus*: antiseptic, stimulant, and antiperiodic. Dose, 5-10 min. (0.333-0.666 c.c.).

eucapnia (u-kap'ne-ah) [Gr. *εὖ* well + *κάπνος* smoke]. The condition in which the carbon dioxide of the blood is normal.

eucapren (u-kap'ren). One per cent. beta-eucain lactate in 1:5000 suprarenalin solution: used as an astringent and anesthetic.

eucasin (u-ka'sin). A proprietary casein preparation.

eucatropin (u-kat'ro-pin). Same as *euphthalmin*.

eucerin (u-se'rin) [Gr. *εὖ* good + *Λ. c'era* wax]. A proprietary ointment base made from the oxy-cholesterin of wool fat and paraffin.

euchinin (u-kin'in) [Gr. *εὖ* well, good + *chinin*]. A compound formed by the action of ethyl-chloro-carbonate on quinin, in white crystals, $\text{C}_2\text{H}_5\text{O.CO.O.C}_{20}\text{H}_{28}\text{N}_2\text{O}$; its properties are like those of quinin, but it produces no disagreeable effects. Dose, 15-30 gr. (1-2 gm.).

euchlorhydia (u-klor-hid're-ah) [Gr. *εὖ* good + *chlorhydic acid*]. The presence of the normal proportion of free hydrochloric acid in the gastric juice.

euchlorin (u-klo'rin). A mixture of chlorin and chlorin dioxide, produced by the action of hydrochloric acid upon potassium chlorate: locally antiseptic.

eucholia (u-ko'le-ah) [Gr. *εὖ* well + *χολή* bile]. Normal condition of the bile.

euchromosome (u-ko'rmo-sōm) [Gr. *εὖ* well, good + *chromosome*]. Same as *autosome*.

euchylia (u-ki'l'e-ah) [Gr. *εὖ* well + *χυλός* chyle]. A normal condition of the chyle.

ecodein, eucodin (u-ko'de-in, u-ko'din). See *codein methyl bromid*.

eucol (u'kol). A colorless liquid, guaiacol acetate, $\text{CH}_3\text{O.C}_6\text{H}_4\text{O.CO.CH}_3$: used like guaiacol.

eucrasia (u-kra'se-ah) [Gr. *εὖ* good + *κράσις* mixture or temperament]. A state of diminished susceptibility to the action of certain foods, drugs, etc.

eucupin (u-ku'pin). An antiseptic and anesthetic derivative of quinin. It is iso-amyl-hydrocuprein, $(\text{CH}_3)_2\text{CH}.\text{CH}_2.\text{CH}_2.\text{O}.\text{C}_9\text{H}_5.\text{N}.\text{CHOH}.\text{C}_7\text{H}_{11}.\text{N}.\text{C}_2\text{H}_5$.

eudermol (u-der'mol). A proprietary name for a salicylate of nicotin, $\text{C}_{10}\text{H}_7\text{N}_2\text{C}_2\text{H}_3\text{O}_3$; used in scabies in ointment of from 0.1-0.25 per cent. strength.

eudesmol (u-des'mol). A white, crystalline camphor, $\text{C}_{10}\text{H}_{16}\text{O}$, from oil of eucalyptus. It is insoluble in aqueous solutions, but soluble in alcohol, ether, etc.

eudiaphoresis (u-di'af-o-re'sis) [Gr. εὖ well + διαφωρεσις]. An easy, natural, or comforting escape of perspiration.

eudiemorrhysis (u'di-em-or'is-is) [Gr. εὖ well + δία through + αἷμα blood + ῥύσις flow]. The normal flow of blood through the capillaries.

eudiometer (u-de-om'et-er) [Gr. εὐδία fine weather + μέτρον measure]. An instrument used in testing the purity of the air.

eudosmol (u-dos'mol). A crystalline camphor, $\text{C}_{10}\text{H}_{16}\text{O}$, from the volatile oil of various species of eucalyptus.

eudoxin (u-doks'in). A bismuth salt of nosophen, $\text{CO}.\text{C}_6\text{H}_4.\text{O}.\text{(C}_6\text{H}_5)_2$, a reddish-brown, odorless, antiseptic powder, containing 52 per cent. of iodine and 15 per cent. of bismuth; used in catarrhal enteritis. Dose, 5-8 gr. (0.333-0.5 gm.).

eudrenin (u-dre'nin). A solution of 0.01 gm. ($\frac{1}{10}$ gr.) of eucain hydrochlorid and 0.00003 gm. ($\frac{3}{1000}$ gr.) of adrenalin chlorid in each cubic centimeter (15 min.): used as a local anesthetic.

eesthesia (u-es-the'ze-ah) [Gr. εὖ well + αἴσθησις feeling]. A normal state of the senses.

eufferol (u-fer'ol). Oxidulated iron and arsenious acid in gelatinous capsules; a proprietary tonic.

Euflagellata (u-flaj-el-a'tah). Same as *Flagellata*.

euformol (u-for'mol). A proprietary germicide, deodorant, and antiseptic compound.

eugallol (u-gal'ol). Pyrogallol monoacetate, a dark-yellow, syrupy substance: used in psoriasis and eczema.

Eugenia (u-je'ne-ah). An extensive genus of myrtaceous trees and shrubs. *E. caryophyllata* furnishes cloves; *E. pimenta* furnishes pimenta. See *cheken*, *clove*, and *Pimenta*.

eugenic acid (u-je'nik). See *eugenol*.

eugenics, eugenetics (u-jen'iks, u-jen-et'iks) [Gr. εὖ well + γεννᾶν to generate]. The study and cultivation of conditions that may improve the physical and moral qualities of future generations.

eugenin (u-je-nin). A camphor, $\text{C}_{10}\text{H}_{12}\text{O}_3$, found in cloves, etc.

eugenism (u'jen-izm). That condition of heredity and environment which tends to produce healthy and happy existence.

eugenist (u-jen'ist). A person who is versed in eugenics.

eugeniform (u-jen'o-form). The sodium salt of eugenol carbinol, a white, crystalline powder used as an intestinal disinfectant. Dose, 8-15 gr. (0.52-1 gm.).

eugenol (u'jen-ol). An oily, liquid principle, allyl guaiacol, $\text{OH}.\text{C}_6\text{H}_3(\text{OCH}_3).\text{C}_3\text{H}_5$, obtainable from oil of cloves, cinnamon, etc. It is an antiseptic and local anesthetic used in dentistry. Dose, 10-15 min. (0.666-1 c.c.). Called also *eugenic acid* and *caryophyllid acid*. **e. acetamid**, an antiseptic and local anesthetic, in shining plates or fine needles. **e. benzoate**, **e. iodid**. Same as *iodo-eugenol*.

eugenothenics (u-ge'no-then'iks). The study of race improvement by the regulation of both heredity and environment.

Euglena (u-gle'nah) [Gr. εὖ well + γλήνη socket of a joint]. A genus of infusorian animals. *E. viridis* is found in stagnant pools.

euglobulin (u-glob'u-lin). One of the two proteins (the other being pseudoglobulin) of which paraglobulin consists. It is characterized by being precipitated by dialysis.

eugonic (u-gon'ik) [Gr. εὖ well + γονή seed]. Growing luxuriantly: said of bacterial cultures.

euguiform (u'gu-form). An odorless white powder, acetylated methylene diguaiaicol, formed by the action of formaldehyd on guaiacol and subsequent acetylation: used as a dusting-powder for wounds.

eukinasia (u-kin'as). A preparation of the intestinal juice of young animals: used for stimulating pancreatic digestion.

eukinesia (u-kin-e'se-ah) [Gr. εὖ well + κίνησις movement]. Normal power of movement.

eulachon (u'lak-on). The candle-fish, *Thaleichthys pacificus*: its oil is used like cod-liver oil.

eulactol (u-lak'tol) [Gr. εὖ well + L. lac milk]. A concentrated food preparation of milk and egg.

eu'lan F. An insecticide used to protect wool from the clothes moth. Cloth when impregnated with eu'lan F. repels or poisons the moths.

eulatin (u-la'tin). A proprietary powder, said to be dimethyl-phenyl-pyrazolon-amido-brombenzoate: used as an expectorant in pertussis. Dose, $\frac{1}{8}$ -1 gr. (0.01-0.065 gm.).

eulaxan (u-lak'san). A proprietary laxative containing phenolphthalein and sodium hydroxid.

Eulenburg's disease (oil'en-burgz) [Albert Eulenburg, German neurologist, born 1840]. See *disease*.

eulexin (u-lek'sin). Same as *ulexin*.

eulyptol (u-lip'tol). An antiseptic preparation consisting of salicylic acid (6 parts), carbolic acid (1 part), and oil of eucalyptus (1 part).

eumenol (u-me'nol). An extract of the root of tangkui, a Chinese plant: useful in amenorrhea and dysmenorrhea. Dose, 1 fl.dr. (3.75 c.c.).

eumenorrhea (u'men-o-re'ah) [Gr. εὖ well + μήν menses + ῥοία flow]. A normal menstruation.

eumetria (u-me'tre-ah) [Gr. "moderation"]. A normal condition of nerve impulse.

eumictin (u-mik'tin). An antigonorrheal preparation of santol, salol, and urotropin.

eumorphics (u-mor'fiks) A branch of orthopedics which deals with the reestablishment of form.

eumorphism (u-mor'fizm) [Gr. εὖ well + μόρφη form]. Retention of the normal form of a cell.

eumydrin (u-mid'rin). Atropin methylnitrate, $\text{C}_{10}\text{H}_{20}\text{O}_2\text{N}(\text{CH}_3)_2.\text{NO}_3$, a white powder, moderately soluble in water. It is used as a mydriatic and has been recommended for use in the sweating of pulmonary tuberculosis. Dose, $\frac{1}{10}$ - $\frac{1}{24}$ gr. (0.001-0.005 gm.).

euatrol (u-na'trol). Sodium oleate, $\text{CH}_3(\text{CH}_2)_7\text{CH}_2\text{CH}(\text{CH}_2)_7\text{CO}_2\text{ONa}$, a patented remedy for gall-stones and hepatic disorders. Dose, 15 gr. (1 gm.) in a pill.

eunoia (u-noi'ah) [Gr. εὖ well + νοῦς mind]. Alertness of mind and will.

eunol (u'no). See *alpha-eunol*, *beta-eunol*.

eunuch (u'nuk) [Gr. εὐνῆ couch + ἔχειν to hold]. A man or boy deprived of the testes or external genital organs.

eunuchism (u'nuk-izm). The condition of a castrated male. **pituitary e.**, loss of sexual power due to derangement of the pituitary secretion.

eunuchoid (u'nuk-oid). 1. Noting a fibroid condition of a physiologically inactive testicle; also noting a high-pitched falsetto voice in a man. 2. A cryptorchid person with defective masculinity of appearance, causing him to resemble a eunuch.

eunuchoidism (u'nuk-oid-izm). A defective state of the testicles or of the testicular secretion, with impaired sexual power and eunuch-like symptoms.

euonymin (u-on'im-in). 1. A resinoid obtained from *Euonymus atropurpurea*. 2. An aperient

and cholagogue principle from the same. Dose, $\frac{1}{2}$ -3 gr. (0.022-0.2 gm.).

Euonymus (u-on'im-us) [Gr. *eu* well + *δνομα* name]. A genus of celastraceous shrubs and trees. The bark of the root of *E. alropurpurea*, wahoo: it is cholagogue, aperient, diuretic, and tonic. Dose of extract, 1-5 gr. (0.066-0.333 gm.); of fluidextract, $\frac{1}{2}$ -1 dr. (1.9-3.75 c.c.).

euphthalmim (u-of-thal'min) [Gr. *eu* well + *ὄφθαλμος* eye]. A white, crystalline powder, the hydrochloric salt of oxytolyl-methyl-vinyl-diacetone-alkamin. It is used as a mydriatic in 2 to 5 per cent. solutions.

eupadur (u-pad'). Two papers, one containing calcium chlorid and the other boric acid. Equal parts of the contents of each are dissolved together in water, in the proportion of 25 gm. of the combined powder to 1 liter of water, to make eusol.

eupancratism (u-pan'kre-at-izm). A normal condition of the pancreatic function.

Euparyph'ium malaya'num. A trematode parasite in the intestine of man in India and Malaya.

eupatorin (u-pat-o'rin). 1. A bitter glucosid from various species of *Eupatorium*. 2. A name for various precipitates derived from *Eupatorium perfoliatum*: diaphoretic, aperient, tonic, and stomachic. Dose, 1-4 gr. (0.066-0.266 gm.).

Eupatorium (u-pat-o're-um). A genus of composite-flowered plants. The leaves and tops of *E. perfoliatum*, boneset or thoroughwort, are tonic, diuretic, diaphoretic, and stomachic. They are used in dyspepsia and in inflammatory and febrile conditions. Dose of fluidextract, 10-60 min. (0.666-4 c.c.). **E. rebaudiana** contains a sweet glucosid, estwin, and a still sweeter substance, rebaudin.

eupepsia, **eupepsy** (u-pep'se-ah, u'pep-se) [Gr. *eu* well + *πέψις* digestion]. Good digestion; particularly the presence of a normal amount of pepsin in the gastric juice.

eupeptic (u-pep'tik). Having a good digestion.

eupeptone (u-pep'tōn). A British proprietary form of Witte's peptone.

euperistalsis (u-per-e-stal'sis). Normal or painless peristalsis.

euphagia (u-fa'je-ah) [Gr. *eu* well + *φαγείν* to eat]. A normal and proper manner of eating.

Euphorbia (u-for'be-ah). An extensive genus of trees, shrubs, and herbs; the spurge. They are actively emetic, cathartic, and poisonous. **E. corollata**, **E. ipecacuanha** grow in America, and have been used as emetics, cathartics, and diaphoretics. Dose, 5-20 gr. (0.3-1.25 gm.). **E. drummondii**, an Australian plant, affords drumin. **E. pilulifera**, a species used for asthma, emphysema, etc., growing in various hot regions. Dose of fluidextract, 30-60 min. (2-4 c.c.). **E. resinifera** furnishes euphorbin.

euphorbin (u-for'bin). A dry concentrate prepared from the root of *Euphorbia corollata*: an arterial sedative, purgative, and expectorant. Dose, 2-4 gr. (0.133-0.256 gm.).

euphorbium (u-for'be-um). An acrid, irritant gum-resin obtained from *Euphorbia resinifera*. It was formerly used in medicine as a stimulant and counterirritant; used in veterinary practice.

euphoria (u-fō're-ah) [Gr. *εὐφορία*]. Bodily comfort; well-being; absence of pain or distress.

euphorin (u-fō-rin). Ethyl phenyl carbamate, $C_6H_5.NH.CO_2.C_2H_5$, a white, crystalline powder derived from anilin. It is analgesic, antipyretic, and antiseptic, and is used in neuralgia and rheumatism. Dose, 7-15 gr. (0.454-1 gm.).

Euphrasia (u-fra'ze-ah). A genus of plants. *E. officinalis*, eyebright, is used as an eye-wash in conjunctivitis and as an astringent lotion in catarrh and hay-fever.

euphthalmim hydrochlorid (ūf-thal'min). A colorless, crystalline alkaloid, tetramethyl-mandel-

oxy-piperidin hydrochlorid, $C_5H_9N(CH_3)_4(C_6H_5-CHOH.CO.O)HCl$, derived from eucain b and mandelic acid. Its aqueous solution is a strong mydriatic, used in 2 to 10 per cent. solution. **e. salicylate**, $C_{17}H_{25}O_3N.(OH)C_6H_4.COOH$.

euphyllin (u-fl'in). A combination of theophyllin and ethylenediamin: used as a diuretic. Dose, 1-8 gr. (0.065-0.5 gm.).

eupicin (u-pis'in). A condensation product of formaldehyd and coal-tar: used in skin diseases.

euplastic (u-plas'tik) [Gr. *eu* well + *πλαστικός* plastic]. Readily becoming organized; adapted to the formation of tissue.

eupnea, **eupnoea** (ūp-ne'ah) [Gr. *eu* well + *πνεῖν* to breathe]. Easy or normal respiration.

euporphin (u-por'fin). Apomorphin/bromomethylate: used like apomorphin hydrochlorid.

eupraxia (u-praks'e-ah). Intactness of reproduction of coordinated movements.

eupraxis (u-praks'ik) [Gr. *eu* well + *πράσσειν* to perform]. Concerned in the proper performance of a function.

Euproc'tis crysorrhō'a. The brown-tail moth. See *brown-tail moth dermatitis*, under *dermatitis*.

eupurpurin (u-pur'pur-in). A dry concentrate from *Eupatorium purpureum*: it is diuretic.

eupyrexia (u-pi-reks'e-ah) [Gr. *eu* well + *πῦρ* fire]. A slight fever in the early stage of an infection, regarded as an attempt on the part of the organism to combat the infection.

eupyrin (u-pi'rin). The ethyl carbonate of vanillin in combination with paraphenetidin, $C_2H_5O-C_6H_4.N:CH.C_6H_3(O.CH_3)O.COOC_2H_5$: said to be a valuable antipyretic. Dose, 15-25 gr. (1-1.66 gm.).

euquinin (u-kwin'in). Same as *euchinin*.

euresol (u're-sol). Resorcin monoacetate, $OH.C_6H_4.O.CO.CH_3$, a proprietary yellow, viscid, but pulverizable substance: used in ointments for skin diseases.

eurthermic (u-re-ther'mik). See *eurythermic*.

eurobin (u-ro'bin). Chrysarobin triacetate: used like chrysarobin.

euroblepharon (u-ro-blef'ar-on) [Gr. *εὐρύς* wide + *βλέφαρον* lid]. Large eyelids.

eurodontia (u-ro-don'she-ah) [Gr. *εὐρύς* mold, decay + *ὀδούς* tooth]. Dental caries.

europhen (u'ro-fen). Diisobutyl orthocresol iodid: an amorphous, yellow iodoform and iodine substitute. It is applied to chancres and given hypodermically in syphilis. Dose, hypodermically, $\frac{1}{2}$ -1½ gr. (0.016-0.099 gm.).

europhenol (u-ro-fe'nol). A europhe and ichthylol derivative: used principally in ointments.

europium (u-ro'pe-um). A rare element, atomic weight 152, symbol Eu.

Eurotium (u-ro'she-um) [Gr. *εὐρύς* mold]. A genus of fungi or molds. *E. re'pens* is sometimes seen on bread and on preserved fruits. *E. malig'num* is occasionally found in the ear.

eurygnathic (u-rig-nath'ik). Having a wide jaw.

eurygnathism (u-rig'nath-izm) [Gr. *εὐρύς* wide + *γνάθος* jaw]. The state of having a wide jaw.

euryon (u're-on) [Gr. *εὐρύς* wide]. The point at either end of the greatest transverse diameter of the skull.

Eurypel'ma heut'zii. The American tarantula. See *tarantula*.

eurythermic (u-rith-er'mik). [Gr. *εὐρύς* wide + *θερμῆν* heat]. Able to grow through a wide range of temperature: said of bacteria.

eurythrol (u-rith-rol). A thick, honey-like extract of ox's spleen, used for chlorosis and anemia. Dose, 1-2 f.l.dr. (3.75-7.5 c.c.) daily.

eusapyl (u-sap'il). A proprietary solution of potassium ricinoleate and chlormetacresol: used as a hand-disinfectant.

euscope (u'skōp) [Gr. εὖ well + σκοπεῖν to see]. A device for projecting the image from a compound microscope upon a barium screen in a dark chamber so that it may be easily viewed. The image may also be projected upon a ground-glass screen so as to be viewed by several persons at one time.

euscopol (u-sko'pol). The proprietary name for optically inactive scopolamin hydrobromid, $C_{17}H_{21}NO_4 \cdot HBr$.

eusemin (u-se'min). A mixture of 0.0075 cocaine and 0.0005 of adrenalin: used as an anesthetic in eye and dental operations.

eusitia (u-sit'e-ah or u-sish'e-ah) [Gr. εὖ well + σίτος food]. Normal appetite.

eusol (u'sol). An antiseptic solution prepared from eupad, and containing calcium chlorid, calcium borate, and hypochlorous acid: used in treating wounds. See *Dakin's fluid*, under *fluid*.

eusoma (u-so'mah). A proprietary echinacea compound: used as an intestinal disinfectant and as a dressing in skin diseases.

eusplanchnia (u-splangk'ne-ah) [Gr. εὖ well + σπλάγχνα viscera]. A normal condition of the internal organs.

eustachian (u-sta'ke-an) [named after Bartolomeo *Eustachio*, an Italian anatomist, 1520-1574]. See under *canal, tube, valve*, etc.

eustachitis (u-sta-ki'tis). Inflammation of the eustachian tube.

eustachium (u-sta'ke-um). The eustachian tube.

eustenine (u-ste'nin). The double salt of theobromin sodium and sodium iodid, $C_7H_5O_2N_4Na \cdot NaI$: used in arteriosclerosis and angina pectoris. Dose, 7-15 gr. (0.5-1 gm.).

Eustrongylus (u-stron'gi-lus). A genus of nematode parasites. **E. gígás**, a species found commonly in dogs, cattle, horses, and other animals, but rarely in man. It is red in color, 1 to 3 feet in length, and is found mostly in the pelvis of the kidney or free in the peritoneal cavity. It causes atrophy and distention of the kidney. Also called *E. visceralis* and *Strongylus gígás*.

eusystole (u-sis'to-le) [Gr. εὖ well + systole]. A normal state of the systole of the heart.

eusystolic (u-sis-tol'ik). Pertaining to or exhibiting a normal cardiac systole.

eutectan (u-tek'tan). An acid bismuth salt of guaiacol, used in gastric ulcer, tuberculosis, intestinal catarrh, etc. Dose, 10-20 gr. (0.6-1.3 gm.).

eutectic (u-tek'tik) [Gr. εὖ well + τῆκτος melting]. Melting readily: said of a mixture that melts more easily than any of its ingredients. **e. mixture**, a mixture of two or more substances in the proportion that gives the lowest melting-point. **e. temperature**, the temperature at which a eutectic mixture melts.

eutelolecithal (u-tel-o-les'ith-al) [Gr. εὖ well + τελεolecithal]. Having an ovum in which the deutoplasm is greatly in excess of the cell protoplasm: said of the ova of birds and many reptiles. Cf. *oligolecithal* and *teleolecithal*.

eutexia (u-tek'se-ah) [see *eutectic*]. The union of two solids to form a liquid.

euthanasia (u-than-a'ze-ah) [Gr. εὖ well + θάνατος death]. An easy or painless death.

euthenic (u-then'ik). Conducive to race improvement through environment.

euthenics (u-then'iks) [Gr. εὖ well + τῦθεναι to thrive]. The science of race improvement through the regulation of environment.

eutherapeutic (u-ther-ap-u'tik) [Gr. εὖ well + θεραπεύειν]. Having good therapeutic properties.

euthermic (u-ther'mik) [Gr. εὖ well + θερμη heat]. Promoting warmth.

euthymol (u-thi'mol). A proprietary antiseptic preparation of eucalyptus and thymol.

euthyphoria (u-the-fo're-ah) [Gr. εὐθύς straight + φέρειν to bear]. Normal adjustment of the plane

of vision so that it coincides with the plane of the horizon.

euthyroidism (u-thi'roi-dism). A condition of normal thyroid function.

eutocia (u-to'se-ah) [Gr. εὐτοκία]. Safe, easy, or normal parturition or childbirth.

eutrepisty (u'tre-pis-te) [Gr. εὐτρεπής well prepared]. The practice of administering a remedy before an operation to lessen the danger of infection.

Eutrichomonas hom'inis. Same as *Enteromonas hominis*.

eutrichosis (u-trik-o'sis) [Gr. εὖ well + θρίξ, τρίχος hair]. A normal development of the hair.

eutrophia (u-tro'fe-ah). A healthy state of nutrition.

eutrophic (u-trof'ik) [Gr. εὖ well + τροφή nutrition]. Producing healthy nutrition.

euvaselin (u-vas'el-in). Vaseline the melting-point of which is raised by the addition of ceresin.

euxanthon (u-zan'thon). A ketone, dioxidiphenylene ketone oxid, $CO(C_6H_5OH)_2O$, obtained from Indian yellow.

euzone (u'zōn). A white powder said to contain 22 per cent. of hydrogen dioxide.

evacuant (e-vak'u-ant) [L. *evacuans* making empty]. 1. Emptying; serving to clear the bowels. 2. A remedy which empties any organ; a cathartic, emetic, or diuretic.

evacuation (e-vak-u-a'shun) [L. *evacuatio*, from *e* out + *vacuus* empty]. 1. An emptying, as of the bowels. 2. A dejection or stool; material discharged from the bowels.

evacuator (e-vak'u-a-tor). An instrument for compelling an evacuation, as of the bowels or bladder, or for removing fluid or small particles from a cavity.

evagination (e-vaj-in-a'shun). A protrusion of some part or organ. **optic e.**, the diverticulum in the primitive embryonic fore-brain from which the eye-cup is developed.

evanescent (ev-an-es'ent) [L. *evanescere* to vanish away]. Vanishing away; passing away quickly; unstable; unfixed.

evaporation (e-vap-o-ra'shun) [L. *e* out + *vaporare* to steam]. Conversion of a liquid or solid into vapor.

evatmine (e-vat'min). A proprietary preparation for treating asthma containing pituitary extract, adrenin, and physiologic salt solution.

evectics (e-vek'tiks) [L. *evēhere* to lift up]. The study of methods of acquiring a good habit of body.

eventration (e-ven-tra'shun) [L. *eventratio* disembowelment, from *e* out + *ven'ter* belly]. 1. Protrusion of the bowels from the abdomen. 2. Removal of the abdominal viscera. **diaphragmatic e.**, elevation of the diaphragm.

eversion (e-ver'shun) [L. *ever'sio*]. A turning outward or inside out.

evert (e-vert') [L. *e* out + *ver'tere* to turn]. To turn inside out; to turn out.

évidement (a-vēd-maw') [Fr.]. The operation of scooping out a cavity or a diseased portion of an organ.

évideur (a-ve-dur') [Fr.]. An instrument for performing évidement.

evisceration (e-vis-er-a'shun) [L. *evisceratio*; *e* out + *viscus* viscus]. 1. Disembowelment; removal of the entrails or viscera. 2. Removal of the contents of an organ, as the eye. **e. of the eye**, surgical removal of the contents of the eye, the sclera being left intact. **obstetric e.**, the removal of the abdominal and thoracic viscera of the fetus in order to facilitate delivery. **e. of the orbit**, removal of the contents of the orbit, with scooping out of its periosteal lining.

evisceroneurotomy (e-vis'er-o-nu-rot'o-me). Evisceration of the eye with division of the optic nerve.

A TABLE OF THE EXANTHEMATATA.

DISEASE.	EARLY SYMPTOMS.	LENGTH OF INCUBATION.	SITE OF ERUPTION.	CHARACTER OF EXANTHEM.	LATER SYMPTOMS.	DURATION OF ERUPTION.	DURATION OF DISEASE.	DEGREE OF CONTAGIOUSNESS.	COMPLICATIONS AND SEQUELÆ.	MANNER OF CONVALESCENCE.
Cerebrospinal Meningitis.	Fever, rigors, occipital and abdominal pains; head retracted; delirium and vomiting.	Two to four days.	General.	Herpetic vesication of lips; entire body spotted as with purpura and erythematous patches.	Stasis;iosis; strabismus; hemiplegia; muscular rigidity.	Various.	Various.	Epidemic.	Arthritis; deafness; pneumonia; keratitis; retrobulbar neuritis; parotiditis.	By lysis, often slow.
Dengue.	High fever; pain in back, head, and joints.	Three to five days.	Hands and feet, then the whole body.	Redness of joints; papules or fugacious erythema, with itching; usually recurrent.	Fever, pains, and prostration during stages of eruption.	Two to five days, often recurrent.	Various; often protracted.	Highly contagious.	Parotid and glandular swellings; epistaxis, and other hemorrhages.	By lysis, often slow.
Erysipelas.	Chills; mild fever.	One-half to three days.	Usually begins on face; in traumatic cases, near wound.	Vivid red, spreading patches; subcutaneous edema, with infiltration.	Fever and swellings; headache; sometimes burning pain and suppuration.	May disappear on the fifth, sixth, or seventh day; relapses are usual.	One to three or four weeks.	Specially contagious in cases of wounds.	Phlebitis; peritonitis; pleurisy; laryngeal edema; meningitis.	By crisis.
Glanders.	Chills; high fever; pain, sweating, and acid coryza.	Three to fifteen days.	Face, neck, belly, and extremities.	Papules, changing to hard vesiculated tubercles, which suppurate and become sloughing ulcers.	Increased fever, abscesses, and edematous patches; a typhoid state.	Extremely contagious.	Bronchitis; pneumonia; pleurisy; gangrene; diarrhœa.	Acute cases usually fatal; chronic ones may recover by a slow lysis.
Measles.	Acute catarrh of conjunctiva, nose, and fauces; dark spots on buccal mucosa; bronchitis; photophobia, and headache.	Ten days to two weeks.	Forehead, face, chin, neck; then downward over the body and limbs.	Small, dark-pink macules in crescentic groups; sometimes confluent.	Fever with catarrhal symptoms, followed by a branny desquamation.	Four to eight days.	Fourteen days.	Highly contagious, especially in the early stage.	Bronchitis; pneumonia; otitis; diarrhœa; sometimes pulmonary tuberculosis.	Crisis.
Roseola Ephemera, or German measles; Rötheln.	Fever; headache; general pains (usually slight).	Five to twenty-one days.	Scalp and sides of face; hand and forearm; and forearm; spreading rapidly to body.	Minute, rosy, itching papules, variously disposed and grouped.	Slight fever; sore throat; conjunctival congestion.	Three days.	Four to eight days.	Very contagious.	Rarely followed by tuberculosis of lungs.	By crisis.
Scarlatina.	Chills; high fever; sore throat; vomiting.	Few hours to a week.	Head, face, wrists, abdomen; spreading swiftly.	Minute rosy papules, soon coalescing into a uniform scarlet erythema.	Fever, tonsillitis, pharyngitis.	Seven to ten days.	Two to three weeks.	Highly and increasingly contagious until end of desquamation.	Nephritis; uremia; otitis; rheumatism, etc.	By lysis.
Small-pox; Variola.	Chills, fever, sweating, vomiting, pain in back and head, etc.	Ten days to two weeks.	Face, neck, head, wrists, body, and mucosa.	Shot-like papules, changing to vesicles, and about the fourth day becoming pustules.	Ptyalism; after pustulation, chills and secondary fever.	Twenty-one to twenty-five days.	Four to five weeks.	Extremely contagious.	Keratitis; abscesses; empyema; edema of glottis, etc.	By lysis.

Typhoid Fever.	Approach insidious; weakness; loss of strength; increasing fever; epistaxis; pains; diarrheal, or constipation.	Six to twenty-five days.	Abdomen, chest, and back.	Small rose-colored spot, disappearing on pressure.	Increased pyrexia, abdominal tenderness, chiefly in right iliac fossa, prostration, delirium, tympanites, hemorrhage, etc.	Three to five days for each crop of spots.	Three to four weeks.	Contagion propagated mainly by the stools.	Intestinal hemorrhage and perforation; peritonitis; pneumonia; osteochondritis, etc.	By lysis; often protracted.
Typhus Fever.	Chills, fever, and pain.	Two to twenty-one days.	Side of thorax, abdomen, wrists, and hands; then general, except on face and neck.	Dusky patches, disappearing on pressure, and dark-pink papules.	Fever, headache, stupor, delirium.	Two or three weeks, or more.	Two to four weeks.	Highly contagious.	Bronchitis; pneumonia; suppurative arthritis; gangrene; abscesses, etc.	By crisis.
Vaccinia; Cow-pox.	Fever, headache, pain.	Eight days.	Mostly at, or near site of, inoculation.	A papule at site of inoculation, becoming a pustule.	Ten to fifteen days.	By inoculation; rarely communicated from cows to their milkers.	Impure virus may lead to blood-poisoning, syphilis, or other untoward sequelæ.	By lysis.
Varicella; Chicken-pox.	Feverishness.	Four to sixteen days.	Chest and body generally.	Crops of rose-pink papules, which change into vesicles.	Fever, mild or sometimes severe, headache.	One or two weeks.	Very contagious.	By lysis.

evolution (ev-o-lu'shun) [L. *evolutio*, from *e* out + *vol'vere* to roll]. 1. An unrolling. 2. A process of development in which an organ or organism becomes more and more complex by the differentiation of its parts; a continuous and progressive change according to certain laws and by means of resident forces. 3. The theory of early physiologists that the fully formed animal or plant exists in a minute form in the germ-cell. This theory was opposed to that of epigenesis. Called also *preformation* or *incasement*. **bathmic e.**, evolution due to something in the organism itself independent of environment. Called also *orthogenic e.* **Denman's spontaneous e.**, a mechanism of spontaneous version in transverse presentations in which the head rotates behind, and as the breech descends the shoulder ascends in the pelvis, the breech finally coming down and out. **organic e.**, the origin and development of species; the theory that existing organisms are the result of descent with modification from those of past times. **orthogenic e.**, bathmic e. **spontaneous e.**, the unaided expulsion of a transversely placed fetus without the process of version or turning.

evulsion (e-vul'shun) [L. *evul'sio*, from *e* out + *vell'vere* to pluck]. The plucking or tearing out, as of a polypus.

Ewald's enema, test-meal (a'vahltz) [Carl Anton Ewald, physician in Berlin, 1845-1915]. See *enema* and *test-meal*.

Ewart's sign (ew'arts) [William Ewart, English physician, born 1848]. See under *sign*.

Ewing's sign, tumor (u'ingz) [James Ewing, New York pathologist]. See under *sign* and *tumor*.

ex (ex) [L. for "out," "away from"]. A Latin preposition used as a prefix.

exacerbation (ex-as-er-ba'shun) [L. *ex* over + *acerbus* harsh]. Increase in the severity of any symptoms or disease.

exacrinous (ex-ak'rin-us) [Gr. *ἐξ* outside + *κρίνειν* to secrete]. Pertaining to the external secretion of a gland.

exalgin (ex-al'jin) [Gr. *ἐξ* out + *ἄλγος* pain]. Methylacetanilid, $C_9H_7N(CH_3).CO.CH_3$, a benzene derivative: it is used as an analgesic and antipyretic. Dose, $\frac{1}{2}$ to 4 gr. (0.033-0.26 gm.).

exaltation (ex-awl-ta'shun). An abnormal mental state, marked by a feeling of great importance and ecstatic spiritual elevation.

exangia (eks-an'je-ah) [Gr. *ἐξ* out + *ἀγγεῖον* blood-vessel]. Dilatation of a blood-vessel.

exanthem, exanthema (ex-an'them, ex-an-the'-mah), pl. *exanthemata* [Gr. *ἐξάνθημα* eruption]. Any eruptive disease; an eruptive fever; also the eruption which characterizes such a fever. See *eruption*. For table of *exanthemata*, see pages 432, 433. **e. subitum**, a condition frequently seen in children marked by remittent fever lasting three days, falling by crisis, and followed a few hours later by a rash on the trunk (Glauzmann). **vesicular e.**, a vesicular eruption in horses marked by the formation of nodules, vesicles, and pustules in the mucous membrane of the vagina and the skin of the vulva and penis.

exanthematous (ex-an-them'at-us). Pertaining to, characterized by, or of the nature of an exanthem.

exanthrope (ex'an-thröp) [Gr. *ἐξ* out + *ἄνθρωπος* man]. Any source of disease not situated within the human body.

exanthropic (ex-an-throp'ik). Of the nature of an exanthrope; not situated within the human body.

exarteritis (ex-ar-te-ri'tis) [*ex* + *arteritis*]. Inflammation of the outer arterial coat.

exarticulation (ex'ar-tik-u-la'shun) [L. *ex* out + *articulus* joint]. Amputation at a joint.

excarnation (ex-kar-na'shun) [L. *ex* out + *car'o*, *car'nis* flesh]. Removal of superfluous carnosous tissue from a preparation.

excavatio (ex-ka-va'she-o) [L.]. Excavation. **e. papillæ ner'vi opt'ici** [B N A], a depression in the center of the optic papilla. **e. recto-uteri'na** [B N A], the recto-uterine pouch. **e. recto-vesica'lis** [B N A], the rectovesical pouch. **e. vesico-uteri'na** [B N A], the vesico-uterine pouch.

excavation (ex-ka-va'shun) [L. *excavatio*, from *ex* out + *ca'vus* hollow]. 1. The act of hollowing out. 2. A hollow, or place that has become hollow. **atrophic e.**, the cupping of the optic disk, which is due to atrophy of the optic nerve-fibers. **glaucomatous e.**, cupping of the disk, which is total and due to abnormally high intra-ocular pressure. **e. of the optic disk**, depression of the optic disk below the retinal surface. **physiologic e.**, partial cupping of the optic disk occurring physiologically.

excavator (ex'ka-va-to'r). A form of scoop or gouge for surgeons' use. **dental e.**, an instrument for removing decayed portions of a tooth.

excelsin (ex-sel'sin). A crystalline protein from the brazil nut.

excrementosis (ex-se-men-to'sis). Hypertrophy of the cementum of the root of a tooth; hypercemen-tosis.

excentric (ex-sen'trik). Same as *eccentric*.

excerebration (ex'ser-e-bra'shun) [L. *ex* out + *cer'ebrum* brain]. The removal of the brain, chiefly that of the fetus in embryotomy.

excernant (ex-ser'nant) [L. *excer'nere* to excrete, to purge]. Causing an evacuation or discharge.

exci-pient (ex-sip'e-ent) [L. *exci'piens*, from *ex* out + *cap'ere* to take]. Any more or less inert substance added to a prescription in order to confer a suitable consistency or form to the drug.

excision (ex-sizh'un) [L. *exci'sio*, from *ex* out + *ca'dere* to cut]. An act of cutting away or taking out.

excitability (ex-si-tab-il'it-e). Readiness to respond to a stimulus; irritability.

excitable (ex-sit'a-bl) [L. *excitab'ilis*]. Susceptible of stimulation; responding to a stimulus.

excitant (ex-sit'ant) [L. *ex* out + *cita're* to call]. Any agent which produces excitation of the vital functions, or of those of the brain.

excitation (ex-si-ta'shun) [L. *excitatio*; *ex* out + *cita're* to call]. An act of irritation or stimulation; a condition of being excited. **direct e.**, the stimulation of a muscle by placing an electrode on the muscle itself. **indirect e.**, the stimulation of a muscle through its nerve.

excitatory (ex-si'ta-to-re). 1. Tending to excitation or stimulation. 2. Tending to disassimilation.

excitoglandular (ex-si'to-glan'du-lar). Causing activity of the glandular functions.

excitometabolic (ex-si'to-met-ab-ol'ik). Producing metabolic changes.

excitomotor (ex-si'to-mo'tor). 1. Tending to produce motion or motor function. 2. An agent which induces motion or functional activity.

excitomotor (ex-si-to-mo'to-re). Excitomotor.

excitomuscular (ex-si'to-mus'ku-lar). Causing muscular motion.

excitonutrient (ex-si-to-nu'tre-ent). Exciting or stimulating nutrition.

excitor (ex-si'tor). A nerve, the stimulation of which excites greater action in the part which it supplies.

excitosecretory (ex-si'to-se-kre'to-re). Producing increased secretion.

excitovascular (ex-si'to-vas'ku-lar). Causing vascular changes, with consequent flushings and erections, and probably certain skin diseases.

exclave (ex'kla'v) [L. *ex* out + *clav'is* key]. A detached part of an organ, as of the pancreas or ovary.

exclusion (ex-klu'zhun) [L. *exclu'sio*, from *ex* out + *clau'dere* to shut]. The act or process of ejecting, rejecting, or extruding. Specifically, an

operation in which a portion of an organ is separated from the rest of the organ, but is not removed from the body. **diagnosis by e.**, the making of a diagnosis by rejecting one hypothesis after another until the only tenable one remains.

excochleation (ex-kok-le-a'shun) [L. *ex* out + *coch'lea* spoon]. The operation of cureting or scooping out a cavity.

excoriation (ex-ko-re-a'shun) [L. *excori'are* to flay, from *ex* out + *cor'ium* skin]. Any superficial loss of substance, such as that produced on the skin by scratching.

excrement (ex'kre-ment) [L. *excrementum*, from *ex* out + *cer'nere* to separate]. Fecal matter; matter cast out as waste from the body.

excrementitious (ex'kre-men-tish'us). Pertaining to or of the nature of excrement; fecal.

excrecence (ex-kres'ens) [L. *ex* out + *cres'cere* to grow]. Any abnormal outgrowth; a projection of morbid origin. **cauliflower e.**, soft cancer of the cervix uteri; condyloma acuminatum. **fung-ating e.**, **fungous e.**, a fungous growth in the umbilicus after separation of the umbilical cord; granuloma of the umbilicus.

excrecent (ex-kres'ent). Resembling or of the nature of an excrecence.

excreta (ex-kre'tah) [L., pl.]. Matters excreted; waste-matters; materials cast out by the body.

excrete (ex-kre't) [L. *excer'nere*]. 1. To throw off, as waste matter, by a normal discharge. 2. Any excreted or discharged waste matter.

excretin (ex'kre-tin). A crystalline compound, $C_{20}H_{32}O$, derivable from human feces.

excretion (ex-kre'shun) [L. *excretio*]. 1. The act, process, or function of excreting. 2. The material elaborated by the process of excreting.

excretory (ex'kre-to-re). Of or pertaining to or subserving excretion.

excursion (ex-kur'shun) [L. *excur'sio*, from *ex* out + *cur'rere* to run]. A wandering off from, as of the eyes from a midposition.

excystation (ex-sis-ta'shun). Escape from a cyst or envelope.

exemia (ex-e'me-ah) [Gr. $\xi\chi$ out + $\alpha\iota\mu\alpha$ blood]. Loss of blood from the circulation, though not from the body; a term that has been applied to surgical shock.

exencephalia (ex'en-sef-a'le-ah) [Gr. $\xi\chi$ out + $\epsilon\gamma\kappa\epsilon\phi\alpha\lambda\omicron\varsigma$ brain]. Congenital exposure of the brain of a teratism.

exencephalous (ex-en-sef'al-us). Characterized by exencephalia.

exencephalus (ex-en-sef'al-us) [Gr. $\xi\chi$ out + $\epsilon\gamma\kappa\epsilon\phi\alpha\lambda\omicron\varsigma$ brain]. A monster having an imperfect cranium, with the brain on the outside of the skull.

exencephaly (ex-en-sef'al-e). Exencephalia.

exenteration (ex-en-ter-a'shun) [Gr. $\xi\chi$ out + $\epsilon\psi\tau\epsilon\rho\omicron\nu$ bowel]. Same as *evisceration*.

exenteritis (ex-en-ter-i'tis). Inflammation of the peritoneal covering of the intestine.

exercise bone (ex'er-siz). A bone developed in a muscle, tendon, or fascia, and formed as a result of overexercise. **passive e.**, muscular exercise produced by mechanical means (massage, passive movements, etc.) without voluntary effort on the part of the patient.

exeresis (ex-er'es-is) [Gr. $\xi\chi$ out + $\epsilon\lambda\epsilon\upsilon\sigma\iota\varsigma$ taking]. Removal or exclusion of a nerve, vessel, or other part or organ.

exesion (ex-e'zhun) [L. *ex'e'dere* to eat out]. The gradual destruction of superficial parts of a tissue.

exestation (ex-fe-ta'shun) [L. *ex* out + *fa'tus*]. Extra-uterine pregnancy.

exflagellation (ex-flaj-el-a'shun) [L. *ex* out + *flagellum*]. The protrusion or formation of flagella by a protozoön, such as the formation of

microgametes (male gametes) from a microgametocyte in malaria.

exfoliation (ex-fō-le-a'shun) [L. *ex* out + *folium* leaf]. A falling off in scales or layers.

exhalation (ex-ha-la'shun) [L. *exhalatio*, from *ex* out + *halare* to breathe]. 1. The giving off of watery or other vapor, or of an effluvium. 2. A vapor or other substance exhaled or given off.

exhaustion (ex-hawst'yun) [L. *ex* out + *haurire* to drain]. 1. Privation of energy with consequent inability to respond to stimuli. 2. Withdrawal. 3. Condition of emptiness caused by withdrawal. 4. Emptying by a process of withdrawal. **heat e.**, a form of heat stroke occurring commonly among workers in furnace rooms, foundries, etc., although it may occur from exposure to the sun's heat. It is marked by subnormal temperature, with depression and sometimes collapse. Called also *heat prostration*, **nervous e.**, depression of vital functions due to excessive demands upon the nervous energy; neurasthenia.

Exhib. Abbreviation for L. *exhibetur*, let it be given.

exhibit (ex-hib'it) [L. *exhibere* to give out]. To administer as a remedy.

exhibitionism (ex-hib-ish'un-izm). The insane habit of exposing the genital organs.

exhilarant (ex-hil'ar-ant) [L. *exhilarare* to gladden]. 1. Causing elevation or gladness. 2. An enlivening or elating agent.

exhumation (ex-hu-ma'shun) [L. *ex* out + *humus* earth]. Disinterment; removal of the dead body from the earth after burial.

exitus (ek'sit-us) [L.]. A going out; an exit or outlet. **e. pelvis**, the inferior outlet of the pelvis.

Exner's nerve, plexus (ex'nerz) [Sigmund Exner, Austrian physiologist, 1846-1926]. See under *nerve* and *plexus*.

exo- [Gr. *ἔξω* outside]. A prefix meaning outward.

exocardia (ex-o-kar'de-ah) [Gr. *ἔξω* outside + *καρδία* heart]. Displacement or abnormal position of the heart.

exocardiac, exocardial (ex-o-kar'de-ak, ex-o-kar'de-al) [Gr. *ἔξω* outside + *καρδία* heart]. Situated, occurring, or developed outside the heart.

exocataphoria (ex'o-kat-af-o're-ah) [Gr. *ἔξω* outward + *cataphoria*]. The condition in which the visual axis turns downward and outward.

exochorion (ex-o-ko're-on). That part of the chorion which is derived from the ectoderm.

exocœloma (ex'o-se-lo'mah). That part of the cœlum which is situated in the extra-embryonic region of the embryo.

exocolitis (ex'o-ko-li'tis) [Gr. *ἔξω* without + *colitis*]. Inflammation of the outer coat of the colon.

exocrin, exocrine (ex'o-krin) [Gr. *ἔξω* without + *κρίνειν* to separate]. The external secretion of a gland.

exocyclic (ex-o-sik'lik). A term applied to cyclic chemical compounds having their double bond in the side chain.

exodic (ex-od'ik) [Gr. *ἔξω* out + *ὁδός* way]. Centrifugal or efferent.

exodin (ex'o-din). A yellow, tasteless, insoluble powder, diacetyl-rufigalic-acid tetramethyl ether. It is a tonic cathartic. Dose, 5-20 gr. (0.3-1.2 gm.).

exodontia (ex-o-don'she-ah) [Gr. *ἔξω* out + *ὀδούς* tooth]. 1. The extraction of teeth. 2. Forward protrusion of the teeth.

exodontist (ex-o-don'tist). A specialist in extraction of teeth.

exodontology (eks-o-don-tol'o-je). That department of dentistry which deals with extraction of the teeth.

exodyne (ex'o-din) [Gr. *ἔξω* out + *ὀδὴν* pain]. An antipyretic and anodyne mixture of acetanilid, sodium salicylate, and sodium bicarbonate.

exo-enzyme (ex-o-en'zim). An extracellular enzyme; an enzyme which acts outside of the cells in which it originates.

exogamy (ex-og'am-e) [Gr. *ἔξω* out + *γάμος* marriage]. Protozoan fertilization by the union of elements that are not derived from the same cell. Cf. *autogamy* and *endogamy*.

exogastritis (ex'o-gas-tri'tis). Inflammation of the external coat of the stomach.

exogen (ex'o-gen). An obsolete term for a dicotyledonous plant.

exogenetic (ex'o-jen-et'ik) [Gr. *ἔξω* outward + *γενᾶν* to produce]. Not arising within the organism, but due to an external cause.

exogenic, exogenous (ex-o-jen'ik, ex-oj'en-us) [Gr. *ἔξω* out + *γενᾶν* to produce]. 1. Growing by additions to the outside; in botany, belonging to the class of the exogens. 2. Developed or originating outside the body.

exognathion (ex-o-gna'the-on) [Gr. *ἔξω* outside + *γνάθος* jaw]. The alveolar process of the upper jaw.

exohemophylaxis (ex'o-he-mo-fi-lak'sis) [Gr. *ἔξω* outside + *αἷμα* blood + *phylaxis*]. A procedure consisting of mixing arsenphenamin with some of the patient's blood and then injecting the mixture, the object being to reduce the sensitiveness of the blood.

exohysteropexy (ex-o-his'ter-o-pek-se) [Gr. *ἔξω* outward + *ὑστέρα* uterus + *πῆξις* fixation]. Uterine fixation by implanting the fundus in the abdominal wall.

exol (ex'ol). A local anesthetic compound; used in dentistry.

exolever (ex'o-le-ver). A lever-like instrument for extracting tooth roots.

exometer (ex-om'et-er). An apparatus for measuring the fluorescent quality of the Röntgen ray in comparison to units of candle-power.

exometritis (ex'o-me-tri'tis) [Gr. *ἔξω* out + *μήτρα* womb + *-itis* inflammation]. Inflammation of the peritoneal or outer surface of the uterus.

exomphalos (ex-om'fal-os) [Gr. *ἔξω* out + *ὀμφαλός* navel]. 1. Hernia of the abdominal viscera into the umbilical cord. 2. Umbilical hernia.

exopathic (ex-o-path'ik). Of the nature of an exopathy; originating outside the body.

exopathy (ex-op'ath-e) [Gr. *ἔξω* out + *πάθος* disease]. A disease originating in some cause lying outside the organism.

exophoria (ex-o-fō're-ah) [Gr. *ἔξω* out + *φέρειν* to bear]. A tendency of the eyes to deviate outward.

exophoric (ex-o-for'ik). Characterized by exophoria.

exophthalmic (ex-of-thal'mik). Of or pertaining to or characterized by exophthalmos.

exophthalmometer (ex-of-thal-mom'et-er). An instrument for measuring the amount of exophthalmos.

exophthalmos, exophthalmus (ex-of-thal'mos, ex-of-thal'mus) [Gr. *ἔξω* out + *ὀφθαλμός* eye]. Abnormal protrusion of the eyeball. **pulsating e.**, exophthalmos with pulsation and bruit, due to aneurysm pushing the eye forward.

exophylactic (ex'o-fi-lak'tik). Pertaining to exophylaxis.

exophylaxis (ex'o-fi-lax'is) [Gr. *ἔξω* outside + *φυλαξις* a guarding]. Prophylaxis against disease from the outside, such as the protective influence of the skin. Cf. *exophylaxis*.

exoplasm (ex'o-plazm) [Gr. *ἔξω* outside + *πλάσμα* something formed]. See *ectoplasm*.

exorbitism (ex-or'bit-izm) [L. *ex* out + *orbita* orbit]. Protrusion of the eyeball from the orbit; exophthalmos.

exormia (ex-or'me-ah) [Gr. *ἔξω* out + *ὁρμή* rush]. Any popular disease of the skin.

exosepsis (ex-o-sep'sis) [Gr. *ἔξω* out + *σῆψις* decay]. Septic poisoning which does not originate within the organism.

exoserosis (ex''o-se-ro'sis). An oozing of serum or exudate, as in moist skin diseases and edema.

exoskeleton (ex-o-skel'e-ton) [Gr. *ἔξω* out + *σκελετόν* skeleton]. A hard structure developed on the outside of the body, as the shell of a crustacean. In vertebrates the term is applied to structures produced by the epidermis, as hair, nails, hoofs, teeth, etc.

exosmose, exosmosis (ex'os-mōs, ex-os-mo'sis) [Gr. *ἔξω* out + *ὥσμός* impulsion]. Diffusion or osmosis from within outward; movement outward through a diaphragm or through vessel-walls.

exosplenopexy (ex-o-sple'no-peks-e) [Gr. *ἔξω* out + *σπλήν* spleen + *πῆξις* fixation]. The operation of suturing the spleen upon the outside of the body or in the wound.

exospore (ex'o-spōr). See *spore*.

exosporium (ex-o-spo're-um). The external layer of the envelop of a spore.

exostosis (ex-os-to'sis) [Gr. *ἔξω* out + *ὀστέον* bone]. A bony growth projecting outward from the surface of a bone or tooth. **e. bursa'ta**, an exostosis from the epiphyseal portion of a bone, consisting of bone and cartilaginous tissue covered by a connective-tissue capsule. **e. cartilagin'ea**, a variety of osteoma consisting of a layer of cartilage developing beneath the periosteum of a bone. **dental e.**, a morbid growth from the root of a tooth. **ivory e.**, a bony growth of great density. **e. multi'plex cartilagin'ea**, the occurrence of multiple cartilaginous growths upon the skeletal system.

exoteric (ex-o-ter'ik) [Gr. *ἔξωτερός* outer]. Generated or developed outside the organism.

exothermal, exothermic (ex-o-ther'mal, -ther'mik) [Gr. *ἔξω* outside + *θέρμη* heat]. Marked by the evolution of heat; liberating heat or energy from its potential forms. Cf. *endothermic*.

exothyropexy (ex-o-thi'mo-pex-se) [Gr. *ἔξω* outside + *θυμύς* + Gr. *πῆξις* fixation]. The operation of enucleating the thymus gland from its fossa and suturing it to the top of the sternum.

exothyropexia, exothyropexy (ex'o-thi-ro-pex'-e-ah, ex-o-thi-ro-pex-se) [Gr. *ἔξω* outside + *θυροειδής* fixation]. The operation of drawing out the enlarged thyroid gland through an incision and letting it shrivel on the outside.

exotic (ex-ot'ik). Of foreign origin; not native.

exotospore (ex-o'to-spōr). The needle-like spore (sporozoite) of the malarial parasite by which it enters the blood-corpuscle. Called also *oxyspore* and *raphidiospore*.

exotoxic (ex-o-tok'sik) [Gr. *ἔξω* outside + *toxic*]. Pertaining to or produced by an exotoxin.

exotoxin (ex-o-tok'sin). A toxin excreted by an organism into the surrounding medium. It can usually be obtained apart from the organism by filtration without destroying the organism.

exotropia (ex-o-tro'pe-ah) [Gr. *ἔξω* outward + *τροπή* turning]. Divergent strabismus; abnormal turning of one or both eyes outward.

expansion (ex-pan'shun) [L. *expandere* to spread out]. 1. Increase in surface, extent, or bulk. 2. An extended surface, as of a tendinous or nervous structure. **cubic e.**, expansion in volume or in all dimensions. **linear e.**, increase of length. **superficial e.**, increase in length and breadth.

expectant (ex-pek'tant) [L. *expectans*, from *ex* out + *speciare* to watch]. Watching and waiting. Expectant treatment is that in which the disease is left to nature's cure, the physician merely relieving the symptoms.

expectation of life (ex-pek-ta'shun). The number of years which any person of a given age or class may reasonably expect to live. **curtate e. of l.**, the number of entire years in the expectation of life.

expectorant (ex-pek'to-rant) [L. *ex* out + *pectus*

breast]. 1. Promoting the ejection by spitting of mucus or other fluids from the lungs and trachea. 2. A medicine which promotes expectoration. **stimulant e.**, an expectorant used to expel secretions that are already formed. **Stokes's e.**, a preparation of ammonium carbonate, fluidextracts of senna and of squill, and camphorated tincture of opium in syrup of tolu.

expectoration (ex-pek-to-ra'shun). 1. The act of coughing up and spitting out materials from the lungs and trachea. 2. The material so ejected; sputum. (For varieties of expectoration see under *sputum*.)

experiment (ex-per'im-ent) [L. *experimen'tum*]. A procedure gone through in order to discover or to demonstrate some fact or general truth. **Goltz's e.**, striking a frog on the abdomen will produce stoppage of the heart's action. **heat-puncture e.**, stimulation, mechanical or electric, of the corpus striatum, which produces a rise of temperature. **Küss's e.**, injection of a solution of opium or belladonna into the bladder produces no symptoms of poisoning, thus proving the impermeability of the bladder epithelium. **Mariotte's e.** (to demonstrate the blind spot of the eye), an eye is fixed on the center of a cross marked on a card on which is also marked a large spot. The card is moved to or from the face, and at a certain distance the image of the spot will disappear. **Nussbaum's e.**, ligation of the renal arteries of an animal in order to isolate the glomeruli of the kidneys from the circulation. **O'Beirne's e.**, the experiment of injecting air or water into a loop of intestine passed through a hole in a sheet of paper: done to demonstrate the causation of strangulated hernia. **Römer's e.**, the placing of abrin in the conjunctiva to show the formation of antitoxins. **Toynbee's e.**, the experiment of partially exhausting the air in the tympanum by swallowing while the nose and mouth are closed.

expiration (ex-pi-ra'shun) [L. *ex* out + *spira're* to breathe]. The act of breathing out or expelling air from the lungs or chest.

expiratory (ex-pir'a-to-re). Subservient or pertaining to expiration.

expirium (eks-pi're-um). An expiration.

expiscation (ex-pis-ka'shun). The long-continued study of symptoms for diagnostic purposes.

explant (ex-plant'). To take from the body and place in an artificial medium for growth. See also *implantation*.

explode (ex-plōd) [L. *explodere*, from *ex* out + *plaudere* to clap the hands]. 1. To cause to undergo sudden and violent decomposition. 2. To undergo sudden and violent decomposition.

exploration (ex-plo-ra'shun) [L. *exploratio*, from *ex* out + *plora're* to cry out]. An act of search, investigation, or careful examination, as in diagnosis.

exploratory (ex-plo-ra-to-re) [L. *exploratorius* pertaining to research]. Subservient an exploration.

explorer (ex-plor'er). An instrument for use in exploration.

explosion (ex-plo'zhun) [L. *explosio*]. 1. A sudden and violent outbreak, as of emotion. 2. The discharge of a neural cell.

explosive (ex-plo'siv). Characterized by explosions, or by sudden and violent outbreaks.

exponent (eks'po-nent). A symbol placed above and at the right of another symbol to indicate that the latter is to be raised to the power indicated by the former; as, x^2 . **hydrogen e.**, a figure used to express the hydrogen-ion concentration of a liquid. It is the logarithm of the figure expressing the concentration. It is represented by the symbol pH.

expression (ex-presh'un) [L. *expres'sio*]. The act of squeezing or pressing out; a term used in pharmacy, surgery, and obstetrics.

expulsive (ex-pul'siv) [L. *ex* out + *pellere* to drive]. Driving or forcing out; tending to expel.

expuralgin (ex-pur-al'jin). Potassium magnesium acetyl citrate: used as an analgesic and antirheumatic. Dose, 10 gr. (0.65 gm.).

exsanguinate (ex-sang-win-ät) [L. *ex* out + *sanguis* blood]. 1. To deprive of blood. 2. Bloodless; exsanguine; anemic.

exsanguination (ex-sang-win-a'shun). The forcible expulsion of the blood from a part.

exsection (ex-sek'shun). Same as *excision*.

exsector (ex-sek'tor). A cutting-instrument for use in performing exsections.

exsiccant (ex-sik'ant). Drying or absorbing moisture; also an agent so acting.

exsiccate (ex-sik-ät) [L. *ex* out + *siccus* dry]. To dry thoroughly; in chemistry, to deprive of the water of crystallization.

exsiccation (ex-sik-a'shun) [L. *ex* out + *siccus* dry]. The act of drying; in chemistry, the deprival of a crystalline substance of its water of crystallization.

exsiccosis (ex-sik-o'sis). [See *exsiccation*]. The bodily state produced by low water intake.

exsomatized (ek-so'mat-izd) [L. *ex* out of + Gr. *σῶμα* body]. Removed from the body.

extrophy (ex'tro-fe) [Gr. *ἐξ* out + *στροφειν* to turn]. The congenital eversion or turning inside out of an organ, as the bladder. **e. of the bladder**, a congenital malformation in which from deficiency of the abdominal wall and bladder, the latter organ appears to be turned inside out, having the internal surface of the posterior wall showing through the opening in the anterior wall.

ext. Abbreviation for *extract*.

extemporaneous (ex-tem-po-ra'ne-us) [L. *extemporaneus*]. Prepared on the spot or for immediate use: used of prescriptions and medicines.

extension (ex-ten'shun) [L. *extensio*]. 1. The movement by which the two ends of any part are pulled asunder. 2. A movement which brings the members of a limb into or toward a straight condition. **Bardenheuer's e.**, extension for fractured limbs with longitudinal, transverse, and rotary pulls, designed to produce extension in all the directions in which the muscles which cause the displacement act. **Buck's e.**, the extension of a fractured leg by weights, the foot of the bed being raised so that the body makes counterextension. **nail e.**, extension exerted on the distal fragment of a fractured bone by means of nails which are driven into the fragment.

extensometer (ex-ten-som'e-ter) [L. *extensus* extension + Gr. *μέτρον* measure]. An instrument for measuring distortion of specimens under test.

extensor (ex-ten'sor) [L.]. Any muscle which performs extension. See *muscles*, table of.

exterior (ex-te're-or) [L.]. Situated on or near the outside; outer.

extern, externe (ex'tern). A physician belonging to the staff of a hospital, but attending only during the day and living outside; also a member of a hospital staff who attends to patients of the outpatient department.

external (ex-ter'nal) [L. *externus* outside]. Situated or occurring on the outside; performed outside the body.

exteroceptive (ex'ter-o-sep'tiv). Sherrington's term for the external surface field of distribution of receptor organs. See *interoceptive*, *proprioceptive*, and *receptor*.

exteroceptor (ex'ter-o-sep'tor). Sherrington's name for terminal sense organs (receptors) which receive stimuli acting on the organism from without; the receptors which are situated in the ectodermal covering of the body. See *interoceptor*.

extima (ex'tim-ah) [L. "outermost" (tunic)]. The outermost coat of an artery.

extinguish (ex-ting'wish) [L. *extinguere*]. To put out, as a fire; to render extinct.

extirpation (ex-tir-pa'shun) [L. *extirpare* to root out, from *ex* out + *stirps* root]. Complete removal or eradication of a part.

extogan (ex'to-gan). Zinc peroxid, a light yellowish, tasteless powder, insoluble in water. It contains 9.8 per cent. of active oxygen.

extorsion (ex-tor'shun) [L. *ex* out + *tor'sio* twisting]. An outward rotation of the vertical cerebral meridians.

extra (ex'trah). A Latin word meaning outside of, beyond, in addition.

extra-anthropic (ex'trah-an-throp'ik). Same as *exanthropic*.

extra-articular (ex'trah-ar-tik'u-lar) [L. *extra* beyond + *articulus* joint]. Situated or occurring outside a joint.

extrabronchial (ex'trah-brong'ke-al). Outside of or independent of the bronchial tubes.

extrabuccal (ex-trah-buk'al). Outside of the mouth.

extrabulbar (ex-trah-bul'bar). Outside of or away from a bulb, as the medulla oblongata or the urethral bulb.

extracapsular (ex-trah-kap'su-lar). Situated or occurring outside a capsule.

extracarpal (ex-trah-kar'pal). Just outside the region of the wrist.

extracellular (ex-trah-sel'u-lar). Outside of a cell or cells.

extracorporeal (ex'trah-kor-po're-al) [L. *extra* beyond + *corpus* body]. Outside of the body: said of the stages of a parasite passed elsewhere than in the host.

extracorpuscular (ex'trah-kor-pus'ku-lar). Outside of the corpuscles.

extracranial (ex-trah-kra'ne-al). Outside of the cranium.

extract (ex'trakt) [L. *extractum*, from *ex* out + *trahere* to draw]. A preparation obtained by exhausting a drug with a menstruum (water, alcohol, ether, or other solvent), evaporating it to complete or approximate dryness, and then adjusting the product to a fixed standard. The official extracts are those of belladonna, cannabis, cascara sagrada, colchicum, colocynth, compound extract of colocynth, ox-gall, glycyrrhiza, pure extract of glycyrrhiza, hyoscyamus, malt, nuxvomica, rhubarb, and stramonium. **acetic e.**, an extract in which acetic acid is the menstruum used. **adrenale e.** Same as *suprarenal e.* **alcoholic e.**, one in which alcohol is used as the menstruum. **ammoniated e.**, one which is prepared by exhausting with ammonia as the menstruum. **animal e.**, an extract from some organ of an animal, obtained by digestion with a mixture of glycerin, alcohol, and boric acid, and believed to contain the active principle of the organ. **antityphoid e.** See *Jes's e.* **aqueous e.**, one in which water is the menstruum employed. **beef e.**, a watery extract of the soluble constituents of beef evaporated to a semisolid consistency at a low temperature in a vacuum. **ciliary e.**, a therapeutic preparation of the ciliary body of the ox: used in eye diseases. **compound e.**, one that is prepared from more than one drug. **dry e.**, a preparation, usually of some narcotic drug, made by drying the extract and powdering it with sugar of milk or some other inactive ingredient. **etheral e.**, one in which ether is used as the dissolving menstruum. **fluid e.** [L. *flu'idextractum*, *e. liq'idum*], a concentrated solution of the active principle of a drug of such strength that 100 c.c. of the product represent 100 gm. of the crude drug. **Gouldard's e.**, liquor plumbi subacetatis. **infundibular e.**, an extract of the infundibular part of the pituitary body. **Jez's e.**, a reddish extract from the organs of animals injected with typhoid bacilli: used in typhoid fever.

as an antitoxic. Called also *antityphoid e.* **Leube's e. of beef**, extract from beef that has been predigested by boiling with hydrochloric acid. **leukocyte e.**, an extract of leukocytes obtained from exudates produced in the pleural cavities of animals by the injection of an irritant: said to increase the immunizing power of the organism into which it is injected. **Liebig's e.**, an aqueous extract of beef evaporated to the consistence of a soft solid. **mammary e.**, an extract from the mammae of sheep: given to check hemorrhage and arrest the growth of uterine fibromata. Dose, 5 gr. (0.3 gm.). **parotid e.**, an extract made from the parotid gland of animals: used in dysmenorrhea. Dose, 5 gr. (0.3 gm.). **pilular e.**, a solid or semi-solid extract of some drug. **pollen e.**, a solution of protein from the pollen of certain plants, such as ragweed, used in the diagnosis and treatment of hay-fever. **powdered e.**, an extract that has been dried and pulverized. **renal e.**, an extract from the kidney of animals: recommended for morbid conditions due to deranged nitrogenous metabolism. **soft e.**, one which has a pilular consistence. **solid e.**, one prepared by evaporating a solution of the active part of a drug. **splenic e.**, an extract made from the spleen of sheep and oxen: given in anemia and typhoid fever. Dose, 5 gr. (0.3 gm.). **suprarenal e.**, a principle extracted from the suprarenal bodies, having the property of producing constriction of vessels when applied locally: used to produce vascular constriction in inflammation of the eyes and nose and in operations upon these parts, and also as a cardiac tonic. See *adrenalin*. **thebaic e.**, an anodyne opium preparation.

extraction (ex-trak'shun) [L. *ex* out + *tra* here to draw]. 1. The process or act of pulling or drawing out. 2. The preparation of an extract. **e. of a cataract**, the surgical removal of a cataractous lens. **flap e.**, extraction of cataract by an incision which makes a flap of cornea.

extractive (ex-trak'tiv). Any substance present in an organized tissue, or in a mixture in a small quantity, and requiring to be extracted by a special method.

extractor (ex-trak'tor). An instrument used in drawing out, pulling, or extracting.

extractum (ex-trak'tum) [L., from *ex* out + *tra* here to draw]. An extract.

extracystic (ex-trah-sis'tik). Outside a cyst or the bladder.

extradural (ex-trah-du'ral). Situated or occurring outside the dura mater.

extra-embryonic (ex'trah-em-bre-on'ik). Not a part of the embryo proper: applied to that portion of the embryo outside of the umbilical stalk.

extra-epiphyseal (ex'trah-ep-e-fiz'e-al). Away from, or unconnected with, an epiphysis.

extra-expiratory (ex'trah-eks-pi'r-at-o-re). Relating to forced expiration.

extragenital (ex'trah-jen'it-al). Lying or originating outside the genital organs.

extrahepatic (ex'trah-he-pat'ik). Outside of, or unconnected with, the liver.

extraligamentous (ex'trah-lig-am-en'tus). Occurring outside a ligament.

extramalleolus (ex'trah-mal-e'o-lus). The outer malleolus of the ankle-joint; the lower end of the fibula.

extramarginal (ex'trah-mar'jin-al). Below the limit of consciousness.

extramastoiditis (ex'trah-mas-toid-i'tis). Inflammation of the outer surface of the mastoid process and of the superincumbent tissues.

extramedullary (ex-trah-med'ul-a-re). Situated or occurring outside any medulla, especially the medulla oblongata.

extramural (ex-trah-mu'ral) [L. *ex* tra + *mu'ra* wall]. Situated or occurring without a wall.

extraneous (ex-tra'ne-us) [L. *extra* new external]. Existing or belonging outside the organism.

extranuclear (ex-trah-nu'kle-ar). Situated or occurring outside a nucleus.

extraparenchymal (ex'trah-par-en'kim-al). Outside of or formed outside of the parenchyma.

extrapelvic (ex-trah-pel'vik). Unconnected with the pelvis.

extraperineal (ex'trah-per-in-e'al). Away from the perineum.

extraperiosteal (ex'trah-per-e-os'te-al). Outside of or independent of the periosteum.

extraperitoneal (ex'trah-per-it-o-ne'al). Situated or occurring outside the peritoneal cavity.

extraplacental (ex'trah-pla-sen'tal). Independent of the placenta.

extraplantar (ex-trah-plan'tar). On the outside of the sole of the foot.

extrapolar (ex-trah-po'lar). Situated or occurring outside or not between the poles, as of a battery.

extraprostatic (ex'trah-pros-tat'ik). Not connected with the prostate gland.

extraprostatitis (ex'trah-pros-tat-i'tis). Paraprostatitis.

extrapulmonary (ex-trah-pul'mo-na-re). Not connected with the lungs.

extrapyramidal (ex-trah-pi-ram'id-al). Outside of the pyramidal tracts.

extrarectus (ex-trah-rek'tus). The external rectus muscle of the eye.

extraserous (ex-trah-se'rus). Outside of a serous cavity.

extrasomatic (ex'trah-so-mat'ik). Unconnected with the body.

extrasymphilitic (ex'trah-sif-il-it'ik). Superadded to a syphilitic virus or lesion.

extrasystole (ex-trah-sis'to-le). A premature contraction of the heart which is independent of the normal rhythm and arises in response to an impulse in some part of the heart other than the sino-auricular node. **auricular e.**, an extrasystole in which the stimulus is thought to arise in the remains of the cardiac tube incorporated in the auricle elsewhere than at the sinus. **auriculoventricular e.**, one in which the stimulus is supposed to arise in the auriculoventricular node; called also *nodal e.* **infranodal e.**, ventricular extrasystole. **interpolated e.**, a contraction taking place between two normal heartbeats. **nodal e.** See *auriculoventricular e.* **retrograde e.**, a premature ventricular contraction followed by a premature auricular contraction, due to transmission of the stimulus backward over the bundle of His. **ventricular e.**, one in which the stimulus is thought to arise in the ventricular portion of the auriculoventricular bundle.

Tracing of the radial pulse in a patient suffering from occasional extrasystoles. The extrasystole occurs at *x*. Note the compensatory pause of four-fifths of a second and the large pulse wave terminating this pause (Hay).

extratracheal (ex-trah-tra'ke-al). Situated or occurring outside the trachea.

extratubal (ex-trah-tu'bal). Outside of a tube.

extratympanic (ex-trah-tim-pan'ik). Outside the tympanum of the ear.

extra-uterine (ex-trah-u'ter-in). Situated or occurring outside the uterus.

extravaginal (ex-trah-vaj'in-al). Outside of the vagina or of a sheath.

extravasation (ex-trah-as-a'shun) [L. *ex* tra beyond + *vas* vessel]. 1. A discharge or escape,

as of blood, from a vessel into the tissues. 2. The process of being extravasated. 3. Blood or other substance which has been extravasated. **punctiform e.**, one which causes a tissue to be covered with minute bloody points.

extravascular (ex-trah-vas'ku-lar). Situated or occurring outside a vessel or the vessels.

extraventricular (ex'tra-ven-trik'u-lar). Situated or occurring outside a ventricle.

extravascular zone (ex-tra-h-viz'u-al). See *visual zone*, under *zone*.

extremal (ex-trem'it-al). Pertaining to or situated at an extremity.

extremities (ex-trem'it-as). Latin for *extremity*.

extremity (ex-trem'it-e). 1. The terminal portion of anything. 2. A limb; an arm or leg.

extrinsic (ex-trin'sik) [L. *extrin'secus*, from *ex'tra* outside + *secus* otherwise]. Coming from or originating outside; having relation to parts outside the organ or limb where found.

introspection (ex-tro-spek'shun) [L. *ex'tra* outside + *spec'ere* to look]. The reverse of introspection: the continued habit of inspecting one's own skin, associated with mysophobia, or insane dread of dirt.

extroversion (ex-tro-ver'shun) [L. *extrover'sio*, from *ex'tra* outside + *ver'tere* to turn]. 1. A turning inside out; extrophy. 2. A turning of the libido outward toward some object. Cf. *introversion*.

extrude (eks-trood'). To occupy a position of extrusion; said of a tooth.

extrudocclusion (ex-tro-du-klu'zhun). In dentistry, extrusion.

extrusion (ex-tru'zhun). A pushing out; a forcing out or expulsion; in dentistry, the condition of a tooth when it is pushed too far forward from the line of occlusion.

extubate (ex-tu'bāt) [L. *ex* out + *tu'ba* tube]. To remove a tube from.

extubation (ex-tu-ba'shun). The removal of a tube.

exuberant (ex-u'ber-ant) [L. *exuberare* to be very fruitful]. Copious or excessive in production; showing excessive proliferation.

exudate (ex'u-dāt) [L. *ex* out + *suda're* to sweat]. A substance thrown out by exudation; any adventitious substance deposited in or on a tissue by a vital process or a disease.

exudation (ex-u-da'shun) [L. *exsuda'tio*, from *ex* out + *suda're* to sweat]. 1. The outpouring of an adventitious substance, which becomes deposited in or upon the tissues. 2. An exude.

exudative (ex'u-da-tiv). Of or pertaining to a process of exudation.

exulcerans (eks-ul'ser-anz). Ulcerating.

ex ulcera'tio sim'plex. Superficial ulceration of the stomach.

exumbilication (ex'um-bil-e-ka'shun) [L. *ex* out + *umbilicus*]. 1. Marked protrusion of the navel. 2. Umbilical hernia.

exuvia (ex-u've-e) [L. *exu'ere* to strip]. 1. Cast-off epidermis. 2. A slough.

exuviation (ex-u-ve-a'shun). The shedding of any epithelial structure, as of the deciduous teeth.

eye (i) [L. *ocu'lus*; Gr. *ὄφθαλμός*]. The organ of vision. In shape the eye consists of a large sphere, with the segment of a smaller sphere, the *cornea*, in front. It is composed of three coats—the *sclerotic* and *cornea*, the *choroid*, and the *retina*—each coat being divided into several layers. Within the three coats are the refracting media—namely, the *aqueous humor*, the *crystalline lens*, and the *vitreous humor*. The *sclerotic*, or external coat, is white and fibrous. Posteriorly the fibers of the optic nerve enter through small perforations in the *lamina cribrosa*. The

inner surface is attached to the choroid by delicate connective tissue, the *lamina fusca*. The *cornea* is composed of five layers, the internal layer being a serous membrane, and sometimes called *Descemet's membrane*. The *choroid*, or middle coat, is chiefly composed of blood-vessels and pigment. Anteriorly, it terminates near the periphery of the lens in folds called the *ciliary processes*. The *retina*, or internal coat, is chiefly composed of nerve tissue, and is made up of three principal layers. The external layer, or Jacob's membrane, is composed of terminal nerve-cells, which, from their shape, are called the *rods* and *cones*. The *iris* is a curtain with a central perforation, the *pupil*, and is composed of smooth muscular fibers arranged both in a circular and in a radiating manner. It varies in color, and is suspended in the aqueous humor in front of the lens. The *ciliary ligament* is a ring of connective-tissue fibers surrounding the iris. The *ciliary muscle* surrounds the periphery of the iris and controls the convexity of the lens during accommodation. The *aqueous humor* fills the cavity between the cornea in front and the lens behind. The *vitreous humor* fills the space back of the lens, and is a clear, jelly-like substance containing mucin. It is surrounded by the *hyaloid membrane*. The *lens*, or *crystalline humor*, is a double convex lens between the vitreous and aqueous humors, and is held in place by an elastic *capsule* and *suspensory ligament*. The arteries of the eye are the short ciliary, the long ciliary, the anterior ciliary, and the central artery of the retina. The nerves are the optic and the long and short ciliary nerves. **Bright's e.**, the eye as affected in chronic disease of the kidney. **cinema e.** See *Klieg e.* **epiphyseal e.** See *parietal e.* **fixing e.**, in strabismus, the eye which is directed toward the object of vision. **Klieg e.**, a condition marked by conjunctivitis, edema of the eyelids, lacrimation, and photophobia due to exposure to the intense lights (Klieg lights) used in making moving picture photographs. Called also *cinema e.* **monochromatic e.**, an eye which can perceive only one color. **parietal e.**, in some lower vertebrates a modification of the pineal body to form a dorsal median eye; called also *parietal organ*, *pineal e.*, *epiphyseal e.* **pheasant's e.**, Adonis. **pineal e.** See *parietal e.* **pink e.**, acute epidemic conjunctivitis produced by hemophilus of Koch-Weeks. **reduced e.**, **schematic e.**, an apparatus with two refracting elements, one representing the cornea and the other the lens; also a picture or drawing illustrating, but not exactly representing, the structure of the eye. **Snellen's reform e.**, an artificial eye composed of two concavoconvex plates with an empty space between. **squinting e.**, the affected eye in strabismus. **trichromatic e.**, the normal eye: one in which the red, green, and blue end-organs are in a normal state.

eye-area (i'a're-ah). A nerve-center in the frontal portion of the cortex.

eyeball (i'bawl). The globe or ball of the eye.

eyebrow (i'brow). The supercilium: the bony ridge and fold of skin above either eye; also the hairy cover of the same.

eye-cup (i'kup). An embryonic structure developed from the optic evagination which develops into the retina.

eye-ground (i'ground). The fundus of the eye, which can be seen on ophthalmoscopic examination.

eyelash (i'lash). A cilium or hair growing upon the edge of an eyelid.

eyelid (i'lid). Either one of the two movable lids or curtains which protect the eye in front.

eye memory. Memory for visual impressions.

eye-minded. Remembering chiefly the impressions made on the eye.

Vertical section through the eyeball: a, sclera; b, choroid; c, ciliary muscle; d, iris; e, cul-de-sac of conjunctiva; f, anterior chamber and aqueous humor; g, crystalline lens; h, posterior chamber; i, angle of anterior chamber; j, suspensory ligament of lens; k, cornea; l, vitreous; m, optic nerve with central artery of retina; n, retina; o, o, ocular muscles.

Right eye from before, the eyelids separated by hooks: Ps, plica semilunaris; Pls, Pls, superior and inferior lacrimal puncta; Car, lacrimal caruncle; Lpm, internal tarsal ligament.

Comparative diagram showing the change in the shape of the crystalline lens during accommodation. The right side shows the lens at rest.

Diagram of the lacrimal apparatus: a, lacrimal gland; b, tarsal cartilage; c, nasal duct; d, lacrimal canaliculus.

The external ocular muscles: a, levator of upper lid; b, superior rectus; c, external rectus; d, inferior rectus; e, superior oblique; f, internal rectus; g, inferior oblique.

The eye with its nerves and blood-vessels: a, section of conjunctiva; b, sclerotic; c, cornea; d, pupil; e, section of superior rectus muscle; f, inferior rectus muscle; g, external rectus muscle; h, superior oblique muscle; i, ophthalmic artery; j, ophthalmic vein; k, optic nerve; l, ophthalmic nerve; m, motor nerve of eye; n, ophthalmic or lenticular ganglion.

eyepiece (i'pēs). The lens or combination of lenses in a microscope which is next the eye, and which magnifies the image made by the objective. See *ocular*. **e. micrometer**. See under *micrometer*.

eye-shield (i'shēld). A covering for the eyes to protect them from light or from injury.

eye-speculum (i'spek'u-lum). An appliance for keeping the eyelids apart.

eye-spot (i'spot). The rudiment of an eye in the embryo.

eye-stone (i'stōn). The operculum of a small shell or other small calcareous object; used for removing foreign substances from the eye.

eye-strain (i'strān). Weariness of eye from over-use or from uncorrected defect in focus of eye.

eye-tooth (i'tooth). An upper canine tooth.

eye-wash. See *collyrium*.

F

F. 1. An abbreviation for *Fahrenheit*, *fat*, *field of vision*, *Fürstenau*, and *formula*. 2. The chemic symbol of *fluorin*.

F₁. The "first filial generation" produced by crossing two unlike individuals.

F₂. The "second filial generation" produced by mating together two members of the F₁ generation.

FA. Abbreviation for *fatty acid*.

F. A. Abbreviation for *field ambulance*.

fabella (fa-bel'ah), pl. *fabellæ* [L. "little bean"]. A sesamoid fibrocartilage on the gastrocnemius muscle.

fabere sign (fab'er-e). See *Patrick's test*, under *tests*.

Fabiana (fab-e-a'nah). See *pichi*.

fabism (fa'bizm) [L. *fa'ba* bean]. A disease of Italy caused by eating of the bean, *Vicia fa'ba*. Cf. *lathyrism*.

Fabricius (fab-ris'e-us), **Hieronymus** [It. *Geronimo Fabrizio*]. An Italian anatomist and surgeon, born 1537; died 1619. He was a pupil of Fallopius and was the teacher of Harvey.

F.A.C.D. Abbreviation for *Fellow of the American College of Dentists*.

face (fās) [L. *fa'cies*]. The anterior aspect of the head from the forehead to the chin inclusive. **dish f.**, **dished f.**, a facial deformity characterized by a prominence of the forehead, as recession of the midface and lower half of the nose, a lengthening of the upper lip, and a prognathic chin; called also *facies scaphoidea*. **Hippocratic f.** See *facies hippocratica*. **moon-shaped f.**, the peculiar rounded face characteristic of myxedema.

facet (fas'et) [Fr. *facette*]. 1. Any small plane surface on a hard body, as on a bone. 2. A small abraded spot on a tooth.

facial (fa'shal) [L. *facia'lis*]. Pertaining to the face. In dentistry, designating the outer surfaces of the teeth collectively (A. D. A.).

facies (fa'she-ēz) [L. for "face"]. 1. The face. 2. The expression or appearance of the face. 3. [B. N. A.] A surface. **f. abdomina'lis**, the expression of the face characteristic of abdominal disease. It is a pinched, anxious, furrowed face, with nose and upper lip drawn up. **adenoid f.**, the stupid expression, with open mouth, seen in children with adenoid growths. **f. anterior**, anterior surface. [B. N. A.] The anterior surface of a molar or premolar tooth. **aortic f.**, the facial appearance of persons with aortic insufficiency: the cheeks are somewhat shrunken, the complexion pale and sallow, and the sclera pale and bluish. **f. articular'is**, an articular surface. **f. bucca'lis** [B. N. A.], the buccal surface of a molar tooth. **cardiac f.**, the anxious expression of patients with heart disease, marked by bright, watery, staring eyes, wide palpebral slits, tensely held mouth, and face slightly shrunken. **f. contact'us** [B. N. A.]. See *contact surface*, under *surface*. **Corvisart's f.**, the facial expression characteristic of cardiac insufficiency. **f. dorsa'lis**, dorsal surface. **f.**

hepat'ica, a thin face with sunken eyeballs, sal-low complexion, and yellow conjunctivæ, characteristic of certain chronic disorders of the liver. **f. hippocratic'ica**, the hippocratic countenance: a drawn, pinched, and livid appearance of the face, indicative of approaching extinction. **Hutchinson's f.**, a peculiar appearance in ophthalmoplegia externa: the eyeballs are fixed, the eyebrows raised, and the lids drooping. **f. labia'lis** [B. N. A.], the labial surface of a tooth. **f. latera'lis** [B. N. A.], lateral surface. **f. leonti'na**, "lion's face": a peculiar, lion-like appearance of the face, seen in certain cases of leprosy. See *leontiasis*. **f. lingua'lis** [B. N. A.]. See *lingual surface*, under *surface*. **Marshall Hall's f.**, the facies of hydrocephalus. **f. masticato'ria** [B. N. A.], the chewing surface of a tooth. **f. media'lis** [B. N. A.], the medial surface. **mitral f.**, **mitrotricuspid f.**, the expression of patients with mitral disease, marked by rosy, flushed cheeks, dilated capillaries, and cyanosis. **myopathic f.**, the peculiar facial expression produced by relaxation of the facial muscles. **f. os'sea** [B. N. A.], the bony skeleton of the face. **f. ova'rica**, **f. ovari'na**, an anxious look expressive of ovarian disease. **Parkinson's f.**, a stolid expression of face pathognomonic of paralysis agitans. **f. poste'rior**, posterior surface. **f. scaphoi'dea**. See *dish face*, under *face*. **f. symphy'seos**, the symphysis pubis. **typhoid f.**, **f. typho'sa**, the vacant and bewildered, often wild and defiant, expression, with face flushed and of a dusky, leaden hue, seen in early stages of typhoid fever. **f. uteri'na**, the facial expression characteristic of uterine disease. **f. vola'ris**, volar surface. **Wells's f.**, the facial expression of ovarian disease.

facilitation (fas-il-it-a'shun). The promotion or hastening of any natural process; the reverse of inhibition. Specifically, the effect produced in nerve tissue by the passage of an impulse. The resistance of the nerve is diminished so that a second application of the stimulus evokes the reaction more easily. Called also *Bahnung*. Cf. *law of facilitation*.

faciobrachial (fa'she-o-bra'ke-al). Pertaining to the face and arm.

faciocervical (fa'she-o-ser'vik-al). Affecting the face and neck.

faciolingual (fa'she-o-ling'wal) [L. *fa'cies* face + *lin'gua* tongue]. Pertaining to the face and tongue.

facioplasty (fa'se-o-plas'te). Plastic surgery of the face.

facioplegia (fa'se-o-ple'je-ah) [L. *fa'cies* face + Gr. *πλῆγη* stroke]. Facial paralysis.

facioscapulohumeral (fa'she-o-skap'u-lo-hu'me-ral). Pertaining to the face, scapula, and arm.

F. A. C. P. Abbreviation for *Fellow of the American College of Physicians*.

F. A. C. S. Abbreviation for *Fellow of the American College of Surgeons*.

factitious (fak-tish'us) [L. *factic'ius*]. Artificial; not natural.

factor (fak'tor) [L. *fac'tor* marked]. 1. One of the elements that contribute to produce a result. 2. One of the quantities or symbols which, when multiplied together, give a result. 3. Same as *gene*. **P.-P. f.**, a substance present in lean meat, milk, green vegetables, eggs, yeast, and some butter which cures or prevents pellagra. It may be a part of or identical with water-soluble vitamin B. **Trapp's f.**, the last two figures expressive of the specific gravity of urine; when multiplied by 2 they give the number of parts of solids per 1000.

facultative (fak'ul-ta-tiv). Not obligatory; voluntary; potential; capable of assuming a part.

faculty (fak'ul-te) [L. *facul'tas*]. 1. Any normal power or function, especially a mental one. 2. The corps of professors and instructors of a college or university. **fusion f.**, the power of blending into one the two images seen by the two eyes.

Fadenreaction (fah'den-re-ak'shun) [Ger.]. See *Mandelbaum's reaction*, under *reaction*.

fæcal, fœces, etc. See *fecal, feces*, etc.

fæcin (fêk'in). A proprietary yeast preparation.

fœnum græcum (fê'num grê'kum) [L. "Greek hay"]. See *fœnugreek*.

fagaramidin (fa-gar-am'id-in). A compound obtained from the root of *Fagara xanthylodes*; it has a narcotic action on cold-blooded animals.

Faget's sign (fazh-âz') [Jean Charles Faget, a French physician, born 1818]. See under *sign*.

fagin (fa'jin) [L. *fa'gus* beech]. A narcotic principle from the nut of the beech.

fagol (fa'gol). A condensation product of creosote and formaldehyd.

fagopyrism (fag-op'ir-izm) [L. *fagopyrum* buckwheat]. Poisoning by buckwheat.

Fahr. Abbreviation for *Fahrenheit*.

Fahrenheit (fah'ren-hit) [Gabriel Daniel Fahrenheit, a German physicist, 1686-1736]. Noting a thermometer, also a thermometric scale, invented by Fahrenheit. See *thermometer*.

faint, fainting (fânt, fânt'ing). See *syncope*.

faith-cure (fâth'-kür). The cure or attempted cure of disease by exercise of faith on the part of the patient.

falcadina (fahl-ka-de'nah). A disease of Istria characterized by the formation of papillomata.

falcate, falciform (fal'kât, fal'sif-orm) [L. *falx* sickle + *for ma* form]. Shaped like a sickle.

falcial (fal'shal). Pertaining to a falx.

falcula (fal'ku-lah) [L.]. The falx cerebelli.

falcular (fal'ku-lar) [L. *falx* sickle]. Sickle-shaped.

fallectomy (fal-ek'to-me). Excision of a portion of the fallopian tube.

falling of the womb (faw'l'ing). The abnormal descent of the uterus into the vagina.

falling-sickness. See *epilepsy*.

fallopian (fal-o'pe-an) [Gabiello Fallopio (*Fallopius*), an Italian anatomist, 1523-1562]. Described by or named for Fallopius. See *aqueduct*, *hiatus*, *ligament*, *tube*, etc.

fallostomy (fal-os'to-me). Salpingostomy.

fallotomy (fal-ot'o-me). Division of the fallopian tube.

false (fawlz) [L. *fal'sus*]. Not true; not genuine; apparent, but not real.

falx (falks), pl. *fal'ces* [L. for "sickle"]. A sickle-shaped organ or structure. **f. cerebel'li** [B N A], the process of dura which intervenes between the cerebellar hemispheres. **f. cer'e'bri** [B N A], the dural fold which separates the cerebral hemispheres. **f. inguina'lis** [B N A], the conjoined tendon. **f. ligamento'sa**, the falciform ligament.

fames (fa'mêz). Latin for *hunger*.

familial (fam'il'e-al) [L. *famil'ia* family]. Affecting the different members of a family.

family (fam'il-e). 1. A group descended from a common ancestor. 2. In classification, the main

division of an order. **degenerate f.**, a family that produces many socially unfit members and few desirable members. Several such family histories have been worked out. **Jukes f.**, a family located mostly in New York State; the history covers five generations. **Kallikak f.**, an American family with two branches; one unfit, the other highly respectable; history from the American Revolution. **Zero f.**, a Swiss family of three branches, two of which are respected and one very unfit. A very complete history from the 17th century.

famine fever. Relapsing fever. See *fever*.

Fanapa'pea intestinalis. See *Chilomastix mesili*.

fandorine (fan'do-rin). A proprietary preparation for the internal treatment of female diseases.

fang (fang). 1. The root of a tooth. 2. A carnassial tooth of a beast or the venomous tooth of a serpent.

fanghi di sclefani (fang'e de skle-fah'ne). Volcanic earth used in treatment of acne rosacea.

fango (fan'go) [Ital.]. A clay or mud from thermal springs at Battaglio, in Italy; applied to gouty and rheumatic joints, etc.

fangothérapie (fan-go-ther'ap-e) [*fango* + Gr. *θεραπεία* treatment]. Treatment by the application of fango.

Fannia (fan'e-ah). A genus of flies, the larvae of which are often found in human feces. *F. canicularis* is the lesser house fly and *F. scalaris* is the latrine fly.

fan-sign. See under *sign*.

fantascope (fan'tas-köp) [*fantasy* + Gr. *σκοπεῖν* to view]. An apparatus for enabling a person to converge the eyes, and so observe certain phenomena of binocular vision.

Far. Abbreviation for *faradic*.

Farabeuf's triangle (far-ab-uf's) [Louis Hubert Farabeuf, French surgeon, 1841-1910]. See under *triangle*.

farad (far'ad) [Michael Faraday, an English physicist, 1791-1867]. The unit of electric capacity; the capacity to hold one coulomb with a potential of one volt.

faradic, faradaic (far-ad'ik, far-ad-a'ik). Pertaining to faradism.

faradimeter (far-ad-im'et-er) [*faradic* + Gr. *μέτρον* measure]. An instrument for measuring faradic electricity.

faradipuncture (far'ad-i-punk'chur). The application of the faradic current by means of needle-electrodes thrust into the tissues.

faradism (far'ad-izm). 1. Induced electricity. 2. Induced electricity in a rapidly alternating current. 3. Faradization.

faradization (far'ad-iz-a'shun). The therapeutic use of induced currents. **galvanic f.**, the use of a galvanic or continuous electric current conjointly with that of an alternating current.

faradocontractility (far'ad-o-kon-trak-til'it-e). Contractility in response to faradic stimulus.

faradomuscular (far'ad-o-mus'ku-lar). Resulting from the application of the faradic current to a muscle.

faradonervous (far'ad-o-ner'vus). Resulting from the application of the faradic current to a nerve.

faradopalpation (far'ad-o-pal-pa'shun). Galvanopalpation.

farcin du bœf (far-sa d'bef'). See *cattle farcy*, under *farcy*.

farcinoma (far-sin-o'mah). A glanderous tumor. **farcy** (far'se). The more chronic and constitutional form of glanders. See *glanders*. **button f.**, farcy characterized by the formation of small tubercular nodules in the skin of the limbs, thorax, and abdomen. **cattle f.**, a disease of cattle caused by infection with *Streptothrix farcinica* (*Ac-*

linomycetes nocaritii), and characterized by the formation of cheesy nodules in the subcutaneous tissue and the organs. **cryptococcus f.** See *lymphangitis epizootica*.

fardel-bound (far'del-bownd). Having an inflamed abomasum and distended omasum, so that chewing of the cud is impossible; a condition seen in cattle and sheep.

fareol (fa're-ol). A proprietary antipyretic and anodyne preparation.

farfara (far'far-ah). The dried leaves of *Tussilago farfara*. See *Tussilago*.

farina (fa-ri'nah) [L.]. 1. Meal or flour. 2. A starchy food prepared from maize. **f. ave'na**, oatmeal. **f. trit'ici**, wheaten flour.

farinaceous (far-in-a'se-us) [L. *farina'ceus*]. 1. Of the nature of flour or meal. 2. Starchy; containing starch.

farinometer (far-in-om'et-er). An instrument for determining the percentage of gluten in flour.

far-point (far'point) [L. *punctum remotum*]. The farthest point at which, with the greatest relaxation of accommodation, objects can be distinctly seen.

far-sight (far'sit). See *hypermetropia* and *presbyopia*.

Farr's law (farz) [William Farr, English medical statist, 1807-1883]. See under *law*.

Farre's line (farz) [Frederick John Farre, an English gynecologist, 1804-1886]. See *line*.

Farre's tubercles (farz) [John Richard Farre, an English physician, 1775-1862]. See under *tubercle*.

Fasc. Abbreviation for *L. fasciculus*, bundle.

fascia (fash'e-ah) [L. "band"]. 1. A sheet or band of tissue which invests and connects the muscles. 2. A serrated band under the hippocampus minor.

Abernethy's f., a sheet of areolar tissue lying over the external iliac artery. **anal f.**, the ischio-rectal fascia. **aponeurotic f.**, any fascia that serves to keep a muscle in its place and to connect muscles and tendons. **bicipital f.**, a fascia given off from the biceps tendon of the arm, continuous with the deep fascia of the forearm. **Buck's f.**, the continuation of Colles' fascia upon the penis. **f. bul'bi** [B N A], Tenon's capsule. **f. of Camper**, the superficial layer of the superficial fascia over the lower portion of the abdomen. **cervical f.**, **deep**, one that invests the muscles, vessels, and nerves of the neck. **cervical f.**, **superficial**, a thin lamina external to the platysma myoides. **f. cine'rea**, a band extending from the lateral striæ of the corpus callosum to the fascia dentata. **clavipectoral f.**, the costocoracoid membrane. See under *membrane*. **Cloquet's f.**, the areolar tissue closing the femoral ring. **Colles' f.**, the deep layer of the superficial perineal fascia. **Cooper's f.**, the fascia transversalis. **cremasteric f.**, a thin covering of the spermatic cord, formed by fibers of the cremasteric muscles. **cribriform f.**, that part of the superficial fascia of the thigh which covers the saphenous opening. **f. cribro'sa** [B N A], cribriform fascia. **Cruveilhier's f.**, the superficial perineal fascia. **cuneate f.**, a continuation of the dorsolateral column of the spinal cord into the oblongata. **deep f.**, a dense, firm, fibrous membrane investing the trunk and limbs, and giving off sheaths to the various muscles. Called also *aponeurotic f.* **Dénonvillier's f.**, a portion of the rectovesical fascia between the rectum and prostate gland. **f. dentata**, **dentate f.**, **f. dentata hippocampi** [B N A], a serrated strip of gray matter under the inner border of the hippocampus major. **f. diaphragmatis pelvis inferior** [B N A], the ischio-rectal fascia. **f. diaphragmatis pelvis superior** [B N A], the rectovesical fascia. **f. diaphragmatis urogenitalis inferior** [B N A], the superficial layer of the triangular ligament. **f. diaphragmatis urogenitalis superior** [B N A], the deep layer

of the triangular ligament. **endothoracic f.**, a dome-shaped structure at the root of the neck, to which the deep cervical fascia is attached. **extrapleural f.**, a structure sometimes found at the root of the neck, a prolongation of the endothoracic fascia; important as possibly modifying the auscultatory sounds at the apex of the lung. **fibro-areolar f.** Same as *superficial f.* **Godman's f.**, a fascia at the root of the neck, extending to the pericardium. **iliac f.**, a strong fascia covering the inner surface of the iliac and psoas muscles. **iliopectineal f.**, the fascia covering the floor of the iliopectineal fossa and made up of the iliac and pectineal fasciæ. **infundibuliform f.**, a process of the transversalis fascia over the spermatic cord. **intercolumnar f.**, the pouch which covers the spermatic cord and testis. **ischio-rectal f.**, that which covers the perineal side of the levator ani. **f. la'ta** [B N A], the wide, dense sheaths of the muscles of the thigh. **lumbodorsal f.**, the combined lumbar and dorsal fasciæ. **masseteric f.**, a layer of the deep cervical fascia covering each masseter muscle. **f. nu'chæ**, the layer of fascia beneath the trapezius and rhomboid muscles. **obturator f.**, **f. obturato'ria** [B N A], the parietal layer of the pelvic fascia. **palmar f.**, a stout layer beneath the skin of the palm. **pectineal f.**, the pubic portion of the fascia lata. **pelvic f.**, the fibrous lining of the interior of the pelvis. **perineal f.**, three layers of fascia between the muscles of the perineum. **plantar f.**, the deep fascia of the sole. **f. propria**. 1. One of the coverings of an oblique inguinal hernia, derived from the infundibuliform fascia. 2. The metamorphosed fascial covering of a femoral hernia. **f. rec'ta**, the sheath of the rectus muscle. **recto-vesical f.**, the fascia forming the inner sheath of the levator ani muscle. **Richert's f.**, a fold of extraperitoneal fascia enveloping the obliterated umbilical vein. **scalene f.** Same as *Sibson's f.* **Scarpa's f.**, a part of the deep layer of superficial fascia of the abdomen which overlies Poupart's ligament. **Sibson's f.**, the scalenus minimus muscle. See under *muscles*. **table of.** **spermatic f.**, **external intercolumnar f.**, a fascia connected with the pillars of the external abdominal ring. **f. spiralis**, a form of spiral bandage. **superficial f.**, a thin and open lamina lying directly beneath the skin. **f. of Tenon**, a fibrous sheath inclosing part of the eyeball, and helping to form the tunica vaginalis of the eye. **Thomson's f.**, occasional yellowish fibers covering the inner half of the external abdominal ring. **thyrolaryngeal f.**, the fascia investing the thyroid body and attached to the cricoid cartilage. **transversalis f.**, that which lies between the transversalis muscle and the peritoneum. **Tyrrell's f.** Same as *Dénonvillier's f.*

fascial (fash'e-al). Pertaining to or of the nature of a fascia.

fascioplasty (fash'e-ah-plas-te) [*fascia* + Gr. *πλάσσειν* to form]. A plastic operation on a fascia.

fascicular, fasciculate, fasciculated (fas-ik'ular, fas-ik'u-lät, fas-ik'u-la-ted). Clustered together. **f. bladder**, a bladder in which there is muscular hypertrophy, due to obstruction, the muscular bundles interlacing in all directions.

fasciculation (fas-ik-u-la'shun). Arrangement in fasciculi.

fasciculus (fas-ik'u-lus) [L. dim. of *fascis* bundle]. A small bundle or cluster, chiefly of nervous or muscular fibers; specifically, a subdivision of the funiculi of the spinal cord, containing fibers belonging to more than one tract. The term is sometimes used as synonymous with *tract*. **f. aberrans of Monakow**, the rubrospinal tract. **f. acusticus**, one of a series of white striæ extending transversely across the floor of the fourth ventricle of the brain. **f. anterior prius**

[B N A]. See *f. pro'prius*. **f. anterolateralis superficialis** [B N A], a bundle of nerve-fibers in the ventral and lateral funiculus of the spinal cord which includes among other tracts the spinotectal tract and ventral spinocerebellar tract. Called also *Gowers's tract* and *fasciculus ventrolateralis superficialis*. **f. arcuatus**, the superior longitudinal fasciculus. **Arnold's f.**, the frontal tract of the crista. **f. atrioventricularis**, **auriculoventricular f.** Same as *bundle of His*. **f. cerebellospinalis** [B N A]. See *spinocerebellar tract*, under *tract*. **cuneate f.**, **f. cuneatus**, the lateral portion of the dorsal funiculus of the spinal cord; called also *column of Burdach*. **f. dorsolateralis**, a fasciculus of the spinal cord made up of unmyelinated fibers from the dorsal roots together with myelinated fibers of the fasciculus proprius. Called also *Lissauer's tract* and *marginal bundle*. **f. exilis**, a cluster of muscle-fibers connecting the flexor pollicis longus with the inner condyle of the humerus, or with the coronoid process of the ulna. **extrapyramidal motor f.**, the rubrospinal tract. **Fleischig's f.**, the anterior ground-bundle and the lateral ground-bundle. See under *bundle*. **Foville's oblique f.**, the peduncle of the cerebellum. **fundamental f.** See *f. pro'prius*. **f. of Gowers**. See *f. anterolateralis superficialis*. **f. gracilis** [B N A], the median portion of the dorsal funiculus of the

and external to the corpus callosum, and between the cingulum and the superior longitudinal bundle of Burdach. **olivary f.**, a fillet beneath and inclosing the olivary body. **oval f.**, an area of descending fibers in the posterior funiculus of the spinal cord near the posterior septum; called also *median root zone*. **f. pedunculomammillaris** [B N A], a tract of fibers extending from the mammillary body to the tegmentum and base of the cerebral peduncle. **f. pro'prius**. 1. That part of the white matter of the spinal cord which borders the gray matter and contains correlation fibers. It is arranged in dorsal, lateral, and ventral subdivisions; called also *ground bundle*, *basis bundle*, and *fundamental bundle*. 2. The arcuate fibers of the cerebrum. **pyramidal f.**, **direct**, a part of the anterior column of the cord extending to the pyramid. Called also *f. of Türck*. **f. retroflexus** [B N A], a small bundle of nerve-fibers running from the habenula to the interpeduncular space; called also *Meyner's fasciculus* and *habenulopeduncular tract*. **f. of Rolando**, the enlarged head of the posterior cornu of gray matter in the oblongata. **f. rotundus**. Same as *solitary f.* **solitary f.**, fibers that connect the internal capsule and the lenticular nucleus with parts below. Called also *tractus solitarius*, *respiratory bundle*, and *solitary bundle*. **f. subcallosus**, a tract of long association fibers be-

Diagram of a cross-section through the human spinal cord to illustrate arrangement of the fiber tracts in the white matter and of the nerve-cells in the gray matter of the ventral column. In the white matter the outlines of some of the more important tracts are schematically indicated, ascending fibers on the right side and descending fibers on the left (Herrick).

spinal cord; called also *column of Goll*. **f. inominatus**, either of two bundles of nerve-fibers within the medulla oblongata, continuous with the fasciculus teres. **f. interfascicularis**, the comma tract or tract of Schultze; a fasciculus of fibers in the dorsal part of the fasciculus proprius containing some descending branches of the dorsal root fibers. **f. lateralis pro'prius** [B N A]. See *f. proprius*. **longitudinal f.**, **posterior**, a bundle of nerve-fibers in the pons and crus joining the corpora quadrigemina and the nuclei of the fourth and sixth nerves with the structures below; called also *medial longitudinal bundle* and *posterior longitudinal bundle*. **f. longitudinalis medialis** [B N A]. Same as *longitudinal f.*, *posterior*. **maculary f.**, a class or system of nerve-fibers which originate in the macula lutea. Some are uncrossed (on the temporal side) and others are crossed fibers (on the nasal side of the retina). **f. marginalis ventralis**, a fasciculus made up of the tectospinal tract and the vestibulospinal tract. **Meynert's f.** See *f. retroflexus*. **f. obliquus pontis** [B N A], a fasciculus of fibers in the ventral surface of the pons extending from the anterior mesal portion outward and backward. **f. occipitofrontalis** (of Déjérine), a bundle of fibers in the brain extending along the external angle of the lateral ventricle, within the corona radiata, above the caudate nucleus, and beneath

neath the callosum, running to the frontal, occipital, and parietal lobes. **f. sulcomarginalis**, fibers of the ventral fasciculus proprius adjacent to the ventral fissure of the spinal cord. **Tarin's f.**, fascia dentata. **f. teres**, the funiculus teres. **f. thalamomammillaris** [B N A]. See *mammillothalamic tract*, under *tract*. **trineural f.**, a small bundle of nerve-fibers in the upper part of the spinal cord, connecting the glossopharyngeal and vagus nerves. **f. of Türck**. Same as *pyramidal f.* **unciform f.**, **uncinate f.**, **f. uncinatus** [B N A], a set of fibers connecting the frontal and temporosphenoid lobes. **f. ventrolateralis superficialis**. See *f. anterolateralis superficialis*.

fasciitis (fas-e-i'tis). Inflammation of fascia.

fasciodesis (fas-e-o-d'e-sis) [L. *fascia* + Gr. *deōsis* binding]. The operation of suturing a tendon to a fascia.

Fasciola (fas-i'o-lah). A genus of flukes. **F. gigantica**, a species resembling *F. hepatica*, but larger and found in the livers of oxen, goats, giraffes, zebras, etc., in Senegambia. **F. hepatica**, the common liver-fluke of sheep, oxen, goats, horses, and other herbivorous animals. It is occasionally found in the human liver, where it may cause dangerous symptoms by obstructing the biliary passages, causing enlargement of the liver, with degeneration and cyst formation. Several snails

of the genus *Limnaea* act as invertebrate hosts. Called also *Fasciola humana*, *F. venarum*, and *Distoma hepaticum*.

fasciola (fas-e'o-lah) [L. "strip of cloth"]. The fasciae dentata. **f. cine'ra**, the upward extension of the fasciae dentata.

fasciolar (fas-e'o-lar). Pertaining to the fasciola or fasciae dentata.

Fasciolet'ta ilioca'na. Same as *Echinostoma iliocanum*.

fascioliasis (fas-e-o-li'as-is). Infection of the organism with *Fasciola hepatica*.

Fasciolop'sis bus'kii. A trematode worm found in the gall-bladder and duodenum of residents in Asia. It is the largest of the intestinal flukes, and is said to cause indigestion, nausea, headache, and diarrhea. The intermediate hosts are the mussels, *Planorbis canosus* and *Segmentina largillierii*. Other species are *F. fuelleborni* from Calcutta and Egypt, *F. goddardi* from China, *F. rathouisi* from Asia, *F. spinifera* from China.

fascioplasty (fash'e-o-plas-te). See *fascioplasty*.

fasciorrhaphy (fas-e-or'af-e) [*fascia* + Gr. *ῥάφω* suture]. The suturing together of torn or divided fasciae.

fasciotomy (fas-e-o'to-me) [*fascia* + Gr. *τέμνω* to cut]. Surgical incision and division of a fasciae.

fascitis (fas-i'tis). Inflammation of a fasciae.

fast (fast). Resistant to destruction or to staining: said of bacteria. Cf. *acid-fast* and *serum-fast*.

fastidium (fas-tid'e-um). Repugnance to food.

fastigatum (fas-tig-a'tum) [L. "pointed"]. The nucleus fastigii, or tegmental nucleus.

fastigium (fas-tij'e-um) [L. "ridge"]. 1. The angle at the junction of the inferior vermiform process with the velum musculare anterius. 2. The acme, or highest point, as of a fever.

fastness (fast'nes). The property of bacteria to resist the action of stains or of destructive agents.

fat (fat). 1. The oily substance that covers the connective tissue of an animal; mainly a compound of stearic, palmitic, and oleic acids with glycerol. 2. In chemistry, an organic ester consisting of the glycerol radical, C_3H_5 , combined with a fatty acid. **f.-cell**, **f.-necrosis**, etc. See under *cell*, *necrosis*, etc. **chyle f.**, fat in the form of an extremely fine emulsion taken into the chyle by the lymphatics of the intestine. **masked f.**, fat that exists in a tissue, but is not revealed by staining methods. **f.-milk**, centrifugalized cows' milk which contains in very nearly exact proportions the elements of human milk, except that the lactose is somewhat deficient. **molecular f.**, fat occurring in fine specks within the cells. **neutral f.**, a compound of a fatty acid and glycerin. **f.-pad**. See under *pad*. **protein f.** See *soap albumin*, under *albumin*. **f.-thrill**, a peculiar thrill sometimes experienced in abdominal examination, due to excessive fatness of the parietes.

fat-soluble A. A class of unknown substances in food which are concerned in inducing growth; they are vitamins, found in animal fats. Cf. *vitamin*.

fatigability (fat-ig-ab-il'it-e). Easily susceptible to fatigue.

fatigue (fah-tēg') [Fr.; L. *fatiga'tio*]. Weariness, usually from overexertion. **stimulation f.**, decreased excitability of a nerve from repeated stimulation. **f.-stuff**, toxic material due to tissue degeneration after excessive fatigue.

fatty (fat'e). Pertaining to fat. **f. series**, the open-chain series. See under *chain*.

fauces (faw'sēz) [L.]. The passage from the mouth to the pharynx. **isthmus of f.** See *isthmus faucium*.

Fasciola hepatica
(Mitchell).

Fauchard's disease (fo-sharz') [Pierre Fauchard, French dentist, 1680-1761]. See under *disease*.

faucial (faw'she-al). Pertaining to the fauces.

fauclitis (faw-si'tis). Inflammation of the fauces.

Fauvel's granules (fo-velz') [Sulpice Antoine Fauvel, French physician, 1813-1884]. Peribronchitic abscesses.

faveolate (fav-e'o-lāt) [L. *fave'olus*, from *fa'vus* honeycomb]. Honeycombed; alveolate.

favin (fa'vin). A preparation similar to trichophytin, but for use in favus.

favism (fa'vism) [Italian *fa'va* bean]. A disease, prevalent in Sardinia, caused by inhaling the flowers of the bean plant or eating the green beans.

favus (fa'vus) [L. "honeycomb"]. A contagious skin disease due to a parasitic fungus, *Achor'ion schönlein'ii*, and marked by the formation of round, cup-shaped crusts resembling honeycomb, which are usually situated over hair-follicles. The crusts are attended with intense itching, and have a peculiar moldy odor. Called also *tinea favosa*, *tinea fcosa*, *tinea lupinosa*, *tinea maligna*, *tinea vera*, *porrigo favosa*, *porrigo larvalis*, *porrigo lupinosa*, *porrigo sentulata*, *porrigophylla*, *dermatomycosis favosa*, *trichomykosis favosa*, *honeycomb ringworm*, and *crusted ringworm*. The disease may affect any part of the body, but occurs most frequently upon the scalp, resulting in loss of the hair. **f. circin'atus**, favus occurring on a circinate patch. **f.-cup**, any one of the cup-shaped divisions of one of the crusts that characterize favus. **f. herpet'icus**, favus in which the lesion is papulovesicular and studded with small yellow points. **f. herpetifor'mis**, mouse favus. **mouse f.**, a disease of mice, caused by the fungus *Achor'ion quinchea'num*; it may be transmitted to man. **f. mur'ium**, mouse favus. **f. pila'ris**, favus of the scalp.

Fe. Chemical symbol of iron (*ferrum*).

feather (feth'er). The abundant long hair on the fetlocks of Shire and Clydesdale horses.

Feb. dur. Abbreviation for *L. feb're duran'te*, while the fever lasts.

febralgene (feb-ra'l-jēn). An antipyretic and anodyne sedative. Dose, 2½-5 gr. (0.166-0.333 gm.).

febricant (feb'rik-ant). Causing fever.

febricide (feb'ris-id) [L. *fe'bris* fever + *cēdere* to kill]. Destroying fever.

febricity (fe-bris'it-e). Feverishness; the quality of being febrile.

febricula (fe-brik'u-lah) [L.]. A slight or temporary attack of fever.

febrifacient (feb-re-fa'shent) [L. *fe'bris* fever + *fa'cere* to make]. Producing fever.

febrific (feb-rif'ik). Producing fever.

febrifugal (fe-brif'u-gal) [L. *fe'bris* fever + *fuga're* to put to flight]. Dispelling or relieving fever.

febrifuge (feb-rif'ūj) [L. *fe'bris* fever + *fuga're* to dispel]. 1. Dispelling or reducing fever. 2. A remedy that allays fever.

febrile (feb'rīl) [L. *fe'bris* fever]. Pertaining to fever; feverish.

febrinol (feb'rīn-ol). A proprietary analgesic, antipyretic, and hypnotic medicine.

febris (fe'bris). Latin for fever. **f. colomben'sis**. See *Colombo fever*, under *fever*. **f. endem'ica rose'ola**, dengue. **f. entericoi'des**, entericoid fever. See *fever*. **f. meliten'sis**, Malta fever. **f. pal'lida**, an acute infectious malignant endocarditis occurring in Switzerland. **f. re-cur'rens**, relapsing fever. **f. ru'bra**, scarlatina. **f. sudora'lis**, undulant fever. **f. trita'a**, tertian intermittent fever. **f. un'dulans**, typhomalarial fever, Malta fever. **f. uveoparotide'a**, uveoparotid fever.

fecal (fe'kal). Pertaining to or of the nature of feces.

fecalith (fek'al-ith) [*feces* + Gr. *λίθος* stone]. An intestinal concretion formed around a center of fecal matter.

fecaloid (fek'a-loid). Resembling fecal matter.

fecaluria (fek-al-u're-ah) [*feces* + Gr. *ούρον* urine]. The presence of fecal matter in the urine.

feces (fe'sez) [L. *faeces*]. The excrement or unabsorbed residues of intestinal excretions discharged from the bowels.

Fechner's law (fek'nerz) [Gustav Theodor *Fechner*, Prussian natural philosopher, 1801-1887]. See *law*.

Fe(C₂H₃O₂)₂. Ferrous lactate.

Fe(C₂H₃O₂)₃. Citrate of iron.

FeCl₂. Ferrous chlorid.

FeCl₃. Ferric chlorid.

FeCO₃. Ferrous carbonate.

fecula (fek'u-lah) [L. *faecula* lees, dregs]. 1. Lees or sediment. 2. Starch; also the starchy part of a seed.

feculent (fek'u-lent) [L. *faeculentus*]. 1. Having dregs or a sediment. 2. Excrementitious.

fecundation (fe-kun-da'shun) [L. *fecunda'tio*]. Impregnation or fertilization. **artificial f.**, that which is effected by injecting semen into the uterus by means of a syringe.

fecundity (fe-kun'dit-e) [L. *fecun'ditas*]. Ability to produce offspring; fruitfulness.

Fede's disease (fa'daz) [Francesco *Fede*, an Italian physician, 1832-1913]. Riga's disease. See under *disease*.

Federici's sign (fe-de-re'tshēz) [Cesare *Federici*, an Italian physician, 1832-1892]. See *sign*.

fedren (fed'ren). A proprietary brand of ephedrin sulphate.

feeble-mindedness. Mental deficiency from arrested mental development. The feeble-minded are divided into three grades: idiots, with a mental age below two years; imbeciles, with a mental age between two and seven years; and morons, with a mental age between seven and twelve years.

feeding (fe'ding). The taking or giving of food. **artificial f.**, feeding of a baby with food other than mothers' milk. **extrabuccal f.**, the administration of food by channels other than the mouth. **Finkelstein's f.**, feeding of infants based upon decrease in the milk-sugar of the food. **forced f.**, the administration of food by force to those who cannot or will not receive it.

Feer's disease (fairz) [Emil *Feer*, Swiss pediatrician, born, 1864]. See under *disease*.

fefe (fe-fe). Samoan term for elephantiasis.

Fehleisen's streptococcus (fa'lis-enz) [Friedrich *Fehleisen*, German physician, born 1854]. The streptococcus of erysipelas.

Fehling's solution (fa'lingz) [Hermann von *Fehling*, German chemist, 1812-1885]. See *solution*.

Fe₂H₂O₆. Ferric hydroxid.

fejoprot (fe'jo-prot). A proprietary organic iron-iodin-albumin compound in tablet form.

fel (fel), gen. *fel'lis* [L. for "bile" or "gall"]. The bile. **f. bo'vis** (U. S. P.), ox-gall. **f. bo'vis inspis'satum**, dried ox-gall. Dose, 5-15 gr. (0.333-1 gm.). **f. bo'vis purifica'tum**, purified ox-gall: laxative, tonic, and digestant. Dose, 5-10 gr. (0.333-0.666 gm.); of extract, 1.5 gr. (0.1 gm.).

fellatio (fel-a'she-o). The act of taking the penis into the mouth.

fellator (fel-at-or). A sexual pervert who takes the penis of another into his mouth.

fellatorism (fel-a'tor-izm). Introduction of the penis into the mouth of another person.

fellatrice (fel-at-rēs'). A female who takes the male organ into her mouth.

fellitin (fel'it-in). A proprietary ox-gall preparation for the cure of frost-bite.

felon (fel'on). See *paronychia*.

felsin (fel'sin). A proprietary preparation of

ox-gall, pepsin, pancreatin, and capsicum: used as a digestive and hepatic stimulant.

felt-work (felt'werk). A complex of nerve-fibrils more dense than a network; neuropilem.

Fem. intern. Abbreviation for *L. femor'ibus internus*, at the inner side of the thighs.

female (fe'māl) [L. *femē'la* young woman]. 1. Relating or belonging to the sex that conceives and bears young. 2. Receiving a complementary part.

feminilism, feminism (fem-in'il-izm, fem'in-izm). The possession or assumption of female characters by the male. **mammary f.**, gynecomastia.

femininity, feminity, femineity (fem-in-in'it-e, fem-in'it-e, fem-in-e'it-e). Womanhood; the possession of normal female qualities by a woman.

feminization (fem'in-iz-a'shun). The development of female characteristics.

feminonucleus (fem'in-o-nu-kle'us). The female pronucleus. See *pronucleus*.

femoral (fem'or-al) [L. *femora'lis*]. Pertaining to the femur.

femoralis muscle (fem-o-ra'lis). Same as *cru-ræus*. See *muscles, table of*.

femorocle (fem'o-ro-sēl) [L. *fe'mur* thigh + Gr. *κῆλη* hernia]. Femoral hernia.

femorotibial (fem'o-ro-tib'e-al). Pertaining to the femur and the tibia.

femur (fe'mur) [L. "thigh"]. 1. The thigh-bone. 2. The thigh. **pilastered f.**, a femur in which the linea aspera stands out like a ridge.

fenchone (fen'kōn). A hydrocarbon, C₁₀H₁₆O, resembling camphor, from oil of fennel and oil of thuja.

fenchyval (fen'she-val). Fenchysovalerate, a colorless liquid used in hysteria.

fenestra (fe-nes'trah) [L. "window"]. A window-like opening; an open area, as in a bandage or the blade of a forceps. **f. coch'lea** [B N A], the fenestra rotunda. **f. ovalis**, an oval opening in the inner wall of the middle ear. **f. rotund'a**, a round opening in the inner wall of the middle ear. **f. vestib'uli** [B N A], the fenestra ovalis.

fenestrated (fen'es-tra-ted) [L. *fenestra'tus*]. Pierced with one or more openings.

fenestration (fen-es-tra'shun) [L. *fenestra'tus* furnished with windows]. The act of perforating, or the condition of being perforated, with openings.

fennel (fen'el). The umbelliferous plant, *Feniculum vulgare*, and its fruit. The fruit is used as a stimulant, carminative, and emmenagogue. Dose of water (*aqua fenic'uli*), 1-4 fl.dr. (4-16 c.c.); of volatile oil, 5-10 min. (0.33-0.66 c.c.). See *Feniculum, dog f.* See *Marula*.

Fenner's guaiac mixture (fen'erz) [B. *Fenner*, American physician]. Same as *linctura antiacida*.

fenthazone (fen'tho-zōn). A proprietary disinfectant and deodorizer containing various antiseptic and aromatic principles.

fenugrec. Fenugreek.

fenugreek (fen'u-grēk) [L. *fa'num gra'cum* Greek hay]. The leguminous plant, *Trigonella fa'num-gra'cum* and its oily seeds. The seeds are used mainly for poultices, etc., and in veterinary medicine.

Fenwick's disease (fen'wicks) [Samuel *Fenwick*, English physician, born 1821]. Primary atrophy of the stomach.

Fe₂O₃. Ferric oxid.

Fe(OH)₃. Hydrated oxid of iron.

feolathan (fe-o-lath'an). Ferro-ammonium lactate, used as a hematinic.

Fe(P₂O₅)₃. Hypophosphite of iron.

feral (fe'ral) [L. *fera'lis*]. Dangerous, deadly

feralbold (fe-ral'bold). A proprietary peptonized iron aluminate.

ferase (fer'ras). A serum for use in treating glanders in horses.

fer cremol (fer kre'mol). A tasteless brown powder of hemoglobin and iron. Dose, 3-8 gr. (0.2-0.52 gm.).

Férol's nodes (fa-ra-ôlz') [Louis Henri Félix Férol, French physician, 1825-1891]. See under *node*.

fergon (fer'gon). An organic iron preparation.

Fergusson's incision, speculum (fer'gus-unz) [Sir William Fergusson, British surgeon, 1808-1877]. See under *incision* and *speculum*.

ferisol (fer'is-ol). A compound of guaiacol and cinnamic acid, recommended for tuberculosis. Dose, 5-15 gr. (0.33-1 gm.).

fermang (fer'mang). A preparation of iron, manganese, and albumin: used in anemia and chlorosis.

fermenlactyl (fer-men-lak'til). A proprietary lactic ferment in compressed form, used in making Bulgarian sour milk.

ferment (fer'ment) [L. *fermentum* leaven]. Any substance that causes fermentation in other substances with which it comes in contact. See *enzyme*. **amylolytic f.**, any sugar-producing or diastatic ferment. **autolytic f.**, a ferment developing in a tissue and causing disintegration of the tissue after death. **chemic f., unorganized f.**, one which is not a living organism. **coagulating f.**, any ferment that causes milk to curdle. **conform f.**, a bacteriolytic ferment which destroys those bacteria which produce it. **diastatic f.**, a ferment that changes starch into sugar. **digestive f.**, a ferment which acts to digest food. **fibrin-f.**, a ferment occurring in the blood, and changing fibrinogen into fibrin. Called also *thrombin* and *plasmase*. **glycolytic f.**, a ferment produced in the liver which changes starch into glucose; also any ferment that breaks up sugar. **heteroform f.**, a bacteriolytic ferment which destroys those bacteria which produce it and others as well. **hydrolytic f.**, a ferment that operates by causing water to be taken up, followed by the breaking down of the substance which absorbs the water. **inverting f.**, a ferment which converts cane-sugar into grape-sugar. **lactic f.**, a ferment which decomposes lactose into lactic acid and carbon dioxide. **leukocytic f.**, the ferment or cytase of leukocytes. **living f.**, an organized ferment. **metallic f.**, a colloidal metal. **milk-curdling f.**, rennin. **myosin f.**, an enzyme occurring in muscle-plasma which converts myosinogen into myosin. **organized f.**, a living plant or animal organism, such as a microbe, which acts as a ferment. **oxidation f., oxidizing f.**, a ferment which acts as a carrier of oxygen and produces oxidation. **protective f.**, a ferment formed in the body as a result of the presence in the blood of foreign substances, which ferment is capable of splitting up the foreign substance and thus protecting the organism. Called also *Abwehrfermente*. Cf. *Abderhalden's reaction* under *reaction*. **proteolytic f.**, any ferment that may convert a protein into a peptone or an albumose. **soluble f.** Same as *unorganized f.* **steatolytic f.**, a ferment which splits up fat into fatty acids and glycerin. **unorganized f.**, a chemical substance producing fermentation by chemical means; an enzyme. **urea f.** See *urease* and *nephrozyme*.

fermental (fer-men'tal). Pertaining to or arising from a ferment.

fermentation (fer-men-ta'shun) [L. *fermentatio*]. The decomposition of complex molecules through the influence of a ferment; chemic or physical change induced by a ferment. **acetic f.**, the conversion of a weak alcoholic solution into acetic acid or vinegar. **alcoholic f.**, the conversion of ethylic alcohol from carbohydrates. **ammoniacal f.**, the formation of ammonia and carbon dioxide from urea. **amyl f.**, the ferment-

ation which produces amyl alcohol from sugar. **butyric f.**, the change of carbohydrates, milk, etc., into butyric acid. **caseous f.**, the coagulation of soluble casein under the influence of rennet ferment. **dextran f.**, the fermentation by which dextrose is converted into dextran. **diastatic f.**, the change of starch into glucose, under the influence of ptyalin, the glycolytic ferment, etc. **frog-spawn f.**, dextran fermentation. **lactic f.**, the souring of milk, caused by various bacilli. **propionic f.**, the production of propionic acid from saccharine solutions by the *Bacillus cavi-cidus*. **saccharobutyric f.**, intestinal fermentation of carbohydrates, with the formation of butyric acid, produced by the *Bacillus aerogenes capsulatus*. **viscous f.**, the production of gummy substances, as in the urine, milk, and in wine, under the influence of various bacilli.

fermentdiagnosticum (fer-ment-di-ag-nos'tikum). A proprietary solution of glycytryptophan for determining the presence of a proteolytic ferment.

fermentemia (fer-men-te-me-ah) [*ferment* + Gr. *aima* blood]. The presence of a ferment in the blood.

fermentine (fer'ment-in). A proprietary preparation of the protoplasmic and nuclear constituents of yeast.

fermentiscible (fer-men-tis'ib-l). Capable of undergoing fermentation.

fermentogen (fer-men'to-jen) [*ferment* + Gr. *γεννάν* to produce]. A substance which may be converted into a ferment.

fermentoid (fer-men'toid) [*ferment* + Gr. *ειδος* resemblance]. A ferment which has been altered so as to lose its active properties.

fermentum (fer-men'tum). Latin for yeast.

fermocyl (fer'mo-sil). A proprietary glycolytic ferment used in diabetes mellitus.

fern (fern). Any cryptogamous plant or species of the order *Filices*. **female f.**, spleenwort, *Asplenium filix femina*. The root-stock was formerly used as an anthelmintic and teniacide. **male-f.** See *Aspidium*.

feralbol (fer-al'bol). A nutritive preparation of egg-albumin, iron, and lecithin.

feralbumose (fer-al'bu-mōs). A proprietary preparation of predigested meat and iron.

ferallia (fer-a'le-ah) [L. pl.]. Medicinal iron preparations; chalybeates.

Ferrata's cell (fer-at'az). See *hemohistioblast*.

ferrated (fer-at'ed) [L. *fer'rum* iron]. Charged with iron.

ferratin (fer'a-tin). A proprietary preparation of the iron of the blood of animals. It is a reddish-brown powder, and contains 6 per cent. of iron, and is insoluble in water and dilute acids. It is a hematinic: used in anemia and chlorosis. Maximum dose, 10-15 gr. (0.66-1 gm.).

ferratogen (fer-at'o-jen). A yellow chalybeate powder, insoluble in water, derived from yeast which has been grown on an iron-containing medium.

ferratol (fer-at-ol). A proprietary pill containing ferric chlorid, quinin, and extracts of quassia and gentian.

Ferrein, pyramids of (fer'in) [Antoine Ferrein, French physician, 1693-1769]. See *pyramids*.

ferri acetas, etc. See under *iron*.

ferri-albuminic (fer'e-al-bu-min'ik). Containing iron and albumin.

ferric (fer'ik) [L. *fer'rum* iron]. Containing iron in its higher valency.

ferrichthylol (fer-ik'the-ol). A derivative of ichthylol containing about 2.5 per cent. of iron: used in anemia, chlorosis, etc. Dose, 3-10 gr. (0.2-0.65 gm.).

ferricyanid (fer-e-si'an-id). A salt of ferricyanic acid.

- ferricyanogen** (fer/'e-si-an'o'-jen). A hexad radical, $(\text{FeC}_6\text{N}_6)_2$.
- ferrin** (fer'in) [L. *fer'rum* iron]. An iron-containing substance found in some bile-pigments.
- ferrinel** (fer'in-ol). A therapeutic preparation of iron and nuclein: used in anemia. Dose, 3-10 gr. (0.2-0.65 gm.).
- ferripton** (fer-ip'ton). A proprietary therapeutic preparation of iron.
- ferripyrrin** (fer-e-pi'rin). Same as *ferropyrin*.
- ferrisalipyrin** (fer/'e-sal-ip-i'rin). A yellow-brown powder: ferrous salicylate of antipyrin.
- ferrivine** (fer'iv-in). An organic amino compound of iron, tripara-aminobenzine-ferric sulphate, used by intravenous injection in syphilis (J. E. R. McDonagh).
- ferrocyanid** (fer-o-si'an-id). A salt of ferrocyanic acid.
- ferrocyanogen** (fer'o-si-an'o'-jen). A tetravalent radical, $\text{Fe}(\text{CN})_6$.
- ferroglidin** (fer-o-gli'din). A compound of iron and glidin, used in anemia, chlorosis, etc.
- ferrohemol** (fer-o-he'mol). Hemol with 3 per cent. of added iron; a brown powder. Dose, 8 gr. (0.5 gm.).
- ferromangan** (fer-o-man'gan). A solution of a compound of peptone with iron and manganese: used as a tonic and hematinic. Dose, 1-4 fl.dr. (4-16 c.c.).
- ferrrometer** (fer-om'et-er) [L. *fer'rum* iron + Gr. *μέτρον* measure]. An instrument for estimating the amount of iron in blood.
- ferroplasma** (fer-o-plaz'mah). An iron-containing preparation in the roots of *Rumex crispus*: used hypodermically in anemia, etc.
- ferroprotein** (fer-o-pro'te-in). An albumin combined with an iron-containing radical.
- ferropyrin** (fer-o-pi'rin). An orange-colored powder, $(\text{C}_1\text{H}_{12}\text{N}_2\text{O}_3)_3\text{FeCl}_6$, a compound of antipyrin and ferric chlorid. It is soluble in 5 parts of water and in alcohol, but insoluble in ether. It is used in anemia, chlorosis, neuralgia, and as an external astringent. Dose, 7-15 gr. (0.5-1 gm.).
- ferrosajodin** (fer'o-sa-i'o'-din). A reddish-brown powder, basic ferric iodobenhenate, $\text{FeOH}(\text{C}_{21}\text{H}_{42}\text{ICOO})_2$, containing at least 5 per cent. of iron and 24 per cent. of iodine. It is used in place of iodids and iron in doses of 8-15 gr. (0.5-1 gm.).
- ferrosilicon** (fer-o-sil'ik-on). Steel in which silicon has been incorporated, giving a substance of great tensile strength. In its preparation and after its manufacture it gives off arseniureted hydrogen, which is likely to cause poisoning in those who handle the substance.
- ferrosin** (fer-o'sin). A preparation of iron oxid (about 75 per cent.) with water, lime, and albumin; used as a pigment.
- ferrosoferrie** (fer-o'so-fer'ik). Combining a ferrous with a ferric compound.
- ferrosol** (fer'o-sol). A black liquid containing ferric saccharate and a saccharate of sodium chlorid: used in anemia and chlorosis. Dose, 1 dr. (4 c.c.).
- ferrosomatose** (fer-o-so'mat-5s). Somatose containing 2 per cent. of an iron combination; a dark-brown, tasteless powder: laxative, and serviceable in anemia and chlorosis. Daily dose, 75-150 gr. (5-10 gm.).
- ferrostypin** (fer-o-stip'tin). A dark-yellow stypic and antiseptic crystalline substance, a salt of hexamethylene tetramine hydrochlorid and ferric chlorid, $(\text{CH}_2)_6\text{N}_4\cdot\text{HCl}\cdot\text{FeCl}_3$. Dose, 5-8 gr. (0.333-0.5 gm.).
- ferrotherapy** (fer-o-ther'ap-e) [L. *fer'rum* iron + *therapy*]. Therapeutic use of iron and iron compounds.
- ferrous** (fer'us). Containing iron in its lower valency. **f. chlorid**, an iron chlorid, FeCl_2 (not the ferric chlorid). Dose, 2-5 gr. (0.13-0.333 gm.). **f. lactate**. See *iron lactate*.
- ferrozone** (fer'o-zōn). 1. A precipitating material for treating sewage, consisting mainly of iron protosulphate. 2. Saccharated iron and vanadium in tablet form.
- ferruginous** (fer-u'jin-us) [L. *ferrugino'sus*; *fer-ru'go* iron rust]. 1. Containing iron or iron rust; chalybeate. 2. Of the color of iron rust.
- ferrule** (fer'ool). In dentistry, a ring or band of metal applied to the root or crown of a tooth in order to strengthen it.
- ferrum** (fer'um), gen. *fer'ri* [L. "iron"]. See *iron*. **f. reductum** (U. S. P.), reduced iron.
- fersan** (fer'san) [L. *fer'rum* iron + *san'guis* blood]. Ferruginous paraneucoprotein, a brown powder prepared from the red cells of cattle blood: used in anemia and phthisis. Dose, 2-3 gr. (0.139-0.198 gm.).
- fertile** (fer'til) [L. *fer'tilis*]. Fruitful; susceptible of being developed into a new individual (of ova); not sterile or barren.
- fertilization** (fer'til-iz-a'shun). The act of rendering fertile; fecundation. It consists of the fusion of a spermatozoon with an ovum, preparatory to the development of the latter.
- fertilizin** (fer'til-i-zin). Lillie's name for a hypothetical agent existing in the ovum which brings about fertilization by means of two side chains, one of which reacts with the ovum, the other with the sperm.
- Ferula** (fer'u-lah) [L.]. A genus of umbelliferous plants. *F. asafetida*, *F. foetida*, *F. narthex*, and *F. scorodoria* yield asafetida. *F. galbaniflua* and *F. rubricaulis* yield galbanum.
- Ferv**. Abbreviation for *L. fer'vens*, boiling.
- fervescence** (fer-ves'ens). An increase of fever or bodily temperature.
- fervin** (fer'vin). A preparation of meat-extract and iron in capsules.
- fester** (fes'ter). 1. A small superficial sore or ulcer. 2. To suppurate superficially.
- festination** (fes-tin-a'shun) [L. *festina'tio*]. An involuntary tendency to increase the speed in walking, as seen in paralysis agitans and other nervous diseases.
- festiform** (fes'to-form). A proprietary preparation of formaldehyd in solid form.
- festoon** (fes-toon'). The swelling and curvature of the gums around the necks of the teeth.
- fetal** (fe'tal). Pertaining to a fetus.
- fetalism** (fe'tal-izm). A persistence in the adult or during postnatal life of certain fetal conditions.
- fetation** (fe-ta'shun) [L. *fæ'tus* fetus]. 1. The development of the fetus. 2. Gestation or pregnancy. See under *pregnancy*.
- feticide** (fe'tis-id) [L. *fæ'tus* fetus + *cædere* to kill]. The destruction of the fetus in the uterus.
- fetid** (fe'tid) [L. *fæ'tidus*]. Having a rank or disagreeable smell.
- fetishism** (fe'tish-izm). Sexual perversion in which the patient associates sexual feelings with articles of female dress, as gloves, shoes, hair, etc.
- fetlock** (fe'tlok). The metacarpophalangeal and metatarsophalangeal regions in the horse.
- fetography** (fe-tog'raf-e) [*fetus* + Gr. *γράφειν* to write]. Skiagraphy of the fetus in utero.
- fetometry** (fe-tom'et-re) [*fetus* + Gr. *μέτρον* measure]. The measurement of the fetus, especially of the diameters of the fetal head.
- fetoplacental** (fe'to-pla-sen'tal). Pertaining to the fetus and placenta.
- fetor** (fe'tor) [L.]. Stench or offensive odor.

fetron (fet'ron). An ointment-base containing stearic acid anilid.

fetterin, fetterine (fet'er-in). An alkaloid derived from sterilized milk.

fetus (fe'tus) [L.]. The unborn offspring of any viviparous animal; the child in the womb after the end of the third month; before that time it is called the embryo. **harlequin f.**, a fetus prematurely born and congenitally affected with keratoma, ichthyosis, and various defects. **f. in fe'tu**, a monster fetus consisting of a small imperfect fetus within the body of the principal fetus. **papyraceous f.**, a dead fetus pressed flat by the growth of a living twin. **f. sanguinolentis**, a dead fetus which has undergone what is known as maceration.

fever (fe'ver) [L. *fe'bris*]. 1. Abnormally high bodily temperature; pyrexia. 2. Any disease characterized by marked increase of temperature, acceleration of the pulse, increased tissue destruction, restlessness, delirium, etc. **absorption f.**, a fever often seen during the first twelve hours after parturition. **acclimation f.** 1. A disease caused by a change of climate. 2. A disease of horses and cattle due to a change of surroundings, as from pasture in the country to stables in the city. **African coast f.** See *Rhodesian f.* **African tick f.**, a recurrent fever caused by *Spiro-nema duttoni*. **algid pernicious f.**, pernicious malaria with symptoms of collapse. **alimentary f.**, the fever which accompanies gastro-intestinal disturbance. **aphthous f.** Same as *foot-and-mouth disease*. See under *disease*. **Archibald's f.**, a fever occurring in the Soudan, characterized by high fever and drowsiness, and due to an organism of the *Bacillus cloacæ* group. **aseptic f.**, surgical fever from aseptic wounds, supposed to be due to the disintegration of leukocytes. **Assam f.** Same as *kala-azar*. **asthenic f.**, a fever with nervous depression, feeble pulse, and a clammy skin. **auric f.**, a febrile condition due to the exhibition of remedies containing gold. **autumn f.**, nanukayami. **autumnal f.**, any fever which occurs in the autumn. **barbiero f.**, a disease produced by the bite of *Lamus magistus*. **bath f.**, a fever attended with anorexia, quickening of pulse, debility, and a cutaneous eruption, due to excessive bathing. **bed f.**, high temperature which lasts while the patient lies in bed, but disappears when he gets up. **biduotertian f.**, tertian malarial fever in which the paroxysms last so long that the fever is nearly continuous. **biliary f. of the dog**, a form of malignant jaundice with fever in dogs, caused by the *Piroplasma canis*. Called also *malignant jaundice of dogs*. **biliary f. of horses**, a disease of horses due to infection with the *Piroplasma equi*, and marked by pigmentation of the mucous membranes with bile. **bilious f.**, one with apparent liver complications and attended with the vomiting of bile. **bilious f. of cattle**, glaziekte. **black f.**, Rocky Mountain spotted fever. **blackwater f.**, malarial hematuria: a dangerous infectious tropical fever marked by chill, remittent fever, vomiting, jaundice, and hematuria. The disease is almost exclusively confined to the white race, and is complicated by nephritis. **blue f.**, Rocky Mountain spotted fever. **boo-hoo f.**, a disease of Hawaii and other Pacific islands marked by depression of spirits and gastro-intestinal disorder.

Harlequin fetus
(Bland-Sutton).

brain f., cerebral meningitis or cerebritis, or both together. Typhoid fever with marked cerebral complications is often called brain fever. **break-bone f.** See *dengue*. **bullous f.**, the fever that accompanies pemphigus. **cachectic f.**, **cachexial f.**, **kala-azar**. **Cameroon f.** Same as *malarial f.* **Canton f.**, Chinese typhus fever of a malarial type. **carbohydrate f.**, food fever. **carbuncular f.**, a variety of anthrax affecting cattle and horses, marked by the formation of circumscribed swellings in the skin, which at first are hard, hot, and painful, but later become gangrenous. **Carter's f.**, Asiatic relapsing fever. **catarrhal f.**, herpetic fever. **catheter f.**, a fever that may follow misuse of a catheter. **Cavité f.**, an endemic fever, resembling dengue, of Cavité in the Philippine Islands and the neighborhood. It is marked by abrupt onset, high fever, muscular pain, and tenderness of the eyeballs. **cerebrospinal f.**, cerebrospinal meningitis. See *meningitis*. **cesspool f.**, typhoid fever. **Chagres f.**, a malignant type of malarial fever occurring along the Chagres River in South America. **channel f.** See *land f.* **Charcot's f.**, a septic fever resulting from impacted gall-stones and consequent jaundice. **childbed f.**, puerperal fever. **Chitral f.**, an acute infectious fever occurring in the Chitral Valley in India. **Cobb's pigmentary f.**, a disease occurring in India marked by a sudden and rapidly rising fever, headache, nausea, vomiting, and pigmentation of the cheeks and nose. **Colombo f.**, a fever resembling paratyphoid fever occurring in Ceylon. An organism, *Bacillus colom-bensis*, is found associated with it. **continued f.**, one which is neither intermittent nor remittent, but in which the symptoms are continuous. **Corsican f.**, a sort of malarial fever occurring in Corsica. **Cyprus f.**, Malta fever. **dandy f.** See *dengue*. **Danube f.**, a remittent fever endemic along the river Danube. **deer-fly f.** See *tularemia*. **dehydration f.** See *inani-tion f.* **digestive f.**, a slight rise of temperature during the process of digestion. **double continued f.**, a fever resembling typhoid fever occurring in China. **Dumdum f.** See *kala-azar*. **east coast f.** Same as *Rhodesian f.* **elephantoid f.**, fever occurring in filarial disease, attended with lymphangitis, adenitis, and chyluria, and marked by vomiting and delirium. **enteric f.**, typhoid fever. **entericoid f.**, any fever resembling typhoid in its clinical features. **ephem-eral f.**, a slight fever lasting only a day or two. **epidemic catarrhal f.** See *influenza*. **equine biliary f.**, a disease of horses caused by *Piroplasma equi*. It is marked by jaundice and high fever, with enlargement of the spleen and lymph-nodes. **eruptive f.**, **exanthematous f.**, any fever accompanied by an eruption on the skin. **estivo-autumnal f.**, malarial fever. **famine f.**, relapsing fever. **fatigue f.**, a febrile attack due to overexercise and the absorption of waste-products. **ferment f.**, a fever produced by the subcutaneous injection of an unorganized ferment. **fermentation f.**, fever due to the absorption of the products of septic fermentation. **five-day f.** See *trench f.* **flood f.** See *tsutsu-gamushi disease*, under *disease*. **food f.**, sudden fever with digestive disturbance lasting from a few days to some weeks, and attributed to intestinal auto-intoxication. **Forrest's f.**, a fever continuing from three to fifteen days, with a parabole-like curve, the temperature rarely exceeding 104° F., and occurring in Rangoon. **fracture f.**, fever following the fracture of a bone. **ganglionic f.**, fever with enlargement of the ganglionic glands. **Gar-rick f.**, a contagious fever which raged in Dublin in 1742. **gastric f.**, any acute abdominal attack associated with gastric disturbances. **Gibraltar f.** Same as *Malta f.* **glandular f.**, characterized by a sudden onset and acute course, with fever and inflammatory swelling of the lymph-nodes, especially those of the cervical region. There is a

moderate leukocytosis due almost entirely to abnormal mononuclear cells. Called also *infectious mononucleosis* and *acute infectious adenitis*. **goat f.**, Malta fever. **Haverill f.** See *erythredema*. **Hawaiian f.**, a disease coming on with malaise and chill, followed by remittent fever, with splenic enlargement, jaundice, and headache. It occurs in the Hawaiian Islands. **hay-f.**, an acute and annually recurrent conjunctivitis with nasal catarrh, and often with asthmatic symptoms. The disease occurs at about the same time every year (usually in the spring or summer), and is regarded as an anaphylactic or allergic condition excited by a protein of plant pollen to which the individual is sensitized. Called also *hay-asthma*, *pollenosis*, and *autumnal catarrh*. **hectic f.**, a daily recurring fever with profound sweating, chills, and flushed countenance, associated with tuberculosis and septic poisoning. **hematuric f.**, any malarial fever that is associated with hematuria. **hemoglobinuric f.**, any malarial fever attended with hemoglobinuria. See *Blackwater f.* **hepatic f.**, catarrhal angiocholitis. **herpetic f.**, a condition characterized by chills, fever, sore throat, and a herpetic eruption on the face. The condition is apparently infectious. Called also *catarrhal f.* **hugli f.**, a severe malarial fever endemic in Bengal. Called also *endemic glandular f.* **hyperpyrexial f.**, a peculiar fever with very high temperature (104° to 107° F.) occurring in the West Coast of Africa and in Ceylon. **hysteric f.**, an irregular elevation of temperature without general symptoms, sometimes seen in hysteria. **icterohemorrhagic f.** See *Weill's disease*, under *disease*. **Ikwa f.** Same as *trench f.* **inanition f.**, a transitory fever which frequently occurs in infants during the first few days of life. It is believed to be due to dehydration and is also called *dehydration f.* **intermenstrual f.**, fever sometimes seen in tuberculous women between the menstrual periods. **intermittent f.**, malarial fever with marked intermissions, or stages of apyrexia and chill. **inundation f.**, tsutsugamushi disease. See under *disease*. **irritation f.**, a febrile condition due to the presence of irritant materials in the body. **island f.** See *tsutsugamushi disease*, under *disease*. **Jaccoud's dissociated f.**, fever with slow and irregular pulse in tuberculous meningitis of adults. **Japanese river f.** See *tsutsugamushi disease*, under *disease*. **jessor f.**, a long-standing intermittent fever common in parts of India. **jungle f.**, a form of pernicious malarial fever occurring in the East Indies. **kriim f.**, an endemic fever of Iceland, Farø, and Greenland. **Kyoto f.**, a seven-day fever occurring in Kyoto, Japan. **land f.**, a set of symptoms resembling seasickness sometimes experienced when, after an ocean voyage, the ship enters a relatively land-locked body of water; called also *channel f.* **lent f.**, typhoid fever. **leprotic f.**, the irregular febrile disturbances seen in the early stages of leprosy. **Levant f.**, a fever endemic in the Levant; by some believed to be of malarial origin. **low f.** Same as *asthenic f.* **lung f.**, croupous or other pneumonia. **malarial f.**, an infectious disease, formerly ascribed to emanations from damp ground, but now known to be caused by a hemosporean parasite (*Plasmodium mala'ria*) which gains access to the blood through the bite of mosquitos of the genus *Anopheles*. The disease is attended with enlargement of the spleen, and in the later stages with disintegration of the blood-corpuscles. The fever occurs in paroxysms, each of which is marked by a chill, followed by high fever and sweating, the attack lasting from one to ten hours. In *intermittent malarial fever* there is complete intermission of the symptoms, but the attack occurs again at regular intervals. If the paroxysms recur daily, the fever is termed *quotidian*; if every other day, *tertian*; if after an interval of two days, *quarian*. In *remittent malarial fever* there is only a remission between the attacks. Often the fever is replaced

by periodic attacks of delirium, or of depression and coma, of nausea, vomiting, and diarrhea, of debility and coldness of the body, or of accelerated respiration and dyspnea. The attacks are known as *dumb* or *masked ague*. When of long duration, the fever produces a state of vital depression, anemia, and cachexia. **malarial catarrhal f. of sheep.** See *hemoglobinuria of sheep*. **malignant f.**, fever in which the blood undergoes rapid degenerative changes. **Malta f.**, **Maltese f.**, **Mediterranean f.**, a chronic infectious disease, due to *Bacterium (Micrococcus) meliten'sis*, and marked by recurring attacks of fever, enlargement of the spleen, swelling of the joints, neuralgic pains, profuse perspiration, and increasing weakness and anemia. The disease is endemic in the Mediterranean regions, but occurs sometimes in other tropical countries. Called also *continued fever*, *Cyprus f.*, *Gibraltar f.*, *goat f.*, *mountain f.*, *Neapolitan f.*, *rock f.*, *slow f.*, *undulant f.*, *febris meliten'sis*, *febris undulans*, *Mediterranean phthisis*, *Bruc's septicemia*, *meliten'sis septicemia*, and *melitococcosis*. **Manchurian f.**, a disease similar to typhoid or typhus, occurring in Manchuria. **miliary f.**, an acute infectious disease characterized by fever, profuse sweating, and the formation of a great many papules, succeeded by a crop of pustules. Called also *sweating sickness*. **milk-f.** 1. A mild form of puerperal septicemia. 2. A fever said to attend the establishment of lactation after delivery. 3. An endemic fever said to be caused by the use of unwholesome cows' milk. 4. A disease of cows. See *cerebral anemia*, under *anemia*, and *parturient paralysis*, under *paralysis*. **mosquito f.**, a febrile disease affecting unacclimated persons in Herzegovina at the beginning of the mosquito season. **Mossman f.**, a fever endemic among the sugarcane cutters of Mossman, North Queensland. It is characterized by swelling of the glands of the axilla and groin. **mountain f.**, Malta fever. **mud f.** See *swamp f.* **mouse f.** See *mouse septicemia*, under *septicemia*. **muma f.**, myositis purulenta tropica. **Naegele's f.**, fever associated with uterine eruption described by Naegele in Southwest Africa. **nakra f.**, **nasa f.**, **nasha f.** [Hind. *nāsā* nose], a remittent fever of India attended with brain congestion and a pathognomonic turgescence of the vessels of the Schneiderian membrane. **nanukayami f.** See *nanukayami*. **Neapolitan f.** Same as *Malta f.* **nicobar f.**, a violent type of jungle fever. **night-soil f.** Same as *typhoid f.* **nodal f.**, erythema nodosum. **oroya f.**, an infectious disease of Peru marked by high fever, a rapid and pernicious form of anemia, prostration, and death. It is caused by a blood parasite to which the name *Bartonella bacilliformis* has been given. Called also *Carrión's disease*. **pappataci f.** See *sandfly f.* **papular f.**, a disorder marked by fever, papular eruption, and rheumatic pains. **para-malta f.**, *parameliten'sis*. **parameliten'sis f.**, a disease resembling clinically Malta fever, but caused by an organism which differs from the *Bacterium meliten'sis*. **paratyphoid f.**, a continued fever with symptoms resembling those of typhoid fever, but with the Widal reaction negative. It is caused by a bacillus intermediate in form between the typhoid bacillus and the colon bacillus, the paratyphoid, or paracolonic bacillus (*Bacterium paratyphosum*), of which there are two types (*B. paratyphosum A* and *B. paratyphosum B*). **paraundulant f.**, a fever resembling a mild undulant fever, but not caused by the organism of undulant fever. **parenteric f.**, a fever resembling clinically typhoid fever and paratyphoid fever, but due to bacteria other than the bacteria of these diseases. **peach f.**, irritation of the skin, with nasal and bronchial catarrh and conjunctivitis, occurring in those who deal in or handle peaches. **Pfeiffer's glandular f.**, an acute infectious febrile disease marked by swelling of the lymph-glands, prostration, and anemia. **phlebotomus**

f. See *sandfly f.* **Pretoria f.**, a fever with symptoms resembling abortive typhoid, observed in South Africa. **protein f.**, heightened temperature produced by the injection of protein material into the body. **puerperal f.**, septic poisoning occurring in child-bed. **pythogenic f.**, typhoid fever. **quartan f.**, a form of malarial fever caused by the *Plasmodium malariae*; which completes its life cycle in seventy-two hours, which causes the paroxysm to recur every three days. **quinin f.**, a fever attended with skin eruption, seen among those who work in quinin. **quintana f.**, trench fever. **rabbit f.**, tularemia. **railway f.**, a condition marked by fever and malaise seen in cattle that have been on a long railway journey without proper care and feeding. **Rangoon f.**, Forrest's fever. **rat-bite f.**, an infectious disease following the bite of a rat. It has an incubation period of about two weeks, followed by one or more febrile attacks, accompanied by a characteristic bluish-red rash. It is attended by severe muscular pains and neuralgia. The causative agent is the *Spirocheta morsus muris*. **recurrent f.**, **relapsing f.**, any one of a group of acute infectious diseases caused by various species of *Spirocheta* (*Spirocheta*, *Borrelia*), and marked by alternating periods of fever and apyrexia, each lasting from five to seven days. The disease begins abruptly with chill, headache, neuromuscular pains, fever, and sometimes vomiting. During the febrile periods there is enlargement of the liver and spleen. The organism causing the disease varies in different countries. The European fever is caused by *Spirocheta* (*Spirocheta*) *obermeieri* which is probably transmitted by lice or by bedbugs. The fever of East and West Africa is caused by *Spirocheta* (*Spirocheta*) *dultoi* ni, which is transmitted by the bite of the tick, *Ornithodoros moubata*; that of North Africa by *S. berbera*; that of India by *S. carteri*; that of America by *S. noyi*; that of Persia by *S. persica*. **red f. of swine.** See *swine erysipelas*, under *erysipelas*. **red-water f.**, Texas fever. **remittent f.**, a malarial fever with exacerbations and remissions, but no intermissions. See *malarial f.* **rheumatic f.**, acute inflammatory rheumatism. **Rhodesian f.**, a form of piroplasmosis of cattle in Africa, caused by the *Piroplasma* (*Theileria*) *parva*, and marked by high fever and swelling of the lymph-nodes. The organism is transmitted by the bite of several ticks of the genus *Rhipicephalus*. Called also *East African coast f.*, *Rhodesian red-water f.*, and *Rhodesian tick f.* **Robb's heat f.**, a non-infective cerebrospinal fever occurring in East Africa. **Robles's f.**, a condition characterized by irregular fever and mild general symptoms, and continuing from two weeks to three months. It occurs in British Honduras. **rock f.**, Malta fever. **Rocky Mountain spotted f.**, an infectious disease of the regions of the Rocky Mountains, characterized by high fever, pains in the bones and muscles, headache, a red, spotted eruption which may become dark and confluent, and by mental symptoms. Probably caused by a blood parasite (*Dermacentor rickettsii*), which is transmitted by the tick, *Dermacentor andersoni* (*venustus*). **Roman f.**, a virulent type of malarial fever prevailing in the Campagna of Rome. **sakushu f.**, seven-day fever occurring in autumn epidemics in the Okayama Prefecture of Japan. **Salonica f.** See *trench f.* **salt f.**, fever associated with excess of salt in the body, due to the drawing away by the salt of the water normally eliminated in the perspiration. **sandfly f.**, a short febrile disease, resembling dengue in many of its symptoms, occurring in Mediterranean countries, and associated with the bites of sandflies, *Phlebotomus papatasi* *sii*. Called also *three-day f.*, *phlebotomus f.*, and *pappalaci f.* **scarlet f.** See *scarlatina*. **septic f.**, one due to the entrance of septic poisons in the blood. **seven-day f.** 1. A fever affecting Europeans in India, and marked by symptoms similar to those of

dengue. 2. See *nanukayami*. **shipping f.**, an infectious disorder attacking animals which have been shipped by freight. The infection takes various forms, such as strangles, pink-eye, influenza, etc. **simple continued f.**, a non-contagious fever with neither remissions nor intermissions. **slow f.**, a popular name for various prolonged febrile conditions, often of the so-called typhomalarial type. **solar f.** Same as *dengue*. **spirillum f.**, relapsing fever. **splenic f.**, true anthrax. **spotted f.**, cerebrospinal meningitis; also typhus; also Rocky Mountain spotted fever. **sthenic f.**, fever characterized by a full, strong pulse, hot and dry skin, high temperature, thirst, and active delirium. **stiff-neck f.**, epidemic cerebrospinal meningitis. See *meningitis*. **sun f.**, dengue. **swamp f.**, an infectious disease of horses marked by recurring attacks of malaise with abrupt rises of temperature. The disease tends to become chronic. The disease is spread by feed and water contaminated by the urine of infected animals. Called also *mud fever*, *equine infectious anemia*, and *pernicious anemia*. **symptomatic f.**, pyrexia and a quickened pulse occurring as accompaniments of a wound or of some other affection. **syphilitic f.**, a febrile condition due to syphilitic poison. **Tachamocho f.**, a fever described as occurring at Tachamocho, Colombia; marked by high fever, vomiting, headache, and diarrhea. **f. of tension**, fever caused by great tension upon the stitches of a wound. Ulceration at the points where the stitches perforate is usually present. **tertian f.**, a form of malarial fever caused by the *Plasmodium vivax*, which completes its life cycle in forty-eight hours, thus causing the paroxysm to recur every two days. **Texas f.**, an infectious cattle disease caused by the presence in the blood of *Piroplasma bigemum*, which is introduced by the bite of the tick, *Boophilus bovis*. **thermic f.** See *sunstroke*. **three-day f.** Same as *sandfly f.* **threshing f.**, a form of pneumokoniosis with irritation of the respiratory tract, headache, and fever, occurring in workers at threshing grain. **thyroid f.**, the fever seen in hyperthyroidism. **tick f.** 1. Any infectious disease transmitted by the bite of a tick. The causative parasite so transmitted may be a rickettsia, as in Rocky Mountain spotted fever; a piropasma, as in Texas fever; or a spirochete, as in relapsing fever. 2. Same as *Rocky Mountain spotted f.* **Tientsin f.**, a fever reported by A. C. Fox from Tientsin. **traumatic f.**, one which follows a wound or injury. **trench f.**, a relapsing fever occurring among the British troops in France and Salonica, marked by headache, dizziness, and pain in the back and legs. It is a germ disease, the infection being transmitted by the body louse. It is probably the same disease as Volhynia fever. **trypanosome f.** Same as *trypanosomiasis*. **tsutsugamushi f.** See *tsutsugamushi disease*, under *disease*. **twelve-day f. of Nigeria**, a dengue-like or typhus-like fever, characterized by abundant rash for several weeks, slight albuminuria and fever that terminates by lysis. **typhoid f.**, enteric fever; abdominal typhus; a specific eruptive communicable fever, due to the *Bacterium typhosum*, and marked by inflammation and ulceration of Peyer's patches, enlargement of the spleen and mesenteric glands, and catarrhal inflammation of the intestinal mucous membrane. The contagious principle is contained in the stools, and is introduced into the body through contaminated food and drinking-water. The period of incubation is from one to four weeks, and the disease begins with headache, weariness, backache, cough, nose-bleed, and tenderness in the ileocecal region, the fever increasing each day, but remitting in the afternoon. The fever reaches its acme by the second week, at which time there appears on the chest, abdomen, and flanks an eruption of small, rose-colored spots or papules, which develop in crops. Diarrhea now begins,

accompanied with gurgling, and the evacuations have a peculiar "pea-soup" appearance; the spleen is markedly enlarged and tympanites is present. In a week or so there is a gradual decline of the fever and other symptoms, and a gradual convalescence, which may be interrupted by relapses. Complications frequently occur, the most important of which are intestinal hemorrhage, perforation of the intestine, pleurisy, pneumonia, bronchitis, nephritis, thrombosis of veins, otitis, parotitis, etc. **typhoid f.**, **abenteric**, typhoid fever in which the intestinal tract is not involved. **typhoid f.**, **abortive**, a variety in which the symptoms are developed in a few days. **typhoid f.**, **ambulatory**, a form in which the symptoms are not severe enough to confine the patient to bed. **typhoid f.**, **appyretic**, a form in which the fever does not rise above 100° F., often remaining normal. **typhoid f.**, **foudroyant**, a severe form with convulsions and other nervous disturbances. **typhoid f.**, **hemorrhagic**, a very fatal variety with hemorrhage from the mouth, bowels, and kidneys. **typhomalarial f.**, a fever showing typhoid symptoms, but believed to be malarial in origin. **typhus f.** (Frascatorius, 1546), a highly contagious eruptive fever, with characteristic lesions (except, possibly, softening of the spleen, darkness of the blood, and congestion of the lungs), but with great prostration. The occurrence of the disease is favored by filth, overcrowding, bad ventilation, poor food, etc., and the causal organism is possibly an organism, *Rickettsia prowazekii*, which is transmitted by the bite of lice. The incubation period varies from one day to two weeks, and the disease begins with malaise, headache, chills, pains in the muscles, dark flushing of the skin, and rapidly rising fever. After the fever has reached its height, the other symptoms increase, with great prostration, blackness and dryness of the tongue, and a deposit of sordes on the teeth and lips. The breath and perspiration have a peculiar musty odor, and the patient passes from a state of delirium into a nearly comatose condition. The eruption, which appears on the fourth or fifth day, consists of a mottling of the skin, together with small, slightly elevated, rose-colored spots. **undulant f.** Same as *Malta f.* **urethral f.**, fever following the use of the urethral bougie, catheter, or sound. **urinary f.** Same as *urethral f.* **urticarial f.**, a febrile disease marked by urticarial rash. **uveoparotid f.**, an infectious fever marked by chronic inflammation of the parotid gland and the uvea. It is attended also by chronic iridocyclitis, unilateral facial paralysis, lassitude, and a subfebrile temperature. Called also *Hurford's disease*. **van der Scheer's f.** Same as *trench f.* **vesicular f.** 1. A disorder marked by fever, localized pain, and a generalized vesicular eruption, occurring in Ceylon. 2. Pemphigus. **Volhynia f.** Same as *trench f.* **water f.**, fever following the intravenous injection of aqueous solutions, as of salvarsan, due probably to the hemolytic effect of the water. **West African f.** Same as *black-water f.* **Whitmore's f.** See *Whitmore's disease*, under *disease*. **Wolhynia f.**, trench fever. **Woolley's f.**, a fever accompanied by jaundice, described by Woolley as occurring in the Andaman Islands. **wound f.**, traumatic fever. **yellow f.**, an infectious fever, chiefly of tropical America, marked by fatty degeneration of the liver and congestion of mucous membranes of the stomach and intestines. It is due to a protozoan organism, *Leptospira icteroides*, which is transmitted to the blood of man by the bite of the mosquito *Aedes aegypti* (formerly known as *Stegomyia fasciata*). The period of incubation is from two to fifteen days, and the disease begins with chills, fever, frontal headache, pains in the spinal and lumbar regions, and vomiting. The fever rises rapidly, the bowels become constipated, and the vomiting increases, until by the fourth day it becomes black or red from the presence of blood.

The skin becomes jaundiced, the urine scanty and albuminous, and there may be hemorrhage from the intestinal mucous membrane. The disease is extremely fatal, the patient passing into the typhoid state or into a condition of delirium or of coma. **Zambesi f.**, an indeterminate non-malarial fever of Kaffirs in the Zambesi Valley (Bruce, 1910).

feveret (fe-ver-et'). 1. Influenza or grip. 2. Ephemeret fever.

feverfew (fe'ver-fū). See *Pyrethrum*.

fexism (feks'izm). A kind of cretinism occurring in Styria in Austria.

F. h. Abbreviation for *L. fi'at haus'tus*, let a draught be made.

fiat (fi'at), pl. *fi'ant*. Latin for *let there be made*.

fiber (fī'ber) [*L. fī'bra*]. An elongated, thread-like structure of organic tissue. **accelerating f's**, nerve-fibers that transmit the impulses that accelerate the heart-beat. **accessory f's**, those zonular fibers that are not grouped as chief fibers. **anastomosing f's**, **anastomotic f's**, fibers extending from one muscle-bundle or nerve-trunk to another. **arciform f's**, **arcuate f's**. 1. In the cerebrum, associating fibers that connect adjacent convolutions; called also *fibræ propriæ* and *fasciculi proprii*. 2. In the cerebellum, similar fibers that connect one lamina with another. **association f's**, nerve-fibers that connect different areas of the cerebral cortex and then take part in the association of functions and acts. **augmentor f's**. Same as *accelerating f's*. **axial f.**, the axis-cylinder of a nerve-fiber. **Beale's f.**, a spiral nerve-fiber. **Bergmann's f's**, processes which radiate from certain superficial glia-cells of the cerebellum and enter the pia. **Bernheimer's f's**, a tract of nerve-fibers of the brain running from the optic tract to Luys' body. **Bogrow's f's**, nerve-fibers of the cerebrum running from the optic tract to the thalamus. **Bühlmann's f's**, a set of peculiar lines in carious teeth caused by bacteria. **bulbospiral f's**, spiral muscular fibers forming a portion of the musculature of the auricles and ventricles of the heart. **Burdach's f's**, nerve-fibers connected with Burdach's nucleus. **capsular f's**, the nerve-fibers within the internal capsule of the brain. **chromatic f.**, the long fiber of chromatin into which the nucleus is resolved during the early stages of karyokinesis and which afterward splits up into the chromosomes. **chromosomal f.** Same as *traction f.* **cilio-equatorial f's**, those which pass from the summits of the ciliary processes to the equator of the lens. **commisural f's**, the nerve-fibers which pass between the cortex of opposite hemispheres of the brain. **cone-f's**, the fiber-like extensions of the visual cells on either side of their nuclei which connect the retinal cones with the outer molecular layers of the retina. **continuous f's**, the spindle fibers in mitosis which extend from pole to pole. **Corti's f's**, the rods of Corti. **Darkschewitz's f's**, nervous fibers of the cerebrum running from the optic tract to the habenular ganglion. **decussating f's**, those which cross in the center of the optic commissure, connecting the retina of each eye with the opposite cerebral hemisphere. **dendritic f's**, fibers which pass in a tree-like form from the cortex to the white substance of Schwann. **dental f's**. Same as *Tomes' f's*. **depressor f's**, afferent nerve-fibers which, when stimulated, cause diminished tone of the vasoconstrictor center and, therefore, decreased arterial pressure. **Edinger's f's**, fibers in the cerebrum of amphibia, forming part of the visual paths. **elastic f's**, yellowish fibers of elastic quality traversing the intercellular substance of connective tissue. **endogenous f's**, nerve-fibers of the spinal cord which arise from cells outside the cord. **exogenous f's**, fibers of the spinal cord which arise from cells situated in the gray matter of the cord. **extraciliary f's**. See *fleece*. **geminal f's**, the pair of fibers formed by division of the pyramidal fibers of the cord, one fiber of

each pair continuing on the same side of the cord, and the other passing to the opposite side. **Gerdy's f's**, the fibers of the superficial ligament connecting the clefts of the palmar surfaces of the fingers. **Goll's f's**, fibers extending from Goll's nucleus to the vermis of the cerebellum. **Gottstein's f's**, the external hair-cells, and nerve-fibers associated with them, forming a part of the expansion of the auditory nerve in the cochlea. **Gratiolet's radiating f's**, fibers that radiate from the optic center in the occipital lobe to the external geniculatum and pulvinar. **gray f's**, non-medullated fibers; the fibers of Remak. **hair-f.**, any one of the horny fibers, each containing relics of a nucleus, which make up the main substance of a hair. **half-spindle f's**, spindle fibers in mitosis which extend from one pole to the chromosomes. **Henle's f's**, the fibers of the fenestrated membrane which exists in certain arteries between the external and middle coats: a part are elastic, others nucleated. **Herxheimer's f's**, minute spiral fibers in the stratum mucosum of the skin. **heterodesmotic f's**, white fibers running between dissimilar gray structures of the nervous system. **homodesmotic f's**, white fibers joining similar gray structures of the central nervous system. **intercolumnar f's**, fibers joining the superior and inferior arms of the external abdominal ring. **intercru-ral f's**. Same as *intercolumnar f's*. **interzonal f's**, the delicate fibers of achromatin forming the central spindle during karyokinesis. **intraciliary f's**, a set of fibers passing from the anterior peduncles of the cerebellum to the dentatum. **lens-f's**, long, flattish, hexagonal prisms extending to the lens of the eye. **longitudinal f's**, the external fibers in the optic tracts passing into the optic nerve of the same side, connecting each retina with the hemisphere of the same side. **mantle f's**, any one of the cytoplasmic filaments which assist in drawing the daughter chromosomes toward the poles of the central spindles. **medullated f's**, grayish-white nerve-fibers whose axis-cylinder is surrounded by a medulla (or white substance of Schwann). **Meynert's f's**, nerve-fibers conveying light sensations from the anterior corpora quadrigemina to the oculomotor nuclei. **moss-f.**, a peculiar form of nerve-fiber. **motor f.**, a fiber in a mixed nerve which transmits motor impulses only. **Müller's f's**, supporting fibers of the neuroglia in the retina. **muscle-f.**, any one of the ultimate linear elements of muscular tissue. **myelinated f's**, the medullated fibers. **Nélaton's f's**. Same as *Nélaton's sphincter*. See under *sphincter*. **nerve-f.**, any fiber having the property of conducting molecular or invisible waves of stimulation. **non-medullated f's**, the gray nerve-fibers. **odontogenic f's**, the fibers forming the layer of connective tissue of the matrix of a tooth surrounding the pulp. **olivocerebellar f's**, a collection of fibers running from the olive on one side to the cerebellum on the opposite side. **orbiculo-antero-capsular f's**, those chief fibers which have the most posterior and internal position, lying in close relation to the anterior boundary of the vitreous. **orbiculociliary f's**, those accessory fibers which pass from the orbicular zone to the ciliary processes. **orbiculopostero-capsular f's**, those zonular fibers which spring from the prolongation of the hyaloid membrane investing the ciliary ring. **pectinate f's**, fibers of muscle extending over the roof of the auricles of the heart from the *tænia terminalis* to the atrioventricular septum. **Perlia's f's**, nerve-fibers of optical function in the cerebrum running to the medulla oblongata. **pontine f's**, the nerve-fibers of the pons varolii. **postcommissural f's**, the fibers of the postcommissure lying just behind the peduncle of the epiphysis. **postganglionic f's**, postganglionic neuron. See *neuron*. **precommissural f's**, fibers of the pre-commissure in the lamina terminalis. **pregang-**

lionic f's, preganglionic neuron. See under *neuron*. **pressor f's**, afferent nerve-fibers which, when stimulated, cause excitation of the vasoconstrictor center and consequently a rise of arterial pressure. **projection f's**, a term which includes all the bundles of axon fibers which connect the cerebral cortex with the brain stem; called also *projection tract*. **Prussak's f's**, two short fibers from the end of the short process of the malleus to the notch of Rivinus. **Purkinje's f's**, beaded muscular fibers forming a network in the subendocardial tissue of the ventricles of the heart. They are thought to be concerned in the conduction of stimuli from the auricles to the ventricles. **pyramidal f's**, the fibers of the pyramidal tracts. **Reissner's f.**, a free fiber in the central canal of the spinal cord. **f's of Remak**, the non-medullated nerve-fibers found largely, but not exclusively, in the sympathetic nerves. **Retzius's f's**, the stiff filaments of Deiters's cells in the organ of Corti. **Ritter's f.**, a fiber in the axis of a retinal rod: probably a nerve-fiber. **Rolando's f's**, the external arcuate fibers of the medulla oblongata. **Sappey's f's**, smooth muscle-fibers in the check ligaments of the eye near their orbital attachments. **scattered fillet f's**, fibers lying internal to the lemniscus of the brain. **Sharpey's f's**, fibers that join together the lamellæ of bone (W. Sharpey, 1846). **short association f's**, fibers in the cerebrum connecting adjacent convolutions. **sinospiral f's**, spiral muscular fibers forming a portion of the musculature of the auricles and ventricles of the heart. **Stilling's f's**, association fibers of the cerebellum. **sustentacular f's**, the fibers which support the nervous structure of the retina. **Tomes's f's**, branching processes of the odontoblasts in the dentinal canals. **traction f's**, the fibers of the spindle in mitosis along which the daughter chromosomes move apart. **transilient f's**, nerve-fibers that pass from one convolution to another not next to it. **varicose f's**, certain medullated fibers which have no neurilemma; after death a fluid accumulates between the myelin and the axis-cylinder, giving them a varicose appearance. **von Monakow's f's**, nerve-fibers of the cerebrum running from the optic tract to the lenticular ganglion. **Weissmann's f's**, fibers within the muscle-spindle. **Wernicke's f's**. Same as *Gratiolet's radiating f's*. **zonular f's**, fibers of the zonula zinni, grouped as accessory and chief fibers. **zonular f's**, chief, a group including the orbiculocapsular and ciliocapsular fibers.

fibra (fī'brah) pl. *fī'bræ*. Latin for fiber. **f. arcua'tæ exter'næ** [B N A], external arcuate fibers. **f. arcua'tæ inter'næ** [B N A], internal arcuate fibers. **f. cerebello-oliva'res** [B N A], olivocerebellar fibers. **f. circula'res** [B N A], Müller's muscle. **f. intercru'ra'les** [B N A], intercolumnar fibers. **f. meridiona'les** [B N A], Brücke's muscle. **f. pro'priæ**, the arcuate fibers of the cerebrum. **f. zonula'res** [B N A], zonular fibers.

fibralbumin (fī-bral-bu'min). Globulin.

fi-bre (fī'ber). See *fiber*.

fībrema (fī-bre'me-ah) [*fī'bra* fiber + Gr. αἷμα blood]. The presence of fibrin in the blood.

fībril, fibrilla (fī'bril, fī-bril'ah) [*L. fibrilla*]. A minute fiber or filament. **collagen f's**, delicate fibrils of collagen in connective tissue, usually cemented together in wavy bundles. Cf. *fibroblast*. **Dirck's f's**, fibrils of elastic tissue binding together the layers of elastic fibers of the tunica media of an artery. **Ebner's f's**, thread-like fibrils in the dentin and in the cementum of a tooth. **fibroglia f's**. See *fibroglia*. **muscle f.**, **muscular f.**, one of the muscle-cells which make up a muscular fiber. **nerve-f.**, an axis-cylinder, **side f. of Golgi**, a delicate twig given off at right angles from a neuraxon near its junction with the ganglion-cell.

fibrillar, fibrillary (fī-bril'ar, fīb'ril-a-re). Pertaining to a fibril or to fibrils.

fibrillation (fīb-ril-a'shun). 1. The quality of being fibrillar. 2. Muscular tremor. 3. A condition of muscular action, especially of the heart muscle, in which the individual fibers take up their own independent action, producing an incoördinate or vermicular contraction. As a result the heart-beats and pulse-beats become extremely irregular both as to time and to force. This fibrillation is distinguished as *auricular* (aīr'al) or *ventricular*, according as the muscle of the auricle or of the ventricle is affected.

fibriloceptor (fī-bril'o-sep-tor). Any one of the specific receptors at the terminals of the neurofibrils of the peripheral sensory neuron which receive the stimuli.

fibrin (fī-brin). A whitish, insoluble protein formed from fibrinogen by the action of thrombin (fibrin ferment), as in the clotting of blood. Fibrin forms the essential portion of the blood-clot. Cf. *fibrinogen*. **canalized f.**, a peculiar hyaline substance traversed by numerous channels occurring in the region of the chorion frondosum in the fetus. **f. factors**, fibrinogen and paraglobulin. **gluten-f.**, a form of fibrin from the seeds of various plants. **Henle's f.**, fibrin formed by precipitating semen with water. **myosin f.**, an insoluble variety of myosin. **vegetable f.** Same as *gluten-f.*

fibrination (fī-brin-a'shun). The acquisition of an abnormally large amount of fibrin.

fibrinemia (fī-brin-e'me-ah). Same as *fibremia*.

fibrin-ferment (fī'brin-fer'ment). See under *ferment*.

fibrin-globulin (fī'brin-glob'u-lin). Same as *fibrinoglobulin*.

fibrinocellular (fī'brin-o-sel'u-lar). Made up of fibrin and cells.

fibrinogen (fī-brin-o-jen) [*fibrin* + Gr. *γενῶν* to produce]. A soluble protein in the blood plasma which by the action of thrombin (fibrin ferment) is converted into fibrin, thus producing clotting of the blood. Another form of fibrinogen, called *tissue fibrinogen* (thromboplastic substance), occurs in the body tissues which has the power of clotting the blood without the agency of thrombin.

fibrinogenic, fibrinogenous (fī'brin-o-jen'ik, fī-brin-oj'en-us). Giving origin to fibrin.

fibrinoglobulin (fī'brin-o-glob'u-lin). A globulin entering into the composition of fibrinogen.

fibrinoid (fī'brin-oid) [*fibrin* + Gr. *εἶδος* form]. The substance formed in the process of caseation of tissues; so called because it resembles canalized fibrin.

fibrinolysin (fī-brin-ol'is-in). A substance formed in the blood which dissolves the clot by disintegrating the fibrin.

fibrinolysis (fī-brin-ol'is-is) [*fibrin* + Gr. *λύσις* solution]. The splitting up of fibrin by enzyme action.

fibrinolytic (fī'brin-o-lit'ik). Splitting up fibrin.

fibrinoplastic (fī'brin-o-plas'tik). Of the nature of paraglobulin.

fibrinoplastin (fī'brin-o-plas'tin). Same as *paraglobulin*. **Schmidt's f.**, serum-globulin.

fibrinopurulent (fī'brin-o-pu'ru-lent). Made up of fibrin containing pus.

fibrinoscopy (fī-brin-os'ko-pe) [L. *fī'bra* fiber + Gr. *σκοπεῖν* to view]. Same as *inoscopy*.

fibrinose (fī'brin-ös). An albumose derived from fibrin.

fibrinosis (fī-brin-o'sis). A condition characterized by excess of fibrin in the blood.

fibrinous (fī'brin-us). Pertaining to or of the nature of fibrin.

fibrinuria (fī-brin-u're-ah). The discharge of fibrin in the urine.

fibro-adenia (fī'bro-ad-e'ne-ah) [L. *fī'bra* fiber +

Gr. *ἀδῆν* gland]. Fibroid degeneration of gland tissue.

fibro-adenoma (fī'bro-ad-en-o'mah). Adenoma containing fibrous tissue.

fibro-adipose (fī-bro-ad'ip-ös). Both fibrous and fatty.

fibro-angioma (fī'bro-an-je-o'mah). An angioma containing much fibrous tissue.

fibro-areolar (fī'bro-ar-e'o-lar) [L. *fī'bra* fiber + *are'ola*]. Both fibrous and areolar.

fibroblast (fī'bro-blast) [*fiber* + Gr. *βλαστός* germ]. A connective-tissue cell; a flat elongated cell with cytoplasmic processes at each end, having a flat, oval, vesicular nucleus. Fibroblasts form the fibrous tissues in the body, tendons, aponeuroses, supporting and binding tissues of all sorts.

fibroblastic (fī-bro-blas'tik). Pertaining to fibroblasts; fibroplastic.

fibroblastoma (fī'bro-blas-to'mah). A tumor arising from the ordinary connective-tissue cell or fibroblast. It includes fibroma and fibrosarcoma.

fibrobronchitis (fī'bro-brong-ki'tis). Plastic bronchitis.

fibrocarcinoma (fī'bro-kar-sin-o'mah). Carcinoma containing fibrous tissue.

fibrocartilage (fī-bro-kar'til-ej) [L. *fī'bra* fiber + *cartilā'go* cartilage]. Any tough and elastic cartilage of which the matrix contains a considerable amount of white fibrous tissue. **basal f.**, **basilar f.**, the cartilage which fills the foramen lacerum of the skull. **circumferential f.**, any fibrocartilage forming a rim about a joint cavity. **connecting f.**, any disk of fibrocartilage which attaches opposing bones to each other by synchondrosis. **elastic f.**, fibro-elastic cartilage. **interarticular f.**, any movable plate of fibrocartilage lying between opposed joint surfaces. The principal of these are the acromioclavicular, intercoccygeal, intervertebral, pubic, radio-ulnar, sacrococcygeal, and sternoclavicular. **intervertebral f.**, an intervertebral disk. See under *disk*. **semilunar f's**, two crescentic lamellæ (external and internal) which deepen the surface of the head of the tibia for its articulation with the femur. **spongy f.** Same as *connecting f.* **stratiform f.**, such as lines the bony grooves in which certain tendons are placed. **white f.**, a mixture of white fibrous and cartilaginous tissues.

fibrocartilaginous (fī'bro-kar-til-aj'in-us). Pertaining to or composed of fibrocartilage.

fibrocasseose (fī-bro-ka'se-ös). Both fibrous and caseous.

fibrocellular (fī-bro-sel'u-lar). Partly fibrous and partly cellular.

fibrochondritis (fī'bro-kon-dri'tis) [L. *fī'bra* fiber + *chondritis*]. Inflammation of a fibrocartilage.

fibrochondroma (fī'bro-kon-dro'mah). A mixed fibroma and chondroma.

fibrocyst (fī'bro-sist) [L. *fī'bra* fiber + Gr. *κύστις* cyst]. A fibroma that has suffered cystic degeneration.

fibrocystic (fī-bro-sis'tik). Partly fibrous and partly cystic.

fibrocystoma (fī'bro-sis-to'mah). Fibroma blended with cystoma; a tumor containing fibromatous and cystomatous elements.

fibrocyte (fī'bro-sit) [L. *fī'bra* fiber + Gr. *κύτος* cell]. A cell of fibrous tissue.

fibro-elastic (fī'bro-e-las'tik). Composed of fibrous and elastic tissue.

fibro-enchondroma (fī'bro-en-kon-dro'mah). Enchondroma containing fibrous elements.

fibrofatty (fī-bro-fat'e). Both fibrous and fatty.

fibrofibrous (fī-bro-fī'brus). Joining or connecting fibers.

fibrogen (fī'bro-jen). A proprietary purified tissue fibrinogen.

fibroglia (fi-brog'le-ah) [L. *fībra* fiber + Gr. *γλία* glue]. A fibrillar substance produced by connective-tissue cells (fibroblasts) which bear the same relation to connective-tissue cells that neuroglia bears to neuroglia cells. See *fibroblast*.

fibroglioma (fī'bro-gli-o'mah). Fibroma blended with glioma.

fibrohemorrhagic (fī'bro-hem-o-raj'ik). Attended with hemorrhage and fibrin formation.

fibroid (fī'broid) [L. *fībra* fiber + Gr. *εἶδος* form]. 1. Resembling a fibroma or a fibrous structure. 2. A fibroma. **Paget's recurrent f.**, spindle-shaped sarcoma of the subcutaneous tissue.

fibroidectomy (fī-broi-dek'to-me) [*fibroid* + Gr. *ἐκτομή* excision]. Excision of a uterine fibroid.

fibroin (fi-bro'in). A white albuminoid, $C_{15}H_{23}N_3O_6$, from spiders' webs and the cocoons of insects.

fibrolipoma (fī'bro-li-po'mah) [L. *fībra* fiber + Gr. *λίπος* fat + *-ωμα* tumor]. A fibrous tumor that is in part fatty.

fibrolipomatous (fī'bro-lip-o'mat-us). Pertaining to fibrolipoma.

fibrolysin (fi-brol'is-in). A soluble combination of thiosinamin and sodium salicylate. It is injected for the purpose of breaking up fibrous tissue.

fibroma (fi-bro'mah) [L. *fībra* fiber]. A tumor composed mainly of fibrous or fully developed connective tissue. **f. cavernosum**, a fibroma containing greatly dilated blood-vessels. **concentric f.**, a uterine fibroma surrounding the uterine cavity. **f. cutis**, fibroma of the skin. **cystic f.**, a fibroma which has undergone cystic degeneration. **f. durum**. See *hard f.* **f. ematoides cysticum**, a fibroma of the nares formed by cysts which arise from distended alveoli lined with overgrowing cells. **f. fungoides**, mycosis fungoides. **hard f.**, one composed of fibrous tissue with few cells. **intracanalicular f.** Same as *adenocoele*. **f. lipomato des.** Same as *xanthoma*. **f. molle**, soft fibroma. **f. molluscum**. Same as *molluscum fibrosum*. **f. mucinosum**, a fibroma affected with mucoid degeneration. **multiple f.**, a condition marked by numerous fibrous tumors of the skin. See *molluscum fibrosum*. **f. myxomato des.**, a myxofibroma. **f. pendulum**, a pendulous fibroma of the skin. **f. sarcomatosum**, fibrosarcoma. **soft f.**, one containing copious cells. **telangiectatic f.**, angiofibroma.

fibromatoid (fī-bro-mat-oid) [*fibroma* + Gr. *εἶδος* form]. Resembling fibroma; fibroma-like.

fibromatosis (fī'bro-ma-to'sis). A tendency to the development of fibromata.

fibromatous (fī-bro-mat-us). Pertaining to or of the nature of fibroma.

fibromectomy (fī-bro-mek'to-me) [*fibroma* + Gr. *ἐκτομή* excision]. Excision of a fibroma.

fibromembranous (fī-bro-mem'bra-nus). Composed of membrane containing much fibrous tissue.

fibromuscular (fī-bro-mus'ku-lar). Composed of fibrous and muscular tissue.

fibromyectomy (fī-bro-mi-ek'to-me) [*fibromyoma* + Gr. *ἐκτομή* excision]. Excision of a fibromyoma.

fibromyitis (fī'bro-mi-i'tis) [L. *fībra* fiber + Gr. *μῦς* muscle + *-ιτις* inflammation]. Inflammation and fibrous degeneration of a muscle.

fibromyoma (fī'bro-mi-o'mah). Fibroma blended with myoma; a tumor containing fibrous and muscular tissue.

fibromyomectomy (fī'bro-mi-o-mek'to-me). Excision of a fibromyoma.

fibromyositis (fī'bro-mi-o-si'tis) [L. *fībra* fiber + Gr. *μῦς* muscle + *-ιτις* inflammation]. Inflammation of fibromuscular tissue. **nodular f.**, a disease marked by inflammation and the formation of nodules in the muscles.

fibromyotomy (fī'bro-mi-ot'o-me) [*fibromyoma* + Gr. *τομή* cut]. Excision of a fibromyoma.

fibromyxoma (fī'bro-miks-o'mah). Fibroma blended with myxoma.

fibromyxosarcoma (fī'bro-miks-o-sar-ko'mah). A sarcoma containing fibrous and myxoid tissue.

fibroneuroma (fī'bro-nu-ro'mah). A fibroma blended with neuroma; a tumor composed of fibrous tissue and nerve-fibers.

fibronuclear (fi-bro-nu'kle-ar). Made up of nucleated fibers.

fibro-osteoma (fī'bro-os-te-o'mah). Osteofibroma.

fibropapilloma (fī'bro-pap-il-o'mah). A papilloma containing much fibrous tissue.

fibropericarditis (fī'bro-per-e-kar-di'tis). Fibrinous pericarditis.

fibroplastic (fi-bro-plas'tik) [L. *fībra* fiber + Gr. *πλασσω* to form]. Giving origin to fibrous tissue.

fibroplastin (fi-bro-plas'tin). Same as *paraglobulin*.

fibroplate (fī'bro-plāt). An interarticular fibrocartilage.

fibropolypus (fī-bro-pol'ip-us). A fibroid polypus.

fibrosammoma (fī'bro-sam-o'mah). A tumor containing fibromatous and psammomatous elements.

fibropurulent (fi-bro-pu'ru-lent). Composed of pus containing flakes of fibrin.

fibroreticulate (fī'bro-re-tik'u-lāt). Composed of a network of fibers.

fibrosarcoma (fī'bro-sar-ko'mah). A fibroma blended with sarcoma; a tumor composed of fibrous and sarcomatous elements. **f. mucocellulare carcinomato des.** Krukenberg's tumor. See under *tumor*.

fibrose (fī'brös). To form fibrous tissue.

fibroserous (fi-bro-se'rus). Composed of fibrous elements, but having a serous surface: said of certain membranes.

fibrosis (fī-bro'sis). The formation of fibrous tissue; fibroid degeneration. **arteriocapillary f.**, the narrowing or closure of minute arteries and capillaries by inflammatory internal fibrosis. **neoplastic f.** Same as *proliferative f.* **panmural f.** See *Hummer's ulcer*, under *ulcer*. **post-fibrinous f.**, fibrosis which replaces fibrin. **proliferative f.**, fibrosis which continues to grow after the irritant starting it has ceased to act. **replacement f.**, the development of fibrous tissue to replace atrophied tissue. **f. uteri**, diffuse fibroid changes in the uterus producing enlargement of the organ.

fibrositis (fī-bro-si'tis) [*fibrous tissue* + *-itis*]. Inflammatory hyperplasia of the white fibrous tissue of the body, as seen in chronic rheumatism.

fibrotic (fī-brot'ik). Pertaining to fibrosis.

fibrotuberculosis (fī'bro-tu-ber-ku-lo'sis). Fibroid phthisis.

fibrous (fī'brus). Composed of or containing fibers.

fibula (fīb'u-lah) [L. "buckle"]. The outer and smaller of the two bones of the leg.

fibular (fīb'u-lar). Pertaining to the fibula.

fibulocalcaneal (fīb'u-lo-kal-ka'ne-al). Pertaining to the fibula and calcaneum.

fici (fī'si) [L. "figs"]. Grease in horses.

Fick's bacillus (fiks) [Rudolph Armin Fick, German physician, born 1866]. See *Bacillus of Fick*.

Ficker's diagnosticum (fik'erz) [Philip Martin Ficker, German bacteriologist, born 1868]. See *Diagnosticum*.

ficosis (fī-ko'sis). See *sycosis*.

Ficus (fī'kus) [L. "fig"]. The genus of trees to which the fig belongs. The fig; the fruit or fleshy receptacle of *F. carica*, the fig-tree: laxative, digestant, and nutritive. 3. An old name for a hemorrhoidal tumor.

fiducinales (fid-u-sin-a'lēz). The lumbricales muscles of the fingers.

Fiedler's disease (fēd'lerz) [Carl Ludwig Alfred Fiedler, German physician, born 1835]. Acute infectious jaundice.

field (fēld). An area or open space. **absolute f.**, that area of the cerebral cortex injury of which always causes paralysis or spasm. **auditory f.**, the space within which sounds are audible. **Cohnheim's f.'s**, small polygonal areas seen on sections of a prism of the sarcous element. **cor-tical f.** See *cortical area*, under *area*. **dark f.** See *ultramicroscope*. **f. of fixation**, the region bounded by the utmost limits of central or clear vision, the eye being allowed to move, but the head being fixed. **Flechsig's f.**, the myelinogenetic field. **Forel's f.**, the most dorsal of the strata of the subthalamus, which is in direct relation with the thalamus and consists of fine longitudinal fibers. **Krönig's f.**, the area of resonance on the chest due to the apices of the lungs. **magnetic f.**, that portion of space about a magnet in which its action is perceptible. **f. of a microscope**, the area that can be seen through a microscope at one time. **myelino-genetic f.**, a collection of fibers in the neuraxis which at a definite stage of development receive myelin sheaths; called also *field of Flechsig*. **relative f.**, an area of the cerebral cortex in which a lesion may or may not cause paralysis. **surplus f.**, the portion of the field of vision in partial hemianopia which passes beyond the point of fixation. **f. of vision**, that portion of space which the fixed eye can see. **f. of vision, cribriform**, a field of vision over which a number of isolated scotomata lie dispersed. **f. of vision, over-shot**, a condition in which the line of separation between the halves of the field of vision does not pass through the point of fixation. **Wernicke's f.**, Wernicke's area. See *area*.

Fielding's membrane (fēl'dingz) [George Hunsley Fielding, English anatomist, 1801-1871]. The tapetum.

fifth disease. See *erythema infectiosum*. **f. nerve**, **f. ventricle**, etc. See *nerve*, *ventricle*, etc.

fig (fig). See *Picus*. **f.-wart**. See *verruca acuminata*.

Figueira's syndrome (fe-ga-e'rahz) [Fernandes Figueira, contemporary pediatricist in Rio de Janeiro]. See under *syndrome*.

figuratus (fig-u-ra'tus) [L.]. Figured.

figure, Minkowski's. A figure representing the relation between dextrose and nitrogen in the urine on a pure meat diet, and when fasting. It is 2.8 : 1. **Stifel's f.**, a black disk having a white spot in the center, used for locating and measuring the blind spot in the eye. **Zöllner's f.'s**. See *Zöllner's lines*, under *line*.

figwort (fig'wurt). Any scrophulariaceous plant, especially the herb, *Scrophularia nodosa*: diuretic, alterative, and sedative. Dose of fluidextract, 30-60 min. (2-4 c.c.).

fila (fī'lah). Plural of *filum*. **f. olfacto'ria**, the afferent filaments composing the olfactory nerve which run from the nasal mucous membrane through the cribriform plate to the olfactory bulb. **f. radicularia**, the nerve filaments forming the roots of the spinal and cranial nerves.

filaceous (fī-la'shus). Made up of filaments.

filament (fī'am-ent) [L. *filamentum*]. A delicate fiber or thread. **f's of Ammon**, fine hairs, or cilia, on the inner surface of the ciliary body of the eye. **axial f.**, the central thread of the flagellum of a spermatozoön. **linin f.**, a network of linin spread throughout the cell-nucleus. **sper-matic f.**, the caudal filament of a spermatozoön. **terminal f.** Same as *filum terminale*.

filamentous (fī'am-en'tus). Composed of long, thread-like structures: said of bacterial colonies.

filar (fī'lar) [L. *fī'lum* thread]. Thread-like; fila-mentous.

Filaria (fī-la're-ah) [L. *fī'lum* thread]. A genus of

nematode or thread-worms; endoparasitic. **F. bancroft'i**, the species which causes elephantiasis. The adult forms are found in the lymphatic glands of the pelvis and abdomen and also in the cystic dilatations of the subcutaneous tissue, scrotum, etc. The microfilariae (larvæ) are found in the circulating blood, especially at night, and are probably carried by *Culex* and other mosquitos. Called also *Wuchereria bancrofti* and *Wuchereria wuchereria*. **F. conjunctivæ**, a species found in the eye of horses and asses, and sometimes in man. **F. demarquaii**. See *F. juncea*. **F. diurna**, the larval form of *F. loa*. **F. equina**, a common parasite of the abdominal cavity of horses and asses; sometimes found in man. **F. hominis o'ris**, a species found in the mouth. **F. immi'tis**, a species found in the blood-vessels and heart of dogs and sheep, being transmitted by the bite of the mosquito. **F. jun'cea**, a very small species found in the West Indies. **F. labial'is**, a species found in the lip. **F. lent'is**, a species found in the lens of the eye. **F. lo'a**. See *Loa loa*. **F. lymphat'ica**, a species found in the bronchial lymph-glands. **F. magalhæ'si**, a species found in a child in Rio de Janeiro. **F. medinen'sis**. See *Dracunculus medinensis*. **F. nocturna**. See *F. bancroft'i*. **F. oc'uli**. Same as *Loa loa*. **F. ozzar'di**, a species found in the lymphatics and blood-stream in the West Indies and northern South America. **F. palpebra'lis**, a species found in the upper eyelid. **F. per'stans**. See *Acanthocheilonema persians*. **F. philippinen'sis**, a species of filaria found in the blood of patients in Manila. **F. recon'dita**, a species found in the blood of dogs, and passing its intermediary cycle in the thoracic muscles of *Culex fatigans*. **F. sanguinis-hom'inis**, the embryos of the worm, *F. bancroft'i*, is found in the blood during the night in chyluria, and in the lymph-vessels of the lower limbs and scrotum. **F. tanigusch'ii**, a species found in Japan. **F. vol'vulus**. Same as *Onchocerca volvulus*.

filarial (fī-la're-al). Pertaining to or caused by filariae.

filariasis, filariosis (fī-la-rī-as-is, fī'lar-e-o'sis). A diseased state due to the presence of *Fila'ria* within the organism.

filariform (fī-la-rī'f-orm). Resembling filaria.

Filariidæ (fī-la-rī'id-æ). A family of nematodes which contains the genus *Filaria*, *Acanthocheilonema*, *Loa*, *Dracunculus*, and *Onchocerca*.

Filatov's or Filatow's disease (fī-la't'ofs) [Nik Féodorowich Filatov, pediatricist in Moscow, 1847-1902]. See under *disease*.

file, dental (fil). A file of various forms used in operative and mechanical dentistry.

filicin (fī'lis-in). A preparation of filix mas. Dose, 2 gr. (0.1 gm.).

filicon (fī'lík-on). A derivative from *Dryop'teris spinulo'sa*, said to possess anthelmintic properties.

filiform (fī'lif-orm) [L. *fī'lum* thread + *forma* form]. 1. Thread-shaped. 2. An extremely slender bough.

Filipovitch's or Filipowicz's sign (fe-le'po-vitshez) [Casimir Filipowitch, contemporary Polish physician]. See under *sign*.

filipuncture (fī'l'e-punkt-yūr) [L. *fī'lum* thread + *punctu'ra* puncture]. The insertion of a wire or thread into an aneurysm.

filix (fī'liks), pl. *fili'ces* [L.]. A fern. **F. fem'ina**, the female fern. **F. mas**, the male fern. See *fern*.

fillet (fī'lēt). 1. A loop-shaped structure. 2. A loop, as of cord or tape, for making traction. 3. The white band on the outer side of the superior cerebellar peduncles, beginning between the two olivary bodies and extending through the tegmentum of the crus and the middle of the pons; the lemniscus. **bulbar f.**, mesal fillet. **lateral f.**, a portion of the lemniscus or fillet that enters

the posterior corpora quadrigemina. **mesal f.**, a portion of the lemniscus that passes to the anterior corpora quadrigemina and thalamus opticus. **olivary f.**, the nerve fasciculus surrounding the olivary nucleus. **pontile f.**, lateral fillet. **spinal f.**, the spinothalamic tract.

filling (fī'ling). 1. The material for insertion in a prepared cavity in a tooth. It is usually gold, amalgam, cement, gutta-percha, or tin. 2. The operation of stopping cavities in the crown of a tooth. **combination f.**, a filling made up of two or more materials, usually one on top of the other. **composite f.** Same as *combination f.* **compound f.**, a filling for a compound cavity, or a cavity that involves more than one surface of a tooth. **contour f.**, a filling which restores the original shape of a tooth crown. **Mosetig-Moorhof f.** See *Mosetig-Moorhof bone-wax*, under *wax*. **non-leaking f.**, a filling so well fitted to the cavity as to prevent the penetration of moisture between the filling and the tooth. **permanent f.**, a filling intended to be left in place permanently. **provisional f.** Same as *temporary f.* **submarine f.**, a filling inserted while the tooth or the cavity is covered with the fluids of the mouth. **temporary f.**, a filling which is designed to be removed after a short period of insertion.

filmaron (fīl-mar'on). An amorphous powder, $C_{47}H_{51}O_{16}$, obtained from the extract of male fern: used as an anthelmintic to expel intestinal parasites in a 10 per cent. solution in castor oil. Dose, $2\frac{1}{2}$ fl.dr. (10 c.c.).

fillogen (fīl'mo-jen). A solution of nitrated cellulose in acetone and castor oil: used in applying medicines to the skin.

filopodium (fī-lo-po'de-um), pl. *filopodia* [L. *fī'lum* thread + Gr. *ποῦς foot*]. A slender, filamentous pseudopodium. Cf. *lobopodium*.

filopressure (fī'lo-pres'h-ūr) [L. *fī'lum* thread + *pressurā* pressure]. The compression of a blood-vessel by a thread.

filovariocosis (fī'lo-var-ik-o'sis). The development of varicosities on the axis-cylinder of a nerve-fiber.

filter (fīl'ter) [L. *fīl'trum*]. A device for the straining of water or other liquid. **Berkefeld f.**, a filter in which the liquid is passed through a filter made of diatomaceous earth. **Darnall f.**, the filter used in the United States Army. The water is mechanically filtered through Canton flannel after being treated with a precipitant. **Gooch f.**, a platinum or porcelain crucible the bottom of which is perforated with holes and covered with a layer of asbestos fibers. **intermittent sand f.**, a sand filter to which sewage is applied for only a short time and then is allowed to drain away so that aëration and oxidation may take place. **Kitasato's f.**, a bacteriologic filter in which the liquids are drawn by suction through an unglazed porcelain bougie. **Mandler f.**, a filter for household and for laboratory use which is made from diatomaceous earth. **mechanical f.**, a filter of sand or other porous material through which water is forced rapidly to remove gross particles. These particles may be the precipitate caused by the addition to the water of some coagulant. **Pasteur-Chamberland f.**, a hollow column of unglazed porcelain through which liquids are forced by pressure or by vacuum exhaustion. **percolating f.** See *trickling f.* **Reichel's f.**, a bacteriologic filter in which the liquid is placed in a receiver of unglazed porcelain and drawn through the walls of the receiver by suction. **roughing f.** See *scrubbing f.* **scrubbing f.**, a coarse-grained filter through which turbid water is passed to remove the larger particles and thus protect the sand filter from clogging. **slow sand f.**, a filter made of sand and gravel through which water passes slowly and is purified largely by the action of the microorganisms growing on the surface of the grains of sand near the

top of the filter. **sprinkling f.**, a trickling filter in which the sewage is applied by spray. **trickling f.**, beds of porous material on which sewage is distributed and allowed to percolate through to drains laid on a tight floor. The purpose is to so oxidize the organic material as to make it non-putrescible.

filter-passers (fīl'ter-pas'erz). See *filtrable*.

filtrable (fīl'trab-el). Capable of passing through the pores of a filter. The term is applied to micro-organism or virus that can pass through a filter which will not let ordinary bacteria pass; they are also called *filter-passers*.

filtrate (fīl'trāt). A liquid which has passed through a filter.

filtration (fīl'tra'shun). 1. The passage of a liquid through a filter. 2. In radiotherapy, the passing of the x-ray through a sheet of aluminum by which the non-penetrating or soft rays are removed, only the penetrating or hard rays passing through.

filtratometer (fīl-tra-tom'et-er). An instrument for measuring gastric filtrates.

filtros (fīl'tros). An artificial porous stone made by compacting silicious sand and used as a filtering element in purifying sewage.

fīl'trum ventriculi. A depression between the two projections formed in the lateral wall of the vestibule of the larynx, by the arytenoid and cuneiform cartilages. Called also *Merkel's filtrum*.

filum (fī'lum) [L.], pl. *fī'la*. A thread-like structure or part. **f. corona'rium**, a cord-shaped ridge near the auricular orifice of the heart. **f. du'ræ ma'tris spina'lis** [B N A], the caudal end of the spinal dura mater. **f. radicu'lare** [B N A], one of the filaments which issue from the dorsolateral fissure of the spinal cord to form the dorsal root of a spinal nerve. **f. termina'le** [B N A] [L. "end-thread"], the slender distal end of the spinal cord.

fimbria (fīm'b're-ah) [L.]. A fringe; especially the fringe-like end of the oviduct. **f. hippocam'pi**, the band of white matter along the median edge of the hippocampus. **f. ova'rica**, the longest of the fimbriae of the oviduct. **f. tu'bæ**, the fringe-like end of the oviduct.

fimbriate, **fimbriated** (fīm'b're-āt, fīm'b're-a-ted) [L. *fimbria'tus*]. Fringed.

fimbriatum (fīm'b're-a'tum) [L. "fringed"]. The corpus fimbriatum.

fimbriocèle (fīm'b're-o-sēl) [*fimbria* + Gr. *κῆλη hernia*]. Hernia containing the fimbriae of the oviduct.

Finckh test (fīnk) [Johann Finckh, German psychiatrist, born 1873]. See under *tests*.

finder (fīn'der). A device on a microscope to facilitate the finding of some object in the field.

finger (fīng'er). Any one of the five digits of the hand. **clubbed f.**, a finger the terminal phalanx of which is short and broad with an overhanging nail: seen in various cases of chronic disease of the thoracic organs. **dead f.** See *digitus mortuus*. **drop-f.**, **hammer-f.** Same as *mallet-f.* **drumstick f.** Same as *clubbed f.* **hippocratic f.**, a condition in which the nails curve over the ends of the fingers: seen in diseases of the lungs and heart. **insane f.**, chronic whittow in certain cases of confirmed insanity. **lock-f.**, a peculiar affection of the fingers in which they are liable to become fixed in a flexed position, owing to the presence of a small fibrous growth in the sheath of the tendon of the extensor. **mallet-f.**, permanent flexion of the distal phalanx. **Morse f.**, a deformity of the finger due to constant use of the Morse telegraph-key. **snap-f.** Same as *spring-f.* **spider f.** See *arachnodactylia*. **spring-f.**, a condition in which flexion and extension of the finger beyond certain points are difficult. **f.-stall**, a cap or cot for a sore or injured finger. **stuck-f.** Same as *trigger-f.* **trigger-f.**, a finger liable to be affected with a momentary spas-

modic arrest of flexion or extension, followed by a snapping into place. **waxy f.** Same as *digitus moriuus*. **webbed f's**, fingers united to a greater or less extent by a fold of skin.

finger-print (fing'er-print). An imprint of the cutaneous ridges of the distal phalanx of a finger; used as a means of identification.

Finkler-Prior spirillum (fink'ler-pri'or) [Dittmar *Finkler*, German bacteriologist, 1852-1912]. The *Vibrio proteus*.

Finney's operation (fin'ez) [John M. T. *Finney*, Baltimore surgeon]. See under *operation*.

Finsen bath, light (fin'sen) [Niels Ryberg *Finsen*, Danish physician, 1860-1904]. See under *bath* and *light*.

fir (fur). See *Abies*. **balsam-f.** See *Abies balsamea*.

firolyptol (fir-o-lip'tol). A proprietary preparation containing cotton-seed oil, eucalyptol, creosote, and firwien in tuberculosis.

first intention. See *healing*.

firwien (fir'win). A respiratory tonic made from the bark of the fir tree, with phosphorus, bromin, and iodine.

Fischer's murmur, sign (fish'erz) [Louis *Fischer*, physician in New York, born 1864]. See *murmur* and *sign*.

Fischer's solution, treatment (fish'erz) [Martin Henry *Fischer*, American physician, born 1879]. See *solution* and *treatment*.

Fischer's test (fish'erz) [Emil *Fischer*, German chemist, 1852-1920]. See under *tests*.

fish-skin disease. See *disease*.

fission (fish'un) [L. *fis'sio*]. A form of asexual reproduction in which the cell simply divides into two approximately equal parts. It is seen in bacteria especially. **bud-f.**, reproduction by the protrusion of a portion of the protoplasm; seen in some rhizopods.

fissiparus (fis-ip'ar-us) [L. *fis'sus* cleft + *par'ere* to produce]. Propagated by fission.

fissura (fis-su'rah). Latin for *fissure*. **f. cer'ebri latera'lis** [B N A], fissure of Sylvius. **f. hippo-cam'pi** [B N A], hippocampal fissure.

fissural (fish'u-ral). Pertaining to a fissure.

fissure (fish'ur) [L. *fissu'ra*]. Any cleft or groove, normal or other; especially a deep fold in the cerebral cortex which involves the entire thickness of the brain wall. Cf. *sulcus*. In dentistry, a fault in the surface of a tooth caused by the imperfect joining of the enamel of the different lobes. To be distinguished from a groove or sulcus (A. D. A.). **abdominal f.**, a congenital slit in the abdominal wall. **adoccipital f.**, a fissure which sometimes crosses the caudal part of the precuneus and joins the occipital fissure. Called also *entolambdoid f.* **Ammon's f.**, a pear-shaped aperture in the sclera at an early fetal period. **amygdaline f.**, a cerebral fissure near the extremity of the temporal lobe. **anal f.**, a painful linear ulcer at the margin of the anus. **an-sate f.**, one of the small fissures on the superior aspect of the anterior part of the brain. **anterior median f.**, the fissure in the middle line of the anterior surface of the spinal cord. **antitrigo-helicine f.**, a fissure in the auricular cartilage between the cauda helix and the antitragus. **ape-f's**, those fissures in the human brain which are found also in apes. **auricular f.**, a fissure between the tympanic portion and the mastoid and squamous portions of the temporal bone, giving passage to the auricular branch of the vagus nerve. **basisylvian f.**, the part of the fissure of Sylvius between the temporal lobe and the orbital surface of the frontal bone. **f. of Bichat**, a transverse fissure between the fornix and the upper surface of the cerebellum. **branchial f.** See *branchial cleft*, under *cleft*. **Broca's f.**, the fissure that surrounds the third left frontal convolution. **Burdach's f.**, a fissure between the lateral surface of

the insula and the inner surface of the operculum. **calcarine f.**, the fissure on the mesial surface of the occipital lobe which separates the cuneus from the lingual lobule. **callosal f.**, the space between the dorsum of the callosum and the cortex overhanging it. **callosomarginal f.**, a fissure on the mesial surface of the frontal and parietal lobes, parallel to the callosum and (anteriorly) to the marginal convolution. **central f.**, the fissure of Rolando. **choroid f.**, a fissure formed by invagination of the optic vesicle and its stalk in the embryo, permitting the ingrowth of the mesoblast for the formation of the vitreous humor, etc. **Cleaver's f.**, the inferior occipital fissure. **collateral f.**, a fissure on the mesal surface of the cerebrum, between the calcarine and subcollateral convolutions. **craniofacial f.**, a vertical fissure separating the mesethmoid into two parts. **dentate f.** Same as *hippocampal f.* **Ecker's f.**, a transverse fissure on the dorsal surface of the occipital lobe of the brain, it being a part of the paroccipital fissure. Called also *transverse occipital f.* **ectorrhinal f.**, the fissure which separates the rhinencephalon from the rest of the hemisphere. **entolambdoid f.** See *adoccipital f.* **entorbital f.**, a fissure occasionally seen between the orbital and olfactory fissures. **ethmoid f.**, the superior meatus of the nares. **exoccipital f.** See *Wernicke's f.* **fimbriodentate f.**, a fissure between the dentate fascia and the corpus fimbriatum. **glaserian f.**, an opening in the wall of the tympanic cavity, extending to the genoid fossa and lodging the long process of the malleus. **great horizontal f.**, the principal horizontal fissure of the cerebellum. **Henle's f's**, spaces filled with connective tissue between the muscular fibers of the heart. **hippocampal f.**, the cerebral fissure, extending from the splenium almost to the tip of the temporal lobe; it is collocated with the hippocampus major. **inferofrontal f.**, a fissure between the middle and inferior frontal convolutions of the brain. **intercerebral f.**, the fissure separating the two hemispheres of the brain. **interparietal f.**, a fissure beginning near the ventral end of the central fissure and running between the parietal convolutions almost to the end of the occipital lobe. **intragracile f.** Same as *intragracile sulcus*. **intraprecuneal f.**, a fissure in the precuneal region of the brain, anterior to the cuneus. **Jensen's f.**, a part of the intermedial fissure near the sylvian fissure. **linguogingival f.**, an occasional fissure in the lingual surface of an upper incisor tooth. **longitudinal f.**, the deep fissure between the cerebral hemispheres. **mandibular f's**, the two lowest facial fissures of the embryo. **occipital f.**, a deep fissure between the parietal and occipital lobes of the cerebrum. **occipital f., anterior**, the depression between the occipitotemporal and inferior sphenoid lobes. **orbital f., inferior**. Same as *sphen-maxillary f.* **orbital f., superior**. Same as *sphenoid f.* **palpebral f.**, the slit or opening between the eyelids. **Pansch's f.**, a brain fissure from the lower end of the central fissure to near the end of the occipital lobe. **para-central f.**, a curved fissure on the mesal surface of a cerebral hemisphere along the paracentral convolution. **parallel f.** Same as *supertemporal f.* **parietal f.**, the parietal portion of the interparietal fissure. **paroccipital f.**, the posterior portion of the interparietal fissure. **petro-occipital f.**, a fissure extending backward from the foramen lacerum between the basioccipital and the posterior and inner border of the petrous portion of the occipital bone. **petro-squamous f.**, a fissure between the petrous and squamous portions of the temporal bone. **petrotympanic f.**, the glaserian fissure. **portal f.**, the transverse fissure of the liver. **post-central f.**, one of the sulci of the cerebellum. **postclivial f.**, one of the fissures of the cerebellum. **postgracile f.** See *postgracile sulcus*, under *sulcus*. **posthippocampal f.**, the

calcarine fissure. **postrhinal f.**, a fissure between the hippocampal and subcollateral convolutions. **postseptal f.**, a cerebral fissure in the posterior part of the occipital lobe. **precentral f.**, a fissure parallel to the fissure of Rolando and anterior to it. **preclival f.**, one of the fissures of the cerebellum. **pregracile f.**, the sulcus pragraclis; a fissure of the cerebellum: it lodges the middle cerebral artery. **prelimbic f.**, the anterior part of the callosomarginal fissure. **prepyramidal f.**, a fissure in front of the pyramid, between the tonsil and the cuneate lobule. **pterygoid f.**, pterygoid notch. See *notch*. **pterygotympanic f.** Same as *glaserian f.* **f. of Rolando**, the fissure between the parietal and frontal lobes. **Santorini's f.**, a cleft in the fibrocartilage of the pinna of the ear. **Schwalbe's f's**, the supercentral and anterior occipital fissures. **sphenoid f.**, a cleft in the wings and body of the sphenoid and orbital plate of the frontal bone for various nerves and vessels. **sphenomaxillary f.**, a fissure between the great wing of the sphenoid and the orbital plate of the maxilla. It transmits the superior maxillary and orbital branches of the fifth nerve. **sphenopetrosal f.**, a fissure between the under surface of the great wing of the sphenoid and the petrous portion of the temporal bone. **subfrontal f.** Same as *inferofrontal f.* **sub-sylvian f.** 1. An occasional fissure on the ventral surface of the frontal lobe of the brain. 2. The horizontal limb of the fissure of Sylvius. **subtemporal f.**, an occasional fissure in the inferior and middle temporal convolutions. **supercallosal f.** 1. The central part of the callosomarginal fissure. 2. The callosomarginal fissure. **supercentral f.**, a cleft of the cerebrum situated above and parallel to the dorsal part of the central fissure. **superfrontal f.**, a fissure on the lateral aspect of the frontal lobe, demarcating the second frontal convolution. **superoccipital f.**, a fissure in the upper part of the occipital portion of the posterior lobe of the cerebrum. **superseptal f.**, a fissure in the cuneus nearly parallel with the occipital fissure. **supertemporal f.**, a fissure in front of and parallel to the sylvian fissure. Called also *parallel f.* **f. of Sylvius**, a fissure that separates the anterior and middle lobes of the cerebrum. **tentorial f.**, the collateral fissure. **trans-temporal f.**, an occasional short fissure on the lateral surface of the temporal lobe. **transverse f.** 1. A fissure crossing the under surface of the right lobe of the liver. 2. A horseshoe-shaped fissure extending from the descending cornu of the cerebrum on one side to that on the other. **tympanomastoid f.** Same as *auricular f.* **umbilical f.**, the anterior part of the longitudinal fissure of the liver. **f. of the vestibule**, the crack by which the fenestra rotunda opens into the vestibule. **Wernicke's f.**, a fissure that sometimes demarcates the parietal and temporal lobes from the occipital lobe. **zygal f.**, a fissure that consists of two portions united by a third portion. **zygomatosphe-noid f.**, a fissure between the orbital surface of the great wing of the sphenoid bone and the malar bone.

fistula (fis'tu-lah, pl. *fis'tulae* [L. "pipe"]. A deep, sinuous ulcer, often leading to an internal hollow organ. **abdominal f.**, a passage leading from the abdominal surface to some one of the hollow abdominal viscera. **aërial f.**, an opening in the neck leading to the trachea or other part of the air-passages. **amphibolic f.**, an opening made into the gall-bladder of an animal in order to obtain bile for study. The common bile-duct is left intact so that the bile may flow through it when the fistula is closed. **anal f.**, a fistula near the anus, which may or may not communicate with the rectum. **f. auris congen'ita**, a congenital fissure of the auricle. **Bellini's f.**, **f. bellinia'na**, a urinary tubule. **biliary f.**, a fistula into the gall-bladder. **f. bimuco'sa**, a complete fistula of the anus both ends of which

open on the mucous surface. **blind f.**, one that is open at one end only. **blind f.**, **external**, a blind fistula that opens upon the skin. **blind f.**, **internal**, one that opens upon a mucous surface. **branchial f.**, an unclosed branchial cleft. **cervical f.** 1. Aërial fissure. 2. A fistula of the cervix uteri. **f. cervicovaginalis laqueat'ica**, a fistula in the vaginal portion of the cervix uteri, between the uterine canal and the vagina. **f. ciba'lis**, the esophagus. **coccygeal f.**, a fistula near the coccyx leading to a dermoid cyst of that region. **f. col'li congen'ita**, a congenital fistula in the neck opening into the pharynx. **complete f.**, one that opens upon the skin and also upon an internal cavity. **f. cor'neæ**, a fistula in the cornea. **dental f.**, a fistula into the cavity of an alveolar abscess. **Eck's f.**, an artificial communication made between the portal vein and the vena cava (Eck, 1877). **enterovaginal f.**, a fistula between the intestine and the vagina. **enterovesical f.**, a fistula between the intestines and the bladder. **fecal f.**, one that communicates with the intestine. **folliculovestibular f.**, peri-urethral fistula in the female subject. **gastric f.**, an opening, usually artificial, into the stomach through the wall of the abdomen. **gastrocolic f.**, a fistula between the stomach and the colon. **gastrocutaneous f.**, a fistula connecting the lumen of the stomach with the surface of the skin. **gastroduodenal f.**, a fistula between the stomach and the duodenum. **gastrointestinal f.**, a fistula between the stomach and the intestine. **genito-urinary f.**, a fistula opening into any portion of the genito-urinary tract. **gingival f.** Same as *dental f.* **hepatic f.**, a fistula into the liver. **horseshoe f.**, a semicircular fistulous tract near the anus. **incomplete f.**, a blind fistula. **internal f.**, a fistula communicating with some internal organ and having no external opening. **intestinal f.**, an opening, usually artificial, through the wall of the belly into the intestines. **lacrimal f.**, a fistula opening into any lacrimal passage. **lacteal f.**, **mammary f.**, a fistula into a lacteal duct. **lymphatic f.**, **f. lymphat'ica**, a fistula in the neck opening into a lymphatic vessel. **metropitoneal f.**, a fistula between the uterine cavity and the peritoneum through the wall of the uterus. **f. nervo'rum**, the neurilemma. **parietal f.**, a fistula through the body wall. **perineovaginal f.**, a fistula through the perineum into the vagina. **pharyngeal f.**, a fistula through the neck into the pharynx. **pilonidal f.**, a fistula due to hair growing underneath the skin. **pulmonary f.**, a fistula through the wall of the thorax into the lung. **rectolabial f.**, a fistula through the labium majus into the rectum. **rectovaginal f.**, an abnormal opening between the rectum and vagina. **rectovesical f.**, a fistula between the rectum and the bladder. **rectovulvar f.** Same as *rectolabial f.* **salivary f.**, a fistula opening into a salivary duct. **spermatic f.**, a fistula opening into any of the seminal passages. **stercoral f.** Same as *fecal f.* **submental f.**, a salivary fistula opening below the chin. **Thiry's f.**, a form of intestinal fistula made usually upon a dog for the purpose of obtaining intestinal juice. **thoracic f.**, a fistula opening in the wall of the thorax. **tracheal f.**, a fistula through the neck into the trachea. **urachal f.**, a fistula between the urachus and some other organ. **urinary f.**, an abnormal opening into some part of the urinary apparatus. **urogenital f.** Same as *genito-urinary f.* **Vella's f.**, an artificial fistula made by dividing the intestine in two places and suturing both ends of the isolated piece to the abdominal wall. It is made in order to secure pure intestinal juice. **vesical f.**, a fistula opening into the urinary bladder. **vesico-intestinal f.**, a fistula between the bladder and the intestine. **vesico-uterine f.**, a fistula between the bladder and the uterus. **vesicovaginal f.**, an opening from the bladder into the vagina.

fistulatome (fis'tu-lah-töm) [*fistula* + Gr. *réueiv* to cut]. The same as *syringolome*.

fistulectomy (fis-tu-lek'to-me) [*fistula* + Gr. *ékromē* excision]. The operation of excising a fistula.

fistulization (fis'tu-liz-a'shun). The process of becoming fistulous; also a surgical procedure on the bladder for cystitis, prostatic disease, etc.

fistulo-enterostomy (fis'tu-lo-en-ter-os'to-me). The operation of making a biliary fistula empty permanently into the intestine.

fistulous (fis'tu-lus) [L. *fistulo'sus*]. Pertaining to or of the nature of a fistula.

fit (fit). A convulsion, sharp paroxysm, or sudden attack. **pontobulbar f's**, convulsions in jacksonian epilepsy, due to some action or condition situated in the pons or the bulb. **uncinate f.**, an attack of unpleasant olfactory auras followed by a transient dreamy state, due to a lesion of the uncinate gyrus.

fitchmul (fitsh'mul). A proprietary preparation of balsams and sedatives used as an expectorant.

Fitz's law, syndrome (fits'ez) [Reginald Heber Fitz, physician in Boston, 1843-1913]. See under *law* and *syndrome*.

fix. To turn the eye so that the image of the object looked at falls on the fovea centralis.

fixateur (fiks-at-er') [Fr.]. Same as *amboceptor*.

fixation (fiks-a'shun) [L. *fixa'tio*]. 1. The act of holding or fastening in a fixed position. 2. The condition of being fixed. **f. of the complement**, when antigen unites with its specific antibody, complement, if present, is taken into the combine and becomes inactive or fixed. Its presence or absence as free, active complement can be shown by adding sensitized blood-cells or blood-cells and hemolytic amboceptor to the mixture. If free complement is present, hemolysis occurs; if not, no hemolysis is observed. This reaction is the basis of many tests for infection, including the Wassermann test for syphilis, and reactions for gonococcus infection, glanders, typhoid fever, tuberculosis, etc. Called also *complement fixation* and *Bordet-Gengou phenomenon*. **nitrogen f.**, the union of the free atmospheric nitrogen with other elements to form chemic compounds, such as ammonia and nitrates or amino groups. It is done mostly by certain organisms in the soil, by electric power in special machines, and by catalysis.

fixative (fiks'at-iv). 1. Any fixing agent employed in the preparation of histologic or pathologic specimens. 2. See *amboceptor*.

fixator (fiks-a'tor). Same as *amboceptor*.

fixin (fiks'in). Aluminum lactate: used as a gastrointestinal disinfectant.

fixing (fiks'ing). The preparation of tissues for study in such a way that their normal form is preserved.

Fl. A symbol for *fluorin*; also abbreviation for *fluid*.

F. l. a. Abbreviation for *L. fi'at le'ge ar'tis*, let it be done according to rule.

fiabellum (fia-bel'um) [L. "fan"]. A set of radiating fibers in the corpus striatum.

fiacid (flak'sid) [L. *fiac'idus*]. Weak, lax, and soft.

fiacherie (flash-er-e') [Fr.]. A disease of silkworms caused by a microparasite.

flag (flag). A name for various monocotyledonous plants having ensiform leaves. **blue f.** See *Iris versicolor*. **sweet f.** See *Calamus*.

Flagellata (flaj-el-a'tah). A subdivision of the class *Mastigophora* of the order *Protozoa*, containing forms with a definite anterior end on which there are one or more flagella.

flagellate (flaj-el'at). 1. Furnished with slender, whip-like processes. 2. A form of microorganism observed in the blood of typhoid patients.

flagellation (flaj-el-a'shun). The protrusion of flagella; exflagellation.

Flagellidia (flaj-el-id'e-ah). Same as *Flagellata*.

flagellospore (flaj-el'o-spör). A spore provided with one or more flagella. Called also *flagellula*.

flagellula (flaj-el'u-lah). See *flagellospore*.

flagellum (flaj-jel'um), pl. *flagel'la* [L. "whip"]. A mobile, whip-like process or cilium.

flaginac reaction (flaj'in-ak). See under *reaction*.

flail-joint (flaj'joint). A joint which, after resection, shows abnormal mobility.

Flajani's disease (flah-jan'éz) [Joseph Flajani, Italian surgeon, 1741-1808]. Basedow's disease.

flame, manometric (flām). A gas-flame in a manometric capsule for producing flame-pictures.

flame-picture (flām'pikt'yur). A picture produced by a manometric capsule and mirror for exhibiting to the eye the qualities of vowel-sounds.

flame-spots. See under *spot*.

flammentachygraph (flām-en-tak'ig-raf). An instrument for recording morbid conditions of the circulation.

flank (flank). The part of the body below the ribs and above the ilium.

flannel, vegetable (flan'el). A fabric prepared in Germany from the fiber of *Pinus sylvestris*: said to be beneficial when worn by rheumatic patients.

flap (flap). A mass of tissue partly detached by the knife. **cellulocutaneous f.**, a surgical flap cut from skin and subcutaneous tissue. **circum-f.**, a surgical flap of a somewhat circular outline. **musculocutaneous f.**, a surgical flap cut from skin and muscle. **skin-f.**, a thin surgical flap containing little or no diagonal tissue. **sliding f.**, a flap carried to its new position by sliding.

flaps (flaps). Severe swelling of the lips in horses.

flash method (flash). See under *method*.

flask (flask). A metal case containing plaster of Paris in which a denture is placed for vulcanizing. Called also *molding flask*.

flasking (flask'ing). The enclosure of a denture in a flask for the purpose of vulcanizing it.

flat (flat). 1. Lying in one plane; having an even surface. 2. Having little or no resonance. 3. Slightly below the normal pitch of sound.

flatfoot (flat'fut). A condition in which one or more of the arches of the foot have flattened out.

flatness (flat'nes). A peculiar quality of sound obtained by percussing a part that is abnormally solid.

flatulence (flat'u-lens) [L. *flatulen'tia*]. Distention of the stomach or intestines with air or gases.

flatulent (flat'u-lent) [L. *flatulent'us*]. Characterized by flatulence; distended with gas.

flatus (fla'tus) [L.]. 1. Gas or air in the stomach or intestines. 2. The air expired in breathing; an act of expelling air from the lungs. **f. vagin-alis**, noisy expulsion of gas from the vagina.

flavado (fla-ve'do) [L. "yellowness"]. Yellowness, as of the skin.

flavescens (fla-ves'enz) [L.]. Yellowish.

flavacid (fla'vis-id). A dye, 2, 7-dimethyl-3-dimethylamino-6-amino-ro-methyl acridinium chlorid: used like acriflavin.

flavine (fla'vin). See *acriflavine*.

Flavobacterium (fla'vo-bak-te're-um) [L. *fla'vus* yellow + *bacterium*]. A genus of Bacteriaceae; saprophytic and forming a yellow or orange pigment.

Print of a normal foot sole (A) and of a flatfoot sole (B) (Albert).

flavone (fla'vön). A colorless crystalline substance, $C_{15}H_{10}O_2$, derived from γ -pyrone. From it are formed numerous yellow dyestuffs.

flavonol (fla'vo-nol). A yellow, crystalline substance, $C_{15}H_{10}O_3$, a hydroxyl derivative of flavone.

flavor (fla'vor). 1. That quality of any substance which affects the taste. 2. A pharmacetic or other preparation for qualifying the taste of a food or medicine.

flax (flaks). See *linum*.

flaxseed. See *linseed*.

fld., fld. Abbreviation for *fluid*.

fl.dr. An abbreviation for *fluidram*.

flea (flē). Any insect of the family Sarcopsyllidæ; many are parasitic and may act as carriers of disease. **cat f.** See *Clenocephalus*. **Chigoe f.** See *chigger*. **common f.** See *Pulex*. **common rat f.** See *Ceratophyllus*. **dog f.** See *Clenocephalus*. **human f.** See *Pulex*. **jigger f.** See *chigger*. **mouse f.** See *Ctenopsylla musculi*. **sand f.** See *Dermatophilus*. **squirrel f.** See *Hoplophylus*. **sticktight f.**, *Echidnophaga*. **tropical or Indian rat f.** See *Xenopsylla*.

fleabane (flē'bān). See *Erigeron*.

fleam (flēm). A lancet for use in venesection; a phlebotome. See *phlebotome*.

Fleischig's area, cuticulum, fasciculus, field, tract, etc. (flēk'sigz) [Paul Emil Fleischig, alienist in Leipzig, born 1847]. See *area, cuticulum, fasciculus, field, tract*, etc.

fleece of Stilling (flēs). A lacework of white fibers that surrounds the dentate nucleus.

Fleischl's hemometer (flē'shelz) [Ernst von Fleischl von Marxow, Austrian pathologist, 1846-1891]. See *hemometer*.

Fleischmann's bursa (flēsh'manz) [Godfried Fleischmann, German anatomist, 1777-1853]. See under *bursa*.

Fleming's tincture [Alexander Fleming, English physician, 1824-1875]. See *solution*.

flemingen (flēm-in'jin). An orange-red powder, in small prismatic needles, from waras, a product of *Flemingia grahamiana*; a strong stain.

Flemming's solution (flēm'ingz) [Walther Flemming, anatomist in Kiel, 1843-1905]. See *solution*.

flesh (flēsh). The soft or muscular parts of the animal body. **goose f.** See *cutis anserina*. **proud f.**, an excessive development of granulation tissue in a wound or sore.

fletcherism (flēsh'er-izm) [Horace Fletcher, American dietitian, 1849-1919]. The thorough mastication of solid food and the taking of liquids by sips.

flex (flēks) [L. *flexus* bent]. To bend or put in a state of flexion.

flexibilitas cerea (flēks-i-bil'it-as) [L. "waxen pliability"]. A cataleptic state in which the limbs retain any position in which they may be placed.

flexibility (flēks-i-bil'it-e) [L. *flexibilis*]. The quality of being flexible.

flexible, flexible (flēks'i-bl, flēks'il) [L. *flexibilis, flexilis*]. Readily bent without liability to break.

fleximeter (flēx-im'et-er). An instrument for measuring the amount of flexion of a joint.

flexion (flēk'shun) [L. *flexio*]. The act of bending or condition of being bent.

Flexner's bacillus, serum (flēks'nerz) [Simon Flexner, American pathologist, born 1863]. See under *bacillus* and *serum*.

flexor (flēks'or) [L.]. Any muscle that flexes a joint. See *muscles*, *table of*.

flexuose (flēks'u-ōs). Winding or wavy.

flexura (flēks-u'rah), pl. *flexuræ* [L.]. 1. A bending or a bent part or structure. 2. The radio-carpal joint of the horse. **f. duodenojejunalis** [B N A], duodenojejunal flexure. **f. perinealis rec'ti** [B N A], the anal canal. **f. sacralis rec'ti** [B N A], the sacrococcygeal portion of the rectum.

flexure (flēks'ūr) [L. *flexura*]. A bend or fold; a curved part or structure. **basiscranial f.**, a bend in the embryo at the upper end of the medulla oblongata. **caudal f.**, the bend at the aboral end of the embryo. **cephalic f.**, **cranial f.**, the curve at the cephalic end of the embryo. **cerebral f.**, one of the bends in the embryonic brain. **cervical f.**, a bend in the neural tube of the embryo at the junction of the brain and spinal cord. **dorsal f.**, one of the flexures of the embryo in the mid-dorsal region. **duodenojejunal f.**, the bend at the point of junction of the duodenum and jejunum. **hemal f.**, a curvature of the cerebral vesicles toward the hemal or ventral aspect. **hepatic f.**, the bend of the colon at the junction of its ascending and transverse parts. **lumbar f.**, the ventral curvature of the back in the lumbar region. **mesencephalic f.**, a flexure in the neural tube of the vertebrate embryo at the level of the mesencephalon. **pontine f.**, a flexure of the hind-brain in the embryo. **sacral f.** Same as *caudal f.* **sigmoid f.**, a part of the colon between the descending colon and the rectum. **splenic f.**, the bend of the colon at the junction of the transverse and descending portions.

Flindt's spots (flintz) [N. Flindt, contemporary Danish physician]. Koplik's spots.

flint disease. Chalicosis.

Flint's arcade (flintz) [Austin Flint, American physician, 1836-1915]. See *arcade*.

Flint's murmur (flintz) [Austin Flint, American physician, 1812-1886]. See *murmur*.

floating (flō'ting). 1. Free to move. 2. Detached from the normal place, as, a *floating* kidney.

floccilation, floccitation (flōk-sil-a'shun, flōk-sit-a'shun) [L. *floccula'tio, floccita'tio*]. The picking at the bed-clothes by a delirious patient.

floccilegium (flōk-sil-e'je-um). Floccilation.

floccose (flōk'ōs) [L. *floccosus* full of flocks of wool]. Woolly: said of a bacterial growth which is composed of short, curved chains variously oriented.

floccular (flōk'u-lar). Pertaining to the flocculus.

flocculation (flōk-u-la'shun). A colloid phenomenon in which the disperse phase separates in discrete, usually visible, particles rather than in a continuous mass, as in coagulation.

flocculent (flōk'u-lent). Containing downy or flaky shreds.

flocculus (flōk'u-lus), pl. *floc'culi* [L. "tuft"]. A small lobe on the lower side of either cerebellar hemisphere. **accessory f.**, a small lobe sometimes seen near the flocculus in the inferior process of the cerebellum.

Flood's ligament (fludz) [Valentine Flood, Irish surgeon, 1800-1847]. See *ligament*.

flooding (flud'ing). Copious uterine hemorrhage.

floor-cells (flōr'selz). See *cell*.

floor-plate. See *plate*.

Flor. Abbreviation for *L. flo'res*, flowers.

flora (flō'rah) [L. *flō'ra*, the goddess of flowers]. All the flowers of a given region of the earth.

floram (flō'ram). Ammonium bifluorid: used in pyorrhea alveolaris.

Florence's reaction (flōr-ahns') [Albert Florence, physician in Lyons, France, born 1851]. See *reaction*.

flores (flō'rēz) [L. pl. of *flos* flower]. 1. The blossoms or flowers of a plant. 2. A drug after sublimation.

f. benzo'i'ni, benzoic acid. **f. ci'næ**, Russian wormwood. **f. sul'phuris**, sublimed sulphur.

floricin (flō'ris-in). See *dericin*.

florid (flō'rid) [L. *flō'ridus*, flowery]. Having a bright red color.

floridin (flō'rid-in). A purplish or violet coloring-matter occurring in the blood of invertebrates.

Flourens's doctrine (flōo-ranz') [Marie Jean Pierre Flourens, French physiologist, 1794-1867].

The opinion that the entire cerebrum takes part in every mental process.

flourine (flōr-ēn'). The trade-name of a preparation of flour and glucose.

flow (flō). 1. To menstruate copiously. 2. A free liquid discharge. 3. The menses. **f. of ideas**. See *incoherent ideation*, under *ideation*.

flower (flō'wēr). The organs of reproduction of a plant together with their envelopes; the bloom of a plant. **elder f.**, Sambucus. **mullein f.**, Verbascum. **Pasque f.**, Pulsatilla. **passion f.**, Passiflora. **wind f.**, Pulsatilla.

Flower's index (flōw'ēr-z) [Sir William Henry Flower, British physician, 1831-1899]. See under *index*.

flowers (flōw'ēr-z). 1. See *flores*. 2. A sublimed drug, as sulphur or benzoïn. 3. The menses. **f. of arsenic**, arsenic trioxid. **f. of benzoïn**, benzoïc acid. **f. of camphor**, powdered camphor prepared by sublimation. **f. of sulphur**, sublimed sulphur.

Fl.oz. Abbreviation for *fluidounce*.

flucticuli (fluk-tik-'u-li) [L. "little waves"]. Markings, like small waves, on the lateral wall of the third ventricle behind the anterior commissure.

fluctuation (fluk-tu-a-'shun) [L. *fluctua'tio*]. 1. A wave-like motion, as of a fluid in a cavity of the body after succession. 2. A slight variation in the structure of an organism.

fluegelplatte (flē-'gel-plaht'e). See *dorsolateral plate*, under *plate*.

Fluhrer's probe (flū'rēr-z) [William Francis Fluhrer, contemporary physician in New York]. See under *probe*.

fluid (flu'id) [L. *flu'idus*]. A liquid or a gas. **allantoïc f.**, the fluid contained in the allantois. **Altman's f.**, a histologic fixing fluid composed of equal parts of 2 per cent. osmic acid solution and a 5 per cent. potassium dichromate solution. **amniotic f.**, the liquor amnii. **ascitic f.**, the serous fluid which accumulates in the peritoneal cavity in ascites. **Bamberger's f.**, an albuminous mercuric solution for use in the treatment of syphilis. **Berthollet's f.**, a mixture of sodium chlorid and sodium hypochlorite solutions. **Biondi's f.**, a histologic staining mixture of orange-green, methyl-green, and acid fuchsin. **Biondi-Ehrlich f.**, a staining mixture of basic methyl-green and acid-red fuchsin. **Bouin's f.**, a fixing fluid for histologic work, consisting of 75 parts of a saturated aqueous solution of picric acid, 5 parts of glacial acetic acid, and 20 parts of formalin. **Burnett's disinfecting f.**, a strong aqueous solution of zinc chlorid. **Callison's f.**, a solution, in 90 parts of distilled water, of Löffler's anilin methylene-blue 1 part, formaldehyd solution 1 part, glycerin 10 parts, ammonium oxalate 1 part, sodium chlorid 5 parts; used as a diluent in counting red blood-corpuscles. **cephalorachidian f.**, cerebrospinal fluid. **cerebrospinal f.**, the fluid contained within the cerebral ventricles, subarachnoid sinus, and the central canal of the cord. **chlorpalladium f.**, a decalcifying fluid for anatomic and other specimens: palladium chlorid, 1 cg.; hydrochloric acid, 1000 c.c. **Coley's f.**, a mixture of erysipelas and prodigious toxins: used in the treatment of malignant tumors. **Condy's f.**, a disinfecting solution of sodium and potassium permanganates. **culture-f.**, a fluid employed as a culture-medium. **Dakin's f.**, a buffered aqueous solution of sodium hypochlorite: used as a bactericide. It is prepared by dissolving 140 gm. of dry sodium carbonate in 10 liters of water. To this 200 gm. of chlorinated lime are added. After shaking the mixture the clear solution is siphoned off, filtered through cotton, and to it is added 40 gm. of boric acid. See *Carrel-Dakin treatment*, under *treatment*. **DeLafield's f.**, a fixing fluid for delicate histologic tissues: osmic acid (1 per cent. solution), 10 c.c.; chromic acid (0.2 per cent. solution), 100 c.c.;

acetic acid, 1 c.c.; 95 per cent. alcohol, 100 c.c. **Fischer's f.** Same as *incitamin*. **formol-Müller f.**, Müller's fluid to which has been added 2 per cent. of formalin. **Fralick's f.**, a germicidal fluid containing nascent chlorine and ozone: used by venous injection in tuberculosis. **Hermann's f.** See under *stains*, table of. **Kaiserling's f.** See *Kaiserling's solution*, under *solution*. **labyrinthine f.**, the perilymph. **Lang's f.**, a hardening fluid composed of corrosive sublimate, 5 parts, sodium chlorid, 6 parts, and acetic acid, 5 parts, in 100 parts of water. **Locke's f.** See *Locke's solution* under *solution*. **Mitchell's f.**, a mixture of sodium chlorid, bromin, hydrochloric acid, and water acted on by an electric current: used in pulmonary tuberculosis. **Morton's f.**, a mixture of 10 gr. of iodine, 30 gr. of potassium iodid, and 1 fluidounce of glycerin: formerly used by injection in spinal meningocoele. **Müller's f.**, a weak solution of potassium dichromate and sulphate: used in fixing, hardening, and preserving anatomic specimens. **Pacini's f.** See under *solution*. **Parker's f.**, a 1 per cent. solution of formaldehyd in 70 per cent. alcohol; a hardening fluid. **Piazza's f.**, a blood-coagulating fluid composed of 1 gm. each of sodium chlorid and ferric chlorid and 4 c.c. of water. **Pitfield's f.**, a diluting fluid for counting leukocytes; made by dissolving 20 gm. of acacia gum in 50 c.c. distilled water and adding 50 gm. of glacial acetic acid and 1 dg. of gentian-violet. **Purdy's f.**, a modification of Fehling's solution, containing 4.752 gm. of cupric sulphate, 23.5 gm. of potassium hydroxid, 350 c.c. of strong ammonia, 38 c.c. of glycerin, and enough distilled water to make 1000 c.c. **saline f.** Same as *salt solution*. **Scarpa's f.**, the endolymph of the ear. **subarachnoid f.**, the cerebrospinal fluid. **synovial f.**, synovia. **Tellyesniczky's f.**, a fixing solution consisting of 3 parts of potassium dichromate, 100 parts of water, and 5 parts of glacial acetic acid. **Thoma's f.**, a decalcifying fluid for histologic work, consisting of 95 per cent. alcohol and pure nitric acid in the proportion of 1 c.c. of the latter to 25 c.c. of the former. **Toisson's f.** See under *stains*, table of. **ventricular f.**, the cerebrospinal fluid contained in the cerebral ventricles. **vital f.**, the fluid in the umbilical vesicle. **Waldeyer's f.** See *chlorpalladium f.* **Wickersheimer's f.**, a fluid composed of arsenic trioxid, sodium chlorid, and the sulphate, carbonate, and nitrate of potassium in a mixture of water, alcohol, and glycerin: used for preserving anatomic specimens. **Zenker's f.** See under *solution*.

fluid-acet-extract (flu'id-as-et-eks-trakt). A fluidextract made with a menstruum of acetic acid.

fluidextract, fluidextractum (flu-id-eks-trakt, flu-id-eks-trak'tum). A liquid preparation of a vegetable drug containing alcohol, either as a solvent or as a preservative, of such strength that 1 c.c. of the finished product closely represents the activity of 1 gram of the air-dried and powdered drug. The official fluidextracts are those of belladonna leaves, belladonna root, buchu, cannabis, cascara sagrada, aromatic fluidextract of cascara sagrada, cimicifuga, cinchona, colchicum, ergot, eriodictyon, eucalyptus, glycyrrhiza, pomegranate, hydrastis, hyoscyamus, ipecac, rhubarb, rhus glabra, rose, sarsaparilla, squill, senega, senna, uva ursi, and ginger. **aromatic f.**, made from aromatic powder. Dose, 15 min. (1 c.c.).

fluidglycerate (flu-id-glis'er-āt). A pharmaceutical preparation containing 50 per cent. by volume of glycerin combined with a drug in the same degree of strength as a fluidextract. The fluidglycerates of the National Formulary are those of cascara sagrada, licorice, Krameria, and rhubarb.

fluidism (flu'id-izm). Same as *humoralism*.

fluidounce (flu-id-ouns'). Eight fluidrams.

fluidram (flu-id-ram'). A measure equal to 56.96 grains of distilled water.

fluinol (flu'in-ol). A proprietary pine-needle extract: used as a sedative addition to baths.

flake (fluk). Any parasitic trematode worm. **blood-f.** See *Schistosoma*. **intestinal f's.** See *Amphystoma*, *Fasciolella*, *Fasciolopsis*, *Gastrotricus*, *Heterophyes*, *Melagonimus*, *Wolonsius*, and *Yokagawa*. **Kwan's f.**, a species found in Hong-Kong. It resembles *Fasciola buski*. **liver f's.** See *Clonorchis*, *Picrocelium*, *Fasciola*, *Melorchis*, and *Opisthorchis*. **lung-f.** See *Paragonimus*.

flumerin (flu'mer-in). A dark red powder easily soluble in water. It is the disodium salt of hydroxy mercury fluorescein, $\text{HgOH.C}_6\text{H}_2(\text{ONa}).\text{O.C}_6\text{H}_3(\text{O}).\text{C}_6\text{H}_4.\text{COONa}$. It is used intravenously in the treatment of syphilis. Dose, 0.20-0.35 gm.

flu'mina pilo'rum [B N A]. The hair-streams, or lines along which the hairs are arranged on various parts of the body.

fluoform (flu'o-form). A compound, CHF_3 , somewhat analogous to chloroform: its aqueous solution is recommended in whooping-cough and tuberculosis.

fluor albus (flu'or al'bus) [L. "white flow"]. See *leukorrhæa*.

fluorane (flu'or-än). The mother substance from which fluoresein and its derivatives are obtained. It is $\text{C}_6\text{H}_4.\text{O}(\text{C}_6\text{H}_4.\text{CO})_2$.

fluorescein, **fluorescin** (flu-or-es'e-in, flu-or-es'in). The simplest of the fluorane dyes and the mother substance of eosin. A dilute solution of its sodium salt, $\text{NaO}(\text{C}_6\text{H}_3\text{O}_2).\text{C}_6\text{H}_4.\text{COONa}$, is used to detect corneal lesions by the green stain produced.

fluorescence (flu-or-es'ens) [first observed in fluor-spar]. The property certain bodies, especially organic fluids and solutions, manifest when irradiated: the light they emit differs in wave length from the light they absorb.

fluorid (flu'or-id). Any binary compound of fluorin.

fluorin (flu'or-in) [from fluor-spar, from which it is derived]. A halogen, non-metallic, gaseous element, not unlike chlorine: symbol, F; atomic weight, 19.

fluoroform (flu'or-o-form). A gas, trifluoromethane, CHF_3 , analogous to chloroform: has been used in phthisis.

fluoroformol (flu'or-o-for'mol). A 3 per cent. aqueous solution of fluoroform: used as an antiseptic in pneumonia, tuberculosis, and lupus.

fluorol (flu'or-ol). Sodium fluoride, NaF , a white, crystalline powder: antiseptic, antiperiodic, etc. Dose, $\frac{1}{16}$ - $\frac{1}{2}$ gr. (0.004-0.0054 gm.); for tuberculosis of children, $\frac{5}{160}$ - $\frac{1}{2}$ gr. (9.1-5 mg.).

fluorometer (flu-or-om'et-er). 1. An apparatus for measuring the quantity of rays given out by an x-ray tube. 2. An attachment to the fluoroscope, enabling the operator to secure a correct and undistorted shadow of the object and to locate exactly the position of the object.

fluoroscope (flu-or-os-köp) [fluorescence + Gr. σκοπεῖν to view]. A device used for examining deep structures by means of the Roentgen rays: it consists of a screen (fluorescent screen) covered with crystals of calcium tungstate.

fluoroscopic (flu'or-o-skop-ik). Pertaining to fluoroscopy.

fluoroscopy (flu-o-ros'ko-pe). Examination by means of the fluoroscope.

fluorphenetol (flu-or-fen'et-ol). A preparation of fluorin and phenetol.

fluorrheumin (flu-or-u'min). A proprietary ointment of petrolatum, lanolin, difluorodiphenyl, and fluorphenetol: used in rheumatism, lumbago, and sciatica.

flush (flush). A redness of the face and neck. **hectic f.**, the peculiar flush of the febrile state of hectic fever. **mahogany f.**, a deep-red or

mahogany-colored, circumscribed spot seen on one cheek in some cases of lobar pneumonia.

flutter, atrial or auricular (flut'er). A condition of cardiac arrhythmia in which the auricular contractions are extremely rapid (180 to 400 per minute), but are rhythmic and of uniform amplitude. The ventricles are unable to respond to each auricular impulse, so that a partial or complete block is set up, the impulses no longer arise from the sino-auricular node, but from some other portion of the auricle.

fluvanil (flu'van-il). A principle, $\text{C}_{10}\text{H}_8\text{O}_6$, derived from gutta-percha.

flux (fluks) [L. flux'us]. 1. An excessive flow or discharge. 2. A substance that facilitates the fusion of metals or minerals. **alvine f.**, diarrhea. **bilious f.**, hepatic f., tropical dysentery with a copious discharge of bile. **bloody f.** See *dysentery*. **celiac f.**, diarrhea accompanied by the discharge of undigested food. **menstrual f.**, the menses.

fly (fli). A dipterous or two-winged insect. **black f.** See *Simulium*. **blow f.**, blue-bottle f. See *Calliphora*. **bot f.** See *Dermatobia*. **cheese f.** See *Piophilæ*. **Columbacz f.** See *Simulium columbaczense*. **crane f.** See *Tipulidæ*. **deer f.** See *Chrysops discalis*. **drone f.**, Eristalis tenax. **dung f.**, Sepsis violacea. **eye f.** See *Siphunculina funicola*. **filth f.**, Musca domestica. **flesh f.** See *Sarcophaga* and *Wohlfahrtia*. **fruit f.** See *Drosophila*. **gad f.** See *Tabanus*. **gold f.** See *Lucilia caesar*. **green bottle f.** See *Lucilia*. **heel f.** See *Hypoderma*. **horn f.** See *Hemalobium*. **horse f.** See *Tabanus*. **house f.** See *Musca domestica*. **mango or mangrove f.** See *Chrysops*. **Motuca f.** See *Lepidosilaga*. **phlebotomus f.** See *Phlebotomus*. **pomace f.** See *Drosophila*. **Russian f.**, cantharis. **sand f.** See *Phlebotomus*. **screw-worm f.** See *Chrysomya*. **Seroot f.**, Tabanus gratus. **Spanish f.**, cantharis. **stable f.** See *Stomoxys*. **tsetse f.** See *Glossina*. **tumbu f.** See *Cordylobia anthropophaga*. **typhoid f.**, Musca domestica. **vinegar f.** See *Drosophila*. **warble f.** See *Dermatobia*.

fly-agaric. See *Amanita muscaria*.

fly-blister (fli'blis-ter). A blister prepared from cantharides.

flying-blister (fli'ing-blis-ter). A blister to be moved from place to place.

F. M., f. m. Abbreviation for *fi'at mistu'ra*, make a mixture.

focal (fo'kal). Pertaining to or occupying a focus. **f. infection.** See *infection*.

Fochier's abscess (fosh-e-äz') [Alphonse Fochier, French gynecologist, 1845-1903]. See under *abscess*.

focil, focile (fo'sil, fo'sil-e) [L. *fusill'us*, a little spindle]. One of the bones of the forearm or leg.

focimeter (fo-sim'et-er). An apparatus for finding the focus of a lens.

focus (fo'kus), pl. *fo'ci* [L. "fire-place"]. 1. The point of convergence of light-rays or of the waves of sound. 2. The chief center of a morbid process. **aplanatic f.**, that focus or point from which rays diverging pass the lens without spheric aberration. **conjugate f.**, the point at which rays that come from some definite point are brought together. **principal f.**, the point at which rays that were parallel before refraction are brought together. **real f.**, the point at which convergent rays intersect. **virtual f.**, the point at which divergent rays would intersect if prolonged backward.

Feniculum (fe-nik'u-lum), gen. *fenic'uli* [L.]. A genus of umbelliferous plants. See *fennel*.

Foerster. See *Förster*.

fœtal, fœtus, etc. See *fetal, fetus*, etc.

fogging, fogging system (fog'ing). A method of testing the vision by first making the patient arti-

ficially myopic by means of plus spheres in order to relax all accommodation before using cylinders.

foil (foil). Metal in very thin, pliable sheets. The chief foils used in medicine and dentistry are those of gold, platinum, and tin.

Fol. Abbreviation for *L. folia*, leaves.

fold (fold). A rather thin, recurved margin, or doubling. **amniotic f.**, the folded edge of the amniotic membrane where it rises over and finally encloses the embryo. **Arnold's f.**, Béraud's valve; a slip of mucous membrane sometimes found at the junction of the nasal duct with the lacrimal sac. **aryepiglottic f.**, a fold of mucous membrane extending on either side between the lateral border of the epiglottis and the summit of the arytenoid cartilage. **axillary f's**, the folds of skin bounding the armpit. **cecal f.** Same as *plica cæcalis*. **ciliary f.**, one of a series of low ridges in the furrows between the ciliary processes. **conjunctival f.**, the fold at the point where the conjunctiva is reflected from the eyeball onto the eyelid. **costocolic f.**, a fold of peritoneum from the diaphragm to the splenic flexure of the colon, forming a shelf-like structure above the spleen. **Douglas's semilunar f.**, a thin, curved margin; the lower part of the posterior wall of the sheath of the abdominal rectus muscle. **Duncan's f's**, loose folds of peritoneum covering the uterus immediately after delivery. **duodenojejunal f.**, a peritoneal fold from the transverse mesocolon to the union of the duodenum with the jejunum. **epigastric f.**, a fold of peritoneum covering the epigastric vessels. **gastropancreatic f.**, a fold of the peritoneum between the stomach and the pancreas. **genital f.**, a fold of skin in the embryo, on each side of the genital tubercle, which develops into the urethral walls in the male or the labia minora in the female. **genitomesenteric f.**, a fold of peritoneum passing from the mesentery of the ileum to the pelvis, attached in the fetus to the genital gland below. **glosso-epiglottic f's**, three folds of mucous membrane extending from the base of the tongue to the epiglottis. **gluteal f.**, the crease separating the buttock from the thigh. **Guérin's f.**, a fold of mucous membrane occasionally seen in the fossa navicularis of the urethra. **head f.**, the inflection of the blastoderm at the head end of the embryo. **Heister's f.** See *Heister's valves*, under *valve*. **Hensing's f.**, **parietocolic f.**, the superior ligament of the cecum. **hypoblastic f.**, a fold over the hypoblast in the embryo developing into the notochord. **ileocolic f.**, a crescentic fold of peritoneum forming a part of the mesentery, mesocolon, and mesoecum. **incudal f.**, a mucous fold in the tympanum extending from the long limb of the incus to the posterior wall. **Jonnesco's f.**, **Juvara's f.** Same as *parieto-peritoneal f.* **Kerkring's f's**, Kerkring's valves. **Kohlrausch's f.**, a fold of mucous membrane projecting from the right side into the lumen of the rectum; the so-called third sphincter. **lacrima f.**, Huschke's valve. See *valve*. **Luschka's f.**, the ileocolic fold. **Marshall's f.** See *vestigial f.* **medullary f.**, a fold of ectoderm along each side of the medullary plate during the early stages of development of the central nervous system. **mesenteriommesocolic f.**, a fold of peritoneum extending from the mesentery into the mesocolon of the sigmoid flexure. **meso-uterine f.**, a fold of peritoneum supporting the uterus. **Nélaton's f.**, a transverse fold of mucous membrane in the rectum, marking the junction of its lower and middle thirds. **neural f.** Same as *medullary f.* **opercular f.**, a fold of tissue constituting an adhesion between the tonsil and the anterior pillar of the fauces. **palpebral f's**, the folds (superior and inferior) formed by the reflections of the conjunctiva from the eyelids to the eye. **parietoperitoneal f.**, a fetal fold of peritoneum arising at the left side of the ascending colon and attached to the parietal peritoneum at the right

of the ascending colon. **Pawlik's f's**, two columns in the vagina forming the lateral boundaries of Pawlik's triangle: they serve to mark the openings of the ureters. **pharyngo-epiglottic f.**, a fold of mucous membrane running backward from the epiglottis. **pituitary f's**, the folds of the dura mater inclosing the hypophysis. **Rathke's f's**, two fetal folds of mesoderm which unite at the median line to form Douglas's septum and to render the rectum a complete canal. **rectal f's**, the crescentic folds of mucous membrane on the lateral walls of the rectum; Houston's valves. **rectovesical f.**, the rectovesical pouch. See *pouch*. **Reid's f.**, the genitomesenteric fold. **retrotarsal f.**, the fornix conjunctivæ. **Rindfleisch's f's**, folds in the serous surface of the pericardium around the beginning of the aorta. **salpingopalatine f.**, a projection in front of the entrance to the eustachian tube within the nasopharynx. **salpingopharyngeal f.**, an eminence behind the entrance to the eustachian tube within the nasopharynx. **Schultze's f.**, a sickle-shaped fold of the amnion extending from the point of insertion of the cord into the placenta to the remains of the umbilical vesicle. **synovial f.**, an extension of the synovial membrane of a joint toward or between two articular surfaces. **tail f.**, a double fold which, with the head-fold, becomes the amniotic fold surrounding the embryo. **Treves's f.**, a fold of peritoneum at the left border of the cecum, extending from the ileum above to the appendix below. **ventricular f.**, the false vocal cord. **vestigial f.**, **Marshall's f.**, a pericardial fold over the root of the left lung, formed by the obliterated duct of Cuvier. **visceral f's**, the thickened folds between the visceral arches and clefts of the embryo. **vocal f.**, the true vocal cord.

folia (fo'le-ah). Latin for *leaves*.

foliaceous (fo-le-a'shus) [*L. folia*, leaves]. Pertaining to or resembling leaves.

folian (fo'le-an). See *Folius*.

folie (fol-e') [*Fr. "insanity"*]. Insanity. **f. à deux** (fol-e' a d-uh') ["insanity of two"], communicated insanity. See under *insanity*. **f. circulaire** (fol-e' ser-koo-lair'), circular insanity. **f. du doute** (fol-e' du doot'), doubting insanity. **f. du pourquoi** (fol-e' du poor-kwah'), a psychasthenic condition in which the patient is constantly asking questions. **f. gemellaire** (fol-e' zhamel-air'), insanity appearing nearly simultaneously in twins. **f. musculaire**, severe chorea. **f. raisonnante** (fol-e' ri-zon-ant'), delusional insanity.

Folin's test (fol'inz) [Otto *Folin*, American physiologic chemist, born 1867]. See under *tests*.

foliosan (fo'le-o-san). Same as *phyllosan*.

folium (fo'le-um), pl. *folia* [*L. "leaf"*]. A leaf or leaf-like structure, especially one of the leaf-like subdivisions or gyri of the cerebellar cortex. **f. cacuminis**, **f. vermis** [B N A], the most posterior part of the superior vermiform process of the cerebellum.

Folius's process (fo'le-us) [Cæcilius *Folius*, anatomist of Venice, 1615-1650]. See under *process*.

follicle (fol'ik-l) [*L. folliculus* little bag]. A very small excretory or secretory sac or gland. **dental f.**, the sac-like structure within the substance of the jaws, inclosing the tooth before its eruption; the dental sac and its contents. **Fleischmann's f.**, a mucous follicle in the mucosa of the floor of the mouth, near the anterior border of the genioglossus muscle. It is not always constant. **gastric f's**. 1. The glands of the stomach which secrete gastric juice. 2. The lymphoid masses in the gastric mucosa. **graafian f.**, any one of the small spheric ovarian bodies, each one of which contains an ovum. **hair-f.**, the depression from which each hair grows. **intestinal f's**, Lieberkühn's follicles. **lenticular f's**, lymphatic follicles of the mucous membrane of

the stomach. **Lieberkühn's f's**, little tubular pits on the mucous membrane of the small intestine. **lymph-f.**, an aggregation of adenoid substance, chiefly found upon the mucous surfaces. **Montgomery's f's**, depressions in the mucous membrane of the uterus. **Naboth's f's**, distended mucous glands within the cervix and about the os uteri. **sebaceous f.**, a sebaceous gland of the skin. **solitary f.**, any discrete lymph-follicle on the mucous surface of the intestine. **vesicular ovarian f.** Same as *graafian f.*

folliclis (fol'ik-lis). A tuberculous disease marked by an eruption on the extremities of red nodules which later become pustular, resulting in an ulcer which heals with a scar.

follicular (fol-ik'u-lar) [*L. follicula'ris*]. Of or pertaining to a follicle or follicles.

folliculin (fol-ik'u-lin). A name given to the hormone which regulates the menstrual cycle on the supposition that it is contained in the liquor folliculi.

folliculitis (fol-ik-u-li'tis). Inflammation of a follicle or follicles. **agminate f.**, inflammation of a set of skin-follicles. **f. barbæ**, inflammation of the hair-follicles of the beard. **f. decal'vans**, chronic folliculitis of the scalp, leading to cicatricial alopecia.

folliculoma (fol-ik-u-lo'mah). A tumor of the ovary formed from the epithelium of the graafian follicles, and containing structures that resemble follicles.

folliculosis (fol-ik-u-lo'sis). A disease characterized by excessive development of lymph-follicles.

folliculus (fol-ik'u-lus) [*L.*]. A follicle. **f. ooph'orus vesicul'us** [*B N A*], a graafian follicle. See *follicle*. **f. pi'li** [*B N A*], a hair-follicle. See *follicle*.

fomentation (fo-men-ta'shun) [*L. fomenta'tio; fomen'tum* a poultice]. Treatment by warm and moist applications; also the substance thus applied.

fomes (fo'mēz), pl. *fom'ies* [*L. "tinder"*]. Any substance other than food that may harbor or transmit a contagium.

fomite (fo'mit). Same as *fomes*.

Fontana's canal, mask, spaces, etc. (fon-tah'-nahz) [Felice Fontana, Italian naturalist, 1730-1805]. See *canal, mask, space*, etc.

fontanel, fontanelle (fon-tan-el') [Fr. *fontanelle* little fountain]. 1. Any one of the unossified spots on the cranium of a young infant. 2. An issue for the discharge of humors from the body. **anterior f.** is situated at the junction of the frontal, coronal, and sagittal suture. **anterolateral f.** Same as *sphenoid f.* **bregmatic f.** Same as *anterior f.* **Casser's f.**, a fontanel at the junction of the temporal, parietal, and occipital bones. **frontal f.** Same as *anterior f.* **Gerdy's f.**, a fontanel occasionally occurring in the sagittal suture. **mastoid f.**, a fontanel between the adjacent edges of parietal, occipital, and mastoid portions of the temporal bone. **occipital f.**, the posterior fontanel. **posterior f.**, one at the junction of the sagittal and lambdoid sutures. **posterolateral f.**, the mastoid fontanel. **sagittal f.**, Gerdy's fontanel. **sphenoid f.**, a fontanel at the point of junction of the frontal, parietal, squamous part of temporal, and great wing of sphenoid bone.

fonticulus (fon-tik'u-lus), pl. *fontic'uli* [*L. dim. of fons* fountain]. 1. The depression at the base of the neck first above the sternum; called also *f. guttu'ris*. 2. A fontanel.

food (food). Anything which, when taken into the body, serves to nourish or build up the tissues or to supply heat; aliment. **isodynamic f's**, foods which generate equal amounts of force in heat-units.

food-ball. See *phytobezoar*.

food-fever. See under *fever*.

foot (fut) [*L. pes*]. The terminal organ of the leg.

See also *claw-foot, club-foot, flat-foot, talipes. f.-and-mouth disease*. See under *disease*.

bear's f. See *Polymnia*. **buttriss f.**, a condition of periostitis or osteitis in the region of the pyramidal process of the os pedis of a horse with fracture of the process, deformity of the hoof, and alteration of the normal angle of the joint. Called also *pyramidal disease* and *low ring-bone*. **claw-f.**, a foot affected with atrophy and contracture of the toes. **cleft f.**, a deformed foot in which the division between the third and fourth toes extends into the metatarsal region. **club-f.** See *talipes*. **contracted f.** See *hoof-bound*.

crooked f., a condition of a horse's hoof in which one wall is concave and the opposite wall convex, giving the hoof a bent appearance. It is due to improper trimming and shoeing. **dangle-f.**, a dependent and powerless state of the foot, due to paralysis of the leg muscles. **end-f.**, one of the delicate terminal expansions of nerve-fibers. **flat-f.** 1. See *flat-foot*. 2. That condition of a horse's foot in which the natural concavity of the sole is absent. **forced f.**, a painful swelling of the feet of soldiers after forced marches, due to fracture of the fourth metatarsal bone. **Friedreich's f.**, pes cavus, with hyperextension of the toes: seen in hereditary ataxia. **fungus-f.** See *mycetoma*.

golfer's f., a painful condition due to breaking down of the anterior arch of the foot in golfers. **hollow f.** See *pes cavus*. **Hongkong f.**, an infectious mycotic disease of the foot occurring in China. **Madura f.** See *mycetoma*. **Morand's f.**, a foot having eight toes. **Morton's f.**, metatarsalgia. **mossy f.**, an infective verrucotic condition of the skin of the feet, endemic in the Amazon region of South America. **f.-phenomenon, f.-reflex**. Same as *ankle-clonus*. **f.-plate**, the plate that forms the base of the stapes. **f.-pound**, the energy needed to raise a pound one foot. **pricked f.**, a condition, in a horse in which the sole or the frog has been punctured either in the forge or by the animal treading on a nail or some other object. **pumiced f.**, a condition in which the sole of a horse's hoof projects beyond the level of the wall, the horn being porous and brittle in quality. Called also *dropped sole* and *convex sole*. **reel f.**, club-foot. **f.-rot**. See under *rot*. **sag-f.**, sagging of the arch of the foot. **tabetic f.**, the flat, distorted foot seen in tabes, and due to disease of the tarsus. **taut-f.**, a shortening and contraction of the calf muscles and plantar flexors of the foot, due to high-heeled shoes. **trench-f.**, a condition of the feet of soldiers in the trenches resembling frost-bite. It is due to the prolonged action of water on the skin combined with circulatory disturbance due to cold and inaction. Called also *water-bite, foot stasis*, and *local frigidism*.

foot-candle. A common unit of illumination. It is equivalent to 1.0764 millilphot.

foot-pound. The work done in raising one pound one foot against gravity.

forage (fo-rahzh). An operation of cutting a V-shaped longitudinal trench in the prostate by means of the electric current, thereby removing the obstruction caused by its hypertrophy.

foramen (for-a'men), pl. *foram'ina* [*L.*]. A hole or perforation; especially a hole in a bone. **alveolar f.**, one of the openings of the posterior dental canals on the external surface of the maxillary bone. **aortic f.**, the hindmost of the openings of the diaphragm. **apical f.**, the opening of the pulp canal at the apex of the root of a tooth. **arachnoid f.**, the foramen of Magendie. **auditory f.**, external, the external meatus of the auditory canal. **auditory f.**, internal, a passage for the auditory and facial nerves in the petrous bone. **Bartholin's f.**, the obstructor foramen. **Bichat's f.**, a canal extending from the subarachnoid space to the third ventricle. **Botalli's f.**, connects the auricles of

the fetal heart. **Bozzi's f.**, Sömmering's yellow spot; the macula lutea of the retina. **f. cæcum**, **cecal f.** 1. A foramen between the frontal bone and crista galli. 2. A canal above the root and dorsum of the tongue. 3. A passage in the mucous membrane of the posterior wall of the pharynx. **f. cæcum posterius**, a blind depression under the edge of the pons, formed by the termination of the anterior fissure of the medulla oblongata. Called also *f. cæcum of Vicq d'Azyr*. **carotid f.**, the inferior aperture of the carotid canal, for the carotid vessels. **cavernous f.**, a passage for the median vertebral vein in the sphenoid bone. **f. centra'le**. Same as *fovea centralis*. **cervical f.**, a passage for the vertebral artery and vein in the transverse processes of the cervical vertebrae. **condyloid f.**, a passage for the hypoglossal nerve in the occipital bone. **condyloid f., posterior**, a fossa behind either occipital condyle. **conjugate f.**, a foramen formed by a notch in each of two opposed bones. **costotransverse f.**, a foramen between the anterior and posterior costotransverse ligaments for the passage of the intercostal branch of the spinal nerve. **cotyloid f.**, a passage between the margin of the acetabulum and the transverse ligament. **dental f., inferior**, the outer aperture of the inferior dental canal in the ramus of the lower jaw. **dental f., superior**, the foramen of Scarpa. **f. diaphragmatis (sel'læ)** [B N A], the opening in the center of the diaphragm of the sella through which passes the infundibulum. **Duverney's f.** Same as *f. of Winslow*. **emissary f.**, any foramen which gives passage to an emissary vein. **epiploic f.**, the foramen of Winslow. **esophageal f.**, the passage for the esophagus through the diaphragm. **ethmoid f. (anterior and posterior)**, foramina on the border of the ethmoid. **ethmoid f., anterior**, a canal between the ethmoid and frontal bones for the nasal branch of the ophthalmic nerve and for the anterior ethmoid vessels. **Ferrein's f.**, the hiatus fallopii. **frontal f.**, the supra-orbital notch. **fronto-ethmoid f.**, a cecal foramen lying between the frontal and ethmoid bones. **Galen's f.**, the opening of the anterior cardiac vein into the right auricle. **Hartigan's f.**, a foramen said to exist in the base of the transverse process of a lumbar vertebra, seldom persisting to adult life. **Huschke's f.**, a perforation found near the inner extremity of the tympanal plate: caused by arrest of development. **incisor f., f. incisivum** [B N A], the aperture for the anterior palatine artery in the alveolar margin. **infra-orbital f.**, the passage in the superior maxillary bone for the infra-orbital nerve and vessels. **innominate f.**, an occasional passage in the temporal bone for the small superficial petrosal nerve. **interventricular f., f. interventricula're**, the communication between the lateral and third ventricles; called also *f. of Monro and porta*. **intervertebral f.**, any passage (anterior or posterior) formed by the notches of any two adjacent vertebrae. **intervertebral f., posterior**, any space between the articular processes of adjacent vertebrae. **ischadic f.** Same as *sacrosciatic f.* **jugular f.**, the foramen lacerum posterius. **Key-Retzius f.**, two openings in the inferior choroid tela of the fourth ventricle at the lateral recesses: they open into the cisterna magna. **f. la'cerum**. Same as *f. lacerum medium*. **f. la'cerum ante'rius**, the sphenoid fissure. **f. la'cerum me'dium**, a cleft in the petrous bone and great wing of the sphenoid bone for the carotid artery and the large superficial petrosal nerve. **f. la'cerum poste'rius**, the space formed by the jugular notches of the temporal and occipital bones. **Luschka's f.**, a semilunar opening between the valvula tarini and the ligula, at the lateral angle of the fourth ventricle on either side. **Magendie's f.**, a median aperture in the membranous roof of the fourth ventricle which connects the fourth ventricle with the subarachnoid space. **f. mag'num**,

a great orifice in the occipital bone through which the brain and spinal cord are connected. **mandibular f.** Same as *dental f., inferior*. **mastoid f.**, a small aperture behind the mastoid process for an artery and vein. **medullary f.** Same as *nutrient f.* **meibomian f.**, the foramen cæcum of the tongue. **mental f.**, a foramen of the lower jaw for the mental nerve and vessels. **f. of Monro**. See *foramen interventriculare*. **Morand's f.**, the foramen cæcum (2d def.). **morgagnian f.**, the interval between the basilar process of the occipital bone and the upper border of the superior constrictor muscles of the pharynx. **f. nervosum** [B N A], one of the openings on the tympanic edge of the lamina spiralis for the passage of the cochlear nerves. **f. nutric'ium** [B N A], **nutrient f.**, any one of the passages which admit the nutrient vessels to the medullary cavity of a bone. **obturator f., f. obtura'tum** [B N A], the large opening between the os pubis and the ischium. **occipital f., f. occipita'le mag'num** [B N A], the large opening in the occipital bone through which passes the lower part of the medulla oblongata. **olfactory f.**, any one of the many openings of the cribriform plate of the ethmoid bone. **optic f.**, the passage for the optic nerve and ophthalmic artery at the apex of the orbit. **f. ova'le** [B N A]. 1. A fetal opening between the heart's auricles. 2. An aperture in the great wing of the sphenoid bone for the inferior maxillary nerve and the small meningeal artery. **pachionian f.**, the opening in the tentorium cerebelli through which the pons extends. **palatine f., anterior**, an orifice in the anterior part of the roof of the mouth for a nerve and artery; the mouth of the incisor canal. **palatine f., posterior or great**, the orifice in the hard palate of the posterior palatine canal. **parietal f.**, an opening near the back of the upper border of the parietal bone for a vein. **pterygopalatine f.**, the exterior aperture of the pterygopalatine canal. **pulpal f.** Same as *apical f.* **quadrate f.**, the opening in the diaphragm for the postcava. **Retzius's f.** Same as *Key-Retzius f.* **rivinin f.**, the notch of Rivinus; also a minute opening said by some observers to exist in Shrapnell's membrane. **f. rotun'dum**, a round aperture in the great wing of the sphenoid for the superior maxillary nerve. **sacral f., anterior**, any one of the eight openings (four on each side) on the posterior surface of the sacrum for the anterior or motor roots of the sacral nerves. **sacral f., posterior**, any one of the four orifices on each side of the posterior surface of the sacrum for the posterior or sensory roots of the sacral nerves. **sacrosciatic f., great**, the oval space between the innominate bone and the lesser sacrosciatic ligament. **sacrosciatic f., smaller**, the space between the greater and lesser sacrosciatic ligaments and the innominate bone. **Scarpa's f.**, two foramina behind the middle incisor teeth: they transmit the nasal palatine nerves. **Schwalbe's f.**, the foramen cæcum posterius. **sciatic f.**, sacrosiatic foramen. **f. singula're** [B N A], an opening on the inferior fossa of the fundus of the internal auditory canal, for the passage of the nerve to the ampulla of the posterior semicircular canal. **Sömmering's f.**, the fovea centralis. **sphenopalatine f.**, the space between the orbital and sphenoid processes of the palate bone. **sphenotic f.**, the foramen lacerum medium. **f. spino'sum** [B N A], an opening in the great wing of the sphenoid near its posterior angle, for the middle meningeal artery. **Stenson's f.**, the two foramina behind the outer incisor teeth: each transmits an artery. **stylomastoid f.**, a foramen between the styloid and mastoid processes, for the facial nerve and stylomastoid artery. **suborbital f.**, the orifice at the anterior end of the infra-orbital canal for the infra-orbital artery and nerve. **suprapyiform f.**, an opening above the pyramidalis muscle through which the gluteal vessels and superior gluteal nerve pass out of the pelvis.

Tarin's f., the hiatus fallopii. **Thebesian f.**, **f. thebesii**, the venæ thebesii or their orifices in the right auricle. **thyroid f.**, the obturator foramen. **f. transversarium** [B N A], transverse f., the vertebral-arterial foramen. **f. venæ cavæ** [B N A], the quadrate foramen. **f. vena'rum minima'rum** (thebesii). Same as **f. thebesii**. **vertebral f.**, the space in any vertebra for the lodgment of the spinal cord. **vertebral f., anterior**, any passage for a spinal nerve. **vertebro-arterial f.**, a passage in each transverse process of a cervical vertebra for the vertebral artery and veins. **f. of Vesalius**, an opening at the inner side of the foramen ovale of the sphenoid. **f. of Vicq d'Azyr**. See **f. cæcum posterius**. **Weitbrecht's f.**, a foramen in the capsule of the shoulder-joint through which passes the synovial membrane to the bursa that lines the under surface of the subscapularis muscle. **f. of Winslow**, the aperture between the greater and lesser peritoneal cavities. **zygomaticofacial f.**, the external aperture of the malar canal on the malar bone for the temporomalar nerve. **zygomatico-orbital f.**, the temporomalar canal. **zygomaticotemporal f.**, the internal orifice of the malar canal in the malar bone for the temporomalar nerve.

foramina (for-am'in-ah). Plural of **foramen**. **f. nasa'lia**, vascular foramina, opening on the outer surface of each nasal bone. **f. nervo'sa** [B N A]. See **f. nervo'sum**. **f. palati'na mino'ria** [B N A], external accessory palatine canals. **f. papillaria re'nis** [B N A], minute openings in the summit of each renal papilla, the openings of the secreting tubules. **f. vena'rum minima'rum** [B N A], the Thebesian foramina.

foraminalum (for-am-in'-a-lum). A very small foramen.

foraminiferous (for'am-in-if'er-us) [**foramen** + **L. fer're** to bear]. Having foramina.

foration (fo-ra'shun) [L. **fora'tio**]. The act or process of trephination or boring.

force (förs) [L. **for'tis** strong]. That which originates or arrests motion. **catabolic f.**, energy derived from the metabolism of food. **nerve f., nervous f.**, the ability of nerve tissue to conduct stimuli. **reserve f.**, energy above that required for normal functioning. **vital f.**, the energy which characterizes a living organism.

forced foot (först). See under **foot**.

forceps (for'seps) [L.]. 1. An instrument with two blades and handles for pulling, grasping, or compressing. 2. Any forcipate organ or part, particularly the terminal fibers of the corpus callosum. **alligator f.**, a strong toothed forceps having a double clamp. **alveolar f.**, a forceps for removing portions of the alveolar process. **f. anterior**. Same as **f. minor**. **artery f.**, a forceps for grasping and compressing an artery. **aural f.**, a forceps for operations on the ear. **axis-traction f.**, an obstetric forceps so constructed that the traction may be made in the line of the pelvic axis. **bone-f.**, a forceps used for cutting bone. **bulldog f.**, spring forceps for seizing an artery or other part to arrest hemorrhage. **capsule f.**, a forceps for removing the lens capsule in membranous cataract. **Chamberlen f.**, the original form of obstetric forceps. **clamp f.**, a forceps-like clamp with an automatic lock, used for compressing arteries, the pedicle of a tumor, etc. **clip f.**, a small forceps with broad ends to the blades and fastened by a spring catch, used to close the end of a severed artery during operations. **dental f.**, forceps for the extraction of teeth. **dressing f.**, a forceps with scissor-like handles for grasping lint, drainage-tubes, etc., in dressing wounds. **ear f.**, a delicate forceps for extracting foreign bodies from the auditory canal. **epilating f.**, a forceps for use in plucking out hairs. **fixation f.**, a forceps for holding a part during an operation. **hammer f.**,

a combined hammer and forceps for surgeons' use. **hemostatic f.**, a forceps for controlling hemorrhage. **Hodge's f.**, a variety of obstetric forceps. **Kielland's f., Kjelland's f.**, an obstetric forceps having short handles, no axis tractor, a marked cephalic curve, and an articulation permitting a gliding movement of one blade over the other. **Knapp's f.**, a forceps with roller blades: used to express trachomatous granules from the conjunctiva. **Kocher's f.**, a strong forceps for holding tissues during operation or for compressing bleeding tissue. **Laborde's f.**, a forceps for grasping the tongue in Laborde's respiration. **Laplace's f.**, a forceps used in enterostomy for holding the portions of the intestines together while they are being sutured. **Levret's f.**, a modified Chamberlen forceps, curved to correspond with the curve of the parturient canal. **Liston's f.**, a bone-cutting forceps. **lithotomy f.**, a forceps for removing stone from the bladder in lithotomy. **Löwenberg's f.**, a forceps for removing adenoid growths. **f. ma'jor**, the terminal fibers of the callosus that pass into the frontal lobe. **f. mi'nor**, the terminal fibers of the callosus that pass from the splenium into the occipital lobe. **mouse-tooth f.**, a forceps with two or more fine teeth at the tip of each blade. **obstetric f.**, forceps for making traction on the fetus in cases of difficult labor. **Péan's f.**, a clamp for hemostasis. **f. poste'rior**. Same as **f. minor**. **roller f.**, a forceps with a roller at the end of each blade: used for compressing the granulations in trachoma. **sequester f.**, a forceps with small but strong serrated jaws for removing the portions of bone forming a sequester. **Simpson's f.**, a form of obstetric forceps. **speculum f.**, a long slender forceps for use through a speculum. **Tarnier's f.**, axis-traction forceps. **tenaculum f.**, a forceps having a sharp hook at the end of each jaw. **torsion f.**, a forceps for making torsion on an artery to arrest hemorrhage. **tracheal f.**, a long slender forceps for removing foreign bodies from the trachea. **trachoma f.** Same as **roller f.** **tubular f.**, a slender forceps for use through a tubular instrument. **volsellum f., vulsellum f.**, a forceps each blade of which is armed with a volsellum hook.

Forchheimer's sign (for'shi-merz) [Frederick Forchheimer, physician in Cincinnati, 1853-1913]. See **sign**.

forcipate (for'sip-ät). Shaped like a forceps.

Forcipomyia (for-sip-o-mi'e-ah). A genus of Chironomide. **F. loewsen'di**, and **F. utæ** are species which are thought to transmit utæ by their bites.

forcipressure (for'sip-resh-ur). Pressure with a forceps, chiefly for the arrest of hemorrhage.

Fordyce's disease [John Addison Fordyce, New York dermatologist, 1858-1925]. See **disease**.

forearm (för'arm). The part of the arm between the elbow and the wrist.

forebrain (för'brän). The prosencephalon.

foreconscious (för-kon'shus). 1. Incapable of becoming conscious until certain conditions are fulfilled. 2. That part of the mind which contains memory impressions which may be brought into consciousness under certain conditions.

forefinger (för-fin'ger). The first, or index, finger.

foregut (för'gut). The embryonic organ whence the pharynx, esophagus, stomach, and duodenum are derived.

forehead (för'ed). The part of the face above the eyes.

Forel's commissure, decussation, field, fornix (fo-rel'z) [Auguste Forel, Swiss neurologist, born 1848]. See **commissure**, **decussation**, **field**, **fornix**.

forensic medicine (for-en'sik) [L. **foren'sis** pertaining to the forum or market-place]. Medicine as applied to the questions arising in courts of law or justice; legal medicine, medical jurisprudence.

foreskin (fôr'skin). The prepuce.

foretop (fôr'top). The anterior portion of the mane of a horse covering the forehead.

forewaters (fôr'wat-erz). The water that escapes in hydrorrhœa gravidarum.

forgenin (fôr'jen-in). A crystalline salt, tetramethyl ammonium formate, $\text{HCOO.N}(\text{CH}_3)_4$, a proprietary remedy used in neuropathic and arthritic disorders.

Forlanini's treatment (fôr-lah-ne'nēz) [Carlo Forlanini, Italian physician, 1847-1918]. See *treatment*.

formacoll (fôr'mak-ol). A preparation of formaldehyd and gelatin: antiseptic.

Formad's kidney (fôr'madz) [Henry F. Formad, American physician, 1847-1892]. See under *kidney*.

formadin (fôr'mad-in). An iodized condensation product of formaldehyd and salicylic acid containing about 56 per cent. of iodine.

formagen (fôr'maj-en). A proprietary dental cement.

formal (fôr'mal) [*formic* + *alcohol*]. Methylal or methylene dimethylate, $\text{CH}_2(\text{OCH}_3)_2$, a clear, fragrant liquid. It is anesthetic and hypnotic. Dose, 2-5 min. (0.133-0.333 c.c.).

formalbumin (fôr-mal-bu'min). A formaldehyd and casein compound; a yellowish powder, used as a wound antiseptic.

formaldehyd (fôr-mal'de-hid). Formic aldehyd, a powerfully disinfectant gas, HCHO . The gas is used as a disinfectant for rooms, clothing, etc. The aqueous solution is a colorless, volatile fluid; used as a surgical and general antiseptic and preservative. **f.-gelatin**, glutoformal.

formalin (fôr'mal-in). A 40 per cent. solution of gaseous formaldehyd. It is used as an antiseptic and disinfectant in 1 : 2000 to 1 : 200 solutions, and as a fixing agent in histologic work. **f.-gelatin**. See *glutol*.

formalina (fôr-mal-i'nah). Same as *igazol*.

formalith (fôr'mal-ith). A porous block charged with formalin: disinfectant.

formaloin (fôr-mal-o'in). A condensation product of formaldehyd and aloin combining the properties of both.

formamid (fôr-mam'id). A colorless, oily liquid, HCONH_2 , allied to urea. Combined with chloral, it forms chloralamid.

formamint (fôr'mam-int). A proprietary mixture of formaldehyd and milk-sugar for use in stomatitis and pharyngitis.

forman (fôr'man). Chlormethyl-menthyl ether, $\text{C}_{10}\text{H}_{18}\text{O} \cdot \text{CH}_2\text{Cl}$. The moisture of the air decomposes it into formic aldehyd, menthol, and hydrochloric acid.

formanilid (fôr-man'il-id). A substance, $\text{HCO} \cdot \text{NHC}_6\text{H}_5$, resembling acetanilid: an anodyne, antipyretic, and local anesthetic. Dose, 3-5 gr. (0.195-0.333 gm.).

formant (fôr'mant). In phonology, the special partial tone of constant pitch for each vowel.

formasal (fôr'mas-al). A condensation product of formaldehyd and salicylic acid which is claimed to be methylene disalicylic acid.

formaseptol (fôr-mas-ep'tol). A proprietary disinfectant made of formaldehyd, thymol, benzoic acid, etc.

formate (fôr'mât). Any salt of formic acid.

formatio (fôr-ma'she-o). Latin for *formation*.

f. al'ba, the light-colored middle part of the formatio reticularis of the spinal cord. **f. bulla'ris**, the tissue composing the primary olfactory center in the olfactory bulb; *i. e.*, the glomeruli, granule cells, and mitral cells. **f. claustra'lis**, the fifth layer of the gray matter of the cerebral cortex. **f. gris'ea**, the darker lateral part of the formatio reticularis of the spinal cord. **f. retic-**

ula'ris, tissue made up of neuropil containing nerve-fibers and cell bodies. Such tissue is seen in the angle between the anterior and posterior gray horns of the spinal cord, forming the processus reticularis. Such tissue occurs also among the large fiber tracts and nuclei of the medulla oblongata. Called also *reticular formation* and *substantia reticularis*. **f. vermicula'ris**, the tonsilla and flocculus of the cerebellum considered as one structure (Bolk).

formative (fôr'mat-iv). Concerned in the organization of an organism, part, or tissue.

formatol (fôr'mat-ol). A disinfectant dusting-powder containing formaldehyd.

formazin (fôr'maz-in). A white, amorphous material used in making the permanent albumin standards used in the life insurance method for albumin in urine. It is made by mixing equal volumes of a 10 per cent. solution of urotropin and a 1 per cent. solution of hydrazin sulphate.

formes frustes (form frust) [Fr.]. Atypical forms of a disease.

formeston (fôr-mes'ton). Basic aluminum acetate.

formic acid (fôr'mik). See *acid*.

formication (fôr-mik-a'shun) [L. *formica* ant.]. A sensation like that produced by ants and other insects crawling over the skin.

formice (fôr'mis) [*form* + *ice*]. A proprietary white, solid substance which, when dissolved in water, produces a very low temperature. It is employed in therapeutic refrigeration.

formiciasis (fôr-mis-i'as-is) [L. *formica* ant.]. The condition resulting from ant bites, usually marked only by itching, inflammation, and swelling; but the bites of large tropical ants may produce faintness, shivering, and paralysis.

formicin (fôr'mis-in). Formaldehyd acetamid, $\text{CH}_3\text{CO.NH.CH}_2\text{OH}$: used as a disinfectant and antiseptic.

formidin (fôr'mid-in). A proprietary antiseptic powder for wounds and internal use, said to be iodid of methylene-disalicylic acid.

formilase (fôr'mil-ās). A ferment which converts acetic acid into unstable formic acid.

formin (fôr'min). Urotropin or hexamethylenetetramin; a crystalline substance, $(\text{CH}_2)_6\text{N}_4$, soluble in water and alcohol, nearly insoluble in ether. It is antiseptic, diuretic, and a solvent of uric acid. Dose, 5-10 gr. (0.333-0.666 gm.).

formitrol (fôr'mit-rol). A proprietary mixture of formaldehyd, menthol, citric acid, and milk-sugar: used in stomatitis and pharyngitis.

formobas (fôr'mo-bas). A proprietary formaldehyd preparation.

formobor (fôr'mo-bör). A proprietary solution of formaldehyd and borax.

formochlorol (fôr-mo-klo'rol). A formaldehyd preparation: when heated under pressure it gives out a vapor of formaldehyd.

formocresol (fôr-mo-kre'sol). A mixture of equal parts of formalin and cresol: used in dentistry to treat putrescent dental pulps.

formoforin, formoform (fôr-mo-fô'rin, fôr'mo-form). A mixture of formaldehyd, thymol, zinc oxid, and starch: a powder for perspiring feet, and an external disinfectant.

formol (fôr'mol). A commercial name for a solution of formaldehyd in wood-alcohol and water: antiseptic.

formol-gel test. See under *tests*.

formolid (fôr'mo-lid). An antiseptic solution, containing, among other ingredients, 0.25 per cent. of formaldehyd and eucalyptol.

formopyrin (fôr-mo-pi'rin). A combination of antipyridin and formaldehyd, methylene dianitpyrin: antipyretic and antiseptic.

formose (for'mōs). A mixture of sugars having the formula $C_6H_{12}O_6$, formed by polymerizing sugar.

formosul (for'mo-sul). Sodium hyposulphite.

formoxid (for-mok'sid). A proprietary preparation of zinc oxid and formaldehyd for treating abscesses.

formula (for'mu-lah) [L. dim. of *for'ma* form].

1. A prescribed method of preparing a medicine.
2. A combination of symbols to express the chemico constitution of a body. **acoustic f.** Same as *Brenner's f.* **Ambard's f.**, a formula for finding the urea index in kidney disease. It is

$$\frac{Ur}{\sqrt{D \times \frac{70}{P} \times \sqrt{\frac{C}{25}}}} = K. \quad Ur \text{ stands for the}$$

proportion of urea in the blood; D, for the total urea for twenty-four hours in grams; P, for the body-weight of the patient in kilograms; C, for the proportion of urea in the urine. **Arneth's f.**, a formula showing the classification of the polymorphonuclear leukocytes into five groups, depending on the number of lobes (1 to 5) which the nucleus shows, and the percentage of each group in healthy persons. It is as follows: 1 lobe, 5 per cent.; 2 lobes, 35 per cent.; 3 lobes, 41 per cent.; 4 lobes, 17 per cent.; 5 lobes, 2 per cent. **Beck-**

mann's f., the formula, $M = \frac{KP}{\Delta}$, used in cryoscopy, in which M is the molecular weight of dissolved substances, K the constant for each solvent, P the percentage strength of the solution, and Δ the lowering of the freezing-point in degrees. **Bird's f.**, the last two figures expressive of the specific gravity of urine nearly represent the number of grains of solids in each ounce. **Black's f.**, the formula $F = (W + C) - H$. W is weight in pounds, C the chest measurement in inches at full inspiration, and H the height in inches. When F is over 120 a man is classed as very strong; between 110 and 120, strong; between 100 and 110, good; between 90 and 100, fair; between 80 and 90, weak; under 80, very weak. Cf. *Pignet's f.* **Brenner's f.**, the cathode being in the external meatus, a loud sound is heard on closing the circuit: intensity diminished during closure; sound ceasing when the circuit is broken. Anode in meatus, no sound on closing or during closure: weak sound at the break. **Broca's f.**, a full-grown man weighs as many kilos as the number of centimeters by which his height exceeds 1 meter. **chemic f.**, a graphic representation by symbols of the constitution of a molecule of any substance. **Christison's f.**, **Häser's f.** Same as *Trapp's f.* **constitutional f.**, a chemic formula showing by symbols the exact molecular structure of a substance, with the relative positions of the atoms and radicals. Called also *graphic f.*, *structural f.*, and *systematic f.* For example,

is the constitutional formula for benzene. **decomposition f.**, a structural formula representing the parts into which the molecule splits in chemic reactions. **Demoivre's f.**, the expectation of life is equal to two-thirds of the difference between the age of the person and eighty. **dental f.**, a formula or combination of symbols which expresses the arrangement of teeth in jaws. The human dental formula is, for the deciduous teeth: $i. \frac{2-2}{2-2} c. \frac{1-1}{1-1} m. \frac{2-2}{2-2} = 20$; for the permanent teeth: $i. \frac{2-2}{2-2} c. \frac{1-1}{1-1} pm. \frac{2-2}{2-2} m. \frac{3-3}{3-3} = 32$.

Dreser's f., a formula showing the work done by the kidney, by comparing the molecular con-

centration of the urine with that of the blood. **Dreyer's f.**, a formula for expressing vital capacity of the lungs as a function of the body surface: $\frac{W^{0.72}}{\bar{V}.C.} = K$, in which W is body weight,

V. C. is the vital capacity in cubic centimeters, K is a constant which at 0.69 represents 100 per cent. fitness. **Du Bois's f.**, for calculating surface area, $O = P^{0.425} \times L^{0.725} \times 71.84$. P means weight, L means height of the body. **electric f.**, a series of symbols expressing an electric reaction. **empiric f.**, a chemic formula which shows the elements in a compound and their relative proportions without attempting to show the structure of the molecule. **extemporaneous f.**, a prescription for a pharmaceutical preparation not kept in stock, but made up at the time of dispensing. **glyptic f.**, an attempted graphic delineation of the arrangement and relations of the atoms of a molecule. **graphic f.** See *constitutional f.* **Haines's f.**, the last two figures of the specific gravity of a sample of urine multiplied by 1.1 gives the number of grains of solids in each fluidounce. **Häser's f.** See *Trapp's f.* **Loebisch's f.**, multiply the last two figures of the specific gravity of the urine by 2.2: the product gives the number of grains of solids in 1000 c.c. of urine. **magistral f.**, one prescribed by a physician to suit a special occasion. **Mall's f.**, the age (in days) of an embryo is obtained by taking the square root of its length (in millimeters) from vertex to breech and multiplying by 100. **McLean's f.**, a modification of Ambard's formula, as follows: Index = gm. urea per 24 hrs. $\sqrt{\text{gm. urea per L. of urine} \times 8.96}$

weight in kilos $\times (\text{gm. urea per L. of blood})$. **Meeh's f.**, for calculating surface area, $O = K \sqrt[3]{P^2}$. K is a constant (12.3), P is the weight of the body. **molecular f.**, an expression that sets forth the supposed or theoretic construction of any special molecule. **official f.**, one directed by a pharmacopeia, codex, dispensatory, or other recognized formulary. **Pignet's f.**, the formula $F = H - (C + W)$. H is height in centimeters, C the chest measurement in centimeters at greatest expiration, and W weight in kilograms. When F is less than 10 a person is very strong; between 10 and 15, strong; between 15 and 20, good; 20 and 25, medium; 25 and 30, weak; above 30, very weak. Cf. *Black's f.* **Poisson-Pearson f.**, a formula for calculating the percentage of error in determining the endemic index of malaria: N is number of children under fifteen years in the locality; n is number examined for the spleen-rate; x is the number having en-

larged spleens; $\frac{x}{n}$ = spleen-rate. The percentage of

$$\text{error is } \frac{200}{n} \sqrt{\frac{2 \times (n - x)}{n}} \sqrt{\frac{n - 1}{1 - IV - 1}}. \quad \text{Ranke's}$$

f., A = specific gravity $- 100 \times 0.52 = 5.406$, in which A is the amount in grams of the albumin per liter of a serous fluid. **rational f.**, empiric formula. **Reuss's f.**, $E = \frac{2}{3}(S - 1000) - 2.8$. In this expression E stands for the percentage of albumin in any given specimen of a pathologic fluid exudate or transudate, and S for its specific gravity. **Runeberg's f.**, a modification of Reuss's formula in which for 2.8 there is substituted 2.73 in case of a transudate and 2.88 in case of an inflammatory exudate. **stereochemic f.** Same as *glyptic f.* **structural f.** See *constitutional f.* **systematic f.** See *constitutional f.* **Trapp's f.**, **Trapp-Häser f.**, to find the number of grains of solids in 1000 c.c. of urine, multiply the last two figures of the specific gravity by 2 (Trapp's coefficient); or, according to some, by 2.33. **unitary f.** Same as *empiric f.* **Van Slyke's f.**, a formula for obtaining the urinary coefficient of various sub-

stances: $\frac{D}{Bl \times \sqrt{Wt \times V}}$ in which D is daily output in grams of the substance in the urine; Bl, grams of some substance per liter of blood;

Wt, weight of patient in kilograms; V, total urine in twenty-four hours. **vertebral f.**, an expression in symbols of the number of vertebrae in each region of the spinal column. For man it is $C_7D_{12}L_5-S_6Cd_4 = 33$. **Vierordt-Mesh f.**, $O = mP^{\frac{2}{3}}$, in which O is the surface of the body, m is the stature, and P the weight.

formulary (for'mu-lar-e). A collection of recipes, formulas, and prescriptions. **National F.**, a collection of widely used and well-known preparations omitted from the U. S. Pharmacopœia.

formurol (for'mu-rol). A urinary disinfectant, being a combination of hexamethylenetetramin.

formyl (for'mil) [L. *for'mic* + Gr. $\epsilon\lambda\eta$ matter]. The radical, CHO or H.C:O—, of formic acid. **f. phenetidin**, colorless crystals, para-ethoxy-formanilid, $C_8H_9O_3$, $C_6H_4.NH.CO.H$: antiseptic and analgesic. Dose, 3-6 gr. (0.2-0.4 gm.). **f.-piperidin**, an oily liquid with an aromatic, agreeable odor, produced from formamid and piperidin.

Fornet's reaction (for-nāz') [Walter Fornet, contemporary German physician]. See *reaction*.

fornicate (for'nik-āt) [L. *fornica'tus* arched]. Shaped like an arch.

fornicolumn (for'nik-ol-um). The anterior pillar of the fornix.

fornicommissure (for-nik-om'is-ūr). The commissure of the fornix uteri.

fornix (for'niks), pl. *for'nices* [L. "arch"]. 1. A band of white substance under the callosus, extending from the fimbria to the corpora mammillaria. It consists mainly of fibers connecting the hemispheres of the cerebrum. 2. Any vault-like space. **anterior f.**, the recess between the cervix uteri and the anterior wall of the vagina. **f. conjunctivæ** [B N A], a loose fold connecting the palpebral and bulbar conjunctivæ. **f. longus of Forel**, a band of fibers which perforate the corpus callosus and pass through the septum pellucidum. **f. pharyngis** [B N A], the vault of the pharynx. **posterior f.**, the deep recess between the cervix uteri and the posterior wall of the vagina. **f. u'teri**. See *anterior f.* and *posterior f.* **f. vaginæ** [B N A]. Same as *f. u'teri*.

Förster's operation (fers'terz) [Otfried Förster, German neurologist, born 1873]. See *operation*.

Förster's photometer (fers'terz) [Richard Förster, German ophthalmologist, 1825-1902]. See *photometer*.

fortification spectrum. See *spectrum*.

fortoin (for-to'in). Methylene-dicotoin; a yellow, crystalline combination of formaldehyd with cotoin: used in diarrhea, typhoid fever, and gonorrhea. Dose, 4 gr. (0.266 gm.).

fortose (for'tós). A proprietary food, rich in albumoses.

fortossan (for'tös-an). A proprietary preparation of phytin, for the convenient exhibition of phosphorus in cachexias of children.

fossa (fos'ah), pl. *fos'sæ* [L. "ditch"]. A pit, depression, trench, fovea, or hollow. **acetabular f.** See *acetabulum*. **adipose f.**, spaces containing fat in the female breast just beneath the skin. **amygdaloid f.**, the depression between the pillars of the fauces which lodges the tonsils. **anconal f.**, **anconeal f.**, the olecranon fossa. **ante-cubital f.**, the triangular hollow in front of the elbow-joint. **f. of anhelix**, the triangular fossa. **axillary f.**, the armpit. **Biesiadecki's f.**, a recess of the peritoneum in the region of the psoas muscles. Called also *iliacosubfascial f.* **Broesike's f.**, a peritoneal recess in the mesojejenum behind the superior mesenteric artery. Called also *parajejunal f.* **canine f.**, a depression on the external surface of the superior maxilla above and outside the canine-tooth socket. **f. capitelli**, the depression for the head of the malleus. **f. capitis fem'oris**, a depression in the head of the femur for the

attachment of the ligamentum teres. **f. carotica** [B N A], the space limited by the infrahyoid muscles, anterior edge of the sternocleidomastoid, posterior belly of the digastric, and the wall of the pharynx. **cerebral f.**, any one of the depressions on each side of the floor of the cranial cavity, containing the frontal lobe, the temporal lobe, and the cerebellum, and distinguished respectively as *anterior*, *middle*, and *posterior*. **f. cer'ebri lateralis** [B N A], sylvian fossa. **Claudius's f.**, the triangular space that lodges the ovary: above it is the external iliac vein, the ureter below, and the round ligament in front. Called also *ovarian f.* **condyloid f.**, **f. condyloideæ**, a depression behind each condyle of the occipital bone. **coronoid f.**, the cavity in the humerus which receives the coronoid process of the ulna. **costal f.**, **f. costalis**, the depression of a vertebra where it articulates with a rib. **cranial f.**, any one of the three hollows in the base of the cranium for lobes of the brain. **crural f.** Same as *femoral f.* **cutibital f.** 1. Same as *coronoid f.* 2. The bend of the elbow. **f. cystitis fell'ææ**, the fissure in the liver in which the gall-bladder is situated. **digastric f.**, a depression of the mastoid bone attaching the digastric muscle. **digital f.** 1. See *trochanteric f.* 2. A depression at the base of the inner surface of the mastoid process. **direct f.**, one occurring at the primary point of the application of force. **f. ductus venosi** [B N A], a fossa on the under surface of the liver, between the caudate and left lobes, containing the remains of the ductus venosus of the fetus. **duodenal f., inferior**, a recess formed by a fold of peritoneum alongside the lower and external part of the ascending portion of the duodenum. **duodenal f., superior**, a recess formed by a fold of peritoneum alongside the upper and external part of the ascending portion of the duodenum. **duodenojejunal f.**, an oval pouch formed by a fold of peritoneum passing from the anterior wall of the terminal portion of the duodenum, and curving around to blend with the parietal peritoneum. **epigastric f.** 1. The urachal fossa. 2. The pit of the stomach. **ethmoid f.**, a groove in the cribriform plate of the ethmoid bone in which lies the olfactory lobe. **eustachian f.**, a groove in the petrous portion of the temporal bone in which lies a part of the eustachian tube. **femoral f.**, a depression on the internal surface of the abdominal wall, corresponding to the location of the femoral ring. **Gerdy's hyoid f.**, the superior carotid triangle. **f. glan'dulæ lacrimalis** [B N A], the lacrimal fossa. **glenoid f.**, the concavity of the temporal bone at the base of the zygomatic process: it forms part of the articulation of the lower jaw. **Grüber's f.**, a diverticulum in the suprasternal space alongside of the inner end of the clavicle. **Grüber-Landzert f.**, a recess in the peritoneum in the position of Jonnesco's fossa, extending downward behind the duodenojejunal angle. **harderian f.**, the depression in which the harderian gland is lodged. **Hartmann's f.**, the fossa ileocæcalis infima. **f. hel'icis**, the cavity between the helix and anthelix. **f. hemielliptica**, the uppermost of the two recesses in the forepart of the roof of the vestibule of the ear: it lodges the utriculus. **f. hemisphærica**, a depression on the inner wall of the vestibular wall of the internal ear. **hyaloid f.**, the patellar fossa. **hypogastric f.**, a depression on the interior surface of the anterior abdominal wall, between the hypogastric folds. **hypophyseal f.**, the pituitary fossa. **f. ileocæcalis infima**, a peritoneal recess between the meso-appendix and Tuffier's inferior ligament. **ileocolic f.**, a long, narrow, peritoneal fossa behind the ileocolic fold. **iliac f., external**, a wide depression on the outer surface of the ilium. **iliac f., internal**, a wide depression on the inner surface of the ilium. **iliopectineal f.**, a depression between the iliopectineus and pectineus muscle in the center of Scarpa's triangle. **incisive f.**, a depression in the superior maxillary bone above the incisor teeth; also

Inferior duodenal fossa.

Superior duodenal fossa.

Fossa of Landzert.

Fossa of Grüber-Landzert.

Infraduodenal fossa.

Transverse intermesocolic fossa.

Duodenojejunal fossa (Jonnesc).

Double fossa of Waldeyer.

Fossa of Treitz.

VARIOUS FOSSÆ (after Landouzy-Jayle).

a similar depression on the inferior maxillary bone below the incisor teeth. **incudal f.**, a groove in the posterior wall of the tympanic cavity lodging the short limb of the incus. **infraclavicular f.**, a space below the clavicle, and further bounded by the pectoralis major, deltoid, and pectoralis minor. **infraduodenal f.**, a recess in the peritoneum below the third portion of the duodenum. **infraspinous f.**, the lower of the two recesses on the dorsal surface of the scapula. **infra-temporal f.**, the zygomatic fossa. **inguinal f., external**, a depression on the internal surface of the anterior abdominal wall, corresponding to the position of the external abdominal ring. **inguinal f., internal**, a depression on the internal surface of the anterior abdominal wall produced by the ridges made by the obliterated epigastric artery and the urachus. **inguinal f., middle**, a depression on the internal surface of the

anterior abdominal wall produced by the ridges made by the deep epigastric and obliterated hypogastric arteries. **innominate f.**, a depression between the aryteno-epiglottic fold and the false vocal cord. **intercondyloid f.**, the depression between the condyles of the femur. **f. intermesocolica transversa**, a recess of the peritoneum in the same situation as the duodenojejunal fossa, but extending transversely. **interpeduncular f.**, fossa of Tarini; a depression on the inferior surface of the mesencephalon, between the two cerebral peduncles, the floor of which is the posterior perforated space. **intersigmoid f.**, a cone-shaped funnel-like opening at the root of the mesosigmoid; called also **sigmoid notch**. **ischio-rectal f.**, a triangular space between the rectum and the tuberosity of the ischium. **Jobert's f.**, the fossa in the popliteal region bounded above by the adductor magnus and below by the gracilis and

sartorius; best seen when the knee is bent and the thigh strongly rotated outward. **Jonnesco's f.**, the duodenojejunal fossa. **jugular f.**, **f. jugularis** [B N A], a depression in the petrous portion of the temporal bone behind the carotid canal, for the jugular vein. **lacerate f.**, an irregular shaped opening in the orbit just above the sphenoid. **lacrimal f.**, a space in the roof of the orbit that lodges the lacrimal gland. **Landzert's f.**, the paraduodenal fossa. **f. lateralis**, the fossa of Sylvius. **lenticular f.** See *patellar f.* **Luschka's f.**, the ileocolic fossa. **Malgaigne's f.**, the superior carotid triangle. **mandibular f.** Same as *glenoid f.* **mastoid f.**, a depression on the inner surface of the mastoid portion of the temporal bone, for the lateral sinus. **mesocranial f.**, **middle cranial f.**, the two (right and left) median cranial fossæ. **Mohrenheim's f.**, the infraclavicular fossa. **f. of Morgagni**, the fossa navicularis of the urethra. **myrtiform f.**, the incisive fossa of the superior maxilla. **f. navicularis**. 1. A cavity behind the vaginal aperture; fossa navicularis vestibuli vaginæ [B N A]. 2. An expansion of the urethra in the glans penis. 3. The fossa between the helix and antihelix. 4. A depression on the internal pterygoid process of the sphenoid bone. **f. olecrani** [B N A], **olecranon f.**, a depression on the posterior surface of the humerus, above the trochlea, for lodging the olecranon of the ulna. **olfactory f.**, a depression on the inner surface of the cranium for the olfactory lobes. **f. ovalis**. 1. [B N A] The sphenous opening in the thigh for the passage of the great saphenous vein. 2. A fovea in the right auricle of the heart, the remains of the fetal foramen ovale. **paraduodenal f.**, a peritoneal recess above the mesocolic fold and extending along the duodenum. **parajejunal f.**, a pouch of peritoneum below the lower end of the first part of the jejunum. **parietal f.**, the deepest portion of the inner surface of the parietal bone. **patellar f.**, the depression in the front of the vitreous body in which the lens is lodged. Called also *hyaloid f.* and *lenticular f.* **petrosal f.**, a small depression on the inferior surface of the petrous portion of the temporal bone between the jugular fossa and the external carotid foramen. **f. pharyngis**, an abnormal congenital fossa in the middle line of the pharynx, producing irritation of the larynx and catarrhal symptoms. **pituitary f.**, a depression in the sphenoid bone lodging the pituitary body. **popliteal f.**. 1. A depression on the posterior face of the femur near its distal end. 2. The hollow at the back of the knee. **pre-scapular f.**, **prespinous f.**, a depression in the anterior surface of the spine of the scapula. **f. provesicalis**. Same as *f. ileocaecalis infima*. **pterygoid f.**, a fossa between the plates of the pterygoid processes of the sphenoid anteriorly. **pterygopalatine f.**, a small depression between the root of the root of the pterygoid process of the sphenoid bone and the back of the maxilla. **radial f.**, a depression on the anterior surface of the humerus just above the radial head. **retroduodenal f.**, a pouch of peritoneum below and behind the third portion of the duodenum. **retromandibular f.**, the depression under the auricle behind the angle of the jaw. **rhomboid f.**, the floor of the fourth ventricle of the brain, made up of the dorsal surfaces of the medulla and pons. **f. of Rolando**, a groove marking the division between the parietal and frontal lobes of the brain. **Rosenmüller's f.**, a depression in the pharynx on either side of the opening of the eustachian tube. **sca-phoid f.**. 1. Same as *f. helioid*. 2. A fossa at the base of the internal plate of the pterygoid process of the sphenoid. **f. scaphoidæ**. Same as *f. helioid*. **f. scarpæ major** [B N A], Scarpa's triangle. See *triangle*. **subarcuate f.**, a fossa in the posterior inner surface of the petrous portion of the temporal bone, beneath the protrusion of the semicircular canal. **subcecal f.**, a depression

formed by a pouch of peritoneum on the under side of the cecum. **subinguinal f.**, the depression in the anterior surface of the thigh beneath the groin. **sublingual f.**, the space on the inside of the lower jaw that lodges the sublingual gland. **submaxillary f.**, the depression on the inner surface of the inferior maxillary bone for the submaxillary gland. **subpyramidal f.**, a fossa on the internal wall of the middle ear, behind the round window and below the pyramid. **subscapular f.**, the concave ventral surface of the body of the scapula. **subsigmoid f.**, a fossa included between the mesentery of the sigmoid flexure and that of the descending colon. **supraclavicular f.**, the depression on either side of the neck behind the clavicle. **f. supraclavicularis minor**, Zang's space. See *space*. **supracondyloid f.**, a depression on the femur between the internal tuberosity and the internal supracondyloid tubercle. **supramastoid f.**, a small depression at the junction of the posterior and superior borders of the external auditory canal. **supraspinous f.**, the upper of the two hollows on the posterior surface of the scapula. **supratonsillar f.**, the space between the anterior and posterior pillars of the fauces above the tonsil. **sylvian f.**, **f. of Sylvius**, a depression of the cerebral hemispheres between the arms of the fissure of Sylvius; its bottom is occupied by the island of Reil or central lobe. **Tarin's f.**, the interpeduncular fossa. **temporal f.**, the area on the side of the cranium between the temporal lines and ending below at the level of the zygomatic arch. **tonsillar f.** Same as *amygdaloid f.* **f. of Treitz**. Same as *duodenojejunal f.* **triangular f.**, **f. triangularis**, the fossa just above the concha of the ear between the branches of the anthelix. **trochanteric f.**, a fossa in the femur for attachment of the obturator internus. **f. trochlearis**, a notch in the frontal bone for the trochlea of the superior oblique muscle. **urachal f.**, a depression on the inner surface of the anterior abdominal wall, between the urachus and the hypogastric artery. **f. venæ cavæ** [B N A], a groove on the lower surface of the liver containing the inferior vena cava. **f. venæ umbilicalis** [B N A], the umbilical fissure of the liver. **f. venosa**, a fold of peritoneum situated at the duodenojejunal angle. **f. vesicæ fellicæ**, a depression on the under surface of the liver lodging the gall-bladder. **Waldeyer's f.**, the two duodenal fossæ considered as one. **zygomatic f.**, the cavity below and within the zygoma.

fossette (fos-et') [Fr.]. 1. A small depression. 2. A small and deep corneal ulcer.

fossula (fos'u-lah). Any one of the many slight depressions in the surface of the brain. **f. fenes-træ cochleæ** [B N A], a depression on the inner wall of the tympanum at the bottom of which is the fenestra rotunda. **f. fenes-træ vestibuli** [B N A], a depression on the inner wall of the tympanum at the bottom of which is the fenestra ovalis. **f. petrosa** [B N A], the petrosal fossa.

fossulate (fos'u-lät). Marked by a small fossa; hollowed or grooved.

Fothergill's disease or neuralgia, pill (foth'er-gilz) [John Fothergill, English physician, 1712-1780]. See under *disease* and *pill*.

Fouchet's test (foo-shāz') [A. Fouchet, contemporary French physician]. See under *tests*.

foudroyant (foo-drwah-yaw) [Fr.]. Fulminant.

foulage (foo-lahzh'). Massage in which the muscles are kneaded and pressed.

foul-brood (fowl-brood). A contagious disease of honey bees caused by *Bacillus alvei*.

founder (fown'der). The crippled condition of a horse afflicted with laminitis. **chest f.**, founder accompanied by atrophy of the chest muscles. **grain f.**, a condition of indigestion or overloaded stomach in the horse, due to overeating.

fourchet, fourchette (foor-shet') [Fr. *fourchette*]. The fold of mucous membrane at the posterior junction of the labia majora.

Fourneau 309 (foor-no') [Ernst *Fourneau*, contemporary French physician]. A trypanocidal preparation: said to be identical with Bayer 205. It is the symmetrical urea of sodium meta-amidobenzoyl-meta-amino-para-methyl-benzoyl-levonaphthyl-amino-4-6-8 trisulphonate.

Fournier's disease, sign (foor-ne-az') [Jean Alfred *Fournier*, dermatologist in Paris, 1832-1914]. See *disease* and *sign*.

fourth disease (föörth). See under *disease*.

fovea (fo've-ah), pl. *fo'veæ* [L. "pit"]. A pit, fossa, or cup: applied to various depressions in the structure of the body, especially the fovea centralis of the retina. **f. anterior**, a depression in the floor of the fourth ventricle, opposite the upper part of the funicular teres. **f. capitis femoris** [B N A], a depression on the head of the femur where the ligamentum teres is attached. **f. capituli**, a shallow cup on the upper surface of the head of the radius for articulation with the capitulum of the humerus. **f. cardiaca**, the opening of the foregut into the archenteric space of the embryo. **f. centralis**. 1. A pit in the middle of the macula lutea; called also *f. centralis retinae* [B N A]. 2. A pit in the floor of the fourth ventricle between the two eminentia teres. **f. costalis**, a facet on the body of a vertebra for articulation with the head of a rib. **f. costalis transversalis** [B N A], a facet on the transverse process of a vertebra for articulation with the tubercle of a rib. **f. externa**, a depression in the external limiting membrane over the fovea centralis. **f. femoralis** [B N A], the femoral fossa. **f. hemielliptica**. Same as *fossa hemielliptica*. **f. hemisphaerica**. Same as *fossa hemisphaerica*. **f. inferior**, a depression on the floor of the fourth ventricle at the site of the vagus area. **f. inguinalis lateralis** [B N A], the external inguinal fossa. **f. inguinalis medialis** [B N A], the middle inguinal fossa. **f. jugularis**, the depression at the base of the neck between the sternal origins of the sternomastoid muscles. **f. limbica**, a sulcus marking the lateral border of the lateral area olfactoria and gyrus hippocampi in the lower mammals. **f. oblongata cartilaginis arytenoidae** [B N A], a depression on the external surface of the arytenoid cartilage separated from the fovea triangularis above by the crista arcuata. **f. pharyngis**. Same as *fossa pharyngis*. **f. posterior**, a depression external to the lower end of the funicular teres. **f. sublingualis** [B N A], the sublingual fossa. **f. submaxillaris** [B N A], the submaxillary fossa. **f. superior** [B N A], a pit in the superior triangle of the fourth ventricle marking the position of the trigeminal nucleus: called also *f. trigemini*. **f. supravescalis** [B N A], the internal inguinal fossa. **f. triangularis cartilaginis arytenoidae** [B N A], a depression on the external surface of the arytenoid cartilage separated from the fovea oblongata below by the crista arcuata. **f. trigemini**. See *f. superior*. **f. trochlearis** [B N A], a depression on the orbital plate of the frontal bone for the attachment of the trochlea of the superior oblique muscle. **f. vagi**. Same as *f. inferior*.

foveate (fo've-ät) [L. *foveatus*]. Pitted.

foveation (fo've-a'shun). A pitted condition.

foveola (fo've-o-lah) [L.]. A small pit or depression. **f. coccyg'ea** [B N A], a depression over the coccyx. **f. gas'trica** [B N A], one of the numerous pits in the gastric mucosa marking the openings of the gastric glands. **f. granularis** [B N A], a pacchionian depression.

Foville's syndrome, tract (fo-vêlz') [Achille Louis *Foville*, French neurologist, 1799-1878]. See *syndrome* and *tract*.

fowl-cholera. See under *cholera*.

Fowler's operation, position (fow'lerz') [George Ryerson *Fowler*, American surgeon, 1848-1906]. See under *operation* and *position*.

Fowler-Murphy treatment [G. R. *Fowler* (see above) and J. B. *Murphy* (q. v.)]. See under *treatment*.

Fowler's solution (fow'lerz') [Thomas *Fowler*, English physician, 1736-1801]. See *solution*.

fowl-pest. See *fowl-plague*, under *plague*.

fowl-plague. See under *plague*.

fowl-pox. See *epithelioma contagiosum*.

fowl-septicemia. See under *septicemia*.

Fox's impetigo [William Tilbury *Fox*, English dermatologist, 1836-1879]. Impetigo contagiosa.

Fox-Fordyce disease [George Henry *Fox*, New York dermatologist, born 1846; John Addison *Fordyce*]. See under *disease*.

foxglove (foks'gluv). See *Digitalis*.

Foxia mansoni. A fungus which causes *Tinea nigra*.

F. p. Abbreviation for *L. f'i at po'tio*, let a portion be made.

F. pil. Abbreviation for *L. f'i ant pil'ula*, let pills be made.

F. R. Abbreviation for *flocculation reaction*. See *Sach-Georgi test*, under *tests*.

Fract. dos. Abbreviation for *L. frac'ta do'si*, in divided doses.

fraction (frak'shun). **mol f.**, the ratio of mols of a solute to total mols in the solution.

fractional (frak'shun-al) [*L. frac'tio* a breaking]. Accomplished by repeated divisions.

fracture (frakt'ür) [*L. fractu'ra*, from *fran'gere* to break]. 1. The breaking of a part, especially of a bone. 2. A break or rupture in a bone. **articular f.**, a fracture of the joint surface of a bone. **automobile f.** Same as *chauffeur's f.* **Barton's f.**, fracture of the distal end of the radius. **Bennett's f.**, a longitudinal fracture of the first metacarpal bone running into the carpometacarpal joint and complicated by subluxation. Called also *slave of the thumb*. **butterfly f.**, a comminuted fracture in which there are two fragments on each side of a main fragment, somewhat resembling the wings of a butterfly. **buttonhole f.**, fracture in which the bone is perforated by a missile. **capillary f.**, a hair-like fracture. **chauffeur's f.**, fracture of the radius or carpus, due to sudden and violent reversing of the starting crank of an automobile engine during cranking. **chisel f.**, oblique detachment of a piece from the head of the radius. **cleavage f.** (*Abschälungsfractur*), shelling off of cartilage with a small fragment of bone from the upper surface of the capitulum humeri (Kocher). **closed f.**, a simple fracture. **Colles's f.**, fracture of the lower third of the radius. **comminuted f.**, one in which the bone is splintered. **complete f.**, one in which the bone is entirely broken across. **complicated f.**, fracture with injury of the adjacent parts. **compound f.**, one in which there is an external wound leading to the break of the bone. **f. by contrecoup**, a fracture of the skull at a distance from the point struck. **depressed f.**, a fracture of the skull in which a fragment is depressed below the surface. **direct f.**, a fracture at the point of injury. **double f.**, fracture of a bone in two places. **Dupuytren's f.** See *Pott's f.* **Duverney's f.**, fracture of the ilium just below the anterior superior spine. **f. en coin** (aw kwah), a V-shaped fracture. **f. en raye** (aw rahv) [Fr. "radish fracture"], a fracture in which the break is transverse at the surface, but not within. **epiphyseal f.**, fracture at the point of union of an epiphysis with the shaft of a bone. **extracapsular f.**, a fracture of the humerus or femur outside of the capsular ligament. **assured f.**, a linear fracture. **Gosselin's f.**, a V-shaped fracture of the distal end of the tibia, extending into the ankle-joint. **greenstick**

Partial or greenstick fracture of the radius.

Spiral fracture of the femur

Transverse fracture of the femur.

Compound fracture.

Pott's fracture.

Intercondyloid fracture of the femur.

Comminuted perforating gunshot fracture of the head of the humerus.

Impacted fracture of the base of the neck of the femur.

Colles' fracture, showing characteristic deformity (silver-fork deformity) at the wrist, due to backward displacement of the lower fragment.

Partial fracture of the ulna: Y-shaped line of fracture.

Comminuted fracture of the tibia.

f., fracture in which one side of a bone is broken, the other being bent; an *infraction*. **grenade-thrower's f.**, fracture of the humerus caused by muscular contraction in throwing a grenade. **gutter-f.**, a fracture of the skull in which the depression is elliptic in form. **hickory-stick f.** Same as *greenstick f.* **impacted f.**, fracture in which one fragment is firmly driven into the other. **incomplete f.**, one which does not entirely destroy the continuity of the bone. **indirect f.**, a fracture at a point distant from the seat or injury. **interperiosteal f.**, incomplete of greenstick fracture. **intra-articular f.**, a fracture of the articular surface of a bone. **intracapsular f.**, one within the capsule of a joint. **intrapariosteal f.**, a fracture without rupture of the periosteum. **intra-uterine f.**, a fracture occurring to the fetus in utero. **joint f.** See *articular f.* **linear f.**, a fracture extending lengthwise of the bone. **longitudinal f.**, a break in a bone extending in a longitudinal direction. **Moore's f.**, fracture of the lower end of the radius, with dislocation of the head of the ulna and imprisonment of the styloid process beneath the annular ligaments. **multiple f.**, a variety in which there are two or more lines of fracture of the same bone not communicating with each other. **oblique f.**, fracture in which the break extends in an oblique direction. **open f.**, a compound fracture. **partial f.**, an incomplete fracture. **perforating f.**, a buttonhole fracture. **pertrochanteric f.**, fracture of the femur passing through the great trochanter. **pond-f.**, fracture of the skull in which a fissure circumscribes the radiating lines, giving the depressed area a circular form. **pot-lid f.**, fracture of the skull running completely around it so as to separate the calvarium from the remainder of the bone. **Pott's f.**, fracture of the lower part of the fibula, with serious injury of the lower tibial articulation, usually a chipping off of a portion of the inner malleolus, or rupture of the internal lateral ligament. **propeller f.**, fracture of the humerus caused by the propeller of an aeroplane. **radish f.** See *f. en rave*. **resecting f.**, a fracture in which a piece of the bone is taken out, as by a rifle-ball. **secondary f.**, a fracture occurring as a result of weakening of the bone by disease. **Shepherd's f.**, fracture of the astragalus, with detachment of the outer protecting edge. **silver-fork f.**, fracture of the lower ends of the radius: so called from the shape of the deformity that it causes. **simple f.**, one in which the overlying integument is intact. **Skillern's f.**, complete fracture of the lower third of the radius with greenstick fracture of the lower third of the ulna. **Smith's f.**, a fracture of the lower end of the radius near its articular surface. **spiral f.**, one in which the bone has been twisted apart. **splintered f.**, a comminuted fracture with thin, sharp fragments. **spontaneous f.**, one occurring as a result of disease of a bone or from some undiscoverable cause, and not due to violence. **sprain-f.**, the separation of a tendon or ligament from its insertion, taking with it a piece of bone. **stellate f.**, a fracture with a central point of injury, from which radiate numerous fissures. **subcutaneous f.**, a simple fracture. **torsion f.** See *spiral f.* **transverse f.**, a fracture at right angles to the axis of the bone. **trophic f.**, one due to a trophic disturbance. **ununited f.**, one not followed by bony union. **Wagstaffe's f.**, separation of the internal malleolus. **willow f.** Same as *greenstick f.*

frænulum, frænum, etc. (fren'u-lum, fre'num). See *frenulum, frenum*, etc.

fragilitas (fraj-il'it-as) [L.]. Brittleness. **f. crin-ium**, a brittle condition of the hair. **f. os'sium**, abnormal brittleness of the bones; osteopsathyrosis. **f. sanguinis**. See *fragility of the blood*.

fragility (fraj-il'it-e). Brittleness. **f. of the blood**, increased susceptibility of the blood-cor-

puscles to split up on alteration of the proportion of the saline contents of the blood.

fragmentation (frag-men-ta'shun). A division into fragments. **f. of myocardium**, transverse rupture of the muscle-fibers of the heart.

fragments, Spengler's (frag'ments). Small round bodies seen in tuberculous sputum.

frambesia, frambœsia (fram-be'ze-ah) [L. *frambœsia* raspberry]. The yaws; a contagious disease of the skin occurring in hot regions and marked by raspberry-like excrescences on the face, hands, feet, and around the external genitals. These excrescences may run together in fungus-like masses, may form pustules, or may become ulcerated. The disease is said to affect chiefly young negroes, and is caused by a protozoan organism, *Treponema pertenue*. **f. tropica**, the disease parangi of Ceylon; probably the same as frambesia.

frambesioma, frambœsioma (fram-be-ze-o'-mah). The primary lesion of frambesia consisting of a large single projecting nodule.

frames, Deiters's terminal (frāmz). Plates in the lamina reticularis uniting Deiters's phalanges with the cells of Hensen.

Francis's disease (fran'sis-ez) [Edward Francis, American surgeon, born 1872]. Tularemia.

Francis's triplex pill [John Wakefield Francis, American physician, 1789-1861]. Compound pill of aloes, mercury, and scammony.

Franciscea (fran-sis'e-ah). See *manaca*.

Frank's sign, symptom (frang'kez) [Karl Ernst Francke, German physician, born 1859]. See *sign and symptom*.

frangula (fran'gu-lah) [L.]. The laxative bark of *Rhamnus frangula*, or alder-buckthorn, which contains the glucosid frangulin. Dose of extract, 15-60 gr. (1-4 gm.); of fluidextract, 10-20 min. (0.666-1.333 c.c.).

frangulin (fran'gu-lin). A purgative principle, $C_{20}H_{30}O_{10}$, from frangula. Dose, 1½-3 gr. (0.099-0.198 gm.).

Frank's operation (frang'kez) [Walther Franke, German surgeon, born 1862]. See *operation*.

Fränkel's pneumococcus, sign (frenk'elz) [Albert Fränkel, German physician, 1848-1916]. See *pneumococcus, sign*.

Fränkel's test (fren'kelz) [Bernhard Fränkel, German laryngologist, 1837-1911]. See *under tests*.

Frankenhäuser's ganglion (frank'en-hoy-zerz) [Ferdinand Frankenhäuser, German gynecologist, died 1894]. See *ganglion*.

frankincense (frank'in-sens) [L. *francum incensum*, pure incense]. Olibanum; also the turpentine of various species of pine. See *olibanum*.

Franklin glasses (frank'lin) [named after Benjamin Franklin]. Spectacles in which the glasses consist of two half-lenses, the lower one for close work and the upper for distant vision.

franklinism (frank'lin-izm). 1. Static or frictional electricity. 2. Franklinization.

franklinization (frank'lin-iz-a'shun). The therapeutic use of static electricity.

Frasera (fra'zer-ah) [after John Fraser, 1750-1817]. 1. A genus of gentianaceous plants. 2. The root of *F. walteri*, or American calumba: a bitter tonic. Dose of fluidextract, 20-60 min. (1.333-4 c.c.).

fraserin (fra'zer-in). A concentration prepared from *Frasera walteri*: tonic, astringent, and stimulant. Dose, 1-5 gr. (0.066-0.333 gm.).

Fraunhofer's lines (frown'hof-erz) [Joseph von Fraunhofer, German optician, 1787-1826]. See *line*.

Fraxinus (fraks'in-us) [L.]. A genus of trees. See *ash* and *manna*.

F.R.C.P. Abbreviation of *Fellow of the Royal College of Physicians*.

F.R.C.P.E. Abbreviation for *Fellow of the Royal College of Physicians of Edinburgh*.

F.R.C.P.I. Abbreviation for *Fellow of the Royal College of Physicians in Ireland*.

F.R.C.S. Abbreviation of *Fellow of the Royal College of Surgeons*.

F.R.C.S.E. Abbreviation for *Fellow of the Royal College of Surgeons of Edinburgh*.

F.R.C.S.I. Abbreviation for *Fellow of the Royal College of Surgeons in Ireland*.

freckle (frek'l). See *lentigo*. **cold f.**, freckles on a part not exposed to the sun.

Frédéricq's sign (fra-da-rèks') [Louis Auguste Frédéricq, Belgian physician, 1815-1853]. See *sign*.

Fredet-Rammstedt operation (fred-a'rahm-stet) [Pierre Fredet, contemporary French surgeon; C. Rammstedt, contemporary German surgeon]. See *under operation*.

free-martin. A sterile female calf born as a twin to a male calf.

freezing-mixture, freezing-point. See *mixture and point*.

frejarol (fre'jar-ol). An aromatic ethereal oil derived from the frejar, an East Indian tree: useful in skin diseases.

fremitus (frem'it-us) [L.]. A thrill or vibration, especially one that is perceptible on palpation.

bronchial f. Same as *rhonchal f.* **friction-f.**, the thrill caused by the rubbing together of two dry surfaces. **hydatid f.**, a tremulous impulse felt on palpation over a hydatid cyst. **pericardial f.**, a thrill of the chest-wall due to the friction of the surfaces of the pericardium over each other. **pleural f.**, a vibration of the wall of the thorax due to friction of the opposing surfaces of the pleura over each other. **rhonchal f.**, vibrations produced by the passage of air through a large bronchial tube filled with mucus. **subjective f.**, a thrill felt by the patient on humming with his mouth closed. **tactile f.**, a thrill, as in the chest-wall, which may be felt by a hand applied to the thorax while the patient is speaking. **tussive f.**, a thrill felt on the chest when the patient coughs. **vocal f.**, a thrill caused by speaking, and perceived by the ear of the auscultator applied to the chest.

frenal (fre'nal). Pertaining to the frenum.

Frenkel's movements or treatment (frenk'elz) [H. S. Frenkel, contemporary Swiss physician]. See *under movement*.

frenosecretory (fre-no-se'kre-to-re) [L. *frænum* bridle + *secretory*]. Exercising an inhibitory or restraining power over the secretions.

frenotomy (fre-not'o-me) [L. *frænum* frenum + Gr. *τομή* a cutting]. The cutting of the *frænum linguae* for tongue-tie.

frenulum, frænulum (fren'u-lum) [L.]. 1. A small frenum. 2. A median ridge on the upper part of the valve of Viessens extending to the corpora quadrigemina. **f. linguae** [B N A], a band extending from the posterior lamina of the lingula over the peduncles of the cerebellum. **f. pudendi**, the fourchet. **f. ve'li**. Same as *frenulum* (2d def.).

frenum, frænum (fre'num), L. pl., *fræna* [L. "bridle"]. A fold of the integument or of the mucous membrane that checks, curbs, or limits the movements of an organ in part. **fræna labiorum**, folds of mucous membrane on the inside of the middle of each lip, connecting the lips with the gums. **f. linguae**, a vertical fold of mucous membrane under the tongue. **Macdowell's f.**, a group of fibers attached to the tendon of the pectoralis muscle and strengthening the intermuscular septum. **f. of Morgagni**, a fold formed by the joined extremities of the ileocolic valve, extending partly around the interior of the colon. **f. of the prepuce**, the fold on the lower surface of the glans penis that connects it with the prepuce. **f. pudendi**, the fourchet.

frenzy (fren'ze) [Gr. *φρένσις*]. Violent maniacal excitement.

frequency (fre'kwen-se). The number of vibrations made by a particle or ray in one second; also the number of alterations in the direction of a current in one second. **f. of a class**. See *class*.

Frerichs' theory (fra'riks) [Friedrich Theodor Frerichs, Berlin physician, 1819-1885]. See *theory*.

fretum halleri (fre'tum hal'er-i) [L. *fretum* strait]. A constriction between the auricles and ventricles of the fetal heart.

Freud's cathartic method, theory (froyds) [Sigmund Freud, neurologist in Vienna, born 1856]. See *catharsis and theory*.

Freudian (fro'i-de-an). 1. Pertaining to Sigmund Freud and his doctrines regarding the causes of certain nervous disorders, that they are based on the existence of unconscious sexual impressions, and that the cure of such disorders can be secured by bringing these impressions into the consciousness by psycho-analysis; the term also is applied to the theory that dreams are the expression under symbolic forms of suppressed wishes, many of which are of a sexual nature. See *unconscious and psycho-analysis*. 2. One who follows the teaching and theories of Sigmund Freud.

Freund's anomaly, reaction (froynds) [Hermann Wolfgang Freund, German gynecologist, 1859-1925]. See *anomaly, reaction*.

Freund's law, operation (froynds) [Wilhelm Alexander Freund, German gynecologist, 1833-1917]. See *law, operation*.

Frey's hairs (friz) [Max von Frey, German physician, born 1852]. See *under hair*.

Freyer's operation (fri'erz) [Sir Peter Johnson Freyer, British surgeon, 1852-1921]. See *operation*.

friable (fri'ab-l) [L. *friabilis*]. Easily pulverized or crumbled.

friars' balsam. The compound tincture of benzoin. See *benzoin*.

Fricke's bandage (frik'ez) [Fricke, German surgeon, 1790-1841]. See *under bandage*.

friction (frik'shun) [L. *frictio*]. The act of rubbing; attrition. **f.-fremitus**. See *fremitus*. **f.-murmur, f.-sound**, the sound heard in auscultation caused by rubbing together of adjacent structures, as of the pericardium in pericarditis, the pleura in pleurisy, and the peritoneum in peritonitis. **f.-sound, Beatty-Bright's**, the friction-sound caused by inflammation of the pleura.

Friedländer's bacillus (frêd'len-derz) [Carl Friedländer, German pathologist, 1847-1887]. See *under bacillus*.

Friedländer's disease (frêd'len-derz) [Max Friedländer, German physician, born 1841]. Endarteritis obliterans.

Friedmann's disease (frêd'mahnz) [Max Friedmann, contemporary German physician]. See *disease*.

Friedmann's treatment (frêd'mahns) [Friedrich Franz Friedmann, contemporary Berlin physician]. See *under treatment*.

Friedreich's ataxia, disease, sign, etc. (frêd'riks) [Nikolaus Friedreich, German physician, 1825-1882]. See *ataxia, disease, sign*, etc.

friente (fre-en'te). An erythematous dermatitis common among wood choppers and field workers, and probably caused by *Ustilago hypodytes* or by *Aclerda berlesii*.

frigidity (frij-id'te). Coldness; especially sexual indifference.

frigo (frig'o) [L. *fri'gor* cold]. An apparatus for preserving a serum by freezing it.

frigolabile (fri-go-la'b'il) [L. *fri'gor* cold + *lab'ilis* unstable]. Easily affected or destroyed by cold.

frigorific (frig-or-if'ik) [L. *frigorif'icus*]. Producing coldness.

frigorism (fri'gor-izm) [L. *fri'gor*, cold]. A condition due to circulatory disturbance from long exposure to cold. **local f.** See *trench-foot*, under *foot*.

frigostable, frigostabile (fri-go-sta'bl) [L. *fri'gor* cold + *sta'bilis* firm]. Resistant to cold or low temperature.

frigotherapy (frig-o-ther'ap-e) [L. *fri'gor* cold + *therapy*]. The treatment of disease by cold.

frigusin (fri'g-u-sin). Diiodolaricinic acid, used as an adhesive varnish, from which iodine is given off. It is employed in wounds, like iodine.

frina (fre'nah). *Furunculus orientalis*.

Frisch's bacillus (frish'ez) [Anton von *Frisch*, Vienna surgeon, 1849-1917]. Bacterium rhinoscleromatis.

frit (frit). The imperfectly fused material used as a basis for making glass. From it the glazed portion of artificial teeth is made.

Fritsch's catheter (frit'shes) [Heinrich *Fritsch*, German gynecologist, 1844-1915]. See *catheter*.

frog (frog). The band of horny substance in the middle of the sole of a horse's foot, dividing into two branches and running toward the heel in the form of a fork. **Cohnheim's f., salt f.**, a frog from which the blood has been removed and replaced by normal salt solution. **rheoscopic f.**, the condition obtained when the nerve of a muscle-nerve preparation is laid across a contracting muscle, causing the muscle in the former to contract, and thus ascertaining the passage of an electric current, as in the rheoscope.

frog-belly (frog-bel-e). A semitympanic state of the abdomen in ricketty children.

frog-face (frog'fas). Flatness of the face due to intranasal disease.

frog-stay (frog'sta). See *spine*.

Fröhlich's syndrome (fra'liks) [Alfred *Fröhlich*, contemporary Austrian neurologist]. See under *syndrome*.

Frohn's reagent (frohnz) [Damianus *Frohn*, German physician, born 1843]. See *reagent*.

Froin's syndrome (frowan'). See under *syndrome*.

frolement (fröl-maw') [Fr.]. 1. A rustling sound often heard in auscultation in disease of the pericardium. 2. A massage movement consisting of light brushing with the palm of the hand.

Frommann's lines (from'aniz) [Carl *Frommann*, anatomist in Heidelberg, 1831-1892]. See *lines*.

Frommel's operation (from'elz) [Richard *Frommel*, German gynecologist, 1854-1912]. See *operation*.

frons (fronz) [L.]. The forehead.

frontad (fron'tad). Toward a frontal aspect.

frontal (fron'tal) [L. *fronta'lis*]. Pertaining to the forehead.

frontalis (fron-ta'lis). See *muscles*, table of.

frontomalar (fron-to-ma'lar). Pertaining to the frontal and malar bones.

frontomaxillary (fron-to-maks'il-a-re). Pertaining to the frontal bone and the upper jaw.

frontonasal (fron-to-na'zal). Pertaining to the frontal sinus and the nose.

fronto-occipital (fron'to-ok-sip'it-al). Pertaining to the forehead and the occiput.

frontoparietal (fron'to-par'it-et-al). Pertaining to the frontal and parietal bones.

frontotemporal (fron-to-tem'po-ral). Pertaining to the frontal and temporal bones.

front-tap contraction. See *contraction*.

Froiep's ganglion (fro'rëps) [August von *Froiep*, German anatomist, 1849-1917]. See *ganglion*.

frost-bite (frawst'bit). The lesion produced by the freezing of a part.

frost-itch (frawst'itsh). See *pruritus hiemalis*.

fructolax (fruk'to-laks) [L. *fructus* fruit + *laxative*]. A proprietary mechanical laxative consisting of hydrocarbon jelly flavored with fruit.

fructosazone (fruk-to-sa'zön). Same as *levulosezone*.

fructose (fruk'tös) [L. *fructus* fruit]. Levulose, or fruit-sugar, a ketohexose, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{CO}\cdot\text{CH}_2\text{OH}$, found in all sweet fruits.

fructosid, fructoside (fruk'to-sid). A compound which bears the same relation to fructose as a glucosid does to glucose.

fructosuria (fruk-to-su're-ah) [*fructose* + Gr. *ōpōr* urine]. The presence of fructose in the urine.

fruit (früt) [L. *fructus*]. The developed ovary of a plant, including the seed and its envelopes. **celery f.** See *Apium*.

Frust. Abbreviation for L. *frustilla'tim*, in small pieces.

frustrate (frus'trät) [L. *frus'tra* in vain]. A feeble contraction of the ventricle of the heart which cannot be felt at the wrist, producing an impression of intermittent pulsations.

frutarian (fru-ta're-an). A person whose diet consists chiefly of fruits.

frutarianism (fru-ta're-an-izm). The use of an exclusively fluid diet.

F. s. a. Abbreviation for L. *fi'at secundum ar'tem*, let it be made skillfully.

Ft., ft. An abbreviation for L. *fi'at* or *fi'ant*, let there be made.

Ft. mas. div. in pil. Abbreviation for L. *fi'at mas'sa dividen'da in pil'ulas*, let a mass be made and divided into pills.

Ft. pulv. Abbreviation for L. *fi'at pul'vis*, let a powder be made.

Fuchs's coloboma (fooks) [Ernst *Fuchs*, German oculist, born 1851]. See *coloboma*.

fuchsin (fook'sin) [named for L. *Fuchs*]. A powerful red dye. **acid f.**, a mixture of sulphonated fuchsin used in Andrade's indicator and in various complex stains. **basic f.**, a mixture of equal parts of parafuchsin and rosanilin. **diamond f.** Same as *basic f.* **new f.**, a basic dye with staining properties much like basic fuchsin. It is triamino-tritoly-methane chloride, or trimethyl fuchsin, $[\text{CH}_3(\text{NH}_2)\text{C}_6\text{H}_4]_2\text{C}\cdot\text{C}_6\text{H}_5(\text{CH}_3)\cdot\text{NH}_2\text{Cl}$. **f. N. B.** Same as *new f.*

fuchsinophil (fook-sin'o-fil) [*fuchsin* + Gr. *φιλεῖν* to love]. 1. Any cell or other element readily stained with fuchsin. 2. Same as *fuchsinophilous*.

fuchsinophilous (fook-sin-o'fil-us). Readily stained by fuchsin.

fulcol (fu'kol). An iodine-containing preparation from algae: used as a vehicle for iodine, creosote, phosphorus, etc.

fucosan (fu'ko-san). A pentosan which is a constituent of the cell-wall of many seaweeds.

fucose (fu'kös). A crystalline pentose, $\text{C}_5\text{H}_{10}\text{O}_5$, from seaweed.

Fucus (fu'kus), gen. *fu'ci* [L.; Gr. *φῦκος*]. A genus of seaweeds. **F. crispus**, furnishes Irish moss.

F. vesiculo'sus, bladder-wrack, is used in goiter and glandular diseases, and as a cure for obesity. Dose of solid extract, 10 gr. (0.666 gm.); of fluid-extract, 60-120 min. (4-8 c.c.).

Fuerbringer. See *Fürbringer*.

fugin (fu'jin). An extremely poisonous substance occurring in the organs of the fish of the genus *Tetrodon*, of the Japanese and Chinese Seas.

fugitive (fu'jit-iv) [L. *fugiti'vus*]. 1. Wandering. 2. Transient.

fugotoxin (fu-go-tok'sin). A poisonous substance of unknown composition obtained from the ovaries of certain poisonous fish of the family Spheroidei. It is used as a remedy for neuralgia and articular rheumatism in Japan. Called also *tetrodotoxin*.

fugue (fug). An insane tendency to wander away from home.

fuguism, fuguismus (fu'gu-izm, fu-gu-iz'mus). Fugu-poison.

fugu-poison (fu'gu) [Japanese *fugu*, the name of a poisonous fish]. Poisoning from eating certain fish of Japanese waters of the genus *Tetrodon*.

Fukala's operation (foo-kah'lahz) [Vincent *Fukala*, Bohemian physician, died 1913]. See *operation*.

fulgurant, fulgurating (ful'gu-rant, ful'gu-rat-ing) [L. *fulgurans*, from *fulgur* lightning]. Coming and going like a flash of lightning.

fulguration (ful-gu-ra'shun) [L. *fulgur* lightning]. Treatment by the application of electric sparks, especially of long and powerful high-frequency sparks. The action of fulguration is not the destruction of cancer tissue, but the production of an alteration of the nutrition of the tissues which renders them less fertile for the proliferation of cancer cells. **Keating-Hart's f.** See under *treatment*.

fuligin (fu'lij-in) [L. *fuligo* soot]. An unofficial medicine prepared from soot.

fuliginous (fu-lij'in-us) [L. *fuligo* soot]. Sooty in color or appearance.

füllkörper (fël'ker-per) [Ger. "fill-bodies"]. Glia cells which have become degenerated.

fulmargin (ful-mar'jin). A finely colloidal silver prepared electrolytically.

fulminant, fulminating (ful'min-ant, ful'min-at-ing) [L. *fulmina're* to lighten]. Sudden, severe; coming on suddenly with intense severity; foudroyant.

fumiform (fu'mif-orm). An asphalt benzoin-malt mixture which, on heating, gives off fumes; used in treating tuberculosis.

fumigant (fu'mig-ant). A substance used in fumigation.

fumigation (fu-mig-a'shun) [L. *fumigatio*]. Exposure to disinfecting fumes.

fuming (fu'ming) [L. *fumus* smoke]. Smoking; emitting a visible vapor.

function (funk'shun) [L. *functio*]. The special, normal, or proper action of any part or organ. **allomeric f.**, the function of the spinal cord which depends on the integrative action of their several parts. **antixenic f.**, the reactivity of living tissue to any foreign substance. **Carnot's f.**, **cardiac f.**, the relation between the quantity of heat lost by a body and the work which can be done by it. **isomeric f.**, the individual function of the several sections of the spinal cord and brain stem.

functional (funk'shun-al). Of or pertaining to a function; affecting the functions, but not the structure.

functionating (funk'shun-a-ting). In a condition of performing the proper function.

fundal (fun'dal). Pertaining to a fundus.

fundament (fun'da-ment) [L. *fundamen'tum*]. 1. The base or foundation of a part. 2. The breech or rump; the anus and parts adjacent to it.

fundamental (fun-dam-en'tal). Pertaining to the base or foundation.

fundic (fun'dik). Pertaining to a fundus.

fundiform (fun'dif-orm) [L. *fundus* sling + *for-ma* form]. Shaped like a sling.

Fundulus (fun'du-lus). A genus of killifish of the order Cyprinodontidae. The common or green killifish, *F. heteroclitus*, is much used in biologic research. Called also *mummy chog* and *salt-water minnow*.

fundus (fun'dus) [L.]. The base or part of a hollow organ remotest from its mouth. **f. meatus acustici interni** [B N A], the fundus of the internal auditory meatus. **f. oculi**, the posterior part or base of the eye, within its coats. **f. tigré** (te-gra'), leopard retina. See under *retina*. **f. tympani**, the floor of the tympanic cavity. **f.**

uteri [B N A], that part of the uterus which is most remote from the os. **f. ventriculi** [B N A], the cardiac portion of the stomach. **f. vesicae felleae** [B N A], the wide end of the gall-bladder. **f. vesicae urinariae** [B N A], the base of the urinary bladder.

fungate (fung'gät). To produce fungus-like growths; to grow rapidly, like a fungus.

fungi (fun'ji). Plural of *fungus*. **f. imperfecti**, a large group of fungi whose life-history is not completely known. It includes the Monilias and many plant diseases. **kefir f.**, a mixture of bacteria and yeasts capable of causing lactic acid fermentation of milk of the Kefir type.

fungicide (fun'jis-id). An agent that destroys fungi.

fungiform (fun'jif-orm). Shaped like a fungus or mushroom. **f. papillae**. See under *papilla*.

fungoid (fun'goid) [fungus + Gr. *ēidos* form]. Shaped like a toadstool. **chignon f.**, a nodular growth often occurring on human hair.

fungosity (fun-gos'it-e). A fungoid growth or excrescence.

fungous (fun'gus) [L. *fungosus*]. Of the nature of or resembling a fungus.

fungus (fun'gus), pl. *fun'gi* [L.]. 1. Any one of a class of vegetable organisms of a low order of development, including mushrooms, toadstools, molds, etc. 2. A growth on the body resembling a fungus; a spongy mass of morbid granulation tissue. **alpha f.**, the fungus, *Achorion arloingi*, of favus herpeticiformis. **beta f.**, the fungus, *Achorion schoenleinii*. **f. of the brain**, hernia cerebri. **chignon f.** See *chignon fungoid*, under *fungoid*. **cutaneous f.**, dermatomycoses. **disease f.**, a fungus capable of producing disease. **fission-f.** Same as *schizomycete*. **foot-f.**, the fungus that produces mycetoma. **f.-foot**, Madura foot. See *mycetoma*. **gamma f.**, a strain of the fungus *Achorion schoenleinii*. **f. hæmato-des**, a soft, bleeding, malignant tumor. **mould f.**, mucorinus. **ray-f.** See *actinomycetes*. **slime f.**, mycetozoa. **umbilical f.**, granulation tissue on the stem of the umbilical cord in newborn infants. **yeast-f.** Same as *saccharomycetes*.

funic (fu'nik). Pertaining to the funis.

funicle (fu'nik-l). Funiculus.

funicular (fu-nik'u-lar). Pertaining to a funiculus.

funiculitis (fu-nik-u-li'tis). 1. Inflammation of the spermatic cord. 2. Inflammation of that portion of a spinal nerve root which lies within the intervertebral canal. **endemic f.**, a disease occurring in Ceylon and southern India, marked by painful swelling of the spermatic cord, chills, nausea, and vomiting. The prognosis is fatal unless operation is performed.

funiculopexy (fu-nik'u-lo-pek-se) [L. *funiculus* cord + Gr. *πῆξις* fixation]. The operation of suturing the spermatic cord to the tissues in cases of undescended testicle.

funiculus (fu-nik'u-lus), pl. *funiculi* [L. "cord"]. 1. The umbilical cord, or funis. 2. More often the spermatic cord. 3. One of the three principal divisions of white matter on each side of the spinal cord, distinguished as dorsal, lateral, and ventral. They were formerly called columns. **f. amnii**, a cord of tissue by which the amnion and chorion are temporarily united in certain ruminant animals. **f. anterior**. Same as *f. ventralis*. **f. cuneatus** [B N A], one of the two prolongations of the dorsolateral columns of Burdach into the oblongata. **f. cuneatus externa lis**, the funiculus of Rolando. **f. cuneatus latera lis**, a longitudinal ridge on the oblongata between the line of roots of the spinal accessory nerve and the cuneate funiculus. **dorsal f.**, **f. dorsa lis**, the white matter of the spinal cord lying between the dorsal fissure and the dorsal root; formerly called *posterior columns*. **f. gra'cilis** [B N A], either of

the structures which, with the clavæ, form the postpyramids or restiform bodies, being extensions of the dorsomedian column of the spinal cord into the oblongata. **lateral f., f. latera'lis** [B N A], the white matter of the spinal cord lying between the dorsal and ventral roots; formerly called *lateral columns*. **f. medul'læ spina'lis** [B N A], any one of the columns of the spinal cord. **f. poste'rior** [B N A]. Same as *f. dorsalis*. **f. of Rolando**, a longitudinal prominence on either side of the lower part of the oblongata, passing up to the tubercle of Rolando. **f. sep'arans**, a

Diagram of a cross-section through one-half of the spinal cord to illustrate the arrangement of the funiculi of white matter and the columns of gray matter (Herrick).

ridge on the floor of the fourth ventricle between the area postrema and the ala cinerea. **f. sil'iquæ**. See *siliqua olive*. **f. solita'rius**, the solitary fasciculus. **f. spermaticus** [B N A], the spermatic cord. **f. te'res**. See *eminentia medialis*. **f. umbilica'lis** [B N A], the umbilical cord. **ventral f., f. ventra'lis**, the white matter of the spinal cord which lies between the ventral fissure and the ventral root; formerly called *anterior columns*.

funiform (fu'nif-orm) [L. *fu'nis* rope + *for'ma* shape]. Resembling a rope or cord.

funis (fu'nis) [L. "cord"]. Any cord-like structure; particularly the umbilical cord. **f. argen'teus**, the spinal cord. **f. bra'chii**, the median cephalic vein of the arm. **f. Hippoc'ratis**, the tendo achillis.

funnel (fun'el). A conic hollow vessel with a tube at the apex: used in chemistry and pharmacy in filtering and for other purposes. **f.-chest**. See under *chest*. **drainage-f.**, an appliance employed in the drainage of wounds. **Golgi's f's**, spiral fibrillary coils said to surround the axis-cylinder of myelinated nerve-fibers: they are probably artefacts. **mitral f.**, a state of the mitral valve in mitral stenosis in which the valve and the left auricle take the form of a hollow cone; called also *mitral buttonhole*. **muscular f.**, the funnel-shaped space bounded by the four straight muscles of the eye. **pial f.**, a sheath of adventitia, extended from the pia mater, loosely surrounding the blood-vessels of the substance of the brain or cord. **Renver's f.**, an appliance used in treating urethral stricture. **vascular f.**, the light colored depression at the center of the disk of the retina.

fur (fer). The coat seen upon the tongue in various diseases.

Fürbringer's sign, test (fer'bring-erz) [Paul Fürbringer, Berlin physician, born 1840]. See under *sign* and *tests*.

furcal (fur'kal) [L. *fur'ca* fork]. Shaped like a fork; forked.

furcrocercus (fer-ko-ser'kus) [L. *fur'ca* fork + Gr. *κέρκος* tail]. Having a forked tail.

furcula (fer'ku-la) [L. "little fork"]. A horse-shoe-shaped ridge in the embryonic larynx, bounding the pharyngeal aperture in front and laterally.

furfur (fer'fer), pl. *fur'fures*. [L. "bran"]. An epidermic scale, such as dandruff.

furfuraceous (fur-fu-r'ashus) [L. *fur'fur* bran]. Resembling bran or dandruff.

furfural (fur'fu-ral) [L. *fur'fur* bran]. An oily substance, $C_6H_4O_2$, from the distillation of bran, sawdust, etc. It is the basis of Molisch's test for carbohydrates. It causes convulsions and paralyses in animals.

furfurol (fur'fu-rol). Furfural.

furfuron (fur'fu-ron). A greenish, proprietary liniment for gout and rheumatism.

furibund (fu'rib-und). Full of fury; raging; maniacal.

furor (fu'tor) [L.]. Fury; rage. **f. epilep'ticus**, an attack of intense anger occurring in epilepsy. **f. secan'di**. Same as *tomomania*. **f. uteri'nus**, nymphomania.

furred (ferd). Having a grayish coating of epithelial scales and other matter; as a furred tongue.

furrow (fu'ro). A groove or trench. **auriculo-ventricular f.**, the transverse groove marking off the auricles of the heart from the ventricles.

digital f., any one of the transverse lines on the palmar surface of a finger. **genital f.**, a groove that appears on the genital tubercle of the fetus at the end of the second month. **gluteal f.**, the furrow which separates the nates. **interven-tricular f.** Same as *interventricular groove*.

Jadelot's f's. See *lines*, *Jadelot's*. **Liebermeister's f's**, depressions sometimes seen on the upper surface of the liver from pressure of the ribs, generally from tight lacing. **mentolabial f.**, the hollow just above the chin. **nympho-labial f.**, a furrow between the labia majora and labia minora on each side. **primitive f.**, the primitive groove. See *groove*. **Sibson's f.**, the under border of the pectoralis major muscle.

Fürstner's disease (ferst'nerz) [German pediatricist, born 1848]. Pseudospastic paralysis with tremor.

furuncle (fu'rung-kl) [L. *furunc'ulus*]. A boil; a painful nodule formed in the skin by circumscribed inflammation of the corium and subcutaneous tissue, inclosing a central slough or "core." It is caused by bacteria, which enter through the hair-follicles or sudoriparous glands, and its formation is favored by constitutional or digestive derangement and local irritation. **lochia f.**, a boil or abscess affecting obstetric nurses, and due to infection from the lochia. **physicians' f.**, a form of abscess with circumscribed subcutaneous fat-necrosis occurring in physicians, and due to infection from the cadaver or from an operation.

furuncular (fu-rung'ku-lar). Pertaining to or of the nature of a boil.

furunculoid (fu-rung'ku-loid). Resembling a furuncle or boil.

furunculosis (fu'rung-ku-lo'sis). The diseased condition that accompanies the appearance of a crop of boils.

furunculous (fu-rung'ku-lus). Same as *furuncular*.

furunculus (fu-rung'ku-lus), pl. *furunc'uli*. Latin for *boil* or *furuncle*. See *furuncle*. **f. orienta'lis**, a kind of sore endemic chiefly in Asia and Africa, and marked by the development on the exposed parts of the body of a papule which passes successively through the stages of tubercle, scab, and circumscribed ulcer. It is caused by a protozoan parasite, termed *Leishmania tropica*. The disease has received various names, according to the locality of its occurrence, as Aleppo boil, Delhi sore, Pendjeh sore, Natal boil, Biskra button, Lahore sore, oriental button, tropical ulcer, etc., but the conditions occurring under the various names are practically one and the same disease. The condition is also known as *cutaneous* or *dermal leishmaniasis*. **f. vulga'ris**, carbuncle.

Fusarium (fu-sa're-um). A genus of molds belonging to the class of *Ascomycetes*. **F. equinum** is believed to be the cause of itch disease, a dermatomycosis in horses in Oregon.

fuscin (fus'in) [L. *fusus* brown]. A brown pigment of the retinal epithelium.

fusel oil (fu'sel). See *amyl alcohol*, under *alcohol*.

fusible (fu'sib-l). Susceptible of being melted.

fusiform (fu'sif-orm) [L. *fu'sus* spindle + *for'ma* form]. Spindle-shaped.

Fusiformis (fu-sif-or'mis). A genus of Mycobacteriaceæ. They are anaerobic or micro-aërophilic, non-motile, rod-shaped, and obligate parasites. **F. ac'nes**, a species found in the pustules of acne vulgaris. **F. typhi-exanthematici**, a small, pleomorphic, Gram-positive, non-motile organism at one time thought to be the cause of typhus fever. Called also *Plotz's bacillus*. **F. vincenti**, a form found in Vincent's angina.

fusion (fu'zhun) [L. *fu'sio*]. 1. The act or process of melting. 2. The abnormal coherence of adjacent parts or bodies. 3. The coördination of the separate images of the same object in the two eyes into one. **nerve-f.**, a method of nerve-anastomosis done for the purpose of inducing

a regeneration which will resupply empty tracts of a nerve by new growths of fibers.

Fusobacterium biau'tum. An organism obtained from cases of appendicitis which is pathogenic for guinea-pigs.

fusocellular (fu-so-sel'u-lar) [L. *fu'sus* spindle + *cellular*]. Having spindle-shaped cells.

fusospirillary (fu-so-spi'ril-a-re). Pertaining to fusiform bacilli and spirillæ, as in Vincent's angina.

fusospirochetosis (fu'so-spi-ro-ke-to'sis). Infection with fusiform bacilli and spirochetes.

fustic (fus'tik). A yellow dye-wood from a South American tree, *Morus tinctoria*.

fustigation (fus-tig-a'shun) [L. *fustiga'tio*]. Therapeutic treatment by flagellation. **electric f.**, therapeutic treatment by beating with rods or by the strokes of electrodes.

fustin (fus'tin). A yellow dye, $C_{15}H_{10}O_6$, from Venetian sumac.

F. vs. Abbreviation for *L. fi'at venæsec'tio*, let the patient be bled.

fyrite (fi'rit). A proprietary preparation used as an investment material in dentistry.

G

G. 1. An abbreviation for *gram* and *gingivol*. 2. The chemical symbol of *glucinum*.

g. An abbreviation for *gram*.

G. A. Abbreviation for *gingivo-axial*.

Ga. The symbol of *gallium*.

Gabbett's solution (gab'ets). [Henry Singer Gabbett, contemporary British physician]. See under *solution*.

gabianol (gab-i'an-ol). An oily liquid compound derived from shale: employed in diseases of the lungs. Dose, 4 min. (0.24 c.c.).

Gaboon ulcer (gab-on'). See under *ulcer*.

gad-fly. See *Tabanus*.

gadinin (gad'in-in). A ptomain, $C_7H_{16}NO_2$, from decaying fish and from bacterial cultures of human feces.

gadolinium (gad-o-lin'e-um). A rare element whose atomic weight is 157.3 and its symbol Gd.

gaduhiston (gad-u-his'ton) [L. *ga'dus* cod + *histon*]. A histon occurring in the spermatozoa of the codfish.

gaduin (gad'u-in) [L. *ga'dus* cod]. A basic fatty principle, $C_{35}H_{46}O_9$, from cod-liver oil.

gaduol (gad'u-ol). A purified preparation of cod-liver oil. Dose, 5-30 min. (0.333-2 c.c.).

Gadus (ga'dus) [L.; Gr. γάδος whiting]. A genus of fishes. **G. morrhua**, the cod-fish: from its liver, cod-liver oil is prepared. See *oil*, *cod-liver*.

Gaertner. See *Gärtner*.

gafeira (gaf-a-i'r'rah) [Port.]. A South American term for leprosy.

Gaffky scale (gaf'ke) [Georg Gaffky, German bacteriologist, 1850-1918]. See under *scale*.

gag (gag). 1. A surgical device for holding the mouth open. 2. To retch, or strive to vomit.

gage, gauge (gāj). An instrument for determining the dimensions or caliber of anything.

gale, gale (gal) [Fr.]. French for *scabies*.

Gaillard's suture (ga-yahrz') [François Lucien Gaillard, French physician, 1805-1869]. See *suture*.

Gairdner's test (gair'dnerz) [Sir William Tennant Gairdner, Scotch physician, born 1824]. See *coint.*, under *tests*.

gait (gāt). The manner or style of walking. **ataxic g.**, a walk in which the foot is raised

high and the sole strikes the ground at once and very suddenly. **cerebellar g.**, a staggering gait indicative of cerebellar disease. **Charcot's g.**, the peculiar gait of hereditary ataxia. **cow-g.**, a swaying walk due to knock-knee. **dromedary g.**, the peculiar gait seen in patients with dystonia musculorum. Called also *camel's walk*. **equine g.**, a walk accomplished mainly by flexing the hip-joint: seen in peroneal paralysis. **festinating g.**, a gait in which the patient moves with short, hurrying steps, often on tip-toe. **frog-g.**, a hopping progression resulting from infantile paralysis. **helicopter g.**, a gait in which the feet describe half-circles, as in some cases of hysterical disorder and in certain cases of hemiplegia. **hemiplegic g.**, the helicopter gait of hemiplegia. **Oppenheim's g.**, a gait marked by irregular oscillation of the head, limbs, and body: seen in some cases of disseminated sclerosis. **paralytic g.**, a gait in which the feet are dragged loosely along the ground. **scissor g.**, a gait in which one foot is passed in front of the other, producing a cross-legged progression. **spastic g.**, a walk in which the legs are held together and move in a stiff manner, the toes seeming to drag and catch. **stamping g.** Same as *ataxic g.* **steppage g.**, a gait in which the advancing foot hangs with the toes pointing toward the ground, the leg being lifted high in order that the toes may clear the ground. It is due to paralysis of the peroneal nerve and is seen in lesions of the lower motor neuron, such as multiple neuritis, lesions of the anterior motor horn cells, and lesions of the cauda equina. **swaying g.** See *cerebellar g.* **tabetic g.** Same as *ataxic g.* **waddling g.**, a gait seen in pseudohypertrophic paralysis. It resembles the waddling of a duck, and is due to the fact that the feet are kept wide apart in order to preserve the balance.

gakhuri (gak-hoo're). The plant, *Triph'ulus lamu-gino'sus*, of India: used locally as a medicine.

galactacrasia (gal-ak-tak-ra'se-ah) [Gr. γάλα milk + κρᾶσι mingling]. Abnormal condition of the mother's milk.

galactagogue (gal-ak'tag-og) [Gr. γάλα milk + ἄγωγος leading]. 1. Increasing the secretion of milk. 2. An agent that promotes the flow of milk.

galactan (gal-ak'tan) [Gr. γάλα milk]. A hemi-cellulose carbohydrate that yields galactose upon hydrolysis. Agar agar is a well-known example.

galactase (gal-ak'tās). A proteolytic enzyme of milk.

galactemia, galactaemia (gal-ak-te'me-ah) [Gr. γάλα milk + αἷμα blood]. A morbid condition of the blood in which it contains milk.

galactenzyme (gal-ak-ten'zim). A commercial preparation of *Lactobacillus bulgaricus*.

galactidrosis (gal-ak-tid-ro'sis) [Gr. γάλα milk + ἰδρὸς sweat]. The sweating of a fluid resembling milk.

galactin (gal-ak'tin) [Gr. γάλα milk]. An amorphous substance, $C_{24}H_{47}N_4O_{25}$, found in milk.

galactischia (gal-ak-tisk'e-ah) [Gr. γάλα milk + ἰσχεῖν to suppress]. Suppression of the secretion of milk.

galactoblast (gal-ak'to-blast) [Gr. γάλα milk + βλαστὸν germ]. A colostrum corpuscle found in the acini of the mammary gland.

galactocoele (gal-ak'to-sēl) [Gr. γάλα milk + κήλη tumor]. 1. A cystic enlargement of the mammary gland containing milk. 2. A hydrocele filled with a milky fluid.

galactochloral (gal-ak'to-klo'ral). A derivative, $C_8H_4Cl_3O_9$, of chloral and galactose in glossy scales: it is used as a hypnotic.

galactococcus (gal-ak-to-kok'us) [Gr. γάλα milk + coccus]. A staphylococcus found in cases of inflammation of the udder in cows.

galactogenous (gal-ak-toj'en-us) [Gr. γάλα milk + γεννᾶν to produce]. Favoring the production of milk.

galactolipin, galactolipine (gal-ak-to-li'pin). Any compound of a fatty acid containing nitrogen but no phosphorus, and combined with galactose.

galactoma (gal-ak-to'mah) [Gr. γάλα milk + -ωμα tumor]. Same as *galactocoele*.

galactometastasis (gal-ak''to-met-as'tas-is). Same as *galactoplasia*.

galactometer (gal-ak-tom'et-er) [Gr. γάλα milk + μέτρον measure]. An instrument for measuring the specific gravity of milk.

galactopathy (gal-ak-top'ath-e) [Gr. γάλα milk + πάθος feeling]. Same as *milk-cure*.

galactophagous (gal-ak-tof'ag-us) [Gr. γάλα milk + φαγῆν to eat]. Feeding upon milk.

galactophlebitis (gal-ak'to-fleb-i'tis) [Gr. γάλα milk + phlebitis]. Phlegmasia alba dolens.

galactophlysis (gal-ak-tof'lis-is) [Gr. γάλα milk + φλύσις eruption]. A vesicular eruption containing a milky fluid.

galactophore (gal-ak'to-for). 1. Galactophorous. 2. A milk-duct.

galactophoritis (gal-ak''tof-or-i'tis) [Gr. γάλα milk + φέρειν to carry + -ιτις inflammation]. Inflammation of the milk-ducts.

galactophorous (gal-ak-tof-or-us) [Gr. γάλα milk + φέρειν to bear]. Conveying milk.

galactophthisis (gal-ak-tof'this-is) [Gr. γάλα milk + φθίσις]. Phthisis or emaciation due to or brought on by over lactation.

galactophygous (gal-ak-tof'ig-us) [Gr. γάλα milk + φυγή flight]. Arresting the milk secretion.

galactoplasia (gal-ak-to-pla'ne-ah) [Gr. γάλα milk + πλάνη wandering]. The secretion of milk in some abnormal part; the metastasis of milk.

galactopoietic (gal-ak''to-poi-et'ik) [Gr. γάλα milk + ποιῆν to make]. Concerned in the production of milk.

galactopyra (gal-ak-to-pi'rah) [Gr. γάλα milk + πῦρ fire]. Milk-fever.

galactorrhea, galactorrhœa (gal-ak-tor-e'ah) [Gr. γάλα milk + ῥοία flow]. Excessive secretion of milk.

galactosamin (gal-ak-to-sam'in). An alpha-amino derivative, $C_8H_9OH.(CHOH)_2CH(NH_2).$

CHO, of galactose obtained from tendomucoid by hydrolysis.

galactosazone (gal-ak-to-sa'zōn). The phenyl osazone of galactose, $CHOH.(CHOH)_2C:(N.NH.C_6H_5).CH.N.NH.C_6H_5$. It is a yellow, crystalline substance which is formed by treating galactose with phenylhydrazin and acetic acid. The crystals melt at 103° C. and may be used in identifying galactose.

galactoschesis (gal-ak-tos'ke-sis) [Gr. γάλα milk + σχῆσις suppression]. Suppression of the milk secretion.

galactoscope (gal-ak'to-skōp) [Gr. γάλα milk + σκοπεῖν to view]. A device for showing the proportion of cream in the milk.

galactose (gal-ak'tōs) [Gr. γάλα milk]. An aldohexose, $CH_2OH.(CHOH)_4CHO$, obtained from lactose or milk-sugar by the action of an enzyme or by boiling with a mineral acid. It is a white crystalline substance, resembles glucose in most of its properties, but forms mucic acid when oxidized with nitric acid. It is found in milk-sugar, in the cerebrosids of the brain, in the raffinose of the sugar-beet, and in many gums and seaweeds.

galactosid (gal-ak'to-sid). A compound having the same relation to galactose that a glucosid has to glucose.

galactosis (gal-ak-to'sis) [Gr. γάλα milk]. The formation of milk by the lacteal glands.

galactostasia (gal-ak-to-sta'se-ah). Galactostasis.

galactostasis (gal-ak-tos'tas-is) [Gr. γάλα milk + στάσις halt]. 1. Cessation of the milk secretion. 2. An abnormal collection of milk.

galactosuria (gal-ak-to-su're-ah) [*galactose* + Gr. οὖρον urine]. Presence of galactose in the urine.

galactotherapy (gal-ak-to-ther'ap-e) [Gr. γάλα milk + θεραπεῖν to cure]. 1. The treatment of suckling children by giving remedies to the mother or wet-nurse. 2. Same as *milk-cure*. 3. The hypodermic injection of the milk of a syphilitic patient for the cure of syphilis.

galactotoxicon (gal-ak-to-tok'sik-on). The poisonous matter that causes galactotoxism.

galactotoxin (gal-ak-to-tok'sin) [Gr. γάλα milk + τοξικόν poison]. Any basic poison generated in milk by the growth of a plant microorganism.

galactotoxism (gal-ak-to-tok'sizm). Poisoning by milk.

galactotrophy (gal-ak-tof'ro-fe) [Gr. γάλα milk + τροφή nutrition]. Feeding with milk.

galactoxism, galactoxismus (gal-ak-tok'sizm, gal-ak-tok-siz'mus). Poisoning by milk.

galactozymase (gal-ak-to-zí'mās) [Gr. γάλα milk + ζύμη leaven]. A starch-liquefying ferment.

galacturia (gal-ak-tu're-ah) [Gr. γάλα milk + οὖρον urine]. The discharge of milk-like urine; chyluria.

galalith (gal'al-ith) [Gr. γάλα milk + λίθος stone]. A material for the manufacture of absorbable anastomosis buttons, consisting of formalin-hardened paracasein.

galanga (gal-an'gah) [L. for "galangal"]. See *galangal*.

galangal (gal-an'gal) [Chinese]. The rhizome of *Alpinia galanga* (*officinorum*) (lesser galangal) or of *A. officinalis* (greater galangal). It has the aromatic stimulant properties of ginger. Dose, 15-30 gr. (1-2 gm.).

galazyme (gal'az-im) [Gr. γάλα milk + ζύμη leaven]. A preparation of the mixed and fermented milk of asses and mares.

galbanum (gal'ban-um) [L.]. 1. A fetid gum-resin from *Ferula galbaniflua* and *F. rubricaulis*, umbelliferous plants of Asia. It is expectorant, antispasmodic, and stimulant, and is used in chronic catarrh of the genital and respiratory tracts and in amenorrhea, and locally as a counterirritant. Dose, 10-20 gr. (0.666-1.333

gm.). The compound pills of galbanum contain galbanum, myrrh, asafoetida, and syrup. 2. An incorrect popular name for Burgundy pitch.

Galbiati's operation (gahl-be-ah'tēz) [Gennaro Galbiati, an Italian surgeon, 1776-1844]. See *operation*.

galbismín (gal-biz'mín). A proprietary substitute for iodoform.

galea (ga'e-ah) [L. "helmet"]. The aponeurotic structure of the scalp, connecting the separated parts of the occipitofrontalis muscle. Called also *galea aponeurotica* [B N A].

galeanthyropy (ga-le-an'thro-pe) [Gr. γάλα cat + ἄνθρωπος man]. A mental delusion that one has become a cat.

Galega (gal-e'gah) [Gr. γάλα milk]. A genus of poisonous leguminous plants called goat's-rue. *G. officinalis* and other species are said to be galactagogues.

galegin (gal-e'jín). A guanidine base, $(CH_3)_2C=CH.NH.C:(NH).NH_2$ found in the seeds of *Galega officinalis*.

galegol (gal-e'gol). A preparation from galega, used as a galactagogue.

Galen (ga'len) [Claudius Galenus]. A celebrated Greek physician and medical writer, born at Pergamum, Mysia, in 130 A. D. At the age of thirty he removed to Rome, where he gained great fame as a practitioner. He is said to have died in Sicily about 200-210 A. D. He wrote a large number of works on medicine, natural science, logic, etc., of which about 80 have been preserved.

galenic (ga-len'ík). Pertaining to the ancient system of medicine taught and practised by Galenus, or Galen.

galenica (gal-en'ík-ah). Galenicals.

galenicals, galenics (gal-en'ík-alz, ga-len'íks). Medicines prepared according to the formulas of Galen. The term is now used to denote standard preparations containing one or several organic ingredients, as contrasted with pure chemical substances.

galenism (ga'len-izm). Galen's doctrine of the four humors as the agents in the causation of disease.

Galeodes araneoides (gal-e-o'dēz). A spider-like animal of the old world, with a venomous bite; injurious to camels.

galeophilia (gal-e-o-fil'e-ah) [Gr. γάλη cat + φιλέω to love]. A liking or fondness for cats.

galeophobia (gal-e-o-fó-beah) [Gr. γάλη cat + φόβος fear]. Marked fear of cats; gatophobia.

galeropia, galeropsia (gal-er-o'pe-ah, -op'se-ah) [Gr. γαλερός cheerful + ὄψις vision]. Abnormal clearness of vision.

Galipea cusparia. See *angustura*.

galipin (gal'ip-in). A crystalline alkaloid, $C_{20}H_{21}NO_3$, from the bark of *Galipea cusparia*.

galipoidin (gal-ip-o'i-dín). A crystalline alkaloid, $C_{19}H_{15}NO_4$, from the bark of *Galipea cusparia*.

galismuth (gal-iz'muth). A diethylene-diamino-bismutho-gallate in a solution of glucose. It is given by intramuscular injection in the treatment of syphilis. Dose, 1 c.c., equivalent to 0.03 gm. of metallic bismuth.

Galium (gal'e-um). A genus of plants. *G. aperine* has been used in suppression of the urine and urinary irritation.

gall (gawl) [L. gal'la]. 1. The bile. 2. Nutgall. **Aleppo g.**, nut gall. **g.-bladder, g.-cyst**. See *gall-bladder*. **g.-ducts**. See *bile-ducts*, under *duct*. **g.-sickness**. See *galzietke*. **Smyrna g.**, nutgall. **g.-stone**, a calculus in or from the gall-bladder or one of its afferent or efferent ducts.

galla (gal'ah), pl. and gen. gal'læ [L.]. Nutgall; an astringent excrescence growing upon oaks, chiefly *Quercus infectoria*. Dose, 5-25 gr. (0.333-1.666 gm.); of tincture, 30-120 min. (2-8 c.c.). See *nutgall*.

gallacetophenone (gal-as-e-to-fe'nón). A yellowish powder, $CH_3.CO.C_6H_4(OH)_3$, or trioxycetophenone: used externally like pyrogallol, of which it is a derivative. Called also *alizarin-yellow*.

gallal (gal'al). Aluminum gallate, $Al_2(C_7H_5O_6)_3 + 4H_2O$, a brownish, antiseptic powder: used in astringent nasal douches.

gallanilid (gal-an'il-id). Same as *gallanol*.

gallanol (gal'an-ol). A gallic acid anilid, $C_6H_5.OH_3.CO.NHC_6H_5 + 2H_2O$, a gallic acid and anilin derivative: a white powder, soluble in alcohol, ether, and boiling water, slightly soluble in cold water. It is used like pyrogallol, externally, in psoriasis, eczema, etc., in 5-25 per cent. ointment.

gallate (gal'át). Any salt of gallic acid.

gall-bladder (gawl'blad-er). The pear-shaped reservoir for the bile on the under surface of the liver. **Courvoisier's g.-b.**, a chronically obstructed gall-bladder. **fish-scale g.-b.**, a gall-bladder presenting a fish-scale-like appearance from multiple small cysts of the mucosa. **sand-paper g.-b.**, a rough state of the mucous membrane of the gall-bladder caused by the presence of cholesterol crystals. **strawberry g.-b.**, a gall-bladder presenting a strawberry-like appearance, due to fine grains of cholesterol-fat material embedded in the mucosa as a result of chronic catarrhal inflammation.

gallein (gal'e-in). Dioxylfluorescein, an anilin-dye indicator which is changed in color by an alkali to red and by an acid to yellow.

gallic acid (gal'ík). See *acid*.

gallicin (gal'is-in). The methyl ester of gallic acid, $(OH)_3C_6H_2.CO.OCH_3$, in snow-white, silky needles, or a whitish powder: used as a substitute for resorcinol in conjunctival catarrh.

gallinol (gal'in-ol). Same as *gallanol*.

Gallionella ferrugin'ea. A species of iron bacteria.

gallipot (gal'ip-ot). A small pot for ointments or confections.

gallisin (gal'is-in). A substance analogous to dextrin.

gallium (gal'e-um) [L., from *Gallia* Gaul]. A rare metal, atomic weight, 70.1; symbol, Ga: some of its compounds are poisonous.

gallobromol (gal-o-bro'mol). A light brown, crystalline, gallic acid and bromin derivative, $C_6Br_2(OH)_3COOH$, or dibromogallic acid: soluble in alcohol, ether, and boiling water. It is used as a sedative like the bromids, and as an astringent in gonorrhea in 1-4 per cent. solution. Dose, 10-30 gr. (0.65-2 gm.) in solution.

galloformin (gal-o-for'mín). A condensation-product of hexamethylenetetramin and gallic acid, $C_6H_2(OH)_3.CO.OH(CH_2)_6N_4$, in needle-like crystals. It is used as an internal antiseptic.

gallogen (gal'o-jen). A compound derived from gallic acid: recommended as an intestinal antiseptic. Dose, 5-30 gr. (0.333-2 gm.).

gallon (gal'on) [L. *con'gulus*]. Four quarts (3785 c.c.); in the United States, 231 cubic inches. See *weights and measures*.

gallotannic acid (gal-o-tan'ík). See *tannin*.

gall-sickness. See *galzietke*.

Galton's delta, law, whistle (gawl'tonz) [Francis Galton, English scientist, 1822-1911]. See *delta, law, and whistle*.

galuteolin (gal-u-te'o-lín). A glucosid, $C_{21}H_{20}O_{11} - 3H_2O$, from the seeds of *Galega officinalis*.

Galv. Abbreviation for *galvanic*.

galvanic (gal-van'ík). 1. Named for or discovered by Galvani. 2. Pertaining to galvanism. **g. battery**. See under *battery*.

galvanism (gal'van-izm) [after Luigi Galvani, 1737-1798]. Galvanic electricity: uninterrupted current electricity derived from a chemic battery.

- galvanization** (gal'van-iz-a'shun). Treatment by galvanic electricity. **spinogastric g.**, galvanization in which the negative pole is placed over the stomach, and the positive is moved up and down the spine.
- galvanocautery** (gal'van-o-kaw'ter-e). Cautery by a wire heated with a galvanic current.
- galvanochemic** (gal'van-o-kem'ik). Pertaining to the chemic action of the galvanic current.
- galvanocontractility** (gal'van-o-kon-trak-til'-it-e). Contractility in response to a galvanic stimulus.
- galvanofaradization** (gal'van-o-far-ad-iz-a'shun). The simultaneous use of continuous and interrupted electric currents.
- galvano-ionization** (gal'van-o-i-o-ni-za'shun). See *iontophoresis*.
- galvanolysis** (gal-van-ol'is-is) [*galvanism* + Gr. *λῦσις* dissolution]. Electrolysis.
- galvanometer** (gal-van-om'et-er) [*galvanic* + Gr. *μέτρον* measure]. An instrument for measuring galvanic electricity. **Einhoven's g., string g.** (1893), **thread g.**, an apparatus for detecting very minute electric currents, consisting of a delicate thread of silvered quartz or platinum stretched between the poles of a strong magnet. The thread may be illuminated by an arc light and the shadow of the thread thrown upon a screen after being magnified by a microscope.
- galvanomuscular** (gal'van-o-mus'ku-lar). Produced by the application of the galvanic current directly to a muscle.
- galvanonervous** (gal'van-o-ner'vus). Produced by application of the galvanic current to a nerve trunk.
- galvanopalpation** (gal'van-o-pal-pa'shun). A method of testing the sensory and vasomotor nerves of the skin by applying a sharp-pointed anode electrode to the part of the skin to be tested, the cathode being applied to some other part of the body.
- galvanopuncture** (gal'van-o-punkt'ūr). The introduction of needles to complete a galvanic circuit.
- galvanoscope** (gal-van-o-skōp) [*galvanism* + Gr. *σκοπεῖν* to view]. An instrument that shows the presence of a galvanic current.
- galvanoscopy** (gal-van-os'ko-pe). Diagnostic examination by means of galvanism.
- galvanosurgery** (gal'van-o-sur'jer-e). The employment of galvanism in surgery.
- galvanotaxis** (gal'van-o-tak'sis). Electrotaxis under the influence of galvanic electricity.
- galvanotherapeutics, galvanotherapy** (gal'-van-o-ther-ap-u'tiks, gal'van-o-ther-ap-ē). The therapeutic employment of galvanism.
- galvanotherapy** (gal'van-o-ther'me) [*galvanism* + Gr. *θερμῆ* heat]. Heating or burning by means of a galvanic current.
- galvanotonic** (gal'van-o-ton'ik). Of the nature of galvanotonus; both galvanic and tonic.
- galvanotonus** (gal-van-ot'o-nus) [*galvanism* + Gr. *τόνος* tone]. Tonic response to galvanism.
- galvanotropism** (gal-van-ot'ro-pizm) [*galvanism* + Gr. *τροπός* a turn]. The tendency of an organism to turn or move under the action of an electric current.
- galyi** (gal'il) [Named in honor of *Galen*]. An organic arsenical preparation, tetraoxydiphosphaminodiar-senobenzene: used like salarsan. Dose, 6-8 gr. (0.4-0.5 gm.).
- galziekte, galzietzke** (gahl-zēk'te) [Dutch *gal* gall + *ziekte* sickness]. A disease of cattle in South Africa, caused by *Trypanosoma theileri*, which is transmitted by a fly (*Hippobosca*), the winged tick fly of the horse. It is marked by slight fever and severe anemia. Called also *gall-sickness* and *bilious fever of cattle*.
- Gamaleia's spirillum** (gam-al-a'yahz) [M. *Gamaleia*, Russian bacteriologist, born 1859]. See *spirillum*.
- gamasid** (gam'as-id). A mite of the family *Gamasidae*.
- Gamasidæ** (gam-as'id-e). A family of mites of the order Acarina; the spider mites or beetle mites. They are parasitic on birds and animals.
- gamasoidosis** (gam-as-oi-do'sis). Infestation by a mite of the family *Gamasidæ*, such as the dermatitis caused by the fowl mite, *Dermanyssus*.
- Gambian horse sickness** (gam'be-an) [*Gambia* a British colony of the West Coast of Africa]. Trypanosomiasis of horses and cattle due to the *Trypanosoma dimorphon*.
- gambir** (gam'ber). Pale catechu; the dried aqueous extract from the leaves and twigs of *Ouroupa'ria gambir*, a rubiaceous plant of southeastern Asia: astringent. The official preparation is the *compound tincture*.
- gamboge** (gam-bōj', gam-booj'). See *cambogia*.
- Gambusia** (gam-bu'se-ah). The genus of fish most effective in North America in destroying mosquito larvæ.
- gamelan** (gam'el-an). A mixture of fats, lipoids, and waxes, which it is claimed stimulates the tissues to produce ferments which saponify the fatty constituents of the tubercle bacilli.
- gamete** (gam'ēt) [Gr. *γαμέτης* spouse]. A sexual cell; a mature germ cell, as, for example, an unfertilized egg or a mature sperm cell.
- gametic** (gam-et'ik). Pertaining to gametes or the primitive sexual elements.
- gametoblast** (gam'et-o-blast) [Gr. *γαμέτη* wife + *βλαστός* germ]. A sporozoite.
- gametocyte** (gam-ēt'o-sit) [Gr. *γαμέτη* spouse + *κύτος* cell]. The mother-cell which produces gametes by division.
- gametogenesis** (gam'et-o-jen'es-is) [*gamete* + Gr. *γένεσις* production]. The origin of germ cells.
- gametoid** (gam'et-oid). Resembling gametes or reproductive cells.
- gametophagia** (gam'et-o-fa'je-ah). Gamophagia.
- gametophyte** (gam'et-o-fit) [Gr. *γαμέτη* wife + *φύτον* plant]. The haploid or sexual stage in the antithetic alternation of generations.
- gamic** (gam'ik). Sexual: applied to eggs which develop only after fertilization.
- gamma** (gam'ah). The third letter in the Greek alphabet, γ. See *alpha*.
- gammacism** (gam'as-izm) [Gr. *γάμμα* letter G]. The imperfect utterance of G-sounds.
- gammot** (gam'ot). An old form of surgical knife.
- gamobium** (gam-o-be-um) [Gr. *γάμος* marriage + *βίος* life]. In zoölogy, the sexually reproducing generation in cases of alternation of generation. Cf. *agamobium*.
- gamogenesis** (gam-o-jen'es-is) [Gr. *γάμος* marriage + *γένεσις* production]. Sexual reproduction.
- gamogenetic** (gam'o-jen-et'ik). Pertaining to or exhibiting sexual reproduction.
- gamont** (gam'ont) [Gr. *γάμος* marriage + *ὄντος* being]. Either of the conjugating individuals in gregarine reproduction.
- gamophagia** (gam-o-fa'je-ah) [Gr. *γάμος* marriage + *φαγεῖν* to eat]. The assimilation and disappearance of the male or female element in generation.
- gampsodactylia** (gamp-so-dak-til'e-ah). Deformity of the toes marked by hyperextension of the first phalanx on the metatarsal and flexion of the other two phalanges. Called also *claw-foot*.
- ganglia** (gang'le-ah). Plural of *ganglion*.
- ganglial** (gang'le-al). Pertaining to a ganglion.

gangliasthenia (gang'le-as-the-ne-ah). Asthenia due to ganglionic disease.

gangliate, gangliated (gang'le-āt, gang'le-ā-ted). Provided with ganglia.

gangliectomy (gang-le-ek-to-me) [Gr. γάγγλιον ganglion + ἐκτομή excision]. Excision of a ganglion.

gangliform (gang'lif-orm). Having the form of a ganglion.

gangliitis (gang-le-ī'tis). Inflammation of a ganglion.

ganglioblast (gang'le-o-blast) [ganglion + Gr. βλαστός germ]. An embryonic cell of the spinal ganglia.

gangliocyte (gang'le-o-sit) [ganglion + Gr. κύτος cell]. A ganglion-cell.

ganglioform (gang'le-o-form). Gangliform.

ganglioma (gang-le-o'mah) [Gr. γάγγλιον ganglion + ῥωμα tumor]. A tumor of a lymphatic ganglion.

ganglion (gang'le-on), pl. *gang'lia* [Gr. γάγγλιον knot]. 1. Any collection or mass of nerve-cells that serves as a center of nervous influence. 2. A form of cystic tumor occurring on an aponeurosis or a tendon. 3. See *ganglion, lymphatic*.

abdominal g., the semilunar ganglion. **aberrant g.**, a mass of nerve-cells occasionally seen on a posterior spinal nerve-root. **acusticofacial g.**, a ganglion of early embryonic life, a portion of which persists as the geniculate ganglion. **Acrel's g.**, a ganglion on the extensor tendons of the wrist. **Andersch's g.**, the petrous ganglion. **anterior g. of thalamus**, the anterior tubercle of the thalamus. **aorticorenal g.**, a partly detached piece of the semilunar ganglion. **Arnold's g.**, **auricular g.**, a ganglion situated below the foramen ovale, that sends nerves to the tympanic muscles and tensor palati. Called also *otic g.* **auditory g.**, the accessory auditory nucleus. **Auerbach's g.**, any one of the small ganglia of Auerbach's plexus. **basal g.**, ganglia below the cortex of the brain, connecting the cerebrum with the lower centers, and comprising the thalami, corpora striata, corpora quadrigemina, tuber cinereum, and geniculate bodies. **Bezold's g.**, a series of ganglion-cells in the interauricular septum. **Bidder's g.**, two ganglia of the auricular septum of a frog's heart. **Bochdalek's g.**, the swelling at the junction of the superior and middle dental nerves. **Bock's g.** Same as *carotid g.* **cardiac g., superior**, a ganglion of the superficial cardiac plexus under the aortic arch. **carotid g.**, a ganglion in the lower part of the cavernous sinus. **carotid g., inferior**, a ganglion of the lower part of the carotid canal. **carotid g., superior**, one in the upper part of the carotid canal. **casserian g.**, an incorrect name for *gasserian g.* **celiac g.** Same as *semilunar g.* **central g. of brain**, the optic thalami and corpora striata. **cephalic g.**, the ciliary, otic, sphenopalatine, and submaxillary ganglia, all mainly of the sympathetic or trisplanchnic system. **cervical g., inferior**, a ganglion between the transverse process of the next lower vertebra and the neck of the first rib. **cervical g., middle**, a ganglion adjacent to the fifth cervical vertebra; the thyroid ganglion. **cervical g., superior**, a ganglion opposite the second and third cervical vertebrae. **cervical g. of the uterus**, is situated near the cervix uteri. **cervico-uterine g.** See *Frankenhäuser's g.* **ciliary g.**, a ganglion of the posterior part of the orbit from which are innervated the muscles of the ciliary process and iris. **Cloquet's g.**, a swelling of the nasopalatine nerve in the anterior palatine canal. **coccygeal g.**, a ganglion situated on the anterior surface of the tip of the coccyx: the ganglion impar. **compound g.**, a cystic tumor of a tendon-sheath which has been compressed into two parts by a ligament. **Corti's g.** Same as *spiral g.* **diaphragmatic g.**, a small ganglion of the diaphragm on the right

side; from it fibers go to the liver. **diffuse g.**, a swelling of several adjoining tendon-sheaths due to inflammatory effusion. **dorsal root g.**, a ganglion connected with the dorsal spinal root. **g. ectotomamilla're**, either of the corpora albicantia. **Ehrenritter's g.**, a ganglion of the glossopharyngeal nerve in the upper part of the jugular foramen. **false g.**, any enlargement on a nerve which has not the true ganglionic structure. **Frankenhäuser's g.**, a ganglion near the cervix uteri. Called also *cervico-uterine g.* **Froriep's g.**, the ganglion of the fourth occipital segment in the human embryo. **Ganser's g.**, interpeduncular ganglion. **gasserian g.**, the semilunar ganglion; a ganglion on the larger root of the fifth cranial nerve. It is situated in a fossa on the anterior part of the petrous portion of the temporal bone, and gives off the ophthalmic and superior and inferior maxillary nerves. **geniculate g.**, a ganglion of the facial nerve in the aqueduct of Fallopius. **Gudden's g.**, a ganglion in the cephalodorsal part of the mammillary body of the brain. **g. haben'ulæ**. See *nucleus habenule*. **hepatic g.**, a ganglion that surrounds the hepatic artery. **hypogastric g.**, either of two ganglia on either side of the cervix uteri, connected with the sacral and hypogastric plexuses. **hypoglossal g.**, a ganglion of the dorsal root of the hypoglossal nerve; rarely found in the human subject. **g. impar**, the coccygeal ganglion; a sympathetic ganglion on the anterior surface of the tip of the coccyx. **g. infer'ius**. See *nodose g.* **inframaxillary g., anterior**, a ganglion near the incisor teeth. It is derived from the inferior maxillary nerve, and gives off filaments to the teeth. **inframaxillary g., posterior**, a ganglion situated near the last molar teeth. **inhibitory g.**, any ganglion with an inhibitory function. **intercarotid g.**, an enlargement connected with the carotid plexus at the bifurcation of the common carotid. **intercural g.** Same as *corpus interpedunculare*. **interpeduncular g.** See *corpus interpedunculare*. **g. intervertebra'le**, a spinal ganglion. **intracardiac g.**, the nerve ganglia within the substance of the heart. **g. isth'mi**. Same as *corpus interpedunculare*. **jugular g.** 1. A small ganglion on the vagus in the jugular foramen, giving off a meningeal and an auricular branch. Called also *ganglion of the root*. 2. Same as *g. superius*. **Küttner's g.**, a large lymphatic gland on the internal jugular vein immediately beneath the posterior belly of the digastric muscle, forming the principal lymphatic terminus of the tongue. Called also *hauptganglion*. **Laumonier's g.**, the carotid ganglion. **Lee's g.**, the cervical ganglion of the uterus. **lenticular g.** See *ciliary g.* **lingual g.**, a ganglion on the anterior branch from the superior cervical ganglion. **lobar g.**, the ganglion of the cerebral lobes. **Lobstein's g.**, a small enlargement on the great splanchnic nerve above the diaphragm. **Loetwig's g.**, the bulbous arteriosus. **Ludwig's g.**, a ganglion connected with the cardiac plexus and situated near the right auricle of the heart. **lumbar g.**, four or five pairs on either side and behind the abdominal aorta. **Luschka's g.** See *coccygeal gland*, under *gland*. **lymphatic g.**, any lymphatic gland. **maxillary g.**, submaxillary ganglion. **Meckel's g.**, a ganglion of the sympathetic, facial, and other nerves situated in the sphenomaxillary fossa. Called also *sphenopalatine g.* **Meissner's g.**, small ganglionic nodes in Meissner's plexus. **mesenteric g., inferior**, a ganglion of the inferior mesenteric plexus. **mesenteric g., lateral**, in the superior mesenteric plexus, left side. **mesenteric g., superior**, a gland of the sympathetic nerve in the superior mesenteric plexus. **Meynert's g.**, a mass of cells within the tuber cinereum near the optic tract. Called also *basal optic g.* **Müller's g.**, the prostatic ganglion. **nasal g.** See *Meckel's g.* **nephrolumbar g.**, a ganglion at the junction of branches of the spermatic and

lumbar nerves, giving off branches to the kidney and lumbar region. **nodose g.**, **g. nodo'sum** [B N A], a ganglion of the vagus below the jugular ganglion, opposite the transverse processes of the first and second cervical vertebrae. Called also *g. of the trunk, inferior vagal g.*, and *g. inferius*. **olfactory g.**, a mass of tissue in the embryo which develops into the olfactory nerves. **ophthalmic g.**, **orbital g.**, the ciliary ganglion. **optic g.** 1. Either of the corpora quadrigemina. 2. The ophthalmic or ciliary ganglion. 3. Meynert's ganglion. **otic g.** Same as **Arnold's g.** **periosteal g.** Same as **periostitis aluminosa**. **petrosal g.**, **g. petro'sum**, **petrous g.**, a ganglion of the glossopharyngeal at the lower border of the petrous bone. Called also **Andersch's g.** **pharyngeal g.**, a ganglion on an anterior branch of the carotid plexus. **pharyngeal g.**, **soft**, is on the lingual artery, near the pharyngeal ganglion. **phrenic g.**, the diaphragmatic ganglion. **g. plex'uum sympathico'rum**, ganglia of the sympathetic plexus. **prevertebral g.**, sympathetic ganglia of the thorax and abdomen other than those of the sympathetic trunk. **primary g.**, that which does not follow a local inflammation. **prostatic g.**, a ganglion situated on the prostate gland; it is connected with the prostatic plexus. **pterygopalatine g.**, **Meckel's ganglion**. **Remak's g.**, a sympathetic ganglion in the heart tissue near the superior vena cava. **renal g.**, a ganglion around the renal artery. **reticulated g.**, the gray matter scattered throughout the oblongata. **g. retinæ**, the outer of the two subdivisions of the internal nuclear layer of the retina. **Ribes's g.**, the alleged upper termination of the sympathetic nerve surrounding the anterior communicating artery of the brain. **sacral g.**, any one of four or five ganglia on the ventral surface of the sacrum. **Scarpa's g.**, a pair situated near the external auditory meatus at the point of junction of the facial nerve and the vestibular branch of the auditory nerve. **Schacher's g.**, the ciliary ganglion. **semilunar g.**, the gasserian ganglion. **semilunar g.**, **right and left**, two small ganglia near the suprarenal capsule. **sensory g.**, the corpora quadrigemina, optic thalami, and other basal sensory brain organs. **simple g.**, a cystic tumor in a tendon-sheath. **sino-audicular g.**, **Remak's ganglion**. **sinus g.**, a group of nerve-cells around the junction of the coronary sinus and the right auricle of the heart. **solar g.**, **right and left**, the right and left semilunar ganglia. **Sömmering's g.**, the substantia nigra of the cerebral peduncle. **sphenopalatine g.** Same as **Meckel's g.** **spinal g.**, one on the posterior root of each spinal nerve. **spiral g.**, a ganglion between the plates of the spiral lamina sending filaments to the organ of Corti. **g. spirale cochleæ** [B N A]. Same as **spiral g.** **splanchnic g.**, a ganglion occasionally found in the great splanchnic nerve. **stellate g.**, the first dorsal sympathetic nerve ganglion. **submaxillary g.**, a ganglion above the submaxillary gland. **g. superius** [B N A], a small ganglion of the glossopharyngeal nerve at the jugular foramen. It has no branches. Called also **jugular g.** and **Ehrenriller's g.** **suprarenal g.**, a ganglion at the junction of the great splanchnic nerves. **g. terminale**, a nerve ganglion of the terminal nerve near the olfactory bulb. **thoracic g.**, twelve pairs between the transverse processes of the vertebrae and the heads of the ribs. **g. thoracicum primum**, the inferior cervical ganglion. **thyroid g.**, **inferior**, the middle cervical ganglion. **thyroid g.**, **superior**. See **cervical g.**, **superior**. **Troisier's g.**, an enlarged lymphatic gland sometimes seen above the clavicle in cases of retrosternal tumor. **tympanic g.**, a ganglion of the tympanic branch of the glossopharyngeal nerve. **vagal g.**, **inferior**. See **nodose g.** **vagal g.**, **superior**, a ganglion in the jugular foramen sending filaments to the vagus. **Valen-**

tin's g., a ganglion at the junction of the posterior and middle dental nerves. **ventricular g.** See **Bidder's g.** **vertebral g.**, the ganglia of the sympathetic trunk. **vestibular g.**, **Scarpa's ganglion**. **Walther's g.**, the ganglion impar. **Wrisberg's g.**, the cardiac ganglion. **wrist-g.**, cystic enlargement of a tendon-sheath on the back of the wrist. **ganglionated** (gang'le-on-a-ted). Provided with ganglia. **ganglionectomy** (gang'le-on-ek'to-me) [ganglion + Gr. ἐκτομή excision]. Excision of a ganglion. **ganglionervous** (gang'le-o-ner'vus). Pertaining to the sympathetic nerve. **ganglioneure** (gang'le-o-nūr) [ganglion + Gr. νευρον nerve]. Any cell of a nervous ganglion. **ganglioneuroma** (gang'le-o-nu-ro'mah). A tumor made up of ganglion-cells. **ganglionic** (gang-le-on'ik). Pertaining to a ganglion. **ganglionitis** (gang''le-on-i'tis). Inflammation of a ganglion. **ganglioplexus** (gang'le-o-plek'sus). A plexus of nerve-fibers in a ganglion. **Gangolphe's sign** (gahng-olfs') [Louis Gangolphe, contemporary French surgeon]. See under **sign**. **gangosa** (gan-go'sah) [Sp. "muffled voice"]. A disease of the Caroline and Ladron Islands, the Philippines, Fiji, and the West Indies, marked by destructive ulceration, beginning in the soft palate or uvula, and extending to the hard palate, larynx, nasal cavity, and even face. It always results in disfigurement. It may be a tertiary lesion of frambesia tropica. Called also *ogo* and *rhinopharyngitis mutilans*. **gangrene** (gan'grēn) [L. *gangra'na*; Gr. γάγγραινα]. Anemic necrosis of tissue combined, usually, with invasion by saprophytic organisms. **anemic g.**, the gangrene due to obstruction to the blood-supply of a part. **angioneurotic g.**, a disease of early life due to thrombosis and sclerosis of the

Senile gangrene (Gross).

arteries and veins: occurring chiefly in cold regions. Called also **spontaneous g.** **angiosclerotic g.**, dry gangrene caused by vascular sclerosis. **carbolic g.**, gangrene due to continued application of dilute carbolic acid. **cold g.**, gangrene that is not preceded by inflammation. **cutaneous g.**, a form of pyodermitis of young children due to a staphylococcus. **decubital g.**, a bed-sore. **diabetic g.**, moist gangrene occurring in persons who suffer with diabetes. **disseminated cutaneous g.**, multiple gangrene of the skin of nervous origin. **dry g.**, necrosis of a peripheral part which is dry, shriveled, and discolored due to occlusion of an artery which cuts off the circulation of blood and fluid. **embolic g.**, that which follows the cutting off of the blood-supply by an embolism. **emphysematous g.**, gaseous gangrene. **epidemic g.** Same as **ergotism**. **fulminating g.**, malignant or gangrenous edema. **gas g.**, **gaseous g.**, a condition often following dirty, lacerated wounds in which the muscles become filled with gas and a serosanguineous exudate. The condition is due to a mixed infection of bacteria among which are *Bacillus welchii*, *B. sporogenes*, *B. novyi*, and *Vibrio*

septicæ. **glycemic g.**, **glykemic g.**, diabetic gangrene. **hospital g.**, a contagious and fatal form occurring in crowded hospitals and attacking wounds. **hot g.**, gangrene which follows an inflammatory attack. **hysteric g.**, a form which appears to result from severe herpes zoster in hysteric subjects. **moist g.**, a form with a free offensive watery discharge. **multiple g.**, gangrene of several different parts. **neurotic g.**, gangrene occurring spontaneously in neurotic persons. **nosocomial g.** Same as *hospital g.* **Pott's g.**, senile gangrene. **primary g.**, gangrene occurring without preceding inflammation of the part. **pulpy g.** Same as *hospital g.* **Raynaud's g.**, the symmetric gangrene of local asphyxia. See *asphyxia*. **secondary g.**, a form which follows a local inflammation. **senile g.**, a form that attacks the aged. **spontaneous g.** Same as *angioneurotic g.* **static g.**, gangrene that results from stasis. **symmetric g.**, gangrene of corresponding parts on either side, due to vasomotor disturbances; local asphyxia. See *asphyxia*. **thrombotic g.**, gangrene from thrombosis of an artery. **trophic g.**, gangrene due to lesion of the trophic nerve supply of a part. **venous g.**, static gangrene. **white g.**, gangrene due to local anemia following complete lymphatic obstruction.

gangrenosis (gang-re-no'sis). The development of gangrene.

gangrenous (gan'gre-nus). Affected with or of the nature of gangrene.

Ganser's ganglion, symptom, syndrome (gan'serz) [Sigbert Joseph Maria Ganser, psychiatrist in Dresden, born 1853]. See under *ganglion, symptom, and syndrome*.

Gant's clamp (gants) [Samuel Goodwin Gant, New York rectal surgeon]. See under *clamp*.

gap, Bochdalek's (gap). The space between the lumbar and costal attachments of the diaphragm.

gapes (gäps). A disease of fowls caused by a worm, *Syngamus trachealis*, in the air-passages.

garantose (gar'an-tös). Benzoylsulphonimid: a compound said to be 500 times as sweet as sugar.

garbage (gar'bai). Refuse not carried by the sewers and especially the waste animal and vegetable material from kitchens as distinguished from ashes, rubbish, street sweepings, manure, and dead animals.

Garcinia (gar-sin'e-ah). A genus of trees from which gamboge is obtained.

gardan (gar'dan). A mixture of novalgin and pyramidin in molecular proportions. It is used as an antiseptic and analgesic in 4- to 7-grain doses.

gardenal (gar'den-al). A French brand of luminal. See *luminal*.

gardenin (gar'den-in). A yellowish, crystalline body, $C_7H_{12}O_6$, from *Gardenia lucida*, or dikamali, a tree of Southern Asia.

Gardiner-Brown's test [Alfred Gardiner-Brown, an English otologist]. See under *tests*.

Garel's sign (gar-elz') [Jean Garel, French physician, born 1852]. See under *sign*.

Garg. Abbreviation for *L. gargaris'mus*, gargle.

gargarism (gar'gar-izm) [Gr. γαργαρίσμα; *L. gargaris'ma*]. A gargle or throat-wash.

garget (gar'get). 1. Mastitis in the cow. 2. A disease of swine characterized by loss of appetite and staggering gait.

gargle (gar'gl) [*L. gargaris'ma*]. A solution used for rinsing the mouth and throat.

Gariel's pessary (gar-e-elz') [Maurice Gariel, French physician, 1812-1878]. See under *pessary*.

Garland's curve, triangle (gar'landz) [George Minott Garland, American physician, born 1848]. See under *curve and triangle*.

garlic (gar'lik). See *Allium*.

garnothol (gar'no-thol). A proprietary antiseptic and antisyphilitic agent containing iodine.

garofen (gar'o-fen). An analgesic and antipyretic remedy.

garotilha (gar-o-til'hah). Anthrax of cattle in Brazil. **Garrod's test** (gar'ods) [Alfred Baring Garrod, London physician, 1819-1907]. See under *tests*.

garrot (gar'ot). An instrument for compressing an artery by twisting a circular bandage about a part; a form of tourniquet.

garrulity (gar-u'lit-e). Talkativeness. **g. of the vulva.** Same as *flatus vaginalis*.

Garrya (gar'e-ah) [after Garry]. A genus of corneaceous plants. *G. fremontii*, the fever-bush of California, is tonic and antiperiodic. Dose of fluidextract of leaves, 10-30 min. (0.666-2 c.c.).

Gärtner's bacillus (gairt'nerz) [August Gärtner, German bacteriologist, born 1848]. The *Bacillus enteritidis*.

Gartner's canal, duct (gart'nerz) [Karl F. Gartner, Danish anatomist, 1785-1827]. See under *duct*.

Gärtner's phenomenon, tonometer (gairt'nerz) [Gustav Gärtner, Austrian physician, 1855-1921]. See under *phenomenon and tonometer*.

gas (gas). Any elastic aëriform fluid. **asphyxiating g.**, carbon monoxid used as a poisonous gas in warfare. **hemolytic g.** See *arsin*. **inert g.**, gases without chemical activity found in the atmosphere in small amounts. They are helium, neon, argon, krypton, xenon, and niton. **laughing-g.**, nitrogen monoxid. **looney g.**, tetraethyl lead. **marsh-g.** See *methane*. **mustard g.**, dichlorethyl sulphid. **noble g.**, any one of the inert gases. **olefant g.** See *ethylene*. **sewer-g.**, the mixture of gases and vapors from a sewer; often dangerous from the contained bacteria and from other materials resulting from the decay of organic matter. **sneezing g.** See *diphenylchlorarsin*. **suffocating g.** See *phosgene and diphosgene*. **sweet g.**, white damp, carbon monoxid. **tear g.** See *xylo*. **vesicating g.**, dichlorethyl sulphid. **vomiting g.**, chloropicrin.

gasator (gaz'a-tor). An apparatus for the controlled production of exact concentrations of chlorin for the treatment of infections of the respiratory tract.

gaseous (gas'e-us). Of the nature of a gas.

Gaskell's bridge (gas'kelz) [Walter Holbrook Gaskell, English physiologist, 1847-1914]. See *bridge*.

gaskin (gas'kin). The thigh of a horse.

gasogenic (gas-o-jen'ik). Producing gas.

gasometer (gas-om'et-er). An instrument for determining the amount of gas present in a mixture. The instrument is used for calorimetry by the indirect method.

gasometric (gas-o-met'rik). Pertaining to gasometry. **g. analysis.** See under *analysis*.

gasometry (gas-om'et-re) [gas + Gr. μέτρον measure]. The chemic determination of the amount of gas present in a mixture.

gasserectomy (gas-e-ek'to-me) [*gasserian* + Gr. ἐκτομή excision]. Surgical removal of the gasserian ganglion.

gasserian (gas'e-re-an). Discovered by or named in honor of A. P. Gasserius, 1505-1577. See under *ganglion*.

gassing (gas'ing). The use of irrespirable gases in warfare.

gastralgia (gas-ter-al'je-ah). Same as *gastralgia*.

gasterangliemphraxis (gas'ter-an-je-em-fraks'is) [Gr. γαστήρ stomach + ἀγγείον vessel + συμφραξίς obstruction]. Obstruction of the blood-vessels of the stomach.

gasterasthenia (gas-ter-as-the'ne-ah). Same as *gastrasthenia*.

gasteremphraxis (gas-ter-em-fraks'is). Same as *gasterangliemphraxis*.

gasterhysterotomy (gas'ter-his-ter-ot'o-me) [Gr. γαστήρ belly + ὑστέρα uterus + τομή cut]. The

- cesarean operation or section; delivery of the fetus by cutting through the uterine and abdominal walls.
- gasterin** (gas'ter-in). A preparation of the gastric juice of dogs; used in treatment of chyluria.
- gastradenitis** (gas-trad-en-í'tis) [Gr. *γαστήρ* stomach + *ἀδέν* gland + *-itis* inflammation]. Inflammation of the stomach glands.
- gastralgia** (gas-tral'je-ah) [Gr. *γαστήρ* stomach + *ἄλγος* pain]. Pain in the stomach. **appendicular g.**, pain in the stomach due to lesion of the vermiform appendix.
- gastralgokenosis** (gas-tral-go-ken-o'sis) [Gr. *γαστήρ* belly + *ἄλγος* pain + *κένωσις* emptiness]. Paroxysmal gastric pain when the stomach is empty, and which is easily relieved by taking food.
- gastraneuria** (gas-trah-nu're-ah) [Gr. *γαστήρ* stomach + *a* neg. + *νεῦρον* nerve]. Impaired nervous tone of the stomach.
- gastrasthenia** (gas-tras-the'ne-ah) [Gr. *γαστήρ* stomach + *asthenia*]. A feeble or weak state of the functions of the stomach.
- gastratrophia** (gas-trat-ro'fe-ah) [Gr. *γαστήρ* stomach + *ἀτροφία* atrophy]. Atrophy of the stomach.
- gastr ectasia, gastr ectasis** (gas-trek-ta'ze-ah, gas-trek'ta-sis) [Gr. *γαστήρ* stomach + *ἐκτασις* stretching]. Dilatation of the stomach.
- gastroctomy** (gas-trek'to-me) [Gr. *γαστήρ* stomach + *ἐκ* out + *τομή* cut]. The cutting out or removal of any part of the stomach.
- gastr ectosis** (gas-trek-to'sis). Gastr ectasia.
- gastric** (gas'trik) [L. *gastricus*; Gr. *γαστήρ* stomach]. Pertaining to the stomach.
- gastricin** (gas'tris-in). A proprietary digestant preparation.
- gastricism** (gas'tris-izm). Any gastric disorder, such as dyspepsia or indigestion.
- gastrin** (gas'trin) [Gr. *γαστήρ* stomach]. A substance existing in the gastric mucous membrane and having the power of exciting the secretion of gastric juice.
- gastrine** (gas'trin). A therapeutic extract of the stomach of the ox or of the dog.
- gastritic** (gas-trit'ik). Pertaining to or affected with gastritis.
- gastritis** (gas-trí'tis) [Gr. *γαστήρ* stomach]. Inflammation of the stomach. **atrophic g.**, chronic gastritis with atrophy of the mucous membrane and glands. **catarrhal g.**, inflammation of the mucous membrane of the stomach, with hypertrophy of the membrane, secretion of an excessive quantity of mucus, and alteration of the gastric juice. The condition is marked by loss of appetite, nausea, pain, vomiting, and tympanic distention of the stomach. **exfoliative g.**, chronic gastritis in which bits of the surface of the mucous membrane are shed. **follicular g.**, inflammation of the glands of the stomach. **g. granulomato'sa fibroplas'tica**, benign hypertrophy of the pylorus; linitis plastica. **hypertrophic g.**, gastritis with infiltration and enlargement of the glands. **mycotic g.**, gastritis caused by fungi. **phlegmonous g.**, a variety with abscesses in the stomach-walls. **polypous g.**, hypertrophic gastritis with polypus-like projections into the stomach. **pseudomembranous g.**, a variety in which false membranes occur in patches within the stomach.
- gastro-** [Gr. *γαστήρ* stomach]. A prefix denoting some relation to the stomach.
- gastro-adyamic** (gas'tro-ad-in-am'ik). Marked by an adynamic condition of the stomach.
- gastro-albumorrhœa** (gas'tro-al-bu-mo-re'ah) [Gr. *γαστήρ* stomach + *albumin* + Gr. *ροία* flow]. The secretion of protein matter by the stomach.
- gastro-anastomosis** (gas'tro-an-as-to-mio'sis). Same as *gastrogastrostomy*.
- gastro-atonía** (gas'tro-at-o'ne-ah). Atony of the stomach.
- gastroblennorrhœa** (gas'tro-blen-or-e'ah) [Gr. *γαστήρ* stomach + *blennorrhœa*]. Excessive secretion of mucus by the stomach.
- gastrobrosis** (gas-tro-bro'sis) [Gr. *γαστήρ* stomach + *βρῶσις* eating]. Perforation of the stomach-wall by a corrosive or ulcerative process.
- gastrocele** (gas'tro-sel) [Gr. *γαστήρ* stomach + *κήλη* hernia]. Hernial protrusion of the stomach or of a gastric pouch.
- gastrochronorrhœa** (gas'tro-kron-o-re'ah) [Gr. *γαστήρ* stomach + *χρόνος* time + *ροία* flowing]. Chronic gastric hypersecretion.
- gastrocnemius** (gas-trok-ne-me-us) [Gr. *γαστήρ* belly + *κνήμη* leg]. See *muscles, table of*.
- gastrocœle** (gas'tro-sel) [Gr. *γαστήρ* belly + *κοίλος* hollow]. The cavity of the archenteron in the gastrula, forming the primitive digestive cavity of the embryo.
- gastrocolic** (gas-tro-kol'ik). Pertaining to the stomach and colon.
- gastrocolitis** (gas'tro-ko-lit'is) [Gr. *γαστήρ* stomach + *κόλον* colon + *-itis* inflammation]. Inflammation of the stomach and colon.
- gastrocoloptosis** (gas'tro-ko-lop-to'sis) [Gr. *γαστήρ* stomach + *colon* + Gr. *πτῶσις* falling]. Downward displacement of the stomach and colon.
- gastrocolostomy** (gas'tro-ko-los'to-me) [Gr. *γαστήρ* stomach + *κόλον* colon + *στόμα* mouth]. The creation of an artificial passage from the stomach to the colon.
- gastrocolotomy** (gas'tro-ko-lot'o-me) [Gr. *γαστήρ* stomach + *κόλον* colon + *τομή* a cut]. Incision of the stomach and colon.
- gastrocolpotomy** (gas'tro-kol-pot'o-me) [Gr. *γαστήρ* stomach + *κόλπος* vagina + *τομή* a cutting]. Incision of the vagina through the abdominal wall.
- gastrodialysis** (gas-tro-di-al'is-is) [Gr. *γαστήρ* stomach + *διάλυσις* separation]. Sloughing of the gastric mucous membrane.
- gastrodiaaphane** (gas-tro-di'af-ān) [Gr. *γαστήρ* stomach + *διά* through + *φαίνειν* to show]. A small electric light to be introduced into the stomach in gastrodiaaphany.
- gastrodiaaphanoscopy** (gas'tro-di-af-an-os'ko-pe) [Gr. *γαστήρ* stomach + *διά* through + *φαίνειν* to show + *σκοπεῖν* to see]. Same as *gastrodiaaphany*.
- gastrodiaaphany** (gas'tro-di-af-an-e) [Gr. *γαστήρ* stomach + *διά* through + *φαίνειν* to show]. The exploration of the stomach by means of an electric lamp passed down the esophagus.
- gastrodidymus** (gas-tro-did'im-us) [*gastro-* + Gr. *δίδυμος* twin]. A double monster-fetus with one abdomen.
- Gastrodis'cus (Gastrodiscoi'des) hom'inis**. Same as *Amphistoma hominis*.
- gastrodisk** (gas'tro-disk). The germinal disk.
- gastroduodenal** (gas'tro-du-o-de'nal). Pertaining to the stomach and duodenum.
- gastroduodenitis** (gas'tro-du-od-en-í'tis) [Gr. *γαστήρ* stomach + *duodēnitis*]. An inflammation of the stomach and duodenum.
- gastroduodeno-enterostomy** (gas'tro-du-o-de'-no-en-ter-os'to-me). The operation of establishing an artificial communication between the stomach and the duodenum.
- gastroduodenoscopy** (gas'tro-du-o-den-os'ko-pe) [Gr. *γαστήρ* stomach + *duodenum* + Gr. *σκοπεῖν* to examine]. Examination of the stomach and duodenum through the gastroscope by an incision through the stomach-wall.
- gastroduodenostomy** (gas'tro-du-o-den-os'to-me) [Gr. *γαστήρ* stomach + *duodenum* + Gr. *στόμα* mouth]. The surgical creation of an artificial passage from the stomach to the duodenum.

gastrodynia (gas-tro-din'e-ah) [Gr. *γαστήρ* stomach + *δύνη* pain]. Pain in the stomach.

gastro-elytrotomy (gas'tro-el-it-rot'o-me) [Gr. *γαστήρ* stomach + *elytrotomy*]. Same as *gastro-colpotomy*.

gastro-enteralgia (gas'tro-en-ter-al'je-ah) [Gr. *γαστήρ* stomach + *έντερον* intestine + *άλγος* pain]. Pain in the stomach and intestines.

gastro-enteric (gas'tro-en-ter'ik) [Gr. *γαστήρ* stomach + *έντερον* intestine]. Pertaining to the stomach and intestines.

gastro-enteritis (gas'tro-en-ter-i'tis) [Gr. *γαστήρ* stomach + *enteritis*]. Inflammation of the stomach and intestines. **g. paratypho'sa B**, a condition caused by the *Bacillus paratyphosus B*. **g. typho'sa**, a form of gastro-enteritis caused by the typhoid bacillus.

gastro-entero-anastomosis (gas'tro-en'ter-o-an-as-to-mo'sis). Anastomosis between the intestine and the stomach-walls in gastro-enterostomy.

gastro-enterocolitis (gas'tro-en-ter-o-ko-li'tis). Inflammation of the stomach, small intestine, and colon.

gastro-enterocolostomy (gas'tro-en'ter-o-ko-lo'sto-me) [Gr. *γαστήρ* stomach + *έντερον* intestine + *κόλον* colon + *στόμα* mouth]. The operation of forming a passage between the stomach, intestine, and colon.

gastro-enterologist (gas'tro-en-ter-ol'o-jist). A practitioner who specializes in diseases of the stomach and intestine.

gastro-enterology (gas'tro-en-ter-ol'o-je) [Gr. *γαστήρ* stomach + *έντερον* intestine + *λόγος* treatise]. The study of the stomach and intestine and their diseases.

gastro-enteroplasty (gas'tro-en'ter-o-plas-te). Gastroplasty combined with enteroplasty.

gastro-enteroptosis (gas'tro-en-ter-op-to'sis) [Gr. *γαστήρ* stomach + *έντερον* intestine + *πτῶσις* falling]. Falling down, or prolapse, of the stomach and intestines.

gastro-enterostomy (gas'tro-en-ter-os'to-me) [Gr. *γαστήρ* stomach + *έντερον* intestine + *στόμα* mouth]. The creation of an artificial passage between the stomach and intestines.

Gastro-enterostomy (Woolf).

gastro-enterotomy (gas'tro-en-ter-ot'o-me) [Gr. *γαστήρ* stomach + *έντερον* intestine + *τομή* cutting]. Surgical incision of the stomach and intestine.

gastro-epiploic (gas'tro-ep-ip-lo'ik) [Gr. *γαστήρ* stomach + *επίπλοον* caul]. Pertaining to the stomach and epiploön.

gastro-esophageal (gas'tro-e-sof-a'je-al) [Gr. *γαστήρ* stomach + *οισοφάγος* gullet]. Pertaining to the stomach and esophagus.

gastro-esophagitis (gas'tro-e-sof-aj-i'tis). Inflammation of the stomach and esophagus.

gastro-esophagostomy (gas'tro-e-sof-ag-os'to-me). The operation of forming an anastomosis

between the stomach and the esophagus: done for stricture of the lower end of the esophagus.

gastrofaradization (gas'tro-far-ad-iz-a'shun). The therapeutic application of faradism to the stomach.

gastrogalvanization (gas'tro-gal-van-iz-a'shun). The therapeutic application of galvanism to the stomach.

gastrogastrostomy (gas'tro-gas-tros'to-me) [Gr. *γαστήρ* stomach + *γαστήρ* stomach + *στόμα* mouth]. The formation of an anastomosis between the pyloric and cardiac ends of the stomach, performed for hour-glass contraction of the stomach.

gastrogen (gas'tro-jen). A proprietary neutralizing indigestion remedy.

gastrogenic (gas'tro-jen'ik). Formed or originating in the stomach.

gastrograph (gas'tro-graf) [Gr. *γαστήρ* stomach + *γράφειν* to record]. An apparatus for recording the motions of the stomach.

gastrohecolosis (gas'tro-hel-ko'sis) [Gr. *γαστήρ* stomach + *έλκος* ulcer]. Ulceration of the stomach.

gastrohepatic (gas'tro-he-pat'ik) [Gr. *γαστήρ* stomach + *ήπαρ* liver]. Pertaining to the stomach and liver.

gastrohepatitis (gas'tro-hep-at-i'tis). Inflammation of the stomach and liver.

gastrohydroorrhea (gas'tro-hi-dro-re'ah) [Gr. *γαστήρ* stomach + *ὕδωρ* water + *ροία* flow]. The secretion by the stomach of a quantity of watery fluid deficient in hydrochloric acid and gastric ferments.

gastrohyperneuria, gastrohypernervia (gas'tro-hi-per-nu're-ah, gas'tro-hi-per-ner've-ah) [Gr. *γαστήρ* stomach + *ὑπέρ* over + *νεῦρον* nerve]. Excessive activity of the nerves of the stomach.

gastrohypertonic (gas'tro-hi-per-ton'ik). Marked by excessive tonicity of the stomach.

gastrohyponervia, gastrohyponervia (gas'tro-hi-po-nu're-ah, gas'tro-hi-po-ner've-ah) [Gr. *γαστήρ* stomach + *ὑπό* under + *νεῦρον* nerve]. Defective activity of the nerves of the stomach.

gastrohysterectomy (gas'tro-his-ter-ek'to-me) [Gr. *γαστήρ* stomach + *ὕστερα* womb + *ἐκτομή* excision]. Removal of the uterus through an abdominal cut.

gastrohysteropexy (gas'tro-his-ter-o-peks-e) [Gr. *γαστήρ* stomach + *ὕστερα* womb + *πηγνύναι* to fix]. Ventrofixation of the uterus; the fastening of a displaced uterus to the ventral wall.

gastrohysterorrhaphy (gas'tro-his-ter-or'af-e) [Gr. *γαστήρ* stomach + *ὕστερα* womb + *ράφή* suture]. Same as *gastrohysteropexy*.

gastrohysterotomy (gas'tro-his-ter-ot'o-me) [Gr. *γαστήρ* belly + *ὕστερα* womb + *τομή* cut]. The cesarean section; the delivery of a fetus through an incision of the uterine and abdominal walls.

gastro-intestinal (gas'tro-in-tes'tin-al) [Gr. *γαστήρ* stomach + *intestinal*]. Pertaining to the stomach and intestine.

gastrojejuno-esophagostomy (gas'tro-jej'u-no-e-sof-ag-os'to-me). Same as *esophagojejuno-gastrostomosis*.

gastrojejunostomy (gas'tro-jej-u-nos'to-me) [gastro- + *jejunostomy*]. The formation of an artificial passage from the stomach to the jejunum.

gastrokateixia (gas-tro-kat-ik'se-ah). Displacement of the stomach.

gastrokinesograph (gas'tro-kin-es'o-graf) [Gr. *γαστήρ* stomach + *κίνησις* motion + *γράφειν* to record]. A device for recording the mechanic motions of the stomach.

gastrolial (gas-tro-li'en-al) [Gr. *γαστήρ* stomach + *l. li'en* spleen]. Pertaining to the stomach and spleen.

gastrolith (gas'tro-lith) [Gr. *γαστήρ* stomach + *λίθος* stone]. A calcareous or other concretion formed in the stomach.

gastrolithiasis (gas'tro-lith-i'as-is) [Gr. *γαστήρ* stomach + *λίθος* stone]. Ill health associated with the formation of gastroliths.

gastrologist (gas-trol'o-jist). A specialist in diseases of the stomach.

gastrology (gas-trol'o-je) [Gr. *γαστήρ* stomach + *λόγος* treatise]. The sum of knowledge regarding the stomach.

gastrolysis (gas-trol'is-is) [Gr. *γαστήρ* stomach + *λύσις* loosening]. The operation of loosening the stomach from adhesions.

gastromalacia (gas'tro-mal-a'se-ah) [Gr. *γαστήρ* stomach + *μαλακία* softening]. An abnormal softening or softness of the wall of the stomach.

gastromegaly (gas-tro-meg'al-e) [Gr. *γαστήρ* stomach + *μέγας* large]. Enlargement of the stomach.

gastromelus (gas-trom'el-us) [Gr. *γαστήρ* belly + *μέλος* limb]. A monster-tetus with a leg or legs attached to the abdomen.

gastromenia (gas-tro-me'ne-ah) [Gr. *γαστήρ* stomach + *μήν* month]. Vicarious menstruation through the stomach.

gastromeningitis (gas'tro-men-in-jit'is). Inflammation of the stomach and the cerebral meninges.

gastromycosis (gas'tro-mi-ko'sis) [Gr. *γαστήρ* stomach + *μύκης* fungus]. A disease of the stomach caused by fungi.

gastromyotomy (gas'tro-mi-o'to-me) [Gr. *γαστήρ* stomach + *μύς* muscle + *τομή* cut]. The operation of cutting the circular muscle-fibers just below a gastric ulcer; done on the theory that the chronicity of the ulcer is due to contraction of the circular fibers.

gastromyxin (gas-tro-miks'in). A proprietary preparation of pepsin.

gastromyxorrhœa (gas'tro-miks-or-e'ah) [Gr. *γαστήρ* stomach + *μύξος* mucus + *ροία* flow]. Excessive secretion of mucus by the stomach.

gastron (gas'tron). A proprietary solution of the gastric tissue juice obtained from the mucosa of the fresh stomach of the pig; it is said to have the enzyme properties of the gastric secretion and is used in gastric disorders. Dose, 1-2 fl.dr. (4-8 c.c.).

gastronephritis (gas'tro-nef-rit'is). Inflammation of the stomach and kidney.

gastroneostomy (gas'tro-ne-te-os'to-me) [Gr. *γαστήρ* stomach + *νήστις* jejunum + *στόμα* opening]. Same as *gastrojejunostomy*.

gastropneurectomy (gas'tro-pan-kre-at-it'is). Inflammation of the stomach and pancreas.

gastroparalysis (gas'tro-par-al'is-is). Paralysis of the stomach.

gastroparesis (gas-tro-par'es-is) [Gr. *γαστήρ* stomach + *πάρεσις* paralysis]. Paralysis of the stomach.

gastroparietal (gas'tro-par-i'et-al). Pertaining to the stomach and the body-wall.

gastropathic (gas-tro-path'ik). Pertaining to disease of the stomach.

gastropathy (gas-trop'ath-e) [Gr. *γαστήρ* belly + *πάθος* suffering]. Any disease of the stomach.

gastroperidynia (gas'tro-per-e-o-din'e-ah) [Gr. *γαστήρ* stomach + *περίόδος* period + *δύνη* pain]. Periodic attacks of pain.

gastroperitonitis (gas'tro-per-it-o-nit'is). Inflammation of the stomach and peritoneum.

gastropexy (gas'tro-pek-se) [Gr. *γαστήρ* stomach + *πηνύναι* to fix or fasten]. The operation of suturing the stomach to the abdominal wall for the cure of displacement.

Gastrophilus (gas-trof'il-us). A genus of dipterous insects of the family Eristidae. *G. equi* is the bot-fly whose larva infests horses. The larvæ of *G. epilepsa* are supposed to cause creeping eruption

(larva migrans). *G. hemorrhoidalis*, the horse bot-fly, found in Russia, sometimes infests man.

gastrophore (gas'tro-fôr) [Gr. *γαστήρ* stomach + *φορός* bearing]. An instrument for fixing the stomach and coaptating its walls during operations upon that organ.

Gastrophilus and larva.

gastrophrenic (gas-tro-fren'ik) [Gr. *γαστήρ* stomach + *φρήν* diaphragm]. Pertaining to the stomach and diaphragm.

gastrophthisis (gas-trof'this-is) [Gr. *γαστήρ* stomach + *φθίσις* wasting]. Hyperplasia of the gastric mucosa and submucosa, leading to thickening of the stomach-walls and diminution of its cavity.

gastroplasty (gas'tro-plas-te) [Gr. *γαστήρ* stomach + *πλάσσειν* to form]. Plastic operation on the stomach, done for correction of deformity, such as hour-glass contraction.

gastroplegia (gas-tro-ple'je-ah) [Gr. *γαστήρ* stomach + *πληγή* stroke]. Paralysis of the stomach-walls.

gastropleuritis (gas'tro-plu-ri'tis). Inflammation of the stomach and the pleura.

gastroplication (gas'tro-pli-ka'shun) [Gr. *γαστήρ* stomach + *L. plicare* to fold]. The surgical cure of a dilated stomach by means of stitching a fold in the stomach or by the removal of a fold of its walls.

gastropneumonic (gas'tro-nu-mon'ik). Pertaining to the stomach and lungs.

gastropotosia (gas-tro-to'se-ah). Same as *gastroptosis*.

gastroptosis (gas-tro-to'sis) [Gr. *γαστήρ* stomach + *πτῶσις* falling]. Downward displacement of the stomach.

gastroptyxis, gastroptyxy (gas-tro-tiks'is, gas'tro-tiks-e) [Gr. *γαστήρ* stomach + *πτύξις* a folding]. An operation for reducing a dilated stomach, consisting of the passing of a series of parallel threads through the outer coat of the anterior aspect of the stomach from the upper to the lower margin and then drawing them tight.

gastropulmonary (gas-tro-pul'mo-na-re) [Gr. *γαστήρ* stomach + *L. pulmo* lung]. Pertaining to the gastric and pulmonary tracts.

gastropylorotomy (gas'tro-pi-lo-rek'to-me) [Gr. *γαστήρ* stomach + *πυλωρός* pylorus + *ἐκτομή* excision]. Excision of the pyloric portion of the stomach.

gastropyloric (gas'tro-pi-lor'ik). Pertaining to the stomach and pylorus.

gastroradiculitis (gas'tro-rad-ik-u-lit'is) [Gr. *γαστήρ* stomach + *L. radix* root + *-itis* inflammation]. Inflammation of the posterior roots of spinal nerves involving irritation of the sensory fibers in them which are connected with the stomach.

gastrorrhagia (gas-tror-a'je-ah) [Gr. *γαστήρ* stomach + *ρήγνυμι* to break forth]. Hemorrhage from the stomach.

gastrorrhaphy (gas-tror'af-e) [Gr. *γαστήρ* stomach + *ράφή* suture]. 1. The suture of a wound of the stomach. 2. Same as *gastroplication*.

gastrorrhea, gastrorrhœa (gas-tror-e'ah) [Gr. *γαστήρ* stomach + *ροία* flow]. Excessive secretion of mucus or gastric juice in the stomach. *g. contin'ua chron'ica*, gastrosuccorhea.

gastrosalpingotomy (gas'tro-sal-pin-got'o-me) [Gr. *γαστήρ* belly + *salpingotomy*]. Incision of the oviduct by abdominal section.

gastrosan (gas'tro-san). Bismuth disalicylate, containing 50 per cent. of salicylic acid.

gastroschisis (gas-tros'kis-is) [Gr. *γαστήρ* belly + *σχίσις* cleft]. A congenital malformation in which the abdomen remains open.

gastroscope (gas'tro-skōp) [Gr. *γαστήρ* stomach + *σκοπεῖν* to see]. An instrument for inspecting the interior of the stomach.

gastroscopic (gas-tro-skop'ik). Pertaining to gastroscopy or the gastroscope.

gastroscopy (gas-tros'ko-pe) [Gr. *γαστήρ* stomach + *σκοπεῖν* to inspect]. The inspection of the interior of the stomach by means of the gastroscope. **lower g.** Same as *laparogastroscopy*.

gastrosia fungosa (gas-tro'se-ah fun-go'sa). The development of molds in the stomach.

gastrosis (gas-tro'sis) [Gr. *γαστήρ* stomach]. Any disease of the stomach.

gastrospasm (gas'tro-spazm) [Gr. *γαστήρ* stomach + *spasm*]. Spasm of the stomach.

gastrosplenic (gas-tro-splen'ik) [*gastric* + *splenic*]. Pertaining to the stomach and spleen.

gastrostaxis (gas-tro-staks'is). The oozing of blood from the mucous membrane of the stomach.

gastrostenosis (gas'tro-sten-o'sis) [Gr. *γαστήρ* stomach + *στένωσις* narrowing]. Contraction or shrinkage of the stomach.

gastrostogavage (gas-tros'to-gav-ahzh'). Feeding through a gastric fistula.

gastrostolavage (gas-tros'to-lav-ahzh'). Washing of the stomach through a gastric fistula.

gastrostoma (gas-tros'to-mah) [Gr. *γαστήρ* stomach + *στόμα* mouth]. A gastric fistula.

gastrostomize (gas-tros'to-miz). To perform gastrostomy upon.

gastrostomosis (gas-tros-to-mo'sis). Same as *gastrostomy*.

gastrostomy (gas-tros'to-me) [Gr. *γαστήρ* stomach + *στόμα* mouth]. The creation of an artificial gastric fistula.

gastrosuccorhea (gas'tro-suk-or-e'ah) [Gr. *γαστήρ* stomach + *L. succus* juice + *Gr. ῥέω* flow]. Excessive and continuous secretion of gastric juice. Called also *Reichmann's disease*. **digestive g.**, a condition in which there is excessive secretion of gastric juice during digestion only. **g. muco'sa**, excessive secretion of mucus by the stomach.

gastrothoracopagus (gas'tro-tho-rak-op'ag-us) [Gr. *γαστήρ* belly + *θώραξ* chest + *πάγος* joined]. A double monster joined at the abdomen and thorax. **g. dip'ygus**, a double monster in which there is attached to the abdomen of the autosite a parasite consisting of the pelvis and lower extremities only.

gastrotome (gas'tro-tōm). A cutting instrument used in gastrostomy.

gastrostomy (gas-tro'to-me) [Gr. *γαστήρ* belly + *τέμνειν* to cut]. Incision of the stomach or abdomen.

gastrotoxin (gas-tro-tok'sin). A cytolyisin produced by injecting the mucous membrane of the cardiac end of the stomach of dogs into goats. It exerts a toxic effect on the stomach of dogs.

gastrotrachelotomy (gas'tro-tra-kel-o'to-me) [Gr. *γαστήρ* abdomen + *τράχηλος* neck + *τέμνειν* to cut]. Cesarean section in which the uterus is opened by a transverse cut across the cervix.

gastrotubotomy (gas'tro-tu-bot'o-me) [*gastro-* + *L. tuba* + *Gr. τομή* cut]. Incision of an oviduct through the abdominal wall.

gastrotyimpanites (gas'tro-tim-pan-i'téz) [*gastro-* + *tympanites*]. Tympanic distention of the stomach.

gastroxia (gas-trok'se-ah) [Gr. *γαστήρ* belly + *ὄξυς* sour]. Same as *gastroxyntsis*.

gastroxyntsis (gas-troks-in'sis) [Gr. *γαστήρ* stomach + *ὀξύειν* to sharpen, exacerbate]. Excessive secretion of hydrochloric acid by the stomach;

hyperchlorhydria. **g. fungo'sa**, a form due to the presence of molds in the stomach.

gastrula (gas'tru-lah) [Gr. *γαστήρ* belly]. That early embryonic stage which follows the blastula, and in which the embryo consists of two layers, the ectoderm and the endoderm, and of two cav-

Section of a gastrula (Hill).

ities, one lying between the ectoderm and the endoderm; the other (the archenteron) formed by invagination so as to lie within the endoderm and having an opening (the blastopore).

gastrulation (gas-tru-la'shun). The passage of the embryo from the blastula to the gastrula stage.

gasu-basu (ga'su-ba'su). An Indian plant from which nervosidin is derived.

gathering (gath'er-ing). An abscess or swelling.

gatism (ga'tizm) [Fr. *gâter* to spoil]. Rectal, vesical, or rectovesical incontinence.

gatophobia (gat-o-fo-be-ah) [Gr. *γάτος* cat + *φόβος* fear]. Morbid dread of cats.

Gaucher's cells, disease (go-shāz') [Phillippe Charles Ernest *Gaucher*, French physician, 1854-1918]. See under *disease*.

Gauducheau's ointment (gow-de-shōz'). See under *ointment*.

Gaultheria (gawl-the're-ah) [after *Gaultier*]. A genus of ericaceous plants. The leaves of *G. procumbens*, of North America, teaberry, checkerberry, or wintergreen, afford a fragrant volatile oil rich in methyl salicylate. The oil is used as a flavoring agent, in acute rheumatism, and as a local antiseptic in wounds and in cystitis. Dose of oil (*o'leum gaulthérie*), 3-10 min. (0.2-0.666 c.c.); of essence (*spir'itus gaulthérie*), 10-20 min. (0.666-1.333 c.c.).

gaultherin (gawl-the'rin). 1. A glucosid from the bark of the black birch. It is $C_{14}H_{18}O_8$, and on hydrolysis yields glucose and methyl salicylate. 2. A sodium salt of methyl salicylate, $C_6H_4-COOCH_3ONa$; used in rheumatism.

gaultherolin (gawl-ther'o-lin). Artificial oil of wintergreen, or methyl salicylate. Dose, 40 min. (2.666 c.c.).

gauntlet (gawnt'let) [Fr. *gant* glove]. A bandage which covers the hand and fingers like a glove.

gauss (gaws). The unit of intensity in a magnetic field.

gauze (gawz). A light, open-meshed variety of muslin or similar material. Before use in surgery it is usually rendered aseptic and is frequently impregnated with various antiseptics, as iodoform gauze, borated gauze, sublimated gauze, etc.

gavage (gah-vahzh') [Fr.]. Feeding by the stomach-tube; also the therapeutic use of a very full diet.

Gavard's muscle (gah-vahrz') [Hyacinthe *Gavard*, French anatomist, 1753-1802]. See *muscles*, table of.

Gayet's disease (ga-yāz') [Prudent *Gayet*, contemporary French surgeon]. See under *disease*.

gayle (ga'le). A sort of puerperal fever in ewes during the lambing season. It is caused by

Staphylococcus hæmorrhagicus and is communicable to man in the form of a local skin eruption on the hands of those who skin the ewes.

Gay-Lussac's law (ga-le-sahks') [Joseph Louis Gay-Lussac, French naturalist, 1778-1850]. See under *law*.

gazotherm (ga'zo-therm). A device for performing dental fillings painlessly. A stream of oxygen is directed against the tooth to be filled. The temperature of the oxygen is lowered by passing it through a cylinder of compressed carbon dioxide. The intense cold so produced freezes the pulp so that the tooth becomes insensitive.

gcushuwa (goosh'u-wah). A venereal disease resembling yaws, occurring among the Kaffirs.

Gd. Chemical symbol for gadolinium.

Ge. Chemic symbol for germanium.

geatolose (je-at'o-lös). Synthetic mucocolloidal cresolant, used in cholera morbus.

Gegenbauer's cells (ga'gen-baw-ers) [Carl Gegenbauer, German anatomist, 1826-1903]. Osteoblasts.

Geigel's reflex (gi'gelz) [Richard Geigel, German physician, born 1850]. See under *reflex*.

Geissler's test (gis'lerz) [Ernst Geissler, German physician in nineteenth century]. See under *tests*.

Geissler's tube (gis'lerz) [Heinrich Geissler, German physicist, 1814-1879]. See under *tube*.

geissospermin (gi-so-sper'min). A poisonous alkaloid, $C_{19}H_{24}N_2O_2 + H_2O$, derived from *Geissospermum laeve* (vellosii), a tree of tropical America.

gel (jel). A colloid which is firm in consistence, though containing much liquid; a colloid in a gelatinous form. See *sol*. **g. test.** See under *tests*.

Gel. quav. Abbreviation for *L. gelati'na qua'vis*, in any kind of jelly.

gelante, gelanthum (jel-an'te, jel-an'thum). A preparation of tragacanth, gelatin, glycerin, rose-water, thymol, etc.: used as an antiseptic dressing and vehicle for the application of skin medicaments. **cuticolor g.**, Armenian bole, 0.02 gm.; eosin (1:500), 2 drops; zinc oxid, 4 gm.; glycerin, 3 c.c.; gelanthum, 20 gm.: used in skin diseases.

gelase (jel'as). An enzyme which is able to split agar-agar.

gelasin (jel'as-in). A preparation of agar-agar.

gelate (jel'at). To form a gel.

gelatification (jel-at-if-ik-a'shun). Conversion into gelatin.

gelatigenous (jel-at-ij'en-us). Producing or forming gelatin.

gelatin (jel'at-in) [*L. gelati'na, gela're* to congeal]. 1. An albuminoid from various animal tissues, such as skin, ligaments, and bones; a colorless, transparent substance, hard when dry, but becoming jelly-like when moistened; glue and size are forms of it. It is much used in pharmacy and the arts. Gelatin has been used subcutaneously to arrest internal hemorrhage and to cause coagulation in sacculated aneurysms. 2. A bacteriologic culture-medium solidified with gelatin. See also under *culture-medium*. **agar g.**, nutrient bouillon solidified by 5 per cent. of gelatin and 0.3 per cent. of agar-agar. **carbolized g.**, nutrient gelatin containing 0.5 per cent. of phenol. **g.-culture**, a bacterial culture preparation with gelatin for its basis. **dextrose g.**, nutrient gelatin containing 2 per cent. of dextrose. **g.-disk**, a disk of medicated gelatin used for the treatment of the eye. **Elsner's potato g.** See *potato g.* **fish g.**, fish bouillon solidified with 10 per cent. of gelatin. **formalin-g.** See *glutol*. **glucose-formate g.**, nutrient gelatin containing 2 per cent. of glucose and 0.4 per cent. of sodium formate. **glycerinated g.**, a preparation of equal parts of gelatin and glycerin. **Goadsby's**

potato g. See *potato g.* **Guarnieri's agar g.** See *agar g.* **Heller's urine g.** See *urine g.* **Japanese g.**, agar-agar. **Kitasato's glucose-formate g.** See *glucose-formate g.* **lactose-litmus g.**, nutrient gelatin containing 2 per cent. of lactose and sufficient litmus solution to color the medium a deep lavender. **litmus g.**, nutrient gelatin containing sufficient litmus to give it a deep lavender color. **litmus whey g.**, litmus whey solidified with gelatin. **meat extract g.**, meat extract bouillon solidified with 10 per cent. of gelatin. **meat infusion g.** See *nutrient g.* **medicated g.**, gelatin mixed with medicated substances: for local application. **nutrient g.**, a bacteriologic culture-medium consisting of nutrient bouillon solidified with 10 per cent. of gelatin. **g.-peptone**, a product of the digestion of gelatin. **Piorkowski's g.**, a medium for cultivating typhoid bacilli, containing 5 gm. of peptone, 33 gm. of gelatin, to the liter of urine of 1020 specific gravity. **potato g.** 1. A cold water extract of grated potatoes containing 1 per cent. of potassium iodid and solidified with 15 per cent. of gelatin. 2. Glycerin potato broth solidified with 10 per cent. of gelatin. **silk-g.** See *sericin*. **g.-sugar**, the same as *glycocoll*. **sulphindigotate g.**, nutritive gelatin containing 2 per cent. of glucose and 0.1 per cent. of sodium sulphindigotate. **urine g.** (Heller), plain urine gelatin containing 1 per cent. of peptone, $\frac{1}{2}$ per cent. of salt, and made neutral to litmus. **urine g.** (plain), freshly passed urine solidified with 10 per cent. of gelatin. **vegetable g.**, a gelatin-like matter obtained from vegetable tissues. See *agar-agar*. **Weyl's sulphindigotate g.** See *sulphindigotate g.* **g. of Wharton**, the jelly-like tissue of the umbilical cord. **whey g.**, whey obtained from fresh milk by curdling it with rennet and solidified with 10 per cent. of gelatin. **wort g.**, beer-wort culture-medium solidified with 10 per cent. of gelatin. **Wurtz's lactose litmus g.** See *lactose-litmus g.*

gelatinase (jel-at'in-as). An enzyme which liquefies gelatin, but does not affect fibrin of egg-albumin. It occurs among bacteria, molds, yeasts, etc.

gelatiniferous (jel'at-in-if'er-us) [*L. gelati'na* gelatin + *fer're* to bear]. Producing gelatin.

gelatinize (jel-at'in-iz). 1. To convert into gelatin. 2. To become converted into gelatin.

gelatinoid (jel-at'in-oid). Resembling gelatin.

gelatinolytic (jel'at-in-o-lit'ik) [*gelatin* + Gr. *lysis* dissolution]. Dissolving or splitting up gelatin.

gelatinosa (jel'at-in-o'sah) [*L.*]. The substantia gelatinosa.

gelatinous (jel-at'in-us) [*L. gelatino'sus*]. Like jelly or softened gelatin.

gelatinum (jel-at'in-um). Latin for *gelatin*. **g. glycerina'tum**, glycerinated gelatin.

gelation (jel-a'shun). The change of a sol into a gel.

gelatol (jel-at-ol). An ointment-base made of gelatin, glycerin, oil, and water.

gelatose (jel-at-ös). An albumose formed by hydrolyzing gelatin by acid, alkalis, or a ferment.

gelidusi (ga-le-doo'se). Same as *pelidisi*.

geliqua (ga-le'kwah). Pirquet's word formula representing ten times two-thirds of the body weight.

Gellé's test (zhel-az') [Marie Ernest Gellé, French aurist, 1834-1923]. See under *tests*.

gelodiagnosis (je'lo-di-ag-no'sis). A method of distinguishing between colon and typhoid bacilli. Lactose is added to cultures of the two bacteria on gelose to which phenol has been added. The culture of colon bacillus will cause fermentation of the lactose, the typhoid bacillus will not.

gelodurat (jel-o-du'rat) [*gelatin* + *L. du'ra* hard]. A proprietary hardened gelatin used for capsules.

gelol (je'lol). A proprietary remedy used in vaginal and urethral diseases.

geloplasm (je'lo-plazm). A proprietary preparation of gelatin and glycerin applied as an elastic protective covering.

gelose (je'lös). A carbohydrate, $C_6H_{10}O_5$, from agar.

gelosin (jel-o'sin). A mucilage from a Japanese sea-weed.

gelotannin (jel-o-tan'in). A compound of tannin and gelatin: used as an antidiarrheic.

gelotherapy, gelototherapy (jel-o-ther'ap-e, je'l-o-to-ther'ap-e) [Gr. γέλως laughter + θεραπεία cure]. Treatment of disease by provoking laughter.

gelsemin (jel'sem-in). 1. A poisonous alkaloid, $C_{20}H_{22}N_2O_2$, from gelsemium. Dose, 375-250 gr. (0.00022-0.00032 gm.). 2. A precipitate from the tincture of *Gelsemium sempervirens*. Dose, 1-20 gr. (0.001-0.003 gm.).

gelseminin (jel-sem'in-in). A brown, resinous alkaloid from gelsemium: therapeutically active.

gelsemism (jel'se-mizm). Poisoning by gelsemium.

Gelsemium (jel-se'me-um) [L.]. A genus of poisonous, loganiaceous climbing plants. The root of *G. sempervirens*, yellow jasmine of the southern United States, is a powerful sedative, a motor depressant, and diaphoretic: used in neuralgia, headache, chorea, delirium tremens, and in fevers; in muscular spasm, as whooping-cough, asthma, dysmenorrhea, etc. Dose of alcoholic extract, 1-2 gr. (0.016-0.032 gm.); of fluidextract, 2-20 min. (0.133-1.333 c.c.); of tincture, 8-15 min. (0.533-1 c.c.).

gelsemism (jel-sem'e-um-izm). Habitual intoxication with preparations of gelsemium.

gelsemerin (jel-sem'per-in). A powdered concentration from *Gelsemium sempervirens*. Dose, 1-1 gr. (0.008-0.066 gm.).

Gély's suture (zha-jéz') [Jules Aristide Gély, French surgeon, 1806-1861]. See *suture*.

gemellus (jem-el'us), pl. *gemelli* [L. "twin"]. See *muscles, table of*.

geminate, geminous (jem'in-ät, jem'in-us) [L. *gemina'tus*]. Paired; in pairs.

gemma (jem'ah) [L. "bud"]. 1. Any bud-like body or structure. 2. Same as *micelle*.

gemmation (jem-a'shun) [L. *gemma're* to bud]. Reproduction by budding; a kind of reproduction in cells in which a portion of the cell-body is thrust out and then broken off, forming a new individual.

gemma (jem'ul) [L. *gem'mula*, dim. of *gem'ma* bud]. 1. A reproductive bud; the immediate product of gemmation. 2. Any one of the many little excrescences upon the protoplasmic process of a nerve-cell. 3. Hypothetical units assumed to be thrown off by the somatic cells, to be stored in the germ cells, and to determine the development of certain characters.

gen (jen). Same as *gene*.

genal (je'nal) [L. *ge'na* cheek]. Pertaining to the cheek.

gene (jën) [Gr. γέν to produce]. A hereditary germinal factor which, either alone or in combination with other factors, produces a single character. Called also *factor*.

geneogenous (je-ne-oj'en-us) [Gr. γενεά birth + γένω to produce]. Congenital.

genera (jen'er-ah). Plural of *genus*.

general (jen'er-al) [L. *genera'lis*]. Affecting many parts or all parts of the organism; not local.

generalize (jen'er-al-iz). To convert from a local to a general disease; to render general.

generation (jen'er-a'shun) [L. *genera'tio*]. The act or process of reproduction. **alternate g.**, the alternate change from sexual to asexual generation in the same species of animal or plant.

asexual g., non-sexual g., reproduction of the species without any union of sexual elements.

filial g. See *F₁* and *F₂*. **sexual g.**, reproduction by the union of male and female elements. **spontaneous g.**, the (theoretic) generation of living organisms from non-living matter.

generative (jen'er-a-tiv). Pertaining to the reproduction of the species.

generic (jen'er'ik) [L. *ge'nus, gen'eris* kind]. Pertaining to a genus; also distinctive.

generin (jen'er-in). The supposed oxidizing agent responsible for the induction of menstruation and gestation.

geneserin (jen-es'er-in). A crystalline alkaloid, $C_{15}H_{21}N_3O_3$, from Calabar bean.

geneserolin (jen-es'er-o-lin). A crystalline alkaloid, $C_{12}H_{18}N_2O_2$, formed by heating geneserin.

genesial, genesic (jen-e'ze-al, je-ne's'ik) [Gr. γένεσις origin]. Pertaining to generation or to origin.

genesiology (jen-e-ze-o'l-o-je) [Gr. γένεσις origin + λόγος treatise]. The sum of what is known concerning reproduction.

genesis (jen'es-is) [Gr. γένεσις]. The coming into being of anything; the process of originating.

genetic (jen-et'ik) [Gr. γένεσις birth]. 1. Pertaining to reproduction, or to birth or origin. 2. Congenital or inherited.

geneticist (jen-et'is-ist). A person interested in the study of genetics.

genetics (jen-et'iks) [Gr. γεννᾶν to produce]. The science which deals with the origin of the characteristics of the individual; the study of heredity.

genetopathy (jen-et-op'ath-e) [Gr. γένεσις reproduction + πάθος disease]. Disease affecting the reproductive functions.

genetous (jen-et'us). Dating from fetal life.

Geneva Convention. An international agreement of 1864, whereby the signatory nations pledged themselves to treat the wounded and the army medical and nursing staffs as neutrals on the field of battle.

Gengou phenomenon (zhaw-goo') [Octave Gengou, contemporary French bacteriologist]. Fixation of the complement.

genial, genian (je'ne-al, je'ne-an) [Gr. γένεον chin]. Pertaining to the chin.

geniculate, geniculated (jen-ik'u-lät, jen-ik'u-la-ted) [L. *genicula'tus*]. Bent, like a knee.

geniculum (je-nik'u-lum) [L. "a little knee"]. A sharp, knee-like bend in any small organ, as a nerve. **g. canalis facialis** [B N A], the bend in the facial canal which corresponds to the geniculum nervi facialis. **g. nervi facialis** [B N A], the bend in the root of the facial nerve, producing the eminentia facialis in the floor of the fourth ventricle.

geniohyoglossus, geniohyoid (je'ne-o-hi-o-glos-us, je'ne-o-hi-oid). See *muscles, table of*.

genion (je'ne-on) [Gr. γένεον chin]. A craniometric point situated at the apex of the lower genial tubercle.

genioplasty (je'ne-o-plas-te) [Gr. γένεον chin + πλασσειν to shape]. Plastic surgery of the chin.

genital (jen'it-al) [L. *genita'lis* genital]. Pertaining to the organs of generation or to reproduction.

genitalia (jen-it-a'le-ah) [L. pl.]. The reproductive organs.

genitals (jen'it-als). The reproductive organs.

genitocrural (jen'it-o-kru'ral) [*genital* + *crural*]. Pertaining to the genitalia and the leg.

genitofemoral (jen'it-o-fem'or-al). Genitocrural.

genitone (jen'it-on). A proprietary preparation of goldenseal, black haw, pulsatilla, passiflora, life-root, and aromatics: used in leukorrhea and amenorrhea.

- genitoplasty** (jen'it-o-plas-te) [*genital* + Gr. *πλάσσειν* to mould]. Plastic surgery on the genital organs.
- genito-urinary** (jen'it-o-u-rin-ar-e). Pertaining to the genital and urinary organs.
- Gennari's band or line** (jen-ah'rēz) [Francisco Gennari, Italian anatomist of the eighteenth century]. See *line of Gennari*, under *line*.
- genoblast** (jen'o-blast) [Gr. *γεν-* to produce + *βλαστός* germ]. 1. The nucleus of the impregnated ovum. 2. A mature germ cell.
- genoceptor** (jen'o-sep-tor). The reproductive element of a cell.
- genodermatosis** (jen''o-der-mat-o'sis) [Gr. *γεννᾶν* to produce + *dermatosis*. An hereditary skin disease.
- genoform** (jen'o-form). A proprietary remedy for gout, rheumatism, and neuralgia, said to be the salicylic acid ester of methylene glycol.
- genotype** (jen'o-tip). 1. The fundamental hereditary constitution (or combination of genes) of an organism. 2. A group of individuals having the same combination of hereditary characters; a biotype. 3. The type species of a genus.
- gentian** (jen'shun) [L. *gentiana*]. Any plant or species of the genus *Gentiana*. The rhizome and root of *G. lu'lea* is a bitter tonic and stomachic, and is used in dyspepsia and gastro-intestinal catarrh. Dose of extract, 1-10 gr. (0.066-0.666 gm.); of fluidextract, 30-60 min. (2-4 c.c.); of compound infusion, 1-4 dr. (4-16 c.c.); of compound tincture (U. S. P.), 30-120 min. (2-8 gr.). **g.-violet**. See under *violet*.
- gentianin** (jen'shan-in) [L. *gentianinum*]. Various substances extracted from gentian root; gentianic acid, or a mixture of the latter and gentiopiricin.
- gentianophil, gentianophilous** (jen'shan-o-fil, jen-shan-ō'fil-us) [*gentian* + Gr. *φιλέιν* to love]. Having affinity for gentian-violet stains.
- gentianophobic** (jen'shan-o-fo'bik). Gentianophobicous.
- gentianophobicous** (jen-shan-ō'f-o-bus) [*gentian* + Gr. *φόβος* fear]. Having no affinity for gentian-violet stains.
- gentiobiose** (jen'she-o-bi'ōs). A disaccharid, $C_{12}H_{22}O_{11}$, from the roots of various gentians.
- gentiopicrin** (jen-she-o-pik'rīn) [*gentian* + Gr. *πικρός* bitter]. A bitter, crystalline glucosid from gentian root.
- genu** (je'nu), pl. *gen'ua* [L. "knee"]. The knee, or any structure bent like a knee. **g. cap'sulæ internæ** [B N A], the blunt angle formed by the union of the two limbs of the internal capsule. **g. cor'poris callo'si** [B N A], the reflected part of the corpus callosum. **g. extror'sum**, out-knee: an outward bending of the leg. **g. facia'lis**. Same as *geniculum nervi facialis*. **g. inter'nun rad'icis ner'vi facia'lis** [B N A], the fibers of the root of the facial nerve bending around the abducens nucleus in the pons. **g. recur'vatum**, a backward curvature of the knee-joint. **g. val'gum**, an inward curvature of the knee or knees; knock-knee or in-knee. **g. va'rum**. Same as *g. extrorsum*.
- genual** (jen'u-al). Relating to or resembling a genu.
- genuclast** (jen'u-klast) [L. *ge'nu* knee + Gr. *κλᾶν* to break]. An instrument for breaking up knee-joint adhesions.
- genucubital** (je-nu-ku'bit-al) [L. *ge'nu* knee + *cu'bilus* elbow]. Pertaining to or resting on the knees and elbow.
- genufacial** (je-nu-fa'se-al). Pertaining to or resting upon the knees and face.
- genupectoral** (je-nu-pek'tor-al) [L. *ge'nu* knee + *pec'tus* breast]. Pertaining to the knees and chest.
- genus** (je'nus), pl. *gen'era*. In classification of animals or plants, a group embracing one or more species.
- genyantralgia** (jen-e-an-tral'je-ah) [Gr. *γένυς* jaw + *άντρον* cave + *άλγος* pain]. Pain in the maxillary antrum.
- genyantritis** (jen'e-an-tri'tis) [Gr. *γένυς* jaw + *άντρον* cave + *-itis* inflammation]. Inflammation of the maxillary antrum.
- genyantrum** (je-ne-an'trum) [Gr. *γένυς* jaw + *άντρον* cave]. The antrum of Highmore or maxillary antrum.
- genychioplasty** (je-ne-ki'o-plas-te) [Gr. *γένυς* jaw + *χείλος* lip + *πλάσσειν* to form]. Plastic surgery of the cheek and lip.
- genyplasty** (jen'ip-las-te) [Gr. *γένυς* jaw + *πλάσσειν* to mold]. Plastic surgery of the cheek.
- Geocyclus** (je-o-si'klus). A genus of schizomyces with flagella-like filaments.
- geode** (je'dō) [Gr. *γέωδης* earth-like: so called from a fancied resemblance to a mineral geode]. A dilated lymph-space.
- geof orm** (je'o-form). Same as *guaiaciform*.
- geoline** (je'o-lin) [Gr. *γη* earth + L. *oleum* oil]. A proprietary form of petrolatum.
- geophagia, geophagism, geophagy** (je-of-a'je-ah, je-of-aj-izm, je-of-aj-e) [Gr. *γη* earth + *φαγείν* to eat]. The habit of eating clay or earth.
- geophagist** (je-of-aj-ist). One who eats earth habitually.
- geosote** (je-o-sōt). Guaiacol valerianate, $CH_3O.C_6H_4.O.CO.C_6H_5$, a yellow, oily fluid, of sweetish, smoky odor. It is used in pulmonary and tuberculous cases. Dose, 3-10 min. (0.2-0.666 c.c.), in capsules.
- geotalose** (je-o-tal'ōs). A mucocolloidal creosote, used in diarrhea and vomiting.
- geotaxis** (je-o-tak'sis) [Gr. *γη* earth + *τάξις* twisting]. Same as *geotropism*.
- geotragia** (je-o-tra'je-ah) [Gr. *γη* earth + *τρώγειν* to chew]. Earth-eating; geophagia.
- geotropic** (je-o-trop'ik). Influenced in growth by gravity.
- geotropism** (je-o't-ro-pizm) [Gr. *γη* earth + *τροπή* a turning]. A tendency of growth or movement toward or away from the earth; the influence of gravity on growth. A tendency to grow toward the earth is *positive g.*; to grow away from the earth, *negative g.*
- gephyrophobia** (jef-i-ro-fo'be-ah) [Gr. *γεφύρα* bridge + *φόβος* fear]. Fear of walking on a bridge, river bank, or other structure near the water.
- Geraghty's test** (ger'at-ez) [John T. Geraghty, American physician, 1876-1924]. The phenolsulphonophthalein test.
- geranial** (je-ra'ne-al). A colorless, oily diolefin aldehyd, $(CH_3)_2C:CH(CH_2)_2C:(CH_3):CH.CHO$, one of the chief constituents of lemon-grass oil and oil of citrus fruits.
- geraniin** (je-ra'ne-in). A dry, concentrated remedy prepared from *Geranium maculatum*. Astringent dose, 1-3 gr. (0.066-0.199 gm.).
- geraniol** (je-ra'ne-ol). A colorless olefinic terpene alcohol, $C_{10}H_{17}OH$, having an odor of roses, and found in oil of roses, geranium oils, and the oils of eucalyptus and citronella. Called also *rhodinol*.
- Geranium** (je-ra'ne-um) [L.; Gr. *γεράνιον*]. A genus of geraniaceous plants. The root of *G. maculatum*, or crane's-bill, is astringent, and is used in diarrhea. Dose of fluidextract, 5-30 min. (0.333-2 c.c.).
- geratic** (je-rat'ik) [Gr. *γηρας* old age]. Pertaining to old age.
- geratology** (jer-at-ol'o-je). Gereology.
- gerbil** (jer'bil). A small burrowing rodent native on the veldt of South Africa which is one of the chief agents for transmitting plague. It is about the size of a rat, has large eyes and ears, long hind legs and tail, and progresses by jumping.

Gerdy's fibers, etc. (zher-dēz') [Pierre Nicolas Gerdy, French physician, 1797-1856]. See under *fibres*, etc.

gerontology, **geræology** (jer-e-o'-o-je) [Gr. γῆρας old age + λόγος treatise]. The science which deals with old age and its phenomena.

Gerhardt's disease, **reaction**, **sign**, **test** (ger'harts) [Carl J. Gerhardt, physician in Berlin, 1833-1903]. See under *disease*, *sign*, and *tests*.

Gerhardt's test (zher-hardts') [Charles Frédéric Gerhardt, French chemist, 1816-1856]. See *tests*.

Gerhardt-Semon law [Carl J. Gerhardt; Sir Felix Semon]. See under *law*.

geriatrics (je-re-at'riks) [Gr. γῆρας old age + ιατρικός relating to a physician]. That department of medicine which treats of the diseases of old age.

geriopsychosis (jer'e-o-si-ko'sis) [Gr. γῆρας old age + ψυχοσις]. Any one of the presenile and senile group of mental diseases (Southard).

Gerlach's network, **valve** (ger'laks) [Joseph von Gerlach, German anatomist, 1820-1896]. See *network* and *valve*.

Gerlach's valvula (ger'laks) [Andreas Christian Gerlach, German veterinarian, 1811-1877]. The pectinate ligaments.

Gerlier's disease (zher-le-āz') [Felix Gerlier, Swiss physician, 1840-1914]. See under *disease*.

germ (jerm) [L. *germen*]. 1. A microbe or bacillus. 2. A spore. 3. The primitive embryo. **dental g.**, the rudiment of a tooth, consisting of a dental sac and including the dental papilla and enamel-organ. **g.-plasm**, Weismann's term for the reproductive and hereditary substance of individuals which is passed on from the germ cell in which an individual originates in direct continuity to the germ cells of succeeding generations. By it new individuals are produced and hereditary characters are transmitted. Cf. *somatoplasm*.

germanin (jer'ma-nin). The trypanocidal agent which was first introduced as Bayer 205, q. v.

germanium (jer-ma-ne-um). A very rare white metal; atomic weight 72.5; symbol, Ge. **g. dioxide**, GeO_2 , has erythropoietic properties and has been used in treating anemia in 0.2 per cent. aqueous solution.

germicidal (jer-mis-i'dal) [L. *germen* germ + *caedere* to kill]. Destructive to germs.

germicide (jer'mis-id) [L. *germen* germ + *caedere* to kill]. An agent that destroys germs.

germiculture (jer-me-kul-tūr) [L. *germen* germ + *cultūra* culture]. The artificial cultivation of bacteria.

germifuge (jer'mif-ūj). 1. Having the power to expel germs. 2. An agent or remedy that expels germs.

germiletum (jer-mil-e'tum). A proprietary antiseptic, germicide, and deodorant.

germinal (jer'min-al) [L. *germina'tis*]. Pertaining to or of the nature of a germ.

germination (jer-min-a'shun) [L. *germina'tio*]. The sprouting of a seed or spore or of a plant embryo.

germinative (jer'min-at-iv) [L. *germinati'vus*]. Pertaining to germination or to a germ.

germogen (jer'mo-jen) [germ + Gr. γεννᾶν to produce]. A mass of protoplasm from which reproductive cells arise.

germol (jer'mol). A proprietary germicide in the form of a brownish, oily fluid.

germozone (jerm-o-zōn'). A proprietary disinfectant remedy.

germplasm (jerm'plazm). See under *germ*.

gerocomia (je-ro-ko-me-ah) [Gr. γῆρων old man + κομᾶν to care for]. The care of old men; the hygiene of old age.

geroderma, **gerodermia** (je-ro-der'mah, -der'me-

ah) [Gr. γῆρων old man + δέρμα skin]. Dystrophy of the skin and genitals, producing the appearance of old age (Rummo and Ferranini, 1897).

gerokomy (je-ro'ko-me). Same as *gerocomia*.

geromarasmus (je'ro-mar-az'mus) [Gr. γῆρων old man + μαρasmus a wasting]. The emaciation sometimes characteristic of old age.

geromorphism (je-ro-mor'fizm) [Gr. γῆρων old man + μορφή form]. Premature decrepitude.

gerontal (jer-on'tal) [Gr. γῆρων old man]. Pertaining to an old man or old age; senile.

gerontin (jer-on'tin). A base from the nuclei of the cells of a dog's liver. It is the same as spermin.

gerontology (je-ron-to'l-o-je) [Gr. γῆρων old man + λόγος treatise]. The scientific study of old age, its phenomena, diseases, etc.

gerontopia (je-ron-to'pe-ah) [Gr. γεων old man + ὄψ vision]. Senopia.

gerontoxon (je-ron-toks'on) [Gr. γῆρων old man + τόξον bow]. The arcus senilis. **g. lentis**, equatorial couching of the lens in the aged.

Gerota's capsule, **method** (ga-ro'tahz) [Gerota, contemporary anatomist in Berlin]. See *capsule* and *method*.

Gersuny's phenomenon or **symptom** (gar-su'nēz) [Robert Gersuny, surgeon in Vienna, 1844-1924]. See *symptom*.

gestation (jes-ta'shun) [L. *gesta'tio*]. Pregnancy; gravidity. See *pregnancy*. **abdominal g.**, extra-uterine pregnancy in which the products of conception are developed in the abdominal cavity. For other varieties, see under *pregnancy*.

G. G. G. Abbreviation for L. *gum'mi gut'ta gam'biæ*, gamboge.

Ghilarducci's reaction (ge-lar-doot'-shēz) [Francesco Ghilarducci, Italian physician, died 1924]. See *reaction*.

Giacomini's band (jah-ko-me'nēz) [Carlo Giacomini, Italian anatomist, 1841-1898]. See under *band*.

Giannuzzi's cells, **crenscents**, or **demilunes** (zhah-noot'zēz) [Italian anatomist of the nineteenth century]. See under *crenscents*.

giant (jī'ant) [Gr. γίγας]. A person or organism of very great size. **g. bipolars**, those cone bipolars of large size which lie beneath the external plexiform layer.

giantism (jī'ant-izm). 1. See *gigantism*. 2. Excessive size, as of cells or nuclei.

Giardia (ge-ar'de-ah). A genus of flagellate protozoan organisms found in the intestinal tract of man and of animals, but not known to be pathogenic, although infection by it is frequently accompanied by a severe diarrhea. **G. intestinalis**-

Giardia intestinalis: A, side view (s., sucker-like depression); B, ventral view (par. b., parabasal bodies); n., nucleus. (Wenyon.)

lis, **G. lamb'lia**, a symmetric, pear-shaped organism with a sucking disk and four pairs of flagella. Called also *Cercomonas intestinalis*, *Dicercomonas muris*, *Lambia intestinalis*, and *Megastoma entericum*.

giardiasis (gi-ar-di'as-is). Infestation with *Giardia*. **Giardi'nus poccolio'des**. A small fish which is very efficient in destroying mosquito larvæ. Called also "millions."

Gibbon's hernia (gib'onz) [Q. V. Gibbon, American surgeon, 1813-1894]. See under *hernia*.

gibbosity (jib-os'it-e) [L. *gibbo'sus* crooked]. The condition of being humped.

gibbous (jib'us) [L. *gibbo'sus*]. Humped; protuberant; humpbacked.

Gibbs's theorem (gibz) [Josiah Willard Gibbs, American physicist, 1839-1903]. See under *theorem*.

gibbus (gib'us) [L.]. A hump.

Gibert's disease (zhe-bairz') [Camille Melchior Gibert, French physician, 1797-1866]. See *disease*.

Gibraltar fever (jib-rawl'tar). See under *fever*.

Gibson's bandage (gib'sunz) [William Gibson, American surgeon, 1788-1865]. See under *bandage*.

gid (gid). See *staggers*.

giddiness (gid'i-nes). Vertigo or dizziness.

Giemsa's stain (gēm'sahz) [G. Giemsa, chemist in Hamburg]. See *stains*, *table of*.

Gierke's bundle, corpuscles (gēr'kez) [Hans Paul Gierke, German anatomist, 1847-1886]. See *bundle* and *corpuscle*.

Gifford's reflex, sign (gif'ordz) [Harold Gifford, American oculist, born 1858]. See *reflex* and *sign*.

gigantism (ji'gan-tizm) [Gr. *γίγας* giant]. Abnormal overgrowth; excessive or monstrous size and stature: it is said to be sometimes a result of a disease of the pituitary body.

gigantoblast (ji-gan'to-blast) [Gr. *γίγας* giant + *βλαστός* germ]. A very large nucleated red blood corpuscle.

gigantochromoblast (ji-gan''to-kro'mo-blast) [Gr. *γίγας* giant + *chromoblast*]. Same as *gigantoblast*.

gigantocyte (ji-gan'to-sit) [Gr. *γίγας* giant + *κύτος* cell]. A very large non-nuclear red blood-cell.

Gigantorhynchus (ji-gan-to-ring'kus). A genus of the Acanthocephala. **G. gi'gas**, a large round worm found in the intestine of hogs and sometimes in man. It has transverse parallel rings on the body and a retractile head. **G. monilifor'mis**, a species found in rats in Italy and occasionally in man. The body is pointed at both ends and covered with knobs so that it has a beaded appearance.

gigantosoma (ji-gan-to-so'mah) [Gr. *γίγας* giant + *σώμα* body]. Gigantism, or great size and stature.

Gigli's operation, saw (ge'glēz) [Leonardo Gigli, gynecologist in Florence, 1863-1908]. See under *operation* and *saw*.

gila monster (he'lah). See under *monster*.

Gilbert's sign (zhēl-bairz') [Augustin Gilbert, French physician, born 1858]. Opsiuria indicative of hepatic cirrhosis.

Gilchrist's disease or mycosis (gil'krists) [Thomas Casper Gilchrist, American physician, born 1862]. Blastomycosis.

gildable (gil'da-bl). Susceptible of being colored with gold stains.

Gillenia (jil-e'ne-ah) [L.; after Arnold Gill]. A genus of rosaceous plants. The root of *G. trifoliola* and *G. stipulacea*, of North America, called bowman's-root, is mildly emetic and aperient. Dose in powder, 20-30 gr. (1.333-2 gm.).

gillenin (jil-e'nin). The active principle of gillenia; a bitter, white, soluble powder: emetic and purgative.

Gillies's operation (gil'ēz) [Harold Delf Gillies, English surgeon]. See under *operation*.

Gilmer's splint (gil'mer) [Thomas Lewis Gilmer, American oral surgeon, born 1849]. See under *splint*.

Gimbernat's ligament (him-ber-nats') [Antonio

de Gimbernat, Spanish surgeon, 1742-1790]. See under *ligament*.

gin (jin) [L. *spir'itus junip'eri compos'itus*]. An alcoholic spirit distilled from malt and juniper-berries; diuretic.

gin-drinkers' liver. Cirrhosis of the liver due to alcoholism.

ginger (jin'jer) [L. *zin'giber*; Gr. *ζιγγίβερης*]. The rhizome of *Zin'giber officinale*, a scitamineaceous plant growing in many tropical regions. It is an aromatic stimulant and carminative: used in flatulence, dyspepsia, colic, as an intestinal tonic, and externally as a rubefacient and counterirritant in toothache, headache, etc. Dose in powder, 10-20 gr. (0.666-1.333 gm.); of fluid-extract, 10-20 min. (0.666-1.333 c.c.); of oleoresin (*oleores'ina zingib'eris*), $\frac{1}{2}$ -1 min. (0.033-0.066 c.c.); of syrup (*syrup'us zingib'eris*), $\frac{1}{2}$ -2 fldr. (2-8 c.c.); of tincture (*tinctu'ra zingib'eris*), $\frac{1}{2}$ -1 fldr. (2-4 c.c.). **wild g.** See *Asarum*.

gingerin (jin'jer-in). An oleoresin derived from ginger. Dose, 1 min. (0.06 c.c.).

gingerol (jin'jer-ol). The volatile oil of ginger.

gingiva (jin-jī'vah), pl. *gingivæ* [L.]. The gum; the fibrous tissue, covered by mucous membrane which covers the alveolar processes of the upper and lower jaws and surrounds the necks of the teeth. **alveolar g.**, that portion of the gingiva which covers the alveolar process. **areolar g.**, that portion of the gingiva which overlies the alveolar process, being bound to it by loose areolar connective tissue. **buccal g.**, the gingiva which covers the buccal surfaces of the teeth. **cemental g.**, the gingiva which covers the cemental part of the root of a tooth. **free g.**, the portion of the gingiva covering part of the crowns of the teeth, but not attached to them. **labial g.**, the gingiva covering the labial surfaces of the teeth. **lingual g.**, the gingiva which covers the lingual surfaces of the teeth. **marginal g.**, that portion of the gingiva which lies in contact with the enamel, but which is not attached directly to the tooth surface.

gingival (jin-jiv'al) [L. *gingiv'a* gum]. Pertaining to the gum or gums; pertaining to the gingiva.

gingivalgia (jin-jiv-al'je-ah) [*gingiva* + Gr. *ἀλγος* pain]. Neuralgia of the gums.

gingivally (jin-jiv'al-e). Toward the gums.

gingivectomy (jin-jiv-ek'to-me) [*gingiva* + Gr. *ἐκτομή* excision]. The operation of cutting away the diseased gingivæ in pyorrhea alveolaris.

gingivitis (jin-jiv-itis) [L. *gingiv'a* gum]. Inflammation of the gum; inflammation of gingival tissue. **catarrhal g.**, inflammation of the external surface of the gums. **expulsive g.**, osteoperiostitis of a tooth or teeth, which are gradually thrust from their sockets. **interstitial g.**, superficial and deep-seated inflammation of the alveolar process preceding the pyorrheal stage. **phagedenic g.**, rapidly progressive ulcerative inflammation of the gums. See *Vincent's angina*, under *angina*. **ulceromembranous g.**, an infectious and contagious disease of the mouth and gums marked by characteristic ulceration. It is caused by Vincent's spirochete.

gingivo-ectomy (jin-jiv-o-ek'to-me) [*gingiva* + Gr. *ἐκτομή* excision]. The operation of cutting away all loose infected and diseased gingival tissue to eradicate periodontal infection.

gingivoglossitis (jin'jiv-o-glos-itis) [L. *gingiv'a* gum + Gr. *γλῶσσα* tongue + *-itis* inflammation]. Inflammation of gums and tongue.

gingivolabial (jin'ji-vo-la-be-al). Pertaining to the gums and lips.

gingivopericementitis (jin'jiv-o-per-e-se-men-ti'tis). Pyorrhea alveolaris.

ginglyform (jin'glif-orm). Same as *ginglymoid*.

ginglymo-arthrodial (jin'glim-o-ar-thro'de-al). Partly ginglymoid and partly arthrodial.

ginglymoid (jin'glim-oid) [*ginglymus* + Gr. *εἶδος* form]. Resembling a ginglymus.

ginglymus (jin'glim-us) [L.; Gr. γίγγλμος hinge].

A hinge-joint; a variety of diarthrosis. **helicoïd g.**, **lateral g.**, a rotatory joint.

ginseng (jin'seng) [Chinese *jin-tsan*, life of man].

The root of *Pa'nax (Ara'lia) gin'seng*, of eastern Asia, and of *P. (Aralia) quinquefo'lia*, of North America: demulcent, and said to be restorative and aphrodisiac; principally used in China.

Giovannini's disease (jo-van-e'nēz) [Sabastiano Giovannini, Italian dermatologist, 1851-1920]. See under *disease*.

Giraldès's organ (he-ral'dās) [Jachim Albin Giraldès, Portuguese surgeon in Paris, 1808-1875]. See under *organ*.

Girard's treatment (jir-ard') [Brig.-Gen. Alfred C. Girard, American army surgeon]. See under *treatment*.

girdle (ger'dl). Any band or belt to surround the body.

Hitzig's g., a girdle of analgesia at the level of the breasts in the area supplied by the third and sixth dorsal nerves, seen in the early stages of tabes dorsalis. **Neptune-g.**, an abdominal band used in applying a wet-pack. **pelvic g.**, the arch formed by the two innominate bones. **shoulder-g.**, **thoracic g.**, the arch formed by the clavicle and scapula. **Venus' g.**, mercurial plaster spread on leather or linen: used in the treatment of syphilis. Called also *balteum venericum*.

Girdner's probe (gird'nerz) [John Harvey Girdner, physician in New York]. See under *probe*.

igitalin (jit'al-in). A glucosid from digitalis.

githagism (gith'aj-izm). Poisoning by the seeds of *Lychnis githago*, or corn-cockle.

gitonin (jit'o-nin). A neutral saponin, $C_{49}H_{80}O_{23}$, from digitalis seed.

Giuffrida-Ruggieri stigma (joof-re'dah-roo-je-er'e) [Vincenzo Giuffrida-Ruggieri, Italian anthropologist]. See *stigma*.

gizzard (giz'ard). The strong muscular stomach of a bird.

Gl. Chemical symbol for *glucinum*.

glabella, glabellum (glah-bel'ah, glah-bel'um) [L.]. The space between the eyebrows.

glabellad (glah-bel'ad). In the direction of the glabella.

glabrificin (gla-brif'is-in) [L. *gl'a'ber* smooth + *fa'cere* to make]. An antibody: so called from the property of rendering bacteria smooth or glabrous.

glabrous (gl'a'brus) [L. *gl'a'ber* smooth]. Smooth.

glacial (gl'a'shal) [L. *glacia'lis*]. Resembling ice; vitreous; solid.

glacialin (gla-se-a'in). Boroglycerid.

gladiate (gla'de-āt) [L. *glad'ius* sword]. Sword shaped.

gladiolin (glad-i'o-lin). An alkaloid or leukomain from the brain tissue.

gladiolus (glad-i'o-lus) [L., dim. of *glad'ius* sword]. The second or principal piece or bone of the sternum; mesosternum.

gladiomanubrial (glad''e-o-man-u'bre-al). Pertaining to the gladiolus and the manubrium; as *g. junction*.

glairin (glār'in) [L. *glair* mucus]. A gelatinous substance of bacterial origin found in the water of certain sulphur springs.

glairy (glār'e). Resembling the white of an egg.

gland (gländ) [L. *glans* acorn]. An organ that separates any fluid from the blood; such ductless bodies as the spleen, the lymphatic organs, etc., which do not appear to secrete anything, are also called glands. **absorbent g.**, a lymphatic gland. **accessory g.**, a detached mass of glandular tissue situated near a gland of similar structure. **acid g's**, the stomach-glands which secrete the acid of the gastric juice. **acinotubular g.**, one that is both acinous and tubular.

acinous g., a gland made up of a number of acini; a racemose gland. **admaxillary g.**, an accessory salivary gland emptying into the parotid duct. **adrenal g.** See *suprarenal g.* **aggregate g's**, **agminated g's**, Peyer's patches or the glands of which they are made up. **albuminous g.**, certain glands of the digestive tract that secrete a watery fluid. **alveolar g.** Same as *acinous g.* **anal g's**, sudoriparous glands in the anal mucous membrane. **anomalous g.**, a ductless gland. **anteprostatic g.** 1. Cowper's gland. 2. A small gland in front of the prostate. **apical g.** Same as *Blandin and Nuhn's g.* **apocrine g's**, glands in which some cell plasm and cell contents of the secreting cells are shed into the secretion. **aporic g.**, a ductless gland. **areolar g's**. See *Montgomery's g's*. **arterial g.**, any knot of small arteries, or mass of vascular tissue, like the coccygeal gland. **arytenoid g's**, the very numerous muciparous glands of the aryteno-epiglottidean fold in front of the arytenoid cartilages. **axillary g's**, lymphatic glands situated in the axilla. **g. of Bartholin**, the vulvovaginal gland. **Bauhin's g's**. Same as *Blandin and Nuhn's g's*. **Blandin and Nuhn's g's**, non-serous or mixed glands near the tip of the tongue. **blood-g.**, any hematopoietic viscus. **Boerhaave's g's**, the sudoriparous glands. **Bowman's g's**, glands in the olfactory region of the nose. **brachial g.**, any lymph-gland of the arm or forearm. **bronchial g's**, the lymph-

Diagram of different forms of glands (Hill).

glands at the root of a bronchus and in the inter-spaces of the bronchial tubes. A therapeutic extract is prepared from these glands. **Bruch's g's**, the lymph-follicles of the conjunctiva of the lower lid. **Brunner's g's**, certain racemose glands in the submucous layer of the duodenum. **buccal g's**, racemose mucous glands in the mucous membrane of the cheeks. **bulbocavernous g's**. Same as *Cowper's g's*. **cardiac g's**, the glands of the cardiac extremity of the stomach. **carotid g.**, a small oval gland, about the size of a wheat-grain, at the bifurcation of the common carotid, frequently containing chromaffin granules. Called also *carotid body*, *intercarotid ganglion*, *paraganglion caroticum*, and *glomus caroticum*. **celiac g's**, lymph-glands anterior to the abdominal aorta. **ceruminous g's**, the glands that secrete the cerumen or ear-wax. **cervical g's**, the lymph-glands of the neck. **choroid g.**, the choroid plexus, regarded as the secretor of the cerebrospinal fluid. **Ciaccio's g's**, the accessory lacrimal glands. **ciliary g's**, the glands of Moll. **circumanal g's**. Same as *anal g's*. **closed g.**, a ductless gland. **Cobelli's g's**, mucous glands in the mucosa of the esophagus just above the cardia. **coccygeal g.**, a small vascular organ near the tip of the coccyx (Luschka, 1860). Called also *Luschka's gland* or *ganglion*, and *glomus coccygeum*. **coil-g.** Same as *sweat-g.* **compound g.**, a gland made up of a number of small pouches; one

with a branched duct. **conglobate g.**, a lymphatic gland. **conglomerate g.**, one made up of several lobes. **convoluted g.**, a sweat-gland. **Cowper's g's**, two glands near the bulb of the corpus spongiosum. **cutaneous g.**, any gland of the skin, whether sebaceous, sudoriparous, or other. **dental g.**, one of the white areas on the mucous membrane of the jaw over the point of emergence of the tooth. **ductless g.**, a gland without a duct, such as the suprarenal capsule; a gland-like body, often without any known secretory function. **duodenal g.** See *Brunner's g's*. **Duverney's g.**, the vulvovaginal gland. **Ebner's g's**, mucous glands of the tongue situated near the circumvallate papillae. **eccrine g.**, a gland which produces a simple fluid secretion without admixture of cell plasma or cell contents. **endocrine g's**, **endocrinous g's**, the organs of internal secretion. See under *secretion*. **excretory g.**, any gland that excretes waste products from the system. **follicular g.**, a follicle. **Fränkel's g's**, minute glands that open below the edge of the vocal cords. **fundic g.**, **fundus g.**, one of the true glands of the stomach which secrete the gastric juice. **Galeati's g's**, Lieberkühn's crypts. **gastric g's**, the secreting glands of the stomach, including the fundus glands (true gastric glands), the cardiac glands, and the pyloric glands. **gastro-epiploic g's**, lymph-glands in the great omentum near the greater curvature of the stomach. **g's of Gay**, numerous highly developed circumanal sweat-glands. **genal g.**, one of the glands in the submucous tissue of the cheek. **genital g.**, a testicle or ovary. **gingival g's**, the gland-like infoldings of epithelium at the junction of the gum and tooth. **Gley's g's**, the parathyroids. **globate g.**, a lymph-gland. **glomerate g's**, glands which appear to be composed of a knot of blood-vessels and an excretory duct. **Guérin's g's**, Skene's glands. **guttural g.**, one of the mucous glands of the pharynx. **hair-g.**, the sebaceous gland of a hair-follicle. **harderian g's**, rudimentary lacrimal glands at the inner canthus of the eye. **haversian g's**, certain folds on the synovial surfaces that are regarded as secretors of the synovial fluid. **hemal g's**. Same as *hemolymph g's*. **hematopoietic g's**, certain gland-like bodies which take a part in the making of the blood, such as the spleen, thyroid, and lymphatic glands. **hemolymph g's**, minute glands resembling lymph-glands, but containing blood-sinuses instead of lymph-spaces. They occur especially in the retroperitoneal tissue near the origin of the superior mesenteric and renal arteries, but are found elsewhere. They are believed to take part in blood destruction and formation. Two varieties are distinguished—*spleno-lymph* glands and *marrow-lymph* or *manolymph* glands. Called also *hemolymph nodes* and *hemal nodes*. **Henle's g's**, tubular glands in the conjunctiva of the eyelids. **hibernating g.**, the fat which forms between the kidneys of hibernating animals in autumn. **holocrine g.** See *holocrine*. **Huguier's g's**, two minor vaginal glands. **incretory g's**, the glands of internal secretion; endocrine glands. **inguinal g's**, the lymph-glands of the groin. **intercapsular g.**, a paired mass of lymphoid tissue in the embryo thought to be a hemolymph gland. **interstitial g.**, Leydig's cell. **intestinal g's**, solitary isolated lymph-glands distributed in the intestinal mucous membranes. **jugal g.**, a lymph-gland behind the clavicular insertion of the sternomastoid muscle. Called also *Virchow's g.* **Krause's g's**, mucous glands of the middle portion of the conjunctiva. **lacrimal g.**, the gland which secretes the tears. **large sweat g.**, an apocrine gland which usually produces an odoriferous secretion. **lenticular g's**, masses of lymphoid tissue in the stomach walls, similar to the solitary glands of the intestine. **Lieberkühn's g's**. See *crypt*. **lingual g.**, an-

terior. Same as *Blandin* and *Nuhn's g's*. **Littre's g's**, racemose glands in the spongy portion of the urethra. **Luschka's g.** See *coccygeal g.* **lymphatic g's**, ductless organs in the course of lymphatic vessels. **lymphatic g's**, **extra-parotid**, glands situated between the superficial and deep fasciae overlying the parotid. **mammary g.**, the mamma: the milk-secreting organ. **manolymph g.** See *hemolymph g's*. **Manz's g's**, glandular depressions on the borders of the eyelids. **marrow lymph g's**. See *hemolymph g's*. **meibomian g's**, sebaceous follicles between the tarsi and the conjunctiva of the eyelids. **merocrine g's**. See *merocrine*. **Méry's g's**, Cowper's glands. **mesenteric g's**, the lymph-glands of the mesentery. **mesocolic g's**, lymph-glands of the mesocolon. **miliary g.**, a sweat-gland. **mixed g's**, glands that are both mucous and serous. **molar g's**, two or three large buccal glands whose ducts open near the last molar tooth. **Moll's g's**, certain small glands of the eyelids. **Monro's g.**, the upper portion of the lacrimal gland; called also *glandula concreta*. **Montgomery's g's**, sebaceous glands of the mammary areola; called also *areolar g's*. **Morgagni's g's**. See *Littre's g's*. **muciparous g's**, mucous g's, glands that secrete mucus. **multicellular g.**, a gland in which the secreting cells discharge their secretion into a common duct, through which it escapes. **myometrial g.**, a tissue supposed to develop in the wall of the uterus at the site of implantation of the placenta and to last until the end of pregnancy. **Naboth's g's**. See *nabothian follicles*, under *follicle*. **Nuhn's g's**. Same as *Blandin's g's*. **odoriferous g's**. See *Tyson's g's*. **oil g.**, a sebaceous gland. **oxyntic g.** Same as *acid g.* **pachionian g's**, **p. bodies**, small masses of the arachnoid substance in the cranial dura. **palatine g's**, small mucous glands on the roof of the mouth. **palpebral g's**, the meibomian glands. **pancreaticosplenic g.**, a lymph-gland extending along the course of the splenic artery and vein. **parathyroid g's**, glandules in two groups near the thyroid: they are epithelial glands, and not accessory thyroids. **parotid g.**, the large salivary gland in front of the ear. **parotid g.**, **accessory**. See *socia parotidis*. **pectoral g's**, lymph-glands situated along the long thoracic artery. **peptic g's**, a set of mucous glands on the mucous membrane of the stomach, believed to secrete the gastric juice. **perspiratory g.**, sweat-gland. **Peyer's g's**, lymphatic glands, chiefly of the ileum, in part solitary and partly in patches. **pharyngeal g.** Same as *cultural g.* **Philip's g's**, enlarged glands above the clavicle, seen in children with tuberculosis. **pilous g.**, the sebaceous gland of a hair-follicle. **pineal g.** See *pineal body*, under *body*. **pituitary g.**, the hypophysis cerebri, or pituitary body. **prehyoid g's**, the parathyroid glands. **preputial g's**, Tyson's glands. **prostate g.**, a gland surrounding the neck of the bladder and the urethra in the male. **puberty g's**, Steinach's name for the interstitial cells of Leydig in the male and the lutein cells of the ovary in the female. **pyloric g's**, the pepsin-secreting glands of the pyloric portion of the stomach. **racemose g's**, glands composed of acini, arranged like grapes on a stalk. **Rivini's g.**, the sublingual gland. **Rosenmüller's g.** 1. The detached forepart of the lacrimal gland. 2. The lymphatic gland of the femoral ring. **saccular g.**, a gland consisting of a sac, or of sacs, lined with glandular epithelium: if composed of many such sacs, it is a racemose gland. **salivary g.**, any gland that secretes saliva, such as the parotid, submaxillary, or sublingual glands. **Sandstroem's g's**, the parathyroids. **Schüller's g's**, diverticula of the ducts of Gärtner. **sebaceous g.**, **sebiferous g.**, any gland secreting sebaceous matter: chiefly situated in the corium, or true skin. **secreting g's**, glandular organs in which the blood within the capillaries comes into close relation with epithelial cells, whereby

certain elements are separated from the blood. **sentinel g.**, an enlarged gland on the omentum, regarded as indicating the existence of an ulcer of the stomach opposite to it. **seromucous g.**, a gland secreting a substance both mucous and albuminous. **serous g.**, a racemose or other gland that secretes a thin, watery fluid, such as those of the back part of the tongue. **Serres's g's**, pearly masses of epithelial cells near the surface of the gum of the infant. **sexual g.**, a testicle or an ovary. **Sigmund's g's**, the epitrochlear lymph-nodes. **Skene's g's**, two glands just within the meatus of the female urethra; regarded as homologues of the seminal vesicles. **solitary g's**, the lymph-follicles of the small intestine. **splenolymph g's**. See *hemolymph g's*. **staphyline g's**, palatine glands. **subauricular g.**, a lymph-gland below and behind the ear. **sublingual g.**, the smallest of the salivary glands, placed beneath the tongue on either side. **submaxillary g.**, a salivary gland on either side, below the angle of the lower jaw. **sudoriparous g's**, the glands of the skin that secrete sweat. **suprarenal g.**, a flattened body situated in the retroperitoneal tissue at the upper end of each kidney. It consists of an internal medulla and external cortex enclosed in a connective-tissue sheath or capsule. It is one of the ductless glands furnishing an internal secretion (adrenalin or epinephrin) which causes contraction of the musculature of the blood-vessels and consequently rise in blood-pressure. Called also *adrenal body*, *adrenal gland*, *suprarenal body*, and *suprarenal capsule*. **Suzanne's g.**, a mucous gland of the mouth, beneath the alveolingual groove. **sweat g.** See *sweat-gland*. **synovial g's**, haversian glands. **tarsal g's**. Same as *meibomian g's*. **tarsosconjunctival g's**, meibomian glands. **Theile's g's**, gland-like formations in the walls of the cystic duct and in the pelvis of the gall-bladder. **thymus g.** See *thymus*. **thyroid g.**, **thyroid g.**, the thyroid body; a large, ductless or chylopoietic organ in front of and on either side of the trachea. It is made up of two *lateral lobes* and an *isthmus*, which unites them below. It is inclosed in a thin envelop of connective tissue, and is composed of a number of closed follicles, or alveoli, which are usually filled with colloid material, and are surrounded by a network of vessels which is supported by the interstitial connective tissue. The thyroid gland is believed to take part in the development and distribution of mucin and other important physiologic functions. **thyroid g., accessory**, a small exclave of the thyroid body. **Tiedemann's g's**, Bartholin's glands. **trachoma g's**, lymphoid follicles of the conjunctiva, found chiefly near the inner canthus of the eye. **tubular g.**, any gland made up of or containing a tubule or a number of tubules. **tympenic g.**, a small reddish mass situated on Jacobson's nerve in the tympanic canal. **Tyson's g's**, the odoriferous glands; small sebaceous glands of the corona of the penis and of the labia pudendi. **unicellular g.**, a gland which consists of a single cell; a cell which performs a secretory function, as a goblet-cell. **urethral g's**. Same as *Littre's g's*. **uterine g's**, tubular glands of the endometrium. **vaginal g.**, any gland of the vaginal mucous membrane. **vascular g.** 1. A glomus. 2. A hemolymph gland. **vestibular g.** Same as *vulvovaginal g.* **Virchow's g.**, a lymphatic gland behind the clavicular insertion of the sternomastoid muscle. **vitelline g.** See *vitellarian g.* **vulvovaginal g.**, a minute gland on either side of the vagina, with a duct opening near the nymphæ. **Waldeyer's g's**, acinotubular glands in the inner skin of the attached edge of the eyelid. **Wasmann's g's**, the peptic glands. **Weber's g's**, the tubular mucous glands of the tongue. **Willis' g's**, the corpora albicantia. **g's of Zeiss**, sebaceous glands of the free edges of the eyelids. **Zuckerland's g.**, a small yellow mass occasionally seen between the

two geniohyoid muscles, thought to be an accessory thyroid.

glandebalæ (glan-deb'al-e). The hairs of the axilla.

glanderous (glan'der-us). Of the nature of or affected with glanders.

glanders (glan'derz) [L. *mal'leus*]. A disease of horses, communicable to man, and due to *Pfeifferella mal'lei* (*Bacillus mal'lei*). It is marked by acute febrile symptoms, inflammation of mucous membranes, especially of the nose, with a purulent discharge from the nose and an eruption of isolated nodules on the skin and mucous membranes. These nodules coalesce and break down, forming deep ulcers, which may end in necrosis of cartilages and bones. In man the disease usually runs an acute course, ending in the typhoid state and in death. Called also *equinia*. *Forcy* is a chronic form of this disease. **African g.**, **Japanese g.** See *lymphangitis epizootica*.

glandilemma (glan-dil-em'ah) [gland + Gr. *λέμμα* sheath]. The capsule or outer envelop of a gland.

glandon (glan'don). A preparation of thyroid gland, adonidin, and sodium cacodylate in tabloid form.

glandula (glan'du-lah), pl. *glan'dulæ* [L.]. A gland; a glandule or small gland. **g. areolaris** [B N A], **glan'dulæ areolares montgomerii**. See *Montgomery's glands*, under *gland*. **g. clau'sa** [B N A], a ductless gland. **g. concreta**. See *Monro's gland*, under *gland*. **g. cutis** [B N A], any one of the glands of the skin. **g. gale'ni**, the upper and larger part of the lacrimal gland. **g. inci'siva**, a small intra-oral gland in the median line near the teeth. **g. monro'i**, the lower portion of the lacrimal gland. **g. supra-rena'lis**, the suprarenal gland. **glan'dulæ supra-rena'les sic'cæ**, desiccated suprarenal glands. **glan'dulæ thyroid'æ sic'cæ**, desiccated thyroid glands. **g. vestibularis bartholi'ni**. See *Bartholin's gland*, under *gland*.

glandular (glan'du-lar). Pertaining to or of the nature of a gland. **g. fever**. See under *fever*.

glandule (glan'dül) [L. *glan'dula*]. A small gland.

glandulen (glan'du-len). A therapeutic preparation of the bronchial glands of the sheep: used in tuberculosis.

glandulin (glan'du-lin). A therapeutic extract of the bronchial glands of sheep: used in tuberculosis.

glandulous (glan'du-lus) [L. *glandulo'sus*]. Abounding in kernels or small glands.

glans (glanz), pl. *glan'des*, Latin for *gland*. **g. clitoridis**, the distal end of the clitoris. **g. pe'nis**, the head, or terminal end, of the penis.

glare. A condition of discomfort in the eye and of depression of central vision produced when a bright light enters the field of vision, especially when the eye is adapted to dark. The amount of glare is directly proportional to the candle-power of the light and inversely proportional to the distance of the light from the eye and to its angular distance from the visual axis. *Direct g.*, when the image of the light falls on the fovea; *peripheral g.*, when it falls outside of the fovea.

glaserian (gla-se're-an) [named for or described by Johann Heinrich Glaser (Glaserius), Swiss anatomist, 1620-1675]. See under *fissure*, etc.

glass (glas) [L. *vit'rum*]. A hard, brittle, and often transparent substance, usually consisting of the fused amorphous silicates of potassium or sodium, and of calcium, with silica in excess. **crystal g.**, a hard glass; a silicate of sodium (or potassium) with lime and alumina. **flint g.**, a soft glass, mainly composed of lead and potassium silicates. **soluble g.**, **water g.**, a potassium or sodium silicate: somewhat in use in preparing immovable bandages.

glasses. See *spectacles*. **bifocal g., Franklin g.,** those which have two different refracting powers, one in the upper and the other in the lower part of the lenses. **hyperbolic g.,** those ground with a section of a hyperbolic curve. **periscope g.** See under *lens*. **prismatic g.,** are made of prisms, and are used in paralysis and insufficiency of the ocular muscles. **snow-g.,** spectacles worn to prevent snow-blindness. **stenopaic g.,** a form having a narrow slit or a small hole in a blackened disk; used in examining for astigmatism.

glass-pox. Amaas.

glassy (glas'e). Resembling glass; hyaline or vitreous.

Glauber's salt (glaw'berz) [Johann Rudolf Glauber, German physician and chemist, 1604-1668]. See *sodium sulphate*.

glauca (glaw'sin). A yellow, crystalline alkaloid, $C_{21}H_{25}NO_4$, from *Glaucium flavum*.

glaucoma (glaw-ko'mah) [Gr. *γλαυκός* green]. A disease of the eye marked by intense intra-ocular pressure, resulting in hardness of the eye, atrophy of the optic disk, and blindness. **g. absolutum, g. consummatum,** glaucoma resulting in total blindness and great hardness of the eyeball: the final stage of inflammatory glaucoma. **apoplectic g.,** that which is associated with retinal hemorrhage. Called also *hemorrhagic g. auricular g.,* that associated with increased intralabyrinthine pressure. **Donders' g.,** simple atrophic glaucoma. **fulminant g.,** a sudden and intensely acute form of inflammatory glaucoma with immediate loss of sight and perception of light (A. von Graefe). **hemorrhagic g.,** that which is caused by pressure from retinal hemorrhage (Graefe). **inflammatory g.,** a form attended with ciliary congestion, corneal opacity, and blindness, recurring in paroxysmal attacks. **malignant g.,** glaucoma that grows rapidly worse in spite of iridectomy. **secondary g.,** a glaucoma that is consequent upon some other eye disease. **g. simplex,** a form with no pronounced inflammatory symptoms, but attended with progressive loss of vision.

glaucomatous (glaw-ko'mat-us). Pertaining to or of the nature of glaucoma.

glaucosuria (glaw-ko-su're-ah) [Gr. *γλαυκός* green + *οὐρον* urine]. Indicanuria.

gleet (glēt). A chronic form of gonorrheal urethritis. **nasal g.,** a chronic catarrhal discharge from the nose of horses, having a bluish, creamy appearance and a bad odor.

gleety (glēt'e). Pertaining to or of the nature of gleet.

Glénard's disease, test, theory (glā-narz') [Frantz Glénard, French physician, 1848-1920]. See under *disease, tests, theory*.

glenohumeral (gle-no-hu'mer-al). Pertaining to the glenoid cavity and to the humerus.

glenoid (glē'noïd) [Gr. *γλήνη* cavity + *εἶδος* form]. 1. Resembling a pit or socket. 2. Pertaining to the glenoid cavity or to its glenoid fossa.

Glenospora (gle-nos'po-rah). A genus of fungi. *G. graph'ii* has been found in otomycosis.

glenosporosis (gle-nos-po-ro'sis). Infection with *Glenospora*.

Gley's cells, glands (glāz) [Eugène Gley, French physiologist, born 1857]. See under *cell* and *gland*.

glia (gli'ah) [Gr. *γλία* glue]. The neuroglia.

gliacyte (gli'as-it) [*glia* + Gr. *κύτος* cell]. A cell of the neuroglia.

gliadin (gli'ad-in) [Gr. *γλία* glue]. An alcohol-soluble protein obtainable from wheat.

glial (gli'al). Pertaining to glia or neuroglia.

glidine (gli'din). A proprietary vegetable protein food prepared from wheat.

gliobacteria (gli'o-bak-tē-re-ah) [Gr. *γλία* glue +

bacteria]. Rod-shaped schizomycetes which are surrounded by a zoöglea.

glioblastoma (gli'o-blas-to'mah) [Gr. *γλία* glue + *βλαστός* germ + *ωμα* tumor]. Glioma.

gliococcus (gli-o-kok'us) [Gr. *γλία* glue + *κόκκος* berry]. A micrococcus forming gelatinous matter.

glioma (gli-o'mah) [Gr. *γλία* glue + *-ωμα* tumor]. Malignant sarcoma of a structure resembling neuroglia (Virchow). It occurs only in nervous tissue, and consists of a homogeneous matrix containing numerous granular nucleated cells. **g. endophytum,** glioma of the retina beginning in the inner layer. **g. exophytum,** glioma of the retina beginning in the outer layer. **g. retinæ,** a tumor of the retina resembling glioma of the cerebrium. Called also *fungus medullaris oculi*. **g. sarcomatousum,** a gliosarcoma. **telangiectatic g.,** glioma containing blood-vessels.

gliomatosis (gli-o-mat-o'sis). Excessive development of the neuroglia, especially of the spinal cord, in certain cases of syringomyelia.

gliomatous (gli-o-mat-us). Affected with or of the nature of glioma.

gliomyoma (gli'o-mi-o'mah). A tumor containing gliomatous and myomatous tissue.

gliomyxoma (gli'o-miks-o'mah). Glioma blended with myxoma.

glioneuroma (gli'o-nu-ro'mah). A tumor containing both gliomatous and neuromatous elements.

glosia (gli'o'sah) [Gr. *γλία* glue]. The gray matter of the spinal cord which covers the head of the dorsal horn and surrounds the central canal.

gliosarcoma (gli'o-sar-ko'mah) [Gr. *γλία* glue + *sarcoma*]. A sarcoma containing glia-cells. **g. retinæ,** glioma retinae.

gliosis (gli-o'sis). The diseased condition associated with the presence of gliomata or with the development of neuroglia tissue. **perivascular g.,** a form of arteriosclerotic insanity marked by increase of the neuroglia about the diseased blood-vessels of the brain. **spinal g.,** syringomyelia.

Gliric'ola porcel'li. A biting louse found on guinea-pigs.

glischrin (glis'krin) [Gr. *γλισχρος* clammy]. A kind of mucin produced in urine by *Bacterium glischro'genes*.

glischruria (glis-kru're-ah) [Gr. *γλισχρος* gluey + *οὐρον* urine]. The presence of glischrin in the urine; a form of mucinuria.

Glisson's capsule (glis'unz) [Francis Glisson, English physician and anatomist, 1597-1677]. See *capsule*.

glissonitis (glis-on-i'tis). Inflammation of Glisson's capsule.

globeol (glo'be-ol). A proprietary blood tonic, said to be prepared from globular protoplasm, dried blood-serum, and colloid iron and manganese.

globin (glo'bin) [L. *glo'bus* globe]. The protein constituent of hemoglobin; also any member of a group of proteins similar to the typical globin.

globinometer (glo-bin-om'e-ter). An instrument used in determining the proportion of oxyhemoglobin in the blood.

globoid bodies (glo'boid). See under *body*.

globon (glo'bon). A trade-name for a preparation of pure dried albumin obtained by the decomposition of phosphorus protonucleins. It is a yellowish, tasteless powder, insoluble in water, and is used as a nutritive. Adult dose, $\frac{1}{2}$ -1 dr. (1.95-3.9 gm.).

globose (glo'bōs) [L. *glo'bus* a ball]. Globe shaped, spherical.

globular (glo'b'u-lar). Like a globe or globule.

globularetin (glo'b'u-lar-e'tin). A derivative, C_6H_8O , of the decomposition of globularin. It is a diuretic, cholagogue, and purgative.

Globularia (glo'b-u-la're-ah). Trypanosoma.

globularin (glob-u-la'rin). A bitter glucosid, $C_{15}H_{20}O_8$, from *Globularia al'ypum*: its action resembles that of caffein, and it lessens the secretion of urine.

globule (glob'ul) [L. *glob'ulus* a globule]. 1. A small spheric mass; a little globe or pellet, as of medicine. 2. A blood-disk or corpuscle; a lymph-corpuscle; a fat-corpuscle in milk. **dentin g's**, small spheres of dentin in the spaces of the peripheral dentin. **directing g's**, **extrusion g's**, **polar g's**, minute rounded, cell-like masses derived from the germinal vesicle and the vitellus, and expelled from the maturing ovum before impregnation: they lie between the ovum and vitelline membrane. They have been found in some mammals and in many invertebrates. **Dobie's g.**, a minute stainable mass in the middle of the transparent disk of a muscle fibril. **Morgagni's g's**, minute hyaline spheres sometimes found between the eye-lens and its capsule, chiefly in cases of cataract.

globulicidal (glob'u-lis-i'dal) [L. *globu'lus* globule + *ca'dere* to kill]. Destroying the blood-corpuscles.

globulicide (glob'u-lis-id). 1. An agent that destroys blood-corpuscles. 2. Globulicidal.

globuliferous (glob-u-lif'er-us). Taking up or destroying the blood-corpuscles.

globulimeter (glob-u-lim'et-er) [*globule* + Gr. *mér-ron* measure]. An instrument for determining the number of blood-globules in a given quantity of blood.

globulin (glob'u-lin) [L. *globu'lus* globule]. A class of proteins characterized by being insoluble in water and alcohol, but soluble in 0.5-1 per cent. solution of some neutral salt, from which solution they may be precipitated by heat. Examples of globulins are edestin, serum-globulin, lactoglobulin, cell-globulin, myoglobulin, myosin, musculin, and fibrinogen. **antidiphtheritic g.**, concentrated and purified antidiphtheritic serum. **antitoxic g.**, a globulin with which is associated the antitoxic properties of the serum. **crystalline g.**, a globulin obtainable from the seeds of pumpkins, etc. **fibrin-g.**, a globulin body found in the blood-serum after coagulation and thought to be split off from the fibrinogen during clotting. **serum-g.**, the globulin of the blood-serum. **vegetable g.**, same as *crystalline g.*

globulinuria (glob'u-lin-u're-ah) [*globulin* + Gr. *ouron* urine]. The presence of globulin or of globulins in the urine.

globulolysis (glob-u-lol'is-is) [*globule* + Gr. *lyōsis* solution]. Destruction of solution of blood-corpuscles.

globulolytic (glob'u-lo-lit'ik). Destructive to red blood-corpuscles; hemolytic.

globulose (glob'u-lōs). A proteose produced by action of pepsin on the globulins; several varieties have been described.

globulus (glob'u-lus), pl. *glob'uli* [L.]. 1. The nucleus globosus. 2. A pill, bolus, or spheric suppository.

globulysis (glo-bu'lis-is) [*globule* + Gr. *lyōsis* solution]. Hemolysis of red blood-corpuscles.

globus (glo'bus). Latin for *sphere* or *ball*. **g. of the heel**, that portion of the wall of a horse's hoof when it curves around the heel to form the bar. **g. hystericus**, the subjective sensation of choking; a lump in the throat: a condition frequently seen in hysteria. **g. ma'ior**, the head or upper and larger end of the epididymis. **g. mi'nor**, the smaller and distal end of the epididymis. **g. pal'idus** [B N A], the pale interior of the lenticular nucleus.

glome (glōm). Either of the two prominences on the posterior edge of the frog of a horse's foot.

glomerate (glom'er-at) [L. *glomera'tus* wound into a ball]. Crowded together into a ball.

glomerular (glo-mer'u-lar). Pertaining to or of the nature of a glomerulus.

glomerule (glom'er-ül). Same as *glomerulus*.

glomerulitis (glom'er-u-lit'is). Inflammation of the glomeruli of the kidney.

glomerulonephritis (glom'er'u-lo-nef-ri'tis) [*glomerulus* + *nephritis*]. Same as *glomerulitis*.

glomerulose (glom'er'u-lōs). Glomerular.

glomerulus (glom'er'u-lus), pl. *glomer'uli* [L. dim. of *glōmus* ball]. 1. A tuft or cluster. 2. A coil of blood-vessels projecting into the expanded end or capsule of each of the uriniferous tubules. **malpighian g.** Same as *glomerulus* (2d def.). **olfactory g.**, any one of a set of small glomerular masses of dense neuropil in the olfactory bulb containing the first synapse in the olfactory pathway. **Ruysch's g.**, a malpighian tuft.

glomus (glō'mus) [L.]. A fusiform swelling of the carotid plexus found at the junction of the body of the lateral ventricle with the descending horn. **g. carot'icum**. See *carotid gland*, under *gland*. **g. choro'id'eum**, an enlargement of the choroid plexus of the lateral ventricle where the inferior horn joins the central part. **g. coccyge'um**, the coccygeal gland.

glonion (glo-no'in). Nitroglycerin; also a homeopathic preparation of the same.

glonoinism (glo-no'in-izm). The toxic effect produced by nitroglycerin.

glossagra (glos-a'grah, glos'ag-rah) [Gr. *γλωσσα* tongue + *ἀγρα* seizure]. Gouty pain of the tongue.

glossal (glos'al) [Gr. *γλωσσα* tongue]. Pertaining to the tongue.

glossalgia (glos-al'je-ah) [Gr. *γλωσσα* tongue + *ἀλγος* pain]. Pain in the tongue.

glossanthrax (glos-an'thraks) [Gr. *γλωσσα* tongue + *ἀνθραξ* anthrax]. Carbuncle of the tongue.

glossectomy (glos-ek'to-me) [Gr. *γλωσσα* tongue + *ἐκτομή* excision]. Surgical removal of the tongue; elinguation.

Glossina (glos-i'nah). A genus of biting flies; the tsetse flies. **G. mor'sitans**, a fly of South Africa which transmits by its bite the *Trypanosoma bru'cei*, the cause of nagana in horses and is also the transmitter of *T. rhodesiense* the cause of the sleeping sickness of Rhodesia. **G. pallid'ipes**, a fly

Glossina morsitans.

Glossina palpalis.

which transmits *T. brucei*. **G. palpa'lis**, a species of Central Africa which transmits by its bite *T. gambiense*, the organism of Africa sleeping sickness. Other species which probably transmit trypanosomes to animals and to man are: *G. brevipennis*, *G. fusca*, *G. longipalpis*, *G. longipennis*, *G. pallciera*, *G. tachinoides*.

glossitis (glos-i'tis) [Gr. *γλωσσα* tongue + *-itis* inflammation]. Inflammation of the tongue. **g. area'ta exfoliat'iva**, geographic tongue. See under *tongue*. **g. dis'secans**, **dissecting g.**, a chronic form in which the tongue is deeply furrowed. **idiopathic g.**, **parenchymatous g.**, inflammation of the substance of the tongue and its mucous membrane. **Moeller's g.**, chronic superficial glossitis, or glossodynia exfoliativa; an affection of the tongue sometimes extending to the cheeks and palate, affecting middle-aged people,

M. J. Schubert

- especially women, and marked by burning pain and by red irregular patches, thinning of the papillae, and desquamation of the stratum corneum. **par-asitic g.** Same as *glossophytia*.
- glossoccele** (glos'o-sēl) [Gr. γλῶσσα tongue + κήλη tumor]. Swelling and protrusion of the tongue.
- glossocinesthetic** (glos'o-sin-es-thet'ik). Glossokinesthetic.
- glossocoma** (glos-ok'o-mah). Retraction of the tongue.
- glossodynamometer** (glos'o-di-nam-on'et-er) [Gr. γλῶσσα tongue + dynamometer]. An instrument for recording the power of the tongue to resist pressure.
- glossodynia** (glos-o-din'e-ah) [Gr. γλῶσσα tongue + δόνην pain]. Pain in the tongue. **g. ex-foliati'va**. See *Moeller's glossitis*, under *glossitis*.
- glosso-epiglottidean** (glos'o-ep-e-glot-id'e-an). Pertaining to the tongue and epiglottis.
- glossograph** (glos'o-graf) [Gr. γλῶσσα tongue + γράφειν to record]. An apparatus for recording the tongue movements in speech.
- glossohyal** (glos-o-hi'al) [*glossa-* + *hyoid*]. Pertaining to the tongue and hyoid bone.
- glossokinesthetic** (glos'o-kin-es-thet'ik) [Gr. γλῶσσα tongue + kinesthetic]. Pertaining to the subjective perception of the movements of the tongue in speech.
- glossology** (glos-ol'o-je) [Gr. γλῶσσα tongue + λόγος treatise]. 1. The sum of knowledge regarding the tongue. 2. A treatise on nomenclature.
- glossolysis** (glos-ol'is-is) [Gr. γλῶσσα tongue + λύσις loosening]. Paralysis of the tongue.
- glossomantia** (glos-o-man-ti'ah) [Gr. γλῶσσα tongue + μαντία divination]. Prognosis based on the appearance of the tongue.
- glossoncus** (glos-ong'kus) [Gr. γλῶσσα tongue + ονκος mass]. A swelling of the tongue.
- glossopalatinus** (glos'o-pal-at-i'nus). A small muscle which constitutes the larger part of the anterior pillar of the fauces.
- glossopathy** (glos-op'ath-e) [Gr. γλῶσσα tongue + πάθος suffering]. Any disease of the tongue.
- glossopharyngeal** (glos'o-fah-rin'je-al) [Gr. γλῶσσα tongue + φάρυγξ pharynx]. Pertaining to the tongue and pharynx. See *nerves*, *table of*.
- glossopharyngeum** (glos'o-fah-rin'je-um) [Gr. γλῶσσα tongue + φάρυγξ pharynx]. The tongue and pharynx together.
- glossopharyngeus** (glos'o-far-in'je-us). See *muscles*, *table of*.
- glossophytia** (glos-o-fit'e-ah) [Gr. γλῶσσα tongue + φυτόν growth]. Black tongue. See under *tongue*.
- glossoplasty** (glos'o-plas-te) [Gr. γλῶσσα tongue + πλάσσειν to mold]. The plastic surgery of the tongue.
- glossoplegia** (glos-o-ple'je-ah) [Gr. γλῶσσα tongue + πηγή stroke]. Paralysis of the tongue.
- glossoptosis** (glos-op-to'sis) [Gr. γλῶσσα tongue + πτώσις fall]. Downward displacement of the base of the tongue.
- glossopyrosis** (glos'o-pi-ro'sis) [Gr. γλῶσσα tongue + πύρωσις burning]. A burning sensation in the tongue.
- glossorrhaphy** (glos-or'af-e) [Gr. γλῶσσα tongue + ραφή suture]. Suture of the tongue.
- glossoscopy** (glos-os'ko-pe) [Gr. γλῶσσα tongue + σκοπεῖν to examine]. Examination of the tongue.
- glossospasm** (glos'o-spazm) [Gr. γλῶσσα tongue + σπασμός spasm]. Spasm of the tongue muscles.
- glossotilt** (glos'o-tilt) [Gr. γλῶσσα tongue + τίλλειν to pull]. A lever which holds the tongue in one of the processes for artificial respiration.
- glossotomy** (glos-ot'o-me) [Gr. γλῶσσα tongue + τέμνειν to cut]. Incision or excision of the tongue.
- glossotrichia** (glos-o-trik'e-ah) [Gr. γλῶσσα tongue + τρίξ hair]. Hairly tongue.
- glottic** (glot'ik) [Gr. γλῶττα tongue]. 1. Pertaining to the glottis. 2. Pertaining to the tongue.
- glottis** (glot'is) [Gr. γλῶττις]. The aperture, or chink, between the vocal cords, together with all that part of the larynx which is concerned in voice-production. **false g.**, the space between the false vocal cords. **true g.**, the opening between the true vocal cords. **vocal g.**, the rima vocalis: the opening between the vocal cords.
- glottitis** (glot-i'tis). Same as *glossitis*.
- glottology** (glot-ol'o-je). Same as *glossology*.
- glou-glou** (gloo'gloo) [Fr.]. 1. A gurgling sound produced in the stomach by various causes, such as the pressure of a corset. 2. A rattling sound sometimes heard in auscultation of the heart.
- glucal** (glu'kal). An aldehyd derivative, $C_6H_{10}O_4$, of glucose.
- glucarsenan** (glu-kar'sen-an). A combination of arspenamin and glucose; said to be less toxic than arspenamin.
- glucarsenol** (glu-kar'sen-ol). A solution of novarsenobenzol in glucose with stovain and guaiacol for intramuscular injection.
- glucose** (glu'kās). A ferment from plants and microorganisms, changing starch into dextroglucose.
- glucatanin** (glu-kat-o'ne-ah) [Gr. γλυκὺς sweet + ατομία]. Reduction of blood-sugar as a result of insulin injection to a point where pathologic symptoms are produced; *insulin shock*.
- glucemia, glucæmia** (glu-se'me-ah). Same as *glycemia*.
- glucid** (glu'sid). See *saccharin*.
- glucides** (glu'sids). Organic substances consisting in whole or part of carbohydrates. The term is a general one embracing the carbohydrates and glucosids. Glucide is also the U. S. P. name for saccharin.
- glucidin** (glu-si'din). An alkaloid of unknown composition from certain species of Papaver.
- glucidtemns** (glu'sid-tems). A collective name for the products produced by the digestion of starch, namely, dextrin, maltose, and glucose.
- glucin** (glu'sin). Sodium amidotriazinsulphonate: a patented sweetening agent, about one hundred times as sweet as cane-sugar.
- glucinum** (glu-si'num). Same as *beryllium*. See *elements*, *table of*.
- gluciphore** (glu'sif-ör). A group of atoms which is able to form sweet compounds by combining with other tasteless atoms. The atoms with which a gluciphore unites is called an *auxogluc*.
- gluck** (gluk). A clucking noise sometimes made by a horse, due to spasm of the velum palati.
- glucohemiam** (glu-ko-he'me-ah). Same as *glycohemiam*.
- glucokinin** (glu-ko-kin'in) [Gr. γλυκὺς sweet + κινεῖν to move]. A hormone-like substance obtained from vegetable tissues and yeast, subcutaneous injection of which produces hypoglycemia in animals and acts on depancreatized dogs in a manner similar to insulin; called also *plant insulin*.
- glucolysis** (glu-kol'is-is). Same as *glycolysis*.
- glucolytic** (glu-kol-it'ik). Same as *glycolytic*.
- glucolic acid** (glu-kon'ik). See under *acid*.
- glucophenetidin** (glu'ko-fen-et'id-in). A derivative from parphenetidin and glucose, in silky white needles.
- glucoprotein** (glu-ko-pro'te-in). Same as *glycoprotein*.
- glucopyron** (glu-ko-pi'ron). Murlin's preparation from the pancreas, recommended for treatment of diabetes.
- glucosamin** (glu-ko-sam'in). An alpha-amino-derivative of glucose, $CH_2OH(CHOH)_3CH(NH_2)-$

CHO, obtained from mucin and chitin by hydrolysis. Called *glycosamin* and *dextrosamin*. **acetyl g.**, the structural unit of chitin.

glucosane (glu'ko-sān). A polysaccharose which on hydrolysis yields a hexose.

glucosazone (glu-ko-sa'zōn). The phenyl-osazone of glucose, $\text{CH}_2\text{OH}(\text{CHOH})_2\text{C}(\text{N.NH.C}_6\text{H}_5)\text{CH.N.NH.C}_6\text{H}_5$. It is a yellow crystalline substance produced by treating glucose with phenylhydrazin and acetic acid. The crystals melt at 205°C . and may be used in the identification of glucose.

glucose (glu'kōs) [Gr. $\gamma\lambda\upsilon\kappa\upsilon\varsigma$ sweet]. Grape-sugar, or dextrose, $\text{C}_6\text{H}_{12}\text{O}_6$ or $\text{CH}_2\text{OH}(\text{CHOH})_4\text{CHO}$, a form of sugar from honey, fruit, etc., also from blood and lymph and from diabetic urine: commercially, it is prepared from maize by hydrolysis of the starch. Glucose is a colorless, crystalline compound, soluble in water, and having the property of rotating polarized light to the right. Commercial glucose is thick and syrupy due to incomplete hydrolysis of the starch. **Brun's g.**, a histologic clearing solution composed of glucose, 240 gm.; distilled water, 840 c.c.; camphor, 60 gm.; and glycerin, 60 c.c. **new g.**, an unknown form of glucose into which ordinary food glucose is changed in the body before it is utilized.

glucosid, glucoside (glu'ko-sid). Any vegetable principle that may be decomposed into glucose and another principle. Chemically a glucosid may be defined as a carbohydrate compound formed by union of a sugar with a non-sugar accompanied by the elimination of water.

glucosidase (glu'ko-si-dās). An enzyme which splits a glucosid.

glucosidolytic (glu'ko-si-do-lit'ik). Causing the splitting up of glucosids.

glucosin (glu'ko-sin). 1. An odorless, white, sweet, crystalline powder: used in place of sugar in diabetes and rheumatism. 2. Any one of a group of bases derived from glucose by the action of ammonia: some are highly toxic.

glucosone (glu'ko-sōn). An adehyd ketone, $\text{CH}_2\text{OH}(\text{CHOH})_3\text{COCHO}$, formed from phenyl glucosazon by oxidation with strong HNO_3 . It is claimed that it can be utilized by the diabetic organism.

glucosum (glu-ko'sum). Glucose.

glucosuria (glu-ko-su'te-ah) [glucose + Gr. $\sigma\upsilon\rho\upsilon$ urine]. Same as *glycosuria*.

glucuronate (glu-ku'ron-āt). Same as *glycuronate*.

glucuronic acid (glu-ku-ron'ik). Glycuronic acid.

glue (gloo). An adhesive preparation in the form of impure gelatin derived from boiling certain animal substances, such as hoofs, in water. **Sinclair's g.**, ordinary glue, 50 pints; water, 50 pints; glycerin, 2 pints; calcium chlorid, 2 pints; thymol, 1 pint; heat to 100°F . in a water-bath.

Gluge's corpuscles (gloo'gez) [Gottlieb Gluge, German pathologist, 1812-1898]. See *corpuscle*.

Gluge'a lys'sæ. The ultramicroscopic microsporidian organism causing rabies.

glulol (glu'lol). A proprietary formalin-gelatin preparation: used as a surgical dressing.

gluside, glusidum (glu'sid, glu-si'dum). The U. S. P. name for saccharin. **soluble g.**, soluble saccharin.

glutæus (glu-te'us) [Gr. $\gamma\lambda\upsilon\tau\omicron\varsigma$ buttock]. See *muscles, table of*.

glutamic acid (glu-tam'ik). See under *acid*.

glutamin (glu-tam'in). The mono-amid of aminoglutaric acid, $\text{COOHCHNH}_2(\text{CH}_2)_2\text{CONH}_2$, found in the juices of many plants.

glutannol (glu-tan'ol). An intestinal astringent made from fibrin and tannic acid. Dose, 5-30 gr. (0.333-2 gm.).

glutathione (glu-tah-thi'ōn) [glutamic acid + Gr. $\theta\epsilon\iota\omicron\nu$ sulphur]. A combination of cystin and

glutamic acid isolated from animal and plant tissues; it has the property of taking up hydrogen from hydrogen donators and then giving it up to reducible substances.

gluteal (glu'te-al) [Gr. $\gamma\lambda\upsilon\tau\omicron\varsigma$ buttock]. Pertaining to the buttocks.

glutelin (glu'te-lin). A simple protein, insoluble in all neutral solvents, but readily soluble in very dilute acids and alkalis and coagulable by heat. It occurs in seeds of cereals.

gluten (glu'ten) [L. "glue"]. The protein of wheat and other grains which gives to the dough its tough elastic character. **g.-casein**, a protein preparation employed in intestinal surgery to excite adhesive inflammation.

glutenin (glu'ten-in). The glutelin of wheat.

gluteofemoral (glu'te-o-fem-or-al) [gluteal + femoral]. Pertaining to the buttock and thigh.

gluteo-inguinal (glu'te-o-in'gwin-al). Pertaining to the buttock and groin.

gluteus (glu-te'us). See *muscles, table of*.

glutin (glu'tin). 1. A viscid substance from the gluten of wheat: gluten-casein. 2. Gelatin in its soft, dissolved, or gelatinous state.

glutinous (glu'tin-us) [L. *glutinosus*]. Sticky; adhesive; gluey.

glutitis (glu-ti'tis) [Gr. $\gamma\lambda\upsilon\tau\omicron\varsigma$ buttock + $-itis$ inflammation]. Inflammation of the buttock.

glutiform (glu'to-form). See *glutol*.

glutoid (glu'toid). A preparation of gelatin and formaldehyd, not digestible in the stomach, but readily so in the intestine. It is used for making capsules to be used in intestinal medication.

glutol (glu'tol). Formalin-gelatin, an antiseptic compound of gelatin and formaldehyd, in the form of a white powder, insoluble in water: used as an agglutinant and protective dressing for wounds. Called also *glutiform*.

glutolin (glu'to-lin). An albuminoid substance found in paraglobulin and thought to be a constant constituent of blood-plasm.

glutose (glu'tōs). An artificial glucid which resembles glucose in many of its chemical reactions and which is fermented by *Bacillus coli*, but which seems to be inert in the body. It is probably a keto-hexose, perhaps $\text{CH}_2\text{OH}(\text{CHOH})_2\text{CO.CHOH.CH}_2\text{OH}$.

Gluzinski's test (gloo-zin'skēz) [Anton Gluzinski, a physician in Lemberg]. See under *tests*.

glybrid (gli'brid). An antiseptic paste of boric acid, antifebrin, and glycerin.

glycase (gli'kās). An enzyme which converts maltose and maltodextrin into dextrose.

glycaine (gli-ka'sin). A proprietary ointment base consisting largely of alkali stearates and glycerin.

glyceum, glycælum (gli-sel-e'um) [Gr. $\gamma\lambda\upsilon\kappa\upsilon\varsigma$ sweet + $\epsilon\lambda\alpha\iota\omicron\nu$ olive oil]. An ointment-base which contains 6 parts of olive oil, 2 parts of glycerin, and 1 part of almond-meal.

glycemia, glycæmia (gli-se-me-ah) [Gr. $\gamma\lambda\upsilon\kappa\upsilon\varsigma$ sweet + $\alpha\iota\mu\alpha$ blood]. The presence of an abnormally large amount of sugar in the blood.

glycerid, glyceride (gli's'er-id). An organic acid ester of glycerol. The natural fats are glycerids of the higher fatty acids. **medullary g.**, a marrow extract used in anemia.

glycerin (gli's'er-in) [L. *glyceri-num*]. 1. A syrupy liquid, $\text{C}_3\text{H}_5(\text{OH})_3$ or $\text{CH}_2\text{OH.CHOH.CH}_2\text{OH}$, from the hydrolysis of oils and fats, in which it is compounded with the various fatty acids. Glycerin is a triatomic alcohol, and is soluble in water and in alcohol. It has a strong affinity for water, and is used to abstract water from the tissues. It is used as an emollient application to the skin, as a vehicle for various substances, as a laxative, as a substitute for sugar in diabetes, and as a medium for mounting in microscopy. Called also *glycerol*. 2. Same as *glycerite*. **g. aldehyd**, a compound,

$\text{CH}_2\text{OHCHOH.CHO}$, one of the constituents of glycose. **g.-gelatin peptone**, a culture-medium for the study of microorganisms. **g.-jelly**. See under *jelly*. **g.-phosphoric acid**. See *acid*. **g. trinitrate**, nitroglycerin.

glycerinated (glis'er-in-a-ted). Treated with or preserved in glycerin.

glycerinum (glis'er-i-num). Latin for *glycerin*.

glycerite (glis'er-it) [*L. glyceri'tum*]. A solution (or mixture) of a medicinal substance in glycerin. **g. of boroglycerin**, boric acid, 31 per cent. **g. of hydrastis**, hydrastis, 1 gram per cubic centimeter. **g. of phenol**, liquefied phenol, 20 per cent. Dose, 5 min. (0.3 c.c.). **g. of starch**, starch, 10 per cent. **g. of tannic acid**, tannic acid, 20 per cent. Dose, 40 min. (2.5 c.c.).

glyceritum (glis'er-i'tum), gen. *glyceri'ti*; pl. *glyceri'ta*. Latin for *glycerite*.

glyceroformol (glis'er-o-for'mol). An antiseptic substance formed by the action of formaldehyd upon glycerin.

glycrogelatin (glis'er-o-jel'at-in). Glycerin-jelly. See under *jelly*.

glycerol (glis'er-ol). 1. Same as *glycerin*. 2. Same as *glycerite*. **acetanilid g.**, a mixture of 40 parts of cold, sterilized glycerol with 1 part of acetanilid powder.

glycerophosphate (glis'er-o-fos'fat). Any salt of glycerophosphoric acid: several of them are used as nerve tonics.

glyceroplasma (glis'er-o-plaz'mah). An antiplogistic compound of glycerin, a salicylate, and antiseptics.

glycerose (glis'er-öz). A sugar formed by oxidizing glycerol. There are two glyceroses, glyceric aldehyde and dioxyacetone.

glyceryl (glis'er-il). The trivalent radical, C_3H_5 , of glycerol. **g. margarate**, intarvin. **g. trinitrate**. See *nitroglycerin*.

glycid (gli'sid). The oxid of hydroxypropene; it is isomeric with lactic aldehyd and acetol.

glycin (gli'sin). Same as *glycocol*.

glycinin (glis'in-in). A protein from the soy-bean.

Glyciphagus (gli-sif'ag-us). A genus of mites. **G. bus'ki**, a species which had caused large sores on the foot of a negro in England. **G. domes'ticus** (*G. pruno'rum*) infests sugar and is the cause of grocer's itch.

glyco- [Gr. *γλυκός* sweet]. A prefix meaning sugar.

Glycobacter (gli-ko-bak'ter) [Gr. *γλυκός* sweet + *bacterium*]. A microörganism isolated from fecal matter, having the power of converting starch into sugar. It checks alimentary putrefaction and is used like the *Bacillus bulgaricus*. Called also *Glycobacter peptolyticus*.

glycoblástol (gli-ko-blas'tol). A proprietary hair restorer.

glycocholate (gli-ko-kol'ät). A salt of glycocholic acid.

glycocholeic acid (gli-ko-ko-le'ik). See under *acid*.

glycocholic acid (gli-ko-kol'ik). See under *acid*.

glycoicin (gli'ko-sin). Same as *glycocol*.

glycocol (gli'ko-kol) [Gr. *γλυκός* sweet + *κόλλα* glue]. 1. Gelatin-sugar, $\text{CH}_2\text{NHC}_2\text{H}_4\text{COOH}$, or amino-acetic acid, a colorless crystalline amino-acid derivable from many proteins. Called also *glycin* and *glycocin*. 2. Any substance of the group to which glycocol belongs.

glycoeyanin (gli-ko-si'an-in). A nitrogenous compound, guanidin-acetic acid. $\text{NH}_2\text{C}(\text{NH})\text{NH}.\text{CH}_2\text{COOH}$, formed by heating guanidin with glycocol. When methylated it becomes creatin.

glycoformal (gli-ko-for'mal). An aqueous solution of glycerin and formaldehyd: disinfectant.

glycogelatin (gli-ko-jel'at-in). An ointment-base containing glycerin and gelatin.

glycogen (gli'ko-jen) [Gr. *γλυκός* sweet + *γεννᾶν* to produce]. A carbohydrate, $(\text{C}_6\text{H}_{10}\text{O}_5)_n$, from the liver, leukocytes, cartilage, and other tissues. It

occurs in the form of an amorphous powder, soluble in water and dextrorotatory, and is colored red by iodine. It is formed in the liver from carbohydrates, being converted into dextrose as the needs of the system require, and carried away in the hepatic vein. It is also called *animal starch*.

glycogenal (gli-ko-jen'al). A compound which occurs in the organism along with glycogen.

glycogenase (gli-ko-jen-äs). An enzyme which splits glycogen into dextrin and maltose.

glycogenesis (gli-ko-jen'es-is) [*glyco- + genesis*]. The production of sugar or of glycogen.

glycogenetic (gli'ko-jen-et'ik). Pertaining to the formation of sugar or of glycerin.

glycogenic (gli-ko-jen'ik). Pertaining to glycogenesis or to glycogen.

glycogenolysis (gli'ko-jen-ol'is-is) [*glycogen + Gr. λύσις* solution]. The splitting up of glycogen into dextrose.

glycogenolytic (gli-ko-jen-o-lit'ik). Splitting up glycogen.

glycogenous (gli-koj'en-us). Same as *glycogenetic*.

glycogeny (gli-koj'en-e). See *glycogenesis*.

glycemia (gli-ko-he'me-ab) [Gr. *γλυκός* sweet + *αἷμα* blood]. The presence of sugar in the blood.

glycoheroin (gli'ko-he-ro'in). A proprietary liquid preparation of heroin, hyoscyamin, and various expectorants. Dose, 1 fl.dr. (4 c.c.).

glycol (gli'kol). 1. Ethylene glycol, $\text{CH}_2\text{OH.CH}_2\text{OH}$. 2. Any diatomic alcohol.

glycoleucin (gli-ko-lu'sin). Alpha-amino normal caproic acid, $\text{CH}_3(\text{CH}_2)_3\text{CH}(\text{NH}_2)\text{COOH}$, obtained as an extractive from brain tissue. Called also *caprin*.

glycolipin (gli-ko-li'pin). A lipid containing carbohydrate radicals. See *cerebrosid*.

glycolysis (gli-ko-lis-is) [Gr. *γλυκός* sweet + *λύσις* solution]. The digestion or hydrolysis of sugar, or its utilization within the living organism.

glycolytic (gli-ko-lit'ik) [Gr. *γλυκός* sweet + *λύειν* to dissolve]. Breaking up or digesting the sugars.

glycometabolic (gli'ko-met-ab-ol'ik). Pertaining to the metabolism of sugar.

glycometabolism (gli'ko-met-ab'o-lizm). The metabolism of sugar.

glycone (gli'kōn). A glycerin suppository.

glyconeogenesis (gli'ko-no-o-jen'es-is) [Gr. *γλυκός* sweet + *νέος* new + *γεννᾶν* to produce]. The formation of carbohydrates from molecules which are not themselves carbohydrates, as protein or fat.

glyconin (gli'ko-nin). A preparation of glycerin and the yolk of eggs; glyceritum vitelli.

glyconol (gli'ko-nol). A proprietary cod-liver oil preparation.

glyconucleoprotein (gli'ko-nu-kle-o-pro'te-in). A nucleoprotein having the carbohydrate group largely developed.

glycopexic (gli-ko-pek'sik). Fixing or storing sugar.

glycopexis (gli-ko-pek'sis) [Gr. *γλυκός* sweet + *πῆξις* fixation]. The fixation or storing of sugar or glycogen.

glycophenol (gli-ko-fe'no). Saccharin.

glycophilia (gli-ko-fil'e-ah) [Gr. *γλυκός* sweet + *φιλεῖν* to love]. A condition in which a very small amount of glucose produces hyperglycemia.

glycophospholipin (gli'ko-fos'fo-li'pin). A phospholipin containing carbohydrate radicals; found in the liver.

glycopolyuria (gli'ko-pol-e-u're-ah) [Gr. *γλυκός* sweet + *πολὺς* much + *οὐρον* urine]. Diabetes with a moderate increase of the sugar of the urine and with a marked increase of uric acid in the blood.

glycoprotein (gli-ko-pro'te-in). Any one of a class of compound proteins consisting of a compound of protein with a carbohydrate group. They are distinguished by yielding in decomposition a product capable of reducing cupric oxid.

The glycoproteins include the mucins, the mucoids, and the chondroproteins.

glycoptalism (gli-ko-ti'al-izm) [Gr. γλυκός sweet + πτύσιν saliva]. The presence of glucose in the saliva.

glycorrhachia (gli-ko-ra'ke-ah) [Gr. γλυκός sweet + ῥάχιν spine]. Presence of sugar in the cerebrospinal fluid.

glycorrhea (gli-kor-e'ah) [Gr. γλυκός sugar + ῥοία flow]. Any sugary discharge, as of urine.

glycosal (gli'ko-sal). A monosaccharic acid glycerin ester, $\text{OH.C}_6\text{H}_4\text{CO.O.C}_3\text{H}_5(\text{OH})_2$: used as an antiseptic and antirheumatic. Dose, 5-50 gr. (0.333-3 gm.).

glycosamin (gli-ko-sam'in). Same as *glucosamin*.

glycoscretory (gli'ko-se-kre'to-re). Causing or concerned in the secretion of glyco-gen.

glycosemia, glycosæmia (gli-ko-se'me-ah). Same as *glycemia*.

glycosid, glycoside (gli'ko-sid). Glucosid.

glycosin (gli-ko'sin). 1. A ring compound formed by the action of concentrated ammonia on glyoxal which sometimes unites with urea in the kidneys, forming uric acid. 2. An extract from the pancreas.

glycosolveol (gli-ko-sol've-ol). A proprietary diabetic remedy.

glycosometer (gli-ko-som'et-er) [Gr. γλυκός sweet + μέτρον measure]. An instrument used in determining the proportion of sugar in the urine.

glycosuria (gli-ko-su're-ah) [Gr. γλυκός sweet + οὐρον urine]. The presence of sugar in normal urine, especially when due to hyperglycemia. See also *glycuresis*. **alimentary g., digestive g.**, glycosuria following the ingestion of sugar which in normal conditions would be disposed of. **emotional g.**, glycosuria induced by violent emotion. **epinephrin g.**, glycosuria following the injection of adrenal extract. **magnesium g.**, glycosuria due to high concentration of magnesium in the blood. **nervous g.**, glycosuria produced by puncture of the fourth ventricle of the brain or by stimulation of the great splanchnic nerve. **pathologic g.**, a condition in which large amounts of sugar appear in the urine for a considerable period of time. **phloridzin g., phlorizin g.**, glycosuria following the administration of phloridzin. **renal g.**, glycosuria occurring when there is only the normal amount of sugar in the blood. **toxic g.**, glycosuria produced by poisons.

glycotauro (gli-ko-taw'ro). A proprietary concentrated ox-bile freed from bile-pigments.

glycothymolin (gli-ko-thi'mo-lin). A proprietary non-irritant antiseptic and anodyne agent.

glycozone (gli'ko-zōn). A proprietary ozone and hydrogen dioxide preparation.

glycuresis (gli-ku-re'sis). An abnormal increase of sugar in the urine (S. R. Benedict), especially the presence of minute amounts of reducing carbohydrates in normal urine without hyperglycemia or diabetes. Cf. *glycosuria*.

glycuronate (gli-ku-ro-nāt). A compound formed by the union of glycuronic acid and some other substance, frequently an aromatic body.

glycuronic acid (gli-ku-rōn'ik). See under *acid*.

glycuronuria (gli-ku-ro-nu're-ah). The presence of glycuronic acid in the urine.

glycyl (gli'sil). The univalent acid radical, $\text{H}_2\text{N.C}_2\text{H}_3\text{CO}$, derived from glycolyl.

glycylglycin (gli-sil-gli'sin). The simplest polypeptid, $\text{CH}_2(\text{NH}_2).\text{CO.NH.C}_2\text{H}_3\text{CO}_2\text{H}$.

glycyltryptophan (gli-sil-trip'to-fan). A dipeptid consisting of glycin and tryptophan radicals: used as a test for cancer of stomach. See under *tests*.

Glycyrrhiza (glis-ir-hi'zah) [Gr. γλυκός sweet + ῥίζα root]. A genus of leguminous plants. The dried rhizome and root of *G. glabra* (licorice-root) is demulcent, antiebcic, and laxative, and is used in laryngitis and bronchitis and as an ingredient in medicinal preparations. Dose of elixir, 1 fl.dr. (4 c.c.); fluidextract, 1 fl.dr. (4 c.c.); of syrup, 1

fl.dr. (4 c.c.); of compound mixture (brown mixture), $\frac{3}{4}$ -1 fl.oz. (15-30 c.c.); of compound powder, $\frac{3}{4}$ -2 dr. (2-8 gm.).

glycyrrhizin (glis-ir-hi'zin) [L. *glycyrrhizinum*]. A principle, $\text{C}_{24}\text{H}_{36}\text{O}_{10}$, from licorice-root. **ammoniated g.**, a sweet substance, used like licorice. Dose, 5-15 gr. (0.333-1 gm.).

glykaolin (gli-ka'ol-in). An anodyne and antiphlogistic preparation of glycerin, kaolin, aluminum salicylate, and antiseptics.

glykemia (gli-ke'me-ah). Glycemia.

glymol (gli'mol). A proprietary oil derived from petroleum: destructive to insect vermin.

glyoxylase (gli-ok'sil-ās). An enzyme found in various tissues, but not in the pancreas, which can change a glyoxaldehyd into a corresponding glycollic acid and which is probably one of the factors in the conversion of alanin into glucose.

glyoxylic acid (gli-ok-sil'ik). See under *acid*.

glysal (gli'sal). Same as *spirosal*.

Gm., gm. An abbreviation for *gram*.

Gmelin's test (ma'linz) [Leopold Gmelin, German physiologist, 1788-1853]. See under *tests*.

gnat (nat). A small dipterous insect. In England the term is applied to misquitos; in America to insects smaller than mosquitos. See *Chironomidae*.

Buffalo g., a sand-fly. See *Simulium*.

gnathalgia (na-thal'je-ah) [Gr. γνάθος jaw + ἄλγος pain]. Pain in the jaw.

gnathic (na'thik) [Gr. γνάθος jaw]. Pertaining to the jaw or cheek.

gnathion (na'the-on) [Gr. γνάθος jaw]. The lowest point on the median line of the lower jaw.

gnathitis (na-thi'tis) [Gr. γνάθος jaw + -itis inflammation]. Inflammation of the jaw.

Gnathobdellidae (gnath-o-del'id-e). A family of the Hirudinea which includes the genus *Hirudo*, the leech.

gnathocephalus (na-tho-sef'al-us) [Gr. γνάθος jaw + κεφαλή head]. A monster-fetus with no part of the head except the jaws.

gnathodynamometer (nath'o-di-nam-om'et-er) [Gr. γνάθος jaw + dynamometer]. An instrument for measuring the force exerted in closing the jaws.

gnathodynia (nath-o-din'e-ah) [Gr. γνάθος jaw + ὀδύνη pain]. Pain in the jaw.

gnathoplasty (na'tho-plas-te) [Gr. γνάθος jaw + πλάσσειν to mold]. Plastic surgery of the jaw or cheek.

Gnathostoma, Gnathostomum (nath-os'to-mah, -to-mum) [Gr. γνάθος jaw + στόμα mouth]. A genus of nematode worms parasitic in cats, swine, cattle, and sometimes in man. **G. hispidum**, a species found in the stomach of pigs in China and which occasionally produces a form of "creeping disease" in man. **G. siamense, G. spinigerum**, a nematode found parasitic in the stomach of cats, dogs, cattle, and swine. It was once found in the subcutaneous tissue of man.

gnathostomiasis (gnath'o-sto-mi'as-is). Infestation with *Gnathostoma*.

Gnathostomidae (gnath-o-sto'mid-e). A family of the Nematoda characterized by having fine spines over the body. There is only one important genus: *Gnathostoma*.

gnoscopin (nos'ko-pin). An alkaloid, de-narcopin, $\text{C}_{22}\text{H}_{23}\text{NO}_7$, from opium, in long, white, woolly needles (T. and H. Smith, 1878).

gnosia (no'se-ah) [Gr. γνῶσις knowledge]. The faculty of perceiving and recognizing.

Goa powder (go'ah) [Goa a city of India]. A powder from the wood of *Andira araroba*. See *Andira*.

goblet-cells. See under *cell*.

Godélier's law (go-da-lyāz') [Charles Pierre Godélier, French physician, 1813-1877]. See under *law*.

Goetsch's skin reaction (getsch'ez) [Emil Goetsch, American physician, born 1883]. See under *reaction*.

Goffe's operation (gofs) [J. Riddle Goffe, New York gynecologist, born 1851]. See *operation*.

Goggia's sign (godj'yahz). See under *sign*.

gogul (go'gul). A variety of bdellium.

goiter, **goitre** (goi'ter) [Fr. *goitre*]. Enlargement of the thyroid body, causing a swelling in the front part of the neck; bronchocele; struma. The disease is endemic in Switzerland, the Alps of Savoy, in Styria, etc., being often accompanied by the condition known as cretinism. **aberrant g.**, goiter of a supernumerary thyroid body. **acute g.**, a rapidly developing goiter. **adenomatous g.**, an enlarged thyroid gland caused by an adenoma of the gland. **Basedowified g.**, toxic goiter. **colloid g.**, a large and soft form of goiter in which the gland presents distended spaces filled with colloid. **cystic g.**, one in which cysts form by mucoid or colloid degeneration. **diver g.**, **diving g.**, a goiter which is movable and is located sometimes above and sometimes below the sternal notch. **endemic g.**, goiter occurring in certain districts, particularly in the mountain regions of the Alps, Pyrenees, Carpathians, Andes, and Himalayas. **exophthalmic g.**, a disease marked by an enlarged pulsating thyroid gland, marked acceleration of the pulse-rate, exophthalmos, a tendency to profuse sweats, nervous symptoms, including fine muscular tremors, psychic disturbance, emaciation, and increased basal metabolism. The disease is probably dependent on lesions of the sympathetic nerve, and is regarded as a manifestation of excessive or perverted thyroid activity. Called also *Flajani's*, *Graves's*, *Parry's*, and *Basedow's disease*, *hyperthyroidism*, *thyrotoxicosis*, *toxic goiter*. **follicular g.** Same as *parenchymatous g.* **intrathoracic g.**, goiter in which a portion of the enlarged thyroid has descended into the thoracic cavity. **lingual g.**, an enlargement of the upper end of the original thyroglossal duct, forming a tumor at the posterior part of the dorsum of the tongue. **parenchymatous g.**, goiter marked by increase in the follicles and proliferation of the epithelium. **perivascular g.**, one which is pierced by a large blood-vessel. **retrovascular g.**, one which sends a process or processes behind an important blood-vessel. **simple g.**, simple hyperplasia of the thyroid gland. **substernal g.**, thyroid enlargement affecting the lower part of the isthmus. **suffocative g.**, a goiter which causes dyspnea by pressure. **toxic g.**, one which produces a toxic secretion causing toxemia. **wandering g.**, diver goiter.

goitrogenous (goi-trij'en-us). Producing goiter.

goitrogenous (goi-trøj'en-us). Producing goiter.

gold (gold). A yellow, metallic element occurring in masses or veins in rocks or in grains in the sand of rivers. Its symbol is Au (L. *aurum*); atomic weight, 197.2; specific gravity, 19.3. Gold and many of its compounds are used in medicine, chiefly as alternatives, and all the compounds are poisonous. **Alexander's g.**, gold rendered plastic by mixing with a waxy material. **g. and sodium chlorid**, a compound, AuCl_3NaCl . It is used in syphilis and in scrofula. Dose, $\frac{1}{10}$ gr. (0.03 gm.). **g.-cure**. Same as *Keeley cure*. See under *cure*. **g. equivalent**. See under *equivalent*. **g. monobromid**, a yellowish-gray compound, AuBr ; antiseptic, antiluetic, and anodyne. Dose, $\frac{1}{10}$ gr. (0.003-0.012 gm.). **g. monocyanid**, a yellow powder, insoluble in water, alcohol, or ether: used in tuberculosis. Dose, $\frac{1}{10}$ gr. (0.004-0.016 gm.). **Nürnberg g.**, a preparation containing 2.5 per cent. gold, 7.5 per cent. aluminum, and 90 per cent. copper. **g. tribromid**, an antiluetic, antiepileptic, and anodyne substance, AuBr_3 . Dose, $\frac{1}{10}$ gr. (0.005-0.012 gm.). **g. tricyanid**, a colorless, crystalline compound, $\text{Au}(\text{CN})_3\text{H}_2\text{O}$, soluble in water and alcohol: used in tuberculosis. Dose, $\frac{1}{10}$ gr. (0.004-0.016 gm.).

Golden's sign (göl'denz) [W. W. Golden, contemporary American physician]. See under *sign*.

goldenseal. See *Hydrastis*.

Goldflam's disease (golt'flahmz) [S. V. Goldflam, contemporary Polish physician]. Myasthenia gravis pseudoparalytica.

Goldscheider's percussion (gold'shi-derz) [Alfred Goldscheider, Berlin physician, born 1858]. See under *percussion*.

goldthread (gold'thred). Same as *Coptis*.

Goldthwait's symptom (gold'thwäts) [Joel Goldthwait, Boston orthopedic surgeon]. See *symptom*.

Golgi's cells, **corpuscles**, etc. [Camillo Golgi, Italian histologist at Pavia, 1844-1926]. See under *cell*, *corpuscle*, etc.

Goll's columns, **fibers**, **nucleus** [Friedrich Goll, Swiss anatomist, 1829-1904]. See under *column*, *fiber*, and *nucleus*.

Goltz's experiment (gölts) [Friedrich Leopold Goltz, German physician, 1834-1902]. See *experiment*.

gomenol (gom'en-ol). A complex oily liquid distilled from the leaves of *niavul* (*Melaleuca viridiflora*): antispasmodic, analgesic, and antiepileptic. Dose, 4-8 min. (0.25-0.50 c.c.), in capsules.

gome-si (go-ma-se'). A Japanese medicine, the dried fruit of *Schizandra ni-gra*, a climbing magnoliaceous shrub.

gomphiasis (gom-fi'as-is) [Gr. *γομφίος* molar tooth]. Looseness of the teeth.

gomphosis (gom-to'sis) [Gr. *γόμφος* nail]. An articulation in which a spike of bone fits into a socket, as the teeth into the maxillary bone.

Gomphrena (gom-fre'nah). See *paraludo*.

gonacratia (gon-ak-ra'she-ah) [Gr. *γονή* semen + *ἀκρατία* incontinence]. Spermatorrhea.

gonad (gon'ad), pl. *gon'ades* [L. *go'nas*, from Gr. *γονή* semen]. A gamete-producing gland; an ovary or testis.

gonadal (gon'ad-al). Pertaining to a gonad.

gonadectomy (gon-ad-ek'to-me) [*gonad* + Gr. *ἐκτομή* excision]. Removal of a sexual gland, either ovary or testicle.

gonadal (gon-ad'e-al). Pertaining to a gonad or reproductive organ.

gonado-advent (gon-ad-o-ad'vent). Gonadopause.

gonadopause (gon-ad'o-paws). The loss of gonadal activity which accompanies senility.

gonadotrope (gon-ad-o-trop). A person who exhibits gonadotropism.

gonadotropic (gon-ad-o-trop'ik). Pertaining to gonadotropism.

gonadotropism (gon-ad-ot'fo-pizm) [*gonad* + Gr. *τροπή* a turning]. An endocrine constitution in which the gonads or sex glands exercise a dominating influence.

gonaduct (gon'ad-ukt). The duct of a gonad; the oviduct, or sperm-duct.

gonagra (gon-ag'rah, gon-ag-rah) [Gr. *γόναυ* knee + *ἄγρα* seizure]. Gout in the knee.

gonal (go'nal). A proprietary preparation said to be the active principle of sandalwood oil: used in gonorrhea. Dose, 10-20 min. (0.66-1.33 c.c.).

gonalgia (go-nal'je-ah) [Gr. *γόναυ* knee + *ἄλγος* pain]. Pain in the knee.

gonangiectomy (gon'an-je-ek'to-me) [Gr. *γονή* seed + *ἀγγεῖον* vessel + *ἐκτομή* excision]. Surgical removal of the vas deferens.

gonargin (gon-ar'jin). A proprietary immunizing vaccine prepared from gonococci cultures.

gonarthritis (gon-ar-thri'tis) [Gr. *γόναυ* knee + *ἄρθρον* joint + *ιτις* inflammation]. Inflammation of a knee or knee-joint.

gonarthroace (gon-ar-throk'a-se) [Gr. *γόναυ* knee + *ἄρθρον* joint + *κάκη* evil]. An inflamed condition of the knee-joint; white swelling.

gonarthromeningitis (gon-ar'thro-men-in-j'i'tis) [Gr. *γόναυ* knee + *ἄρθρον* joint + *μηνιγξ* mem-

- brane]. Inflammation of the synovial membrane of the knee-joint.
- gonarthrotomy** (gon-ar-throt'-o-me) [Gr. γόνυ knee + ἀρθρον joint + τέμνειν to cut]. Surgical incision of the knee-joint.
- gonatagra** (gon-at-ag'-rah) [Gr. γόνυ knee + ἀγρα seizure]. Gout in the knee.
- gonatocele** (gon-at'-o-sēl) [Gr. γόνυ knee + κήλη tumor]. Tumor of the knee.
- gonecyst**, **gonecystitis** (gon'-e-sist, gon-e-sis'tis) [Gr. γονή semen + κύστις bladder]. A seminal vesicle.
- gonecystitis** (gon-e-sis-ti'tis). Inflammation of a gonecyst.
- gonecystolith** (gon-e-sis'to-lith) [gonecyst + Gr. λίθος stone]. A concretion in a seminal vesicle.
- gonecystopyosis** (gon'-e-sis-to-pi-o'sis) [gonecyst + Gr. πύσις suppuration]. Suppuration in a seminal vesicle.
- goneitis** (gon-e-i'tis) [Gr. γόνυ knee + -itis inflammation]. Inflammation of the knee.
- gonepoiesis** (gon'-e-poi-e'sis) [Gr. γονή semen + ποιῖν to make]. The secretion or formation of the semen.
- gonepoietic** (gon'-e-poi-et'ik). Pertaining to the secretion of semen.
- Gongylonema** (gon-jil-o-ne'mah). A genus of filarial nematodes. **G. hominis** has been found in the mouth and tongue. **G. labialis** has been found in the upper lip in Naples. **G. pulchrum** occurs in swine. **G. scutatum** occurs in cattle and sheep. **G. subtile**, found in mouth in Rome.
- gonidia** (go-nid'e-ah). Plural of *gonidium*.
- gonidiospore** (go-nid'e-o-spōr). An endospore formed within a spore capsule, as in *Mucor*.
- gonidium** (go-nid'e-um), pl. *gonidia* [Gr. γονή seed]. 1. A spore which is not born free, but is formed in a case or receptacle; an endospore. 2. One of the chlorophyll-bearing elements of lichens.
- goniocraniometry** (go'-ne-o-kra-ne-om'-et-re) [Gr. γωνία angle + craniometry]. The measurement of the cranial angles.
- goniometer** (go-ne-om'-et-er) [Gr. γωνία angle + μέτρον measure]. 1. An instrument for measuring angles. 2. A plank, one end of which may be tilted to any height; used for testing for labyrinthine disease.
- gonion** (go'-ne-on) [Gr. γωνία angle]. The tip of the angle of the lower jaw.
- gonioscope** (go'-ne-o-skōp) [Gr. γωνία angle + σκοπεῖν to see]. A kind of ophthalmoscope for examining the angle of the anterior chamber and for demonstrating ocular motility and rotation.
- gonioscopy** (go-ne-os'ko-pe). Examination of the eye with the gonioscope.
- gonitis** (go-ni'tis) [Gr. γόνυ knee + ιτις inflammation]. Inflammation of the knee. **fungous g.**, inflammation of the knee-joint in which the capsule is diffusely thickened. **g. tuberculo'sa**, tuberculosis of the knee-joint.
- gonoblennorrhea** (gon'-o-blen-o-re'ah). Gonorrhea.
- gonochorism** (gon-ok'-o-rizm) [Gr. γόνος seed + χωρίζω to separate]. Differentiation of sex.
- gonocide** (gon'-o-sid). Destructive to gonococcus.
- gonococcal** (gon-o-kok'al). Pertaining to gonococci.
- gonococcemia** (gon-o-kok-se'me-ah) [L. *gonococci* + Gr. αἷμα blood]. The presence of gonococci in the blood.
- gonococcic** (gon-o-kok'sik). Gonococcal.
- gonococcide** (gon-o-kok'sid) [*gonococcus* + L. *cādere* to kill]. Destructive to gonococci; an agent that destroys gonococci.
- gonococcin** (gon-o-kok'sin). A glycerin extractive of gonococci; employed in the cuti-reaction for gonorrhea.
- gonococcocide** (gon-o-kok'-o-sid) [*gonococcus* + L. *cādere* to kill]. Gonococcide.
- gonococcus** (gon-o-kok'us), pl. *gonococ'ci* [*gonorrhea* + *coccus*]. The specific organism of gonorrhea: the *Neisseria gonorrhoea*, discovered by A. Neisser in 1879.
- gonocyte** (gon'-o-sit) [Gr. γόνος generation + κύτος cell]. 1. The primitive reproductive cell of the embryo. 2. A gamete-producing cell.
- gonohemia**, **gonohemia** (gon-o-he'me-ah) [*gonorrhea* + Gr. αἷμα blood]. General gonorrheal infection.
- gonoiodin** (gon'-oi'-din). A proprietary gonorrhea remedy.
- Gonolobus**. See *condurango*.
- gonomery** (gon-om'er-e) [Gr. γόνος seed + μέρος part]. The condition in which the paternal and the maternal chromosomes remain in separate groups and do not completely fuse, as is the case in certain hybrids.
- gonone** (go-no'ne). See *Trombidium*.
- gononephrotome** (gon-o-nef'ro-tōm) [Gr. γόνος seed + νεφρός kidney + τομή section]. That part of the mesoderm which develops into the reproductive and excretory organs of the embryo.
- gonopepsin** (gon-o-pep'sin). A proprietary remedy for gonorrhea.
- gonophage** (gon'-o-fāj). The bacteriophage elaborated by the gonococcus in culture.
- gonophore**, **gonophorus** (gon'-o-fōr, go-nof'o-rus) [Gr. γόνος sperm, seed + φέρω to bear]. Any accessory generative organ, such as an oviduct, spermiduct, uterus, or seminal vesicle.
- gonorol** (gon'-o-rol). A proprietary remedy for gonorrhea, containing the combined active principles of true sandalwood oil.
- gonorrhea**, **gonorrhea** (gon-or-e'ah) [Gr. γονή semen + ρεῖν to flow]. A contagious catarrhal inflammation of the genital mucous membrane, mainly propagated by impure coitus, and due to a specific microorganism, the gonococcus of Neisser, *Neisseria gonorrhoea*. The disease is marked by pain, ardor urine, and a mucopurulent discharge; it may pass away without any serious result, or it may become chronic, involving the submucous tissue and producing urethral stricture or leaving a chronic discharge called *gleet*. It is frequently attended with complications, such as prostatitis, epididymitis, orchitis, cystitis, etc. It may also produce arthritis and endocarditis. **black g.**, gonorrhea in which the discharge is black or bloody.
- gonorrheal** (gon-or-e'al). Of or pertaining to gonorrhea.
- gonosan** (gon'-o-san). A preparation of the active principle of kava-kava and sandalwood oil: used for gonorrhea.
- gonotokont** (gon-o-to'kont). Same as *auxocyte*.
- gonotome** (gon'-o-tōm) [Gr. γόνος generation + τομή a cut]. That part of the mesoderm which develops into the reproductive organs of the embryo.
- gonotoxemia** (gon-o-toks-e'me-ah). Toxemia caused by gonorrheal pus.
- gonotoxin** (gon-o-toks'in). The toxin of the gonococcus.
- gonotropin** (gon-ot'ro-pin). A proprietary gonococcus vaccine.
- gonycampsis** (gon-e-kamp'sis) [Gr. γόνυ knee + κάμψις bending]. Abnormal curvature of the knee.
- gyncrotesis** (gon-e-kro-te'sis) [Gr. γόνυ knee + κρότησις striking]. Knock-knee.
- gonyctyposis** (gon'-e-ek-ti-po'sis) [Gr. γόνυ knee + ἐκτυπῶσις displacement]. Bow-legs.
- gonyocele** (gon'-e-o-sēl) [Gr. γόνυ knee + κήλη tumor]. Synovitis or tuberculous arthritis of the knee.

gonyoncus (gon-e-ong'kus) [Gr. γόνυ knee + ὄγκος tumor]. Tumor of the knee.

Goodpasture's stain [Ernest William Goodpasture, Boston pathologist]. See *stains, table of*.

goose-flesh (goos'flesh). See *cutis anserina*.

Gordiacea (gor-de-a'se-ah). An order of the Nemathelminthes commonly called "horse-hair" or "hair-cels."

Gordius (gor'de-us). A genus of the Gordiacea, the hair snakes. **G. aquaticus**, this species has been found as a parasite in man several times and seems to cause intestinal and nervous symptoms.

Gordon's reflex and sign (gor'donz) [Alfred C. Gordon, neurologist in Philadelphia, born 1869]. See under *reflex* and *sign*.

gorget (gor'jet). A wide-grooved lithotomy director.

gorit (gor'it). A proprietary calcium peroxid: used as an intestinal disinfectant.

gorondou (gor-on'roo). See *goundou*.

Gosselin's fracture (gos-lahz') [Léon Athanase Gosselin, French surgeon, 1815-1887]. See *fracture*.

gossypii radicles cortex (gos-ip'e-i ra-di'sis kor'teks) [L.]. Cotton-root bark. See under *Gossypium*.

gossypium (gos-ip'e-in). A concentration prepared from cotton-root: diuretic and emmenagogue. Dose, 1-5 gr. (0.066-0.333 gm.).

Gossypium (gos-ip'e-um), gen. *gossypii* [L.]. 1. A genus of malvaceous plants; cotton-plants. The bark of the root of various species (*cotton-root bark*) is diuretic, emmenagogue, and oxytocic, and is used in dysmenorrhea and amenorrhea. Dose, $\frac{1}{2}$ -1 dr. (1-4 gm.); of fluidextract, 15-45 min. (1-3 c.c.). 2. Cotton; the fiber or hairy down surrounding the seeds of the cotton-plant. See *cotton*, *cotton oil*. **g. purificatum**, purified cotton. **g. stypiticum**, styptic cotton. See under *cotton*.

gossypol (gos-ip'ol). A toxic substance extracted from cotton-seed.

Gottschalk's operation (got'shahks) [Sigmund Gottschalk, German surgeon, 1860-1914]. See under *operation*.

Gottstein's fibers, process (got'stinz) [Jacob Gottstein, otologist in Breslau, 1832-1895]. See under *fiber*, *process*.

gouge (gowj). A hollow chisel used in cutting and removing bone.

Goulard's cerate, extract (goo-larz') [Thomas Goulard, French surgeon, died 1784]. See *cerate* and *extract*.

Gould's sign (gooldz) [George Milbry Gould, American ophthalmologist, 1848-1922]. See *sign*.

Gould's suture (goolds) [Sir Alfred Pearce Gould, English surgeon, 1852-1922]. See under *suture*.

goundou (goon'doo). Osteoplastic periostitis of the nose: a disease seen in the natives of the west coast of Africa, and marked by headache, purulent nasal discharge, and the formation of symmetric painless swellings (bony exostoses) at the sides of the nose. It is thought to be a sequel of yaws. Called also *henpue*, *henpuys*, and *anakhre*.

Goundou (Castellani and Chalmers).

gout (gowt) [L. *gut'ta* a drop, because of the ancient belief that the disease was due to a "noxa" falling drop by drop into the joint]. A disease of metabolism dependent on the deposit of purin substances in the body, and attended by an excess of uric acid in the blood, the formation of chalky (monosodium urate) deposits in the cartilages of

the joints, and by attacks of acute arthritis. An attack of gout usually comes on suddenly in the night, and is marked by severe pain and inflammation of the great toe and by febrile symptoms, the symptoms tending to disappear in the morning, but returning at night. Other joints may become involved, especially the small joints of the extremities. It is brought on by excess in food and sweet wines. **abarticular g.**, that which does not affect the joints. **articular g.**, gout affecting the joints. **chalky g.** Same as *tophaceous g.* **irregular g.** Same as *abarticular g.* **latent g.**, **masked g.**, lithemia without the typical features of gout. **lead-g.**, gout ascribed to lead-poisoning. **misplaced g.**, **retrocedent g.**, gout in which the arthritic symptoms have disappeared and are followed by severe constitutional disturbances. **poor-man's g.**, gout ascribed to hard work, exposure, ill feeding, and excess in the use of malt liquors. **regular g.** articular gout. **retrocedent g.**, gout in which the joint symptoms suddenly abate, being replaced by cerebral, cardiac, and gastric disturbances. **rheumatic g.**, a name formerly employed for what is now known as atrophic arthritis, on the erroneous supposition that the disease was gouty in origin. See *atrophic arthritis*, under *arthritis*. **saturnine g.**, gout due to lead-poisoning. **tophaceous g.**, gout in which there are tophi or chalky deposits of sodium urate.

goutin (gowt'in). See *citarin*.

gouty (gow'te). Affected with or of the nature of gout.

Gowers's contraction, sign, etc. (gow'erz) [Sir William R. Gowers, English neurologist, 1845-1915]. See under *contraction*, *sign*, etc.

Goyrand's hernia (gwar-ahndz') [Jean Gaspard Blaise Goyrand, French surgeon, 1803-1866]. See under *hernia*.

Gr., gr. An abbreviation for *grain*.

graffian follicle, vesicles, etc. (grah'fe-an) [Reinhard de Graaf, Dutch physician and anatomist, 1641-1673]. See under *follicle*, *vesicle*, etc.

gracile (gras'il) [L. *gracilis*]. Slender or delicate.

gracilis (gras'il-is). See *muscles, table of*.

Grad. Abbreviation for *L. grada'tim*, by degrees.

gradatim (gra-da'tim) [L.]. Gradually.

Gradenigo's syndrome (grah-den-e'gōz) [Giuseppe Gradenigo, Italian physician, 1859-1926]. See under *syndrome*.

graduate (grad'u-āt) [L. *gradua'tus*]. 1. A person who has received a degree from a university or college. 2. A measuring-vessel marked by a series of lines.

graduated (grad'u-at-ed) [L. *gra'dus* step]. Marked by a succession of lines, steps, or degrees.

Graefe's sign, etc. (grah'fēz) [Albrecht von Graefe, German ophthalmologist, 1828-1870]. See *sign*.

graft (graft). A slip of skin or of other tissue for implantation. **animal g.**, a graft of tissue transferred from one of the lower animals to man. Called also *zoöplastic g.* **autodermic g.**, **autoepidermic g.**, a skin-graft taken from the patient's own body; dermatoplasty. **autoplastic g.**, a graft that is taken from the patient's own body. **bone-g.**, a piece of bone taken from an animal or from some bone of the patient and used to take the place of a removed bone or bony defect. **cotton-g.**, the insertion of a tuft of cotton into an ulcer to promote healing. **dermic g.**, a graft composed of a bit of the derma, or true skin. **epidermic g.**, a piece of epidermis implanted upon a raw surface. **fascicular g.**, a nerve graft in which the bundles of nerve-fibers are approximated and sutured separately. **frog-skin g's**, bits of sterilized skin from the belly of the frog for transfer to the surface of a chronic ulcer. **heterodermic g.**, a skin-graft taken from the body of a person other than the patient. **het-**

eroplasmic g., a graft that is taken from an animal of another species. **homoplasmic g.** Same as *autoplasmic g.* **isoplasmic g.**, a graft taken from another individual of the same species. **omental g's**, strips of omentum to cover the line of enterorrhaphy. **periosteal g.**, a piece of periosteum to cover a denuded bone. **skin-g.**, a bit of skin implanted to replace a lost part of the integument. **sponge-g.**, a bit of sponge inserted into a wound to promote the formation of granulations. **Thiersch's g.**, a graft consisting of a piece of skin and a certain thickness of the subcutaneous tissue. **thyroid g.**, a piece of the thyroid body implanted in the tissues as a remedy for myxedema. **zoöplasmic g.**, a piece of tissue transplanted from one of the lower animals to the human body.

Graham's law (gra'hāmz) [Thomas Graham, English chemist, 1805-1869]. See under *law*.

grain (grān) [L. *grānum*]. 1. A seed, especially of a cereal plant. 2. The twentieth part of a scruple: 0.065 gram. **kefir g.** See under *kefir*. **g's of paradise**, the unripe fruit of *Amo'mum melegueta* and other West African species of the genus: stimulant and diuretic; sometimes used in neuralgia. **V-shaped g's**, a system of separate grains of colorable material (each grain united with an achromatic thread) in the ovum.

grain-founder (grān-foun'der). See under *founder*.

grainage (grān'āj). Weight in grains or parts of a grain.

gram, gramme (gram) [Fr. *gramme*; Gr. *γράμμα* mark]. A weight in the metric system equal to 15.437+ grains troy.

gram-equivalent. The atomic weight of an element divided by its valence.

graminol (gram'in-ol). The blood-serum of normal cattle: used in treating cases of hay-fever. It is obtained from the cattle at the time the flowers causing the hay-fever are in bloom.

gram-ion (gram'í-on). A quantity of an ion whose weight in grams is numerically equal to the atomic weight of the ion.

grammeter (gram'me-ter). A unit of work, representing the energy expended in raising 1 gm. of weight 1 meter vertically against gravitational force. It is one-thousandth of a kilogrammeter, or about 98,000 ergs.

grammole (gram'möl). Gram-molecule.

gram-molecule (gram-mol'ek-ül). As many grams of a substance as are numerically equal to its molecular weight.

Gram-negative, Gram-positive. Bacteria of tissues which lose the stain or are decolorized by alcohol in Gram's method of staining are said to be Gram-negative; those that retain the stain are Gram-positive.

Gram's method, solution, etc. [Hans C. J. Gram, Danish physician, born 1853]. See *solution* and *staining, methods of*.

granatonin (gran-a-to'nin). Same as *pseudopelletierin*.

granatum (gra-na'tum), gen. *grana'ti* [L.]. The bark of the root or stem of *Punica grana'tum*, or pomegranate. It is a vermifuge and tenacide. Dose in powder, 20-30 gr. (1.333-2 gm.); of fluidextract, ½-2 fl.dr. (2-8 c.c.). See *pelletierin*.

Grancher's disease (grahn-shā'z) [Jacques Joseph Grancher, French physician, 1843-1907]. See under *disease*.

grandination (gran-din-a'shun) [L. *gran'do* hail]. The application, by means of the sand-blast, of fine particles, as seeds, to the surface of a part, for the stimulation of the skin.

grandira (gran-di'rah). A proprietary calomel ointment, used as a protective against syphilis.

grand mal (grahnd mahl). See under *epilepsy*.

Granger line (grān'jer) [Amedee Granger, New Orleans radiologist]. See under *line*.

granoplasm (gran'o-plazm). Granular protoplasm.

granular (gran'ü-lar) [L. *granula'ris*]. Made up of or marked by granules or grains.

granulase (gran'ü-lās). A ferment thought to be present in grain and to have the power of splitting starch into achroëdextrin and maltose.

granulation (gran-u-la'shun) [L. *granula'tio*]. 1. The division of hard or metallic substances into small particles. 2. The formation in wounds of small, rounded, fleshy masses; also a mass so formed. 3. A small, round, abnormal mass of lymphoid tissue, as on the conjunctiva of the lids or within the pharynx. **Bayle's g's**, gray tubercular nodules of the lung that have undergone fibroid degeneration. **Bright's g's**, the granulations of large white kidney. **exuberant g's**. Same as *proud flesh*. See *flesh*. **pachchionian g's**, pachchionian bodies. See under *body*. **Virchow's g's**, granulations containing ependymal and glia-fibers, found in the walls of the cerebral ventricles in general paralysis.

granulatio'es arachnoideales [B N A]. The pachchionian bodies. See under *body*.

granule (gran'ül) [L. *granulum*]. A small particle or grain; also a medicinal pellet. **acidophil g's**. Same as *alpha-g's*. **agminated g's**, small protoplasmic particles occurring in the blood, supposed to be disintegrated blood-corpuscles. **albuminous g's**, granules seen in the cytoplasm of many normal cells, which optically disappear on the addition of acetic acid, but are not affected by ether or chloroform. **alpha-g's**, the coarse, highly refractive, eosinophil granules of leukocytes. They are composed of albuminous matter. Called also *eosinophil* and *oxyphil g's*. **Altmann's g's**, rounded masses stainable with acid fuchsin, seen in the glandular cells of vertebrates; they are thought to be concerned in secretory activity. Called also *fuchsinophil g's* and *plasmosomes*. **amphophil g's**. Same as *beta-g's*. **azur g.**, **azurophil g.**, a granule which stains easily with azure dyes; they are coarse reddish granules and are seen in many lymphocytes. **Babes-Ernst g's**. See *metachromatic g.* **Balfour's infective g.**, a small refractive granule seen in the red blood-corpuscles in spirochetosis of fowls. **basal g.**, blepharoplast. **basophil g's**. Same as *gamma-g's*. **beta-g's**, fine, round, amphophil granules found in the marrow cavities, and sometimes in leukocytes. **Bettelheim's g's**, small mobile granules seen in the blood. **Bütschli's g's**, swellings on the bipolar rays of the amphiaster in the ovum. **carbohydrate g's**, particles of carbohydrate matter in the body fluids in the course of being assimilated. **chromatic g's**, **chromophilic g's**, particles of stainable substance, whether within or without a cell or a nucleus. **cone-g's**, the nuclei of the visual cells of the retina in its outer nuclear layer which are connected with the cones. **cytoplasmic g's**. See *albuminous g's*. **delta-g's**, round basophilic masses from the non-nuclear elements of the blood. **elementary g's**, hemokonia. **eosinophil g's**. See *alpha-g's*. **epsilon-g's**, neutrophil granules from the protoplasm of polynuclear leukocytes. **Fauvel's g's**, peribronchitic abscesses. **female g's**, the parts into which the female pronucleus breaks up after fertilization. **fuchsinophil g's**. See *Altmann's g's*. **gamma-g's**, basophilic granules found in the blood, marrow, and in the tissues. They are very abundant in leukemic blood. **Gravitz's g's**, minute granules seen in the red blood-corpuscles in the basophilia of lead-poisoning. **hyperchromatin g.**, azure granule. **infective g.**, a small granular body which carries the infection in trypanosomiasis. **iodophil g's**, granules staining brown with iodine, seen in polymorphonuclear leukocytes in various acute infectious diseases.

kappa g., azur granule. **Köl liker's interstitial g's**, various sized granules seen in the sarcoplasm of muscle-fibers. **male-g's**, the parts (four or six in number) into which the head of the spermatozoon divides after fertilization has taken place. **malignant g.** See *Hodgkin's disease*, under *disease*. **metachromatic g.**, deeply staining masses irregular in size and number seen in the protoplasm of various bacteria. Called also *metachromatic bodies* and *Babes-Ernst bodies*. **Much's g's**, granules and rods found in tuberculous sputum which do not stain by the usual processes for acid-fast bacilli, but do stain with Gram stain; regarded as modified tubercle bacilli. **Neusser's g's**, basophil granules seen about the nuclei of leukocytes. **neutrophil g's**. See *epsilon-g's*. **Nissl's g's**. See *Nissl's bodies*, under *body*. **oxyphil g's**. See *alpha-g's*. **pigment g's**, small masses of coloring-matter occurring in pigment cells. **Plehn's g's**, basophil granules in the conjugating form of malarial parasite. **protein g's**, minute particles of various proteins, some anabolic and others catabolic. **rod-g's**, the nuclei of rod-visual cells in the outer nuclear layer of the retina which are connected with the rods. **Schridde's g's**, granules similar to Altmann's granules, but smaller, found in plasma-cells and lymphocytes. **Schroen-Much g's**. Same as *Much's g's*. **Schron's g.**, a small body, of doubtful origin, seen in the germinal spot of the ovum. **Schüffner's g's**, coarse red granules seen in parasitized erythrocytes in tertian malarial fever on staining with polychrome methylene-blue. **Schügnier's g's**, Plehn's granules. **Schüle's g's**, Plehn's granules. **seminal g's**, the small granular bodies seen in the spermatic fluid. **thread g's**. See *mitochondria*. **zymogen g's**, granules in the cells of the salivary gland thought to contain the preliminary matter from which ptyalin is formed.

granulitis (gran-u-lī'tis). Miliary tuberculosis.

granulo-adipose (gran'u-lo-ad'ip-ōs). Showing fatty degeneration which contains granules of fat.

granuloblast (gran'u-lo-blast). An embryonic blood-cell containing granules and developing into a granulocyte.

granulocyte (gran'u-lo-sit) [*granular* + Gr. *kytos* cell]. Any cell containing granules, especially a leukocyte containing basophil or eosinophil granules in its protoplasm.

granulofatty (gran'u-lo-fat'e). Same as *granulo-adipose*.

granulogen (gran'u-lo-jen). A proprietary paraffin preparation: used as a protective dressing for burns and skin diseases.

granuloma (gran-u-lo'mah). A tumor or neoplasm made up of granulation tissue (Virchow). **g. annulare**, a condition marked by hard, reddish nodules arranged in a circle which enlarge until they form a ring. **coccidioidal g.**, a disease due to infection with the fungus *Coccidioides immitis* (*Oidium coccidioides*). The symptoms resemble those of tuberculosis, and the disease attacks the viscera as well as the bones, joints, and skin. Called also *odionomycosis*, *California disease*, *San Joaquin Valley disease*, and *dermatitis coccidioides*. **dental g.**, a small mass of granulation tissue containing bacterial deposits on the root of a tooth. **g. endemicum**, dermal leishmaniasis. **g. fungoides**, mycosis fungoides. **Hodgkin's g.**, Hodgkin's disease. **infectious g.**, granuloma caused by a specific microorganism, as tubercle. **g. inguinale**. Same as *ulcerating g. of pudenda*. **g. iridis**, a non-malignant and highly vascular growth of the iris, of various form. **g. malignum**, **malignant g.** See *Hodgkin's disease*, under *disease*. **g. pyogenicum**, a fungating pedunculated growth in which the granulations consist of masses of staphylococci. **g. sarcomatodes**, mycosis fungoides. **g.**

trichophyticum, a variety consisting of round or flat nodules, from a rose red to a cyanotic hue, disseminated or arranged in chains. It is due to a trichophyton. **g. tropicum**. Same as *yaws*. **ulcerating g. of the pudenda**, a tropical disease, being an ulcerating granuloma affecting the genitals and neighboring parts, the lesion being characterized by its chronic course and by the light shiny mass of granulating tissue which bleeds easily and exudes a thin sanguineous fluid with a fetid odor; called also *pudendal ulcer*, *granuloma inguinale*, and *granuloma venereum*. **venereal g.**, **g. vene'reum**. Same as *ulcerating g. of the pudenda*.

granulomatosis (gran-u-lo-mat-o'sis). The formation of multiple granulomata.

granuloplasm (gran'u-lo-plazm). Same as *entolaur*.

granuloplastic (gran'u-lo-plas'tik) [*granule* + Gr. *πλάσσειν* to form]. Forming granules.

granulopotent (gran'u-lo-po'tent). Capable of forming granules.

granulosarcoid, **granulosarcoma** (gran'u-lo-sar'koid, gran'u-lo-sar-ko'ma). Same as *mycosis fungoides*.

granulose (gran'u-lōs). The more soluble portion of starch. See *amylase*.

granulosis (gran-u-lo'sis). The formation of a mass of granules. **g. rubra nasi**, a disease of the skin of the nose, which sometimes extends to the cheeks, marked by a bright red color of the part, over which are scattered reddish specks and papules. It is associated with hyperidrosis of the area and is due to chronic inflammation of the vessels around the sweat apparatus.

granulosity (gran-u-lo'sit-e). A mass of granulations.

granum (gra'num), pl. *grana*. Latin for *grain*.

Granville's hammer [Joseph Mortimer Granville, English physician, 1833-1900]. A hammer-like instrument for performing vibratory massage.

Granville's lotion [Augustus Bozzi Granville, English physician, 1783-1871]. See *lotion*.

grape-cure (grāp'kūr). The treatment of disease by feeding the patient with grapes.

grape-sugar. See *glucose*.

grapes (grāps). 1. Granulations forming in severe cases of grease-heel in horses. 2. Bovine tuberculosis. **Carswell's g's**, tuberculous infiltration distributed in masses around the smaller bronchi like bunches of grapes: seen in pulmonary tuberculosis.

graphic (graf'ik) [Gr. *γράφειν* to write]. Written or drawn; pertaining to representation by diagrams. **g. method**, a method of making use of diagrams, tracings, etc., in studying scientific phenomena, as in the study of heart action by sphygmographic tracings, etc.

graphite (graf'it) [L. *graphites*, from Gr. *γραφίς* pencil]. Plumbago: a form of native mineralized carbon.

graphology (graf-ol'o-je) [Gr. *γραφή* writing + *λόγος* treatise]. The study of the handwriting as a means of diagnosis in diseases of the brain and nerves.

graphomotor (graf-o-mo'tor) [Gr. *γράφειν* to write + *motor*]. Pertaining to, or affecting, the movements required in writing.

graphorrhea (graf-or-e'ah) [Gr. *γράφειν* to write + *ῥοία* flow]. An insane condition marked by the writing of long lists of meaningless and unconnected words.

graphoscope (graf'o-skōp) [Gr. *γράφειν* to write + *σκοπεῖν* to view]. An instrument for treating myopia and asthenopia.

graphospasm (graf'o-spazm) [Gr. *γράφειν* to write + *σπασμός* spasm]. Writers' cramp.

grass. Any plant of the Order Gramineæ. Some of the grasses which by their pollen cause hay-fever are: *Bermuda g.*, *Cynodon dactylon*; *Johnson g.*, *Sorgum halapense*; and *Timothy g.*, *Phleum pratense*. **couch g.**, *dog g.*, *Triticum*. **star g.**, *Aletris*.

Grasset's law, sign (grah-săz') [Joseph Grasset, French physician, 1849-1918]. See under *law*.

grass-fire. Stalk disease of cattle.

grass-sickness. See under *sickness*.

Gratiola officinalis (gra-ti'o'-lah). The hedge-hyssop, a scrophulariaceous plant of Europe: purgative, emetic, and diuretic. Dose in powder, 15-30 gr. (1-2 gm.); of infusion, $\frac{1}{2}$ fl.oz. (15 c.c.).

Gratiolet's optic radiation (grah-te-o'-lăz') [Louis Pierre Gratiolet, French anatomist, 1815-1865]. See *optic radiation*, under *radiation*.

gratiolin (gra-ti'o'-lin). A poisonous glucosid, in yellow nodules or silky needles, $C_{20}H_{34}O_7$, from *Gratiola officinalis*.

grattage (grat-ahzh') [Fr.]. The removal of granulations by friction with a stiff brush.

Graupner's test (growp'nerz) [S. C. Graupner, contemporary German physician]. See under *tests*.

grave (grāv) [L. *gravis*]. Severe or serious.

gravedo (gra-ve'do) [L.]. Cold in the head, or nasal catarrh.

gravel (grav'el). Calculus matter from the kidneys or bladder, distinguished from stone only by its smaller size. See *calculus*.

Graves's disease (grävz) [Robert James Graves, Irish physician, 1797-1853]. See under *disease*.

grave-wax (grāv-waks). See *adipocere*.

gravid (grav'id) [L. *gravidā* pregnant]. Pregnant; with child; containing a fetus.

gravida (grav'id-ah). A pregnant woman.

gravidic (grav'id'ik). Occurring in pregnancy.

gravidin (grav'id-in). See *kyestin*.

gravidism (grav'id-izm). Pregnancy, or the sum of the symptoms, signs, and conditions associated with it.

gravidity (grav'id'it-e) [L. *graviditas*]. The condition of being with child; pregnancy.

gravimeter (grav-im'et-er) [L. *gravis* heavy + *metrum* measure]. An instrument for determining specific gravities.

gravimetric (grav-im-et'rik) [L. *gravis* heavy + *metrum* measure]. Pertaining to measurement by weight; performed by weight and measure.

gravistatic (grav-is-tat'ik). Due to gravitation, as, *gravistatic* pulmonary congestion.

gravitation (grav-it-a'shun). The force that tends to draw all bodies together.

gravitometer (grav-it-om-et-er). A balance for measuring specific gravity.

gravity (grav'it-e) [L. *gravitas*]. Weight; tendency toward the center of the earth. **specific g.**, the weight of a substance compared with that of an equal volume of another substance taken as a standard.

Grawitz's cachexia, cells, tumors (grah'witz) [Paul Grawitz, pathologist in Greifswald, born 1850]. See under *cachexia*, *cell*, and *tumor*.

gray (grā). 1. Of a hue between white and black. See the associated nouns. 2. The gray matter of the nervous system. **central g.**, relatively undifferentiated gray matter which retains its primitive position near the ventricles. **nervous g.**, Nissl's term for the unknown specific constituent of the gray matter of the nervous system. **silver g.**, **steel g.**, nigrosin.

grease (grēs). An inflammatory swelling in a horse's leg, with the formation of cracks in the skin and the excretion of oily matter.

grease-heel (grēs-hēl'). Same as *grease*.

greasene (grēs'en). An absorbent mixture used in gas masks.

green (grēn). 1. Having the color of fresh leaves or of grass. See the associated nouns. 2. A green coloring-matter or dye. **acid g.** Same as *light g.* **S. F. brilliant g.**, a basic dye, the sulphate of tetra-ethyl-diamino-triphenyl methane, $(C_6H_5)_2N(SO_2OH).C_6H_4:C(C_6H_5).C_6H_4.N(C_2H_5)_2$, having powerful bacteriostatic properties for Gram-positive organisms. **bromoresol g.**, an indicator, tetrabrom-meta-cresol-sulphonphthalein $(CH_3.C_6HBr_2OH)_2C.C_6H_4.SO_3ONa$: used in the determination of hydrogen ion concentration. **diamond g.**, malachite green. **diazin g.**, janus green. **emerald g.**, malachite green. **ethyl g.**, brilliant green. **fast acid g. N.** Same as *light g.* **S. F. Hoffman g.**, iodine green. **iodin g.**, a dye, hepta-methyl-rosanilin, $(CH_3)_2N(C_6H_4.C[C_6H_3(CH_3).N(CH_3)_2]C_6H_4.N(CH_3)_2)Cl$: used as a chromatin stain. **Janus g.**, a dye used as a histologic and bacteriologic stain. **Janus g. B.**, an azo dye used for staining chondriosomes intra vitam, $CH_3(NH_2).C_6H_2.N.(Cl.N.C_6H_4).C_6H_2(CH_3).N.N.C_6H_4.N(CH_3)_2$. **light g.**, **2 G**, **3 G**, **4 G**, or **2 GN**.

Same as *light green S. F.* **light g. N.**, malachite green. **light g. S. F.**, yellowish, an acid dye used as a plasma stain, $SO_3.C_6H_4.C[C_6H_4.N(C_2H_5).C_6H_2.C_6H_3.SO_3ONa]_2$. **malachite g. G**, brilliant green. **methyl g.**, a mixture of hepta- and hexamethyl-pararosaniin. The hepta compound is $(C_6H_5)_2N(C_6H_4.C[C_6H_4.N(CH_3)_2]C_6H_4.N(CH_3)_2)Cl$. For the hexa compound see *crystal violet*. **methylene g.**, one of the constituents of polychrome methylene-blue. It is a mononitromethylene-blue, $(C_6H_5)_2N.C_6H_4(SN).C_6H_4(NO_2).N(CH_3)_2Cl$. **new victoria g.**, malachite green. **Paris g.**, **Schweinfurth's g.** See *Paris green*. **solid g.**, malachite green. **Victoria g.**, a dye, tetramethyl-diaminodichloro-triphenyl-carbinol chlorid, $Cl_2.C_6H_3.C[C_6H_4.N(CH_3)_2]Cl$, having powerful bacteriostatic properties.

green soap. See *sapo viridis*. **tincture of g.** See *liniment of soft soap*.

green-stain (grēn'stān). Deposit of fungoid material upon the teeth.

green T stuff. A war gas mixture composed of 88 per cent. of xylol bromid and 12 per cent. of bromoacetone.

Greene's sign (grēnz) [Charles Lyman Greene, contemporary American physician]. See under *sign*.

greenheartin (grēn'har-tin). A yellow pigment, $C_{30}H_{40}O_8$, from the wood of the greenheart, *Nectandra rodiaei*, a tree of South America.

Greenhow's disease (grēn'howz) [Edward Head-lane Greenhow, English physician, 1814-1888]. See under *disease*.

greffotome (gref'o-tōm) [Fr. *greffe* graft + Gr. *τέμνειν* to cut]. An instrument for cutting grafts of tissue.

gregaloid (greg'al-oid) [L. *greg* flock + Gr. *εἶδος* form]. Formed by casual union of independent cells: said of a colony of protozoa.

Gregarina (greg-ar-i'nah) [L.]. A genus of parasitic protozoan microorganisms. No species is positively known to inhabit the human body, but it is said that they are found in some cancers of the human subject.

gregarine (greg'ar-in). Pertaining to the Gregarina.

gregarinosis (greg-ar-in-o'sis). A diseased condition due to infestation with gregarinae.

Gregory's powder (greg'o-rēz) [James Gregory, Scotch physician, 1753-1822]. Pulvis rhei compositus.

grege, grigri (gre'gre). Same as *Erythrophlaeum guineense* (q. v. under *Erythrophlaeum*).

grenetin (gren'et-in). A white gelatin prepared from the skins and cartilages of young animals.

Griesinger's sign or symptom (grē'zing-erz) [Wilhelm Griesinger, German neurologist, 1817-1868]. See under *sign*.

griffado (grif-ah'do). A person one of whose parents is white and the other a quadroon, and who thus has one-thirty-second black blood.

griffe des orteils (grêf da zor-ta') [Fr.]. Same as *claw-foot*.

Griffith's mixture (grif'iths) [Robert Eglesfeld Griffith, American physician, 1798-1850]. *Mistura ferri composita*.

Grindelia (grin-de'le-ah) [H. Grindel, 1776-1836]. A genus of American composite-flowered plants. The leaves and flowering tops of *G. camporum*, *G. cuneifolia*, and *G. squarrosa*, of the western United States, are used mainly in bronchitis, asthma, and in various coughs. Dose of extract, 5-15 gr. (0.333-1 gm.); of fluidextract, 10-60 min. (0.666-4 c.c.).

grindelin (grin'del-in). A bitter, crystalline alkaloid from *Grindelia robusta*.

grinders (grin'derz). The molar teeth.

grinders' asthma (grin'derz). See *asthma*.

grip, la grippe (grip) [Fr. *grippe*]. See *influenza*.

devil's g. See *epidemic pleurodynia*, under *pleurodynia*.

gripe (grip). A severe and often spasmodic pain in the bowels.

grippal (grip'al). Pertaining to grip, or influenza.

grippotoxin (grip-o-tok'sin). The toxin of influenza.

griserin (gri'ser-in). The sodium salt of loretin.

Grisolle's sign (gre-zolz') [Augustin Grisolle, French physician, 1811-1869]. See under *sign*.

gristle (gris'el). See *cartilage*.

Gritti's amputation (gre'tîz) [Rocco Gritti, surgeon in Milan, 1857-1920]. See *amputation*.

Grocco's sign, triangle (grok'ôz) [Pietro Grocco, physician in Florence, 1857-1916]. See under *sign*.

groin (groin) [L. *in'guen*]. The lowest part of the abdominal wall, near its junction with the thigh.

groove (groov). A shallow linear depression, especially one in a bone. **alveolingual g.**, the groove between the lower jaw and the tongue. **anterior paramedian g.**, the paramesial sulcus. See *sulcus*. **anterolateral g.**, a groove in the side of the medulla oblongata from which emerge the roots of the hypoglossal nerve. **anteromedian g.**, the anterior median fissure. **auriculoventricular g.**, the groove between the left auricle and left ventricle of the heart, lodging the coronary sinus. **basilar g.**, the depression on the upper surface of the basilar process of the occipital bone on which the medulla rests. **bicipital g.**, the trench on the anterior surface of the humerus that lodges the long tendon of the triceps. **Blessig's g.**, a trace in the embryonic eye corresponding in position with the future ora serrata. **cavernous g.**, the depression on the upper surface of the sphenoid bone that lodges the internal carotid artery and the cavernous sinus. **dental g.**, **primitive**, a groove in the border of the jaws of the embryo. **developmental g's**, fine grooves in the enamel which mark the junction of the primitive lobes of a tooth. **genital g.**, a furrow in the embryo on the rima pudendi which develops into the urethra. **hamular g.**, a groove at the base of the hamular process through which moves the tendon of the tensor veli palatini muscle. **Harrison's g.**, a groove on the chest, above the anterior insertion of the diaphragm, said to be caused by the muscular effort of breathing in dyspnea. **interventricular g.**, the depression on the external surface of the heart, marking the course of the septum between the two ventricles. **lacrimal g.**, a depression in the wall of the orbit for the lacrimal sac. **Liebermeister's g's**, anteroposterior grooves on the surface of the liver due to irregular development. **medullary g.** Same as *neural g.* **mesal g.**, a groove on the floor

of the fourth ventricle. **mesiolingual g.**, a groove over the junction of the fifth cusp on an upper molar tooth. **musculospiral g.**, a broad oblique groove on the posterior surface of the humerus for the musculospiral nerve and the superior profunda artery. Called also *sulcus radialis*. **mylohyoid g.**, a groove on the inner face of the ramus of the lower jaw for the mylohyoid artery and nerve. **nasal g.**, a longitudinal furrow on the inner surface of the nasal bone for a branch of the nasal nerve. **nasopalatine g.**, a furrow on the lateral surface of the vomer for the nasopalatine nerve. **nasopharyngeal g.**, a faint line between the nasal cavities and the rhinopharynx. **neural g.**, the groove assumed by the neural plate during its invagination to form the neural tube; called also *medullary g.* **olfactory g.**, a groove on the cribriform plate of the ethmoid bone on each side of the crista galli for the olfactory lobe of the cerebrum. **optic g.**, a trench on the upper surface of the sphenoid, in front of the olivary eminence, lodging the optic commissure. **posterior paramedian g.** See *sulcus intermedius posterior*. **posterolateral g.**, a groove on the medulla oblongata where are situated the roots of the spinal accessory, vagus, and glossopharyngeal nerves. **primitive g.**, a lengthwise furrow on the outer surface of the primitive streak. **sagittal g.**, a groove on the inner surface of the skull for the superior longitudinal sinus. **Sibson's g.**, a furrow sometimes seen at the lower border of the pectoralis major muscle. **subclavian g.**, a furrow along the middle of the clavicle for the subclavius muscle. **subcostal g.**, a groove on the inner surface of the lower edge of a rib. **supplemental g's**, grooves on the surface of a tooth which do not mark (as do the developmental grooves) the junction of the primitive lobes of the tooth. **trigeminal g.**, the embryonic structure which develops into the gasserian ganglion. **Verga's lacral g.**, a groove running downward from the lower orifice of the nasal duct. **vertebral g.** 1. The depression on either side of the spine. 2. A groove in the embryo formed from the primitive groove and developing into the medullary tube.

gross (grôs) [L. *grôs'sus* rough]. Coarse or large; macroscopic; taking no account of minutiae.

Gross's disease, pill (grôs'ez) [Samuel D. Gross, American surgeon, 1805-1884]. See under *disease* and *pill*.

Grossich's method (grôs'iks) [Antonio Grossich, surgeon in Fiume, 1849-1926]. See under *method*.

Grossman's sign (grôs'manz) [Max Grossman, American physician, born 1881]. See under *sign*.

grotan (gro'tan). A proprietary disinfectant preparation.

ground-bundle (grownd'bun-dl). See under *bundle*.

ground-itch. See under *itch*.

group. 1. An assemblage of objects having certain things in common. 2. A group of atoms forming a recognizable and usually a transferable portion of a molecule. **g.-agglutination**. See under *agglutination*. **alcohol g.** There are three alcohol groups: —CH₂OH is the primary, =CHOH the secondary, and ≡COH is the tertiary alcohol group. **blood g.** See *typing of blood*. **carotin g.** See under *carotin*. **characterizing g.**, a group of atoms which is characteristic of the class of substances in which it occurs. **colon-typhoid-dysentery g.**, a group of Gram-negative bacteria more or less resembling *Bacterium typhosum*. **complementophil g.**, the group of the amoceptor by means of which it is attached to the complement. **cytophil g.**, the group of the amoceptor by means of which it is anchored to the sensitive cell. **ergophore g.**, **toxophore g.**, **zymophore g.**, the group in an agglutinin, precipitin, or lysin which brings about the specific action when properly anchored by the haptophore

- group. **haptophore g.** See *haptophore*. **hemorrhagic-septicemia g.**, a group of bacteria of which *Pasteurella pestis* is the type organism. **hog cholera g.** See *paratyphoid-enteritidis g.* **paratyphoid-enteritidis g.**, a group of organisms which cause food poisoning in man and various diseases in animals. **proteus g.**, a group of bacteria of which *Proteus vulgaris* is the type organism. **Q. R. S. g.**, that portion of the electrocardiogram which is represented by these letters. See *electrocardiogram*. **g.-reaction.** See *group agglutination*, under *agglutination*. **saccharid g.** See under *saccharid*. **salmonella g.** See *paratyphoid-enteritidis g.* **sulphonic g.**, the group SO_2OH .
- group-agglutination.** See *agglutination*.
- group diagnosis, medicine.** See under *diagnosis and medicine*.
- Grove's cell** (gröv) [Sir William Robert Grove, English physicist, 1811-1896]. See under *cell*.
- Gruber's bougies, speculum** (groo'berz) [Josef Gruber, Austrian aurist, 1827-1900]. See *bougie* and *speculum*.
- Gruber's fossa** (groo'berz) [Wenaslaus Leopold Gruber, Russian anatomist, 1814-1890]. See *fossa*.
- Gruber's reaction** (gru'berz) [Max von Gruber, bacteriologist in Munich, 1853-1923]. See under *reaction*.
- Gruby's disease** (groo'bēz) [David Gruby, Hungarian physician in Paris, 1810-1898]. See under *disease*.
- gruel** (gru'el). A thin paste or porridge made of oatmeal or maize meal and water.
- gruffs** (grufs). The coarse part of a drug.
- grumose, grumous** (gru'moz, gru'mus) [L. *gru-mus* heap]. Clotted or lumpy.
- Grünbaum's test** (grēn'bowmz) [Albert S. Grünbaum, contemporary German physician]. See under *tests*.
- Grünbaum-Widal test** (grēn'bowm-ve'dal). See *Widal test*, under *tests*.
- grutum** (gru'tum) [L.]. Milium: a lump in the skin caused by the retention of the secretion of a sebaceous gland.
- Grynfeldt's triangle** (grin'felts) [J. G. Grynfeldt, French surgeon who died in 1913]. See under *triangle*.
- gryochrome** (grī'o-krōm) [Gr. γρῦ morsel + χρῶμα color]. Any nerve-cell in which the stainable matter of the cell-body appears as fine granules: used also adjectively.
- gryposis** (grī-po'sis) [Gr. γρύπσις]. Abnormal curvature.
- G. S.** An ethocain derivative used for local anesthesia. It is the hydrochlorid of beta-normal-butyl-allyl-amino-para-amino-benzoate.
- G. S. W.** Abbreviation for *gunshot wound*.
- Gt., gt.** An abbreviation for L. *gut'ta*, drop.
- Gtt., gtt.** An abbreviation for L. *gut'ta*, drops.
- guacamphol** (gwa-kam'fol). Same as *guaiacamphol*.
- guacetin** (gwas'et-in). Same as *guaiacetin*.
- guachamaca** (gwah-shah-mah-kah') [Sp.]. The poisonous bark of *Malouëtia nitida*, an apocynaceous tree of South America: used in hydrophobia and tetanus.
- guachamacin** (gwah-shah'mah-sin). A poisonous alkaloid from guachamaca.
- guacin** (gwa'sin). A bitter, resinous principle from *Mikania guaco*: stimulant, emetic, and diaphoretic.
- guaco** (gwah'ko) [Spanish American]. A name given to many South American plants, and especially to *Mikania guaco*: useful in asthma, dyspepsia, gout, rheumatism, and in skin diseases. Dose of aqueous extract, 3 min. (0.199 c.c.).
- guaconization** (gwah-kon-i-za'shun). The effect produced by the free administration of guaco.
- guaethol** (gwa'eth-ol). Ethyl guaiacol, $\text{OH.C}_6\text{H}_4\text{.O.C}_2\text{H}_5$, an oily liquid, soluble in alcohol, ether, and chloroform, but insoluble in water and gelatin. It is used like guaiacol. Dose, 4-8 min. (0.25-0.5 c.c.).
- guaiac** (gwi'ak). See *Guaiacum*.
- guaiacamphol** (gwi-ak-am'fol). An insoluble white powder, the camphoric-acid ester of guaiacol, $\text{C}_8\text{H}_{14}(\text{O.CO.C}_6\text{H}_4\text{O.CH}_3)_2$: used in the night-sweats of phthisis. Dose, 3-15 gr. (0.19-1 gm.).
- guaiacene** (gwi'as-ēn). A clear, oily liquid, $\text{C}_8\text{H}_8\text{O}$, derived by heat from guaiacum.
- guaiacetin** (gwi-ah-se'tin). A white, odorless powder, $\text{C}_8\text{H}_8\text{.OH.OCH}_2\text{COOH}$, or pyrocatechin monoacetate, soluble in water, formed by the action of chloracetic acid on pyrocatechin. It is used like guaiacol in phthisis. Dose, $\frac{7}{8}$ gr. (0.5 gm.).
- guaiacin lignum** (gwah-i'as-i lig'num) [L.]. The wood of *Guaiacum officinale* and *G. sanctum*, trees of tropical America; lignum vitæ: alterative, expectorant, and diaphoretic. Dose of ammoniated tincture, 5-30 min. (0.333-2 c.c.); of ordinary tincture, 5-60 min. (0.333-4 c.c.).
- guaiacin** (gwi'as-in). A resin-like principle from guaiacum.
- guaiacocain** (gwi'ah-ko-ka'in). An anesthetic guaiacol and cocain mixture: used in dentistry.
- guaiacodein** (gwi-ak-o'-de-in). A white, crystalline powder, $\text{C}_{22}\text{H}_{29}\text{O}_9\text{NS}$, the codein salt of guaiacol sulphonic acid.
- guaiacodyl** (gwi-ak'o-dil). See *cacodyliacal*.
- guaiacol** (gwi'ak-ol). The methyl-ether of pyrocatechin, a solid or a colorless, oily liquid, $\text{OH.C}_6\text{H}_4\text{O.CH}_3$, derived from beech creosote: useful in phthisis, and applied locally as an antiseptic. Dose, 2-10 min. (0.1-0.6 c.c.). **g. benzoate.** See *benzosal*. **g. biniodid**, a reddish-brown powder, $\text{OH.C}_6\text{H}_2\text{I}_2\text{O.CH}_3$: used in tuberculosis. Dose, 5-10 gr. (0.3-0.6 gm.). **g. cacodylate**, a reddish, crystalline compound: used hypodermically in phthisis. **g. camphorate**, guaiacamphol. **g. carbonate**, duotol; a crystalline body, $\text{CO}(\text{OC}_6\text{H}_4\text{OCH}_3)_2$: serviceable in typhoid fever and in tuberculosis, and safer than pure guaiacol. Dose, 15 gr. (1 gm.). **g. cinnamate**, styracol. **g. ethyl.** See *guaethol*. **g. ethyleneate**, an ester in needles, $\text{CH}_3\text{O.C}_6\text{H}_4\text{O.C}_2\text{H}_4\text{.OC}_6\text{H}_4\text{OCH}_3$: used in tuberculosis. Dose, $\frac{7}{8}$ -15 gr. (0.5-1 gm.). **g. methylglycholate**, monotal. **g. oleocreoosote**, a yellow, oily liquid: used in tuberculosis. Dose, 15 min. (1 c.c.). **g.-phosphal**, guaiacol phosphite, $(\text{CH}_3\text{O.C}_6\text{H}_4\text{O})_3\text{P}$; a salt in white or colorless needles: used in tuberculosis. Daily dose, 15-30 gr. (1-2 gm.). **g. phosphate**, a salt in colorless tablets, $(\text{CH}_3\text{O.C}_6\text{H}_4\text{O})_3\text{PO}$: used in the hectic fever of tuberculosis. Dose, 4 gr. (0.25 gm.). **g. salicylate**, a white, crystalline derivative of guaiacol and salicylic acid, $\text{C}_6\text{H}_4(\text{OH})\text{COO.C}_6\text{H}_4\text{OCH}_3$. It is used as an antirheumatic and intestinal antiseptic. Dose, 5-15 gr. (0.333-1 gm.). **g. succinate**, an ester of guaiacol, in fine, silky needles, $\text{C}_8\text{H}_8\text{O}_4\text{.(C}_6\text{H}_4\text{OCH}_3)_2$. **g. sulphonate.** See *thiocol*. **g. valerianate.** See *geosole*.
- guaiacola** (gwi-ak-o'lah). A proprietary guaiacol and cod-liver oil preparation.
- guaiacolate** (gwi-ak'o-lat). A salt of guaiacol.
- guaiacolize** (gwi'ak-ol-iz). To treat with or bring under the influence of guaiacol.
- guaiacophosphal** (gwi'ak-o-fos'fal). Guaiacol phosphite: a proprietary remedy.
- guaiacose** (gwi'ak-ōs). A liquid somatose containing 5 per cent. of calcium guaiacolsulphonate, used as an antiseptic, expectorant, tonic, and nutrient.
- Guaiacum** (gwi'ak-um). A genus of zygomylaceous trees, chiefly natives of South America and the West Indies. *G. sanctum* and *G. officinale* (lignum vitæ) afford an official resin. **amber g.**, a very pure form of guaiacum. **oil of g.** I. An

emphysematic oil obtained by distilling guaiacum wood. 2. Guaiacum resin, 1 part; oil, 10 parts: used as an eye anesthetic. **resin of g.**, gum guaiac, or the resin of guaiacum wood: alterative, stimulant, and useful in rheumatism. Dose, 5-30 gr. (0.333-2 gm.); of tincture, 1 fl.dr. (4 c.c.); of ammoniated tincture, 30 min. (2 c.c.).

guaiacyl (gwi'as-il). A bluish-gray powder, guaiacol-sulphonic acid: a local anesthetic; used subcutaneously. **g. calcium**, calcium ortho-guaiacol-sulphonate, $[\text{CH}_3\text{O.C}_6\text{H}_3(\text{OH})\text{SO}_3]_2\text{Ca}$, a blue-gray powder: employed as a local anesthetic.

guaiadol (gwi'ad-ol). Paraoidoguaiacol: used in pulmonary tuberculosis and tuberculous sarcoma. Dose, 1 gr. (0.6 gm.).

guaiiform (gwi'af-orm). A brownish-yellow antiseptic powder, methylene diguaiacol, $\text{CH}_2(\text{C}_6\text{H}_3(\text{OH})\text{OCH}_2)_2$, a combination of guaiacol and formaldehyd.

guaiakinol (gwi'ak-in-ol). Guaiacolate of quinin.

guaialin (gwi'al-in). A greenish powder, methyl-diguiacol-benzoate ester. It is diuretic, antipyretic, and antiseptic. Dose, 10-20 gr. (0.65-1.33 gm.).

guaiamar (gwi'am-ar). A white, crystalline powder, guaiacol glyceryl ester, $\text{CH}_3\text{O.C}_6\text{H}_4\text{O.C}_3\text{H}_7\text{O}_2$, formed by treating guaiacol with anhydrous glycerin. An intestinal and genito-urinary antiseptic, useful in tuberculosis, and used as an ointment in rheumatism. Dose, 5-20 gr. (0.333-1.333 gm.).

guaiaperol (gwi-ap'er-ol). Piperidin guaiacolate, a crystalline agent, used in tuberculosis. Dose, 4-20 gr. (0.26-1.333 gm.).

guaiakin (gwi'ah-kwin). Guaiacol bisulphonate of quinin, $\text{C}_6\text{H}_3\text{O}_2\text{CH}_2\text{HSO}_3\text{C}_6\text{H}_3\text{O}_2\text{N}_2$, a yellow, crystalline powder, combining the antiseptic powers of guaiacol with the antiperiodic action of quinin. It is used as an intestinal antiseptic. Dose, 1-5 gr. (0.065-0.333 gm.).

guaiakinol (gwi'ak-in-ol). Quinin dibromguaiacolate.

guaiarsin (gwi'ar-sin). A proprietary preparation, said to be cacodylate of guaiacol: used in influenza and tuberculosis. Dose, 1 gr. (0.065 gm.).

guaiasanol (gwi-ah-sa'no). The hydrochlorid of diethyl-glycocoll-guaiacol, $\text{CH}_3\text{O.C}_6\text{H}_4\text{O.CO.CH}_2\text{N}(\text{C}_2\text{H}_5)_2\text{HCl}$, a non-toxic antiseptic and anesthetic agent. It is used in diseases of the eye in 2-5 per cent. solution, and is employed in diseases of the lungs and for the destruction of *Oxyuris vermicularis*. Dose, 45 gr. (3 gm.).

guaiasotol (gwi-as'o-tol). A proprietary syrup of guaiacol.

guaiodol (gwi'od-ol). A preparation of iodine, bismuth, and guaiacol: antiseptic, styptic, and astringent.

guanase (gwan'as). An enzyme found in various tissues and converting guanin into xanthin.

guanidin (gwahn'id-in). A poisonous base, the amidin of amino carbamic acid, $\text{NH}_2\text{C}(\text{NH}_2)_2$.

guanin (gwan'in). A white, crystalline base, 2-amino-6-oxypurin, $\text{C}_4\text{H}_5\text{N}_3\text{O}$, found in guano, fish scales, leguminous seedlings, and various animal tissues. It has a pearly lustre and is used in making artificial pearls. It is one of the decomposition products of nuclein and occurs as a white deposit in the tissues of swine affected with a kind of gout.

guano (gwah'no). The excrement of sea-fowl: used externally in skin diseases.

guanosin (gwan'o-sin). A nucleosid from guanylic acid. It is composed of guanin and a pentose. **g. deaminase**, an enzyme which converts guanosin into xanthosin. **g. hydrolase**, an enzyme which converts guanosin into guanin and sugar.

guanylic acid (gwan-il'ik). See under *acid*.

guarana (gwah-rah'nah) [Tupi-Guarani]. A dried paste prepared from the seeds of *Paullinia cupa'na*, a tree of Brazil: a nerve stimulant, useful in headache. Dose, 1-2 dr. (4-8 gm.); of fluidextract, 5-30 min. (0.333-2 c.c.).

guaranin (gwah-rah'nin). An alkaloid, $\text{C}_8\text{H}_{10}\text{N}_4\text{O}_2$, from guarana, nearly identical with caffeine. Dose, 1-3 gr. (0.066-0.199 gm.).

Guarnieri's bodies or corpuscles (gwar-ne-er'-ez) [Giuseppe Guarnieri, Italian physician, 1856-1918]. See under *body*.

guathol (gwath'ol). A proprietary disinfectant: pyrocatechin ethyl ether.

guavacin (gwav'as-in). An anthelmintic alkaloid, $\text{C}_8\text{H}_9\text{NO}_2$, from the areca-nut, in colorless crystals.

guavacolin (gwav-ak'o-lin). The methyl ester of guavacin.

gubernaculum (gu-ber-nak'u-lar). Pertaining to a gubernaculum.

gubernaculum (gu-ber-nak'u-lum) [L. "helm"]. Something which guides. **g. dent'tis**, a band of connective tissue connecting the dental sac of the embryo with the gum. **Hunter's g.** Same as *g. testis*. **g. testis**, the fetal cord attached to the lower end of the epididymis and to the bottom of the scrotum that governs the descent of the testis.

Gubler's icterus, line, paralysis, tumor, etc. (goob'lerz) [Adolphe Gubler, French physician, 1821-1870]. See *icterus, line, paralysis, tumor*, etc.

Gudden's commissure, ganglion, etc. [Bernhardus von Gudden, German neurologist, 1824-1886]. See *commissure, ganglion*, etc.

Guéneau de Mussy's point (ga-no' de mis-az') [Noël François Odon Guéneau de Mussy, French physician, 1813-1885]. See *de Mussy's point*, under *point*.

Guenz. See *Günz*.

Guenzburg. See *Günzburg*.

Guérin's fold, glands, sinus, etc. (ga-raz') [Alphonse Guérin, French surgeon, 1816-1895]. See *fold, gland, sinus*, etc.

guha (gu'hah). A sort of bronchial asthma, epidemic in the island of Guam.

guide (gid). 1. A grooved sound. 2. A filiform bougie over which a tunneled sound is passed, as in stricture of the urethra.

guillotine (gil'o-tén) [Fr.]. An instrument for cutting off a tonsil or uvula.

guinea-pig (gin'e-pig). A small rodent, *Ca'via coba'ya*, used extensively for experimental work.

guinea-worm (gin'e-worm). See *Dracunculus med-iensis*.

Guinon's disease (ge-nawz') [Georges Guinon, French physician, born 1859]. See under *disease*.

guipsine (gip'sin). A proprietary preparation from mistletoe: used for lowering arterial tension in arteriosclerosis.

gujasanol (gu-jas'an-ol). Diethylglycocollguaiacol hydrochlorid: anesthetic and antiseptic. Dose, 30 gr. (2 gm.); locally in 0.1-2 per cent. solution.

gulf, Lecat's (gulf). The hollow of the bulbous portion of the urethra.

gulhai (gul'hi). An endemic cattle plague of Sahel, one of the Italian possessions in the Red Sea.

Gull's disease (gulz) [Sir William Withey Gull, English physician, 1816-1890]. The idiopathic form of myxedema.

Gull-Sutton disease [See *Gull and Sutton*]. Arterio-capillary fibrosis.

gullet (gul'et). The esophagus; also the pharynx.

Gullstrand's slit lamp (gul'strandz) [Alvar Gullstrand, Swedish ophthalmologist, born 1862]. See under *lamp*.

glucose (gu'lōs). A hexose isomeric with dextrose.

gum (gum) [L. *gum'mi*]. 1. A mucilaginous excretion from various plants. 2. See *gingiva*. **acaroid g.**, a resin derived from *Xanthorrhoea hastilis* and *X. arbo'rea*, tall liliaceous plants growing in Australia (named from *Aca'rois*, a former generic name). **animal g.**, a polysac-

charid isolated from various proteins and tissues; possibly an impure chondroitin. **g. arabic**. See *acacia*. **Australian g.** See *wattle g.* **Bassora g.**, a gum resembling gum arabic, from Persia. **g. benjamin**, **g. benzoïn**, benzoïn. **blackboy g.** Same as *acaroid g.* **blue g.** See *Eucalyptus*. **Botany Bay g.**, acaroid gum (*q. v.*). **British g.** See *dextrin*. **cape g.**, a gum from *Acacia horrida*. **chagual g.**, a gum like gum arabic, derived from *Pu'ya lanuginosa*, a tree of Chili. **cherry-g.**, a gum that exudes from cherry and plum trees. **g. chicle**. See *chicle*. **doctor g.** Same as *hog g.* **eucalyptus g.** See *red g.* **g. guaiacum**, the resin of guaiacum. **hog g.**, a gum from *Rhus meto'pium* of South America. **Kordofan g.**, the best variety of gum arabic from Kordofan and adjacent region. **mesquite g.**, a gum from *Prosopis juliflora*, of Texas. **g. opium**. See *opium*. **Orenburg g.**, an edible, sweetish, gummy, and somewhat resinous substance collected in Russia from larch trees after forest fires: it is soluble in water. **red g.**, an exudation from the bark of *Eucalyptus rostrata*: used as an astringent and in throat affections. **g. senegal**, *acacia*. **succory g.**, a narcotic, resinous exudation from *Chondrilla juncea*, a composite-flowered plant. **g. thus**, turpentine. **g. tragacanth**. See *tragacanth*. **wattle g.**, the gum of several Australian species of *Acacia*, an excellent substitute for true gum arabic.

gumanin (gu'man-in). White dammar.

gum-boil. A parulis or swelling of the gums caused by an abscess at the root of a tooth.

gumma (gum'ah), pl. *gum'mata* [L.]. A soft, gummy tumor occurring in tertiary syphilis, and made up of tissue resembling granulation tissue. Gummata form firm nodules, which grow slowly and finally disappear. **tuberculous g.**, an infectious granuloma of tuberculous origin.

gummate (gum'at). An arabate.

gummatous (gum'at-us). Of the nature of gumma.

gummi (gum'i). Latin for *gum* (of plants).

gummose (gum'os). A sugar, $C_6H_{12}O_6$, formed by the action of dilute acids upon animal gum.

gummy (gum'e). Resembling a gum or a gumma.

gum-resin (gum-rez'in). A concrete juice exuding from various trees. The gum-resins consist of a principle soluble in water and insoluble in alcohol, combined with a volatile oil or resin soluble in alcohol, but not in water, and include ammoniac, asafetida, euphorbium, galbanum, gamboge, myrrh, olibanum, and scammony.

gums (gumz). See *gingiva*.

gun-cotton (gun-kot'n). Same as *pyroxylin*.

Günz's ligament (gints) [Justus Gottfried Günz, German anatomist, 1714-1780]. See *ligament*.

Günzburg's reagent, test (gints'boorgz) [Alfred Günzburg, German physician of the nineteenth century]. See under *reagent* and *tests*.

gurgulio (gur-gu'le-o) [L.]. The uvula.

gurjun (goor'jun). Gurjun balsam; an oleoresin from *Dipterocarpus laevis*, a tree of southern Asia. It is used as an expectorant, for gonorrhea, and for leprosy. Dose, 10-50 min. (0.666-3.333 c.c.).

guru (goo'roo). Same as *kola*.

Gussenbauer's clamp, operation, suture (goos'en-bow-erz) [Carl Gussenbauer, German surgeon, born 1842]. See *clamp, operation, suture*.

gustation (gus-ta'shun) [L. *gusta'tio*, from *gusta're* to taste]. The sense of taste.

gustatory (gus'tat-o-re) [L. *gustato'rius*]. Pertaining to the sense of taste.

gustometry (gus-tom'et-re) [L. *gusta're* to taste + Gr. *μετρον* measure]. The measurement of the acuity of the sense of taste.

gut (gut). 1. The intestine or bowel. 2. Catgut.

fore-g., **head-g.**, an embryonic organ whence

are derived the pharynx, esophagus, stomach, and duodenum. **hind-g.**, the lower part of the embryonic alimentary tract which develops into the colon. **mid-g.**, the mesogaster. **tail-g.**, a prolongation of the archenteron into the tail of the early embryo.

Guthrie's muscle (guth'rēz) [George James Guthrie, English surgeon, 1785-1856]. The compressor urethrae muscle.

gutta (gut'ah), pl. *gut'tae* [L. for "drop"]. A minute spheric mass of liquid: assumed to be equal to a minim (*q. v.*). **g-percha**, the coagulated milky juice of various trees of the genus *Palaoquium*. **g. rosa'cea**. Same as *acne rosacea*. **g. sere'na**, amaurosis.

Guttat. Abbreviation for *guttatim*.

guttate (gut'at). Characterized by lesions that are drop-shaped.

guttatim (gut-a'tim) [L.]. Drop by drop.

gut-tie (gut-ti). 1. A twisting of the intestine of animals, causing colicky pains. 2. A condition in cattle in which a loop of intestine passes through a tear in the peritoneum and is held there, producing obstruction of the bowels.

Guttmann's sign (goot'mahnz) [Paul Guttmann, Berlin physician, 1834-1893]. See under *sign*.

Gutt. quibusd. Abbreviation for *L. gut'tis quibus'dam*, with a few drops.

guttur (gut'ur). Latin for *throat*.

guttural (gut'u-ral). Pertaining to the throat.

gutturrotetany (gut'u-ro-tet'an-e) [*guttur* + *tetany*]. A guttural spasm, resulting in a kind of stutur.

guvacin (gu'vas-in). An alkaloid from the arecanut; teniacidal.

Guy de Chauliac. See *Chauliac*.

Guy's pill (giz) [William Augustus Guy, English physician, 1819-1900]. See under *pill*.

Guyon's amputation, isthmus, sign (ge-yonz') [Félix Jean Casimir Guyon, surgeon in Paris, 1831-1920]. See under *amputation, isthmus*, and *sign*.

Gwathmey's oil-ether anesthesia (gwath'mēz) [James T. Gwathmey, contemporary New York surgeon]. See under *anesthesia*.

Gye-Barnard organism. Gye and Barnard assert that a filtrable virus is the cause of cancer.

gymnastics (jim-nas'tiks) [Gr. *γυμναστικός* pertaining to nakedness]. Systematic muscular exercise. **ocular g.**, systematic exercise of the eye muscles in order to secure proper movement, accommodation, or fixation. **Swedish g.**, a system of movements made by the patient against resistance on the part of the attendant. **vocal g.**, methodic exercise of the voice for the purpose of increasing the lung expansion.

Gymnema (jim-ne'mah). A genus of trees. The leaves of *G. sylvestre*, of Africa, are used to disguise the taste of unpleasant medicines.

gymnemic acid (jim-nem'ik). See under *acid*.

Gymnoascæ (jim-no-as'e-e). A family of the ascomycetous fungi in which the reproductive organs are in the form of naked asci.

gymnobacteria (jim'no-bak-te're-ah) [Gr. *γυμνός* naked + *bacteria*]. Non-flagellate bacteria.

gymnocarpous (jim-no-kar'pus) [Gr. *γυμνός* naked + *καρπός* fruit]. Having the hymenium exposed during spore formation: said of certain fungi.

gymnocyte (jim'no-sit) [Gr. *γυμνός* naked + *κύτος* cell]. A cell with no cell wall.

gymnophobia (jim-no-fō-be-ah) [Gr. *γυμνός* naked + *φόβος* fear]. Insane dread of the sight of the naked body.

gymnoplast (jim'no-plast) [Gr. *γυμνός* naked + *πλαστός* formed]. A mass of protoplasm without an inclosing wall.

gymnosperm (jim'no-sperm) [Gr. *γυμνός* naked + *σπέρμα* seed]. A plant in which the seeds are not inclosed in an ovary.

gymnospore (jim'no-spōr). A spore without any protective envelope.

gymnosporidia (jim'no-spo-rid'e-ah) [Gr. *γυμνός* naked + *sporidium*]. A group of animal micro-organisms, examples of which have been found in human blood.

gynæcology (jin-e-kol'o-je). See *gynecology*.

gynæcophorus (jin-e-kol'o-rus). Same as *Bilharzia*.

gynandrisim (jin-an'drizm) [Gr. *γυνή* woman + *άνδρ* man]. 1. Hermaphroditism in the male. 2. Partial pseudohermaphroditism in the female, characterized by hypertrophy of the clitoris and union of the labia majora, simulating in general appearance the penis and scrotum.

gynandroid (ji-nan'droid) [Gr. *γυνή* woman + *άνδρ* man]. A hermaphrodite woman resembling a man.

gynandromorphism (jin-an-dro-mor'fizm) [Gr. *γυνή* female + *άνδρ* male + *μορφή* form]. The quality of having both male and female characters.

gynandromorphous (jin-an-dro-mor'fus). Having both male and female qualities.

gynase (jin'ās) [Gr. *γυνή* female + *-ase* ferment]. A hypothetical enzyme-like substance regarded as the material basis of femaleness in heredity. Cf. *andrase*.

gynatresia (jin-ah-tre'ze-ah) [Gr. *γυνή* woman + *α* priv. + *τρήσις* perforation]. An imperforate condition of the vagina.

gynecic (jin-e'sik). Pertaining to women.

gynecium, gynæcium (jin-e'se-um) [Gr. *γυνή* woman + *οἶκος* house]. The female part of a flower.

gynecoiatry (jin-e-ko-i'at-re). Gyniatrics.

gynecologic, gynæcological (jin-e-ko-lo'jik, jin-e-ko-lo'ik-al). Pertaining to gynecology.

gynecologist (jin-e-kol'o-jist). A person skilled in gynecology.

gynecology (jin-e-kol'o-je) [Gr. *γυνή* woman + *λόγος* discourse]. That branch of medicine which treats of women's constitution and diseases, especially of the genital, urinary, and rectal diseases occurring in women.

gynecomania (jin-e-ko-ma'ne-ah) [Gr. *γυνή* woman + *μανία* madness]. Satyriasis.

gynecomastia (jin'e-ko-mas'te-ah) [Gr. *γυνή* woman + *μαστός* breast]. Excessive size of the male mammary glands.

gynecomastism (jin-ek-o-mas'tizm). Gynecomastia.

gynecomasty (jin'e-ko-mas-te). Gynecomastia.

gynecomazia (jin-e-ko-ma'-ze-ah). Same as *gynecomastia*.

gynecomathy (jin-e-kop'-ath-e) [Gr. *γυνή* woman + *πάθος* disease]. A disease peculiar to women.

gynephobia (jin-e-fo'be-ah) [Gr. *γυνή* woman + *φοβός* fear]. Dread of or morbid aversion to the society of women.

gynoplasty (jin'e-plas-te). Same as *gynoplastics*.

gynergen (jin'er-jen). A proprietary liquid preparation of ergotamine tartrate. It is proposed for use like ergot to cause uterine contraction; also in hemorrhage following abortion, after curettage, and in postpartum endometritis. Dose, 1 to 2 mg. orally; 0.25 mg. intramuscularly or hypodermically

gynesin (jin'es-in). A nitrogenous compound found in small amounts in female urine, $C_{19}H_{23}N_3O_3$.

gyniatrics (jin-e-at'riks) [Gr. *γυνή* woman + *ιατρικός* medical]. Treatment of diseases of women.

gyniatry (jin-e-at're). Gyniatrics.

gynocardate (jin-o-kar'dāt). A salt of gynecardic acid.

Gynocar'dia odora'ta. A tropical tree; the oil from the seeds has been used in the treatment of leprosy. See *chaulmoogra*.

gynocardin (jin-o-kar'din). A cyanophoric glucosid from *Gynocardia odorata*. It yields glucosic, prussic acid, and an unknown substance, $C_6H_5O_4$, on hydrolysis.

gynocyanauridizarin (jin'o-si'-an-aw-rid'za-rin). A crystalline remedy, $(C_5H_{21}O_2)KClNOAu_3$, it being a principle from *Gynocar'dia lancifolia'ta* combined with gold cyanid; given in minute doses for tuberculosis and leprosy.

gynodyne (jin'o-din). A proprietary preparation of acetylparaminophenyl-acetylsalicylate: used for the after-pains of childbirth.

gynogenesis (jin-o-jen'es-is) [Gr. *γυνή* woman + *γενεσις* production]. Development of an egg which contains only maternal chromosomes and nuclei.

gynoplastics (jin-o-plas'tiks) [Gr. *γυνή* woman + *πλαστός* formed]. The plastic surgery of the female reproductive organs.

gynoplasty (ji'no-plas-te). Gynoplastics.

gynosin (ji'no-sin) [Gr. *γυνή* woman]. A proprietary remedy for disease of the female reproductive organs.

gynoval (jin'o-val). Isoborneol isovalerate, $(CH_3)_2-CH.CH_2.COO.C_{10}H_{17}$: used in functional neuroses. Dose, 7 gr. (0.5 gm.) three times a day.

gypsum (jip'sum) [L.; Gr. *γύψος*]. Calcium sulphate: when calcined, it becomes plaster-of-Paris, much used in making permanent dressings for fractures.

gyraldose (ji-ral'dōs). A proprietary antiseptic for local gynecologic use.

gyrate (ji'rāt) [L. *gyra'tus* turned round]. Twisted in a ring or spiral shape.

gyration (ji-ra'shun). Revolution in a circle or in circles.

gyre (jir) [L. *gy'rus*; Gr. *γῦρος* circle]. See *gyrus*. **dentate g.** See *convolution, dentate*.

gyrencephalic (ji-ren-sef-al'ik) [Gr. *γῦρος* gyrus + *ἐγκέφαλος* brain]. Having a brain marked by convolutions. Cf. *lissencephalic*.

gyri (ji'ri) [L.]. Plural of *gyrus*. **g. bre'ves in'sulæ**. Same as *preinsular gyrus*. **g. oper'ti**, the convolutions of the island of Reil.

gyrochrome (ji'ro-krōm) [Gr. *γῦρος* turn + *χρῶμα* color]. A nerve-cell in which the Nissl bodies have a ring-like arrangement in the cytoplasm. Cf. *arkyochrome, perichrome, and stichochrome*.

gyroma (ji-ro'mah) [Gr. *γῦρος* turn]. A form of tumor of the ovary, consisting of a convoluted, highly refracting mass.

gyromele (ji'ro-mēl). A flexible catheter tipped with sponge; also a stomach-tube with a rotating center, used in treating the stomach.

Gy'ropus ova'lis. A biting louse found on guinea-pigs. Its abdomen is almost twice as broad as long.

gyrosa (ji-ro'sah) [L.]. Gastric vertigo in which everything seems to turn round.

gyrose (ji'rōs). Marked by curved lines or circles.

gyrospasm (ji'ro-spazm) [Gr. *γῦρος* circle + *spasm*]. Rotatory spasm of the head.

gyrotrope (ji'ro-trōp). Same as *rheotropé*.

gyrous (ji'rūs). Gyrose.

gyrus (ji'rūs), pl. *gy'ri* [L.; Gr. *γῦρος*]. 1. A convolution or fold of the cerebral cortex bounded by fissures or sulci. 2. A structure which winds

Gynecomastia
(Morgan).

round the brain-stem and central parts of the cerebral hemisphere. **angular g.**, a cerebral convolution continuous anteriorly with the supra-marginal gyrus. **annectent g.**, any one of the four gyri which connect the occipital and parietotemporal lobes. **gyri bre'ves in'sulæ** [B N A], preinsular gyrus. **Broca's g.**, the inferior frontal gyrus. **g. callo'sus**, the callosal convolution. **g. centra'lis**, central convolution. **g. cin'guli** [B N A], the callosal convolution. **dentate g.**, an imperfect convolution within the dentate fissure. **g. descen'dens**, **Ecker's g.**, the aftermost of the occipital convolutions of the cerebrum. **g. fornica'tus** [B N A], the marginal portion of the cerebral cortex on the medial aspect of the hemisphere, including the gyrus cinguli, gyrus hippocampi, and others. Called also **limbic lobe**. **frontal g.**, **ascending**, a part of the frontal lobe, bounded in front by the pre-central fissure, and dorsally by the fissure of Rolando. **frontal g.**, **inferior**, the lower and outer portion of the frontal lobe of the cerebrum. **frontal g.**, **middle**, a convolution between the super-frontal and subfrontal fissures. **frontal f.**, **superior**, a gyrus of the frontal lobe above the superfrontal fissure. **fusiform g.**, **subcollateral g.**, a gyrus connecting the temporal and occipital lobes, and situated under the collateral and over the subtemporal fissure. **g. genic'uli**, a vestigial gyrus at the anterior end of the corpus callosum. **Heschl's g.**, the transverse temporal convolution. **hippocampal g.**, **g. hippocamp'i**, a convolution between the hippocampal and collateral fissures. **infracalcarine g.**, the lingual lobule on the under surface of the temporal lobe. **g. lim'bicus**. Same as *indusium griseum*. **lingual g.**, the median occipitotemporal

convolution of the brain. **g. lon'gus in'sulæ** [B N A], a long gyrus forming the postinsula. **marginal g.**, a convolution of the frontal lobe bordering on the callosomarginal fissure. **occipital g.**, any of the three (superior, middle, and inferior) gyri of the occipital lobe. **occipitotemporal g.** Same as *fusi'form g.* **g. olfacto'rius media'lis** of Retzius. See *area parolfactoria*. **orbital g.**, the orbital convolution. **paracentral g.**, one on the mesial surface of a cerebral hemisphere, having the paracentral fissure in front and the precuneus behind. **parietal g.**, either one of the gyri (ascending and inferior) of the parietal lobe. **parietal g.**, **ascending**, a gyrus having the fissure of Rolando in front, the intraparietal behind, and the fissure of Sylvius below. **paroccipital g.**, the first, or superior occipital, gyrus of the cerebrum. **preinsular g.**, a number of radiating gyri forming the preinsula. **g. profun'di cer'e'br'i**, the deep cerebral convolutions. **quadrate g.**, an upward extension of the gyrus fornicatus on the median surface of the parietal lobe. **g. rec'tus** [B N A], a cerebral convolution on the orbital aspect of the frontal, between the olfactory fissure and the mesial margin. **Retzius' g.**, **sagittal g.**, a large convolution of the brain running parallel with the sagittal suture of the skull. **g. subcallo'sus** [B N A], the subcallosal convolution. **g. supracallo'sus**, the supracallosal convolution. **supramarginal g.**, that part of the inferior parietal convolution which curves around the upper end of the sylvian fissure. **temporal g.**, any gyrus of the temporal lobe. **g. transiti'vus** [B N A]. Same as *annectent g.* **uncinate g.**, **g. uncina'tus**, the forward continuation of the hippocampal gyrus; its anterior end is hook shaped; called also *uncus*.

H

H. The symbol for *hydrogen*; also an abbreviation for *hausius* (a draft), *horizontal*, *L. ho'ra*, hour, *hypermotropia*, and *Holz'knecht unit*. See *unit*.

H⁺. The symbol for hydrogen ion.

h. An abbreviation for *Planck's constant*.

Haab's magnet, reflex (hahbz) [O. Haab, professor of ophthalmology in Zurich, born 1850]. See under *magnet* and *reflex*.

habena (hab-e'nah), pl. *hab'e'næ* [L. "rein"]. The peduncle of the pineal gland. See *habenula* (3d def.).

habenal, habenar (hab-e'nal, hab-e'nar). Pertaining to the habena, especially to the pedicle of the pineal body.

habenula (hab-en'u-lah), pl. *haben'ulæ* [L.]. 1. Any frenum or rein-like structure. 2. Any one of a set of such structures in the cochlea. 3. [B N A] A triangular area on the dorsomedial aspect of the thalamus, immediately rostral to the pineal body on each side. It marks the position of an underlying nuclear mass, the nucleus habenulæ or habenular ganglion. The term is sometimes applied to the nucleus habenulæ as well as the area itself. Called also *trigonum habenula*, *habenular trigone*, and *habena*. **h. arcua'ta**, the inner portion of the basilar membrane of the cochlea. **h. cona'rii**, the peduncle of the pineal body. **Hal-ler's h.**, the remains of the processus vaginalis of the peritoneum. **h. pectina'ta**, the outer portion of the basilar membrane of the cochlea. **h. perfora'ta**. Same as *foramen nervosum*. **h. urethra'lis**, either of two whitish lines extending from the urinary meatus to the clitoris in girls and young women.

habenular (hab-en'u-lar). Pertaining to the habenula. **h. body**, **h. ganglion**, **h. nucleus**. See *nucleus habenulæ*. **h. trigone**. See *habenula*.

habit (hab'it) [L. *hab'itus*, from *habe're* to hold].

1. A fixed or constant practice established by frequent repetition. 2. Predisposition or bodily temperament. **apoplectic h.** Same as *full h.* **drug h.**, the habitual use of a drug; drug addiction. **endothelioid h.**, a condition in which the nucleus of a cell is relatively small as compared with the cytoplasm. **full h.**, a plethoric condition marked by engorgement of the visible blood-vessels, flushed face, and a tendency to fatness. **glaucomatous h.**, shallowness of the anterior chamber of the eye with dilated pupil: seen in persons who have a predisposition to glaucoma. **leukocytoid h.** Same as *endothelioid h.* **physiological h.**, an acquired modification of behavior or response to stimulation brought about and permanently fixed by constant repetition. **h-spasm**. See *spasm*. **vibratory h.**, a nervous disease due to bicycle riding.

habitat (hab'it-at). The natural abode or home of an animal or plant species.

habitus (hab'it-us). Latin for *habit*. **h. apoplecticus**. See *full habit*, under *habit*. **h. enterop'ticus**, the bodily conformation seen in enteroptosis, marked by a long narrow abdomen. **h. phthis'icus**, a bodily habit predisposing to pulmonary tuberculosis, marked by pallor, emaciation, poor muscular development, and small bones.

habromania (hab-ro-ma'ne-ah) [Gr. *ἀσβός* graceful + *μανία* madness]. Amenomania: insanity with marked gaiety or cheerfulness.

Habronema (hab-ro-ne'mah). A genus of nematode worms parasitic in the stomach of horses in Australia. The larval forms are taken up from the feces of horses by flies and transmitted to the skin of horses when they produce a dermatitis and a

form of granuloma; in the conjunctiva they produce bungeye.

habronemiasis (hab-ro-ne-mi'as-is). Infection with *Habronema*, causing summer dermatitis (esponja) and granuloma in Brazilian horses.

habronemic (hab-ro-ne'mik). Caused by *Habronema*.

hachement (ahsh-maw') [Fr.]. A chopping or hacking stroke in massage.

Hackenbruch's experience (hah'ken-brooks) [Peter Theodor *Hackenbruch*, German surgeon, born 1865]. The area of anesthesia produced by the injection of a local anesthetic is rhombic shaped.

hacking (hak'ing). Same as *hachement*.

hadernkrankheit (hahd'ern-krank-hit) [Ger.]. A disease affecting rag-pickers, variously regarded as anthrax or malignant edema.

hæ-. For words beginning thus, see those beginning *he-*.

Haeckel's law (hek'elz) [Ernst Heinrich *Haeckel*, German naturalist, 1834-1919]. See under *law*.

hæm (hem). The non-protein, insoluble iron-pyrrol compound found in hemoglobin, in other respiratory pigments, and in many cells both animal and vegetable.

Hæmadip'sa ceylon'ica. A leech common in Ceylon and annoying to man and animals. Its bite is painful. **H. japon'ica**, a species found in Japan.

Hæmameba (hem-am-e'bah). See *Hæmosporidia*.

Hæmaphysalis leach'i. The common day tick of South Africa. It transmits *Piroplasma canis*.

Hæmapium (hem-a'pe-um). A genus of plasmodia. *H. ried'yi* occurs in the erythrocytes of certain salamanders.

hæmato-. For words beginning thus, see those beginning *hemo-*.

Hæmatobium iritans. Small flies, "horn flies," which are very troublesome to cattle.

Hæmatopinus (hem-at-o-pi'nus). A genus of sucking lice, species of which infest horses, swine, and cattle.

Hæmatopota. See *Heimatopota*.

hæmatoxylin. See *hematoxylin*.

Hæmatoxylon (hem-at-ok'sil-on) [Gr. αἷμα blood + ξύλον wood]. A genus of leguminous trees. The heart-wood of *H. campechia'num*, or log-wood, contains tannin and is astringent. Dose of extract, 5-20 gr. (0.333-1.333 gm.).

Hæmenteria (hem-en-te're-ah). A genus of leeches. *H. ghilian'ii* is found in Brazil. *H. officinalis*, a species used for medicinal purposes in Mexico and South America.

hæmo-. For words beginning thus, see those beginning *hemo-*.

Hæmocytozoa (hem-o-si-to-zo'ah). Same as *Hæmosporidia*.

Hæmodypus ventricosus. The common sucking louse of the rabbit.

hæmoferrum (he-mo-fer'um) [Gr. αἷμα blood + L. ferrum iron]. A proprietary name for a remedy, said to be pure oxyhemoglobin, from bullock's blood.

Hæmoflagellates (he-mo-flaj'el-äts). Those flagellate protozoa which are parasitic in the blood of vertebrate animals.

Hæmogregarinæ (hem'o-greg-ar-i'ne). See *Hæmosporidia*.

Hæmonchus contortus. See *wireworm*.

Hæmopsis (hem-o'pis). A genus of leeches. *H. pal'udum* is parasitic in the nose and throat in Ceylon. *H. sanguisuga* of Europe and North Africa infests the nasal passages.

hæmorrhagia (hem-o-ra'je-ah) [L.]. Hemorrhage. **h. per rex'in**, hemorrhage from rupture of a blood-vessel.

Hæmosporidia (hem-o-spo-rid'e-ah). A group of sporozoa which live parasitically in the red blood-corpuscles of vertebrate animals. The *Hæmosporidia* are divided into the *Hæmamebæ* and the *Hæmogregarinæ*. The *Hæmamebæ* include the *Plasmodium malariae*, the *Proteosoma præcox* of birds, the *Plasmodium kochi* of apes, the halteridium of birds, the piroplasma of Texas cattle fever, and that of dogs and horses. The *Hæmogregarinæ* include parasites of cold-blooded animals and mammals, such as *Lankesterella* (*Drepanidinium*) *ranarum* of frogs, the parasite of water tortoise, the karyolysis of lizards, the leukocytozoön in dogs, the *H. gerbilli* of an Indian rat, and *H. jaculi* of the jerboa.

hæmosporidium (hem-o-spo-rid'e-um), pl. *hæmosporidia*. Same as *plasmodium*.

hæmotrophin (hem-o'tro-fin). A proprietary liquid preparation of hemoglobin.

Hæn's pills (hah'enz) [Anton de *Hæn*, Dutch physician in Vienna, 1811-1884]. See under *pill*.

Haff daff [named from the Königsberg *Haff*, a fresh water bay connected with the Baltic Sea]. See under *daff*.

Haffkine's serum (haf'kinz) [Waldemar Mordecai Wolff *Haffkine*, a Russian-English bacteriologist in India, born 1860]. See under *serum*.

haffkinize (haf'kin-iz). To immunize with Haffkine's serum.

hafnium (haf'ne-um) [L. *Haf'nia*, Copenhagen]. A chemical element of atomic number 72 and atomic weight 178.6. A homologue of zirconium, discovered in 1922 by Coster and Havesy of Copenhagen, in extracts of zirconium minerals.

hafussi bath (hah-foos'e). See under *bath*.

Hagedorn needle (hahg'ed-orn) [Werner *Hagedorn*, German surgeon, 1831-1894]. See *needle*.

hageen (hag-én). A superfatted soap containing 33.33 per cent. mercury: used by inunction in syphilis.

Hagenia (ha-je'ne-ah). See *Brayera*.

hagiotherapy (ha-je-o-ther'ap-e) [Gr. ἅγιος sacred + θεραπεία treatment]. Miraculous healing by a holy man.

Hagner's operation (hag'nerz) [Francis R. *Hagner*, American surgeon, born 1873]. See under *operation*.

hahnemannian (hah-ne-man'e-an). Pertaining to Christian Friedrich Samuel *Hahnemann* (1755-1843), founder of homeopathy.

hahnemannism (hah'ne-man-izm). Homeopathy.

Haidinger's brushes (hi'ding-erz) [Wilhelm von *Haidinger*, Austrian mineralogist, 1795-1871]. Two conic, brush-like images, with apices touching, seen on looking through a Nicol prism.

Haines's formula, reagent, test (hänz') [Walter Stanley *Haines*, Chicago chemist, 1850-1923]. See under *formula* and *tests*.

hair (hare) [L. *capill'us*]. A filamentous outgrowth of the body, consisting of modified epidermic tissue: also the aggregate of small filaments, especially that of the scalp. A hair consists of a cylindric *shaft* and a root, which is contained in a flask-like depression (*hair-follicle*) in the corium and subcutaneous tissue. The base of the root is expanded into the *hair-bulb*, which rests upon the *hair-papilla*. **auditory h's**, hair-like attachments of the specialized epithelial cells of the cristæ acusticæ and the maculæ acusticæ. **h.-ball**, a concretion in the stomach composed of hair, vegetable fiber, etc., matted together. Called also *hair-cast*, *hair-mass*, *trichobezoar*, *phylotrichobezoar*, and *tumeur pileuse*. **beaded h.**, hair marked with alternate swellings and constrictions. **h.-bulb**. See under *hair*. **h.-cell**. See *cell*. **h.-follicle**. See *follicle*. **Frey's h's**, stiff hairs mounted in a handle: used for testing the sen-

sitiveness of the pressure points of the skin. **moniliform h.**, monilethrix. **h.-papilla.** See under *hair*. **ringed h.**, a condition in which each hair has a ringed appearance, due to patches of white. **Schridde's cancer h's**, occasional coarse, dull hairs on the beard and temples, seen in patients with cancer and other cachectic conditions. **sensory h's**, ciliaform bristles attached to the apex of a taste-bulb. **stellate h.**, a hair split at the end in a star-like form. **tactile h's**, hairs with sensibility of touch.

haircap (hare'kap). See *Polytrichum*.

hair-matrix. The epidermic root of a hair-follicle.

halakone (hal'ak-ōn). A small conic plug of stiffened gauze used for introducing medicaments into the nostril.

halazone (hal'az-ōn). A compound, $\text{Cl}_2\text{N}_2\text{O}_2\text{C}_6\text{H}_4\text{COOH}$, or p-sulphondichloramidobenzoic acid: used in the disinfection of water in the proportion of 1 to 300,000.

Hales's piezometer (hālz) [Stephen Hales, English physiologist, 1677-1761]. See *piezometer*.

half-life period. See under *period*.

half-retinal (hahf-ret'in-ah). Affecting one-half of the retina.

halid, halide (hal'id). 1. Same as *haloid*. 2. A salt of an alkali metal, as lithium, sodium, potassium, etc.

hali-ichthyotoxin (hal'i-ik-the-o-tok'sin). A poisonous base of bacterial origin from stale fish.

halisteresis (hal'is-ter-e'sis) [Gr. ἅλς salt + στέρησις privation]. Osteomalacia; a loss or lack of the lime-salts of bone. **h. ce'rea**, waxy softening of the bones.

halisteretic (hal'is-ter-et'ik). Affected with or of the nature of halisteresis.

halitosis (hal-it-o'sis) [L. *ha'itus* exhalation]. Offensive breath; bad breath.

halituous (hal-it'u-us) [L. *ha'itus* breath]. Covered with moisture or vapor.

halitus (hal'it-us) [L.]. An exhalation or vapor; an expired breath.

Hall's disease (hawlz). See under *disease*.

Hallé's point (al-āz') [Adrien Joseph Marie Noël Hallé, French physician, born 1859]. See under *point*.

Haller's ansa, arch, circle, fretum, line, etc. (hal'erz) [Albrecht von Haller, Swiss physiologist, 1708-1777]. See the nouns.

hallex (hal'eks) [pl. *hal'tices*]. Same as *hallux*.

Hallion's law, test (al-yawz') [L. *Hallion*, French physiologist]. See under *law* and *tests*.

Hallopeau's disease (al-op-ōz') [Henri Hallopeau, French dermatologist, 1842-1919]. Pustular dermatitis.

hallucal (hal'u-kal). Pertaining to the hallux or great toe.

hallucination (hal-u-sin-a'shun) [L. *hallucina'tio*]. A sense perception not founded on an objective reality. Compare *delusion* and *illusion*. **depressive h.**, a condition of acute depression with hallucinations. **haptic h.**, hallucination of the sense of touch. **stump-h.**, the sensation of the existence of a limb or part of a limb after its amputation.

hallucinosi (hal-u-sin-o'sis). The condition of being possessed by hallucinations. **alcoholic h.**, a psychosis often occurring in chronic alcoholism, marked by auditory hallucinations and loose delusions of persecution.

hallus, hallux (hal'us, hal'uks) [L.]. The great toe. **h. dolorosa, h. rig'idus**, a painful disease of the great toe, usually associated with flat-foot. **h. flex'us**, hammer-toe. **h. val'gus**, displacement of the great toe toward the other toes.

h. va'rus, displacement of the great toe away from the other toes.

Hallwacks effect. See under *effect*.

halmatogenesis

(hal'mat-o-jen'-es-is) [Gr. ἅλμα a jump + γένεσις production]. A sudden alteration of type from one generation to another.

Hallux valgus.

Called also *saltatory variation*.

halo (ha'lo) [L.; Gr. ἅλως]. 1. A circle, especially a colored circle seen around a light in glaucoma. 2. A ring seen around the macula lutea in an ophthalmoscopic image. 3. The imprint of the ciliary processes upon the vitreous body. **h. glaucomato'sus**, a whitish ring around the optic disk in glaucoma.

halogen (hal'o-jen) [Gr. ἅλς salt + γεννᾶν to produce]. Any element capable of forming a haloid salt: the halogens are chlorine, bromine, iodine, and fluorine. **h.-protein.** See under *protein*.

haloid (hal'oid) [Gr. ἅλς salt + εἶδος form]. Resembling sodium chlorid, or common salt.

halometer (ha-lom'et-er) [halo + Gr. μέτρον measure]. An instrument for measuring ocular halos.

halosteresis (hal-os-ter-e'sis). Halisteresis.

Halsted's operation (hal'stedz) [William Stewart Halsted, Baltimore surgeon, 1852-1922]. See under *operation*.

Halteridium (hal-ter'id'e-um) [Gr. ἄλτηρ leaping-weight]. See *Hemophysalis columbæ*. **H. dan-liew'skyi** is the malarial parasite of large birds.

Haly Abbas. See *Ali Abbas*.

halzoun (hal'zūn). A disease of Syria caused by *Fasciola hepatica*, which attaches itself to the pharyngeal mucous membrane, causing roaring in the ears, auricular tension, dysphagia, dyspnea, and asphyxia.

ham (ham). 1. The popliteal region. 2. The hip, buttock, and thigh.

hamamelidin (ham-am-el'id-in). Hamamelin.

hamamelin (ham-am-e'lin). A precipitate prepared from *Hamamelis virginica*: tonic and astringent. Dose, $\frac{1}{2}$ gr. (0.033 gm.).

Hamamelis (ham-am-e'lis) [Gr. ἅμα like + ἄμλον apple-tree]. A genus of hamamelaceous trees and shrubs. The leaves of *H. virginica*, or witch-hazel, are styptic, sedative, and vulnerary, and are used in internal hemorrhages and threatened abortion, and locally in inflamed conditions. Dose, 1-60 min. (0.066-4 c.c.).

hamarthritis (ham-ar-thri'tis) [Gr. ἅμα together + ἀρθρίτις gout]. Arthritis of all the joints at the same time.

hamartia (ham-ar'she-ah) [Gr. ἁμαρτία defect]. A defect in tissue combination during development.

hamartoblastoma (ham-ar'to-blas-to'ma) [Gr. ἁμαρτία defect + βλάστος germ + -ωμα tumor]. A tumor developing from a hamartoma.

hamartoma (ham-ar-to'mah) [Gr. ἁμαρτία error + -ωμα tumor]. Albrecht's term for a tumor due to overdevelopment of some tissue element which belongs normally at the site where it is found, or to abnormal relationship of a normally situated tissue element.

hamatum (ha-ma'tum) [L. "hooked"]. The unciform bone.

Hamberger's schema (ham'ber-gerz) [Georg Erhard Hamberger, German physician, 1697-1755]. See under *schema*.

Hamburger interchange (ham'ber-ger). [Hartog Jacob Hamburger, Dutch physiologist, 1860-1924]. The ionic interchange between the corpuscles and plasma of the blood which regulates the neutrality of the blood. Called also *secondary buffering*.

Hamilton's bandage, pseudophlegmon, test [Frank Hastings *Hamilton*, American surgeon, 1813-1875]. See *bandage*, etc.

Hammarsten's test [Olof *Hammarsten*, physiologist in Upsala, born 1841]. See under *tests*.

Hammerschlag's test [Albert *Hammerschlag*, physician in Vienna, born 1863]. See under *tests*.

hammer-toe (ham'er-to). A claw-like bending of a toe.

Hammond's disease (ham'-undz) [William Alexander *Hammond*, American neurologist, 1828-1900]. Athetosis.

Hammer-toe
(Da Costa).

hamstring (ham'string). Either one of the tendons which laterally bound the popliteal space. **inner h.**, the tendons of the gracilis, sartorius, and two other muscles. **outer h.**, the tendon of the biceps flexor femoris.

hamular (ham'u-lar). Shaped like a hook.

hamulus (ham'u-lus), pl. *ham'uli* [L.]. 1. Any hook-shaped process. 2. The hamular process. **h. cochleæ**, a hook-like process of the osseous lamina at the cupula. **h. lacrima'lis**, the hamular process of the lacrimal bone. **h. laminae spira'lis**, the hook-like upper end of the osseous spiral lamina. **h. os'sis hama'ti**, the hamular process. **h. pterygoi'deus**, the hamular process of the sphenoid bone.

hand (hand) [L. *man'us*]. The carpus, metacarpus, and fingers together. **ape-h.**, a hand with the thumb permanently extended. **apostolic h.**, a hand affected with Dupuytren's contraction. **benediction h.**, a hand in which the ring and little fingers are flexed, the thumb and other two fingers remaining normal: seen in ulnar paralysis and syringomyelia; called also *preacher's h.* **claw-h.**, flexion and atrophy of the hand and fingers, producing paralysis of the intrinsic muscles of the hand: seen in the lower arm type of paralysis; called also *main en griffe*. **cleft h.**, malformation of the hand in which the division between the fingers extends into the metacarpus. **crab h.**, severe inflammation of the hand due to a scratch by the shell of a crab. **electric h.**, the hand used as an electrode. **flat h.**. See *manus plana*. **Marinesco's succulent h.**, a hand marked by edema with lividity and coldness of the skin; seen in syringomyelia. **monkey-h.**, a hand showing atrophy of the thenar muscles. Called also *main en singe*. **obstetrician's h.**, contraction of the hand in tetany (gastric). The thumb is strongly adducted, the fingers are drawn against each other and are half-flexed (over the thumb) at the metacarpophalangeal joint, and the sides of the palm are turned in to form a cone. **preacher's h.** See *benediction h.* **skeleton-h.**, a hand markedly atrophied and held in a position of extension: seen in progressive muscular atrophy. Called also *main en squelette*. **spade h.**, the thick square hand of myxedema and acromegaly. **trench h.** (main de tranchées), contracture or other incapacity of the hand from frost-bite in the trenches. **trident h.**, the characteristic hand of achondroplasia: the fingers are relatively of the same length, and there is a peculiar separation of the second and third fingers at the second phalangeal joint, causing the fingers to spread out. **washer-woman's h.**, the blanched, corrugated hand of washerwomen; found also in the hands of the drowned.

hangnail (hang'nāl). Agnail; a splitting of the epidermis at the side of a finger-nail.

Hanot's cirrhosis (an-ōz') [Victor Charles *Hanot*, French physician, 1844-1896]. Biliary cirrhosis.

Hansen's bacillus (han'senz) [Gerhard Armauer *Hansen*, Norwegian physician, 1841-1912]. The *Bacillus lepræ*.

haponychia (hap'al-o-nik'e-ah) [Gr. ἀπαλός soft + ὄνυξ nail]. A soft, uncornified condition of the nails.

haphalgnesia (haf-al-je'ze-ah) [Gr. ἀφή touch + ἄλγος pain]. A condition in which pain is experienced on touching objects.

haphophobia (haf-e-to'be-ah) [Gr. ἀφή touch + φόβος fear]. Morbid dread of being touched.

Hapke's phenomenon (hap'kez) [Franz *Hapke*, contemporary German physician]. See *phenomenon*.

haplobacteria (hap'lo-bak-te're-ah) [Gr. ἀπλός simple + *bacteria*]. Bacteria which are not filamentous.

Haplococcus reticula'tus (hap-lo-kok'us). A protozoan organism occurring in the muscles of swine. It consists of minute vesicles containing amebæ which are finally set free.

haplodermatitis (hap'lo-der-mat-i'tis). Haplo-dermitis.

haplodermitis (hap'lo-der-mi'tis) [Gr. ἀπλός simple + δέρμα skin + -itis inflammation]. An uncomplicated inflammation of the skin.

haplodont (hap'lo-dont) [Gr. ἀπλός plain + ὀδούς tooth]. Having teeth with plain (non-ridged) crowns.

Haplographiaceæ (hap'lo-graf-e-a'se-e). A family of fungi.

haploid (hap'loid). One-half the diploid number of chromosomes for a given species as is found in the germ cells.

haplont (hap'lon't). A haploid individual.

haplopathy (hap-lop'ath-e) [Gr. ἀπλός simple + πάθος disease]. An uncomplicated disease.

haplophase (hap'lo-faz). That phase in the life-history in which the nuclei are haploid.

haplopia (hap-lo'pe-ah) [Gr. ἀπλός single + ὥψ vision]. Single vision; the condition in which an object looked at is seen single and not double.

haploscope (hap'lo-skōp) [Gr. ἀπλός single + σκοπεῖν to see]. A form of stereoscope used for testing the visual axes. **mirror-h.**, an instrument for making experiments, with different degrees of convergence of the visual axes.

haploscopic (hap-lo-skop'ik). Pertaining to a haploscope; stereoscopic.

Haplosporidia (hap'lo-spo-rid'e-ah). A family of Neosporidia found as parasites in the intestines of marine annelides and in tumors of fishes. Only one species infests man. See *Rhinosporidium seeberti*.

haptic (hap'tik) [Gr. ἅπτειν to touch]. Tactile.

haptics (hap'tiks) [Gr. ἅπτειν to touch]. The science of touch, or the sense of contact.

haptin (hap'tin) [Gr. ἅπτειν to seize]. Any one of the side-chains of a normally functioning cell; a cast-off receptor. See *receptor* and *Ehrlich's side-chain theory*, under *theory*.

haptophil, haptophile (hap-to-fil) [*haptin* + Gr. φιλεῖν to love]. Having a peculiar affinity for a haptophore.

haptophore (hap-to-fōr) [Gr. ἅπτειν to seize + φέρειν to carry]. The stable, specific group of the molecule of toxins, agglutinins, precipitins, and lysins by which they become attached to their antibodies, antigens, or the receptors of cells and thus make possible the specific activity. See *Ehrlich's side-chain theory*, under *theory*.

haptophoric (hap-to-for'ik). Same as *haptophorous*.

haptophorous (hap-to-for-us) [Gr. ἅπτειν to touch + φέρειν to bring]. Causing the combination of an antitoxin with cells. The term is applied to that group of a toxin which fastens on the antitoxin, and to that group of an amboceptor which joins the complement to the cell.

haramaitism (har-am-a'it-izm). Child marriage among the Hindus.

hardening (hard'en-ing). The procedure of rendering tissue firm, so that it may be more readily cut for purposes of microscopic examination.

Harder's glands [Johann Jacob *Harder*, Swiss anatomist, 1656-1711]. See under *gland*.

hardness (hard'nes). The presence in the water of soluble salts of calcium and magnesium or other substances which form an insoluble curd with the soap and thus interfere with its cleansing power. **permanent h.**, hardness not removed by boiling; it is usually due to sulphates and chlorids. **temporary h.**, hardness removed by boiling; it is due to soluble bicarbonates which lose CO₂ on boiling and precipitate as normal carbonates.

Hardy's lotion (ar-déz') [Louis Phillipe Alfred *Hardy*, French physician, 1811-1893]. See *lotion*.

hare's eye. See *lagophthalmos*.

harelip (hār'lip). A congenital cleft of one or both lips, but usually of the upper only. **double h.**, a cleft on either side of the middle line on the lip. **single h.**, a cleft on the middle line of the lip or on one side only.

harlequin fetus (har'le-kwin). See under *fetus*.

Harley's disease (har'lēz) [George *Harley*, English physician, 1829-1896]. Paroxysmal hemoglobinuria.

harmalin (har'mal-in). An alkaloid, C₁₃H₁₄N₂O, from *harmel*, a plant, *Peganum harmala*, of Turkey: used as a vermifuge and stimulant.

harmin (har'min). A crystalline alkaloid, C₁₃H₁₂N₂O, from *Peganum harmala*.

harmonia, harmony (har-mo'ne-ah, har'mo-ne) [L.]. The immovable articulation of bones by surfaces that are nearly smooth.

harmony (har'mo-zōn) [Gr. ἀρμονία to govern]. An internal secretion which influences growth and nutrition.

harpoon (har-poon') [Gr. ἀρπαγή to seize]. An instrument for removing small pieces of living tissue for diagnostic examination.

Harrington's solution (har'ing-tonz) [Francis B. *Harrington*, surgeon in Boston, 1854-1914]. See under *solution*.

Harris's segregator or separator (har'is-ez) [Malcolm La Selle *Harris*, Chicago surgeon, born 1862]. See under *separator*.

Harrison's groove (har'is-unz) [Edward *Harrison*, English physician, 1766-1838]. See under *groove*.

Harrower's hypothesis, test (har'o-erz) [Henry R. *Harrower*, American physician, born 1883]. See under *hypothesis* and *tests*.

harrowing (har'o-ing). Same as *hersage*.

Hartley-Krause operation (hart'le-krowse) [Frank *Hartley*, New York surgeon, 1857-1913; *Krause*]. See under *operation*.

Hartmanella hyalina. A coprozoic ameba found in human feces.

Hartmann's curet (hart'manz) [Arthur *Hartmann*, laryngologist in Berlin, born 1849]. See under *curet*.

Hartmann's pouch (hart'manz) [Robert *Hartmann*, German anatomist, born 1831]. See *pouch*.

hartshorn (harts'horn). 1. The horn of the stag or hart; cornu cervi. 2. A popular name for liquor ammoniac.

harveian (hahr've-an). Named in honor of William *Harvey*, a celebrated English physician (1578-1657), the discoverer of the circulation of the blood.

Häser's formula (ha'serz) [Heinrich *Häser*, German physician, 1811-1885]. See under *formula*.

hashish, hasheesh (hash-ēsh') [Arabic "herb"]. The stalks and leaves of *Can'nabis indica*. See *Cannabis*.

Hasner's valve (hahs'nerz) [Joseph Ritter von *Hasner*, an ophthalmologist in Prague, 1819-1892]. See under *valve*.

Hassall's corpuscles (has'alz) [Arthur Hill *Hassall*, English chemist and physician, 1817-1894]. See under *corpuscle*.

Hastings's stain (hās'tings) [Thomas Ward *Hastings*, physician in New York, born 1873]. See under *stains*, *table of*.

Hata's phenomenon, preparation (hah'tabs) [S. *Hata*, contemporary Japanese physician]. See under *phenomenon* and *preparation*.

Haudek's niche (haw'deks) [Martin *Haudek*, roentgenologist in Vienna]. See under *niche*.

haunch-bone (haw'nsh'bōn). See *ilium*.

haupt-agglutinin (hawpt'ag-lu'tin-in). See *chief agglutinin*, under *agglutinin*.

hauptganglion of Küttner (howpt'gan-gle-on). See *Küttner's ganglion*, under *ganglion*.

Haust. Abbreviation for *L. haust'us*, a draft.

haustorium (haws-to're-um), pl. *hausto'ria* [L. *haus'tor* a drawer]. An organ of certain parasitic protozoa by which they attach themselves to the host for the purpose of obtaining nourishment.

haustral (haws'tral). Pertaining to the haustra of the colon. **h. churning**, the backward and forward movement of the intestinal contents which takes place in the distal colon. It keeps the contents plastic and assists in their progress toward the anus. Called also *haustral segmentation*.

haustrum (haws'trum), pl. *haus'tra* [L. *haus'tor* a drawer]. The recess made by one of the sacculations of the colon.

haustus (haws'tus). Latin for *draft*. **h. ni'ger**, black draft: the compound infusion of senna.

haut-mal (o-mahl') [Fr.]. An epileptic attack in its full development.

Havers, canal of, spaces of (ha'vers) [see *haversian*]. See *canal* and *space*.

haversian (ha-ver'zhan). Named after or described by Clopton *Havers*, an English anatomist, 1650-1702. See under *canal*, *gland*, *space*, etc.

hawk (hawk). To clear the throat of mucus.

hay-asthma (ha-az'mah). Hay-fever.

hay-bacillus. *Bacillus subtilis*.

hay-fever (ha-fe'ver). See under *fever*.

Hay's test (hāz) [Matthew *Hay*, Scotch physician, born 1855]. See under *tests*.

Hayem's disease, serum, solution, type (a-yaws') [Georges *Hayem*, physician in Paris, born 1841]. See *disease*, *serum*, *solution*, and *type*.

Hayem-Weil syndrome (a-yaw'vil). See *hemolytic jaundice*, under *jaundice*.

Haygarth's nodes or nodosities (ha'garths) [John *Haygarth*, English physician, 1740-1827]. See under *node*.

Haynes's operation (hānz) [Irving S. *Haynes*, New York surgeon, born 1861]. See *operation*.

hazelin (ha'zel-in). A proprietary preparation of hamamelis. Dose, 1-5 min. (0.066-0.333 c.c.).

Hazen's theorem (ha'zenz) [Allen *Hazen*, American civil engineer, born 1869]. See *theorem*.

Hb. The symbol of *hemoglobin*.

HBr. Hydrobromic acid.

H. C. Abbreviation for *hospital corps*.

HCl. Hydrochloric acid.

H. D. An abbreviation for *hearing distance*.

H. d. Abbreviation for *L. ho'ra decu'bitus*, at bed-time.

H. D. L. W. Distance at which a watch is heard by the left ear.

H. D. R. W. Distance at which a watch is heard by the right ear.

He. Chemical symbol for *helium*.

he. For words beginning thus see also those beginning *hæ*.

head (hed) [L. *ca'pul*]. That part of the organism which contains the brain and the organs of special sense. **articular h.**, the head of a bone by which it articulates with another bone. **h.-drop**, a malarial disease of Japan, characterized by

drooping of the head. **hot-cross-bun h.**, a head in which the sutures are depressed; seen in hereditary syphilis. **hour-glass h.**, a head in which the coronal suture is depressed. **h.-kidney**, the pronephros. **h.-lock**, the locking together of the chins in twin labor. **h.-louse**. See *pediculus capitis*. **scald-h.**, a popular name for favus, porrigo, and other scaly affections of the scalp. **steeple h.**, **tower h.**, oxycephalia.

headache (hed'ak). Pain in the head; cephalalgia. **anemic h.**, headache due to anemia, local or general. **bilious h.**, migraine. **blind h.**, migraine. **congestive h.**, **hyperemic h.**, headache due to congestion or hyperemia. **helmet h.**, pain involving the upper half of the head. **indurative h.**, headache due to indurations and thickenings in the muscles of the head and neck. **miners' h.**, that which is due to the gases produced by exploded nitroglycerin. **nodular h.**, indurative headache. **organic h.**, headache due to structural disease of the cerebral membranes. **puncture h.**, the headache and associated symptoms following puncture of the spinal canal and removal of cerebrospinal fluid. **pyrexial h.**, that due to fever. **reflex h.**, headache due to disease of some organ, as the stomach, eyes, etc. **rhinogenous h.**, headache due to nasal disease. **sick-h.**, migraine. **symptomatic h.** Same as *reflex h.* **toxic h.**, headache due to systemic poisoning.

Head's zones (Henry *Head*, contemporary English physician). See under *zone*.

headgrit (hed'grit). Sheep cholera, an epizootic disease of sheep.

healing (hel'ing). A process of cure; the restoration of wounded parts. **h. by first intention**, healing in which the parts unite directly without the intervention of granulations. **h. by second intention**, union by the adhesion of granulating surfaces. **h. by third intention**, union by the filling of a wound with granulations.

health (helth). A normal condition of body and mind, *i. e.*, with all the parts functioning normally.

healthy (hel'the). In a normal condition with respect to health; free from disease or dysfunction.

hearing (hēr'ing) [*L. audītus*]. The sense by which sounds are appreciated. **color-h.** See *chromesthesia*.

heart (hart) [*L. cor*]. The muscular viscus that maintains the circulation of the blood. It is divided into four cavities—two auricles and two ventricles. The left auricle receives the arterialized blood from the lungs, whence it passes to the left ventricle, which forces it through the arteries to

tricle; the *aortic*, at the entrance of the aorta to the left ventricle; the *pulmonary*, at the entrance of the pulmonary artery to the right ventricle; and the *eustachian*, between the anterior margin of the inferior vena cava and the right auriculoventricular opening. The *columnae carnae* are rounded columns of muscular tissue on the inner surface of the ventricles. Some of them are simply ridges, others are attached at each extremity, and others terminate in tendinous cords, the extremities of which are attached to the auriculoventricular valves. The tendinous rings of the orifices of the heart are called *festooned rings*. The weight of the heart in adult males is from ten to twelve ounces; in females, from eight to ten ounces. **abdominal h.**, a heart displaced into the abdominal cavity. **armored h.**, a condition marked by calcareous deposits in the pericardium. **athletic h.**, hypertrophy of the heart with no disease of the valves, sometimes seen in athletes. **beer h.** See *Tübingen h.* **bony h.**, a heart containing calcareous patches. **cervical h.**, a heart situated high up in the neck. **Copenhagen h.**, cardiac weakness seen among habitual users of strong snuff, in which mitral insufficiency is readily provoked by any exercise. **drop h.**, ptosis and atony of the heart. **fat-h.**, **fatty h.** 1. A heart affected with fatty degeneration. 2. A condition in which there is an excessive layer of fat deposited about the heart muscle. **fibroid h.**, a heart affected with a chronic myocarditis in which fibrous tissue is developed within the muscular tissue of the organ. **frosted h.**, a condition in which the pericardium is thickened, giving the heart the appearance of being frosted like a cake. **goiter h.**, disturbance of the muscular action of the heart due to pressure of a goiter on the veins of the neck and on the trachea. **hairy h.**, a heart covered with a shaggy exudation. **icing h.**, pericarditis which appears postmortem like the icing on a cake. **irritable h.** See *neurocirculatory asthenia*, under *asthenia*. **left h.**, the left auricle and ventricle; that portion of the heart which propels the blood in the systemic circulation. **luxus h.**, dilatation of the left ventricle of the heart, conjoined with hypertrophy. **military h.**, irritable heart in soldiers. **pectoral h.**, a heart situated in the front of the chest where it produces a bulging area. **pendulous h.** See *drop h.* **pulmonary h.** Same as *right h.* **Quain's fatty h.**, a fatty degeneration of the heart muscle. **right h.**, the right auricle and ventricle; that portion of the heart which is concerned in the pulmonary circulation. **scarlet fever h.** See *myocarditis scarlatinosa*. **soldier's h.** See *neurocirculatory asthenia*, under *asthenia*. **systemic h.**, the left auricle and ventricle. **tabby-cat h.**, a condition of the heart in which the inner surface of the ventricular wall and the papillary muscles are streaked and spotted; seen in marked cases of fatty degeneration. Called also *thrush-breast h.* and *tiger-lily h.* **thrush-breast h.** See *tabby-cat h.* **tiger h.**, **tiger-lily h.** Same as *tabby-cat h.* **tobacco h.**, a heart showing irregularity of action due to excessive use of tobacco. **Traube's h.**, heart disease of a nephropathic origin, *i. e.*, based on kidney disease. **Tübingen h.**, dilatation and hypertrophy of the heart from excessive beer drinking. **wandering h.**, an abnormally movable heart.

heart-block (hart-blok). The condition in which the muscular interconnection between the auricle and ventricle (auriculoventricular band or band of His) is interrupted, so that the auricle and ventricle beat independently of each other (Gaskell). The condition is marked by permanent or paroxysmal bradycardia, epileptiform, vertiginous, or syncope attacks, and pulsations of the cervical veins exceeding in rate those of the arteries. The condition is known as *Adams-Stokes' disease*. **atrioventricular h.** Same as *auriculoventricular h.* **auriculoventricular h.**, a form in which the blocking is at the auriculoventricular junction.

Anterior aspect of heart (Green).

supply the tissues. The right auricle receives the venous blood after it has passed through the capillaries and given up its oxygen. The blood then passes to the right ventricle, thence to the lungs, to be oxygenated. The organ is composed of fibrous rings and involuntary striped muscular fibers, which are intricately interlaced, and proceed in a spiral manner from the apex to the base. The valves are five in number—viz., the *mitral*, between the left auricle and ventricle; the *tricuspid*, between the right auricle and ven-

bundle-branch h. See *interventricular h.*
dextrauriculoseptoleauricular h., a form in which the blocking is at the line of union of the right auricle with the left auricle plus the interauricular septum. **interventricular h.**, a form in which one ventricle contracts without the other on account of obstruction in one of the branches of the bundle of His; called also *bundle-branch block*. **septodextrauriculoleauricular h.**, a form in which the blocking is at the line of union of the right auricle plus the interauricular septum with the left auricle. **sino-auricular h.**, a form in which the blocking is located between the auricles and the mouths of the great veins and coronary sinus.

heart-burn (hart'burn). A burning sensation in the esophagus; cardialgia.

heart-failure (hart'-fal-yer). Sudden and fatal cessation of the heart's action.

heart-hurry (hart'hur-e). Extreme rapidity of the pulse, a form of tachycardia.

heart sac. The pericardium.

heart-water disease. See *hemoglobinuria of sheep*.

heat (hêt) [L. *calor*]. 1. The sensation produced by proximity to a heated object. 2. The energy which produces the sensation of heat. It exists in the form of molecular or atomic vibration (thermal agitation) and may be transferred by conduction through a substance, by convection by a substance, and by radiation as electromagnetic waves. 3. Sexual ardor of animals. **atomic h.**, the amount of heat required to raise an atom from 0° to 1° C. **initial h.**, the heat produced in muscle during the development of tension. Cf. *recovery h.* **latent h.**, that which apparently disappears when it is absorbed by bodies which are not thereby rendered warmer; the heat which a body may absorb without changing its temperature. **molecular h.**, the product of the molecular weight of a substance multiplied by its specific heat. **prickly h.** See *miliaria*. **radiant h.**, electromagnetic waves longer than the waves of red light and shorter than the Hertzian waves. **recovery h.**, that part of the heat developed by muscular contraction which is evolved after shortening has begun. Cf. *initial h.* **sensible h.**, the heat which, when absorbed by a body, produces a rise in temperature. **specific h.**, the amount of heat needed to raise the unit-volume of any substance through 1° C. **h.-unit**, a calorie.

heat-apoplexy. Heat stroke. See under *stroke*.

heat cramps. See under *cramp*.

heat exhaustion. See under *exhaustion*.

heat prostration. Heat exhaustion. See under *exhaustion*.

heat rash. Miliaria rubra.

heat stroke. See under *stroke*.

heat-unit. See under *unit*.

Heaton's operation (he'tonz) [George Heaton, Boston surgeon, 1808-1870]. See under *operation*.

heaves (hêvz). A respiratory disturbance of horses marked by easy inspiration and difficult expiration, the latter being accomplished in two distinct efforts. Called also *broken wind*.

Hebdom. Abbreviation for *L. hebdom'ada*, a week.

hebeosteotomy (he'be-os-te-ot'o-me). Same as *pubiotomy*.

hebephrenia (heb-e-fre'ne-ah) [Gr. *ἥβη* puberty + *φρῆν* mind]. A form of mental disorder or insanity coming on at the time of puberty, and marked by depression, gradual failure of mental faculties, and moral deterioration, with egoistic and self-centered delusions. See *dementia præcox*. **grafted h.**, hebephrenia grafted, as it were, on feeble-mindedness.

Heberden's asthma, disease, nodes (he'ber-denz) [William Heberden, English physician, 1710-1801]. See under *asthma, disease, and node*.

hebetie (he-bet'ik) [Gr. *ἡβητής* youthful]. Pertaining to or occurring at the time of puberty.

hebetomy (he-be't'o-me) [Gr. *ἥβη* pubes + *τομή* cut]. Pubetotomy.

hebetude (heb-et-üd) [L. *hebetu'do*]. Mental dullness with impairment of the special senses, such as is seen in asthenic fevers.

heboidophrenia (heb-oi-do-fre'ne-ah). Dementia præcox marked by simple dementia.

heboid-paranoid (heb'oid-par'an-oid). A name for the group of mental disorders which consists of the juvenile insanities, dementia præcox, and paranoia.

heboosteotomy (he-bos-te-ot'o-me) [Gr. *ἥβη* pubes + *ὀστέον* bone + *τομή* cutting]. Same as *pubiotomy*.

hebotomy (he-bot'o-me) [Gr. *ἥβη* pubes + *τομή* a cut]. Same as *pubiotomy*.

Hebra's disease, ointment, etc. (he'brahs) [Ferdinand von Hebra, Austrian dermatologist, 1816-1880]. See under *disease, ointment*, etc.

hecatomeral (hek-at-om'er-al). Same as *hecatomeric*.

hecatomeric (hek'at-o-mer'ik) [Gr. *ἐκάτερον* each + *μέρος* part]. Having processes which divide into two, one going to each side of the spinal cord: used of certain neurons.

Hecht's test (hekts) [Hugo Hecht, contemporary physician in Prague]. See under *tests*.

Hecker's law (hek'erz) [Karl v. Hecker, German obstetrician, 1827-1882]. See under *law*.

hectargyre (hek'tar-jir). A mercury compound of hectin, used like the latter.

hectic (hek'tik) [L. *hæticus*; Gr. *ἐκτικός* habitual]. 1. Associated with phthisis and with septic poisoning. 2. The irregular fever of phthisis and of chronic suppurative processes. See under *fever* and *flush*.

hectin, hectine (hek'tin). Sodium benzosulphoparamino-phenylarsinate, $C_6H_5SO_2NH.C_6H_4NO(OH).ONa$, an arsenical compound for use like atoxyl. Dose, 1½-3 gr. (0.1-2 gm.) per day.

hectogram (hek'to-gram) [Fr. *hectogramme*; Gr. *ἑκατόν* hundred + *γράμ*]. One hundred grams; 3 ounces and 230.7 grains avoirdupois. See *weights and measures*.

hectoliter (hek'to-le-ter) [Fr. *hectolitre*; Gr. *ἑκατόν* hundred + *λίτρον*]. One hundred liters; 22 imperial or 26.4 United States gallons. See *weights and measures*.

hectometer (hek'to-me-ter) [Fr. *hectomètre*; Gr. *ἑκατόν* hundred + *μέτρον*]. One hundred meters, or 328 feet and 1 inch.

H. E. D. [German Haut Einheits Dosis]. Abbreviation for *unit skin dose*, a therapeutic unit of x-ray dosage established by Seitz and Wintz. [Note: This unit is now almost in general use in Germany, and is often misinterpreted as the erythema dose, E. D.]

Hedeoma (hed-e-o'mah) [L.]. A genus of labiate herbs. The leaves and tops of *H. pulegioides*, American pennyroyal, are stimulant, emmenagogue, and carminative. Dose of volatile oil (*oleum hedeo'mæ*), 2-5 min. (0.133-0.333 c.c.).

hediosit (he'de-o-sit). A white, crystalline powder, $C_7H_{12}O_2$, the lactone of alpha-glycoheptonic acid: used as a sweetener of food for the diabetic.

hedonal (he'do-nal) [Gr. *ἡδονή* pleasure]. A colorless crystalline compound, methyl-propyl-carbinol-urethane, $C_8H_{17}.CH(CH_3).O.CO.NH_2$, slightly soluble in water: a hypnotic in doses of 20 gr. (1.33 gm.).

hedonic (he-don'ik). Pertaining to pleasure.

hedonism (he'do-nizm) [Gr. *ἡδονή* pleasure]. Excessive devotion to pleasure.

hedratresia (hed-rat-re'se-ah) [Gr. *ἔδρα* anus + *ἀτρεία*]. Imperforation of the anus.

hedrocele (hed'ro-sēl) [Gr. *ἕδρα* anus + *κῆλη* hernia]. Hernia, or prolapse, of the intestine through the anus.

hedroin (hed'ro-in). A trade name for acetomorphin hydrochlorid.

heel (hēl) [L. *calc*]. The hindmost part of the foot. **anterior h.**, a triangular shaped piece of leather fastened obliquely across the ball of the shoe just behind the heads of the metatarsal bones, the object being to support the heads, equalize the pressure, and support the anterior arch. **h.-bone**, the calcaneum. **contracted h.** See *hoof-bound*.

h.-fly, the ox-bot, *Hypoderma lineata*, which flies about the heels of cattle and lays its eggs on the hair. **gonorrheal h.**, the development of exostoses on the heel, attributed to gonorrheal infection. **h.-jar**, a feeling of pain experienced by a patient on raising on the toes and suddenly bringing the heels to the ground. In Pott's disease the pain is felt in the spine; in renal calculus it is felt in the lumbar region. **painful h.**, a condition in which pain is caused by pressure on the heel. **weak h.**, a condition of the wall of a horse's hoof in which, owing to the softness of the horn and the oblique direction of the horn fibers, the heels are unable to bear the body weight.

Heerfordt's disease (hār'forts) [Heerfordt, Danish ophthalmologist]. See *uveoparotid fever*, under *fever*.

Hegar's dilator, operation, sign (ha'garz) [Alfred Hegar, gynecologist in Freiburg, 1830-1914]. See *dilator, operation*, and *sign*.

hegemony (heg'em-o-ne) [Gr. *ἡγεμον* leader]. The state of being chief or most important.

hegonon (heg'o-nōn). A light brown powder, obtained by treating albumose with an ammoniacal solution of silver nitrate: used like other silver protein compounds, especially in gonorrhea.

hegovia (he-go've-ah). A proprietary mixture containing salol, lithium salicylate, and powdered snails: recommended for enuresis.

Heichelheim's test (hi'kel-himz) [Rudolf Heichelheim, contemporary German physician]. See under *tests*.

Heidenhain's cells, law, rods, stain, etc. (hi'den-hinz) [Rudolph P. Heidenhain, German physician, 1834-1887]. See *cell, law, rod, stain*, etc.

Heilbronner's sign or thigh (hil'bron-erz) [Karl Heilbronner, 1870-1914]. See under *thigh*.

Heim's pill (himz) [Ernst Ludwig Heim, German physician, 1747-1834]. See under *pill*.

Heine's operation (hi'nēz) [Leopold Heine, German oculist, born 1870]. See under *operation*.

Heine-Medin disease (hi'ne-ma'din) [Jacob Heine, German physician, 1800-1879; Oskar Medin, contemporary Swedish physician]. Acute anterior poliomyelitis.

Heineke-Mikulicz operation (hi'nek-e-mik'u-litsh) [Walter Hermann Heineke, German surgeon, 1834-1901; see *Mikulicz*]. See under *operation*.

Heinz bodies (hintz) [R. Heinz, contemporary German physician]. See under *body*.

Heiser's treatment (hi'serz) [Victor Heiser, contemporary American physician]. See *treatment*.

Heister's valve (his'terz) [Lorenz Heister, German anatomist, 1683-1758]. See under *valve*.

hektin (hek'tin). See *hectin*.

helcoid (hel'koid) [Gr. *ἑλκος* ulcer + *εἶδος* form]. Resembling an ulcer.

helcology (hel-kol'o-je) [Gr. *ἑλκος* ulcer + *λόγος* discourse]. The scientific study of ulcers.

helcoma (hel-kō'mah) [Gr.]. Corneal ulcer (Hippocrates).

helcoplasty (hel'ko-plas-te) [Gr. *ἑλκος* ulcer + *πλάσσειν* to form]. Plastic surgery of ulcers, as by skin-grafting, etc.

helcosal, helcosol (hel'ko-sal, -sol). Bismuth pyrogallate, $C_6H_3(OH)_2OBI$; a yellow, insoluble powder, containing 60 per cent. of bismuth: an

internal and external antiseptic. **Merck's h.**, a greenish-yellow powder, $C_6H_3(OH)_2O_2BI$, containing 48 per cent. of bismuth. Dose, 5-15 gr. (0.3-1 gm.).

helcosis (hel-kō'sis) [Gr. *ἑλκωσις*]. Ulceration; the formation of an ulcer.

Helcosoma tropicum. A name proposed by G. J. H. Wright for the microorganism found by him in the endothelial cells of Delhi boil. Called also *Leishmania tropica* and *Herpetomonas tropica*.

helenin (hel'en-in). A bitter, yellow, crystalline principle, C_6H_5O , from *Inula helenium*, or elecampane: antiseptic and antispasmodic. Dose, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.011-0.022 gm.).

helgotan (hel'go-tan). See *tannoform*.

heliantin (he-le-an'thin). An orange-yellow anilin dye. It is the sodium salt of para-dimethyl-amino-azo-benzene-sulphonic acid, $(CH_3)_2N.C_6H_4.N:N.C_6H_4.SO_2.ONa$. It may be used as an indicator with a PH range of 3.1-4.4, being red at 3.1 and yellow at 4.4. Called also *trapeolin D.*, *methyl-orange*, and *Poirrier's orange*.

helicin (hel'is-in). A glucosid formed by oxidizing salicin. On hydrolysis it yields glucose and salicylic aldehyd.

helicine (hel'is-in) [Gr. *ἑλῖξ* coil]. 1. Of a spiral form. 2. Of or pertaining to the helix.

Helicobacterium (hel'ik-o-bak-te're-um) [Gr. *ἑλῖξ* coil + *βακτήριον* rod]. A genus or form of schizomycetous microorganisms. **H. aërogenes**, a gas-producing species from the alimentary canal, in motile rods, single or in chains, growing into long, undulating filaments.

helicoïd (hel'ik-oid) [Gr. *ἑλῖξ* coil + *εἶδος* form]. Resembling a coil or helix.

helicon (hel'ik-on). A proprietary preparation identical with aspirin.

helicopepsin (hel'ik-o-pep'sin) [Gr. *ἑλῖξ* spiral shell + *pepsin*]. A ferment resembling pepsin, from snails.

helicopod (hel'ik-o-pod) [Gr. *ἑλῖξ* coil + *ποὺς* foot]. 1. The dragging gait of some cases of hysteric disorder and of certain paralytics. 2. Having a peculiar walk, in which the feet describe half-circles.

helicopodia (hel'ik-o-po'de-ah). The gait of a helicopod.

helicoprotein (hel'ik-o-pro'te-in) [Gr. *ἑλῖξ* snail + *protein*]. A glucoprotein substance obtained from the snail, *Helix pomatia*.

helicotrema (hel-ik-o-tre'mah) [Gr. *ἑλῖξ* helix + *τρήμα* hole]. The passage that connects the scala tympani and scala vestibuli at the apex of the cochlea.

helid, helide (hel'id). A compound of an element with helium.

helienecephalitis (he'le-en-sef-al'i'tis) [Gr. *ἥλιος* sun + *ἐγκέφαλος* brain + *-itis* inflammation]. Inflammation of the brain caused by exposure to the sun.

helion (he'le-on). Helium.

heliophobia (he'le-o-fō-be-ah) [Gr. *ἥλιος* sun + *φόβος* fear]. Morbid avoidance or dread of sunlight.

heliosin (he-le-o'sin). A compound containing keratin and various inorganic salts: used in syphilis.

heliosis (he-le-o'sis) [Gr. *ἥλιος* sun]. Sunstroke.

heliotaxis (he-le-o-tak'sis) [Gr. *ἥλιος* sun + *τάξις* turning]. See *heliotropism*.

heliotherapy (he'le-o-ther'ap-e) [Gr. *ἥλιος* sun + *therapy*]. The treatment of disease by exposing the body to the sun's rays; the therapeutic use of the sun-bath.

heliotrope B. Amethyst violet. See under *violet*.

heliotropin (he-le-o'ro-pin). Piperonal or protocatechuic aldehyd methylene ether, $CH_2O_2.C_6H_3-CHO$, a fragrant crystalline antiseptic and antipyretic base: used in perfumery, etc.

heliotropism (he-le-ot'ro-pizm) [Gr. ἥλιος sun + τροπή a turn]. Chemotropism induced by the action of sunlight; the tendency of an organism to turn toward or grow toward sunlight.

helium (he'le-um) [Gr. ἥλιος sun]. An inert gaseous element that exists in the sun, the air, and is now obtained from crude petroleum. Symbol, He; atomic weight, 4; specific gravity, 1.98.

helix (he'liks) [Gr. ἑλῆξ coil]. 1. The margin of the pinna of the ear. 2. A coil of wire, as in an electromagnet.

Hellesimas'tix fecic'ola. An oval coprozoic flagellate which has been grown from human feces.

helkomen (hel'ko-men). Bismuth dibrometaxoxynaphtholate: used like iodoform.

Hellat's sign (hel'ats) [Piotr Hellat, Russian otologist, 1857-1912]. See under *sign*.

hellebore (hel'e-bōr) [L. *helleb'orus*; Gr. ἑλλέβορος]. A violent gastro-intestinal poison, having hydragogue, cathartic, and emmenagogue properties. It is sometimes used in mania, amenorrhea, and ascites. **American h.**, veratrum viride. **black h.**, the root of *Helleb'orus niger*. Dose in powder, 10-20 gr. (0.666-1.333 gm.); of extract, ½-5 gr. (0.033-0.33 gm.); of fluidextract, 5-15 min. (0.333-1 c.c.). **false h.** See *Adonis*. **green h.**, white h., veratrum viride.

helleborein (hel'e-bo're-in). A glucosid, C₂₈H₄₄O₁₃, from hellebore: it is mydriatic, and may be used like digitalis in heart diseases. Dose, ½-10 gr. (0.0033-0.0066 gm.).

helleborin (hel'eb-or-in). A poisonous glucosid from hellebore.

helleborism (hel'eb-or-izm). The poisonous effects of hellebore; also treatment with hellebore.

Helleborus (hel'eb-o-rus). See *hellebore*.

Heller's test (hel'erz) [Arnold Ludwig Gotthelf Heller, pathologist in Kiel, 1840-1913]. See under *tests*.

Helmholtz's ligament (helm'holtz-es) [Hermann Ludwig Ferdinand von Helmholtz, German physiologist, 1821-1894]. See *ligament*.

helminth (hel'minth) [Gr. ἔλμυς worm]. An intestinal worm or worm-like parasite.

helminthagogue (hel-min'thag-og) [*helminth* + Gr. ἀγωγός leading]. Same as *vermifuge* or *vermifugal*.

helminthemia (hel-min-them'e-sis) [Gr. ἔλμυς worm + ἔμεσις vomiting]. The vomiting of worms.

helminthiasis (hel-min-thi'as-is) [Gr. ἔλμυς worm]. A morbid state due to infestation with worms. **h. elastica**, the occurrence of elastic tumors in the groin and axilla, probably due to filariae. **h. Wuchereri**, a term proposed by V. Pereira for all forms of filariasis.

helminthic (hel-min'thik). Same as *helminthagogue*.

helminthicide (hel-min'this-id) [Gr. ἔλμυς worm + L. *cādere* to kill]. Vermicide.

helminthism (hel-min-thizm). The presence of worms in the body.

helminthocorton (hel-min-tho-kor'ton) [Gr. ἔλμυς worm + χορτός grass]. Corsican moss; a mixture of pigments of seaweeds obtained in Corsica: vermifuge and antipyretic.

helminthoid (hel-min'thoid) [Gr. ἔλμυς worm + εἶδος form]. Worm-like.

helminthology (hel-min-thol'o-je). [Gr. ἔλμυς worm + λόγος science]. The sum of knowledge regarding worms or animal endoparasites.

helminthoma (hel-min-tho'mah) [Gr. ἔλμυς worm + ὅμα tumor]. A tumor caused by a parasitic worm.

helminthophobia (hel-min-tho-fō-be-ah) Gr. ἔλμυς worm + φόβος fear. Morbid fear of be-

ing infested with worms; an obsession of infestation with worms.

helminthous (hel-min'thus) [Gr. ἔλμυς worm]. Pertaining to worms; infested with worms.

helmitol (hel'mit-ol). A white powder, urotropin anhydro methylene citrate, (CH₂)₆N₄C₇H₆O₇: used as a urinary antiseptic. Dose, 15 gr. (1 gm.).

Heloderma (he-lo-der'mah). A genus of venomous lizards of Arizona and New Mexico. *H. horridum* is the Mexican caltetepon, and *H. suspectum*, the Gila monster.

heloma (he-lo'mah) [Gr. ἥλος nail + ὅμα tumor]. A corn or callosity on the hand or foot.

helonias (he-lo'ne-as). The rhizomes and roots of *Chamaelirium luteum*: used as a vermifuge.

helonin (he-lo'nin). A precipitate from a tincture of *Helonias dioica* or *Chamaelirium luteum*: diuretic and anthelmintic. Dose, 2-4 gr. (0.133-0.266 gm.).

helosis (he-lo'sis) [Gr. ἥλος nail]. The condition of having corns.

helotomeia (he-lo-to-mi'ah) [Gr. ἥλος nail + τομή cut]. The surgery of corns.

helotomon (he-lot'o-mon). A knife for cutting corns.

helotomy (he-lot'o-me). The cutting of corns; surgery of corns.

helthin (hel'thin). Amidonaphthol-potassic-acid, used as a reagent for testing water for the presence of nitrous impurities.

Helweg's bundle or tract (hel'vegz) [Hans Kristian Saxtorph Helweg, Danish physician, born 1847]. See *olivospinal tract*, under *tract*.

hem. See *hem*.

hem-, **hēm-** [Gr. αἷμα blood]. A prefix denoting some relation to the blood.

hemabrometer (hem-a-bar-om'et-er) [Gr. αἷμα blood + *barometer*]. An instrument for ascertaining the specific gravity of the blood.

hemaboloids (hem-ab'o-loidz). A preparation of organic iron compounds, bone-marrow, nuclein, and beef peptones.

hemachromatosis (hem'ak-ro-mat-o'sis). General pigmentation of hemic origin.

hemachrome (hem'ak-rōm) [Gr. αἷμα blood + χρώμα color]. The red coloring-matter of the blood.

hemachrosis (hem-ak-ro'sis) [Gr. αἷμα blood + χρώσις coloring]. Abnormal or excessive redness of the blood.

hemacyanin (hem-as-i'an-in) [Gr. αἷμα blood + κίανος blue]. Same as *hematocyanin*.

hemacyte (hem'as-it). Same as *hematocyte*.

hemacytometer (hem'a-si-tom'et-er) [Gr. αἷμα blood + κύτος cell + μέτρον measure]. An instrument used in counting the blood-corpuscles.

hemacytozoön (hem'a-si-to-zo'on), pl. *hemacytozo'a* [Gr. αἷμα blood + κύτος cell + ζῶον animal]. Any cellular animal microparasite or species inhabiting the blood.

hemad (he'mad). 1. Toward the hemal or ventral aspect. 2. A blood-corpuscle.

hemaden (hem'ad-en) [Gr. αἷμα blood + ἀδὴν gland]. A ductless gland.

hemadenology (hem-ad-en-ol'o-je) [Gr. αἷμα blood + ἀδὴν gland + λόγος word]. The study of the relations of the internal secretions to general diseases.

hemadostenosis (hem'ad-o-ste-no'sis) [Gr. αἷμα blood-stream + στένωσις narrowing]. The narrowing or obliteration of a blood-vessel.

hemadromograph (hem-a-drom'o-graf) [Gr. αἷμα blood + δρόμος course + γράφειν to record]. An instrument for recording the speed of the blood-current.

hemadromometer (hem'ad-ro-mom'et-er). Same as *hemodromometer*.

hemadynamometer (hem''a-di-nam-om'et-er)

[Gr. αἷμα blood + δύναμις strength + μέτρον measure]. An apparatus for measuring the pressure of the blood.

hemadynamometry (hem''ad-i-nam-om'et-re)

[see *hemadynamometer*]. Measurement of blood-pressure.

hemafacient (hem-af-a'shent) [Gr. αἷμα blood + L. *facere* to make]. Same as *hemalopoietic*.**hemafecia** (hem-ah-fe'se-ah) [Gr. αἷμα blood + *feces*]. Blood in the feces.**hemaformyl** (hem'af-or-mil). A compound of hematoxylin and formaldehyd: used in digestive disorders.**hemagglutination** (hem-ag lu-tin-a'shun). The agglutination of blood-corpuscles.**hemagglutinative** (hem-ag-lu'tin-a-tiv). Causing agglutination of blood-corpuscles.

hemagglutinin (hem-ag-lu'tin-in) [Gr. αἷμα blood + *agglutin*]. A specific substance in blood-serum which causes agglutination of red blood-corpuscles. Hemagglutins may be divided into *auto-hemagglutinins* which agglutinate the cells of the same blood as that in which they are contained: *iso-hemagglutinins* or *homologous hemagglutinins* which agglutinate the cells of other members of the same species; and *hetero-agglutinins* which agglutinate the red cells of other species of animals.

hemagogic (hem-ag-oj'ik). Of the nature of a hemagogue.

hemagogue (hem'ag-og) [Gr. αἷμα blood + ἄγωγός leading]. 1. Favoring the discharge of blood or of the menses. 2. An agent that promotes a sanguineous discharge.

hemagonium (hem-ag-o'ne-um) [Gr. αἷμα blood + γονή seed]. Same as *hemoblast* (1st def.).**hemagulen** (hem-ag'u-len). A proprietary hemostatic prepared from fresh brain substance.

hemal (he'mal) [Gr. αἷμα blood]. Of or pertaining to the blood. **h. nodes**. See *hemolymph gland*, under *gland*.

hemalbumin (hem-al-bu'min) [Gr. αἷμα blood + *albumin*]. 1. Predigested iron albuminate: used as a remedy. 2. A proprietary preparation of the salts and acid non-coagulating albuminoids of the blood. 3. A patented preparation of blood containing hematin, hemoglobin, serum-albumin, paraglobulin, etc.

hemalexin (he-mal-ek'sin). Analoxin of the blood.

hemalexin (he-mal-ek'sis) [Gr. αἷμα blood + ἀλέγειν to aid]. The manufacture of alexins or protective elements of the blood.

hemalum (hem-al'um). A stain used in histologic work, made of hematoxylin and alum.**hemameba** (hem-am-e'bah) [*hema-* + *ameba*].

1. A white blood-corpuscle. 2. A parasitic ameboid microörganism of the blood: particularly a genus of *Hemocytozoa* infesting the blood of man, monkeys, bats, and various birds. It includes the *plasmodium* of man and the *hemoproteus* of birds. See *Hemosporidia*. **h. lucæmiæ magna**, a form said to be the cause of myelogenous leukemia. **h. lucæmiæ parvæ**, a form said to be the cause of lymphatic leukemia.

hemamebiasis (hem-am-e-bi'as-is). Infection with hemamebæ.**hemanalysis** (hem-an-al'is-is) [Gr. αἷμα blood + *analysis*]. Analysis of the blood.

hemangio-endothelioblastoma (hem-an''je-o-en-do-the''le-o-blas-to'mah) [Gr. αἷμα blood + ἄγγειον vessel + *endothelium* + βλάστος germ + *-ωμα* tumor]. A tumor of mesenchymal origin of which the cells tend to form endothelial cells and line blood-vessels.

hemangio-endothelioma (hem-an''je-o-en-do-the-le-o'mah) [*hemangioma* + *endothelioma*]. A new-growth of the endothelium of the capillary

vessels. **h. tuberosum multiplex**, a hyperplasia of the endothelium of the cutaneous blood-vessels producing an eruption of nodules and papules.

hemangiofibroma (hem-an''je-o-fi-bro'mah). A hemangioma containing fibrous tissue.

hemangioma (hem'an-je-o'mah) [Gr. αἷμα blood + *angioma*]. A tumor made up of new-formed blood-vessels. Cf. *angioma* and *lymphangioma*.

hemangiomatosis (hem'an-je-o-mat-o'sis). A condition in which multiple hemangiomata are developed.**hemangiosarcoma** (hem-an''je-o-sar-ko'mah). Hemangioma blended with sarcoma.**hemanutrid** (hem-an-u'trid). A liquid preparation of hemoglobin, glycerin, and brandy.**hemapheic**, **hemapheic** (hem-af-e'ik). Marked by the presence of hemaphein.**hemaphein** (hem-af-e'in) [Gr. αἷμα blood + φαῖς tawny]. A brown coloring-matter of the blood and urine.**hemapheism**, **hemaphæism** (hem-af-e'izm). The presence of hemaphein in the urine.**hemaphobia** (hem-af-o'be-ah) [Gr. αἷμα blood + φόβος fear]. Morbid dread of the sight of blood.**hemaphograph** (hem-af-o'to-graf) [Gr. αἷμα blood + *photograph*]. A photograph used in estimating the hemoglobin of the blood.**hemapoiesis** (hem'ah-poi-e'is) [Gr. αἷμα blood + ποίσις formation]. The formation or making of the blood.**hemapoietic** (hem'ah-poi-et'ik). See *hematopoietic*.**hemapophysis**, **hæmapophysis** (hem-ap-of'is-is) [Gr. αἷμα blood + *apophysis*]. A costal cartilage regarded as an apophysis of the hemal spine.**hemarobin** (hem-ar-o'bin). A proprietary tonic containing hypophosphites, cod-liver oil, etc.**hemarthros** (hem-ar'thros). Hemarthrosis.**hemarthrosis** (hem-ar-thro'sis) [Gr. αἷμα blood + ἄρθρον joint]. Blood extravasated into a joint or its synovial cavity; hemorrhage into a joint.**hemase** (hem'as) [Gr. αἷμα blood + *-ase*]. A catalase found in the blood.

hemasthenosis (hem-as-then-o'sis) [Gr. αἷμα blood + ἀσθένεια weakness]. 1. Defective circulation of the blood. 2. A defective state of the blood.

hemastrontium (hem-as-tron'she-um). A tissue stain prepared by adding strontium chlorid to a solution of hematein and aluminum chlorid in alcohol and citric acid.

hematachometer (hem''at-ak-om'et-er) [Gr. αἷμα blood + ταχύς swift + μέτρον measure]. An instrument for measuring the speed of the blood-current.**hematærometer** (hem''at-a-er-om'et-er) [Gr. αἷμα blood + ἄρ air + μέτρον measure]. An instrument for measuring the pressure of gases in the blood.**hematalloscopy** (hem''at-al-os'ko-pe) [Gr. αἷμα blood + ἄλλος other + σκοπεῖν to examine]. The examination of blood to distinguish one kind from another.**hematapostasis** (hem''at-ap-os'tas-is) [Gr. αἷμα blood + ἀπόστασις a standing away]. The metastasis of blood.**hematapostema** (hem''at-ap-os-te'mah). An abscess containing effused blood.**hemate** (hem'ät). A compound of hematein.

hemateikon (hem-at-i'kon), pl. *hemateiko'nia* [Gr. αἷμα blood + εἶκον image]. The blood-picture, or appearance of the blood under the microscope.

hematein (hem-at-e'in). A brownish-red, crystalline substance, C₁₆H₁₂O₆, derived from hematoxylin by oxidation.

hematemesis (hem-at-em'-es-is) [Gr. *αἷμα* blood + *ἐμεῖς* vomiting]. The vomiting of blood. **h. puella'ris**, blood-vomiting in girls or young women with no stomach lesion.

hematencephalon (hem''at-en-sef'al-on) [Gr. *αἷμα* blood + *encephalon*]. The effusion of blood into the brain.

hematherapy (hem-ath-er'ap-e) [Gr. *αἷμα* blood + *θεραπεία* treatment]. Blood treatment; treatment of disease by the use of prepared arterial blood of bullocks, either by injection or t rough the mouth.

hemathermal (hem-ath-er'mal) [Gr. *αἷμα* blood + *θερμός* warm]. Warm blooded; said of animals whose blood remains at a constant temperature.

hemathermous (hem-ath-er'mus) [Gr. *αἷμα* blood + *θερμός* hot]. Having warm blood.

hemathorax (hem-ath-o'rax). Hemothorax.

hematic (he-mat'ik). Pertaining to the blood.

hematicum (he-mat'ik-um). An aqueous alcoholic solution of iron compounds.

hematid (hem'at-id). A red blood-corpuscle.

hematidrosis (hem''at-id-ro'sis) [Gr. *αἷμα* blood + *ἵδρωσις* sweating]. The sweating of blood or of a fluid mixed with blood.

hematimeter (hem-at-im'et-er) [Gr. *αἷμα* blood + *μέτρον* measure]. An instrument used in counting the blood-corpuscles.

hematimetry (hem-at-im'et-re). Counting of the corpuscles in a given quantity of blood.

hematin (hem'at-in). A brown or blue-black amorphous substance, $C_{35}H_{35}N_4FeO_5$, which, with globin, forms hemoglobin. **h.-albumin**, a brown powder obtained by drying the fibrin of the blood. **reduced h.**, hemochromogen. **vegetable h.**, aspergillin.

hematinemia (hem'at-in-e'me-ah) [*hematin* + Gr. *αἷμα* blood]. The presence of hematin in the blood.

hematinic (hem-at-in'ik). Same as *hematic*.

hematinogen (hem-at-in'o-jen). An iron-containing pigment of the blood.

hematinometer (hem'at-in-om'et-er). Same as *hemoglobinometer*.

hematurinuria (hem'at-in-u're-ah) [*hematin* + Gr. *οὖρον* urine]. The condition of urine that is tinged with hematin.

hematisthesis (hem-at-is'kes-is) [Gr. *αἷμα* blood + *σχέσις* checking]. Arrest of bleeding.

hematisthetic (hem'at-is-ket'ik). Checking bleeding; styptic.

hemato-, hæmato- [Gr. *αἷμα*, *αἷματος* blood]. A prefix denoting some relationship to the blood.

hemato-aërometer (hem'at-o-a-er-om'et-er). Hemataërometer.

hematobium, hæmatobium (hem-at-o'be-um), pl. *hemato'bia* [Gr. *αἷμα* blood + *βίος* life]. Any organism that lives in the blood, especially an animal microorganism.

hematoblast (hem-at-o-blast) [Gr. *αἷμα* blood + *βλαστός* germ]. A cell or mass from which a red blood-corpuscle is developed, whether found in the blood or in a hematopoietic tissue; called also *erythrogenium* and *proerythroblast*.

hematocatharsis (hem'at-o-kath-ar'sis) [Gr. *αἷμα* blood + *κάθαρσις* purging]. The ridding of the blood of toxic substances; blood-lavage.

hematocele (hem'at-o-sē) [Gr. *αἷμα* blood + *κήλη* tumor]. An effusion of blood into a cavity, especially into the tunica vaginalis testis. **parametric h.**, **pelvic h.**, **retro-uterine h.**, a tumor formed by effusion of blood into Douglas' pouch. **pudendal h.**, a sanguineous tumor in a labium of the pudenda. **scrotal h.**, effusion of blood into the tissues of the scrotum or into the tunica vaginalis testis.

hematocelia, hematocœlia (hem'at-o-se'le-ah)

[Gr. *αἷμα* blood + *κοιλία* cavity]. Effusion of blood into the peritoneal cavity.

hematocephalus (hem'at-o-sef'al-us) [Gr. *αἷμα* blood + *κεφαλή* head]. A fetus born with a head distended with blood.

hematochezia (hem'at-o-ke'ze-ah) [Gr. *αἷμα* blood + *χέειν* to go to stool]. The passage of bloody stools.

hematochlorin (hem'at-o-klo'r'in) [Gr. *αἷμα* blood + *χλωρός* green]. A green coloring-matter occurring in the placenta and derived from hemoglobin.

hematochromatosis (hem'at-o-kro-mat-o'sis) [Gr. *αἷμα* blood + *χρῶμα* color]. Staining of the tissues with blood-pigment.

hematochyluria (hem'at-o-ki-lu're-ah) [Gr. *αἷμα* blood + *χυλός* chyle + *οὖρον* urine]. The discharge of blood and chyle with the urine, due to *Filaria sanguinis-hominis*.

hematoclasia (hem-at-ok'las-is). Hemoclasia.

hematoclastic (hem'at-o-klas'tik). Hemoclastic.

hematocolpometra (hem'at-o-kol'po-me'trah) [Gr. *αἷμα* blood + *κόλπος* vagina + *μήτρα* uterus]. Accumulation of menstrual blood in the vagina and uterus.

hematocolpos (hem'at-o-kol'pos) [Gr. *αἷμα* blood + *κόλπος* vaginal]. An accumulation of blood or menses in the vagina.

hematocrit, hematocrite (hem'at-o-krit) [Gr. *αἷμα* blood + *κρίνειν* to separate]. A centrifuge for separating the corpuscles from the liquor sanguinis.

hematocryal (hem-at-ok're-al) [Gr. *αἷμα* blood + *κρύος* cold]. Cold-blooded.

hematocrystallin (hem'at-o-kris'tal-in) [Gr. *αἷμα* blood + *κρύσταλλος* crystal]. Same as *hemoglobin*.

hematocyanin (hem'at-o-si'an-in) [Gr. *αἷμα* blood + *κύανος* blue]. A substance allied to hemoglobin occurring in the blood of certain invertebrates. It is blue in color and contains copper instead of iron.

hematocyst (hem'at-o-sist) [Gr. *αἷμα* blood + *κύστις* bladder]. An effusion of blood into the bladder or into a cyst.

hematocystis (hem'at-o-sis'tis). Hematocyst.

hematocyte (hem'at-o-sit) [Gr. *αἷμα* blood + *κύτος* cell]. Any blood-corpuscle or blood-cell.

hematocytoblast (hem'at-o-si'to-blast) [Gr. *αἷμα* blood + *κύτος* cell + *βλαστός* germ]. Same as *myeloblast*.

hematocytolysis (hem'at-o-si-to'l'is-is) [*hematocyte* + Gr. *λύσις* solution]. Dissolution and disintegration of blood-corpuscles.

hematocytometer (hem'at-o-si-tom'et-er) [*hematocyte* + Gr. *μέτρον* measure]. Same as *hematimeter*.

hematocytozoön (hem'at-o-si-to-zo'on) [*hematocyte* + Gr. *ζῶον* animal]. A parasite inhabiting the blood-cells. The term *Hemacytozoa* is the name of an order of sporozoa including the parasites of intermittent fever. **H. mala'riæ**, the *Plasmodium malariae*.

hematocyturia (hem'at-o-si-tu're-ah) [*hematocyte* + Gr. *οὖρον* urine]. The occurrence of blood-corpuscles in the urine.

hematodynamometer (hem'at-o-di-nam-om'et-er). Same as *hemadynamometer*.

hematodystrophy (hem'at-o-dis'tro-fe) [Gr. *αἷμα* blood + *δυσ* difficult + *τροφή* nutrition]. Any disordered condition of blood nutrition.

hemato-ethyroidin (hem'at-o-e-thi-roi'din) [Gr. *αἷμα* blood + *e* without + *thyroid*]. A preparation from the blood of an animal deprived of its thyroid gland; used in the treatment of hyperthyroidism.

hematogen (hem-at'o-jen) [Gr. *αἷμα* blood + *γενῶν* to produce]. 1. A yellow iron powder derived from the blood; therapeutic. 2. A liquid prepa-

ration of iron citrate, acetic acid, and albumin: given for anemia, tuberculosis, and rickets. Dose, 1-4 dr. (4-16 c.c.). 3. A proprietary preparation of blood-plasma, glycerin, and wine: used for anemia, rickets, and tuberculosis. Dose, 1-6 dr. (4-24 c.c.). 4. A protein substance in the yolk of egg that contains iron.

hematogenesis (hem''at-o-jen'es-is) [*hemato-* + *genesis*]. The production of blood.

hematogenic, hematogenous (hem''at-o-jen'ik, hem-at-o-jen-us). 1. Produced in the blood, or derived from the blood. 2. Producing blood.

hematoglobulin (hem''at-o-glo-bin). Hemoglobin.

hematoglobulinuria (hem''at-o-glo-bin-u're-ah). Same as *hemoglobinuria*.

hematoglobulin (hem''at-o-glob'u-lin). The name given by Y. Berzelius to hemoglobin.

hematogonia (hem''at-o-go'ne-ah) [*Gr. αἷμα blood* + *γενή generation*]. Same as *myeloblast*.

hematohidrosis (hem''at-o-hid-ro'sis). See *hematidrosis*.

hematohistioblast (hem''at-o-his'te-o-blast). Same as *hemohistioblast*.

hematohiston (hem''at-o-his'ton). The globin of the blood.

hematohyaloid (hem''at-o-hi'al-oid) [*Gr. αἷμα blood* + *hyaline*]. The hyaline matter formed by degeneration of thrombi through coagulation of the red corpuscles or blood-platelets.

hematoid (hem''at-oid) [*Gr. αἷμα blood* + *εἶδος form*]. Resembling blood.

hematoidin (hem''at-oid'in). A yellow-brown, crystalline substance, $C_{18}H_{18}N_2O_8$, from blood-clots.

hematokolpos (hem-at-o-kol'pos). See *hematocolpos*.

hematokrit (hem''at-o-krit). See *hematocrit*.

hematol (hem''at-ol). A therapeutic preparation of sterilized hemoglobin, glycerin, and brandy.

hematolin (hem''at-o'lin). A compound, $C_{66}H_{78}O_7N_8$, from hematins.

hematolith (hem''at-o-lith). Hemolith.

hematologist (hem-at-ol'o-jist). A specialist in the study of the blood.

hematology (hem-at-ol'o-je) [*Gr. αἷμα blood* + *λόγος discourse*]. The sum of what is known regarding the blood.

hematolymphangioma (hem''at-o-lim'fan-je-o'-mah) [*Gr. αἷμα blood* + *L. lym'pha lymph* + *Gr. ἄγγειον vessel*]. A tumor composed of blood-vessels and lymph-vessels.

hematolysis (hem-at-ol'i-sis) [*Gr. αἷμα blood* + *λύειν to dissolve*]. The disintegration and degeneration of the blood.

hematolytic (hem-at-o-lit'ik). Pertaining to or causing a degeneration of the blood.

hematoma (hem-at-o'mah), pl. *hemato'mata* [*Gr. αἷμα blood* + *-μα tumor*]. A tumor containing effused blood. **h. auris**, a blood tumor of the perichondrium of the ear. It is seen in insanity, and is sometimes called *insane ear*. **dural h.**, a circumscribed subdural effusion of the blood occurring in layers. **pelvic h.**, an effusion of blood into the pelvic cellular tissue. **retro-uterine h.**, an effusion of blood into the connective tissue behind the uterus.

hematomancy, hematomanteia (hem''at-o-man-se, hem''at-o-man-te'ah) [*Gr. αἷμα blood* + *μαντεία divination*]. Diagnosis by examination of the blood.

hematomanometer (hem''at-o-man-om'et-er). Sphygmomanometer.

hematomediastinum (hem''at-o-me-de-as-ti-

num) [*hemato-* + *mediastinum*]. An effusion of blood in the mediastinum.

hematometer (hem-at-om'e-ter) [*Gr. αἷμα blood* + *μέτρον measure*]. 1. A hemometer. 2. A hemodynamometer.

hematometra (hem''at-o-me'trah) [*Gr. αἷμα blood* + *μήτρα uterus*]. An accumulation of blood in the uterus.

hematometry (hem-at-om'et-re) [*Gr. αἷμα blood* + *μέτρον measure*]. Measurement of the hemoglobin and estimation of the percentage of the various cells in the blood.

hematomole (hem-at-o-möl). Same as *Breus' mole*. See under *mole*.

Hematomonas (hem-at-om'on-as) [*Gr. αἷμα blood* + *μονάς monad*]. A genus of protozoan parasites living in the blood.

hematomphalocoele (hem''at-om-fal'o-sēl) [*Gr. αἷμα blood* + *omphalocoele*]. An umbilical hernia containing blood.

hematomyelia (hem''at-o-mi-e'le-ah) [*Gr. αἷμα blood* + *μυελός marrow*]. An effusion of blood within or upon the spinal cord.

hematomyelitis (hem''at-o-mi-el-i'tis) [*Gr. αἷμα blood* + *myelitis*]. Acute myelitis with bloody effusion.

hematomyelopore (hem''at-o-mi'el-o-pōr) [*Gr. αἷμα blood* + *μυελός marrow* + *πόρος opening*]. A disease marked by the formation of canals in the spinal cord, due to hemorrhage.

hematone (hem''at-ōn). A proprietary tonic containing blood-iron, albuminates, hydrastis, nuxvomica, etc.

hematonephrosis (hem''at-o-nef-ro'sis). Same as *hemonephrosis*.

hematonic (hem-at-on'ik). A blood tonic.

hematopan (hem-at-o-pan) [*Gr. αἷμα blood* + *L. pan'is bread*]. A proprietary nutrient preparation of blood and malt.

hematopathology (hem''at-o-path-ol'o-je) [*Gr. αἷμα blood* + *pathology*]. The study of diseases of the blood.

hematopericardium (hem''at-o-per-ik-ar'de-um). [*Gr. αἷμα blood* + *pericardium*]. An effusion of blood within the pericardium.

hematoperitoneum (hem''at-o-per-it-o-ne'um). Hemoperitoneum.

hematopexin (hem''at-o-peks'in). Same as *hemopexin*.

hematopexis (hem''at-o-peks'is). Same as *hemopexis*.

hematophag (hem''at-o-fā) [*hematophagia*]. A phagocytic cell which acts as a destroyer of red blood-corpuscles.

hematophagia (hem''at-o-fa'je-ah) [*Gr. αἷμα blood* + *φαγείν to eat*]. 1. Blood-drinking. 2. The act of subsisting on the blood of another animal. 3. The taking up or digestion of red blood-corpuscles by phagocytic cells.

hematophagocyte (hem''at-o-fag'o-sit). Same as *hemophagocyte*.

hematophagous (hem-at-of-ag-us) [*Gr. αἷμα blood* + *φαγείν to eat*]. Eating or subsisting on blood.

hematophagy (hem-at-of'aj-e). Hematophagia.

hematophilia (hem-at-o-fil'e-ah). See *hemophilia*.

hematophobia (hem''at-o-fō-be'ah) [*Gr. αἷμα blood* + *φόβος fear*]. 1. Morbid dread of the sight of blood. 2. Prejudice against venesection.

hematophyte (hem''at-o-fit) [*Gr. αἷμα blood* + *φυτόν plant*]. Any microscopic plant organism or species living in the blood.

hematoplasia (hem''at-o-pla-ne'ah) [*Gr. αἷμα blood* + *πλάνη wandering*]. Vicarious menstruation.

hematoplast (hem''at-o-plast). Same as *hematoblast*.

Hematoma auris.

- hematoplastic** (hem''at-o-plas'tik) [Gr. αἷμα blood + πλάσσειν to mold]. Concerned in the elaboration of the blood.
- hematopneic** (hem-at-o-ne'ik) [Gr. αἷμα blood + πνέειν to breathe]. Pertaining to the oxygenation of the blood.
- hematopoiesis** (hem''at-o-poi-e'sis) [Gr. αἷμα blood + ποίειν to make]. The formation or production of blood from the food and lymph-products.
- hematopoietic** (hem''at-o-poi-et'ik) [Gr. αἷμα blood + ποίειν to make]. Pertaining to or taking part in the formation of blood.
- hematopoiectin** (hem''at-o-poi-e'tin). Hemopoietin.
- hematoporphyrin** (hem''at-o-por-fi're-ah). A constitutional state marked by enormous quantity of hematoporphyrin in the urine, sensitiveness of the skin to light, vomiting, and intestinal disturbance. Called also *porphyria*.
- hematoporphyrin** (hem''at-o-por'fir-in) [Gr. αἷμα blood + πορφύρα purple]. Hematin deprived of its iron, $C_{54}H_{34}N_8O_{12}$; iron-free hematin. It is a product of the decomposition of hemoglobin, and is seen in the urine after destruction of the red blood-corpuscles.
- hematoporphyrinuria** (hem''at-o-por'fir-in-u're-ah). The occurrence of hematoporphyrin in the urine; it may be due to the misuse of sulphonal.
- hematoporphyrinoidin** (hem''at-o-por-fi-ro'din). A product of the decomposition of hematoporphyrin.
- hematoposia** (hem''at-o-po'ze-ah) [Gr. αἷμα blood + πόσις draft]. The drinking of blood as a therapeutic measure.
- hematopostema** (hem-at-o-pos-te'mah). An abscess containing extravasated blood.
- Hematopota** (hem-at-op'o-tah). A genus of tabanid flies. *H. italica* and *H. pluvialis* are common in Europe.
- hematoprecipitin** (hem''at-o-pre-sip'it-in). A precipitin specific for blood, especially for plasma and serum.
- hematorachis, hemorachis** (hem-at-or'a-kis, hem-or'a-kis) [Gr. αἷμα blood + ράχis spine]. Hemorrhage into the vertebral canal.
- hematorrhea** (hem''at-or-re'ah) [Gr. αἷμα blood + ῥοία flow]. A free or copious hemorrhage.
- hematosalpinx** (hem''at-o-sal'pinks) [Gr. αἷμα blood + σάλπιγξ tube]. A collection of blood in an oviduct.
- hematoscheocele** (hem-at-os'ke-o-sēl) [Gr. αἷμα blood + σσχέον scrotum + κήλη tumor]. A collection of blood within the scrotum.
- hematoscope** (hem''at-o-skōp) [Gr. αἷμα blood + σκοπεῖν to see]. An instrument for the optical or spectroscopic examination of the blood.
- hematoscopy** (hem-at-os'ko-pe) [see *hematoscope*]. The inspection of the blood, as with a spectro-scope.
- hematosepsis** (hem''at-o-sep'sis) [Gr. αἷμα blood + σήψis putrefaction]. The same as *septicemia*.
- hematosin** (hem-at-o'sin). See *hematin*.
- hematosis** (hem-at-o'sis) [Gr. αἷμα blood]. The formation of the blood; also its arterialization, or aëration, in the lungs.
- hematospectrophotometer** (hem''at-o-spek'-tro-fo-tom'et-er). A spectrophotometer for determining the amount of hemoglobin in the blood.
- hematospectroscope** (hem''at-o-spek'-tro-skōp) [Gr. αἷμα blood + spectroscōpy]. A form of spectroscopy for examining thin layers of blood.
- hematospectroscopy** (hem''at-o-spek-tros'ko-pe) [Gr. αἷμα blood + spectroscōpy]. The spectroscopic examination of the blood.
- hematospermatocoele** (hem''at-o-sper-mat'o-sēl) [Gr. αἷμα blood + σπέρμα seed + κήλη tumor]. A spermatocoele containing blood.
- hematospermia** (hem''at-o-sper-me-ah) [Gr. αἷμα blood + σπέρμα seed]. The discharge of bloody semen.
- hematospherinemia** (hem''at-o-sfe-rin-e'me-ah) [Gr. αἷμα blood + σφαῖρα sphere + αἷμα blood]. Hemoglobinemia.
- Hematosporidia** (hem''at-o-spo-rid'e-ah). A suborder of *Sporozoa* which contains the parasite of malaria.
- hematostatic** (hem''at-o-stat'ik) [Gr. αἷμα blood + στάσις standing]. Due to, or characterized by, stagnation of the blood.
- hematosteon** (hem-at-os'te-on) [Gr. αἷμα blood + ὀστέον bone]. Hemorrhage into the medullary cavity of a bone.
- hematotherapy** (hem''at-o-ther'ap-e) [Gr. αἷμα blood + θεραπεία]. Treatment by means of blood or blood preparations.
- hematothermal** (hem''at-o-ther'mal) [Gr. αἷμα blood + θερμη heat]. Having warm blood.
- hematothorax** (hem''at-o-tho'raks). See *hemothorax*.
- hematothyroidin** (hem''at-o-thi-ro'i'din). A proprietary preparation from the blood of thyroidectomized animals; used in exophthalmic goiter.
- hematotic** (hem-at-ot'ik). Pertaining to hematosis.
- hematotoxic** (hem''at-o-toks'ik) [hemato- + toxic]. Pertaining to blood-poisoning.
- hematotoxin** (hem''at-o-tok'sin). Same as *hematoxin*.
- hematotrachelos** (hem-at-o-trak-e'los) [Gr. αἷμα blood + τράχηλος neck]. Distention of the cervix of the uterus with blood owing to atresia of the vagina.
- hematotympanum** (hem''at-o-tim'pan-um) [Gr. αἷμα blood + tympanum]. A hemorrhagic exudation into the drum-cavity of the ear.
- hematotoxic** (hem-at-oks'ik). See *hematotoxic*.
- hematoxin** (hem-at-oks'in). 1. Same as *hemolysin*. 2. A semivalent diphtheria toxin.
- hematoylin** (hem-at-oks'il-on). A crystalline stain, $C_{16}H_{14}O_6 + 3H_2O$, obtained by extracting logwood with ether. It may be used as an indicator with a pH range of 5-6. **Delafeld's h.**, a staining fluid: hematoylin, 4 gm.; pure alcohol, 25 c.c.; ammonium alum, 52 gm.; water, 400 c.c.; glycerin, 100 c.c.; methyl alcohol, 100 c.c. See under *stains*, table of.
- hematoxylon** (hem-at-oks'il-on). See *Hematoxylon*.
- hematozemia** (hem''at-o-ze'me-ah) [Gr. αἷμα blood + ζημία loss]. A gradual loss of blood.
- hematozoic** (hem''at-o-zo'ik). Inhabiting the blood; said of parasites.
- Hematozoön mala'riae**. Plasmodium malariae.
- hematozoön** (hem''at-o-zo'on), pl. *hematozo'a* [Gr. αἷμα blood + ζῶον animal]. Any animal organism or species that lives in the blood.
- hematozymosis** (hem''at-o-zi-mo'sis) [Gr. αἷμα blood + ζύμωσις fermentation]. Fermentation of the blood.
- hematropin** (hem-at-ro-pin). A proprietary fluid hemoglobin preparation.
- hematuriesis** (hem''at-u-re'sis). Same as *hematuria*.
- hematuria** (hem-at-u're-ah) [Gr. αἷμα blood + οὖρον urine]. The discharge of bloody urine.
- angioneurotic h.** See *Gull's renal epistaxis*, under *epistaxis*.
- endemic h.**, bilharziasis of the bladder.
- essential h.**, renal bleeding for which a cause cannot be determined.
- false h.**, redness of the urine due to food or drugs containing pigment.
- hema-urochrome** (hem''ah-u-ro-krōm) [Gr. αἷμα blood + urochrome]. A substance found in the urine in such diseases as carcinoma and sarcoma, and thought to be a derivative of hematin from blood destruction.
- hematograph** (hem-aw'to-graf) [Gr. αἷμα blood + αὐτός self + γράφειν to write]. A tracing made by an arterial blood-jet.

hemautography (hem-aw-tog'raf-e). The formation of a hemautograph.

hembra (hem'brah). The ulcerative type of dermal leishmaniasis.

hemetrometra lateralis (hem-e-lit-ro-me'trah lat-er-a'lis) [Gr. *αἷμα* blood + *ἐλκτρον* sheath + *μήτρα* womb]. Accumulation of menstrual blood in a pouch formed by the rudimentary half of a double vagina.

hemendothelioma (hem'en-do-the-le-o'mah). A form of endothelioma made up of vessels that contain proliferated endothelium: probably caused by the proliferation of vascular endothelium.

Hementaria officinalis. The leech commonly used in Mexico and Central America for therapeutic purposes.

hemeralope (hem'er-al-ōp). A person affected with hemeralopia.

hemeralopia (hem'er-al-o'pe-ah) [Gr. *ἡμέρα* day + *ἀλαός* blind + *ὤψ* eye]. 1. Day-blindness; 2. [Gr. *ἡμέρα* day + *ὤψ* eye]. Night-blindness; nyctalopia; a condition in which the patient sees worse at night or in a dim light than his normal vision would seem to warrant.

Hemerocampa leucostigma. The white-marked tussock moth. In the larval stage the smaller white hairs are poisonous and may produce severe urticaria.

hemerythrin (hem-er'ith-rin) [Gr. *αἷμα* blood + *ἐρυθρός* red]. The coloring-matter of the blood of earthworms which is contained in the plasma.

hemesia (hem-e'se-ah). A proprietary quinin and urea hydrochlorid preparation: used as a local anesthetic.

hemetaboly (hem-et-ab'o-le) [Gr. *αἷμα* blood + *μεταβολή*]. The metabolism of blood elements.

hemi- [Gr. *ἡμι-* half]. A prefix signifying one-half.

hemialepsia (hem'e-ab-lep'se-ah). Same as *hemianopsia*.

hemiacardius (hem'e-ak-ar'de-us) [Gr. *ἡμι-* half + *a neg.* + *καρδία* heart]. One of twin fetuses in which only a part of the circulation is accomplished by its own heart.

hemicephalus (hem'e-as-ef'al-us) [Gr. *ἡμι-* half + *a neg.* + *κεφαλή* head]. A monster-fetus whose head is represented by a shapeless mass.

hemichromatopsia (hem'e-ak-ro-mat-op'se-ah) [*hemi-* + *achromatopsia*]. Color-blindness in one-half, or in corresponding halves, of the visual field.

hemigeusia, hemigeusia (hem'e-ah-gu'ze-ah, hem'e-ah-güs'te-ah) [Gr. *ἡμι-* half + *a not* + *γεῦσις* taste]. Loss or absence of the sense of taste on one side of the tongue.

hemialbumin (hem'e-al-bu'min) [*hemi-* + *albumin*]. Same as *anti-albumin*.

hemialbumose (hem-e-al-bu-mōs). A crystallizable product of the digestion of certain proteins; normally found in bone-marrow, and occurring in the urine of osteomalacia and diphtheria.

hemialbumosuria (hem-e-al-bu-mo-su're-ah) [*hemialbumose* + Gr. *οὔρον* urine]. The presence of hemialbumose in the urine; propeptonuria.

hemialgia (hem-e-al'je-ah) [Gr. *ἡμι-* half + *ἄλγος* pain]. Neuralgia on one side only.

hemianaurosis (hem-e-am-aw-ro'sis). Hemianopsia.

hemiambyopia (hem'e-am-ble-o'pe-ah) [*hemi-* + *ambyopia*]. Impairment of the visual power of one-half of the retina.

hemiamyosthenia (hem'e-ah-mi-os-the'ne-ah) [Gr. *ἡμι-* half + *a not* + *μῦς* muscle + *σθένος* strength]. Lack of muscular power on one side of the body.

hemianacusia (hem'e-an-ak-u'ze-ah) [Gr. *ἡμι-* half + *ἀν-* not + *ἀκουσία* hearing]. Loss of hearing on one side.

hemianalgesia (hem'e-an-al-je'ze-ah) [*hemi-* + *analgesia*]. Analgesia of one side of the body.

hemianesthesia (hem'e-an-es-the'ze-ah) [*hemi-* + *anesthesia*]. Anesthesia of either lateral half of the body. **alternate h., crossed h.,** anesthesia of one side of the head and of the opposite side of the body. **cerebral h.,** that which is due to lesion of the internal capsule of the lenticular nucleus. **mesocephalic h., pontile h.,** that which is due to disease of the pons. **spinal h.,** that which is due to a lesion of the spinal cord.

hemianopia, hemianopsia (hem'e-an-o'pe-ah, hem'e-an-op'se-ah) [Gr. *ἡμι-* half + *ὄψ* priv. + *ὄψις* vision]. Blindness for one-half the field of vision in one or both eyes. **absolute h.,** hemianopia to light, color, and form. **altitudinal h.,** blindness for either the upper or the lower half of the field of vision. **bilateral h., binocular h.,** hemianopia affecting both eyes. **binasal h., nasal h.,** blindness on the nasal side of the visual field as to both eyes. **bitemporal h., temporal h.,** blindness on the temporal side of the visual field affecting both eyes. **h. bitemporalis fugax,** transient bitemporal hemianopia, sometimes seen in syphilitic patients. **complete h.,** hemianopia affecting the entire half of each eye. **crossed h., heteronymous h.,** binasal or bitemporal hemianopia. **equilateral h., homonymous h.,** one which affects the nasal half of one eye and the temporal half of the other. **incomplete h.,** hemianopia affecting less than the entire half of the visual field of each eye. **relative h.,** hemianopia to only form or color, the light sense being retained. **unilateral h., unocular h.,** hemianopia affecting but one eye.

hemianosmia (hem'e-an-oz'me-ah). Loss of the sense of smell in one of the nostrils.

hemiapraxia (hem-e-ah-prak'se-ah) [*hemi-* + *apraxia*]. Unilateral apraxia; inability to perform coördinated movements on one side of the body.

hemiarthrosis (hem'e-ar-thro'sis) [*hemi-* + *arthrosis*]. A spurious synchondrosis.

hemiasynergia (hem'e-as-in-er'je-ah). Asynergia affecting one side of the body.

hemiataxia (hem'e-at-aks'e-ah) [*hemi-* + *ataxia*]. Ataxia affecting one side of the body.

hemiataxy (hem-e-at-aks'e). Hemiataxia.

hemiatheiosis (hem'e-ath-et-o'sis) [*hemi-* + *athetosis*]. Athetosis affecting one side of the body.

hemiatrophy (hem-e-at-ro'fe). Atrophy of one side of the body or of one-half of an organ or part. **facial h.,** atrophy of one lateral half of the face: sometimes progressive, and due to a nervous disorder. **progressive lingual h.,** progressive atrophy of one lateral half of the tongue.

hemiballism (hem-e-bal'izm) [Gr. *ἡμι* half + *βαλλισμός* jumping]. Violent jerking and twitching movements affecting one side of the body.

hemibilirubin (hem-e-bil-ir-u'bin). A modified bile pigment found in the urine. Possibly a urobilinogen.

hemic (hem'ik) [Gr. *αἷμα* blood]. Pertaining to the blood.

hemicanities (hem'e-kan-ish'e-ēz). Grayness of the hair on one side of the body.

hemicardia (hem-e-ka'r'de-ah) [Gr. *ἡμι-* half + *καρδία* heart]. Either half of a four-chambered heart. **h. dex'tra,** the right heart. **h. sinis'tra,** the left heart.

hemicellulose (hem-e-sel'u-lōs). A general name for various cell wall materials, insoluble in water and similar to cellulose. The hemicelluloses are not converted into sugar by diastase, but are readily hydrolyzed by dilute acids, yielding arabinose, xylose, galactose, and mannose.

hemicentrum (hem-is-en'trum) [*hemi-* + *centrum*]. Either lateral half of a vertebral centrum.

hemicephalia (hém''e-sef-a'le-ah) [Gr. *ἡμι-* half + *κεφαλή* head]. Congenital absence of one lateral half of the skull.

hemicephalus (hem-e-sef'al-us) [Gr. *ἡμι-* half + *κεφαλή* head]. A monster-fetus with only one cerebral hemisphere.

hemocerebrum (hem-e-ser'e-brum) [*hemi-* + *cerebrum*]. A cerebral hemisphere.

hemichorea (hem''e-ko-re'ah) [*hemi-* + *chorea*]. Chorea which affects only one side.

hemichromatopsia (hem''e-ko-mat-op'se-ah) [Gr. *ἡμι-* half + *chromatopsia*]. Color-blindness in one-half of the visual field.

hemichromosome (hem-e-kró'mo-sóm). A body formed by the longitudinal division of a chromosome.

hemicolectomy (hem''e-ko-lek'to-me) [Gr. *ἡμι-* half + *colectomy*]. Excision of a portion of the colon.

hemicollin (hem-e-kol'in) [Gr. *ἡμι-* half + *κόλλα* glue]. A substance formed by the digestion of gelatin.

hemicrania (hem-ik-ra'ne-ah) [Gr. *ἡμι-* half + *κράνιον* skull]. 1. Pain or aching in one side of the head. 2. Absence of the inferior bones of the skull (Galen).

hemicianectomy (hem''e-kra-ne-ek'to-me) [Gr. *ἡμι-* half + *κράνιον* cranium + *ἐκτομή* excision]. Doyen's operation of sectioning the vault of the skull from before backward, near the median line, and forcing the entire side outward, thus exposing half of the brain.

hemicranin (hem-ik-ra'nin). A proprietary mixture of phenacetin, 5 parts; caffeine, 1 part; and citric acid, 1 part: used in hemicrania.

hemicraniosis (hem''ik-ra-ne-os'is). A condition marked by hyperostosis on one-half of the cranium or face, with cerebral involvement. The condition is believed to be due to endothelioma of the dura.

hemicraniotomy (hem''e-kra-ne-ot'o-me) [Gr. *ἡμι-* half + *κράνιον* skull + *τομή* cut]. Hemicianectomy.

Hemidesmus (hem-e-des'mus). A genus of asclepiadaceous plants. The root of *H. indicus* is used like sarsaparilla. Dose of syrup, $\frac{3}{4}$ -1 fl.dr. (2-4 c.c.).

hemidiaphoresis (hem''e-di-af-o-re'sis) [*hemi-* + *diaphoresis*]. A sweating of one side of the body.

hemidiaphragm (hem-e-di'af-ram). Paralysis of one-half of the diaphragm.

hemidrosis (hem-id-ro'sis). See *hematidrosis*.

hemidysergia (hem''e-dis-er'je-ah). Dysergia affecting one side of the body.

hemidysesthesia (hem''e-dis-es-the'ze-ah) [Gr. *ἡμι-* half + *δυσ-* ill + *αἰσθησις* feeling]. A disorder of sensation affecting one-half of the body.

hemidystrophy (hem-e-dis'tro-fe). Unequal development of the two sides of the body.

hemi-ectromelia (hem''e-ek-tro-me'le-ah). Monstrosity characterized by imperfect limbs on one side of the body.

hemi-elastin (hem-e-e-las'tin). A substance formed by the digestion or hydrolysis of elastin.

hemi-encephalus (hem''e-en-sef'al-us) [Gr. *ἡμι-* half + *ἐγκέφαλος* brain]. A fetus that lacks the sense-organs of the brain.

hemi-epilepsy (hem-e-ep'il-ep-se) [*hemi-* + *epilepsy*]. Epilepsy affecting one-half of the body.

hemifacial (hem-e-fa'shal). Affecting one-half of the face.

hemigastrectomy (hem''e-gas-trek'to-me). Excision of one half of the stomach; especially resection of the pyloric pocket in cases of bilocular stomach.

hemigeusia (hem-e-gu'se-ah) [Gr. *ἡμι-* half + *γεῖσις* taste]. Absence of sense of taste on one-half of the tongue.

hemiglossal (hem-e-glos'al) [Gr. *ἡμι-* half + *γλῶσσα* tongue]. Affecting one side of the tongue.

hemiglossotomy (hem''e-glos-ek-to-me) [Gr. *ἡμι-* half + *γλῶσσα* tongue + *ἐκτομή* excision]. Surgical removal of one-half of the tongue.

hemiglossitis (hem''e-glos-i'tis) [Gr. *ἡμι-* half + *γλῶσσα* tongue + *-ιτις* inflammation]. Inflammation of one lateral half of the tongue.

hemihidrosis (hem-e-hid-ro'sis) [Gr. *ἡμι-* half + *ιδρῶς* sweat]. Sweating on one side of the body.

hemihypalgnesia (hem''e-hi-pal-je'ze-ah). Hypalgnesia affecting one lateral half of the body.

hemihyperesthesia (hem''e-hi''per-es-the'ze-ah) [Gr. *ἡμι-* half + *hyperesthesia*]. Abnormal acuteness of sensation in one lateral half of the body.

hemihyperidrosis (hem''e-hi-per-id-ro'sis) [Gr. *ἡμι-* half + *ὑπέρ* over + *ιδρῶς* sweat]. Excessive perspiration of one side.

hemihypermetria (hem''e-hi-per-me'tre-ah). Exaggerated extension of one-half of a part, as in protruding of the tongue.

hemihypertonia (hem''e-hi-per-to'ne-ah) [Gr. *ἡμι-* half + *ὑπέρ* over + *τόνος* tone]. Increased tonicity of the muscles of one side, resulting in tonic contractions: sometimes seen after apoplectic attacks. Called also *hemitonia*.

hemihypertrophy (hem''e-hi-per'tro-fe) [Gr. *ἡμι-* half + *hypertrophy*]. Hypertrophy or overgrowth of one-half or one side of the body or of a part. **facial h.**, hypertrophy of half of the face.

hemihypesthesia (hem''e-hi-pes-the'ze-ah). Diminished acuteness of sensation on one-half of the body.

hemihypo-esthesia (hem-e-hi-po-es-the'ze-ah). Hemihypesthesia.

hemihypotonia (hem''e-hi-po-to'ne-ah) [Gr. *ἡμι-* half + *ὑπό* under + *τόνος* tone]. Defective tonicity of either side of the body.

hemikaryon (hem-e-kar'e-on) [Gr. *ἡμι-* half + *κάρυον* nucleus]. A nucleus which contains the haploid number of chromosomes.

hemilaminectomy (hem''e-lam-in-ek'to-me). Removal of the vertebral laminae on one side only.

hemilaryngectomy (hem''e-lar-in-jek'to-me). Excision of one-half of the larynx.

hemilateral (hem-e-lat'er-al). Affecting one-half of one side.

hemilesion (hem-e-le'zhun). A lesion of one side of the spinal cord; a unilateral lesion of the cord.

hemilingual (hem-e-ling'wal) [Gr. *ἡμι-* half + *λῖν'γυα* tongue]. Affecting one side of the tongue.

hemimacroglossia (hem''e-mak-ro-glos'e-ah). Enlargement of one side of the tongue.

hemimelia (hem-e-me'le-ah). A fetus with defective limbs.

hemimelus (hem-im'el-us) [Gr. *ἡμι-* half + *μέλος* limb]. A fetus or person the distal portions of whose limbs are deformed or defective.

hemin (he'min) [Gr. *αἷμα* blood]. The crystalline chlorid of hematin, $C_{34}H_{33}N_4O_4FeCl$, of which Teichmann's crystals are composed.

heminal (he'min-al). A soluble brown or blackish powder containing hemoglobin and hematin: used in anemia, scrofula, rickets, neurasthenia, etc. Dose, 8-15 gr. (0.5-1 gm.).

hemineurasthenia (hem''e-nu-ras-the'ne-ah). Neurasthenia affecting one side only.

hemiorpalia (hem''e-op-al'je-ah) [Gr. *ἡμι-* half + *ὤψ* eye + *ἄλγος* pain]. Pain in one side of the head and in one eye.

hemioopia (hem-e-o'pe-ah). 1. Hemianopia (Plenk). 2. Absence of visual power in one-half of the retina.

hemioptic (hem-e-op'ik) [Gr. *ἡμι-* half + *ὤψ* eye].
1. Affecting one eye. 2. Pertaining to hemiopia.

hemipagus (hem-ip-ag-us) [Gr. *ἡμι-* half + *πάγος* union]. Twin fetuses united at the thorax.

hemiparalysis (hem'e-par-al'is-is). Hemiplegia.

hemiparaneesthesia (hem'e-par-an-es-the'ze-ah) [*hemi-* + Gr. *παρά* below + *anesthesia*]. Anesthesia of the lower half of one side of the body.

hemiparaplegia (hem'e-par'ap-le'je-ah) [*hemi-* + *paraplegia*]. Paralysis of the lower half of one side of the body.

hemiparesis (hem-e-par'es-is) [*hemi-* + *paresis*]. Paresis affecting one side.

hemiparesthesia (hem'e-par-es-the'ze-ah) [*hemi-* + *paresthesia*]. Perverted sensation on one side of the body.

hemiparkinsonism (hem-e-par'kin-son-izm). Parkinsonism affecting only one side.

hemipeptone (hem-e-pep'tōn) [Gr. *ἡμι-* half + *peptone*]. One of the intermediate products of pepsin digestion of protein. It is formed along with antipeptone, and differs from the latter in being convertible into amino-acids by trypsin.

hemiplegia (hem-e-ple'je-ah) [Gr. *ἡμι-* half + *πληγή* stroke]. Paralysis of one side of the body.

h. alternans hypoglossica, hemiplegia due to lesion of the hypoglossal nerve on the side opposite the paralyzed part. **alternate h.**, that which affects a part on one side of the body and another part on the opposite side. Called also *crossed h.* **ascending h.**, ascending paralysis of one lateral half of the body. **cerebral h.**, that which is due to a lesion of the brain. **crossed h.** See *alternate h.* **h. crucia'ta**, crossed hemiplegia. **facial h.**, paralysis of one side of the face, the body being unaffected. **Gubler's h.** See *Gubler's paralysis*, under *paralysis*. **hephestic h.**, a hemiplegia, with spasms, peculiar to blacksmiths. **infantile h.**, hemiplegia due to cerebral hemorrhage at birth or during intra-uterine life; birth palsy. **spastic h.**, hemiplegia, with spasms and atrophy; usually infantile. **spinal h.**, a form due to a lesion of the spinal cord.

hemiplegic (hem-e-plej'ik). Pertaining to or of the nature of hemiplegia.

hemiprotein (hem-e-pro'te-in) [*hemi-* + *protein*]. The same as *anti-albumin*.

Hemiptera (hem-ip'ter-ah) [Gr. *ἡμι-* half + *πτερόν* wing]. An order of insects, including ordinary bugs and lice, characterized by having the mouth parts adapted to pinching or sucking.

hemiscotosis (hem'e-sko-to'sis). Blindness of one-half of a retina.

hemisection (hem-e-sek'shun). 1. Bisection. 2. A section or cutting of one-half.

hemiseptum (hem-e-sep'tum). Either half of a septum; especially the lamina of the septum lucidum. **h. auricula're**, the lateral half of the septum between the auricles of the heart. **h. cer'e'bri**, the lateral half of the septum lucidum of the brain. **h. ventricula're**, the lateral half of the septum between the ventricles of the heart.

hemisine (hem'is-in). A proprietary suprarenal gland preparation.

Hemisomnambulism (hem'e-som-nam'bu-lizm). Somnambulism in which the subject retains consciousness and his normal personality.

hemisomus (hem-e-so'mus) [Gr. *ἡμι-* half + *σῶμα* body]. A monster-fetus with one side of the body absent.

hemisotonic (hem-i-so-ton'ik) [Gr. *αἷμα* blood + *isotonic*]. Isotonic with the blood; having the same osmotic pressure as the blood.

hemispasm (hem'e-spazm). Spasm affecting one side only.

hemisphærium (hem-e-sfe're-um). Hemisphere. **h. bul'bi ure'thræ** [B N A], one of the lateral halves of the bulb of the urethra.

hemisphere (hem'is-fēr) [*hemi-* + *sphere*]. Either lateral half of the cerebrum or cerebellum.

Hemispora stella'ta. A fungus found in cases of mycosis resembling sporotrichosis.

hemispore (hem'e-spōr). A spore formed by the differentiation and division of the terminal portion of a hyphus.

hemisporosis (hem'e-spo-ro'sis). A mycosis due to infection with the *Hemispora stellata*, characterized by gummatous swellings in the bones and other tissues (Gongerot and Caraven).

hemistrumectomy (hem'e-stru-mek'to-me) [*hemi* + *strumectomy*]. Excision of one-half of a goiter.

hemisyndrome (hem-e-sin'drōm). A syndrome indicative of a unilateral lesion of the spinal cord.

hemisystole (hem-e-sis'to-le) [*hemi-* + *systole*]. Systole of only one ventricle of the heart, resulting in only one pulse-beat for every two beats of the heart.

hemiterata (hem-e-ter-at-ah) [Gr. *ἡμι-* half + *τέρας* monster]. A group of congenitally deformed individuals that cannot be classed as teratisms or monstrosities.

hemiteric, hemiteratic (hem-e-ter'ik, hem'e-ter-at'ik) [Gr. *ἡμι-* half + *τέρας* monster]. Congenitally deformed, but not monstrous.

hemiterpene (hem-e-ter'pēn). A terpene having the formula C₈H₈.

hemitetary (hem-e-tet'a-ne). Tetany limited to one side of the body.

hemithermo-anesthesia (hem'e-ther-mo-an-es-the'ze-ah). Insensibility to heat and cold in one side of the body.

hemithyroidectomy (hem'e-thi-roi-dek'to-me). Excision of one lobe of the thyroid.

hemitomias (hem-e-to'me-as) [Gr.]. A half-eunuch; a person deprived of one testicle.

hemitonia (hem-e-to'ne-ah) [Gr. *ἡμι-* half + *τόνία* tension]. Same as *hemihypertonia*.

hemitoxin (hem-e-toks'in). A toxin whose toxicity has been reduced to one-half.

hemitremor (hem-e-tre'mor). Tremor of one side of the body.

hemivagotomy (hem-e-va-got'o-ne). Vagotomy or irritability of the vagus nerve on one side.

hemlock (hem'lok). 1. Conium. 2. Any fir-tree of the genus *Tsu'ga*, especially *T. canadensis*, the source of Canada pitch, of the volatile oil of hemlock, and of an astringent extract. **poison h.** See *Conium*.

hemo-, hēmo- [Gr. *αἷμα* blood]. A prefix denoting some relationship to the blood.

hemo-agglutination (he'mo-ag-lu-tin-a'shun). The agglutination of red blood-cells by the action of alien cells.

hemo-agglutinin (hem'o-ag-lu'tin-in). An agglutinin which agglutinates red blood-corpuscles.

hemo-alkalimeter (he'mo-al-kal-im'et-er). An instrument for ascertaining the alkalinity of the blood.

hemobilinuria (hem'o-bi-lin-u're-ah) [Gr. *αἷμα* blood + *bilin* + Gr. *οὐρον* urine]. The presence of urobilin in the blood and urine.

hemoblast (hem'o-blast) [Gr. *αἷμα* blood + *βλαστός* germ]. 1. A primitive blood-cell; one of the inner cells of the angioblast from which the blood-cells are developed. Called also *mesameboid*. 2. A blood-platelet. 3. An erythroblast.

hemocatatonic (hem'o-kat-ah-to-nis'tik). Lessening the cohesion between the hemoglobin and the erythrocytes of the blood.

hemocelom, hemocœlom (hem-o-se'lom) [*hemo-* + *cœlom*]. The part of the cœlom whence the heart is developed.

hemochromatosis (hem''o-kro-mat-o'sis) [Gr. *αἷμα* blood + *χρῶμα* color]. A disease characterized by pigmentation of the skin and viscera with hemosiderin and hemofuscin, producing the condition known as bronze diabetes.

hemochrome (hem''o-kro-m) [Gr. *αἷμα* blood + *χρῶμα* color]. The coloring-matter of the blood.

hemochromogen (hem-o-kro-mo-jen) [Gr. *αἷμα* blood + *χρῶμα* color + *γεννᾶν* to produce]. A crystalline coloring-matter, $C_{34}H_{37}N_4FeO_5$, derivable from hemoglobin. It is reduced hematin.

hemochromometer (hem''o-kro-mom''et-er) [Gr. *αἷμα* blood + *χρῶμα* color + *μέτρον* measure]. An instrument for making color-tests of the blood to determine the proportion of hemoglobin.

hemochromometry (hem''o-kro-mom''et-re). The measurement of the quantity of hemoglobin in the blood.

hemochromoprotein (hem-o-kro-mo-pro''te-in) [Gr. *αἷμα* blood + *chromoprotein*]. A chromoprotein of blood as distinguished from the phycochromoproteins.

hemoclasia (he-mo-kla'se-ah). 1. Anaphylactic crises in the course of a disease. 2. Food anaphylaxis from personal idiosyncrasy. See *hemoclastic crisis*, under *crisis*.

hemoclasia (he-mok'las-is) [Gr. *αἷμα* blood + *κλάσις* destruction]. Rupture, destruction, or dissolution of erythrocytes; hemolysis.

hemoclastic (hem-o-klas'tik). Causing destruction or dissolution of erythrocytes. **h. crisis**. See under *crisis*.

hemococcidium (hem''o-koks-id'e-um). Same as *plasmodium*.

hemoceloma (hem-o-se-lo'mah) [Gr. *αἷμα* blood + *καίωμα*]. See *hemocelom*.

hemoconia (hem-o-ko'ne-ah). Same as *hemokonia*.

hemokoniosis (hem''o-ko-ne-o'sis). Hemokoniosis.

hemocryoscopy (hem-o-kri-os'ko-pe) [Gr. *αἷμα* blood + *κρυοσκόπῳ*]. Cryoscopy of the blood.

hemocrystallin (hem-o-kris'tal-in). Hemoglobin.

hemoculture (hem'o-kul-tür) [Gr. *αἷμα* blood + *καλλιέργεια* culture]. A bacteriologic culture of the blood.

hemocyanin (hem-o-si'an-in) [Gr. *αἷμα* blood + *κύανος* blue]. Same as *hematocyanin*.

hemocyte (hem'o-sit). Same as *hematocyte*.

hemocytoblast (hem-o-si'to-blast) [*hemocyte* + Gr. *βλαστῶς* germ]. The primitive stem cell from which, by development along different lines, all the other cells of the blood are derived.

hemocytogenesis (hem-o-si-to-jen'es-is) [*hemocyte* + *genesis*]. The formation or production of blood-corpuscles.

hemocytology (hem-o-si-to'l'o-je) [Gr. *αἷμα* blood + *κύτος* cell + *λόγος* treatise]. The study of blood-cells.

hemocytolysis (hem''o-si-to'l'is-is) [*hemocyte* + Gr. *λύειν* to dissolve]. The breaking down or destruction of the blood-corpuscles.

hemocytometer (hem''o-si-tom''et-er). See *hematimeter*.

hemocytotripsis (hem''o-si-to-trip'sis) [*hemocyte* + Gr. *τρίβειν* to rub]. The disintegration of the blood-corpuscles by reason of pressure.

hemocytotoxin (hem''o-si-to-zo'o-n), pl. *hemocytotoxins* [Gr. *αἷμα* blood + *κύτος* cell]. Any animal microparasite inhabiting the blood-cells.

hemodiagnosis (hem''o-di-ag-no'sis) [Gr. *αἷμα* blood + *διάγνωσις* diagnosis]. Diagnosis by examination of the blood.

hemodiastase (hem-o-di'as-tās) [Gr. *αἷμα* blood + *διάστασις* diastase]. An amylolytic enzyme in the blood.

Hemodipsus (he-mo-dip'sus). The common rab-

bit louse which probably transmits the *Bacterium tularensis* from rabbit to rabbit.

hemodromograph (hem-o-drom'o-graf). According hemodromometer.

hemodromometer (hem''o-dro-mom''et-er) [*hemodrom* + Gr. *δρόμος* course + *μέτρον*]. An instrument for measuring the speed of the blood-current.

hemodynamic (hem''o-di-nam'ik). Pertaining to the movements involved in the circulation of the blood.

hemodynamics (hem''o-di-nam'iks) [Gr. *αἷμα* blood + *δύναμις* power]. The study of the movements of the blood and of the forces concerned therein.

hemodynamometer (hem''o-di-nam-om''et-er). See *hemadynamometer*.

hemodystrophy (hem-o-dis'tro-fe) [Gr. *αἷμα* blood + *δυσ-* bad + *τροφή* nutrition]. Any blood disease due to faulty blood nutrition.

hemoferrogen (hem-o-fer'o-jen). A preparation of dried blood: useful in anemia and chlorosis.

hemoferrum (hem-o-fer'um). Oxyhemoglobin.

hemoflagellate (hem-o-flaj'el-āt). Any flagellate protozoan parasite of the blood. The term includes the trypanosomes and leishmanias.

hemofuscin (hem-o-fus'in) [*hem-* + L. *fusco* brown]. A brown coloring-matter of the blood, derived from the breaking up of hemoglobin.

hemogallol (hem-o-gal'ol). A preparation of defibrinated blood and pyrogallol, in a dark-red powder: a hematinic. Dose, 15-30 gr. (1-2 gm.).

hemogenesis (hem-o-jen'es-is). Hematogenesis.

hemogenia (hem-o-je'ne-ah) [Gr. *αἷμα* blood + *γεννᾶν* to produce]. A hemorrhagic diathesis, due to functional disturbance of the entire blood-producing apparatus; called also *pseudohemophilia*.

hemogenic (hem-o-jen'ik). See *hematogenic*.

hemoglobic (hem-o-glo'bik). Producing or containing hemoglobin.

hemoglobin (hem-o-glo'bin) [*hem-* + *globin*]. The coloring-matter of the red blood-corpuscles, containing iron (Hoppe-Seyler, 1862). It is a reddish, crystalline compound of complex composition, consisting of a protein, globin, combined with hematin. In its ordinary form, *oxyhemoglobin*, it is of a bright-red color and contains oxygen, which it readily parts with and becomes *reduced h.*, which is of a purple color and absorbs oxygen from the air. Hemoglobin is used as a remedy in anemia in doses of $\frac{3}{4}$ -2 gr. (0.033-0.133 gm.).

hemoglobinated (hem-o-glo'bin-a-ted). Containing hemoglobin.

hemoglobininemia (hem''o-glo-bin-e'me-ah) [*hemoglobin* + Gr. *αἷμα* blood]. The abnormal presence of hemoglobin in the plasma of the blood.

hemoglobinocholia (hem''o-glo'bin-o-ko'le-ah) [*hemoglobin* + Gr. *χολή* bile]. The occurrence of hemoglobin in the bile.

hemoglobinolysis (hem-o-glo-bin-ol'is-is) [*hemoglobin* + Gr. *λύσις* dissolution]. Splitting up of hemoglobin.

hemoglobinomometer (hem''o-glo-bin-om''et-er) [*hemoglobin* + *μέτρον*]. An instrument for measuring the hemoglobin of the blood.

hemoglobinopepsia (hem-o-glo'bin-o-pep'se-ah) [*hemoglobin* + Gr. *πέψις* digestion]. Hemoglobinolysis.

hemoglobinophilia (hem-o-glo-bin-o-fil'e-ah) [*hemoglobin* + Gr. *φιλεῖν* to love]. Fondness for hemoglobin.

hemoglobinophilic (hem-o-glo'bin-o-fil'ik). Living on hemoglobin.

hemoglobinous (hem-o-glo'bin-us). Containing hemoglobin.

hemoglobinuria (hem''o-glo-bin-u're-ah) [*hemoglobin* + Gr. *οὖρον* urine]. The presence of hemo-

globin in the urine. It is due to destruction of the blood-corpuscles in the vessels or in the urinary passages. **bovine h.**, Texas cattle fever. See *fever*. **epidemic h.**, hemoglobinuria of young infants: attended with cyanosis, jaundice, etc. Called also *Winckel's disease* and *maladie bronzée*. **epidemic h. of cattle**, a disease said to be due to a microbe, *Neisseria babesia*. **intermittent h.**, **paroxysmal h.**, a form with recurrent febrile paroxysms. **malarial h.**, blackwater fever of hot climates. **h. of sheep**, a disease of sheep marked by anemia, icterus, and hemoglobinuria. It is caused by *Rickettsia ruminantium* and is transmitted by the tick *Amblyomma hebraeum*. Called also *icterohematuria*, *malarial catarrhal fever*, and *heart-water disease*. **toxic h.**, that which is consequent upon the ingestion of various poisons.

hemoglobinuric (hem-o-glo-bin-u'rik). Affected with hemoglobinuria.

hemogram (hem'o-gram) [Gr. αἷμα blood + γράμμα a writing]. A microphotograph of a specimen of blood.

Hemogregarina (hem'o-greg-ar-i'nah). A genus of sporozoan parasites found in the blood-corpuscles of reptiles, amphibians, and some warm-blooded animals. Part of their life cycle is passed in another host, usually an insect. **H. bovis**, a species found in Abyssinian oxen. **H. canis**, a species found in the dog (*Canis familiaris*). Sporogeny occurs in the tick (*Rhipicephalus sanguineus*). **H. felis**, a species found in the cat (*Felis domestica*). **H. hominis**, a species found in the red blood-cells of man. **H. muris**, a species found in the rat (*Mus norvegicus*) and in the white rat.

hemohistioblast (hem-o-his'te-o-blast) [Gr. αἷμα blood + ἱστός tissue + βλάστος cell]. Ferrata's name for a connective-tissue cell diffusely situated in the tissues which, in morbid processes, undergoes transformation into specific blood-cells. Cf. *clasmatoocyte*.

hemoid (he'moid). Resembling blood.

hemokonia (hem-o-ko'ne-ah), pl. *hemoko'nia* [Gr. αἷμα blood + κόνη dust]. Any one of a very great number of small refractive bodies in the blood, supposed to be fragments of the blood-corpuscles, collectively called the *blood-dust*. Called also *Müller's dust-bodies*.

hemokoniosis (hem'o-ko-ne-o'sis). The presence of an abnormal amount of hemokonia in the blood.

hemol (he'mol). A dark-brown powder prepared from hemoglobin by deoxidizing by zinc. It is used for anemia. Dose, $1\frac{1}{2}$ - $7\frac{1}{2}$ gr. (0.1-0.5 gm.). **bromated h.**, a preparation of hemol containing 2.7 per cent. of bromin. **copper-h.**, hemol containing 2 per cent. of copper. **h. mercuric iodid**, a preparation of hemol containing mercury and iodine: used in syphilis. **zinc-h.**, hemol containing 1 per cent. of zinc: a brown powder, useful in diarrhea, etc. Dose, 8 gr. (0.5 gm.).

hemol-arsenic (he-mol-ar'sen-ik). Same as *arsenhemol*.

hemoleukocyte (hem-o-lu'ko-sit). A white blood-corpuscle.

hemoleukocytic (hem-o-lu-ko-si'tik). Pertaining to the leukocytes of the blood.

hemolipase (hem-o-lip'as). A ferment of the blood capable of saponifying fats.

hemolith (hem'o-lith) [Gr. αἷμα blood + λίθος stone]. A concretion in the wall of a blood-vessel.

hemology (he-mol'o-je). See *hematology*.

hemolutein (hem-o-lu'te-in). A yellow pigment from the blood-serum of certain animals.

hemolymph (hem'o-limf) [Gr. αἷμα blood + λυμήν]. 1. The blood and lymph. 2. The nutrient fluid, or blood, of certain invertebrates. **h. glands** or **nodes**. See under *gland*.

hemolymphocytotoxin (hem'o-lim-fō-si-to-toks-in). A toxin which destroys blood and lymph-corpuscles.

hemolysin (he-mol'is-in) [Gr. αἷμα blood + λύσις dissolution]. A substance which dissolves red blood-corpuscles and liberates their hemoglobin. Hemolysins may be present naturally in the body or they may be formed therein as a result of injections of foreign red corpuscles. The hemolysin formed by the injection of blood from the same species of animal is called *isolysin*, *isohemolysin*, or *hemolysin*, that by the injection from another species, a *heterolysin*; one which destroys cells of the animal's own body is an *autolysin*. **heterophile h.**, a hemolysin which has affinity for the red cells of some animal besides the one for which it is specific. **immune h.**, a hemolysin made by injecting an animal with blood or with blood-corpuscles.

hemolysingen (hem-ol-is-in'o-jen). The substance in red blood-cells which when injected into an animal acts as an antigen and stimulates the production of a hemolytic antibody.

hemolysis (he-mol'is-is) [Gr. αἷμα blood + λύσις dissolution]. The dissolution of the red blood-corpuscles by the action of specific lysins or hemolysins, by certain chemicals, by freezing or heating, or by the action of distilled water. Hemolysis consists of the separation of the hemoglobin from the corpuscles and its appearance in the serum. **biologic h.**, hemolysis by lysins produced in animals and plants. **siderogenous h.**, portal cirrhosis of liver associated with hemochromatosis; bronzed diabetes. **venom h.**, hemolysis produced by snake-poison.

hemolysoid (he-mol'is-oid). A hemolysin the toxophore group of which has been destroyed. It is able to unite with the blood-cell, but not to destroy it.

hemolysophilic (hem'o-li-so-fil'ik). Uniting readily with hemolysin.

hemolytic (hem-o-lit'ik). Causing hemolysis; pertaining to or marked by hemolysis. **h. jaundice**. See under *jaundice*.

hemolytropic (hem-o-lit'o-poi-et'ik) [Gr. αἷμα blood + λύσις solution + ποιεῖν to make]. Regulating or pertaining to the formation and destruction of blood-cells: a term applied to the system or mechanism in the body which controls the cellular elements of the blood by maintaining a proper balance between blood-cell formation and destruction.

hemolizable (hem'o-li-za-bl). Capable of undergoing hemolysis.

hemolization (hem'ol-is-a'shun). The production of hemolysis.

hemolyze (hem'ol-iz). To cause hemolysis.

hemolyzing (hem'ol-i-zing). Producing hemolysis. **hemomanometer** (hem-o-man-om'et-er). A manometer for determining blood-pressure.

hemomediastinum (hem'o-me-de-as-ti'num). Same as *hematomediastinum*.

hemometer (he-mom'et-er) [Gr. αἷμα blood + μέτρον measure]. An instrument for measuring the amount of blood, counting its corpuscles, or estimating its hemoglobin content. **Fleischl's h.**, an instrument for estimating the richness of the blood in hemoglobin by comparing the color of a stated dilution of the blood with a piece of red glass. **Gowers's h.**, an apparatus for comparing a definite dilution of a drop of blood with a standard solution in order to estimate its hemoglobin percentage.

hemometra (hem-o-me'trah) [hemo- + Gr. μήτρα womb]. See *hemometra*.

hemometry (he-mom'et-re) [Gr. αἷμα blood + μέτρον measure]. Measurement of the hemoglobin or of the number of corpuscles in the blood.

hemonephrosis (hem'o-nef-ro'sis) [Gr. αἷμα blood + νεφρός kidney]. Presence of blood in the pelvis of the kidney.

hemonervine (hem-o-ner'vin). A nerve- and blood-tonic containing calcium phosphoglycerate, hemoglobin, iron, and strychnin nitrate.

hemo-opsonin (hem-o-op'so-nin). Same as *hemopsonin*.

hemopathic (he-mo-path'ik). Pertaining to disease of the blood; due to blood disorder.

hemopathology (hem'o-path-ol'o-je) [Gr. *αἷμα* blood + *pathology*]. Study of diseases of the blood.

hemopathy (he-mop'ath-e) [Gr. *αἷμα* blood + *πάθος* disease]. Any disease of the blood.

hemopericardium (hem'o-per-e-kar'de-um). Same as *hematopericardium*.

hemoperitoneum (hem'o-per-it-o-ne'um) [*hemo* + *peritoneum*]. The presence of extravasated blood in the peritoneal cavity.

hemopexin (hem-o-peks'in) [Gr. *αἷμα* blood + *πῆξις* fixation]. A ferment which coagulates blood.

hemopexis (hem-o-peks'is) [Gr. *αἷμα* blood + *πῆξις* fixation]. Coagulation of blood; the coagulation time of the blood.

hemophage (hem'o-fāj) [Gr. *αἷμα* blood + *φαγεῖν* to eat]. A cell which destroys red blood-cells.

hemophagocyte (hem-o-fag'o-sit) [*hemo* + *phagocyte*]. A phagocyte which destroys erythrocytes.

hemophagocytosis (hem-o-fag-o-si-to'sis) [Gr. *αἷμα* blood + *phagocytosis*]. The phagocytosis of erythrocytes.

hemophil, hemophile (hem'o-fil, -fil) [Gr. *αἷμα* blood + *φιλεῖν* to love]. Loving blood; applied to bacteria which thrive in media containing hemoglobin.

hemophilia (hem-o-fil'e-ah) [Gr. *αἷμα* blood + *φιλεῖν* to love]. A congenital condition characterized by delayed clotting of the blood and consequent difficulty in checking hemorrhage. It is inherited by males through the mother as a sex-linked character. **h. calcipri'ya**, hemophilia attended by a deficiency of calcium in the blood. **hereditary f.**, hemophilia inherited from one or both parents. **h. neonato'rum**, purpura in newborn children. **renal h.** See *Gull's renal epistaxis*, under *epistaxis*. **sporadic h.**, spontaneous hemorrhage in a person who has no hemophilic ancestry.

hemophilic (hem-o-fil'e-ak). A person subject to hemophilia.

hemophilic (hem-o-fil'ik) [Gr. *αἷμα* blood + *φιλεῖν* to love]. 1. Fond of blood; living in blood. 2. Pertaining to hemophilia or to hemophiliacs.

Hemophilus (hem-o-fil-us) [Gr. *αἷμα* blood + *φιλεῖν* to love]. A genus of Bacteriaceae which are strictly parasitic. They are minute, pleomorphic, Gram-negative, non-motile rods growing best (or only) in the presence of hemoglobin. **h. of Ducrey**, a minute form found in the lesions of chancroid and probably causing the same. Called also *Ducrey's bacillus*, and *Bacillus ulceris molliis*. **H. influen'zæ**, the species found in cases of influenza, in various other diseases, and in normal persons. It is possibly the cause of influenza. Called also *influenza bacillus* and *Pfeiffer's b.* **h. of Koch-Weeks**, an organism closely resembling *Hemophilus influenzae* which is found in the conjunctival sac and probably causes an acute contagious conjunctivitis known as pink-eye. Called also *Bacillus aegyptiacus*, *bacillus of pink-eye*, *Weeks's bacillus*, and *Bacterium aegyptiacus*. **H. lacuna'tus**. See *Hemophilus of Morax-Axenfeld*. **H. of Morax-Axenfeld**, an organism found in cases of subacute conjunctivitis. It is a short, thick, oval rod and probably the cause of the conjunctivitis. Called also *Bacillus duplex*, *B. lacunatus*, and *bacillus of Morax-Axenfeld*. **H. pertus'sis**, a small organism resembling *Hemophilus influenzae* which is found in cases of pertussis and possibly the cause of the disease. Called also

Bordet's bacillus, *Bordet-Gengou b.*, *Bacillus pertussis*, and *B. tussis convulsiva*.

hemophobia (hem-o-f'o-be-ah) [Gr. *αἷμα* blood + *φόβος* fear]. Fear of blood, either dread of the sight of blood or dread of bleeding.

hemophoric (hem-o-for'ik) [Gr. *αἷμα* blood + *φόρος* bearing]. Carrying or conveying blood.

hemophotograph (hem-o-f'o-to-graf). A photograph of blood-corpuscles.

hemophthalmia, hemophthalmus (hem-of-thal'me-ah, hem-of-thal'mus) [Gr. *αἷμα* blood + *ὄφθαλμός* eye]. An extravasation of blood within the eye.

hemophthisis (he-mof'this-is) [Gr. *αἷμα* blood + *φθίσις* wasting]. Anemia due to insufficient nutrition of blood-cells.

hemopiezometer (hem'o-pi-e-zom'et-er) [Gr. *αἷμα* blood + *πίεσις* pressure + *μέτρον* measure]. Any apparatus for measuring blood-pressure.

Hemopis (hem'o-pis). A genus of leech which enters a horse's nose while drinking and attaches to the mucous membrane.

hemoplasmodium (hem'o-plaz-mo'de-um). The plasmodium of a blood parasite.

hemoplastic (hem-o-plas'tik) [Gr. *αἷμα* blood + *πλάσσειν* to form]. Concerned in the elaboration of the blood; hematoplastic.

hemoplastin (hem-o-plas'tin). A proprietary preparation of prothrombin and antithrombin: used by intravenous injection as a hemostatic.

hemopneumopericardium (hem'o-nu-mo-per-e-kar'de-um). Pneumopericardium with hemorrhagic effusion.

hemopneumothorax (hem'o-nu-mo-tho'raks). Hemothorax and pneumothorax together.

hemopoiesis (hem'o-poi-e'si). Hematopoiesis.

hemopoietic (hem-o-po-et'ik). Hematopoietic.

hemopoietin (hem-o-poi-e'tin) [Gr. *αἷμα* blood + *ποιεῖν* to make]. A supposed substance in the blood-serum which stimulates the bone-marrow to increased reproduction or regeneration of blood-cells.

hemoprecipitin (hem'o-pre-sip'it-in). A blood precipitin.

hemoproctia (hem-o-prok'she-ah) [Gr. *αἷμα* blood + *πρωκτός* anus]. Hemorrhage from the rectum.

Hemoproteus (hem-o-pro'te-us). A genus of sporozoa parasitic in the blood-corpuscles of birds.

H. colum'bæ, a sluggishly ameboid organism found in the red blood-cells of doves. Its invertebrate host is a biting fly (*Lynchia maura* or *L. lividocolor*). Other species are: *H. danilew'skyi*, found in the crow (*Corvus cornix*); *H. noctuæ*, found in the little owl (*Glaucidium noctuæ*); *H. passeris*, found in the blood of the sparrow.

hemopsonin (hem-op-so'nin) [Gr. *αἷμα* blood + *opsonin*]. An opsonin which acts on red blood-corpuscles to render them susceptible of destruction by other cells.

hemoptysic (hem-op-ti'zik). Pertaining to or marked by hemoptysis.

hemoptysis (hem-op'tis-is) [Gr. *αἷμα* blood + *πτύειν* to spit]. The spitting of blood. **cardiac h.**, that due to disturbed arterial tension in persons with heart disease. **endemic h.** See *tochil*. **parasitic h.**, a disease caused by infection of the lungs with *Paragonimus westermani*. It is marked by cough and spitting of blood and by gradual deterioration of health. Called also *pulmonary distomatosis* and *lung-fluke disease*. **vulgarious h.**, that which occurs instead of a menstruation.

hemopyelectasis (hem'o-pi-el-ek'tas-is) [Gr. *αἷμα* blood + *πύεξος* pelvis + *ἐκτασις* dilatation]. Dilatation of the renal pelvis with an accumulation of bloody fluid.

hemopyrrol (hem-o-pir'rol). A mixture of substituted pyrrols produced by the reduction of hematomporphyrin.

hemoquinin (hem-o-kwin'in). A preparation of iron, manganese, quinin, and arsenic: used in chlorosis and malarial cachexia.

hemorrhage, hemorrhage (hem'or-aj) [Gr. αἷμα blood + ῥήγνυμι to burst orth]. A copious escape of blood from the vessels; bleeding. **accidental h.**, hemorrhage during pregnancy, due to premature detachment of the placenta. **arterial h.**, the escape of blood from an artery or a ruptured aneurysm. **bronchial h.**, hemoptysis. **capillary h.**, the oozing of blood from the minute vessels. **capsuloganglionic h.**, hemorrhage into the basal ganglia and internal and external capsule of the brain. **cerebral h.**, a hemorrhage into the cerebrum or occurring within the cranium. Cerebral hemorrhages are classed as dural, meningeal, supradural, epidural, subdural, etc. **concealed h.**, hemorrhage without escape of blood from the body. **consecutive h.**, that which does not directly follow an injury. **critical h.**, that which marks the crisis of a disease. **essential h.**, one not due to an injury. **essential uterine h.**, a condition marked by hemorrhage from the uterus, and usually showing hypertrophy of the uterine mucosa and cystic disease of the ovary. Called also *metropathia hemorrhagica*. **external h.**, one in which blood escapes from the body. **gastric h.**, hematemesis. **gravitating h.**, hemorrhage into the spinal canal, in which the blood settles to the lower part of the canal from the force of gravity. **intermediary h.** Same as *recurring h.* **internal h.**, hemorrhage in which the extravasated blood remains within the body. **intestinal h.**, hemorrhage from the bowels. **intrapartum h.**, hemorrhage occurring during parturition. **nasal h.**, epistaxis. **parenchymatous h.**, capillary hemorrhage into the substance of an organ. **h. per rhexin**, hemorrhage from rupture of a blood-vessel. **petechial h.**, hemorrhage that occurs in minute points beneath the skin. **postpartum h.**, that which occurs soon after labor or childbirth. **primary h.**, that which occurs as an immediate result of an injury. **pulmonary h.**, hemoptysis. **punctate h.**, spots of blood effused into the tissues from capillary hemorrhage. **recurring h.**, that which has been once stopped by clots, but returns after the period of reaction, the clots being displaced by the blood-current. **renal h.**, hematuria. **secondary h.**, that which follows an accident or injury after a considerable lapse of time. **spontaneous h.**, the bleeding of hemophilia. **unavoidable h.**, that which results from the detachment of a placenta prævia. **venous h.**, the escape of blood from a wounded vein. **vicarious h.**, a discharge of blood from any part in consequence of the suppression of a discharge from another part.

hemorrhagic (hem-o-raj-en'ik) [*hemorrhage* + Gr. γεν- to produce]. Causing hemorrhage.

hemorrhagic (hem-or-aj'ik). Pertaining to or characterized by hemorrhage.

hemorrhagin (hem-o-ra'jin). A cytolyisin existing in certain venoms and poisons, such as snake venom and ricin, which is destructive to endothelial cells and blood-vessels.

hemorrhagiparous (hem-o-raj-ip'ar-us) [*hemorrhage* + L. *parere* to produce]. Causing hemorrhage.

hemorrhaphilia (hem''or-af-il'e-ah). Hemophilia.

hemorrhæa, hemorrhæa (hem-or-e'ah) [Gr. αἷμα blood + ῥέω flow]. A copious discharge of blood.

hemorrhoid (hem'or-oid) [Gr. αἰμορροΐς], A pile, or vascular tumor of the rectal mucous membrane (Hippocrates). **external h's**, hemorrhoids situated outside the sphincter ani. **internal h's**, hemorrhoids situated within the sphincter ani. **lingual h.**, a swelling of certain veins at the root of the tongue.

hemorrhoidal (hem-or-oid'al). Pertaining to, or of the nature of, hemorrhoids.

hemorrhoidectomy (hem-o-roi-dek'to-me). Excision of hemorrhoids.

hemosalpinx (hem-o-sal'pinks). Dilatation of an oviduct with blood.

hemoscope (hem'o-sköp). Same as *hemaloscope*.

hemosiderin (hem-o-sid'er-in) [Gr. αἷμα blood + σίδηρος iron]. 1. A dark yellow pigment containing iron, found in various phagocytic cells of the blood. 2. A preparation containing the iron of the blood.

hemosiderosis (hem-o-sid-er-o'sis). A condition in which hemosiderin is deposited in the lobes of the liver. It is due to destruction of the blood-corpuscles, such as occurs in pernicious anemia, etc.

hemosozic (hem-o-so'zik) [Gr. αἷμα blood + σώζω to save]. Preventing hemolysis; antihemolytic.

hemosozin (hem-o-so'zin). An antiserum that hinders hemolysis.

hemospasia (hem-o-spa'ze-ah) [Gr. αἷμα blood + σπᾶν to draw]. The drawing of blood, especially by cupping.

hemospast (hem'o-spast). A cup or other device for drawing blood.

hemospastic (hem-o-spas'tik). Serving to draw or extract blood.

hemospermia (hem-o-sper'me-ah) [Gr. αἷμα blood + σπέρμα seed]. A bloody condition of the semen.

Hemosporidia. See *Hamosporidia*.

hemosporidium (hem''o-spor-id'e-um), pl. *hemosporidia* [Gr. αἷμα blood + sporidium]. See *plasmodium*.

hemostasia (hem-o-sta'ze-ah). Hemostasis.

hemostasis (hem-os'tas-is) [Gr. αἷμα blood + στάσις halt]. 1. The arrest of an escape of blood. 2. The checking of the flow of blood through any part or vessel.

hemostat (hem'o-stat). 1. An apparatus or a medicine for checking hemorrhage. 2. A proprietary remedy for nose-bleed, containing tannin, quinin sulphate, lard, and benzoic acid; used externally.

hemostatic (hem-o-stat'ik) [Gr. αἷμα blood + στατικός standing]. 1. Checking the flow of blood. 2. An agent that arrests the flow of blood. **Martin's h.**, surgeon's agaric impregnated with ferric chlorid.

hemostatin (hem-os'tat-in). 1. A therapeutic extract of the thymus gland of calves. 2. Tribromphenol bismuth.

hemosterol (hem-os'te-rol). A therapeutic agent derived from the flesh of animals.

hemostix (hem'o-stiks). An instrument for obtaining a drop of blood for diagnostic purposes.

hemostyptic (hem-o-stip'tik). Same as *hemostatic*.

hemotachometer (hem''o-tak-om'te-er) [Gr. αἷμα blood + τάχος swiftness + μέτρον measure]. An instrument for measuring the swiftness of the blood-current.

hemotherapeutics (hem''o-ther-ap-u'tiks). Hemotherapy.

hemotherapy (hem-o-ther'ap-e) [Gr. αἷμα blood + θεραπεία treatment]. Treatment of disease by the administration of blood.

hemothorax (hem-o-tho'raks) [Gr. αἷμα blood + θώραξ chest]. A collection of blood in the thoracic cavity.

hemothymia (hem-o-thi'me-ah) [Gr. αἷμα blood + θυμός anger]. An insane tendency to murder.

hemotonia (hem-o-to'ne-ah) [Gr. αἷμα blood + τόνος tension]. The tonus of the solid elements of the blood.

hemotoxic (hem-o-tok'sik) [Gr. *αἷμα* blood + *τοξικόν* poison]. Poisonous to the blood; also due to toxic destruction of the blood-cells.

hemotoxin (hem-o-tok'sin). A cytotoxin capable of destroying blood-cells. **cobra h.**, the hemolytic constituent of cobra venom which is able to dissolve the red blood-cells of various animals and of man without the presence or aid of blood-serum.

hemotropic (hem-o-trop'ik) [Gr. *αἷμα* blood + *τρόπος* a turning]. Same as *haplophoric*.

hemotropin (he-mot'ro-pin). Same as *hemorsonin*.

hemotympanum (hem-o-tim'pan-um) [Gr. *αἷμα* blood + *τύμπανum*]. Presence of blood in the middle ear.

hemoximeter (hem-oks-om'et-er) [Gr. *αἷμα* blood + oxygen + *μέτρον* measure]. An instrument for measuring the oxygen content of the blood.

hemozoön (hem-o-zo'on). Same as *hematozoön*.

hemp. See *Cannabis*, also *Apocynum*. **Canadian h.** See *Apocynum*. **common h.** See *Cannabis*.

hemypnone (hem-ip'nōn). A proprietary preparation containing diacetylmorphin, diallylbarbiturate, and trichlor tertiary butyl alcohol: given by the mouth to produce twilight sleep.

henbane (hen'bān). See *hyoscyamus*.

Henke's space, trigone (henk'ēz) [Wilhelm Henke, German anatomist, 1834-1896]. See under *space* and *trigone*.

Henle's layer, loop, membrane, etc. (hen-lēz) [Friedrich Gustav Jakob Henle, German anatomist, 1809-1885]. See *layer, loop, membrane, etc.*

henna (hen'ah). The dried and powdered leaves of *Lawsonia inermis*, a cosmetic and hair-dye, and a useful astringent.

Hennebert's sign (en-barz') [contemporary Belgian otologist]. See under *sign*.

Henoch's purpura (hen'ōks) [Edouard Heinrich Henoch, German pediatricist, 1820-1910]. See under *purpura*.

hen-pox (hen'poks). A disease of fowls, pigeons, and turkeys, marked by an eruption of yellow, warty nodules, chiefly on the head.

henpue, henpuye (hen-poo'ye) [West African]. See *goundou*.

henry (hen're) [after Joseph Henry, American physicist, 1797-1878]. The unit of electric induction.

Henry's law (hen'rēz) [William Henry, English chemist, 1775-1837]. See *law*.

Hensen's canal cells, disk, stripe, etc. [Victor Hensen, German anatomist and physiologist, 1835-1924]. See *canal, disk, etc.*

Hensling's ligament (hen'singz) [Frederich Wilhelm Hensling, German anatomist, 1719-1745]. See *ligament*.

hepaptosis, hepaptosis (hep-ap-to'se-ah, hep-ap-to'sis). Same as *hepatoplosis*.

hepar (he'par) [L. for "liver"; Gr. *ήπαρ*]. The liver: also a liver-like or liver-colored substance. **h. loba'tum**, a liver divided into numerous lobes by deep fissures produced by syphilis. **h. sicca'tum**, the dried and powdered liver of pigs: used as a food and medicine in organic diseases of the liver. Daily dose, 300 gr. (20 gm.). **h. sulphuris**. See *potassa sulphurala*.

heparaden (he-par'ad-en) [Gr. *ήπαρ* liver + *ἀδών* gland]. A therapeutic preparation of pigs' livers, 2 parts, and milk-sugar, 1 part: used in jaundice.

heparin (he'par-in) [Gr. *ήπαρ* liver]. A phosphatid occurring in various tissues, but most abundantly in the liver. It is obtained by extracting with 1 per cent. salt solution and precipitating the clear extract with acetone. One milligram in salt solu-

tion will prevent the clotting of 5-10 c.c. of blood in vitro. Injected intravenously it renders the blood incoagulable by preventing the conversion of prothrombin into thrombin.

hepatalgia (hep-at-al'je-ah) [Gr. *ήπαρ* liver + *ἄλγος* pain]. Pain in the liver.

hepatargia, hepatargy (hep-at-ar'je-ah, hep-at-ar-je) [Gr. *ήπαρ* liver + *ἀργία* inactivity]. Hepatic auto-intoxication; auto-intoxication from defective liver action.

hepatatrophia (hep-at-at'ro-fe-ah) [Gr. *ήπαρ* liver + *ἀτροφία* atrophy]. Atrophy of the liver.

hepatatrophy (hep-at-at'ro-fe). Hepatatrophia.

hepatauxe (hep-at-awks'e) [Gr. *ήπαρ* liver + *αὐξή* increase]. Enlargement of the liver.

hepatectomy (hep-at-ek'to-me) [Gr. *ήπαρ* liver + *ἐκτομή* excision]. Excision of a portion of the liver.

hepatic (he-pat'ik) [L. *hepaticus*; Gr. *ήπατικός*]. Pertaining to the liver.

hepaticocholecystostocholecystenterostomy (hep-at'ik-o-ko-le-sist'ost-ko-le-sis-ten-ter-os'to-me). The formation of an anastomosis between the gall-bladder and the hepatic duct and between the intestine and the gall-bladder.

hepaticodochotomy (hep-at'ik-o-do-kot'o-me). Same as *hepaticotomy*.

hepaticoduodenostomy (hep-at'ik-o-du-o-denos'to-me). The operation of forming an anastomosis between the hepatic duct and the duodenum.

hepatico-enterostomy (hep-at'ik-o-en-ter-os'to-me) [Gr. *ήπατικός* hepatic + *έντερον* intestine + *στόμα* mouth]. The operation of forming an anastomosis between the hepatic duct and the intestine.

hepaticogastrostomy (hep-at'ik-o-gas-tros'to-me). The operation of uniting the hepatic duct to the stomach.

Hepaticola (hep-at-ik'o-lah). A genus of nematodes parasitic in the liver of rats. *H. hepatica* has been found in the liver of man in India.

hepaticoliasis (hep-at'ik-o-li-as-is). Infestation with *Hepaticola*.

hepaticolithotripsy (hep-at'ik-o-lith'o-trip-se). The operation of crushing a stone in the hepatic duct.

hepaticopulmonary (hep-at'ik-o-pul'mo-na-re). Pertaining to the liver and the lungs.

hepaticostomy (hep-at-ik-os'to-me) [Gr. *ήπατικός* hepatic + *στόμα* mouth]. The creation of an artificial opening into the hepatic duct.

hepaticotomy (hep-at-ik-ot'o-me) [Gr. *ήπατικός* hepatic + *τομή* cutting]. The operation of opening the hepatic duct.

hepatin (hep-at-in). Same as *glycogen*.

hepatism (hep-at-izm). Ill health due to liver disease.

hepatitis (hep-at-i'tis). Inflammation of the liver. **acute parenchymatous h.**, acute yellow atrophy of the liver. **chronic interstitial h.**, cirrhosis of the liver. **h. externa, external h.**, perihepatitis. **h. seques'trans**, hepatitis with necrosis and disintegration of the liver tissue. **suppurative h.**, abscess of the liver.

hepatization (hep-at-iz-a'shun) [L. *he'par* liver]. 1. The change of tissue into a liver-like substance. 2. Impregnation with hydrogen sulphid. **gray h.**, hepatization of the lung in which the affected tissue has a gray color. **red h.**, a form in which the affected tissue is red from excess of blood. **yellow h.**, a stage in hepatization in which the exudate is purulent.

hepatized (hep-at-izd). Changed into a liver-like substance.

hepato- [L. *he'par*; Gr. *ήπαρ* liver]. A prefix denoting some relation to the liver.

hepatocoele (he-pat'ō-sēl) [Gr. ἥπαρ liver + κήλη hernia]. Hernial protrusion of a part of the liver.

hepatocolangiocystoduodenostomy (hep'-at-o-ko-lan'je-o-sis' to-du-o-de-nos'to-me) [Gr. ἥπαρ liver + χολή bile + ἀγγεῖον vessel + *duodenum* + Gr. *στόμα* opening]. The operation of establishing drainage of the bile-ducts into the duodenum by way of the gall-bladder.

hepatocolangioduodenostomy (hep'-ot-o-ko-lan'je-o-du-o-de-nos'to-me). The operation of establishing drainage of the bile-ducts into the duodenum.

hepatocolangio-enterostomy (hep'-at-o-ko-lan'je-o-en-ter-os'to-me) [Gr. ἥπαρ liver + χολή bile + ἀγγεῖον vessel + *έντερον* intestine + *στόμα* mouth]. Surgical formation of a communication between the liver and the intestine.

hepatocolangiogastrostomy (hep'-at-o-ko-lan'je-o-gas'tro-to-me). The operation of establishing drainage of the bile-ducts into the stomach.

hepatocolangiostomy (hep'-at-o-ko-lan-je-os'to-me). The operation of establishing drainage of the gall-bladder either through the abdominal wall (*external h.*) or through internal drainage into some part of the gastro-intestinal tract (*internal h.*).

hepatocirrhosis (hep'-at-o-sir-o'sis) [*hepato-* + *cirrhosis*]. Cirrhosis of the liver.

hepatocolic (hep-at-o-ko-l'ik). Pertaining to the liver and the colon.

hepatocystic (hep'-at-o-sis'tik). Pertaining to the liver and gall-bladder.

hepatoduodenostomy (hep'-at-o-du-o-den-os'to-me) [Gr. ἥπαρ liver + *duodenum* + Gr. *στόμα* mouth]. The surgical creation of an opening from the liver into the duodenum.

hepatodynia (hep'-at-o-din'e-ah) [Gr. ἥπαρ liver + *δύνη* pain]. Pain in the liver.

hepatodysentery (hep'-at-o-dis'en-ter-e). Dysentery due to inflammation of the liver.

hepato-enteric (hep'-at-o-en-ter'ik). Pertaining to the liver and intestine.

hepatogastric (hep'-at-o-gas'trik). Pertaining to the liver and stomach.

hepatogenic, hepatogenous (hep'-at-o-jen'ik, hep-at-o-j'en-us) [Gr. ἥπαρ liver + *γεννᾶν* to produce]. Produced in the liver.

hepatography (hep-at-og'raf-e) [Gr. ἥπαρ liver + *γράφειν* to write]. A treatise on the liver.

hepatohemia (hep'-at-o-he-me-ah) [Gr. ἥπαρ liver + *αἷμα* blood]. Congestion of the liver.

hepatoid (hep-at-oid) [Gr. ἥπαρ liver + *είδος* form]. Resembling the liver in structure.

hepatolenticular (hep'-at-o-len-tik'u-lar). Pertaining to the liver and the lenticular nucleus.

h. degeneration, Wilson's disease. See under *disease*.

hepatolith (hep-at-o-lith) [Gr. ἥπαρ liver + *λίθος* stone]. A gall-stone, especially one within the liver.

hepatolithectomy (hep'-at-o-lith-ek'to-me) [Gr. ἥπαρ liver + *λίθος* stone + *ἐκτομή* excision]. Excision of a calculus from the liver or the hepatic duct.

hepatolithiasis (hep'-at-o-lith-i'as-is) [*hepato-* + *lithiasis*]. The formation of calculi in the liver or gall-bladder.

hepatologist (hep-at-ol'o-jist). A specialist on the liver.

hepatology (hep-at-ol'o-je) [Gr. ἥπαρ liver + *λόγος* treatise]. The study of the liver.

hepatolysin (hep-at-ol'is-in). A cytolyisin destructive to liver-cells.

hepatolysis (hep-at-ol'is-is). Destruction of the liver-cells.

hepatolytic (hep'-at-o-lit'ik) [Gr. ἥπαρ liver + *λύσις* dissolution]. Destructive to hepatic tissue.

hepatoma (hep-at-o'mah). A tumor of the liver:

Sabourin's term for a transition stage between adenoma and carcinoma of the liver.

hepatomalacia (hep'-at-o-mal-a'se-ah) [Gr. ἥπαρ liver + *μαλακία* softening]. Softening of the liver.

hepatomegalla (hep'-at-o-meg-a'le-ah) [Gr. ἥπαρ liver + *μεγάλη* bigness]. Enlargement of the liver.

hepatomelanos (hep'-at-o-mel-an-o'sis). Melanosis of the liver.

hepatomphalos (hep-at-om'fal-os) [Gr. ἥπαρ liver + *ομφαλός* navel]. Projection of the liver through the abdominal wall near the umbilicus.

hepatonephric (hep'-at-o-nef'rik). Pertaining to the liver and kidney.

hepatonephritis (hep'-at-o-nef-ri'tis) [Gr. ἥπαρ liver + *νεφρός* kidney]. A form of severe icterus due to simultaneous inflammation of the liver and kidneys from the same cause.

hepatopathy (hep-at-op'ath-e) [Gr. ἥπαρ liver + *πάθος* disease]. Any disease of the liver.

hepatoperitonitis (hep'-at-o-per-it-o-ni'tis) [Gr. ἥπαρ liver + *peritonitis*]. Inflammation of the peritoneum covering the liver.

hepatopexy (hep'-at-o-peks-e) [Gr. ἥπαρ liver + *πῆγναι* to fix]. Surgical fixation of the displaced liver to the abdominal wall.

hepatophag (hep'-at-o-fāj) [Gr. ἥπαρ liver + *φαγείν* to eat]. A giant-cell supposed to destroy the liver cells.

hepatophlebitis (hep'-at-o-fleb-i'tis). Inflammation of the veins of the liver.

hepatophlebotomy (hep'-at-o-fle-bot'o-me) [Gr. ἥπαρ liver + *phlebotomy*]. The aspiration of blood from the liver.

hepatophyma (hep'-at-o-fi'mah) [Gr. ἥπαρ liver + *φύμα* a growth]. Abscess of the liver.

hepatopneumonic (hep'-at-o-nu-mon'ik). Pertaining to the liver and lungs.

hepatoportal (hep'-at-o-por'tal). Pertaining to the portal system of the liver.

hepatoptosis (hep'-at-op-to'se-ah). Hepatoptosis.

hepatoptosis (hep'-at-op-to'sis) [Gr. ἥπαρ liver + *πτῶσις* falling]. Dislocation of the liver; movable liver.

hepatopulmonary (hep'-at-o-pul'mo-na-re). Relating to or affecting the liver and the lungs.

hepatorenal (hep'-at-o-re'nal). Pertaining to the liver and kidneys.

hepatorrhagia (hep'-at-or-ra'je-ah) [Gr. ἥπαρ liver + *ῥεγνῖναι* to burst forth]. Hemorrhage from the liver.

hepatorrhaphy (hep-at-or'af-e) [Gr. ἥπαρ liver + *ραφή* suture]. The suturing of the liver.

hepatorrhea (hep'-at-or-e'ah) [Gr. ἥπαρ liver + *ῥοία* flow]. A morbidly excessive secretion of bile; any morbid flow from the liver.

hepatorrhesis (hep'-at-or-eks'is) [Gr. ἥπαρ liver + *ῥήξις* rupture]. Rupture of the liver.

hepatoscopy (hep-at-os'ko-pe) [Gr. ἥπαρ liver + *σκοπεῖν* to examine]. Examination of the liver.

hepatosplenitis (hep'-at-o-sple-ni'tis). Inflammation of the liver and spleen.

hepatostomy (hep-at-os'to-me) [Gr. ἥπαρ liver + *στόμα* mouth]. The making of an opening into the liver, as for the removal of gall-stones.

hepatotherapy (hep'-at-o-ther-ap-e) [Gr. ἥπαρ liver + *θεραπεῖν* treatment]. Treatment of disease by the administration of raw pulped liver.

hepatothrombin (hep'-at-o-throm'bin) [Gr. ἥπαρ liver + *thrombin*]. Wolf's name for a fibrin factor formed by the liver and existing in the blood, which unites with leukothrombin to form thrombin.

hepatotomy (hep-at-o't'om-e) [Gr. ἥπαρ liver + *τομή* cut]. Surgical incision of the liver. **trans-thoracic h.**, the operation of incising the liver for abscess by resecting a rib, opening the pleural sac, and incising the diaphragm.

hepatotoxemia (hep'at-o-toks-e'me-ah) [Gr. *ἥπαρ* liver + *toxemia*]. Blood-poisoning originating in the liver.

hepatotoxin (hep'at-o-toks'in) [Gr. *ἥπαρ* liver + *toxin*]. A toxin destructive to liver cells; especially an antibody produced by injecting an animal with liver cells.

hepatoxin (hep-at-oks'in). A leprosy remedy said to be prepared from the liver of the Japanese globe-fish.

Hepatozoön perniciösum. A protozoan parasite of the leukocytes of the blood of rats.

hephestic (he-fes'tik) [*Ἥφαιστος* Vulcan]. Characteristic of blacksmiths. **h. spasm**. See *hemiplegia*, *hephestic*.

hephestiorrhaphy (hef-es-te-or'raf-e) [*Ἥφαιστος* Vulcan + *ράφω* suture]. Cauterization of the edges of a wound to produce adhesions.

hepstin (hep'tin) [Maurice *Hepß*, contemporary French physician]. Pure physiologic gastric juice obtained from living pigs.

heptachromic (hep-tah-kro'mik) [Gr. *ἑπτά* seven + *χρῶμα* color]. Possessing full color vision for all seven colors of the spectrum.

heptad (hep'tad) [Gr. *ἑπτά* seven]. Any element having a valency of seven.

heptanal (hep'tan-al). Heptoic aldehyd.

heptane (hep'tan). A hydrocarbon, C_7H_{16} , from pine-resin and petroleum: identical with abietene.

heptaploid (hep-tap'loid). See *polyploid*.

heptatomic (hep-tat-om'ik). Heptavalent.

heptavalent (hep-tav'al-ent) [Gr. *ἑπτά* seven + *Λ. val'ere* to be able]. Septivalent.

heptose (hep'tös) [Gr. *ἑπτά* seven]. Any sugar whose molecule contains seven atoms of carbon in the molecule.

heptosuria (hep-to-su're-ah). Presence of a hepto in the urine.

herapathite (her'ap-ath-it) [for W. B. *Herapath*, 1820-1868]. Quinin iodosulphate: used chiefly in microscopy. **cinchonin h.**, antiseptol, or cinchonin iodosulphate.

herb (erb, herb) [L. *her'ba*]. Any leafy plant without a woody stem. **vulnery h.**, an herb anciently regarded as healing wounds.

Herb. recent. Abbreviation for L. *herbarium recentium*, of fresh herbs.

herbaceous (her-ba'shus). Having the characters of an herb; having a woody stem which dies down to the roots every autumn.

Herbert's operation (herb'erts) [J. Frederick *Herbert*, Philadelphia oculist, born 1860]. See under *operation*.

herbivorous (her-biv'or-us) [L. *her'ba* grass + *vora're* to eat]. Subsisting upon grasses and herbs.

Herbst's corpuscles (herb'sts) [Ernst Friedrich *Herbst*, German physician, 1803-1893]. See under *corpuscle*.

hereditary (he-red'it-ar-e) [L. *hereditarius*]. Derived from ancestry or obtained by inheritance.

hereditation (he-red-it-a'shun). The influence of heredity.

hereditosyphilitic (he-red'it-o-sif-il-it'ik). Affected with hereditary syphilis.

heredity (he-red'it-e) [L. *hereditas*]. Organic resemblance based on descent (Castle); the inheritance of qualities or of diseases from ancestry. **cumulative h.**, that which comes from many generations of ancestors. **immediate h.**, that due to the parents. **mediate h.**, that which comes from the grandparents.

heredo-ataxia (her'ed-o-at-aks'e-ah). Friedreich's ataxia.

heredofamilial (her'ed-o-fam-il'e-al). Hereditary in certain families.

heredolues (her'ed-o-lu'ez). Hereditary syphilis.

heredoluetic (her'ed-o-lu-et'ik). Pertaining to hereditary syphilis.

heredosyphilis (her'ed-o-sif'il-is). Inherited syphilis.

heredosyphilitic (her'ed-o-sif-il-it'ik). A person affected with hereditary syphilis.

heredosyphilology (her'ed-o-sif-il-ol'o-je). The study of hereditary syphilis.

heredotuberculosis (her'ed-o-tu-ber-ku-lo'sis). Inherited tuberculosis.

Hering's phenomenon (her'ingz) [H. E. *Hering*, Austrian physician, born 1866]. See *phenomenon*.

Hering's test, theory (her'ingz) [Ewald *Hering*, physiologist in Leipzig, 1834-1918]. See under *tests, theory*.

Hermann's fluid, solution (her'manz) [Friedrich *Hermann*, German anatomist, 1859-1920]. See under *stains, table of*.

hermaphroditism, hermaphroditism (her-maf'-rod-izm, her-maf'-rod-it-izm) [Gr. *Ἑρμῆς* Mercury + *Ἀφροδίτη* Venus]. Double or doubtful sex. **complex h.**, the existence in the same individual of the internal and external organs of both sexes. **dimidiate h.**, that in which the organs of one side are male and of the other female. Called also *lateral h.* **h. with excess**, when the subject has the perfect organs of either sex with some that pertain to the other sex. **female h.**, when the sexual organs are predominantly female, but have some of the characters of the male sex. **lateral h.** See *dimidiate h.* **male h.**, when the person is of the male sex, with organs which have more or less of the female characters. **neuter h.**, **neutral h.**, when the individual has neither male nor female organs. **spurious h.**, doubtful but not double sex. **transverse h.**, when the outward organs appear to be of one sex and the internal ones are of the other. **true h.**, the presence in the same individual of both the male and female organs; double sex. **unilateral h.**, when one side has an ovary or a testis and the other has both an ovary and a testis.

hermaphrodite (her-maf'-ro-dit). A person who has or appears to have both male and female characters.

hermesoline (her-mes'o-lin). A solution of mercuric chlorid for intramuscular injection in syphilis.

hermetic, hermetical (her-met'ik, her-met'ik-al) [L. *hermeticus*]. Impervious to air; air-tight.

hermetically (her-met'ik-al-e). In an air-tight manner.

hermitine (her'mit-in). A proprietary antiseptic and disinfectant: said to be electrolyzed seawater.

hermodactyl (her-mo-dak'til) [Gr. *ἑρμόδακτυλος*]. The root of *Colchicum variegatum*: cathartic.

hermophenol, hermophenyl (her-mo-fe'nol, her-mo-fen'il). A white powder, mercuric-phenol-disulphonate of sodium: used as an antiseptic in a 0.1-2 per cent. solution; also as an antisypilitic.

hernia (her'ne-ah) [L.]. The protrusion of a loop or knuckle of an organ or tissue through an abnormal opening (Celsus). **abdominal h.**, the protrusion of some internal structure through the abdominal wall. **acquired h.**, one brought on by lifting or by a strain or other injury. **h. adipo'sa**. See *fat h.* **Barth's h.**, hernia of loops of intestine between the serosa of the abdominal wall and that of a persistent vitelline duct. **Béclard's h.**, femoral hernia through the saphenous opening. **Birkett's h.**, protrusion of the synovial membrane of a joint through a laceration of the capsular ligament. Called also *synovial h.* **h. of the bladder**, protrusion of a part of the bladder through any normal or other opening. **cecal h.**, one that contains the cecum or a part of it. **h. cere'bri**, the protrusion of the brain substance through the skull. **Cloquet's h.**, pectin-

Very large femoral hernia.

Femoral hernia in a female.

Indirect inguinal hernia (incomplete).

Double direct inguinal hernia.

Inguinal (scrotal) hernia.

Different varieties of infantile hernia.

Hernial sac with contained bowel: n, neck of sac; s, sac; b, bowel.

eal crural hernia. **complete h.**, one in which the sac and its contents have passed through the orifice. **concealed h.**, hernia not perceptible on palpation. **congenital h.**, that which exists at birth, most commonly scrotal. **Cooper's h.**, retroperitoneal hernia. **crural h.** Same as *femoral h.* **crural h.**, **pectineal**, hernia within and behind the femoral vessels, the tumor resting upon the pectineus muscle. **cystic h.** Same as *cystocele*. **diaphragmatic h.**, hernia through the diaphragm. **diverticular h.**, the protrusion of a congenital diverticulum of the gut. **dry h.**, a hernia in which the sac and its contents have become intimately adherent to each other. **encysted h.**, scrotal or oblique inguinal hernia in which the bowel, enveloped in its own proper sac, passes into the tunica vaginalis in such a way that the bowel has three coverings of peritoneum. **epigastric h.**, a hernia through the linea alba above the navel. **extrasaccular h.**, sliding hernia. **fat h.**, hernial protrusion of retroperitoneal fat through the abdominal wall; called also *h. adiposa*. **femoral h.**, hernia into the femoral canal. **foraminal h.**, hernia through the foramen of Winslow. **funicular h.**, hernia of the umbilical or spermatic cord. **Gibbon's h.**, hydrocele with large hernia. **gluteal h.**, crural hernia. **Goyrand's h.**, inguinal hernia that does not descend into the scrotum. **Hesselbach's h.**, hernia with a diverticulum through the cribriform fascia. **Hey's h.**, encysted hernia. **Holt-house's h.**, an inguinal hernia which has turned outward into the groin. Called also *inguino-crural h.* **incarcerated h.**, hernia so occluded as to obstruct the bowel completely. **incisional h.**, hernia occurring through an old abdominal incision. **incomplete h.**, one which has not passed quite through the orifice. **infantile h.**, oblique inguinal hernia behind the funicular process of the peritoneum. **inguinal h.**, hernia into the inguinal canal. **inguinal h.**, **direct**, inguinal hernia which passes directly through the abdominal wall by the internal ring. **inguinocrural h.** See *Holt-house's h.* **inguinofemoral h.**, a combined inguinal and femoral hernia. **inguinoproperitoneal h.**, hernia that is partly inguinal and partly properitoneal. Called also *Krönlein's h.* **inguinosuperficial h.**, interstitial hernia which passes through the internal inguinal ring, the inguinal canal, and the external inguinal ring, but at this point is deflected upward and outward so as to lie upon the aponeurosis of the external oblique. Called also *Küster's hernia*. **interparietal h.**, an interstitial hernia which lies between one or another of the fascial or muscular planes of the abdomen. **intersigmoid h.**, hernia of the intestine through the intersigmoid fossa. **interstitial h.**, a hernia in which a knuckle of intestine lies between two layers of the abdominal wall. **h. of the iris**, protrusion of a part of the iris. **irreducible h.**, hernia that cannot be restored by taxis. **ischiatric h.**, hernia through the sacrosacral foramen. **ischiorectal h.**, a protrusion of the abdominal viscera between fibers of the levator ani muscle. **Krönlein's h.** See *inguinoproperitoneal h.* **Küster's h.**, inguinosuperficial hernia. **labial h.**, the protrusion of a knuckle of the gut into a labium majus. **Laugier's h.**, a femoral hernia perforating Gimbernat's ligament. **levator h.** See *pudendal h.* **Littre's h.**, diverticular hernia. **lumbar h.**, hernia in the loin. **mesenteric h.**, the passage of a portion of the gut through an opening in the mesentery. **mesocolic h.**, hernia into a pouch of the mesocolon. **mucosal h.**, hernia of the mucous membrane of the intestine through an opening in the muscular coat. **oburator h.**, protrusion through the obturator foramen. **omentotal h.**, a protrusion of a knuckle of omentum. **ovarian h.**, hernial protrusion of an ovary. **h. par glissement** (gles-maw'). Same as *sliding h.* **paraperitoneal h.**, hernia of the bladder in which only a part of the protruded bladder is

covered by the peritoneum of the sac. **parasaccular h.**, sliding hernia. **parietal h.** Same as *Richter's h.* **pectineal h.**, hernia situated beneath the pectineal fascia. **perineal h.** Same as *ischiorectal h.* **Petit's h.**, lumbar hernia in Petit's triangle. **posterior vaginal h.**, a condition in which the pouch of Douglas with its intestinal contents pushes downward between the posterior vaginal wall and the rectum. Called also *enterocele*. **properitoneal h.**, an interstitial hernia which is located between the parietal peritoneum and the transversalis fascia. **pudendal h.**, a hernia located in the pudendum, having passed through a rent in the levator muscle and its fascia. Called also *levator h.* **h. of pulp**, protrusion of the dental pulp through the dentin wall of the pulp cavity. **reducible h.**, one that may be returned by manipulation. **retrograde h.**, a hernia the sac of which contains two loops of intestine, the portion of intestine between the two loops lying within the abdominal cavity. **retroperitoneal h.**, hernia of the intestine into the duodenojejunal fossa. **Richter's h.**, one in which only a part of the caliber of the gut is protruded. **Rokitansky's h.**, protrusion of a sac of mucous membrane or of the peritoneum through separated muscular fibers of the intestine. **sciatic h.**, hernia through the great sacrosacral foramen. **scrotal h.**, an inguinal hernia wh'ch has descended into the scrotum. **sliding h.**, **slip h.**, **slipped h.**, hernia of the colon in which a portion of the part is drawn into or slips into a hernial sac by the inclusion in the sac of the parietal peritoneum to which it is attached. Called also *extrasaccular h.*, *parasaccular h.*, and *h. par glissement*. **strangulated h.**, one which is tightly constricted and has become or is likely to become sphacelated. **synovial h.**, protrusion of the inner lining membrane through the stratum fibrosum of a joint capsule. **Treitz's h.**, a retroperitoneal hernia through the duodenojejunal recess. **tunicary h.** Same as *mucosal h.* **umbilical h.**, protrusion of the bowel or omentum at the navel. **uterine h.**, hernial protrusion of the uterus. **vaginal h.**, hernia into the vagina. **vaginolabial h.**, hernia of a viscus into the posterior end of the labium majus; posterior labial hernia. **Velpeau's h.**, femoral hernia in front of the femoral vessels. **ventral h.**, hernia through the abdominal wall. **vesical h.**, protrusion of the bladder. **w-h.**, a hernia in which the sac contains two loops of intestine.

hernia-knife (her'ne-ah-nif). A herniotome.

hernial (her'ne-al). Pertaining to a hernia.

herniary (her'ne-a-re). Pertaining to or associated with hernia.

herniated (her'ne-a-ted). Afflicted with hernia.

herniation (her'ne-a'shun). The formation of a hernia.

hernio-enterotomy (her'ne-o-en-ter-ot'o-me). Herniotomy conjoined with enterotomy.

hernioid (her'ne-oid). Resembling hernia.

herniolaparotomy (her'ne-o-lap-ar-ot'o-me). Laparotomy for the cure of hernia.

herniology (her'ne-ol'o-je) [*hernia* + Gr. λόγος treatise]. The study and science of hernias.

hernioplasty (her'ne-o-plas'te). Operation for the radical cure of hernia.

herniopuncture (her'ne-o-punkt-ūr) [*hernia* + *puncture*]. Surgical puncture of a hernia.

herniorrhaphy (her'ne-or'raf-e) [*hernia* + Gr. ραφή suture]. Suture of a hernia; the radical operation for hernia.

herniotome (her'ne-o-tōm). A knife for operating on hernia.

herniotomy (her'ne-ot'o-me) [*hernia* + Gr. τέμνειν to cut]. Kelotomy; a cutting operation for hernia.

heroic (he-ro'ik) [L. *hero'icus*]. Severe or rash.

heroin (her'o-in). A white, bitterish, crystalline powder, $C_{17}H_{17}(O.OO.CH_3)_2.NO$, the diacetic acid

ester of morphin. It is an anodyne and sedative, and is used in irritative coughs of phthisis and bronchitis, and in dyspnea. Dose, $\frac{1}{4}$ – $\frac{1}{2}$ gr. (0.0025–0.005 gm.). Hypodermically it is used in 2 per cent. solution in the same doses. **h. hydrochlorid**, a white, crystalline powder, $C_{17}H_{17}O(CO.CH_3)_2ON.HCl.H_2O$: used like heroin.

heroinism (her'ō-in-izm). Addiction to the use of heroin; heroin habit.

heroinomania (her'ō-in-o-ma'ne-ah). Heroinism.

heromal (her'ō-mal). A preparation of heroin and malt extract. Dose, 2 fl.dr. (8 c.c.).

heromania (he-ro-ma'ne-ah). Addiction to the use of heroin.

Herophilus (her-of'il-us). A Greek physician and anatomist of Alexandria, born about 344 B. C., one of the most celebrated physicians of antiquity.

heroterpin (her-o-ter'pin). A preparation of heroin and terpin hydrate. Dose, 1–3 fl.dr. (4–12 c.c.).

herpangina (her-pan'jin-ah) [*herpes* + *angina*]. A specific febrile disease of children marked by the appearance of minute papules, vesicles, and ulcers in the throat.

herpes (her'pēz) [L.; Gr. *ἔρπης*]. An inflammatory skin disease characterized by the formation of small vesicles in clusters (Galen). **h. catarrhalis**. Same as *h. simplex*. **h. circinata**. Same as *tinea circinata*. **h. cor'neæ**, herpetic inflammation of the cornea. **h. des'quamans**, tinea imbricata. **h. facia'lis**, **h. febril'is**, the so-called fever-blister occurring on the face. **h. farino'sus**, a variety of ringworm. **h. genita'lis**, herpes of the genital organs. **h. gestatio'nis**, a herpes peculiar to pregnant women. **h. i'ris**, a form occurring in rings on the hands and feet. **h. labia'lis**, herpes of the lips; cold-sore or fever-blister. **h. menst'rua'lis**, a form that recurs at the menstrual epoch. **h. phlyctæno'des**, dermatitis herpetiformis. **h. præputia'lis**, a form that occurs on the male genitals. **h. progenita'lis**, herpes of the genitals. **h. recur'rens**, herpes occurring in recurrent attacks. **h. sim'plex**, a skin disease marked by the formation of one or more vesicles on the border of the lip, the external nares, or the mucous surface of the genitals. **h. ton'surans**, tinea tonsurans. **h. ton'surans maculo'sus**. See *pityriasis rosea*. **h. veg'etans**, pemphigus vegetans. **h. zos'ter**. See *zoster*.

herpetic (her-pet'ik) [L. *herpet'icus*]. Pertaining to or of the nature of herpes.

herpetiform (her-pet'if-orm) [L. *her'pes* herpes + *for'ma* form]. Resembling herpes.

herpetism (her-pet-izm). Predisposition to herpetic disease; the herpetic or dartrous diathesis.

Herpetomonas (her-pet-om'on-as) [Gr. *ἑρπετόν* creeper + *μονάς* monad]. 1. A genus of flagellate animal microparasites found in the intestines of insects and in the blood of various animals. They are elongate or spindle-shaped, have a single flagellum, and no undulating membrane. They closely resemble one of the developmental forms of trypanosomes. They are not known to be pathogenic. 2. One of the developmental stages through which trypanosomes pass in their insect hosts. **H. donova'ni**. See *Leishmania donovani*. **H. furunculo'sa**, **H. trop'ica**. Same as *Leishmania tropica*.

herpetomoniasis (her-pet'ō-mo-ni'as-is). Infection with a species of Herpetomonas.

hersage (ār-sahzh') [Fr. "harrowing"]. The therapeutic loosening of the fibers of a diseased nerve-trunk.

hertzian waves (hertz'e-an) [after Heinrich Hertz, German physicist, 1857–1894]. See *wave*.

herubin (he-ru'bin). A preparation from leeches: used to prevent coagulation of the blood.

herudin (he-ru'din). See *hirudin*.

Herxheimer's fibers, reaction, spirals (herks'him-erz) [Karl Herxheimer, German dermatologist, born 1861]. See *fiber, reaction, spirals*, etc.

Heryng's sign (her'ingz) [Théodor Heryng, Polish laryngologist, born 1847]. See *sign*.

hesperanopia (hes'per-an-ō-pe-ah) [Gr. *ἑσπερα* evening + *ἀν* neg. + *ὤψ* eye]. Nyctalopia.

Hesselbach's hernia, triangle (hes'el-bahks) [Franz Kaspar Hesselbach, German surgeon, 1759–1816]. See *hernia* and *triangle*.

heteradelphía (het'er-ad-el'fe-ah) [Gr. *ἑτερος* other + *ἀδελφός* brother]. A joined twin monstrosity in which one fetus is much more fully developed than the other.

heteradelphus (het'er-ad-el'fus). A twin monster affected with heteradelphía.

heteradenia (het'er-ad-e'ne-ah) [Gr. *ἑτερος* other + *ἀδὴν* gland]. Any abnormality of the gland tissue.

heteradenic (het'er-ad-en'ik). Pertaining to, affected with, or of the nature of, heteradenia.

heteradenoma (het'er-ad-en-ō'mah) [Gr. *ἑτερος* other + *adenoma*]. Any hyaline cylindroma.

heteralin (het'er-al-in). Dioxymethylene hexamethylenetetramin, a colorless, crystalline compound, soluble in water and alcohol: used as a urinary antiseptic in cystitis, gonorrhea, etc. Dose, 15–30 gr. (1–2 gm.).

heteralialis, heteralialis (het-er-a'le-us, het-er-al'ik-us) [Gr. *ἑτερος* other + *ἄλως* disk]. An extreme example of heteradelphía.

heteraxial (het-er-ak'se-al) [Gr. *ἑτερος* other + *axis*]. Having axes of unequal length.

heterocius, heterocius (het-er-e'se-us) [Gr. *ἑτερος* other + *οἶκος* house]. Living upon one host in one stage or generation and upon another in the next.

heterecism (het'er-e-sizm). The state of being heterocius.

heteresthesia (het-er-es-the'ze-ah) [Gr. *ἑτερος* other + *αἰσθησις* sensation]. Variation in the degree of cutaneous sensibility on adjoining areas of the body surface.

hetero- [Gr. *ἑτερος* other]. A prefix denoting unlikeness or dissimilarity.

hetero-agglutinin (het'er-o-ag-lu'tin-in). An agglutinin found in the blood of an animal on the injection of blood from an animal of a different species.

hetero-albumose (het'er-o-al'bu-mōs) [*hetero-* + *albumose*]. A form of hemialbumose that is not soluble in water, but is soluble in hydrochloric acid and salt solutions.

hetero-albumosuria (het'er-o-al'bu-mo-su're-ah) [*hetero-albumose* + Gr. *οὐρον* urine]. The presence of hetero-albumose in the urine.

hetero-atom (het'er-o-at'om). Any atom of a ring-shaped chemical nucleus other than the carbon atoms.

hetero-autoplasty (het'er-o-aw'to-plas-te) [*hetero-* + *autoplasty*]. The surgical transfer of tissue from one part of the body to another.

heteroblastic (het'er-o-blas'tik) [Gr. *ἑτερος* other + *βλαστός* germ]. Having origin in different kinds of tissue.

heterocellular (het'er-o-sel'u-lar). Composed of cells of different kinds.

heterocentric (het'er-o-sen'trik) [Gr. *ἑτερος* other + L. *cen'trum* center]. Made up of rays that are neither parallel nor meet in one point: said of a ray of light.

heterocephalus (het'er-o-sef'al-us) [Gr. *ἑτερος* other + *κεφαλή* head]. A monster with two unequal heads.

heterochiral (het'er-o-ki'al) [Gr. *ἑτερος* other + *χελρ* hand]. Reversed as regards right and left, but otherwise the same in form and size.

- heterochromia** (het''er-o-kro''me-ah) [Gr. *ἑτερος* other + *χρῶμα* color]. Diversity of color in a part or parts that should normally be of one color, as in the two irides or in different parts of the same iris (h. ir'idis).
- heterochromosome** (het''er-o-kro''mo-sōm) [Gr. *ἑτερος* other + *chromosome*]. Same as *allosome*.
- heterochromous** (het''er-o-kro''mus). Marked by diversity of color; exhibiting heterochromia.
- heterochronia** (het''er-o-kro''ne-ah) [Gr. *ἑτερος* other + *χρόνος* time]. The formation of parts or tissues at an unusual time.
- heterochronic** (het''er-o-kron''ik) [Gr. *ἑτερος* other + *χρόνος* time]. Occurring at abnormal and irregular times.
- heterochronous** (het-er-ok''ro-nus). Heterochronic.
- heterochthonous** (het-er-ok''thon-us) [Gr. *ἑτερος* other + *χθών* earth]. Originating in a region other than that where it is found.
- heterochylia** (het''er-o-ki''le-ah). The sudden varying of the gastric secretion from normal acidity to hyperacidity or anacidity.
- heterocinesia** (het''er-o-sin-e''se-ah) [Gr. *ἑτερος* other + *κίνησις* movement]. A condition in which the patient performs movements other than those he is instructed to perform.
- heterocladic** (het''er-o-klad''ik) [Gr. *ἑτερος* other + *κλάδος* branch]. Indicating an anastomosis between terminal branches from different arteries.
- heterocomplement** (het''er-o-kom''ple-ment) [Gr. *ἑτερος* other + *complement*]. A complement derived from an animal of a species different from the one which furnishes the amboceptor.
- heterocomplementophilic** (het''er-o-kom''ple-men-to-fil''ik). Having an affinity for heterocomplements.
- heterocrisis** (het-er-ok''ris-is) [Gr. *ἑτερος* other + *κρίσις* division]. An abnormal crisis.
- heterocyclic** (het''er-o-sik''lik) [Gr. *ἑτερος* other + *κύκλος* circle]. Noting a compound the molecule of which consists of a closed chain of atoms, containing in such a ring atoms of more than a single element.
- heterocytotoxin** (het''er-o-si-to-tok''sin). A toxin which destroys cells from an animal of another species.
- Heterod'era radici'ola**. A nematode parasitic on the common root vegetables, such as radishes, carrots, turnips, potatoes, etc., as well as on celery. When infested vegetables are eaten ova of the parasite may appear in the stools and may lead to incorrect diagnosis.
- heterodermic** (het''er-o-der''mik) [Gr. *ἑτερος* other + *δέρμα* skin]. Performed with another person's skin: said of a method of skin-grafting. See *dermalheteroplasty*.
- heterodesmotic fibers** (het''er-o-des-mot''ik) [Gr. *ἑτερος* other + *δεσμός* a band]. See under *fiber*.
- heterodont** (het''er-o-dont) [Gr. *ἑτερος* other + *ὄδους* tooth]. Having teeth of different sorts, as molars, incisors, etc.
- Heterodox'us longitar'sus**. A kangaroo louse found sometimes on dogs.
- heterodrome** (het''er-o-drōm) [Gr. *ἑτερος* other + *δρόμος* a running]. A negative induction current.
- heterodymus** (het''er-o-d'im-us) [Gr. *ἑτερος* other + *δίδυμος* twin]. A mons'er-fetus with a second head on the abdomen.
- hetero-erotism** (het''er-o-er''ot-izm) [Gr. *ἑτερος* other + *ἔρως* love]. Sexual feeling directed toward another individual. Cf. *auto-erotism*.
- heterogametic** (het''er-o-gam-e''tik). Having unlike gametes. See *digametic*.
- heteroganglionic** (het''er-o-gang-le-on''ik) [Gr. *ἑτερος* other + *γάγγλιον* ganglion]. Connecting various ganglia: used of the sympathetic nervous system.
- heterogeneous** (het''er-o-je''ne-us) [Gr. *ἑτερος* other + *γένος* kind]. Consisting of or composed of dissimilar elements or ingredients.
- heterogenesis** (het''er-o-jen''es-is) [Gr. *ἑτερος* other + *γένεσις* generation]. 1. Alternation of generation; reproduction that differs in character in successive generations. 2. Asexual generation.
- heterogenetic** (het''er-o-jen-et''ik). 1. Pertaining to heterogenesis. 2. Not arising within the organism.
- heterogenic** (het''er-o-jen''ik). 1. Occurring in the wrong sex, as a beard upon a woman. 2. Derived from a different source or species.
- heterogenicity** (het''er-o-jen-is''it-e). The state of being heterogeneous.
- heterogenous** (het-er-oj''en-us). Heterogenic.
- heteroglobulose** (het''er-o-glo''bu-lōs). A heteroalbumose obtained from a globulin.
- heterograft** (het''er-o-graft) [Gr. *ἑτερος* other + *graft*]. A graft taken from an individual other than the one into which it is to be implanted.
- heterography** (het''er-o-graf-e) [Gr. *ἑτερος* other + *γράφειν* to write]. The writing of words other than those intended by the writer.
- heterohemagglutinin** (het''er-o-hem-ag-lu''tin-in). See under *hemagglutinin*.
- hetero-immune** (het''er-o-im''in'). Immune to the cells of an animal of a different species from the one which furnishes the immune serum.
- hetero-infection** (het''er-o-in-fek''shun). Infection with virus from outside the organism.
- hetero-inoculable** (het''er-o-in-ok''u-la-bl). Susceptible of being inoculated with a virus from another organism.
- hetero-inoculation** (het''er-o-in-ok-u-la''shun). Inoculation with a virus from another organism.
- hetero-intoxication** (het''er-o-in-tok-sik-a''shun). Poisoning by matters introduced from outside the body.
- heterokinesis** (het''er-o-kin-e''sis). The stage of meiosis in which the sex chromosomes become efferentially distributed in the gametes. **post-h.**, distribution of the sex chromosomes in the second mitotic division. **pre-h.**, segregation of the sex chromosomes in the first mitotic division.
- heterolalia** (het''er-o-la''le-ah) [Gr. *ἑτερος* other + *λαλιά* utterance]. Same as *heterophasia*.
- heterolateral** (het''er-o-lat''er-al) [Gr. *ἑτερος* other + *lateral* side]. Relating to opposite sides.
- heteroliteral** (het''er-o-lit''er-al). Marked by the substitution of one letter for another in pronouncing words.
- heterolith** (het''er-o-lith) [Gr. *ἑτερος* other + *λίθος* stone]. An intestinal concretion not formed of mineral matter.
- heterologous** (het-er-ol''o-gus) [Gr. *ἑτερος* other + *λόγος* relation]. Made up of tissue not normal to the part; also, derived from a different species, as, *heterologous* serum.
- heterology** (het-er-ol''o-je). Abnormality in structure, arrangement, or manner of formation. In chemistry, the relationship between substances of partial identity of structure but of different properties.
- heterolysin** (het-er-ol''is-in). A lysin which digests tissues other than that from which it is derived; or one which is formed in the body on the ingestion of an antigen from an animal of another species.
- heterolysis** (het-er-ol''is-is) [Gr. *ἑτερος* other + *λύσις* dissolution]. Dissolution or splitting up of a cell or a protein by extracts of another sort of tissue.
- heterolytic** (het''er-o-lit''ik). Pertaining to or caused by heterolysis or a heterolysin.
- heteromastigote** (het''er-o-mas'tig-ot''e) [Gr. *ἑτερος* other + *μάστιξ* lash]. Having several forward flagella together with one directed backward.
- heteromeral** (het-er-om''er-al). Heteromeric.

heteromeric (het'er-o-mer'ik) [Gr. *ἕτερος* other + *μέρος* side]. Sending processes through one of the commissures to the white matter of the other side of the spinal cord; used of nerve-cells.

heteromerous (het-er-om'er-us). Heteromeric.

heterometaplasia (het'er-o-met-ap-la'se-ah) [Gr. *ἕτερος* other + *metaplasia*]. Development of tissue into a variety foreign to the part where it is produced.

heterometropia (het'er-o-met-ro'pe-ah). The state in which there is a different kind of refraction in the two eyes; antimetropia.

heteromorphhic (het'er-o-mor'fik). Heteromorphous.

heteromorphosis (het'er-o-mor-fō'sis) [Gr. *ἕτερος* other + *μόρφωσις* a forming]. Malformation or malposition of tissues, organs, or parts.

heteromorphous (het'er-o-mor'fus) [Gr. *ἕτερος* other + *μορφή* form]. 1. Of abnormal shape or structure. 2. Having synaptic chromosome mates which differ in size, form, or structure.

heteronephrolysin (het'er-o-nef-rol'is-in) [Gr. *ἕτερος* other + *nephrolysin*]. A nephrolysin which acts on the cells of animals from a different species of animal.

heteronomous (het-er-on'o-mus) [Gr. *ἕτερος* other + *νόμος* law]. 1. Not independent or autonomous. 2. Abnormal.

heteronymous (het-er-on'im-us) [Gr. *ἕτερος* other + *ὄνομα* name]. Reversed or opposite in position.

hetero-osteoplasty (het'er-o-os'te-o-plas-te) [Gr. *ἕτερος* other + *ὀστέον* bone + *πλάσσειν* to shape]. The surgical grafting of a bone with a piece taken from one of the lower animals.

heteropagus (het-er-op'ag-us) [Gr. *ἕτερος* other + *πάγος* fixture]. A fetus to which another rudimentary fetus is attached by the abdomen.

heteropancreatism (het'er-o-pan'kre-at-izm). An irregular condition of functioning on the part of the pancreas.

heteropathy (het-er-op'ath-e) [Gr. *ἕτερος* other + *πάθος* suffering]. 1. Abnormal or morbid sensitiveness to stimuli. 2. Allopathy.

heterophany (het-er-of'an-e) [Gr. *ἕτερος* other + *φαίνα* to appear]. A difference in the manifestations of the same condition.

heterophasia (het'er-o-fa'ze-ah) [Gr. *ἕτερος* other + *φάσις* speech]. A form of partial aphasia in which the patient says one thing when he means something else.

heterophasis (het'er-o-fa'sis). Heterophasia.

heterophemia, heterophemy (het'er-o-fe'me-ah, het-er-of'e-me) [Gr. *ἕτερος* other + *φήμη* word]. Same as *heterophasia*.

heterophile (het'er-o-fil) [Gr. *ἕτερος* other + *φιλεῖν* to love]. Having affinity for other antigens or antibodies besides the one for which it is specific.

heterophonia (het'er-o-fo'ne-ah) [Gr. *ἕτερος* other + *φωνή* voice]. Any abnormality of the voice or of phonation.

heterophony (het-er-of'o-ne). Same as *heterophonia*.

heterophoralgia (het'er-of-o-ral'je-ah) [Gr. *ἕτερος* other + *φορῶς* bearing + *ἄλγος* pain]. Heterophoria associated with pain.

heterophoria (het'er-of-o're-ah) [Gr. *ἕτερος* other + *φορῶς* bearing]. Lack of parallelism between the visual lines, due to insufficiency of the ocular muscles.

heterophoric (het'er-o-fo'rik). Pertaining to or affected with heterophoria.

heterophthalmia, heterophthalmos (het'er-of-thal'me-ah, -thal'mos) [Gr. *ἕτερος* other + *ὀφθαλμός* eye]. Difference in the color, or in the direction of the axes, of the two eyes.

heterophthongia (het'er-of-thon'je-ah) [Gr. *ἕτερος*

other + *φθόγγια* utterance]. Any abnormality of speech.

Heterophyes (het-er-of'i-ēz). A minute trematode worm found in the middle third of the small intestine of man, dogs, and cats in Egypt (*H. heterophyes*) and Japan (*H. no'cens*).

heterophylasis (het'er-o-fi'i-as-is). Infection with flukes of the family Heterophyllidæ, namely, *Heterophyes* and *Metagonimus*.

heteroplasia (het'er-o-pla'ze-ah) [Gr. *ἕτερος* other + *πλάσσειν* to mold]. The replacement of normal by abnormal tissue; malposition of normal cells.

heteroplasim (het'er-o-plazm). Any heterologous tissue.

heteroplastic (het'er-o-plas'tik). Pertaining to heteroplasia or to heteroplasty; noting tissue taken from one species of animal for transplantation into an animal of another species.

heteroplastid (het'er-o-plas'tid). A surgical graft derived from another person or from a lower animal.

heteroplasty (het'er-o-plas-te) [Gr. *ἕτερος* other + *πλάσσειν* to mold]. Plastic surgery in which tissue is removed from a sound person, or in which a graft is taken from an individual of another species.

heteropodal (het-er-op'o-dal) [Gr. *ἕτερος* other + *πούς* foot]. Having branches or processes of different kinds: said of nerve-cells.

heteroproteose (het'er-o-pro'te-ōs). A primary proteose which is insoluble in water, but soluble in dilute salt solution.

heteropsia (het-er-op'se-ah) [Gr. *ἕτερος* other + *ὄψις* vision]. Unequal vision in the two eyes.

heteropsychologic (het'er-o-si-ko-loj'ik). Pertaining to ideas formed outside the individual mind.

Heteroptera (het-er-op'ter-ah) [Gr. *ἕτερος* other + *πτερόν* wing]. A suborder of the Hemiptera characterized by the possession of two pairs of wings, one horny, the other membranous. There are two genera: Cimex and Lamus.

heteroptics (het-er-op'tiks) [Gr. *ἕτερος* other + *ὀπτικός* optic]. False or perverted vision.

heteroscope (het'er-o-skōp) [*heterophoria* + Gr. *σκοπεῖν* to view]. A pair of fusion tubes so mounted as to subserve the observation of the progress of cases of heterophoria.

heteroscopy (het-er-os'ko-pe) [Gr. *ἕτερος* other + *σκοπεῖν* to see]. Inequality of vision in the two eyes.

heteroserotherapy (het'er-o-se-ro-ther'ap-e). Treatment of a patient by serum derived from some other individual.

heterosexual (het'er-o-seks'u-al). Pertaining to the opposite sex.

heterosexuality (het'er-o-seks-u-al'it-e). Love or sexual desire toward persons of the opposite sex.

heterosis (het-er-o'sis) [Gr. *ἕτερος* other]. Hybrid vigor; the condition in which the first generation of a hybrid shows more vigor than either of the parent strains.

heterosporous (het-er-os'po-rus) [Gr. *ἕτερος* other + *σπόρος* seed]. Having two kinds of spores.

heterosuggestion (het'er-o-sug-jest'shun) [Gr. *ἕτερος* other + *suggestion*]. Suggestion received from another person.

heterotaxia (het'er-o-taks'e-ah) [Gr. *ἕτερος* other + *τάξις* arrangement]. Abnormal or anomalous placement of viscera or parts.

heterotaxic (het'er-o-taks'ik). Affected with heterotaxia.

heterotaxis, heterotaxy (het-er-o-tak'sis, het'er-o-tak-se). Heterotaxia.

heterotherapy (het'er-o-ther'ap-e) [Gr. *ἕτερος* different + *θεραπεία* treatment]. Treatment of disease by remedies which are antagonistic to the

- principal symptoms of the disease; non-specific therapy.
- heterotonia** (het'er-o-to'ne-ah) [Gr. *ἕρεος* other + *τόνος* tension]. Variable tension.
- heterotopia, heterotopy** (het'er-o-to'pe-ah, het-er-ot'o-pe) [Gr. *ἕρεος* other + *τόπος* place]. Displacement or misplacement of parts or organs.
- heterotopic** (het'er-o-top'ik). Occurring at an abnormal place or upon the wrong part of the body.
- heterotoxic** (het'er-o-tok'sik). Pertaining to heterotoxin.
- heterotoxin** (het'er-o-toks'in) [Gr. *ἕρεος* other + *τοξιν*]. A toxin formed in the body through the agency of some organism outside of the body or introduced into it from outside.
- heterotoxis** (het'er-o-toks'is). Poisoning by toxic matter introduced into the system from without.
- heterotransplant** (het'er-o-trans'plant). A piece of tissue taken from one individual and transplanted into an individual of a different species.
- heterotransplantation** (het'er-o-trans-plan-ta'shun) [Gr. *ἕρεος* other + *transplantation*]. Transplantation of tissue from one individual to another individual of a different species.
- heterotrichosis** (het'er-o-tri-ko'sis) [Gr. *ἕρεος* other + *τρίχων* growth of hair]. Growth of hair of different colors on the body. **h. superciliorum**, eyebrows of different color (von Walther).
- heterotrophia, heterotrophy** (het'er-o-tro'fe-ah, het-er-ot'ro-fe) [Gr. *ἕρεος* other + *τροφή* nourishment]. Any disorder or fault of nutrition.
- heterotrophic** (het'er-o-trof'ik) [Gr. *ἕρεος* other + *τροφή* nutrition]. Not self-sustaining; said of organisms which are unable to form protein and carbohydrates from inorganic nitrogen and carbon. See *autotrophic*.
- heterotropia, heterotropy** (het'er-o-tro'pe-ah, het-er-ot'ro-pe) [Gr. *ἕρεος* other + *τρόπος* turn]. Same as *strabismus*.
- heterotypic** (het'er-o-ti'pik). Noting the first mitotic division of the germ cells.
- heterovaccine** (het'er-o-vak'sin). A vaccine made from some bacterium other than the one causing the disease for which the vaccine is used. It is one form of non-specific protein therapy.
- heteroxanthin** (het'er-ok-zan'thin) [*hetero-* + *xanthin*]. Mono-methyl-xanthin, a purin body, $C_8H_8N_4O_2$, methyl-2, 6-dioxypurin, from the urine; one of the xanthin bases, and a probable cause of gout.
- heterozoic** (het'er-o-zo'ik) [Gr. *ἕρεος* other + *ζῷον* animal]. Pertaining to another animal or species of animal.
- heterozygosis** (het'er-o-zi-go'sis). The formation of hybrids by the union of unlike gametes.
- heterozygous** (het'er-o-zi'gus). Derived from germ cells unlike in respect to one or more factors.
- heterozygote** (het'er-o-zi'göt) [Gr. *ἕρεος* other + *zygote*]. An individual which, with regard to any or all of its hereditary characters, has received unlike contributions from its parents.
- heterozygous** (het'er-o-zi'gus). Formed by unlike gametes; hybrid.
- hetocresol** (he-to-kres'ol). The cinnamic acid ester of metacresol, $C_6H_5(CH_2.CO.O.C_6H_4.CH_3$; a non-poisonous, antiseptic, crystalline substance; used in tuberculosis.
- hetoform** (he-to-form). Bismuth cinnamate, a white powder with an odor like cinnamon: used in tuberculosis.
- hetol** (he'tol). Sodium cinnamate, $C_6H_5(CH_2.CO.ONa$: highly commended for intravenous injection in tuberculosis.
- hetralin** (het'ral-in). Resorcinol hexamethylenetetramin, $(CH_2)_6N_4.C_6H_4(OH)_2$: a urinary antiseptic. Dose, 5-15 gr. (0.3-1 gm.).
- hettocytosis** (het'o-sir-to'sis) [Gr. *ἥττω* less + *κύρτωσις* curvature]. A slight curvature.
- Heubner's disease** (hoyb'nerz) [Johann Otto L. Heubner, pediatricist in Berlin, 1843-1926]. See under *disease*.
- heurteloup** (her'tel-ooop, Fr., urt-loo'). An artificial leech or cupping apparatus.
- hexabasic** (heks-ah-ba'sik) [Gr. *ἕξ* six + *basic*]. Having six atoms replaceable by a base.
- hexabiose** (heks-ah-bi'ös). Same as *disaccharid*.
- hexabromiodiphenylcarbinol** (heks'ah-bröm-di-oks-e-di-fen-il-kar'bin-ol). A disinfectant and germicide far more powerful than carbolic acid, being a compound of cresols with halogens.
- hexachinol** (heks-ah-ki'no). An oxycholin preparation of hexamethylenetetramin: used in gonorrhea and cystitis.
- hexachromic** (heks-ah-kro'mik) [Gr. *ἕξ* six + *χρῶμα* color]. Able to distinguish only six of the seven colors of the spectrum, the indigo not being distinguished.
- hexad** (heks'ad) [Gr. *ἕξ* six]. Any sexivalent element; an element having a valency of six.
- hexadactylism** (heks-ah-dak'til-izm) [Gr. *ἕξ* six + *δάκτυλος* finger]. The occurrence of six fingers (or toes) on a hand (or foot).
- hexahydrohematoporphyrin** (heks'ah-hi'dro-hem'at-o-por'fir-in). One of the resulting products of the treatment of hematin with alcohol and a reducing agent.
- hexahydroxybenzene** (heks'ah-hi-drok-se-ben'-zēn). See *inosite*. Called also *hexahydroxybenzol*, *hexahydratexaoxybenzene*.
- hexal** (heks'al). Hexamethylenamin sulphosalicylate, a crystalline compound: used in cystitis, nephritis, etc.
- hexalet** (heks'al-et). Hexamethylenetetramin salicyl sulphonic acid, $(CH_2)_6N_4.C_6H_5(OH)(COOH).SO_3OH.H_2O$: used as a sedative urinary antiseptic. Dose, $7\frac{1}{2}$ -15 gr. (0.5-1 gm.).
- hexamecol** (heks-am'e-kol). A compound of guaiacol and hexamethylenamin: used by inunction for the pains of phthisis, spondylitis, etc.
- hexamethylated** (heks-ah-meth'il-a-ted). Containing six methyl groups.
- hexamethylenamin** (heks-ah-meth'il-ēn-am'in). The U. S. P. name for urotropin.
- hexamethylendiamin** (heks-ah-meth'il-en-di'am-in). A ptomain, $NH_2(CH_2)_6NH_2$, from decomposing pancreas and muscle.
- hexamethylenetetramin** (heks-ah-meth'il-ēn-tet-ram'in). Urotropin.
- hexamethyl violet**. Crystal violet; an anilin of the triphenylmethane group, having bactericidal properties.
- hexamine** (heks'am-in). The B. P. name for hexamethylenetetramin. See *urotropin*.
- hexamylose** (heks-am'il-ös). A polymerized form of diamylose. It may be bisamylose, $[(C_6H_{10}O_5)_2]_3$, or be triamylose, $[(C_6H_{10}O_5)_3]_2$.
- hexane** (heks'an). A liquid hydrocarbon, C_6H_{14} .
- hexaploid** (heks'ap-loid). See *polyplaid*.
- Hexapoda** (hex-ap'o-dah) [Gr. *ἕξ* six + *πῶς* foot]. Insects.
- hexatomic** (heks-at-om'ik) [Gr. *ἕξ* six + *atom*]. 1. Containing six atoms of an element, or six replaceable univalent atoms. 2. In immunology, having the power of binding six complements of different strains.
- hexavaccine** (heks-ah-vak'sēn). A vaccine containing six different organisms.
- hexavalent** (heks-av'al-ent). Sexivalent.
- Hexenmilch** (heks'en-miltsh) [Ger. "witches' milk"]. A milk-like secretion from the breasts of newborn children.
- hexeton** (heks'e-ton). A water-soluble form of camphor, 3-methyl-5-isopropyl-2, 3-cyclohexenon,

$\text{CH}_3\text{C}_6\text{H}_4\text{O}_2\text{CH}(\text{CH}_3)_2$: used as a respiratory stimulant by subcutaneous or intramuscular injection, a 10 per cent. solution in a 25 per cent. solution of sodium salicylate being used. Dose intramuscularly, 0.2 gm.; intravenously, 0.01 gm.

hexone bases (heks'ōn). See under *base*.

hexonic (heks-on'ik). Pertaining to the hexone bases.

hexophan (heks'o-fan). An organic compound used in the treatment of gout. It is oxyphenylquinolin-dicarboxylic acid, $\text{C}_{17}\text{H}_{11}\text{NO}_5\text{H}_2\text{O}$.

hexos, **hexose** (heks'os, -ōs). A monosaccharid; any member of the group of sugars having six carbon atoms in the molecule. **h. diphosphate**, **h. diphosphoric acid ester**. See *lactacidogen*.

hexosamin (hex'ōs-am-in). A nitrogenous sugar in which an amino group replaces a hydroxyl group.

hexosan (heks'o-san). An anhydrid or a polymerized form of a hexose.

hexosazone (heks-o-sa'zōn). An osazone formed from a hexose.

hexosephosphatase (hex'ōs-fos'fat-ās). An enzyme which splits lactacidogen.

hexyl (heks'il) [Gr. ἕξ six + ὕλη substance]. A hydrocarbon, C_6H_{13} , in many isomeric forms.

hexylamin (heks-il-am'in) [*hexyl* + *amin*]. A poisonous base, $\text{C}_6\text{H}_{13}\text{NH}_2$, from yeast and from some samples of cod-liver oil.

hexylresorcinol (heks'il-re-zor'sin-ol). A white, waxy, stable solid, $\text{CH}_3(\text{CH}_2)_5\text{C}_6\text{H}_3(\text{OH})_2$. It is a powerful germicide with a phenol coefficient of 46 and is used as a urinary disinfectant, as it is not poisonous nor is it irritant to the urinary tract. Dose, 2½-10 min. (0.15-0.6 c.c.) three times a day.

Hey's hernia, ligament, operation, saw (hāz) [William Hey, English surgeon, 1736-1819]. See *hernia, ligament, operation, saw*.

Heynsius's test (hīn'se-oos) [Adrian Heynsius, Dutch physician, 1831-1885]. See under *testis*.

Hg. 1. The symbol for mercury (L. *hydrargyrum*). 2. Abbreviation for *hemoglobin*.

HgCl₂. Mercuric chlorid.

Hg₂Cl₂. Mercurous chlorid.

HgI₂. Mercuric iodid.

Hg₂I₂. Mercurous iodid.

Hg(NO₃)₂. Mercuric nitrate.

HgO. Mercuric oxid.

Hg₂O. Mercurous oxid.

HgS. Mercuric sulphid.

HgSO₄. Mercuric sulphate.

H. + Hm. Compound hypermetropic astigmatism.

HI. Hydriodic acid.

hiatus (hi-a'tus) [L.]. 1. Any gap or fissure. 2. The helicotrema. 3. The vulva. **h. aortic** [B N A], the aortic opening of the diaphragm. **Breschet's h.**, the helicotrema. **h. canalis facialis** [B N A]. Same as *h. fallopii*. **h. fallopii**, an opening in the petrous bone for the petrosal branch of the vidian nerve. **h. femoralis**, the femoral ring. **h. finis sacralis**, a cleft in the lowermost sacral vertebra. **h. intermedium lumbosacralis**, a spinal cleft in the region of the first sacral vertebra, considered a normally delayed ossification in young subjects. **h. interosseus**, the opening above the interosseous membrane of the forearm for the passage of the posterior interosseous vessels. **h. lumbosacralis**, the gap between the arches of the fifth lumbar and first sacral vertebrae, which is greater than the space between any two vertebrae at a higher level. **maxillary h.**, the opening into the antrum of Highmore on the nasal surface of the superior maxilla. **neural h.**, an opening in the neural tube during the process of closure. **h. œsophageus** [B N A], the œsophageal opening of the diaphragm. **h. sacralis** [B N A], the opening at the inferior end of the sacral canal. **Scarpa's h.**, the open-

ing between the scala tympani and the scala vestibuli. **h. semilunaris**. 1. [B N A] The groove in the external wall of the middle meatus of the nasal fossa into which the antrum of Highmore and the anterior ethmoid cells open. 2. The opening in the fascia of the arm transmitting the basilic vein and the internal cutaneous nerve. **h. tendineus**, the anterior opening of Hunter's canal. **h. tendineus adductorius** [B N A], the femoral opening. **h. totalis sacralis**, a cleft in all of the sacral vertebrae, sometimes also including one or several of the lowest lumbar vertebrae.

Hibbs's operation (hibz) [Russell H. Hibbs, contemporary New York surgeon]. See under *operation*.

hibernation (hi-ber-na'shun) [L. *hiberna* winter]. The dormant state in which certain animals pass the winter.

hiccup, hiccough (hik'up, hik'of). A sharp inspiratory sound with spasm of the glottis and diaphragm; singultus. **epidemic h.**, a condition frequently seen in epidemic encephalitis.

Hicks's sign (hiks) [John Braxton Hicks, English gynecologist, 1825-1897]. See under *sign*.

hide-bound (hid'bownd). Affected with scleroderma.

hidradenitis (hid-rad-en-i'tis) [Gr. ἰδρῶς sweat + ἀδὴν gland + -itis inflammation]. Inflammation of a sweat-gland. **h. suppurativa**, a disease of the sweat-glands marked by the development of one or more cutaneous, shot-like nodules, which gradually enlarge to the size of a pea, and undergo softening and suppuration, with subsequent discharge.

hidradenoma (hi'drad-en-o'mah). Same as *syngangocystadenoma*.

hidroa (hid-ro'ah) [Gr. ἰδρωα sudamina; ἰδρῶς sweat]. 1. Sudamina or other skin affection accompanied by sweating. 2. See *hydroa*.

hidrocystoma (hid'ro-sis-to'mah) [Gr. ἰδρῶς sweat + cystoma]. A retention-cyst of a sweat-gland; pompholyx.

hidromancy (hid'ror-man-se) [Gr. ἰδρῶς sweat + μαντεία medication]. Prognosis based upon the character of the sweat.

hidropoiesis (hid'ro-poi-e'sis) [Gr. ἰδρῶς sweat + ποίησις formation]. The formation of sweat.

hidropoietic (hid'ro-poi-et'ik) [Gr. ἰδρῶς sweat + ποιῶν to make]. Pertaining to the secretion of sweat.

hidrorrhea (hid-ror-re'ah) [Gr. ἰδρῶς sweat + ροία flow]. Profuse perspiration.

hidrosadenitis (hi'dro-sad-en-i'tis) [Gr. ἰδρῶς sweat + ἀδὴν gland + -itis inflammation]. Inflammation of the sweat-glands.

hidroschesis (hid-ros'kes-is) [Gr. ἰδρῶς perspiration + σχέσις holding]. Suppression of the perspiration.

hidrosis (hid-ro'sis) [Gr. ἰδρῶς sweat]. 1. The secretion and excretion of the sweat. 2. Any skin disease affecting primarily the sweat-glands. 3. Too profuse sweating.

hidrotic (hid-rot'ik). Causing hidrosis; sudorific.

hiemalis (hi-em-a'lis). Pertaining or occurring in winter.

hiera piera (hi'er-ah pi'krah) [Gr. "holy bit-ers"]. Powder of aloes and canella; L., *pulvis aloes et canellae*.

hialgia (hi-er-al'je-ah) [Gr. ἱερόν sacrum + ἄλγος pain]. Pain in the sacrum.

hieromania (hi'er-o-ma'ne-ah) [Gr. ἱερός sacred + μανία madness]. Religious insanity or frenzy.

hierophobia (hi'er-o-fō-be'ah) [Gr. ἱερός sacred + φόβος fear]. A morbid fear or anxiety affecting clergymen in their public functions.

hierotherapy (hi'er-o-ther'a-pe) [Gr. ἱερός sacred + θεραπεία therapy]. The treatment of disease by religious exercises.

high-blowing. The sound caused by the vibration of the nostrils of a horse when breathing rapidly.

high-frequency (hi-fre'kwen-se). Having a frequency higher than normal; a term applied to an alternating electric current having a large number of electric oscillations per second.

Highmore's antrum, body, etc. (hi'mōrz) [Nathaniel Highmore, English surgeon, 1613-1684]. See *antrum, body*, etc.

higmoritis (hi-mōr-i'tis). Inflammation of the antrum of Highmore.

higueron (hig-wer'on). The plant *Ficus laurifolia*; the milk of plant is used in ankylostomiasis.

hiliastic (hi-las'tik) [Gr. ἱλασμός atonement]. In Greek medicine, prophylactic, in the sense of diverting disease by rites of propitiation.

Hildenbrand's disease (hil'den-brands) [Johann Valentin Hildenbrand, Austrian physician, 1763-1818]. Typhus fever.

hillock (hil'ok). A small prominence or elevation. **axon h.**, the cone-shaped insertion of a neuron in its neuraxon. **Doyère's h.**, the elevation where a nerve-fiber enters a muscle. **seminal h.**, the verumontanum.

Hilton's muscle (hil'tunz) [John Hilton, English surgeon, 1804-1878]. See *muscles, table of*.

hilum (hi'lum) [L.]. A depression or pit at the entrance and exit of the vessels, nerves, and duct of a gland. **h. hep'atis**, the transverse fissure of the liver. **h. of the kidney**, the opening in the concave edge of the kidney through which the vessels and nerves enter. **h. lie'nis**, the hilum of the spleen. **h. of the lung**, the depression on the mediastinal surface of the lung where the bronchus, blood-vessels, nerves, etc., enter. **h. pulmo'nis**, the hilum of the lung. **h. rena'lis**, the hilum of the kidney. **h. of the spleen**, the fissure on the gastric surface of the spleen where the vessels and nerves enter.

hilus (hi'lus) [L.]. Same as *hilum*. **h. lie'nis** [B N A], the hilum of the spleen. **h. nu'clei oliva'ris** [B N A], the mesial end of the inferior olivary nucleus. **h. pulmo'nis** [B N A], hilum of the lung. **h. rena'lis** [B N A], hilum of the kidney.

himantosis (hi-man-to'sis) [Gr. ἱμάντωσις, from ἱμάς strap]. Elongation of the uvula.

hind-brain (hind'brān). A term which has been variously applied to the cerebellum, the cerebellum and pons, the medulla oblongata, and the entire rhombencephalon. Cf. *metencephalon*.

hind-gut (hind'gut). The embryonic structure whence the colon is formed.

hind-kidney (hind-kid'ne). The metanephros.

hinge-joint (hinj'joint). See *ginglymus*.

hip (hip). The region on each side of the pelvis. **h.-bone**, the os innominatum. **h.-joint**, the articulation of the innominate bone and the femur. **h.-joint disease**, tuberculosis of the hip-joint, resulting in chronic suppuration, the development of necrosis and fistule, or ankylosis from plastic effusion. The disease is marked by pain which is often felt in the knee, and is increased on pressure over the trochanter, sudden crying out during the night, muscular contraction, stiffness of the joint, etc. **snapping h.**, a condition marked by a slipping around of the hip-joint, with sometimes an audible snap, due to the slipping of a tendinous band over the great trochanter.

hipped (hipt). Having a fracture at the point of the hip: said of horses.

hippiater (hip'e-a-ter). A veterinarian.

hippiatric (hip-e-at'rik). Veterinary.

hippiatrics, hippiatry (hip-e-at'riks, hip'e-at-re) [Gr. ἵππος horse + ἱατρὸς physician]. Veterinary medicine and surgery.

hippo (hip'o). A dangerous arrow-poison from eastern Africa.

Hippobosca (hip-o-bos'kah) [Gr. ἵππος horse + βόσκειν to feed]. The typical genus of the family Hippoboscidae. They are pupiparous, dipterous, parasitic insects called the winged tick fly of the horse. **H. ru'fipes**, the species which is thought to transmit *galziekte*.

hippocamp (hip'o-kamp). Same as *hippocampus*. **hippocampal** (hip-o-kam'pal). Pertaining to the hippocampus.

hippocampus (hip-o-kam'pus) [Gr. ἵπποκαμπος sea-horse]. [B N A] A curved structure on the floor of the middle horn of the lateral ventricle. It is a submerged gyrus forming the larger part of the olfactory cerebral cortex. Called also *hippocampus major*, *Amnion's horn*, and *cornu ammonis*. **h. mi'nor**, a white elevation on the floor of the posterior cornu of the lateral ventricle, the calcar avis. **h. nu'dus**, a small part of the hippocampus on the median surface of the brain, in the cavity formed by the splenic bending of the fascia dentata.

hippocastanum (hip-o-kas'tan-um). Horse-chestnut. See *Æsculus*.

hippocoprosterol (hip'o-o-ko-pros'te-rol) [Gr. ἵππος horse + κόπρος dung + στερόλ]. A sterol found in the feces of herbivorous animals and derived from the phytosterol of grass and other food plants, C₂₇H₅₄O.

hippocratic (hip-o-krat'ik). Pertaining to or described by *Hippocrates*, a famous Greek physician, born in the island of Cos, 460 B. C., and called the "Father of Medicine." He taught the "humoral theory" of disease, and from his pupils he exacted an oath (*hippocratic oath*) that they would never abuse their trust by criminal practice nor disclose professional secrets. Of the 87 writings forming the so-called "hippocratic collection," many were doubtless composed by other writers. **h. face**. See *facies hippocratica*.

hippocratism (hip-o'krat-izm). The hippocratic system of treatment, based on imitating the processes of nature.

hippol (hip'ol). Methylene hippuric acid, C₆H₅·CO·N(CH₂)₂COOH, a colorless, crystalline substance: used as a urinary antiseptic.

hippolite, hippolith (hip'o-lit, hip'o-lith) [Gr. ἵππος horse + λίθος stone]. A bezoar, or concretion, from the alimentary canal of the horse.

Hippomane (hip-om'a-ne) [Gr. ἵππος horse + μάνα madness]. A genus of euphorbiaceous trees. **H. mancinella** is the highly poisonous manchineel tree: used in homeopathy.

hippomelanin (hip-o-mel'an-in) [Gr. ἵππος horse + μέλας black]. A black pigment from tumors and marrow of horses affected with melanosis.

hippostercorin (hip-o-ster'ko-rin). Hippocoprosterol.

hippurate (hip'u-rät) [Gr. ἵππος horse + οὔρον urine]. Any salt of hippuric acid. The hippurates of lime, lithium, and sodium are solvents of the urates, and are useful in gouty and calculous diseases. -Dose, 4-15 gr. (0.26-1 gm.).

hippuria (hip'u-re-ah) [Gr. ἵππος horse + οὔρον urine]. Excess of hippuric acid in the urine.

hippuric (hip-u'rik) [Gr. ἵππος horse + οὔρον urine]. Derivable from the urine of horses. See under *acid*.

hippus (hip'us) [Gr. ἵππος horse]. Tremor of the iris, producing rapid, spasmodic alteration of the size of the pupil. **respiratory h.**, dilatation of the pupil during inspiration and contraction during expiration.

hip-shot. Deformed by fracture of the haunch: said of a horse.

hirathiol (hi-rath'e-ol). A brownish-black syrupy liquid, ammonium sulphochthyolate, resembling ichthyol and used for the same purposes.

hirax (hi'raks). A proprietary lotion; a remedy for mosquito-bites, insect-stings, etc.

hircin (hir'sin) [L. *hir'cus* goat]. An ill-smelling principle from the suet of goats.

hircismus (hir-siz'mus) [L. *hir'cus* goat]. The strong odor of the axillæ.

hircus (hir'kus), pl. *hir'ci* [L. "a goat"]. 1. An axillary hair. 2. The strong odor of the axillæ. 3. The tragus of the ear.

Hirschberg's method (hirsh'bergz) [Julius Hirschberg, German ophthalmologist, 1843-1925]. See under *method*.

Hirschberg's reaction (hirsh'bergz) [Leonard Keene Hirschberg, physician in Baltimore, born 1877]. See under *reaction*.

Hirschfeld's disease [Felix Hirschfeld, German physician, born 1860]. Acute diabetes mellitus.

Hirschfeld's nerve (hirsh'feldz) [Ludwig Moritz Hirschfeld, Austrian anatomist, 1816-1876]. See *nerves, table of*.

Hirschfelder's tuberculin (hirsh'fel-derz) [Joseph Oakland Hirschfelder, American pathologist, born 1854]. See under *tuberculin*.

Hirschsprung's disease (hirsh'sproongz) [Harold Hirschsprung, a Danish physician, 1830-1916]. See under *disease*.

hirsute (her'süt) [L. *hirsu'tus*]. Shaggy; having long hair.

hirsuties (her-su'she-ëz) [L.]. Excessive hairiness.

hirsutism (her'süt-izm). Abnormal hairiness, especially in women.

hirudin (hi-ru'din) [L. *hiru'do* leech]. The active principle of the secretion of the buccal glands of leeches. It has the power of preventing coagulation of the blood by acting as an antithrombin.

Hirudinea (hi-ru-din'e-ah). A class of the Annelida; the leeches. It comprises three orders: Acanthobdellidea, Arhynchobdellidea, Rhynchobdellidea.

hirudiniasis (hi-ru-din'i-as-is). Invasion of the nose, mouth, pharynx, or larynx by leeches.

hirudiniæ (hi-ru'din-iz). To render the blood non-coagulable by the injection of hirudin.

Hirudo (hi-ru'do), pl. *hiru'dines*. Latin for *leech*. A genus of the Hirudinea. **H. ægypti'aca** is pathogenic when drunk with water. **H. japon-ica**, the medicinal leech of Japan. **H. javan-ica**, a leech of Java, Batavia, and Burma. It may also be parasitic in the body cavities. **H. medicina'lis**, the well-known olive-gray leech that was formerly used extensively for therapeutic purposes. **H. quinquestria'ta**, a leech occurring in Australia. **H. sanguisor'ba**. Same as *Hæmopsis sanguisuga*. **H. trocti'na**, the common European leech which is marked with green, orange, and black somewhat like a trout.

His's band or bundle, spindle [Wilhelm His, German physician, born 1863]. See *bundle and spindle*.

His's bursa, canal, rule, spaces, zone, etc. [Wilhelm His, German anatomist, 1831-1904]. See *bursa, canal, rule, spaces, zone*, etc.

Hiss's stain [Philip Hanson Hiss, New York bacteriologist, 1868-1913]. See *stains, table of*.

histaffine (his-taf'in) [Gr. *istós* tissue + L. *aff'inis* having affinity for]. 1. Having affinity for tissues. 2. A substance present in the blood-serum of animals affected with certain diseases, which combine with certain constituents of the tissues, thus producing the phenomenon of fixation of the complement.

histamin (his'tam-in). An amin produced from histidin by the loss of CO₂; betaminazolyethylamin, C₃H₅N₂(CH₂)₂NH₂; used like pituitrin, especially in the form of histamin hydrochlorid. **h. hydrochlorid**. Same as *imido-Roche*.

histaminemia (his-tam-in'e-me-ah). The presence of histamin in the blood.

histase (his'tās). An enzyme which digests tissue.

histenzyme (his-ten'zim) [Gr. *istós* tissue + *enzyme*]. A ferment from the kidney which splits up hippuric acid into benzoic acid and glycocholl.

histic (his'tik). Pertaining to or of the nature of tissue.

histidin (his'tid-in). An amino-acid, C₃H₅N₂CH₂-CH(NH₂)CO₂H, first found as a decomposition product of the protamin of sturgeon testes (Kossel, 1896); obtainable from any protein by the action of sulphuric acid and water.

histiocyte (his'te-o-sit). Same as *histocyte*.

histiogenic (his'te-o-jen'ik). Histogenous.

histioid (his'te-oid). Same as *histoid*.

histio-irritative (his'te-o-ir'it-a-tiv) [Gr. *istov* tissue + *irritative*]. Having an irritative effect on connective tissue.

histioma (his-te-o'mah). Same as *histoma*.

histionie (his-te-on'ik) [Gr. *istiov* web, tissue]. Pertaining to or derived from a tissue.

histo- [Gr. *istós* web]. A prefix denoting some relation to the tissues.

histoblast (his'to-blast) [Gr. *istós* tissue + *βλαστός* germ]. A tissue-cell.

histochemistry (his-to-kem'is-tre) [*histo-* + *chem-istry*]. The chemistry of living or organized tissues.

histochromatosis (his'to-kro-mat-o'sis) [Gr. *istós* tissue + *χρώμα* color]. A general term for affections of the reticulo-endothelial system, including xanthochromatosis, Gaucher's disease, and lymphogranulomatosis.

histoclastic (his-to-klas'tik) [Gr. *istós* tissue + *κλαστός* breaking]. Breaking down tissue: said of certain cells.

histocyte (his'to-sit) [Gr. *istós* tissue + *κύτος* cell]. A large phagocytic interstitial cell forming part of the reticulo-endothelial system and corresponding to the clasmatocyte or perithelial cell (Aschoff). Cf. *endotheliocyte*.

histocytomatosis (his'to-si-to-mat-o'sis). Any generalized disorder of the reticulo-endothelial system, such as xanthomatosis, Gaucher's disease, lymphogranulomatosis, etc.

histodiagnosis (his'to-di-ag-no'sis) [Gr. *istós* tissue + *diagnosis*]. Diagnosis by microscopic examination of the tissues.

histodialysis (his'to-di-al'is-is) [*histo-* + *dialy-sis*]. The disintegration or, breaking down of tissues.

histofluorescence (his'to-flu-o-res'ens). Fluorescence produced in the body by the administration of some substance previous to exposure to the x-rays.

histogenal (his-toj'en-al). See *histogenol*.

histogenesis (his-to-jen'es-is) [Gr. *istós* web + *γένεσις* production]. The formation or development of tissues from the undifferentiated cells of the germ-layers of the embryo.

histogenetic (his'to-jen-et'ik). Pertaining to histogeny.

histogenol (his-to-je'nol). A compound of disodium methylarsenate and nucleic acid: used in tuberculosis.

histogenous (his-toj'en-us) [Gr. *istós* tissue + *γεννᾶν* to produce]. Formed by the tissues.

histogeny (his-toj'en-e). Histogenesis.

histogram (his'to-gram). A diagram or graphical representation of frequency distributions.

histography (his-toj'raf-e) [Gr. *istós* tissue + *γράφειν* to write]. Description of the tissues.

histohematin (his-to-hem'at-in) [Gr. *istós* tissue + *hematin*]. Any one of a certain group of red tissue pigments found in the muscles, suprarenal glands, and other organs, and thought to have a respiratory function similar to that of hematin.

- histohematogenous** (his''to-hem-at-oj'en-us) [Gr. *istós* tissue + *αἷμα* blood + *-γεν* to produce]. Formed both from the tissues and from the blood.
- histoid** (his'toid) [Gr. *istós* web + *εἶδος* form]. 1. Web-like. 2. Developed from but one tissue. 3. Like the tissues of the surrounding parts.
- histokinesis** (his'to-kin-e'sis) [Gr. *istós* tissue + *κίνησις*]. Movement in the tissues of the body.
- histology** (his-tol'o-je) [Gr. *istós* web + *λόγος* discourse]. The sum of knowledge regarding the minute structure and composition of the tissues; tissue anatomy. **normal h.**, the histology of normal and healthy tissues. **pathologic h.**, the histology of diseased tissues.
- histolysis** (his-tol'is-is) [Gr. *istós* web + *λύνειν* to loosen]. The dissolution or breaking down of the tissues.
- histolytic** (his-to-lit'ik). Causing histolysis.
- histoma** (his-to'mah) [Gr. *istós* tissue + *-ωμα* tumor]. Any tissue tumor, as a fibroma.
- histometaplastic** (his''to-met-ap-las'tik). Stimulating metaplasia of tissue.
- histomorphology** (his-to-mor-fol'o-je). Histology.
- histon, histone** (his'tōn) [Gr. *istós* web]. A simple protein, soluble in water and insoluble in dilute ammonia. The globin of hemoglobin is a histone. Some are decidedly poisonous and contain a considerable amount of phosphorus. Combined with leukonuclein they form nucleohiston. Blood treated with histon is altered so that it coagulates with difficulty. Histon has been found in the urine in leukemia and febrile conditions. Cf. *prolamin*.
- h. nucleinate**, a compound of nucleic acid and histon, the characteristic constituent of lymph-glands, spleen, and thymus.
- histonectomy** (his-to-nek'to-me) [Gr. *istós* tissue + *ἐκτομή* excision]. Periarterial sympathectomy. See under *sympathectomy*.
- histonomy** (his-ton'o-me) [Gr. *istós* web + *νόμος* law]. A statement of the laws of tissue development.
- histonuria** (his-tōn-u're-ah) [*histon* + Gr. *οὔρον* urine]. The presence of histon in the urine.
- histopathology** (his''to-path-o'l'o-je) [Gr. *istós* tissue + *pathology*]. Pathologic histology.
- histophysiology** (his'to-fiz-e-o'l'o-je) [Gr. *istós* tissue + *physiology*]. The physiology of the minute elements of the tissues.
- histopin** (his'to-pin). An extract from staphylococci: used for immunization of the skin to infectious dermatitis.
- Histoplasma capsula'tum**. A protozoan organism found by Darling (1906) in peculiar lesions of the lungs, spleen, liver, and bone-marrow of a negro resembling the splenomegaly of kala-azar.
- histoplasmosis** (his'to-plaz-mo'sis). The disease caused by the presence of histoplasma in the body. It is marked by splenomegaly, emaciation, fever, and leukopenia, the pathologic lesions being the presence of small gray nodules in the lungs, smaller yellowish nodules in the spleen, irregular grayish areas in the liver, and neurosis and ulceration of the small intestine and cecum.
- histopsychē** (his-to-si'ke) [Gr. *istós* web + *ψυχή* soul]. The tissue soul; the higher psychologic function of tissue.
- histopsychology** (his''to-si-kol'o-je) [Gr. *istós* tissue + *psychology*]. The study of minute structure combined with psychologic analysis.
- historetention** (his''to-re-ten'shun). Retention of matter by the tissues.
- historrhesis** (his-to-rek'sis) [Gr. *istós* tissue + *ῥήξις* rupture]. Breaking up of tissue; Southard's term for focal destruction of nerve-tissue of non-infectious nature.
- histosan** (his'to-san). A guaiacol-albumin preparation used in respiratory diseases. Dose, 1-4 dr. (4-16 gm.).
- Histosporidium carcinomato'sum**. Feinberg's name for the alleged parasite of cancer.
- histotherapy** (his-to-ther'ap-e) [Gr. *istós* tissue + *therapy*]. The treatment of disease by the administration of animal tissues.
- histothrombin** (his-to-throm'bin). Thrombin from connective tissue.
- histotome** (his'to-tōm) [Gr. *istós* web + *τέμνειν* to cut]. A cutting instrument used in microtomy.
- histotomy** (his-to'to-me) [Gr. *istós* web + *τέμνειν* to cut]. The dissection of the tissues; microtomy.
- histotribe** (his'to-trib) [Gr. *istós* tissue + *τριβειν* to crush]. A strong forceps for clamping on a mass of tissue containing blood-vessels to secure hemostasis.
- histotripsy** (his'to-trip-se) [Gr. *istós* tissue + *τριβις* crushing]. The crushing of tissue with a histotribe.
- histotrophic** (his-to-trof'ik) [Gr. *istós* tissue + *τροφή* nutrition]. Encouraging the formation of tissue.
- histotropic** (his-to-trop'ik) [Gr. *istós* tissue + *τρόπος* a turning]. Having special affinity for tissue-cells: said of chemicals.
- histozoic** (his-to-zo'ik) [Gr. *istós* tissue + *ζωή* life]. Living on or within the tissues: said of parasites.
- histozyme** (his'to-zim) [Gr. *istós* web + *ζύμη* leaven]. Any enzyme which causes a fermentation in the tissues by producing the hydrolysis of hippuric acid.
- histrionic** (his-tre-on'ik) [L. *histrion* actor]. Characterized by exaggerated imitative movements like those of an actor.
- histrionism** (his'tre-on-izm). The insane or hysterical adoption of the manner and gestures of an actor.
- Hittorf number, tube** (hit'orf) [Johann Wilhelm Hittorf, German physicist, 1824-1914]. See *number* and *tube*.
- Hitzig's girdle** (hit'zigz) [Edouard Hitzig, German psychiatrist, 1868-1907]. See under *girdle*.
- hives** (hivz). A popular name for urticaria and for various other skin diseases.
- HI**. The symbol for *latent hypermelproia*.
- Hm**. The symbol for *manifest hypermelproia*.
- H.M.C.** Abbreviation for *hyoscin-morphin-cactin anesthesia*. See under *anesthetic*.
- HNO₂**. Nitrous acid.
- HNO₃**. Nitric acid.
- Ho**. Chemical symbol of *holmium*.
- H.O**. Water.
- H₂O₂**. Hydrogen dioxid or peroxid.
- hoang-nan** (ho-ang-nan'). A Chinese remedy for leprosy and syphilis; the bark of *Strychnos gaultheria* na. Dose, 2-5 gr. (0.133-0.33 gm.); of tincture, 1-5 min. (0.066-0.333 cc.).
- hoarseness** (hōrs'nes). A rough quality of voice.
- Hochsinger's phenomenon** (hōk'sing-erz) [Karl Hochsinger, contemporary Austrian pediatricist]. See *phenomenon*.
- hock** (hok). The tarsal joint or region of the tarsus in the hind leg of the horse or ox. **capped h.**, a cyst or a thickening of the skin over the point of the calcaneum in the horse. **curby h.**, a hock affected with curb. **spring h.** See *spring-hock*.
- Hodara's disease** (ho-dar'ahz) [Menahem Hodara, a Turkish physician]. See *disease*.
- hodegetics** (hod-e-jet'iks). Medical etiquette.
- Hodge's forceps, pessary, plane**, etc. [Hugh Lenox Hodge, Philadelphia gynecologist, 1796-1873]. See *forceps*, *pessary*, *plane*, etc.
- Hodgkin's disease** or **granuloma** (hoj'kinz) [Thomas Hodgkin, English physician, 1788-1866]. See *disease*.

Hodgson's disease (hoj'son-z) [Joseph *Hodgson*, English physician, 1788-1869]. See *disease*.

hodi-potsy (ho-de-pot'se). A skin disease of Madagascar resembling tinea flava.

hodoneuromere (ho-do-nu'ro-mēr) [Gr. ὁδός path + νεῦρον nerve + μέρος part]. A segment of the embryonic trunk with its pair of nerves and their branches.

hodorin (ho-do'rin). An alkaloid, $C_{18}H_{31}NO_6$, from *Stemona sessiliflora*.

Hoffbauer cells (hof'bow-er). See under *cell*.

Hoffa's disease, operation (hof'az) [Albert *Hoffa*, German surgeon, 1859-1907]. See *disease* and *operation*.

Hoffmann's anodyne (hof'manz) [Friedrich *Hoffmann*, German physician, 1660-1742]. See *anodyne*.

Hoffmann's atrophy, sign [Johann *Hoffmann*, contemporary German physician]. See *atrophy* and *sign*.

Hoffmann's bacillus [Georg von *Hoffmann* Wellenhof, Austrian bacteriologist]. See *bacillus*.

Hoffmann's duct [Moritz *Hoffmann*, German anatomist, 1622-1698]. The duct of Wirsung.

Hoffmann's violet [August Wilhelm *Hoffmann*, German chemist, 1818-1892]. *Dahlia*.

hog-cholera (hog-kol'er-ah). See under *cholera*.

holadin (hol'ad-in) [Gr. ὅλος entire + ἄδην gland]. A proprietary preparation of the entire pancreas, used in cases of imperfect digestion. It is sold in 3 gr. capsules.

holagogue (hol'ag-og) [Gr. ὅλος whole + ἄγωγός leader]. A medicine capable of expelling all disease humors; a drastic or radical remedy.

holarrhenin (hol-ar'e'nin). An alkaloid, $C_{24}H_{38}N_2O$, from various species of *Holarrhena*; a cardiac poison.

holarthrititis (hol-ar-thri'tis). Same as *hamarthrititis*.

Holden's line (hōl'denz) [Luther *Holden*, English surgeon, 1815-1905]. See *line*.

holding method (hōl'ding). See under *method*.

holgin (hol'jin). An antiseptic compound of menthol, 1 part, formaldehyd, 17.5 parts, and methyl alcohol, 81.5 parts.

hollow-back (hol'o-bak). See *lordosis*.

hollow-horn (hol'o-horn). A disease of cattle, characterized by leanness, general debility, coarse hair, and scurviness.

Holmgren's test (holm'gren-z) [A. C. *Holmgren*, Swedish physiologist, 1831-1897]. See under *tests*.

holmium (hol'me-um). One of the rare earths; symbol Ho. atomic weight 163.5.

holoacardius (hol-o-ah-kar'de-us) [Gr. ὅλος entire + α neg. + καρδία heart]. A monster-fetus with a completely closed body, but lacking a heart.

holoblastic (hol-o-blas'tik) [Gr. ὅλος entire + βλαστός germ]. A term applied to the ova of certain animals in which the entire egg undergoes segmentation, and nearly all the yolk goes to the formation of the germ.

holocain (hol-o-ka'in). A crystalline base, phenetidyl acetphenetidin, $C_2H_5O.C_6H_4.NH.C(CH_3)_2$; $N.C_6H_4(OC_2H_5)_2$, nearly allied to phenacetin; its hydrochlorid is a local anesthetic and antiseptic, and is used like cocaine. It is an active convulsant poison. **h. hydrochlorid**. See *phenacain*.

holocephalic (hol'o-sef-al'ik) [Gr. ὅλος whole + κεφαλή head]. Having the head entire: said of a monster-fetus.

holocrine (hol'o-krin) [Gr. ὅλος whole + κρίνειν to separate]. Wholly secretory: a term applied to glands in which entire secretory cells are cast off and after disintegration form part of the secretion, as the sebaceous glands. See *merocrine*.

holodiastolic (hol'o-di-as-to'l'ik) [Gr. ὅλος entire + διαστολή]. Pertaining to the entire diastole.

hologamy (hol-og'am-e) [Gr. ὅλος whole + γάμῃ marriage]. The condition in which the gametes are of the same size and structural type as the somatic cells.

holomastigote (hol-o-mas'tig-ōt) [Gr. ὅλος whole + μάστιξ lash]. Having numerous flagella scattered over the body.

holomorphosis (hol-o-mor'fo-sis) [Gr. ὅλος whole + μορφοῦσι formation]. The complete regeneration of a lost part.

holomyerial (hol'o-mi-e're-al). A type of arrangement of the muscular system in the Nematoda. The muscle-cells are small, numerous, close together, and form a band below the cuticle.

holophytic (hol-o-fit'ik) [Gr. ὅλος whole + φυτὸν plant]. Having the characters of a plant: said of certain protozoa.

holopon (hol'o-pōn). An aqueous extract containing the total opium alkaloids (10 per cent. strength) free from colloids and other insoluble matter. It is suitable for injection.

holorachischisis (hol'or-a-kis'kis-is) [Gr. ὅλος entire + ράχis spinal column + σχίσis cleft]. Fissure of the entire spinal cord.

holoschisis (hol-os'kis-is) [Gr. ὅλος entire + σχίσis cleft]. Same as *amiosis*.

holosystolic (hol'o-sis-to'l'ik) [Gr. ὅλος entire + systole]. Pertaining to the entire systole.

holotetanus (hol-o-tet'an-us) [Gr. ὅλος whole + ἵκτανus]. General tetanus.

Holothyrus (hol-o-thi'rus). A genus of ticks. *H. coccinella*, of Mauritius, is found on geese, and is poisonous to human subjects, causing a painful swelling of the tongue and throat.

holotonia (hol-o-to'ne-ah) [Gr. ὅλος whole + τόνος tension]. Muscular spasm of the whole body.

holotonic (hol-o-ton'ik). Affected with holotonia.

holotrichous (hol-ot'rik-us) [Gr. ὅλος whole + θρίξ hair]. Covered with cilia.

holotropy (hol-ot'ro-pe) [Gr. ὅλος whole + τροπή a turning]. The position of an organ in relation to the whole body.

holozoic (hol-o-zo'ik) [Gr. ὅλος whole + ζῶν animal]. Having all its characters those of an animal. Cf. *holophytic*.

Holthouse's hernia (holt'howz-es) [Carsten *Holthouse*, English surgeon, 1810-1901]. See *hernia*.

holzin (hol'zin). A preparation containing menthol, formaldehyd, and methyl alcohol: given by inhalation for tuberculosis.

holzinol (hol'zin-ol). A disinfectant containing formaldehyd, 2 parts; menthol, 40 parts; and methyl alcohol, 58 parts.

homalocephalus (hom'al-o-sef'al-us) [Gr. ὁμαλός level + κεφαλή head]. Flat-headed.

homalography (hom-al-og'raf-e) [Gr. ὁμαλός level + γράφειν to write]. The study of anatomy by means of plane sections of the parts.

Homalomyia (ho'mal-o-mi'e-ah). A genus of flies whose maggots sometimes infest the human intestine.

homatropin (ho-mat'ro-pin). A mydriatic alkaloid, $C_9H_{21}NO_3$, or tropin mandelate, obtained by the condensation of tropin and mandelic acid. It is slightly soluble in water, and is used to produce dilatation of the pupil and paralysis of accommodation for the purpose of examining the interior of the eye and determining its refraction. Dose, $\frac{1}{2}$ gr. (0.022 gm.); **h. hydrobromid**, $C_{16}H_{21}O_3N.HBr$. Dose, $\frac{1}{32}$ gr. (0.0005 gm.).

homaxial, homaxonic (ho-mak'se-al, ho-mak-son'ik). Having the axes all similar: said of cocci that grow alike in all directions of space.

Home's lobe [Sir Everard *Home*, English surgeon, 1763-1832]. See *lobe*.

homeo-, homœo- (ho'me-o) [Gr. ὁμοιος like]. A prefix denoting similarity.

homeocyte (ho-me'o-sit) [Gr. *ῥμοιος* like + *κύτος* cell]. Same as *lymphocyte*.

homeomorphous (ho'me-o-mor'fus) [*ῥμοιο-* + Gr. *μορφή* form]. Of like form and structure.

homeo-osteoplasty (ho'me-o-os'te-o-plas-te) [Gr. *ῥμοιος* like + *ὀστέον* bone + *πλάσσειν* to mold]. The surgical implantation of a piece of a bone similar to the grafted bone.

homeopath (ho'me-o-path). Homeopathist.

homeopathic (ho'me-o-path'ik). Pertaining to homeopathy.

homeopathist (ho-me-op'ath-ist). One who practices homeopathy.

homeopathy, homoeopathy (ho-me-op'ath-e) [Gr. *ῥμοιος* like + *πάθος* disease]. A system of therapeutics "founded by Samuel Christian Friedrich Hahnemann (1755-1843) based on the following theories: first, the doctrine of signatures, namely, that diseases are curable by those drugs which produce effects on the body similar to the symptoms of the disease (*similia similibus curantur*); second, that the effects of drugs is increased by giving them in minute doses, which are to be obtained by carrying dilution or trituration to an extreme limit; third, the notion that most chronic diseases are only a manifestation of suppressed itch or 'psora'" (Garrison, History of Medicine).

homeoplasia (ho'me-o-pla'ze-ah) [Gr. *ῥμοιος* like + *πλάσσειν* to form]. The formation of new tissue like that adjacent to it and normal to the part.

homeoplastic (ho'me-o-plas'tik). Resembling the structure of adjacent parts.

homeotherapy (ho'me-o-ther'ap-e) [Gr. *ῥμοιος* like + *θεραπεία* treatment]. Treatment of disease with a substance similar to but not the same as the causative agent of the disease.

homeothermal (ho-me-o-ther'mal) [Gr. *ῥμοιος* alike + *θέρμη* heat]. Same as *homothermal*.

homeotransplant (ho'me-o-trans'plant). A piece of tissue taken from one individual and transplanted into another individual of the same species.

homeotransplantation (ho'me-o-trans-plan-ta'shun) [Gr. *ῥμοιος* like + *transplantation*]. Transplantation of tissue from one individual to another of the same species.

homeotypical (ho'me-o-tip'ik-al) [Gr. *ῥμοιος* alike + *τύπος* type]. Resembling the normal or usual type. The term is applied to the second mitotic division of the germ cells.

homergy (hom'er-je) [Gr. *ῥμός* same + *ἔργον* work]. Normal metabolism.

home-sickness (hōm'sik-nes). Intense longing for home; nostalgia.

homiculture (hom'e-kult-ūr) [L. *ho'mo* man + *cultura* culture]. The stirpiculture of the human species.

homigrade thermometer (hom'ig-rād). See *thermometer*.

homo-. A prefix in chemical names indicating the addition of one CH₂ group to the main compound.

homo-arecolin (ho'mo-ar-ek'o-lin). A yellowish liquid, C₇H₁₀(C₂H₅)NO₂; the ethyl ether of arecaidin. Its hydrobromid, a colorless, crystalline body, is an anthelmintic.

homocentric (ho-mo-sen'trik) [Gr. *ῥμός* same + *κέντρον* center]. Having the same center or focus.

homocerebrin (ho-mo-ser'e-brin) [Gr. *ῥμός* equal + *cerebrin*]. A principle like cerebrin from the brain substance.

homochelidonin (ho'mo-kel-id-on'in). A crystalline alkaloid, C₂₁H₂₃NO₅, from *Chelidonium majus* and other plants. It occurs in three forms, alpha, beta, and gamma.

homochronous (ho-mok'ro-nus) [Gr. *ῥμός* same + *χρόνος* time]. Occurring at the same age in successive generations.

homocinchonin (ho'mo-sin-kon'is-in). An alkaloid prepared by heating homocinchonidin sulphate.

homocinchonidin (ho'mo-sin-kon'id-in). An alkaloid, C₁₉H₂₂ON₂, from cinchona.

homocinchonin (ho-mo-sin'ko-nin). An alkaloid, C₁₉H₂₂ON₂, from cinchona, isomeric with cinchonin.

homocladic (ho-mo-klad'ik) [Gr. *ῥμός* same + *κλάδος* branch]. Formed between twigs of the same artery: said of such an anastomosis.

homococain (ho-mo-ko'ka-in). Same as *cocacethylin*.

homocyclic (ho-mo-sik'lik). Having a ring nucleus all of whose members are atoms of the same element.

homodesmotic (ho'mo-des-mot'ik) [Gr. *ῥμός* single + *δεσμός* bond]. Joining similar parts of the central nervous system. See under *fiber*.

homodont (ho'mo-dont) [Gr. *ῥμός* same + *ὀδούς* tooth]. Having the teeth all alike throughout, as in some of the lower vertebrates. Cf. *heterodont*.

homoeo-. See *homeo-*.

homo-eroticism (ho'mo-e-rot'is-izm). Eroticism directed toward a person of the same sex, especially when the rôle assumed by the affected person is passive.

homoflemingin (ho'mo-flem-in'jin). A principle obtainable from *Flemingia grahampia* na. See *waras*.

homogametic (ho'o-gam-et'ik). Having but one class of gametes.

homogenization (ho-mo-je'ne-iz-a'shun). The act or process of rendering homogeneous.

homogeneous (ho-mo-je-ne-us) [Gr. *ῥμός* same + *γένος* kind]. Of the same kind or of a uniform quality throughout.

homogenesis, homogeny (ho-mo-je-n'es-is, ho-mo'en-e) [Gr. *ῥμός* same + *γένεσις* production]. The reproduction of the same process in each generation.

homogentisic acid (ho'mo-je-n-tis'ik). See *acid*.

homoglandular (ho-mo-glan'du-lar). Pertaining to the same gland.

homograft (ho'mo-graft). A graft taken from another person.

homohomotherapy (ho'mo-hem-o-ther'ap-e). Treatment by injecting blood from another human being.

homoio-. See *homeo-*.

homoiolaplasia (ho-moi-o-pla'se-ah). Homeoplasia.

homoipodal (ho-moi-op'o-dal) [Gr. *ῥμοιος* like + *ποῖς* foot]. Having processes of one kind only: said of nerve-cells.

homoiothermal (ho-moi-o-ther'mal). Homothermal.

homolateral (ho-mo-lat'er-al). On the same side.

homologen (ho-mol'o-je-n). See under *homologue*.

homologous (ho-mol'o-gus) [Gr. *ῥμός* same + *λόγος* relation]. Of similar structure or situation, but not necessarily of similar function.

homologue (hom'ol-og). 1. Any homologous organ or part; an organ similar in structure to another organ. 2. In chemistry, one of a series of compounds, each of which is formed from the one before it by the addition of a constant element. Called also *homologen*.

homology (ho-mol'o-je) [Gr. *ῥμός* same + *λόγος* relation]. The quality of being homologous; the morphologic identity of corresponding parts; structural similarity due to descent from a common form.

homolysin (ho-mol'is-in). See *hemolysin*.

homomartonite (ho-mo-mar'to-nit). See *methyl ethyl ketone*.

homomorphic (ho-mo-mor'fik). Having synaptic chromosome mates of similar size and form.

homomorphosis (ho'mo-mor-fo'sis) [Gr. *ὁμός* same + *μόρφωσις* formation]. Replacement of a lost part by a similar part.

homonomous (ho-mon'o-mus) [Gr. *ὁμός* same + *νόμος* law]. Subject to the same law.

homonymous (ho-mon'im-us) [Gr. *ὁμός* same + *ὄνυμα* name]. Having the same or a corresponding sound or name; having a correlation of parts or places.

homopiperonal (ho'mo-pip-er'o-nal). A fragrant substance, in white, flaky crystals, closely resembling piperonal: antipyretic and antiseptic.

homoplastic (ho-mo-plas'tik) [Gr. *ὁμός* same + *πλάσσειν* to form]. Noting a transplantation of a part to an abnormal place in the same organism.

homoplasty (ho'mo-plas-te) [see *homoplastic*]. Operative replacement of lost parts or tissues by similar parts from the same person or from an individual of the same species.

homocoumarin (ho-mo-kwin'in). An alkaloid, $C_{39}H_{46}O_4N_4 \cdot 4H_2O$, formed by the union of cuprein and quinin.

homorenon hydrochlorid (ho-mo-re'non). A crystalline compound, ethylamino-acetopyrocatechin hydrochlorid, $C_6H_3(OH)_2 \cdot CO \cdot CH_2 \cdot NH_2 \cdot C_2H_5 \cdot HCl$: used like adrenalin.

homorganic (hom-or-gan'ik) [Gr. *ὁμός* same + *ὄργανον* organ]. Produced by the same or by homologous organs.

homosaligenin (ho'mo-sal-ij'e-nin). Methyl saligenin, $CH_3 \cdot C_6H_3(OH) \cdot CH_2OH$.

homosexual (ho-mo-seks'u-al). Directed toward a person of the same sex.

homosexuality (ho'mo-seks-u-al'it-e) [Gr. *ὁμός* same + *sexuality*]. Sexual perversion toward those of the same sex.

homosporous (ho-mos'po-rus) [Gr. *ὁμός* same + *σπόρος* seed]. Having only one kind of spores.

homostimulant (ho-mo-stim'u-lant) [Gr. *ὁμός* same]. Stimulating the same organ from which it is derived; said of an extract from an organ which, on injection into the body, stimulates the same organ from which it is derived.

homostimulation (ho'mo-stim-u-la'shun). Treatment by a homostimulant.

homothermal, homothermic (ho-mo-ther'mal, -mik) [Gr. *ὁμός* same + *θερμη* heat]. Maintaining a uniform bodily temperature: said of warm blood animals, i. e., mammals and birds.

homotonic (ho-mo-ton'ik) [Gr. *ὁμός* same + *τόνος* tone]. Of a uniform course or tension.

homotransplant (ho-mo-trans'plant). A piece of tissue taken from an individual and transplanted into another place in the same individual.

homotransplantation (ho'mo-trans-plan-ta'shun). The making of a homotransplant.

homotropism (ho-mot'ro-pizm) [Gr. *ὁμός* same + *τροπή* turning]. The property of cells to attract cells of a like order.

homotype (hom'o-tip) [Gr. *ὁμός* same + *τύπος* type]. A part that has a reversed symmetry with its fellow.

homozoic (ho-mo-zo'ik) [Gr. *ὁμός* same + *ζῶον* animal]. Pertaining to the same animal or same species.

homozygosis (ho'mo-zi-go'sis). The formation of a zygote by gametes belonging to the same strain.

homozygote (ho-mo-zi'göt) [Gr. *ὁμός* same + *zygote*]. An individual which, with regard to some one or all of its characters, has received like contributions from both of its parents.

homozygous (ho-mo-zi'gus). Derived from like zygotes or germ-cells; pure bred.

honey (hun'e). See *mel*.

honorarium (hon-o-ra're-um), pl. *honora'ria* [L.]. A physician's professional fee.

honthin, hontin (hon'thin, hon'tin). A light brown, tasteless powder, a combination of tannin with albumin and keratin. It is insoluble in water, but partly soluble in alcohol: used as an intestinal astringent. Dose, 4-7½ gr. (0.26-0.5 gm.).

hoof (hoof). The hard, horny casing of the foot or ends of the digits of many animals. **curved h.**, a condition in which the hoof has the wall of one side concave and the other convex. **dished h.**, a hoof which is concave from the coronet to the plantar surface. **false h.**, the hoof of an unused digit. **ribbed h.**, **ringed h.**, a condition in which the wall of a horse's hoof is marked by ridges running parallel with the coronary margin.

hoof-bound. Dryness and contraction of a horse's hoof, causing lameness. Called also *contracted foot* and *contracted heel*.

hook (hook). A curved instrument used for traction or for holding. **blunt h.**, an instrument for exercising traction upon the fetus in certain cases of breech presentation. **Bose's h's**, small hooks used in tracheotomy. **fixation h.**, a hook for fixing a part. **Malgaigne's h's**, two pairs of hooks connected by a screw for approximating the pieces of a broken patella. **Pajot's h.**, a hook for decapitating the fetus. **squint h.**, a hook for stretching an eye tendon in tenotomy. **tracheotomy h.**, a hook for use in tracheotomy. **Tyrell's h.**, a slender hook used in eye surgery.

hookworm (hook'worm). A worm of the family Strongylidæ, parasitic in the intestine of man. **American h.** See *Necator*. **h. disease**. See *ankylostomiasis*. **h. of the dog**. See *Uncinaria*. **European h.** See *Ankylostoma*.

hoolamite (hoo'lam-it). A chemical detector for carbon monoxid. It contains fuming sulphuric acid, iodine pentoxid, and powdered pumice. It changes from light gray to a green under the influence of carbon monoxid.

Hooper's pills (hoo'perz) [John Hooper, English apothecary of the eighteenth century]. See under *pill*.

hooping-cough (hoop'ing-kof). See *whooping-cough*.

hoose (hooz). A disease of sheep caused by the presence of *Strongylus filaria* in the lungs, and marked by cough, dyspnea, anorexia, and constipation. Called also *sheep cough*.

hoove, hooven (hoov, hoo'ven). See *hoven*.

Hoover's sign (hoo'verz) [Charles F. Hoover, American physician, born 1865]. See *sign*.

hop (hop). An urticaceous twining plant, *Hu'mulus lupulus*. See *hops*.

hopcalite (hop'kal-it). A catalytic gas mask absorbent for carbon monoxid.

Hope's mixture [John Hope, English physician, 1725-1786]. See under *mixture*.

Hoplopsyllus anomalus. The species of flea found in the ground squirrels of California.

hopogan (ho'po-gan). Magnesium peroxid, a white, tasteless, odorless powder, nearly insoluble in water. It contains 7.15 per cent. of active oxygen and is intended for internal use.

Hoppe-Seyler's test (hop-e-si'lerz) [Ernst Felix Immanuel Hoppe-Seyler, German chemist, 1825-1895]. See under *tests*.

hops (hops) [L. *hu'mulus* or *lu'pulus*]. The strobiles, or spikes, of the hop-plant, *Hu'mulus lupulus*. They contain lupulin, tannin, and humulin, and are sedative and tonic. They are employed as a local anodyne, and are given in dyspepsia, genito-urinary irritation, and delirium tremens. Dose of fluidextract, 5-15 min. (0.333-1 c.c.); of oleoresin, 2-5 min. (0.133-0.333 c.c.); of tincture, 3-2 dr. (2-4 c.c.); of extract, 5-10 gr. (0.333-0.666 gm.).

hop-trefoil. See *Ptelea*.

Hor. decub. Abbreviation for *L. ho'ra decu'bitus*, at bedtime.

hordein (hor'de-in) [L. *hordeum*, barley]. A simple native protein from barley, a prolamin insoluble in water, but soluble in 80 per cent. alcohol.

hordenin (hor'de'nin). A colorless, crystalline alkaloid, para-oxophenyl-ethyl-dimethylamin, $\text{OH} \cdot \text{C}_6\text{H}_4 \cdot \text{CH}_2 \cdot \text{CH}_2 \cdot \text{N}(\text{CH}_3)_2$, from barley. It is a methylated form of para-oxophenyl-dimethylethylamin from tyrosin. It has been used in diarrhea and typhoid fever and as a heart tonic.

hordeolum (hor-de'o-lum) [L. "barley-corn"]. See *sty*.

hordeum (hor'de-um), gen. *hor'dei* [L.]. See *barley*. **h. decortica'tum**, pearl barley; the husked grain of barley.

horeshoud, hoarhound (hōr'hownd). The labiate plant, *Marrubium vulgare*, also its leaves and tops (L. *marrubium*): useful in coughs and dyspnea and as a vermifuge. Dose of fluidextract, 1-2 dr. (4-8 c.c.).

Hor. interm. Abbreviation for L. *ho'ris interme'diis*, at the intermediate hours.

horismascope (ho-ris'mas-kōp). A variety of albumoscope consisting of a U-shaped tube, one arm of which is of small caliber and has a funnel-like top, the other arm being of larger caliber and having a black area against which traces of albumin may be seen.

horizocardia (hor-i-zo-kar'de-ah) [Gr. *ὁρίζων* horizon + *καρδία* heart]. A horizontal position of the heart.

hormion (hor'me-on) [Gr. *ὄρμος* chaplet]. The median anterior point of the spheno-occipital bones.

Hormoden'drum fontoynon'ti. A fungus occurring in the scales of hodi-potsy.

hormonadin (hor-mon'ad-in). A proprietary preparation of the internal secretion of the pancreas.

hormonal (hor'mo-nal). A proprietary organo-therapeutic preparation (peristaltic hormone) for the stimulation of intestinal peristalsis. It consists of a liquid extract taken from the spleen of an animal killed at the height of digestion. Dose, 5 fldr. (20 c.c.) by intravenous or intramuscular injection.

hormone (hor'mōn) [Gr. *ὁρμᾶναι* to excite or arouse]. A chemic substance produced in an organ, which, being carried to an associated organ by the blood-stream, excites in the latter organ a functional activity. **cardiac h.** See *sinus h.* **chromaffin h.**, epinephrin. **disassimilatory h.**, a hormone which produces increased disassimilation and increase of normal activity in tissues. **h. hunger.** See under *hunger*. **Langerhansian h.**, the internal secretion of the pancreas, supposed to be formed in the islands of Langerhans, and to influence the metabolism of sugar. **peristaltic h.** See *hormonal*. **sex h. (female)**, a hormone found in the liquor folliculi of the ovary which will induce the estrual cycle in an ovariectomized animal. **sinus h.**, a substance given off by the beating sinus of a frog's heart which seems to be a physiologic tonic to the heart. When added to an isolated heart the force of the beat is strengthened, the rate of a slowly beating heart is increased, and beating may even be re-established in a heart which has ceased to beat.

hormonic (hor-mon'ik). Pertaining to or acting as a hormone; having the exciting influence of a hormone.

hormonogenesis (hor'mon-o-jen'es-is). Hormonopoesis.

hormonogenic (hor'mon-o-jen'ik). Forming hormones.

hormonology (hor-mo-nol'o-je). The science of hormones or of internal secretions.

hormonopoesis (hor'mo-no-poi-e'sis). The production of hormones.

hormonopoietic (hor-mo-no-poi-et'ik) [*hormone* +

Gr. *ποιεῖν* to make]. Forming or elaborating hormones; said of glands.

hormopoesis (hor'mo-poi-e'sis). Hormonopoesis.

hormopoietic (hor'mo-poi-et'ik). Forming hormones.

hormotone (hor'mo-tōn). A proprietary mixture of extracts from the thyroid, pituitary, ovary, and testes: used in menopause disturbances and in neurasthenia.

horn (horn) [L. *cor'nu*]. 1. A cutaneous horny outgrowth. 2. One of the three chief parts of the lateral ventricle—anterior, posterior, or middle. 3. One of the gray columns of the spinal cord. See *cornu*. 4. An extension of the pulp chamber of a tooth toward a cusp. **h. of Ammon.** See *hippocampus*. **cicatrical h.**, a hard, dry outgrowth from a cicatrix, commonly scaly and very rarely osseous. **h. of the clitoris**, an occasional formation of a horny mass, resembling a talon, under the prepuce of the clitoris. **nail h.**, an overgrown toe-nail or finger-nail, chiefly of neglected and bed-ridden patients. **h. of pulp**, the pulp tissue in the horn of the pulp chamber. **sebaceous h.**, a hard outgrowth of the contents of a sebaceous cyst. **warty h.**, a hard and pointed outgrowth from a wart.

hornskin (horn'skin). Animal skin or hide, dried and varnished: used in orthopedic surgery.

horny (hor'ne). Having the nature and appearance of horn.

horopter (hor-op'ter) [Gr. *ὅρος* limit + *ὀπτήρ* observer]. The sum of all points seen single in binocular vision with the eyes fixed (Aguilonius, 1613).

horoptericon (hor-op-ter'ik). Pertaining to a horopter.

horripilation (hor'ip-il-a'shun) [L. *horripila'tio*]. Cutis anserina, or goose-flesh; the erection of the hairs.

horse-chestnut. See *Esculus*.

horsemint. See *Monarda*.

horsenettle. See *Solanum*.

horse-power. A unit of work, being 33,000 pounds lifted one foot in one minute.

horse-pox (hors'poks). Modified small-pox occurring in the horse

horse-radish (hors'rad-ish). See *Cochlearia*.

horse-sickness (hors-sik'nes). An infectious disease of horses and mules in South Africa, marked by serous exudations. Called also *Pferdepest*.

horseweed (hors'wēd). See *Collinsonia*.

horsine (hors'in). The muscle plasm of horses, recommended for use in tuberculosis.

Horsley's putty or wax (hors'lēz) [Sir Victor Horsley, English surgeon, 1857-1916]. See *wax*.

Hor. un. spatio. Abbreviation for L. *ho'ræ uni'us spa'tio*, at the end of an hour.

H₂O₄. Osmic acid.

hospital (hos'pit-al) [L. *hospital'ium*; *hos'pes* host, guest]. An institution for the treatment of the sick. **banian h.**, a hospital for animals. **base h.**, a hospital unit within the line of communication of the army, usually in a permanent building, designed for the reception of wounded and other patients received via the field hospitals from the front, and for cases originating within the line of communication itself. **camp h.**, an immobile military unit organized and equipped for the care of the sick and wounded in camp, in order to prevent immobilization of field hospitals or other mobile sanitary organizations. **cottage h.**, a small hospital not having a resident staff; also a hospital consisting of a number of detached cottages. **evacuation h.**, a mobile advance hospital unit within the line of communication, designed to take over the functions of field hospitals when they move away with their divisions and to supplement base hospitals in their functions. **field h.**, a portable military hospital, manned by

non-commissioned officers and men, located beyond the zone of conflict, 3-4 miles beyond the dressing stations, designed to shelter and care for wounded brought in by ambulance companies until they can be transported to the line of communications.

hospitalism (hos'pit-al-izm). 1. The morbid conditions due to the assembling of diseased persons in a hospital. 2. A morbid habit of attending hospital dispensaries as a patient.

hospitalization (hos'pit-al-iz-a'shun). The removal of patients to a hospital where they can receive proper treatment.

host (höst) [L. *hos'pes*]. Any animal or plant upon which another organism lives parasitically. **definitive h.**, **final h.**, the animal in which a parasite undergoes its sexual life. **intermediary h.**, the animal in which a parasite passes its larval existence.

Hotchkiss's operation [Lucien W. *Hotchkiss*, surgeon in New York, 1859-1926]. See *operation*.

hot-cross-bun head. See under *head*.

Hottentot apron. See under *apron*. **H. bustle.** See *steatopygia*.

hottentotism (hot'en-tot-izm). An exaggerated form of stuttering.

hough (hok). Same as *hock*.

Houghton's test (how'tonz) [E. M. *Houghton*, American physician, born 1867]. See under *tests*.

hour-glass contraction (owr'glas). See under *contraction*.

housemaids' knee (hows'mädz ne). See *knee*.

house-prevalence. The non-epidemic occurrence of several cases of the same disease in the same hospital.

house-staff (hows'staf). The resident physicians and surgeons of a hospital.

house-surgeon (hows-sur'jun). A resident surgeon in a hospital.

Houston's valve [John *Houston*, Irish surgeon, 1802-1845]. See *valve*.

hoven (ho'ven). A kind of indigestion in cattle and sheep, marked by an abnormal collection of gas in the first stomach. Called also *hoove*, *hooven*, and *blout*.

Hovius's canal (ho've-us). The canal of Fontana.

Howard's method (how'ards) [Benjamin Douglas *Howard*, physician in New York, 1840-1900]. See under *respiration*, *artificial*.

Howell's bodies (how'elz) [William Henry *Howell*, American physiologist, born 1860]. See under *body*.

Howell-Jolly bodies. Howell's bodies.

Howship's lacunæ, symptom (how'ships) [John *Howship*, English surgeon, died 1841]. See *lacuna* and *symptom*.

H. p. n. Abbreviation for *L. haustus purgans nos'ter*, our own purgative draft.

HPO₃. Metaphosphoric acid.

H₂PO₂. Hypophosphorous acid.

H₂PO₃. Phosphorous acid.

H₃PO₄. Orthophosphoric acid.

H₂P₂O₆. Hypophosphoric acid.

H₂P₂O₇. Pyrophosphoric acid.

H. S. Abbreviation for *house surgeon*.

H. s. Abbreviation for *L. ho'ra som'ni*, at bedtime.

H₂S. Hydrogen sulphid.

H₂SiO₃. Metasilicic acid.

H₂SiO₄. Orthosilicic acid.

H₂SO₃. Sulphurous acid.

H₂SO₄. Sulphuric acid.

Ht. The symbol for *total hypermetropia*.

htone na (hut-to'ne-nah). A peripheral neuritis of malarial origin occurring in Burma.

Huchard's disease, serum, sign (e-sharz') [Henri *Huchard*, physician in Paris, 1844-1910]. See under *disease*, *serum*, and *sign*.

Hueck's ligament (heks) [Alexander Friedrich *Hueck*, German anatomist, 1802-1842]. See under *ligament*.

Hueter's bandage, sign (he'terz) [Karl *Hueter*, German surgeon, 1838-1882]. See *bandage*, *sign*.

Hufeland's powder (hoof'a-lants) [Christoph Wilhelm *Hufeland*, Berlin physician, 1762-1836]. See under *powder*.

Huguenin's edema (e-gen-az') [Gustave *Huguenin*, Swiss psychiatrist, born 1841]. See *edema*.

Huguier's canal, etc. (e-ge-äz') [Pierre Charles *Huguier*, French surgeon, 1804-1873]. See *canal*, *etc.*

hum, venous. A continuous blowing, singing, or humming murmur heard on auscultation over the right jugular vein in anemia, chlorosis, and occasionally in health. Called also *bruit de diable* and *humming-top murmur*.

humagolsan (hu-mag'so-lan). A proprietary hydrolyzed keratin preparation given with the food for the purpose of promoting the growth of hair.

humanol (hüm'an-ol). Fluid human fat: used to prevent the formation of adhesions in operations upon tendons and nerves.

humectant (hu-mek'tant). 1. Moistening. 2. A diluent medicine.

humectation (hu-mek-ta'shun). The act of moistening.

humeral (hu'mer-al) [L. *humera'lis*]. Of or pertaining to the humerus.

humeroradial (hu'mer-o-ra'de-al). Pertaining to the humerus and the radius.

humeroscapular (hu'mer-o-skap'u-lar). Pertaining to the humerus and the scapula.

humero-ulnar (hu'mer-o-ul'nar). Pertaining to the humerus and the ulna.

humerus (hu'mer-us) [L.]. The bone that extends from the shoulder to the elbow.

humic acid (hu'mik). See *acid*.

humidity (hu-mid'it-e) [L. *humid'itas*]. The degree of moisture, especially of that in the air. **absolute h.**, the actual amount of vapor in the atmosphere expressed in grains per cubic foot. **relative h.**, the percentage of moisture in the air as compared to the amount necessary to cause saturation, which is taken as 100.

humín (hu'mín). Same as *humic acid*, see under *acid*.

humor (hu'mor, yu'mor) [L.]. 1. Any fluid or semifluid of the body. 2. Any chronic cutaneous disease. **aqueous h.**, the fluid filling the anterior and posterior chambers of the eye in front of the lens. **crystalline h.**, the crystalline lens. See *lens*. **ocular h.**, any one of the humors of the eye, aqueous, crystalline, and vitreous. **vitreous h.**, the gelatinous matter that fills the posterior chamber of the eye behind the lens.

humoral (hu'mor-al). Pertaining to the humors of the body.

humoralism, humorism (hu'mor-al-izm, hu'mor-izm). The obsolete doctrine that all diseases arise from some change of the humors. See *humoral theory*, under *theory*.

humulin (hu'mu-lín). 1. Lupulin. 2. A dry, concentrated preparation of hops.

humulus (hu'mu-lus), gen. *hu'muli* [L.]. See *hops*.

humus (hu'mus) [L.]. A dark mold of decayed vegetable tissue: used therapeutically in certain forms of the bath.

hunchback (hunsh'bak). See *kyphosis*.

Hundstaupe (hoond'stow-pe). Dog distemper.

hunger (hun'ger). A craving for food. **air-h.**, a distressing dyspnea occurring in paroxysms, and often forerunning an attack of diabetic coma (Kussmaul, 1874). **chlorin-h.**, a desire for salt due to deficiency of chlorin in the blood. **h.-cure**,

the treatment of disease (as dyspepsia, syphilis, or cancer) by severe and rigid fasting; nesiatria. **h.-evil**, a condition in the horse marked by attacks of extreme hunger. **hormone h.**, deficiency in the supply to any organ of the special hormone on which its proper functioning depends.

Hunner's ulcer (hun'erz) [Guy Hunner, Baltimore surgeon]. See under *ulcer*.

Hunt's atrophy, disease, neuralgia, phenomenon, syndrome [James Ramsay Hunt, neurologist in New York, born 1872]. See *atrophy, disease, neuralgia, phenomenon*, and *syndrome*.

Hunter's canal, etc. (hun'terz) [John Hunter, English anatomist and surgeon, 1728-1793]. See *canal*, etc.

hunterian chancre (hun-te're-an). See *chancre*.

Huntington's chorea (hun'ting-tunz) [George Huntington, American physician, 1850-1916]. See *chorea*.

hunyadi jános (hoo'yah-de yah'nosh) [named for a heroic Magyar general, fifteenth century]. An aperient mineral water from Hungary. It contains sodium and magnesium sulphates, sodium carbonate, and sodium chlorid.

Huppert's disease (hoop'erts) [Hugo Huppert, Bohemian physician, 1832-1904]. Multiple myeloma.

Huschke's canal, foramen, etc. (hoosh'-kēz) [Emil Huschke, German anatomist, 1797-1858]. See *canal, foramen*, etc.

Hutchinson's teeth (hutsh'in-sunz) [Sir Jonathan Hutchinson, English physician, 1828-1913]. See *tooth*.

Hutinel's disease (e-tin-elz') [Victor Hutinel, pediatricist in Paris, born 1849]. See *disease*.

Huxham's tincture (huks'hamz) [John Huxham, English physician, 1694-1768]. See *tincture*.

Huxley's layer (huks'lez) [Thomas Henry Huxley, English physiologist and naturalist, 1825-1895]. See *layer*.

hygienian ocular (hi-je-ne-an) [Christian Huygens, a Dutch physicist, 1629-1695]. See *ocular*.

Hy. Abbreviation for *hypermetropia*.

hyananchin (hi-e-nang'kin). A highly poisonous bitter principle from *Hyænan'che globosa*, a euphorbiaceous plant of Africa.

hyalin (hi'al-in) [Gr. *υαλος* glass]. 1. A translucent albuminoid substance, one of the products of amyloid degeneration. 2. A substance composing the walls of hydatid cysts. **hematogenous h.** Same as *hematohyaloid*.

hyaline (hi'al-in) [Gr. *υαλος* glass]. Pellucid or glassy, and transparent or nearly so.

hyalinosiis (hi'al-in-o'sis). Hyaline degeneration.

hyalinuria (hi'al-in-u're-ah) [*hyalin* + *urine*]. The discharge of hyalin in the urine.

hyalitis (hi-al-i'tis). Inflammation of a hyaloid membrane or of the vitreous humor. **asteroid h.**, hyalitis marked by the presence of spherical or star-shaped bodies in the vitreous. **h. punctata**, a form marked by the formation of small opacities. **h. suppurativa**, a purulent inflammation of the vitreous humor of the eye.

hyalo-enchondroma (hi'al-o-en-kon-dro'mah). A chondroma of hyaline cartilage.

hyalogen (hi-al'o-jen) [*hyalin* + Gr. *γεννάν* to produce]. An albuminous substance occurring in cartilage, vitreous humor, etc., and convertible into hyalin.

hyaloid (hi'al-oid) [Gr. *υαλος* glass + *ειδος* form]. Resembling glass.

hyaloidin (hi-al-oi'din). A carbohydrate radicle from mucoproteins. It resembles chondroitin, but contains no sulphuric acid.

hyaloiditis (hi'al-oid-i'tis). See *hyalitis*.

hyaloma (hi'al-o'mah) [Gr. *υαλος* glass + *-ωμα* tumor]. Colloid milium. See *milium*.

hyalomitome (hi'al-o-mit'om). Same as *hyaloplasm*.

Hyalomma (hi-al-om'ah) [Gr. *υαλος* glass + *ομμα* eye]. A genus of ixodin ticks. *H. aegypticum* is a cattle tick of Africa, India, and southern Europe.

hyalomucoid (hi'al-o-mu'koid). The mucoid of the vitreous body.

hyalonyxis (hi'al-o-niks'is) [Gr. *υαλος* glass + *νυξις* pricking]. The act of puncturing the vitreous body.

hyalophagia (hi'al-o-fa'je-ah) [Gr. *υαλος* glass + *φαγειν* to eat]. The eating of glass.

hyalophagy (hi-al-of'aj-e). Hyalophagia.

hyalophobia (hi'al-o-f'o-be-ah) [Gr. *υαλος* glass + *φοβος* fear]. Fear of glass.

hyaloplasm (hi'al-o-plazm) [Gr. *υαλος* glass + *πλάσμα* anything formed]. 1. The more fluid, finely granular substance of the cytoplasm of cells. Called *paraplasm*, *interfilar mass*, *paramitome*, *enchylema*, and *cytolymph*. 2. The conducting medium of the axon. **nuclear h.**, karyolymph.

hyaloserositis (hi'al-o-se-ro-si'tis) [Gr. *υαλος* glass + *serum* + Gr. *-ιτις* inflammation]. A form of inflammation of serous membranes marked by the formation of a fibrohyaline investment. **progressive multiple h.**, polyorhometitis.

hyalosome (hi-al'o-sōm) [Gr. *υαλος* glass + *σώμα* body]. A structure resembling the nucleolus of a cell, but staining only slightly.

hyalotome (hi-al'o-tōm). See *paramitome*.

hybrid (hi'brid) [Gr. *υβρις* lewdness]. An animal or plant bred from two species.

hybridism (hi'brid-izm). The state of being a hybrid; the production of hybrids.

hybridization (hi'brid-iz-a'shun). The production of hybrids; the development of hybrids.

hychlorite (hi-klo'rit). A proprietary solution of chlorinated soda.

hyclorite (hi-klo'rit). A solution of chlorinated soda.

hycol (hi'kol). A proprietary disinfectant and antiseptic preparation.

hycyan (hi-si'an). Mercury oxycyanid in tablet form: used for disinfecting.

hydantoin (hi-dan'to-in). A crystalline base, glycolyl urea. $\text{CO.NH.CH}_2\text{CO.NH}$, derivable from allantoin. **phenyl-ethyl-h.**, nirvanol.

hydatid (hi-dat'id) [L. *hydatis*, Gr. *υδατις*]. An echinococcus or the vesicle containing it. See under *cyst*. **h. of Morgagni**, the cyst-like remnant of the müllerian duct attached to an oviduct or testicle. See *appendix testis* and *appendix vasculosa*. **sessile h.**, the hydatid of Morgagni which is connected with the testicle. **stalked h.**, the hydatid of Morgagni which is connected with an oviduct.

hydatidiform, hydatiform (hi-dat-id'if-orm, hi-dat'if-orm). Resembling a hydatid in form.

hydatidocoele (hi-da-tid'o-sēl) [*hydatid* + Gr. *κῆλη* tumor]. A tumor of the scrotum containing hydatids.

hydatidoma (hi-da-tid-o'mah). A tumor containing hydatids or one caused by hydatids.

hydatidosis (hi-dat-id-o'sis). Hydatid disease; infestation with echinococcus.

hydatidostomy (hi-dat-id-os'to-me) [*hydatid* + Gr. *στόμα* mouth]. The opening and draining of a hydatid cyst.

Hydatigera (hi-dat-ij'er-ah). A genus of tape-worms resembling *Tania*, but with a massive rostellum without a neck and found mostly in the intestines of carnivorous animals. *H. infans* has been reported from man in Argentina.

hydatism (hi'dat-izm) [Gr. *υδωρ* water]. The sound caused by the presence of fluid in a cavity.

hydatoid (hid'at-oid). 1. The aqueous humor. 2.

The hyaloid membrane. 3. Pertaining to the aqueous humor.

Hyde's disease (híd'z) [James Nevil Hyde, American dermatologist, 1840-1910]. Prurigo nodularis. **Hydnocarpus wightiana**. A tropical tree. The oil from the seed resembles chaulmoogra oil and is used in the treatment of leprosy. *H. subulata*, *H. alcala*, and other species yield a similar oil.

hydracetic (hi-dras'e-tin). Pyrodin acetylphenylhydrazin, $C_8H_5NHNH.CO.CH_3$; a derivative of acetic anhydrid and phenylhydrazin in colorless crystals. It is antirheumatic and antipyretic, but poisonous. Dose, $\frac{1}{2}$ – $1\frac{1}{2}$ gr. (0.05–0.1 gm.).

hydracid (hi-dras'id). See *haloid acid*, under *acid*. **hydradenitis** (hi-drad-en-i'tis). Same as *hidradenitis*.

hydradenoma (hi-drad-en-o'mah). Same as *hidradenoma*.

hydræmia. See *hyremia*.

hydræroperitoneum (hi-dra''e-ro-per-it-o-ne'um) [Gr. *ὕδωρ* water + *ἄρρ* air + *peritoneum*]. A collection of water and gas in the peritoneal cavity.

hydragogin (hi-drag'o-jin). A compound of the tinctures of digitalis and strophanthus, containing also oxy-saponin, scillitoin, and scillipicrin: a strong hydragogue; diuretic. Dose, 10–15 min. (0.666–1 c.c.).

hydragogue (hi'drag-og) [Gr. *ὕδωρ* water + *ἄγειν* to lead]. 1. Producing watery discharges, especially from the bowels. 2. A cathartic which causes watery purgation.

hydramin, hydramine (hi-dram'in). An amine derived from a glycol in which one hydroxyl is replaced by an amino group.

hydramnion, hydramnios (hi-dram'ne-on, hi-dram'ne-os) [Gr. *ὕδωρ* water + *amnion*]. Dropsy of the amnion; excess of the amniotic fluid.

hydramyl (hi'dram-il). Pentane, C_5H_{12} ; a liquid hydrocarbon derived from petroleum: anesthetic.

hydranencephaly (hi''dran-en-sef'al-e). Internal hydrocephalus.

Hydrangea (hi-dran'je-ah). A genus of saxifrageous trees and shrubs. The root of *H. arborescens* is diuretic. Dose of fluidextract, 30–60 min. (2–4 c.c.).

hydrangin (hi-dran'jin). A diuretic glucosid from *Hydrangea arborescens*.

hydrarguent (hi-drar'gwent). A fatty ointment-base, especially adapted to the preparation of mercurial ointment.

hydrargyri (hi-drar'jir-i). The genitive case of *L. hydrargyrum*, mercury. See *mercury*. **h. chloridum corrosivum**. See *mercuric chlorid*. **g. chloridum mi'te**. See *calomel*. **h. iodi'dum fla'vum**. See *mercurous iodid*. **h. iodi'dum ru'brum**. See *mercuric iodid*, red. **h. ox'idum fla'vum**. See *mercuric oxide*, yellow. **h. salicylas**. See *mercuric salicylate*.

hydrargyria (hi-drar-jir'e-ah) [see *hydrargyrum*]. Mercurial poisoning.

hydrargyrim (hi-drar'jir-izm). Mercurial poisoning; mercurialism.

hydrargyro-iodohemol (hi-drar'jir-o-i'o-o-doh'e-mol). A therapeutic preparation of hemol, containing 12.35 per cent. of mercury and 28 per cent. of iodine.

hydrargyrol (hi-drar'jir-ol). Mercury paraphenylsulphonate, $C_6H_4.OH.SO_3Hg$: used as a substitute for corrosive sublimate. It is a brownish, crystalline substance, with the odor of gingerbread.

hydrargyroseptol (hi-drar'jir-o-sep'tol). A compound of mercury, chinolol, and common salt, $C_6H_5N.O.SO_3Hg+2NaCl$; antiseptic and antisyphilitic.

hydrargyrum (hi-drar'jir-um), gen. *hydrargyri* [Gr. *ὕδωρ* water + *ἄργυρος* silver]. Mercury

or quicksilver. See *mercury*. **h. ammonia'tum**, ammoniated mercury. **h. chloridum**. See *mercuric chlorid* and *calomel*. **h. cum cre'ta**, mercury with chalk: used as a laxative. Dose, 4 gr. (0.25 gm.).

hydrarsan (hi-drar'san). A proprietary compound of phenacetin, mercuric chlorid, arsenic chlorid, and potassium iodid: used in syphilis.

hydrarthrosis, hydrarthrus (hi''drar-thro'sis, hi-drar'thrus) [Gr. *ὕδωρ* water + *ἄρθρον* joint]. An accumulation of water in the cavity of a joint. **intermittent h.**, serous effusion into a joint occurring periodically.

hydrastin (hi-dras'tin). 1. A crystalline bitter alkaloid, $C_{11}H_{17}NO_6$, from *Hydrastis canadensis*. Dose, $\frac{1}{16}$ – $\frac{1}{4}$ gr. (0.004–0.016 gm.); of hydrochlorate or sulphate, $\frac{1}{16}$ – $\frac{1}{4}$ gr. (0.004–0.016 gm.); of concentration, $\frac{1}{2}$ –2 gr. (0.033–0.133 gm.). 2. A precipitate or concentration from hydrastis. Dose, 5–10 gr. (0.333–0.666 gm.).

hydrastinin (hi-dras'tin-in). An artificial alkaloid, $C_{11}H_{17}O_2N + H_2O$, prepared from the alkaloid hydrastin or from pyrocatechin: used like ergot. Dose, $\frac{1}{16}$ – $\frac{1}{4}$ gr. (0.004–0.016 gm.). **h. hydrochlorate**, a salt of hydrastinin, is used like ergot, but is more speedy in its action. Dose, 2–4 gr. (0.133–0.266 gm.).

Hydrastis (hi-dras'tis). A genus of ranunculaceous plants. The rhizome and roots of *H. canadensis*, or goldenseal, contain the alkaloid hydrastin, and are tonic, cholagogue, and diuretic. It is given in dyspepsia, jaundice, constipation, gonorrhea, and catarrhs of the genito-urinary and nasal tracts. Dose of fluidextract (U. S. P.), 8–30 min. (0.5–2 c.c.); of glycerite, 30–60 min. (2–4 c.c.); of tincture, 30–90 min. (2–6 c.c.); of extract, 8 gr. (0.5 gm.).

hydrastol (hi-dras'tol). A proprietary preparation of hydrastis.

hydrate (hi'drat) [L. *hydras*]. 1. Any compound of a radical with H_2O . 2. Any salt or other compound that contains water of crystallization.

hydrated (hi'dra-ted) [L. *hydras*]. Combined with water; forming a hydrate or a hydroxid.

hydration (hi-dra'shun). 1. The act of combining or causing to combine with water. 2. The condition of being combined with water.

hydraulics (hi-drawl'iks) [Gr. *ὕδωρ* water]. The branch of physics which treats of the action of liquids under physical laws.

hydrazin (hi'dra-zin). A colorless, gaseous diamine, H_2N-NH_2 ; also any member of a group of its substitution derivatives.

hydrazone (hi'dra-zōn). A compound formed from a sugar by the action of phenylhydrazin. It may be converted into an osazone by further treatment with phenylhydrazin.

hyremia (hi-dre'me-ah) [Gr. *ὕδωρ* water + *αἷμα* blood]. Excess of water in the blood; a condition in which the proportion of the serum in the blood to the corpuscles is excessive.

hydrancephalocoele (hi-dren-sef'al-o-sēl) [Gr. *ὕδωρ* water + *encephalocoele*]. A protrusion of the brain fissure inclosing part of a ventricle.

hydrancephalus (hi-dren-sef'al-us). The same as *hydrancephalus*.

hydropigastrium (hi-drep-e-gas'tre-um) [Gr. *ὕδωρ* water + *epigastrium*]. A collection of fluid between the peritoneum and the abdominal muscles.

hydiatic, hydiatric (hid-re-at'ik, hid-re-at'rik) [Gr. *ὕδωρ* water + *ιατρικός*, *ιατρικός* healing]. Pertaining to hydrotherapy.

hydiatrics (hi-dre-at'riks). Hydrotherapeutics.

hydiatrist (hi-dre-at'rist). A specialist in hydrotherapy.

hydric (hi'drik). Pertaining to or combined with hydrogen; containing replaceable hydrogen.

hydrid, hydride (hi'drid, hi'drid) [Gr. *ὑδρῶς* water].

Any compound of hydrogen with an element or radical.

hydriodate (hid're-o-dat). A salt of hydriodic acid.

hydriodic acid (hid-re-od'ik). See under *acid*.

hydriodol (hi-dri-o-dol). Cypridol.

hydriion (hi-dri'on). Hydrogen ion.

hydro- [Gr. *ὑδρῶς* water]. A prefix signifying some relationship to water or to hydrogen.

hydroa (hid-ro'ah). A skin disease marked by red, irregular patches on which form groups of vesicles. The disease is attended with intense itching, debility, and nervous symptoms. It is also called *dermatitis herpetiformis* and *pemphigus pruriginosus*, and is also written *hidroa*. **h. æstivalis**. Same as *h. puerorum*. **h. febris-le**, herpes simplex. **h. gestatio'nis**, dermatitis herpetiformis occurring during pregnancy or the puerperium. **h. puerorum**, *h. vaccinifor'me*, a disease of children marked by the development of vesicles upon patches of erythema. The disease recurs every summer. **h. vesiculo'sum**, herpes iris.

hydro-adipsia (hi'dro-ah-dip'se-ah) [Gr. *ὑδρῶς* water + *a* not + *διψα* thirst]. Absence of thirst for water.

hydro-appendix (hi'dro-ap-en'diks). Distention of the vermiform appendix with a watery fluid.

hydrobilirubin (hi'dro-bil-e-ru'bin) [*hydro-* + *bilirubin*]. A brownish-red pigment, $C_{32}H_{40}N_4O_7$, derivable from bilirubin by reduction. It is believed to be identical with stercobilin and urobilin.

hydroblepharon (hi-dro-blef'ar-on) [Gr. *ὑδρῶς* water + *βλέφαρον* eyelid]. Edema of the eyelids.

hydrobromate (hi-dro-bro'māt). Any salt of hydrobromic acid. See under *acid*.

hydrobromic acid (hi-dro-brōm'ik). See *acid*.

hydrocarbon (hi-dro-kar'bon). Any compound of hydrogen and carbon. The hydrocarbons are divided into groups according to the proportions of hydrogen and carbon contained in them, each one of the groups differing from the one before it by the addition of CH_2 . **aromatic h's**, these include benzene (C_6H_6) and its homologues, phenyl (C_6H_5), and the univalent hydrocarbons, and naphthalene ($C_{10}H_8$) with its derivatives. **bivalent h's**, the *olefins*, methylene, ethylene, propylene, etc. **fatty h's**, those that are fatty in nature, and include the *paraffins*. **saturated h's**, the paraffins, methane, ethane, propane, butane, pentane, hexane, and heptane. **univalent h's**, the *alcohol radicals*, methyl, ethyl, propyl, etc.

hydrocele (hi'dro-sēl) [Gr. *ὑδρῶς* water + *κῆλη* tumor]. A circumscribed collection of fluid, especially a collection of fluid in the tunica vaginalis of the testicle. **cervical**

h., a serous dilatation of a persistent cervical cleft or duct, or sometimes of a deep cervical lymph-space. **h. coli**, cervical hydrocele. **congenital h.**, hydrocele in the unobliterated canal between the peritoneal cavity and that of the tunica vaginalis. **diffused h.**, a collection of fluid diffused in the loose connective tissue of the spermatic cord.

Dupuytren's h., bilocular hydrocele of the tunica vaginalis testis. **encysted h.**, one which occurs in cysts outside the cavity of the tunica vaginalis testis. **h. fœminæ**, an affection of the round ligament of the female resembling ordinary hydrocele. **funicular h.**, hydrocele of the tunica vaginalis of the spermatic cord

Anatomy of hydrocele (Morse).

in a space closed toward the testis and open toward the peritoneal cavity. **Gibbon's h.**, hydrocele with voluminous hernia. **h. hernial**, distention of the hernial sac with a fluid. **Mau-noir's h.**, cervical hydrocele. **h. mulie'bris**, a watery dilatation of the canal of Nuck. **h. of neck**, a congenital lymphatic cyst of the neck. **Nuck's h.**, hydrocele fœminæ. **scrotal h.**, a circumscribed collection of fluid in the scrotum. **h. spina'lis**, spina bifida.

hydrocenosis (hi'dro-sen-o'sis) [Gr. *ὑδρῶς* water + *κένωσις* emptying]. Removal of a dropsical fluid.

hydrocephalic (hi'dro-sef'al'ik). Pertaining to or affected with hydrocephalocele.

hydrocephalocele (hi'dro-sef'al-o-sel). See *hydrocephalocele*.

hydrocephaloid (hi-dro-sef'al-oid). 1. Resembling hydrocephalus. 2. A state resembling infantile hydrocephalus, but attended with depression of the fontanels: it follows diarrhea.

hydrocephalus (hi-dro-sef'al-us) [Gr. *ὑδρῶς* water + *κεφαλή* head]. A condition characterized by abnormal increase in the amount of cerebral fluid accompanied by dilatation of the cerebral ventricles. The disease is marked by enlargement of the head, with prominence of the forehead, atrophy of the brain, mental weakness, and convulsions. **acute h.**, tubercular meningitis. **chronic h.**, **congenital h.**, **infantile h.**, a slowly progressing form occurring in infancy. **external h.**, dropsy of the subdural space. **internal h.**, any fluid effusion within the ventricles of the brain. **primary h.**, chronic hydrocephalus. **secondary h.**, hydrocephalus resulting from meningitis or obstruction of the venous outflow.

hydrocerin (hi-dro-se'rin). An ointment-base of wax, petrolatum, and water.

hydrochinon (hi-dro-kin'on). Dioxycyclohexadiene, $C_6H_4(OH)_2$, prepared by reducing quinone and other substances. It is a crystalline substance, soluble in 17 parts of cold water, and easily soluble in hot water, alcohol, and ether. It is antipyretic and antiseptic. It is used in gonorrhea, conjunctivitis, etc., in 1-3 per cent. solution. Dose, 5-30 gr. (0.333-2 gm.). Called also *paradihydroquinone*.

hydrochinonuria (hi'dro-kin-o-nu're-ah). The presence of hydrochinon in the urine as a result of the administration of salol, resorcinol, phenol, or uva-ursi.

hydrochlorate (hi-dro-klo'rāt). Any salt of hydrochloric acid.

hydrochloric acid (hi-dro-klo'rik). See *acid*.

hydrocholecystitis (hi'dro-kol-e-sis'tis) [Gr. *ὑδρῶς* water + *χολή* bile + *κύστις* bladder]. A dropsical inflammation of the gall-bladder.

hydrocholesterol (hi'dro-ko-le'ster-ol). A reduced form of cholesterol.

hydrocinchonidin (hi'dro-sin-kon'id-in). A cinchona alkaloid, $C_{19}H_{24}ON_2$, isomeric with cinchonin.

hydrocinchonin (hi-dro-sin'ko-nin). Same as *cinchonin*.

hydrocinnamic acid (hi'dro-sin-am'ik). See under *acid*.

hydrocirsocoele (hi-dro-sir'so-sēl) [*hydro-* + *cirsocoele*]. Hydrocele combined with varicocele.

hydrocollidin (hi-dro-kol'id-in) [*hydro-* + *collidin*]. A poisonous oily ptomaine, $C_8H_{13}N$, from nicotin, decayed flesh, and from stale fish.

hydrocolpos (hi-dro-kol'pos) [Gr. *ὑδρῶς* water + *κόλπος* vagina]. A retention-cyst of the vagina containing a watery fluid.

hydroconion (hi-dro-ko'ne-on) [Gr. *ὑδρῶς* water + *κόνις* dust]. An atomizer or vaporizer for throwing liquids in a fine spray.

hydroconquinin (hi-dro-kon'kwin-in). Hydroquinidin.

hydrocoridin (hi-dro-ko-rí'din). A ptomain,

$C_{10}H_{17}N$, produced by *Bacillus allii*.

hydrocotarnin (hi''dro-ko-tar'nin). A crystallizable base, $C_{12}H_{13}NO_3 + \frac{1}{2}H_2O$, from opium.

Hydrocotyle (hi-dro-ko'tí'le) [Gr. ὕδωρ water + κοτύλη cup]. A genus of umbelliferous herbs. *H. asiatica* is serviceable in syphilis, leprosy, and skin diseases. Dose, 8-15 gr. (0.5-1 gm.).

hydrocupreidin (hi''dro-ku-pre'id-in). An artificial alkaloid, $C_{10}H_{14}O_2N_2 \cdot XH_2O$, isomeric with hydrocuprein and prepared by demethylating hydroquinidin.

hydrocuprein (hi-dro-ku'pre-in). An artificial alkaloid which can be prepared by demethylating dihydroquinin or by reducing cuprein. It is $OH \cdot C_9H_5N \cdot CHOH \cdot C_6H_5N(CH_2)_2C_2H_5$. **ethyl h.** See *oplochin*. **isoamyl h.**, eucupin. **iso-octyl h.**, vuzin. **isopropyl h.**, cinchain. **methyl h.**, hydroquinin.

hydrocyanic acid (hi''dro-si-an'ík). See under acid.

hydrocyst (hi''dro-sist) [Gr. ὕδωρ water + κύστις cyst]. A cyst with watery contents.

hydrocystoma (hi''dro-sis-to'mah) [Gr. ὕδωρ water + κύστις cyst + -ωμα tumor]. A cystic disease of the sweat-glands of the face, with lesions resembling boiled sago-grains embedded in the skin. It is frequently seen in washerwomen, laundresses, and those exposed to moist heat.

hydrodiastope (hi-dro-di'as-kóp) [Gr. ὕδωρ water + διά through + σκοπεῖν to see]. An instrument, resembling a pair of spectacles, used in the treatment of astigmatism.

hydrodictiotomy (hi''dro-dik-te-ot'o-me). An operation for displacement of the retina (R. Secondi).

hydrodiffusion (hi''dro-dif-u'zhun). Diffusion in an aqueous medium.

hydrodynamics (hi''dro-di-nam'iks) [Gr. ὕδωρ water + dynamics]. That branch of the science of mechanics which treats of liquids.

hydro-electric (hi''dro-e-lek'trik). Combining the therapeutic use of water and of electricity.

hydro-electrization (hi''dro-el-ek-triz-a'shun). Treatment by the hydro-electric bath.

hydro-encephalocele (hi''dro-en-sef'al-o-sél) [Gr. ὕδωρ water + κεφαλή head + κήλη hernia]. Hernial protrusion of a knuckle of the cranial dura distended with fluid.

hydro-ergotinain (hi''dro-er-got'in-in). Ergo-toxin.

hydrogel (hi''dro-jel). A gel that has water as its dispersion medium.

hydrogen (hi''dro-jen) [Gr. ὕδωρ water + γεννᾶν to produce]. The lightest element. It is an odorless, tasteless, colorless gas which is inflammable and explosive when mixed with air. It is found in water and in all organic compounds. Its ion is the active constituent of all acids. Its symbol is H; atomic weight, 1.008; and specific gravity, 0.069. **h. dioxid.** Same as *h. peroxid*. **h. disulphid**, an ill-smelling gas, H_2S_2 . **h. exponent.** See under *exponent*. **h. ion**, the positively charged hydrogen atom. It seems to consist only of the nucleus and has a positive charge equivalent to the negative charge on an electron. It thus forms the unit of positive electricity as the electron does of negative electricity and is called the *proton*. **h. ion concentration.** See under *concentration*. **h. monoxid**, water, H_2O . **h. peroxid**, a strongly disinfectant cleansing and bleaching liquid, H_2O_2 ; used mainly as a wash or spray. Dose, $\frac{1}{2}$ -2 dr. (2-8 c.c.). **h. selenid**, a poisonous gas, H_2Se ; its inhalation causes an obstinate coryza and destroys the sense of smell. **sulphuretted h.**, **h. sulphid**, hydrosulphuric acid. See under acid.

hydrogenate (hi''dro-jen-ät). To cause to combine with hydrogen; to reduce.

hydrogenid (hi''dro-jen id). A hydrid.

hydrogenize (hi''dro-jen-iz). Hydrogenate.

hydrogenoid (hi-droj'en-oid). A homeopathic term noting a constitution or temperament that will not tolerate much moisture. **h. remedy**, one adapted to such a constitution.

Hydrogenomonas (hi-droj-en-om'onas). A genus of bacterial organisms. They are short rods capable of growing in the absence of organic matter, obtaining their energy for growth from the oxidation of hydrogen to water. **H. formica** forms formic acid. **H. pantotropha**, a species which generates formaldehyd.

hydroglossa (hi-dro-glos'ah) [Gr. ὕδωρ water + γλῶσσα tongue]. Ranula.

Hydrogol (hi''dro-gol). A proprietary agent said to be an aqueous solution of colloidal silver: used for gonorrhea.

hydrohematonephrosis (hi''dro-hem'at-o-nef-ro'sis) [Gr. ὕδωρ water + αἷμα blood + νέφρος kidney]. Distention of the pelvis of the kidney with bloody urine.

hydrohepatosis (hi''dro-hep-at-o'sis) [Gr. ὕδωρ water + ἥπαρ liver]. A condition in which there is a collection of fluid in the liver.

hydrohymenitis (hi''dro-hi-men-i'tis) [Gr. ὕδωρ water + ὕμην membrane + -ιτις inflammation]. The inflammation of a serous membrane.

hydrokinetics (hi''dro-kin-et'iks) [Gr. ὕδωρ water + κίνησις motion]. That branch of mechanics which treats of fluids in motion.

hydrol (hi''drol). 1. See *hydrone*. 2. A final mother liquor obtained in the manufacture of glucose from cornstarch.

hydrolase (hi''dro-lās). A ferment which causes hydrolysis.

hydrolein (hi-dro'le-in). Cod-liver oil emulsified with pancreatin and borax.

hydrology (hi-drol'o-je) [Gr. ὕδωρ water + λόγος science]. The sum of knowledge regarding water and its uses.

hydrolymph (hi''dro-limf) [Gr. ὕδωρ water + λυμφή]. The thin, watery blood of certain of the lower animals.

hydrolysis (hi-drol'is-is) [Gr. ὕδωρ water + λύειν to loosen]. Decomposition due to the incorporation of water. The two resulting products divide the water, the hydroxyl group being attached to one and the hydrogen atom to the other. **reversible h.**, hydrosynthesis.

hydrolyst (hi''dro-list). A hydrolytic ferment.

hydrolyte (hi''dro-lit). A substance undergoing hydrolysis.

hydrolytic (hi-dro-lit'ik). Pertaining to or operating by hydrolysis.

hydrolyze (hi''dro-liz). To subject to hydrolysis.

hydroma (hi-dro'mah). Same as *hygroma*.

hydromania (hi-dro-ma'ne-ah) [Gr. ὕδωρ water + μανία madness]. Insanity marked by a tendency to commit suicide by drowning.

hydromel (hi''dro-mel) [Gr. ὕδωρ water + μέλι honey]. Water mixed with honey: sometimes medicated in various ways.

hydromeningitis (hi''dro-men-in-jí'tis) [Gr. ὕδωρ water + meningitis]. 1. Meningitis with serous effusion. 2. Descemetitis or cyclitis.

hydromeningocele (hi''dro-men-in-go-sél) [Gr. ὕδωρ water + μήνιγξ membrane + κήλη hernia]. Encephalocele; also spina bifida with protrusion of the meninges so as to form a sac filled with a serous fluid.

hydrometer (hi-drom'et-er) [Gr. ὕδωρ water + μέτρον measure]. An instrument for finding the specific gravities of fluids.

hydrometra (hi-dro-me'trah) [Gr. ὕδωρ water + μήτρα uterus]. A collection of watery fluid in the uterus.

hydrometric (hi-dro-met'rik). Pertaining to hydrometry.

hydrometry (hi-drom-et-re). The measurement of the specific gravity of a fluid by means of the hydrometer.

hydromphalus (hi-drom-fal-us) [Gr. ὕδωρ water + ὄμφαλος navel]. A watery tumor or cyst at the navel.

hydromyelia (hi''dro-mi-e'le-ah). See *hydromyelocele*.

hydromyelocele (hi''dro-mi-ēl'o-sēl) [*hydro-* + *myelocele*]. The formation of spaces filled with a watery fluid in the spinal cord, chiefly of children; syringomyelia.

hydromyoma (hi''dro-mi-o'mah) [Gr. ὕδωρ water + *myoma*]. A cystic (usually uterine) myoma containing fluid.

hydronal (hi''dro-nal). A polymerization product of chloral and pyridin: used as a hypnotic. Called also *visferral* and *polychloral*.

hydronaphthol (hi-dro-naf'thol) [*hydro-* + *naphthol*]. A disinfectant naphthol preparation. It is used in typhoid fever, and in 1:1000 solution as a disinfectant for instruments. Dose, 30-60 min. (2-4 c.c.).

hydronaphthylamin (hi''dro-naf-thil-am'in). A powerfully mydriatic substance, C₁₀H₁₁NH₂.

hydrone (hi'drōn) [Gr. ὕδωρ water + ὤν being]. The unassociated water molecule, H₂O.

hydronephrosis (hi''dro-nef-ro'sis) [Gr. ὕδωρ water + νεφρός kidney]. A collection of urine in the pelvis of the kidney, forming a cyst by the production of distention and atrophy of the organ. **intermittent h.**, a form with occasional reduction in the size of the cyst, due to the escape of urine through the twisted ureter.

hydronephrotic (hi''dro-nef-rot'ik). Pertaining to or affected with hydronephrosis.

hydro-oligocythemia (hi''dro-ol'ig-o-si-the-me-ah) [Gr. ὕδωρ water + ὀλίγος few + κύτος cell + αἷμα blood]. Anemia with excess of serum and scarcity of red blood-corpuscles.

hydroparasalpinx (hi''dro-par-as-al'pinks) [Gr. ὕδωρ water + σάλπιξ beside + σάλπιγξ tube]. The accumulation of watery fluid in the accessory tubes of the oviduct.

hydroparotitis (hi''dro-par-o-ti'tis). Distention of the parotid gland with fluid.

hydropathic (hi-dro-path'ik). Pertaining to hydrophathy.

hydrophathy (hi-drop'ath-e) [Gr. ὕδωρ water + πάθος suffering]. Treatment of disease by the application of water; particularly a system of treatment which professes to cure all diseases by the use of water; water cure.

hydropericarditis (hi''dro-per-e-kar-di'tis). Pericarditis attended with a watery effusion.

hydropericardium (hi''dro-per-e-kar-de-um) [Gr. ὕδωρ water + *pericardium*]. The accumulation of a serous fluid in the pericardial cavity.

hydroperinephrosis (hi''dro-per-e-nef-ro'sis) [Gr. ὕδωρ water + περί around + νεφρός kidney]. A collection of fluid in the retroperitoneal connective tissue and opening into the pelvis of the kidney.

hydroperion (hi-dro-per'e-on) [Gr. ὕδωρ water + περί around + ὠν egg]. The fluid between the decidua reflexa and the decidua vera.

hydroperitoneum (hi''dro-per-it-o-ne-um) [Gr. ὕδωρ water + *peritoneum*]. Ascites or abdominal dropsy.

hydroperitonitis (hi''dro-per-it-o-ne-ah). Ascites.

hydrophil, hydrophilic (hi''dro-fil, -fil'ik). Hydrophilous.

hydrophilous (hi-drof'il-us) [Gr. ὕδωρ water + φιλέω to love]. Readily absorbing moisture; hygroscopic.

hydrophobia (hi-dro-fō-be-ah) [Gr. ὕδωρ water + φόβος fear]. The usual name for rabies in man. See *rabies*. **paralytic h.**, rabies with symptoms not unlike those of acute ascending paralysis.

hydrophobic (hi-dro-fō'bik). 1. Pertaining to or affected with hydrophobia. 2. Not readily absorbing water, or being adversely affected by water, as a hydrophobic colloid.

hydrophobin (hi-dro-fō'bin). Same as *lyssin*.

hydrophobinum (hi-dro-fō-bi'num). A homeopathic nosode from the virus of rabies.

hydrophobophobia (hi''dro-fō-bo-fō-be-ah) [*hydrophobia* + Gr. φόβος fear]. Morbid dread of hydrophobia, with symptoms that simulate those of true rabies.

hydrophthalmia (hi-drof-thal'me-ah). Hydrophthalmos.

hydrophthalmos, hydrophthalmus (hi-drof-thal'mos, hi-drof-thal'mus) [Gr. ὕδωρ water + ὀφθαλμός eye]. Dropsy of the eye; distention of the eyeball by a watery effusion, producing buphthalmus, keratoglobus, staphyloma, etc. **h. anterior**, that which affects the anterior portion of the eyeball only. **h. posterior**, that affecting the posterior part of the eyeball only. **h. totalis**, that which affects the entire eyeball.

hydrophysometra (hi''dro-fi-so-me'trah) [*hydro-* + *physometra*]. The presence of water and gas in the uterus.

hydropic (hi-drop'ik) [L. *hydropicus*; Gr. ὕδρωτικός]. Pertaining to or affected with dropsy.

hydropigenous (hi-dro-pij'en-us). Causing dropsy.

hydropirin (hi-dro-pi'rin). Sodium or lithium acetylsalicylate: used in rheumatism.

hydroplasma (hi-dro-plaz'mah) [Gr. ὕδωρ water + πλάσμα something formed]. 1. A watery condition or dilution of the blood-plasm. 2. A watery or dropical condition of the tissues.

hydroplasmia (hi-dro-plaz'me-ah). A thinning or dilution (increased water content) of the blood plasm.

hydro pneumatosis (hi''dro-nu-mat-o'sis) [Gr. ὕδωρ water + πνεύματος inflation]. A collection of fluid and gas within the tissues.

hydro pneumogony (hi''dro-nu-mo'gon-e) [Gr. ὕδωρ water + πνεύμα air + γόνυ knee]. The infection of air into a joint with a view to obtaining information with regard to the presence of effusion in the joint.

hydro pneumopericardium (hi''dro-nu'mo-per'ik-ar-de-um) [Gr. ὕδωρ water + πνεύμα air + *pericardium*]. A collection of fluid and gas within the pericardium.

hydro pneumoperitoneum (hi''dro-nu'mo-per-it-o-ne-um) [Gr. ὕδωρ water + πνεύμα air + *peritoneum*]. The presence of fluid and gas in the peritoneal cavity.

hydro pneumothorax (hi''dro-nu-mo-tho'raks) [Gr. ὕδωρ water + πνεύμα air + θώραξ chest]. A collection of fluid and gas within the pleural cavity.

hydrotherapy (hi''dro-po-ther'ap-e) [Gr. ὕδωρ dropsy + θεραπεία treatment]. The therapeutic injection of ascitic fluid.

hydrops (hi'drops) [Gr. ὕδρωψ dropsy]. Latin for dropsy. See *dropsy*. **h. abdominis**, abdominal dropsy; ascites. **h. ad mat'ulam**, polyuria. **h. am'nii**, hydramnion. **h. an'tri**, effusion of serous fluid into the antrum of Highmore. **h. artic'uli**, the dropsy of a joint. **h. asthmat'icus**, heriberi. **h. follic'uli**, dropsy of the graafian follicle. **h. hypostrophos**, angioneurotic edema. **h. tu'bæ**, hydrosalpinx. **h. tu'bæ prof'luens**, a condition in which the abdominal opening of the fallopian tube is closed by adhesions, and in consequence the tube fills with serum until pressure causes it to escape through the uterine opening. Called also *intermittent hydrosalpinx*.

hydropyonephrosis (hi''dro-pi''o-nef-ro'sis) [Gr. ὕδωρ water + πύον pus + νεφρός kidney]. The accumulation of urine and pus in the kidney and its pelvis.

hydropyrim (hi-dro-pi''rin). Lithium acetylsalicylate: used in rheumatism and neuralgia.

hydroquinoin (hi-dro-kwin'in-in). An alkaloid $C_{20}H_{28}O_2N_2$, formed by fusing dry hydroquinin sulphate.

hydroquinidin (hi-dro-kwin'id-in). A cinchona alkaloid, $C_{20}H_{28}O_2N_2 \cdot 2\frac{1}{2}H_2O$, isomeric with hydroquinin, found in commercial quinidin and which can be prepared by the catalytic reduction of quinidin.

hydroquinin (hi-dro-kwin'in). A white, crystalline powder, methyl hydrocuprein, $C_{20}H_{28}O_2N_2 \cdot 2H_2O$: used in malaria. Dose, 3 gr. (0.2 gm.).

hydroquinon (hi-dro-kwin'on). See *hydrochinon*.

hydrorachis (hi-dro'a-kis) [Gr. ὕδωρ water + ῥάχis spine]. A collection of water in the vertebral canal.

hydrorachitis (hi''dro-ra-ki'tis) [Gr. ὕδωρ water + ῥάχis spine + -itis inflammation]. Inflammation within the vertebral canal, attended with a watery effusion.

hydroheostat (hi-dro-re'o-stat) [*hydro-* + *rheo-*stat]. A rheostat in which resistance is furnished by water.

hydroporrhea, **hydroporrhea** (hi-dro-re'ah) [Gr. ὕδωρ water + πόρα flow]. A copious watery discharge. **h. gravidarum**, a discharge of thin mucus from the pregnant uterus, due to excessive secretion of the uterine glands. **nasal h.**, watery discharge from the nose.

hydrosalpinx (hi-dro-sal'pinks) [Gr. ὕδωρ water + σάλπιγξ trumpet]. The distention of an oviduct with a watery fluid. **intermittent h.** See *hy'drops tu'bæ prof'luens*.

hydrosarcocele (hi-dro-sar'ko-sēl) [*hydro-* + *sar-*cocele]. Hydrocele conjoined with sarcocele.

hydroscheocele (hi-dros'ke-o-sēl) [Gr. ὕδωρ water + σάχεον scrotum + κήλη hernia]. Scrotal hernia which contains fluid.

hydroscope (hi'dro-skōp) [Gr. ὕδωρ water + σκοπεῖν to see]. An instrument for detecting the presence of water.

hydrosis (hi-dro'sis). An incorrect spelling of *hidrosis*.

hydrosol (hi'dro-sol). A sol in which the solvent is water.

hydrospigmograph (hi-dro-sfig'mo-graf) [Gr. ὕδωρ water + σπυγμός pulse + γράφειν to record]. A spigmograph with water for an index.

hydrospirometer (hi''dro-spi-rom'et-er) [Gr. ὕδωρ water + *L. spirare* to breathe + Gr. μέτρον measure]. A spirometer in which a column of water serves as an index.

hydrostat (hi'dro-stat) [Gr. ὕδωρ water + στατός standing]. A device to prevent the spilling of the fluid of an electric battery.

hydrostatic (hi-dro-stat'ik) [Gr. ὕδωρ water + στατικός standing]. Pertaining to a liquid in a state of equilibrium.

hydrostatics (hi-dro-stat'iks). The science of liquids in a state of rest or equilibrium.

hydrosudopathy (hi''dro-su-dop'ath-e) [Gr. ὕδωρ water + *L. sudor* sweat + Gr. πάθος disease]. Hydrosudotherapy.

hydrosudotherapy (hi''dro-su-do-ther'ap-e). Hydrotherapy with the induction of perspiration.

hydrosulphite (hi-dro-sul'fit). See *hyposulphite*.

hydrosynthesis (hi-dro-sin'thes-is). A chemical reaction in which water is formed.

hydrosyringomyelia (hi''dro-si-ring''o-mi-e'le-ah) [Gr. ὕδωρ water + σπυγξ tube + μύελος marrow]. Distention of the central canal of the spinal cord by an effused fluid, with the formation of cavities and degeneration.

hydrotaxis (hi-dro-tak'sis) [Gr. ὕδωρ water + τάξις arrangement]. The movement of organisms or cells in relation to moisture.

Hydro'tea meteor'ica. A fly which attacks the eyes and nostrils of man and animals.

hydrotherapeutics (hi''dro-ther-ap-u'tiks) [Gr. ὕδωρ water + θεραπεύειν to heal]. The use of water in treating disease.

hydrotherapy (hi-dro-ther'ap-e). Same as *hydrotherapeutics*.

hydrothionammonemia (hi''dro-thi-o-nam''o-ne'me-ah) [Gr. ὕδωρ water + θείον sulphur + ammonium + Gr. αἷμα blood]. The occurrence of ammonium hydrosulphid in the blood.

hydrothionemia (hi''dro-thi-o-ne'me-ah) [Gr. ὕδωρ water + θείον sulphur + αἷμα blood]. The presence of hydrogen sulphid in the blood.

hydrothionuria (hi''dro-thi-o-nu're-ah) [Gr. ὕδωρ water + θείον sulphur + οὖρον urine]. The presence of hydrogen sulphid in the urine.

hydrothorax (-hi-dro-tho'raks) [Gr. ὕδωρ water + thorax]. The presence of an effused fluid in the pleural cavity. It is due to venous obstruction, to feeble circulation, and to hydremia, and is attended with dyspnea, and marked by absence of vocal fremitus, dullness on percussion, and other signs of the presence of the fluid. **chylous h.**, the presence of chyle in the thoracic cavity, due to a wound or rupture of the thoracic duct.

hydrotis (hi-dro'tis) [Gr. ὕδωρ water + οὖς ear]. A watery effusion within the ear.

hydrotomy (hi-dro'to-me) [Gr. ὕδωρ water + τέμνειν to cut]. The dissection or separation of parts by the forcible injection of water.

hydrotropism (hi-dro-tro'pizm) [Gr. ὕδωρ water + τροπεῖν to turn]. Chemotropism produced by water.

hydrotyimpanum (hi-dro-tim'pan-um) [Gr. ὕδωρ water + tympanum]. Dropsy of the tympanic cavity.

hydro-ureter (hi''dro-u-re'ter). Abnormal distention of the ureter with urine or with a watery fluid.

hydro-ureterosis (hi''dro-u-re-ter-o'sis). Same as *hydro-ureter*.

hydrous (hi'drus). Containing water.

hydrovarium (hi-dro-va're-um) [Gr. ὕδωρ water + *L. ovarium* ovary]. Ovarian dropsy or ovarian cyst.

hydroxid (hi-drox'id). Any compound of hydroxyl (OH) with another radical.

hydroxidion (hi-drok-sid'ion). Hydroxyl ion.

hydroxy-. A prefix in chemical terms indicating the hydroxyl group OH.

hydroxyacetone (hi-drok-se-as'e-tōn). See *aceto*.

hydroxyaminopropionic acid (hi-drok''se-am''in-o-pro-pi-on'ik). See *serin*.

hydroxybenzene (hi-drok''se-ben'zēn). Phenol.

hydroxycafein (hi-drok-se-ka'f'e-in). Trimethyluric acid, a diuretic.

hydroxycholin (hi-drok-se-ko'lin). Muscarin.

hydroxycodin (hi-drok-se-ko'de-in). An alkaloid derived from opium.

hydroxyl (hi-droks'il). The univalent radical OH, which, in combination with other radicals, forms hydroxids. **h. ion**, the hydroxyl group in solution bearing a negative electric charge.

hydroxylamin (hi''doks-il'am'in). An amin, NH_3O , whose hydrochlorid, $NH_3OH.HCl$, a substance in colorless plates, is antiseptic and is used in skin diseases.

hydroxypentacosanic acid (hi-drok''se-pen-tah-ko-san'ik). See *cerebronic acid*, under *acid*.

hydroxyprolin (hi''drok-se-pro'lin). An amino-acid, gamma-hydroxy-alpha-pyrrolidin-carboxylic acid, $CH_3C_4H_6(NH)COOH$, produced in the digestion or hydrolytic decomposition of proteins.

hydrozone (hi'dro-zōn) [Gr. ὕδωρ water + ozone]. Water charged with hydrogen dioxide: detergent and antiseptic.

hydruria (hi-dru're-ah) [Gr. ὕδωρ water + οὐρον urine]. Diabetes insipidus.

hydruric (hi-dru'rik). Characterized by hydruria.

hyenanchin (hi-e-nan'kin). A poisonous substance from the outer envelopes of the fruit of *Toxicoden'dron capen'se*, of South Africa. It somewhat resembles strychnin in its action.

hyetometry (hi-et-om'et-re) [Gr. ἕρος rain + μέτρον measure]. Measurement of the rainfall.

Hygeia (hi-je'ah). The goddess of health, daughter of Æsculapius, the god of medicine.

hygiolatry (hi-je-o-lat-re). Excessive attention to one's own health.

hygiama (hi-je-ah'mah). A proprietary food made of condensed milk, chocolate, and cereals.

hygieist (hi-je'ist). An expert in the rules for preserving the health.

hygiene (hi-jen') [Gr. ὑγιεία health]. The science of health and of its preservation. **oral h.**, the proper care of the mouth and teeth.

hygienic (hi-je-en'ik). Pertaining to hygiene or to health.

hygienics (hi-je-en'iks). A system of principles for promoting health; hygiene.

hygienism (hi-je'en-izm). Devotion to the observance of hygienic rules.

hygienist (hi-je'in-ist). A specialist in hygiene. **dental h.**, a person trained in and practising the art of dental prophylaxis.

hygienization (hi''je-en-iz-a'shun). The establishment of hygienic conditions.

hygieology (hi-je-o'l-o-je) [Gr. ὑγιεία health + λόγος treatise]. The complete science upon which the arts of hygiene and sanitation are based.

hygiogenesis (hi-je-o-jen'es-is) [Gr. ὑγιής healthy + γέν- to produce]. The mechanism of the processes which lead to recovery of health.

hygiology. See *hygieology*.

hygiopon (hi-je-o-pon). A preparation of iron, said to be electrolytic.

hygrechema (hi-gre-ke'mah). An auscultation sound caused by the presence of water.

hygremometry (hi-gre-mom'et-re) [Gr. ὑγρός moist + αἷμα blood + μέτρον measure]. Estimation of the dried substance of the blood for the purpose of determining the proportion of hemoglobin.

hygric (hi'grik) [Gr. ὑγρός moist]. Pertaining or relating to moisture.

hygrin (hi'grin) [Gr. ὑγρός moist]. A mydriatic liquid alkaloid, C₂H₅.CO.O.C₄H₉N.CH₃, from coca leaves.

hygroblepharic (hi''gro-blef-ah'rik) [Gr. ὑγρός moist + βλέφαρον eyelid]. Noting the excretory ducts of the lacrimal canals.

hygrol (hi'grol). Colloidal mercury: sometimes used in ointments.

hygroma (hi-gro'mah), pl. *hygro'mata* [Gr. ὑγρός moist + -ωμα tumor]. A sac, cyst, or bursa distended with a fluid. **Fleischmann's h.**, enlargement of a bursa in the floor of the mouth, to the outer side of the geniglossus muscle.

hygromed (hi'gro-med). An instrument for performing hygromedry.

hygromedry (hi-grom'ed-re). Measurement of the vapor given off from a definite area of the skin.

hygrometer (hi-grom'et-er) [Gr. ὑγρός moist + μέτρον measure]. An instrument for measuring the moisture of the atmosphere. **hair h.**, **Sausure's h.**, a hygrometer whose action is determined by the elongation and contraction of a hair under the influence of moisture.

hygrometric (hi-gro-met'rik). 1. Pertaining to hygrometry. 2. Hygroscopic or bibulous: readily absorbing water.

hygrometry (hi-grom'et-re) [Gr. ὑγρός moist + μέτρον measure]. The measurement of the proportion of watery vapor in the air.

Hygrophila spino'sa. A plant of tropical Asia: used as a demulcent and diuretic.

hygrophobia (hi-gro-fō-be-ah) [Gr. ὑγρός moist + φόβος fear]. Morbid dread of liquids, as water or wine.

hygroscope (hi'gro-skōp). An instrument for estimating the amount of moisture in the atmosphere.

hygroscopic (hi-gro-skop'ik) [Gr. ὑγρός moist + σκοπεῖν to view]. Readily absorbing moisture.

hygroscopy (hi-gros'ko-pe). Estimation of the amount of moisture in the atmosphere.

hygrostomia (hi-gro-stō-me-ah) [Gr. ὑγρός moist + στόμα mouth]. Ptyalism or salivation.

hyla (hi'lah). A lateral extension of the mesocœle, or aequeduct of Sylvius. Called also *paraqueduct*.

hyle (hi'le) [Gr. ὕλη matter]. The primitive substance from which all matter is composed. See *prohyl*.

Hylemyia (hi-lem-i'ah). A genus of flies, the larvae of which infest vegetables and may be swallowed if the latter are eaten raw. *H. anti'qua* is the onion root maggot and *H. bras'sica* is the cabbage root maggot.

hylic (hi'lik) [Gr. ὕλη matter]. Composed of matter: a term applied by Adami to the pulp tissues of the embryo.

hylogenesis (hi-lo-jen'is-is) [Gr. ὕλη matter + γένεσις formation]. The production by a cell of the substance which is to be secreted.

hyloma (hi-lo'mah) [Gr. ὕλη matter + -ωμα tumor]. A tumor formed in one of the original hylic tissues. **atypic h.**, gliosarcoma. **mesenchymal h.**, a tumor composed of tissue derived from the mesenchyma. **mesothelial h.**, a tumor formed from tissue of mesothelial origin. **typic h.**, a neuroma or glioma.

hylopathism (hi-lop'ath-izm) [Gr. ὕλη matter + πάθος illness]. The doctrine that disease is due to changes in the constitution of matter.

hylopathist (hi-lop'ath-ist). One who believes in the theory of hylopathism.

hylotropic (hi-lo-trop'ik) [Gr. ὕλη matter + τρέω turn]. Changing form, as from liquid to vapor, without change of composition.

hylozoism (hi-lo'zo-izm) [Gr. ὕλη matter + ζῶω animal]. The doctrine that all matter in the universe is alive.

hymen (hi'men) [Gr. ὑμήν membrane]. The membranous fold which partially or wholly occludes the external orifice of the vagina, at least during virginity. **h. bifene'stra'tus**, **h. bifo'ris**, a hymen with two openings side by side and a broad septum between them. **cribriform h.**, a hymen in which the opening is filled by a membrane pierced by many small perforations. **denticular h.**, a hymen with an opening which has serrate edges. **imperforate h.**, one which completely closes the vaginal orifice. **infundibuliform h.**, a hymen that has a central opening with sloping sides. **sculptured h.**, a hymen showing an irregularly curved edge, as if carved out of a thickened tissue. **h. sept'us**, a form of hymen in which the opening is divided by a narrow septum. **h. subsept'us**, a form of hymen in which the opening is partially filled by a septum growing out of one wall, but not reaching the other.

hymenal (hi'men-al). Pertaining to the hymen.

hymenitis (hi-men-i'tis) [Gr. ὑμήν hymen + -ιτις inflammation]. Inflammation of the hymen.

hymenium (hi-me'ne-um) [dim. of Gr. ὑμήν membrane]. The spore-forming surface of the hyphæ of fungi.

Hymenolepis (hi-men-ol'ep-is). A genus of cestode worms. **H. diminu'ta**, a tapeworm of rats oc-

asionally found in man. **H. lanceola**'ta, a tapeworm of ducks and geese once reported from man. **H. murina**, **H. na'na**, the dwarf tapeworm, a species about 1 inch long, found in the adult form in the human intestine, and frequently causing local disturbance. Fleas (*Ceratophyllus fasciatus* and *Xenopsylla cheopis*) serve as invertebrate hosts, but infection probably reaches man through the rat.

hymenology (hi-men-ol'o-je) [Gr. *ὕμην* hymen + *λόγος* word]. The sum of what is known regarding the membranes.

Hymenoptera (hi-men-op'ter-ah) [Gr. *ὕμην* membrane + *πτερόν* wing]. An order of insects having four membranous wings, as the bees, wasps, ants, etc.

hymenopterism (hi-men-op'ter-izm). Poisoning by the stings or bites of hymenopterous insects, as a bee or wasp.

hymenorrhaphy (hi-men-or'af-e) [Gr. *ὕμην* hymen + *ραφή* seam]. The closure of the vagina by sutures at the hymen.

hymenotome (hi-men'o-tōm) [Gr. *ὕμην* membrane + *τέμνω* to cut]. An instrument for cutting membranes.

hymenotomy (hi-men-ot'o-me) [Gr. *ὕμην* membrane + *τέμνω* to cut]. 1. Surgical incision of the hymen. 2. The anatomy and dissection of membranes.

hymosa (hi-mo'sah). A proprietary remedy for gout, rheumatism, neuralgia, and lumbago. Dose, 1 fl.dr. (4 c.c.).

hyobasioglossus (hi'o-ba-se-o-glos'us). The basal part of the hyoglossus muscle.

hyocholalic (hi'o-ko-lal'ik) [Gr. *ὕς* swine + *χολή* bile]. Noting an acid from swine's bile.

hyo-epiglottic, hyo-epiglottidean (hi'o-ep-ig-lot'ik, hi'o-ep-ig-lot-id'e-an) [Gr. *ὕοιδής* hyoid + *ἐπιγλωττίς* epiglottis]. Pertaining to the hyoid bone and the epiglottis.

hyoglossal (hi-o-glos'al) [Gr. *ὕοιδής* hyoid + *γλῶσσα* tongue]. Pertaining to the hyoid bone and the tongue.

hyoglossus (hi-o-glos'us). See *muscles, table of*.

hyoid (hi'oid) [Gr. *ὕοιδής* U-shaped]. 1. Shaped like the Greek letter upsilon (υ). 2. Pertaining to the hyoid bone. See under *bone*.

hyonigrin (hi-o-ni'grin). A proprietary powdered concentration from the leaves of *Hyoscyamus niger*. Dose, $\frac{1}{16}$ – $\frac{1}{8}$ gr. (0.004–0.032 gm.).

hyopharyngeus (hi'o-far-in'je-us). The middle constrictor of the pharynx.

hyoscin (hi'o-sin) [L. *hyos'cinal*]. An alkaloid from the mother liquors left in the preparation of hyoscyamin. It is a bitter and acrid syrup which on hydrolysis yields tropic acid and oscine. It is a poisonous nerve depressant, mydriatic, and hypnotic, and is used in mania, delirium, insomnia, alcoholic tremor, and morbid sexual excitement. Dose, $\frac{1}{60}$ gr. (0.001 gm.); of hydrobromid or hydriodate, $\frac{1}{160}$ – $\frac{1}{80}$ gr. (0.0005–0.0008 gm.).

hyoscyamin (hi-o-si-am'in) [L. *hyoscyamina*]. The chief alkaloidal constituent of *Atropa belladonna*, *Datura stramonium*, and several species of *Hyoscyamus*. It is a white crystalline, slightly soluble alkaloid, l-tropyltropine, $\text{CH}_3\text{N.C}_6\text{H}_{10}\text{CH}_2\text{O.CH}(\text{C}_6\text{H}_5)\text{CH}_2\text{OH}$, and when racemized with alkalis it forms atropin. Used as a hypnotic, anodyne, and antispasmodic in mental disorders, epilepsy, colic, etc. Dose, $\frac{1}{80}$ gr. (0.0008 gm.); of hydrobromid or sulphate, $\frac{1}{160}$ – $\frac{1}{80}$ gr. (0.00066–0.0013 gm.).

Hyoscyamus (hi-o-si'am-us) [L.; Gr. *ὕς* swine + *κύαμος* bean]. A genus of solanaceous plants. The leaves, seeds, flowers, and tops of *H. niger*, or henbane, are narcotic, mydriatic, and analgesic, and are given in mania, hysteria, whooping-cough, colic, and incontinence of urine. Dose of alcoholic extract, 1–2 gr. (0.066–0.133 gm.); of

fluidextract, 2–5 min. (0.12–0.3 c.c.); of tincture, 15–30 min. (1–2 c.c.).

hyospondylotomy (hi'o-spon-dil-ot'o-me) [*hyoid* + Gr. *σπόνδυλος* vertebra + *τομή* cut]. The veterinary operation of incising the laryngeal pouch.

hyothyroid (hi-o-thi'roid). Pertaining to the hyoid bone and the thyroid cartilage.

hyovertebrotomy (hi'o-ver-te-brot'o-me). Same as *hyospondylotomy*.

hypacidemia (hi-pas-id-e'me-ah) [Gr. *ὕπό* under + *acid* + Gr. *αἷμα* blood]. Deficiency of an acid in the blood.

hypacidity (hi-pas-id'it-e) [Gr. *ὕπό* under + *acid* + *ity*]. Deficiency of acid; lack of normal acidity.

hypacusia, hypacusis (hi-pak-u'ze-ah, hi-pak-u'sis) [Gr. *ὕπό* under + *ἀκουσις* hearing]. Defective hearing.

hypalbuminosis (hi'pal-bu-min-o'sis). Deficiency of albumin in the blood.

hypalgnesia, hypalgia (hi-pal-je'ze-ah, hi-pal'je-ah) [Gr. *ὕπό* under + *ἀλγσις* pain]. Diminished sensitiveness to pain.

hypalgic, hypalgetic (hi-pal-je'sik, -jet'ik). Showing decreased sensitiveness to pain.

hypamnesia (hi-pam-ne'ze-ah) [Gr. *ὕπερ* over + *ἀμνησις* memory]. Abnormal increase in the power of memory, seen in certain exalted mental states.

hypamnion, hypamnios (hi-pam'ne-on, hi-pam'ne-os) [Gr. *ὕπό* under + *amnion*]. Deficiency of the amniotic fluid.

hypanakinesia, hypanakinesis (hi'pan-ak-in-e'ze-ah, hi'pan-ak-in-e'sis) [Gr. *ὕπό* under + *ἀνακίνησις* exercise]. Deficiency of mechanic action, as of the stomach (*h. ventriculi*).

hypaphorin (hi-paf'o-rin). A crystalline alkaloid, alpha-trimethyl-3-indolepropionibetan, $\text{C}_{14}\text{H}_{18}\text{N}_2\text{O}_2 \cdot 2\text{H}_2\text{O}$, from *Erythrina hypaphorus*.

hyarterial (hi-par'te'al). Beneath an artery.

hypasthenia (hi-pas-the'ne-ah) [Gr. *ὕπό* under + *ἀσθένεια* weakness]. Slight asthenia.

hyaxial (hi-pak'se-al) [Gr. *ὕπό* under + *ἄξις* axis]. Situated ventrad to the body axis.

hypazoturia (hi-pa-zo-tu're-ah) [Gr. *ὕπό* under + *αζωτρία*]. Deficient elimination of nitrogen in the urine.

hypencephalon (hi-pen-sef'al-on) [Gr. *ὕπό* under + *ἐγκέφαλος* brain]. The embryonic cerebellum.

hypenchyme (hi'peng-kim). The primitive embryonic tissue formed in the cavity of the archenteron.

hyposinophil (hi-pe-o-sin'o-fil) [*hypo* + *eosinophil*]. 1. A cell or other structural element imperfectly stainable with eosin; specifically, one of the leukocyte granules which stain with eosin, but may be decolorized by alkalis or acids. 2. Imperfectly stainable with eosin.

hyper- (hi'per) [Gr. *ὕπερ* above]. A prefix signifying above, beyond.

hyperacid (hi-per-as'id) [Gr. *ὕπερ* over + L. *acidus* sour]. Abnormally or excessively acid.

hyperacidaminuria (hi'per-as'id-am-in-u're-ah). Excess of amino-acids in the urine.

hyperacidity (hi'per-as-id'it-e). An excessive degree of acidity. **larval h.**, gastric hyperacidity which is not revealed.

hyperaction (hi-per-ak'shun). Abnormal increase of activity.

hyperactivity (hi-per-ak-tiv'it-e). Overactivity.

hyperacusis, hyperakusis, hyperacousia (hi'per-ak-u'sis, hi'per-ak-oo'ze-ah) [Gr. *ὕπερ* over + *ἀκουσις* hearing]. An abnormally acute sense of hearing.

hyperacute (hi-per-ak-ūt). Very acute.

hyperadenosis (hi'per-ad-en-o'sis) [Gr. *ὕπερ* over + *ἀδὴν* gland]. Enlargement of glands.

hyperadiposis, hyperadiposity (hi''per-ad-ip-
o'sis, -os'ti'e) [Gr. *ὑπέρ* over + *adiposis*]. Ex-
treme adiposity or fatness.

hyperadrenalemia (hi''per-ad-re-nal-e'me-ah).
The presence of an abnormal amount of adrenal
secretion in the blood.

hyperadrenalism (hi''per-ad-re'nal-izm). Abnor-
mally increased activity of adrenal secretion.

hyperadrenia (hi-per-ad-re'ne-ah). Hyperadrenal-
ism.

hyperæmia (hi-per-e'me-ah). See *hyperemia*.

hyperæsthesia (hi''per-es-the'ze-ah). See *hyper-
esthesia*.

hyperalbuminosis (hi''per-al-bu-min-o'sis). An
excess of albuminoids in the blood.

hyperalgesia (hi''per-al-je'-ze-ah) [Gr. *ὑπέρ* over +
ἄλγος pain]. Excessive sensitiveness or sen-
sibility to pain. **auditory h.**, the condition in
which slight noises cause pain. **muscular h.**,
the condition in which slight exertion causes
great weariness.

hyperalgesic (hi''per-al-je'sik). Pertaining to or
characterized by hyperalgesia.

hyperalgetic (hi''per-al-jet'ik). Hyperalgesic.

hyperalgia (hi-per-al'je-ah) [Gr. *ὑπέρ* over + *ἄλγος*
pain]. Abnormal sensitiveness to pain.

hyperalimentation (hi''per-al-im-en-ta'shun).
Excess in the amount of food taken.

hyperalimentosis (hi''per-al-im-en-to'sis). Dis-
ease due to excess in eating.

hyperalkalescence (hi''per-al-kal-es'ens). An
excess of alkalinity.

hyperalkalinity (hi''per-al-kal-in'ti'e). Excessive
alkalinity.

hyperaltonemia (hi''per-al-o-ne'me-ah) [Gr. *ὑπέρ*
over + *ἅλς* salt + *αἷμα* blood]. Excess of salts in
the blood.

hyperaminoacidemia (hi''per-am-in-o-as-id-e'-
me-ah). Presence of amino-acids in the blood in
excess of the normal amount.

hyperamnesia (hi-per-am-ne'se-ah). Hypamnesia.

hyperanacinesia (hi''per-an-as-in-e'ze-ah). Hy-
peranakinesia.

hyperanakinesia, hyperanakinesis (hi''per-an-
ak-in-e'ze-ah, hi''per-an-a-kin-e'sis) [Gr. *ὑπέρ*
over + *ἀνακίνησις* exercise]. Excessive mechanic
activity, as of the stomach (*h. ventriculi*).

hyperaphia (hi-per-a'fe-ah) [Gr. *ὑπέρ* over + *ἄφή*
touch]. Excessive tactile sensibility.

hyperaphic (hi-per-af'ik). Characterized by hy-
peraphia.

hyperazotemia (hi''per-a-zo-te'me-ah) [Gr. *ὑπέρ*
over + *azotemia*]. The presence of an abnormally
large amount of nitrogenous matter in the blood.

hyperazoturia (hi''per-az-o-tu're-ah). Presence
of an excessive amount of nitrogenous matter in
the urine.

hyperblastosis (hi-per-blas-to'sis) [Gr. *ὑπέρ* over
+ *βλάστος* germ]. An overgrowth of some specific
tissue.

hyperbrachycephalic (hi''per-bra-ke-sef-al'ik).
Excessively brachycephalic.

hyperbrachycephaly (hi''per-brak-is-el'a-le). Ex-
treme brachycephaly.

hyperbulia (hi-per-bu'le-ah) [Gr. *ὑπέρ* over +
βουλή will]. Morbid development of the will;
insane wilfulness.

hypercalcemia (hi-per-kal-se'me-ah) [Gr. *ὑπέρ*
over + *calcium* + Gr. *αἷμα* blood]. A dangerous
rise of blood calcium.

hypercapnia (hi-per-kap'ne-ah) [Gr. *ὑπέρ* over +
καπνός smoke]. Excess of carbon dioxide in the
blood or in the lungs.

hypercatharsis (hi''per-kath-ar'sis) [Gr. *ὑπέρ* over
+ *κάθαρσις* purge]. Excessive purgation.

hypercathartic (hi''per-kath-ar'tik) [Gr. *ὑπέρ* over
+ *καθαρτικός* purgative]. Excessively cathartic.

hypercementosis (hi''per-sem-en-to'sis). Ex-
cessive development of the tooth-cement.

hypercenesthesia (hi-per-sen-es-the'ze-ah) [Gr.
ὑπέρ over + *cenesthesia*]. A feeling of exaggerated
well-being such as is seen in general paralysis and
sometimes in mania.

hyperchlorhydria (hi''per-klor-hid're-ah) [Gr.
ὑπέρ over + *χλωρός* green (chlorin) + *ὕδωρ* water
(hydrogen)]. Excessive secretion of hydrochloric
acid by the stomach cells. **larval h.**, hyperchlor-
hydria without any symptoms.

hyperchlorid (hi-per-klo'rid). A perchlorid.

hyperchloridation (hi''per-klo-rid-a'shun). The
administration of an excess of sodium chlorid to the
patient.

hypercholesterinemia (hi''per-ko-les'ter-in-e'-
me-ah). The presence of an excess of cholesterol
in the blood.

hypercholesterolemia (hi''per-ko-les-ter-ol-e'me-
ah) [Gr. *ὑπέρ* over + *cholesterol* + *αἷμα* blood].
Excess of cholesterol in the blood.

hypercholia (hi-per-ko'le-ah) [Gr. *ὑπέρ* over +
χολή bile]. Excessive secretion of bile.

hyperchromasia (hi-per-kro-ma'se-ah). Hyper-
chromatism.

hyperchromatic (hi''per-kro-mat'ik). Containing
an abnormally large number of chromosomes.

hyperchromatin (hi-per-kro'mat-in). The part of
the chromatin that stains with blue anilin dyes.

hyperchromatism, hyperchromatosis (hi-per-
kro'mat-izm, hi''per-kro-mah-to'sis) [Gr. *ὑπέρ*
over + *χρῶμα* color]. Excessive pigmentation;
especially a form of degeneration of a cell-nucleus
in which it becomes filled with particles of pigment,
or chromosomes. **macrocytar h.** See *hyper-
chromatic macrocythemia*, under *macrocythemia*.

hyperchromatopsia (hi-per-kro'mat-op'se-ah)
[Gr. *ὑπέρ* over + *χρῶμα* color + *ὄψις* vision]. A
condition in which all objects appear colored.

hyperchromemia (hi-per-kro-me'me-ah) [Gr. *ὑπέρ*
over + *χρῶμα* color + *αἷμα* blood]. A high color-
index of the blood.

hyperchromia (hi-per-kro'me-ah). See *hyper-
chromatism*.

hyperchylia (hi-per-ki'le-ah). Same as *hyper-
chlorhydria*.

hypercinesia (hi''per-sin-e'ze-ah). Same as *hyper-
kinesia*.

hypercoria (hi-per-ko're-ah). See *hyperkoria*.

hypercrinism (hi-per-kr'i'nizm) [Gr. *ὑπέρ* over +
κρίνειν to separate]. The bodily state caused by
excessive secretion of any endocrine gland.

hypercryalgasia (hi''per-kri-al'je'-ze-ah) [Gr. *ὑπέρ*
over + *κρύος* cold + *ἄλγος* pain]. Excessive sensi-
tiveness to cold.

hypercryesthesia (hi''per-kri-es-the'ze-ah) [Gr.
ὑπέρ over + *κρύος* cold + *αἴσθησις* sensation].
Hypercryalgasia.

hypercryesthesia (hi-per-kris-es-the'ze-ah). Hy-
percryesthesia.

hypercyanotic (hi''per-si-an-ot'ik). Extremely cy-
anotic.

hypercyesis (hi''per-si-e'sis) [Gr. *ὑπέρ* over +
κύησις gestation]. Superfetation.

hypercythemia (hi''per-si-the'me-ah) [Gr. *ὑπέρ*
over + *κύτος* cell + *αἷμα* blood]. Excess in the
number of red blood-corpuscles.

hypercytochromia (hi-per-si-to-kro'me-ah) [Gr.
ὑπέρ over + *κύτος* cell + *χρῶμα* color]. Increased
staining capacity of a blood-cell.

hypercytosis (hi''per-si-to'sis) [Gr. *ὑπέρ* over +
κύτος cell]. Hyperleukocytosis.

hyperdactylia (hi-per-dak-ti'e-ah) [Gr. *ὑπέρ* over
+ *δάκτυλος* finger]. The presence of super-
numerary fingers or toes.

hyperdiastole (hi-per-di-as'to-le) [Gr. *ὑπέρ* over + *diastole*]. Active dilatation of the heart.

hyperdicrotic (hi'per-di-krot'ik) [Gr. *ὑπέρ* over + *dicrotic*]. Exhibiting marked dicrotism.

hyperdicrotism (hi-per-dik'ro-tizm) [Gr. *ὑπέρ* over + *dicrotism*]. The quality of being hyperdicrotic; extreme dicrotism.

hyperdiemorrhysis (hi'per-di-em-or'is-is) [Gr. *ὑπέρ* over + *diá* through + *αἷμα* blood + *ῥύσις* flowing]. Capillary hyperemia.

hyperdistention (hi'per-dis-ten'shun). Excessive distention.

hyperdiuresis (hi'per-di-u-re'sis) [Gr. *ὑπέρ* over + *diuresis*]. Excessive secretion of urine.

hyperdontogeny (hi'per-don-toj'en-e). A third dentition.

hyperdynamia (hi'per-din-a'me-ah) [Gr. *ὑπέρ* over + *δύναμις* force]. Excessive muscular activity. **h. uteri**, excessive uterine contractions in labor.

hyperdynamic (hi-per-di-nam'ik). Characterized by hyperdynamia.

hyperemesis (hi-per-em'e-sis) [Gr. *ὑπέρ* over + *έμεσις* vomiting]. Excessive vomiting. **h. gravidarum**, the pernicious vomiting of pregnancy. **h. lactentium**, the vomiting of nursing babies.

hyperemia, **hyperæmia** (hi-per-e'me-ah) [Gr. *ὑπέρ* over + *αἷμα* blood]. Excess of blood in any part of the body (Andral). **active h.**, that due to increased inflow of blood. **arterial h.**, active hyperemia. **Bier's passive h.**, the induction of venous congestion by applying a thin rubber band, for the treatment of joint affections and inflammatory conditions. **constriction h.** See *Bier's passive h.* **fluxionary h.** Same as *active h.* **leptomeningeal h.**, congestion of the pia-arachnoid. **passive h.**, that due to decreased outflow of blood. **venous h.**, passive hyperemia.

hyperemotivity (hi'per-e-mo-tiv'it-e). Abnormally excessive emotivity; abnormal responsiveness to mild stimuli.

hyperencephalus (hi'per-en-sef'al-us) [Gr. *ὑπέρ* over + *ἐγκέφαλος* brain]. A monster-fetus with the brain exposed.

hyperendocrinism (hi'per-en-dok'rín-izm) [Gr. *ὑπέρ* over + *ἐνδον* within + *κρίνειν* to separate]. Abnormal activity of any of the organs of internal secretion.

hyperendocrisia (hi'per-en-do-kris'e-ah). Hyperendocrinism.

hyper eosinophilia (hi'per-e-o-sin-o-fil'e-ah). Excessive eosinophilia.

hyperephidrosis (hi'per-ef-id-ro'sis) [Gr. *ὑπέρ* over + *ἐπί* upon + *ιδρώς* sweat]. Excessive sweating.

hyperepinephrinemia (hi'per-ep-e-nef-rin-e'me-ah) [Gr. *ὑπέρ* over + *epinephrin* + Gr. *αἷμα* blood]. Same as *hyperadrenalemia*.

hyperepinephry (hi'per-ep-e-nef're) [Gr. *ὑπέρ* over + *ἐπινέφρος* adrenal body]. Excessive activity of adrenal secretion, causing heightened arterial tension.

hyperequilibrium (hi'per-e-kwíl-ib're-um). An excessive tendency to vertigo.

hypererethism (hi-per-er'eth-izm). Extreme irritability.

hyperergasia (hi'per-er-ga'se-ah) [Gr. *ὑπέρ* over + *έργον* work]. Abnormally increased functional activity.

hypererythrocythemia (hi'per-er'ith-ro-si-the'me-ah) [Gr. *ὑπέρ* over + *erythrocyte* + Gr. *αἷμα* blood]. Excess of red corpuscles in the blood.

hyperesophoria (hi'per-es-o-fó're-ah) [Gr. *ὑπέρ* over + *ἔσω* inward + *φορεῖν* to bear]. Upward and inward strabismus.

hyperesthesia (hi'per-es-the'ze-ah) [Gr. *ὑπέρ* over + *αἰσθησις* sensibility]. Excessive sensitiveness of the skin or of a special sense. **acoustic h.**,

auditory h., morbid sensitiveness of the ear to sounds. **cerebral h.**, that which is due to a cerebral lesion. **gustatory h.** Same as *hypergeusia*. **muscular h.**, muscular oversensitiveness to pain or fatigue. **olfactory h.** Same as *hyperosmia*. **optic h.**, abnormal sensitiveness of the eye to light. **sexual h.**, abnormal increase of the sexual impulse. **tactile h.** Same as *hyperaphia* or *hyperpselaphesia*.

hyperesthetic (hi'per-es-the't'ik). Pertaining to or affected with hyperesthesia.

hyperexophoria (hi'per-eks-o-fó're-ah) [Gr. *ὑπέρ* over + *ἐξω* outward + *φορός* bearing]. Upward and outward strabismus.

hyperextension (hi'per-eks-ten'shun). Extreme or excessive extension.

hyperfunctioning (hi-per-funk'shun-ing). Excessive functioning on the part of an organ.

hypergasia (hi-per-ga'se-ah) [Gr. *ὑπό* under + *ἔργον* work]. Decreased functional activity.

hypergenesis (hi-per-jen'es-is) [Gr. *ὑπέρ* over + *γένεσις* development]. Excessive development or hypertrophy.

hypergenetic (hi'per-jen-et'ik). Characterized by congenital hypertrophy of one or more parts or organs.

hypergenitalism (hi'per-jen'it'al-izm). Excessive activity of the internal secretion of the genital glands, resulting in precocious puberty, genital overdevelopment, etc.

hypergeusesthesia, **hypergeusia** (hi'per-gus-the'ze-ah, hi-per-gu'ze-ah) [Gr. *ὑπέρ* over + *γεῦσις* taste]. Excessive or abnormal acuteness of the sense of taste.

hypergeusia (hi-per-ju'se-ah) [Gr. *ὑπέρ* over + *γεῦσις* taste]. Hypergeusesthesia.

hypergigantosome (hi'per-jí-gan'to-so'mah) [Gr. *ὑπέρ* over + *γίγας* giant + *σῶμα* body]. Excessive tallness, or gigantism.

hyperglobulia (hi'per-glo-bu'le-ah) [Gr. *ὑπέρ* over + *L. globulus* globule]. Excess in the number of red globules in the blood.

hyperglobulism (hi-per-glob'u-lizm). Hyperglobulia.

hyperglycemia (hi'per-gli-se'me-ah) [Gr. *ὑπέρ* over + *γλυκός* sweet + *αἷμα* blood]. Excess of sugar in the blood.

hyperglycistia, **hyperglycystia** (hi-per-gli-sis'te-ah) [Gr. *ὑπέρ* over + *γλυκός* sweet + *ιστός* tissue]. Excess of sugar in the bodily tissues.

hyperglycogenolysis (hi-per-gli-ko-jen-ol'is-is). Excessive splitting up of glycogen, resulting in an excess of dextrose in the body.

hyperglycoplasmia (hi'per-gli-ko-plaz'me-ah). The presence of a greater amount than normal of sugar in the blood plasma.

hyperglycorrachia (hi'per-gli-ko-ra'ke-ah) [Gr. *ὑπέρ* excessive + *γλυκός* sweet + *ράχis* spine]. The presence of an excessive amount of sugar in the cerebrospinal fluid.

hyperglycosemia (hi'per-gli-ko-se'me-ah). Hyperglycemia.

hyperglycosuria (hi'per-gli-ko-su're-ah) [Gr. *ὑπέρ* excessive + *glycosuria*]. Extreme glycosuria.

hyperglykemia (hi'per-gli-ke'me-ah). Hyperglycemia.

hypergonadism (hi-per-go'nad-izm). Excessive ovarian or testicular secretion.

hyperhedonia (hi'per-he-do'ne-ah) [Gr. *ὑπέρ* over + *ἡδονή* pleasure]. Morbid increase of the feeling of pleasure in agreeable acts.

hyperhedonism (hi-per-he'do-nizm). Hyperhedonia.

hyperhemoglobinemia (hi'per-hem-o-glo-bin-e'me-ah). Extreme or excessive hemoglobinemia.

hyperhepatia (hi-per-he-pat'e-ah) [Gr. *ὑπέρ* over + *ἥπαρ* liver]. Hyperfunction of the liver.

hyperhidrosis, hyperidrosis (hi'per-hid-ro'sis, hi'per-id-ro'sis) [Gr. *ὑπέρ* over + *ἰδρῶς* sweat]. Excessive sweating.

hyperhydrochloria (hi'per-hi-dro-klo're-ah). Hyperchlorhydria.

hyperhydrochloridia (hi'per-hi-dro-klo-rid'e-ah). Hyperchlorhydria.

hyperhypercytosis (hi'per-hi-per-si-to'sis). Hyperleukocytosis in which the neutrophils are relatively increased.

hyperhypocytosis (hi'per-hi-po-si-to'sis). Leukopenia in which the proportion of neutrophils is abnormally large.

hyperideal (hi-per-i'de-al). An improved modification of Ehrlich's "606." See *salvarsan*.

hyperimmunity (hi-per-im-u'nit-e). Increased immunity.

hyperimmunization (hi'per-im-u-niz-a'shun). Introduction of organisms into the body beyond the point of establishment of immunity.

hyperingestion (hi'per-in-jes'tshun). Abnormally free ingestion of food or drink.

hyperinosemia (hi'per-in-o-se'me-ah) [Gr. *ὑπέρ* over + *ῖς* fiber + *αἷμα* blood]. An excess of fibrin in the blood.

hyperinosis (hi'per-in-o'sis) [Gr. *ὑπέρ* over + *ῖς* fiber]. Same as *hyperinosemia*.

hyperinsulinism (hi-per-in'su-lin-izm). Excessive secretion of insulin by the pancreas, resulting in hypoglycemia.

hyperinterrenopathy (hi'per-in-ter-re-nop'ath-e) [Gr. *ὑπέρ* over + *interrenal* + Gr. *πάθος* disease]. Any disease due to overactivity of the cortex of the suprarenal gland.

hyperinvolution (hi'per-in-vo-lu'shun). Too complete involution, as of the womb.

hyperisotonia (hi'per-i-so-to'ne-ah) [Gr. *ὑπέρ* over + *ῖσος* equal + *τόνος* tone]. Marked equality of tone or of tonicity.

hyperisotonic (hi'per-i-so-ton'ik) [Gr. *ὑπέρ* over + *ῖσος* equal + *τόνος* tension or tone]. Noting a serum containing more salt than is necessary to preserve the red corpuscles.

hyperkeratomycosis (hi'per-ker'at-o-mi-ko'sis) [*hyperkeratosis* + Gr. *μύκης* fungus]. Hyper trophy of a corneous tissue, due to a microphyte.

hyperkeratosis (hi'per-ker-at-o'sis) [Gr. *ὑπέρ* over + *κέρας* horn]. 1. Hypertrophy of the corneous layer of the skin, or any disease characterized by it. 2. Hypertrophy of the cornea. **h. excen'trica**. See *prokeratosis*. **h. lacuna'ris**, a condition in which the tonsillar crypts contain hard, firmly attached masses. **h. lin'guae**. See *black tongue*, under *tongue*. **h. subungua'lis**, hyperkeratosis affecting the nail-beds.

hyperketonuria (hi'per-ke-to-nu're-ah). The presence of an excessive quantity of ketone in the urine.

hyperkinesia, hyperkinesis (hi'per-kin-e'ze-ah, hi'per-kin-e'sis) [Gr. *ὑπέρ* over + *κίνησις* energy]. Preternatural or excessive mobility. **profes-sional h.**, occupation neurosis.

hyperkoria (hi-per-ko're-ah) [Gr. *ὑπέρ* over + *κόρος* satiety]. An early sense of satiety.

hyperlactation (hi-per-lak-ta'shun). Excessive secretion of milk.

hyperlethal (hi-per-le'thal). More than enough to cause death.

hyperleukocytosis (hi'per-lu'ko-si-to'sis) [Gr. *ὑπέρ* over + *λευκός* white + *κύτος* cell]. Excess in the number of leukocytes.

hyperlipemia (hi-per-li-pe'me-ah) [Gr. *ὑπέρ* over + *λίπη*]. Excess of fat in the blood.

hyperlipoidemia (hi-per-li-poi-de'me-ah) [Gr. *ὑπέρ* over + *λίποειδία*]. Excess of lipoids in the blood.

hyperliposis (hi-per-lip-o'sis) [Gr. *ὑπέρ* over + *λίπος*]. An excess of liposin in the blood-serum.

hyperlithic (hi'per-lith'ik). Containing an excess of lithic acid.

hyperlithuria (hi'per-lith-u're-ah). Excess of lithic (uric) acid in the urine.

hypermastia (hi-per-mas'te-ah) [Gr. *ὑπέρ* over + *μαστός* breast]. 1. The presence of one or more supernumerary mammary glands. 2. Hypertrophy of the mammary gland.

hypermature (hi'per-mat-ūr'). Past the stage of maturity.

hypermegasoma (hi'per-meg-ah-so'mah) [Gr. *ὑπέρ* over + *μέγας* great + *σῶμα* body]. Excessive tallness and size.

hypermesosoma (hi'per-mes-o-so'mah) [Gr. *ὑπέρ* over + *μέσος* middle + *σῶμα* body]. A stature somewhat exceeding the ordinary.

hypermetabolism (hi'per-met-ab'o-lizm). Abnormally increased utilization of material by the body; increased metabolism.

hypermetamorphosis (hi'per-met-ah-mor-fo'sis). Too rapid drift of thought-activity, leading to mental distraction and confusion, and forming a chief element in mania.

hypermetaplasia (hi'per-met-ap-la'se-ah). Abnormally increased metaplasia.

hypermetria (hi-per-me'tre-ah) [Gr. *ὑπέρ* over + *μέτρον* to measure]. Exaggerated extension of a part in a given direction; excessive range of movement.

hypermetrope (hi-per-met'rōp). A far-sighted person.

hypermetropia (hi'per-me-tro'pe-ah) [Gr. *ὑπέρ* over + *μέτρον* measure + *ὄψ* eye]. Far-sightedness; hyperopia. See *hyperopia*.

hypermicrosoma (hi'per-mi-kro-so'mah) [Gr. *ὑπέρ* over + *μικρός* small + *σῶμα* body]. A very low stature; marked dwarfishness.

hypernesia (hi-perm-ne'ze-ah) [Gr. *ὑπέρ* over + *μνήσις* memory]. Abnormal or extreme retentiveness of memory.

hypermorph (hi'per-morf) [Gr. *ὑπέρ* over + *μόρφη* form]. A person who is tall but of low sitting height, with bony and narrow arms and legs, slender body, narrow nose, shoulders, thorax, and lips. Cf. *mesomorph*.

hypermotility (hi'per-mo-til'it-e). Excessive or abnormal motility.

hypermyotonia (hi'per-mi-o-to'ne-ah) [Gr. *ὑπέρ* over + *μύς* muscle + *τόνος* tone]. Excess of muscular tonicity.

hypermyotrophy (hi'per-mi-ot-ro-fe) [Gr. *ὑπέρ* over + *μύς* muscle + *τροφή* nourishment]. Excessive development of the muscular tissue.

hypernanosoma (hi'per-na-no-so'mah) [Gr. *ὑπέρ* over + *νάνος* dwarf + *σῶμα* body]. A very low but not absolutely dwarfish stature.

hypernea (hi-per-ne'ah). Hypernoia.

hyperneocytosis (hi'per-ne-o-si-to'sis) [Gr. *ὑπέρ* over + *νεός* new + *κύτος* cell]. Hyperleukocytosis in which many immature forms of leukocytes are present.

hypernephroid (hi-per-nef'roid). Resembling the adrenal body.

hypernephroma (hi'per-nef-ro'mah) [Gr. *ὑπέρ* over + *νεφρός* kidney + *-ωμα* tumor]. A tumor derived from suprarenal tissue, either of the gland itself, or misplaced in the kidney or elsewhere.

hyperneurotization (hi'per-nu-rot-iz-a'shun) [Gr. *ὑπέρ* over + *νεῦρον* nerve]. The implantation of a foreign motor nerve into a muscle possessing its normal innervation in order to increase the energy force of the muscle.

hypernitremia, hypernitramia (hi'per-ni-tre'me-ah) [Gr. *ὑπέρ* over + *nitrogen* + Gr. *αἷμα* blood]. Excessive quantity of nitrogen in the blood.

hypernoia, hypernoia (hi-per-ne'ah) [Gr. *ὑπέρ* over + *νοῦς* mind]. Excessive mental activity.

hypernomic (hi-per-nom'ik) [Gr. *ὑπέρ* above + *νόμος* law]. Above the law; unrestrained, excessive.

hypernormal (hi-per-nor'mal). In excess of what is normal.

hypernormocytosis (hi-per-nor'mo-si-to'sis) [Gr. *ὑπέρ* over + *normocytosis*]. Excessive increase in the proportion of neutrophils in the blood.

hypernutrition (hi'per-nu-trish'un). Overfeeding and its ill effects.

hyperol (hi'per-ol). A solid preparation containing 34 per cent. of hydrogen dioxide. It is claimed to be two molecules of urea with one of hydrogen peroxid.

hyperotomorph (hi-per-on'to-morf) [Gr. *ὑπέρ* excessive + *ων* being + *μόρφη* form]. A person with a tendency to hyperthyroidism.

hyperonychchia (hi'per-o-nik'e-ah) [Gr. *ὑπέρ* over + *ὄνυξ* nail]. Hypertrophy of the nails.

hyperope (hi'per-öp). A far-sighted person.

hyperopia (hi-per-o'pe-ah) [Gr. *ὑπέρ* over + *ὤψ* eye]. Far-sightedness; the focusing of parallel rays behind the retina. **absolute h.**, that which can be partially corrected by accommodation. **axial h.**, that which is due to shortness of the anteroposterior axis of the eye. **curvature h.**, hyperopia due to changes in the curvature of the refracting surfaces. **facultative h.**, that which can be entirely corrected by the unaided accommodative power of the eye. **index h.**, hyperopia caused by deficient refractive power in the media of the eye. **latent h.**, that part of the total hyperopia that is constantly concealed by accommodative effort. **manifest h.**, that which may be corrected by accommodation aided by convex lenses. **relative h.**, that in which vision is distinct only when excessive convergence is made. **total h.**, manifest and latent hyperopia combined.

hyperorchidism (hi-per-or'kid-izm) [Gr. *ὑπέρ* over + *ὄρχις* testicle]. Abnormal activity of the internal secretion of the testicle.

hyperorexia (hi'per-o-reks'e-ah) [Gr. *ὑπέρ* over + *ὄρεξις* appetite]. Abnormal increase in the sensation of hunger. See *bulimia*.

hyperorthocytosis (hi'per-or-tho-si-to'sis) [Gr. *ὑπέρ* over + *ὀρθός* straight + *κύτος* cell]. Hyperleukocytosis in which the proportion of the various forms of leukocytes is normal.

hyperosmia (hi-per-oz'me-ah) [Gr. *ὑπέρ* over + *ὀσμή* smell]. Morbid sensitiveness to odors.

hyperosmotic (hi-per-os-mot'ik). Producing or caused by abnormally rapid osmosis.

hyperosphresia, hyperosphresis (hi'per-os-fre'ze-ah, hi'per-os-fre'sis) [Gr. *ὑπέρ* over + *ὀσφρησις* smell]. Same as *hyperosmia*.

hyperosteogeny (hi-per-os-te-o'jen-e) [Gr. *ὑπέρ* over + *ὀστέον* bone + *γενᾶν* to produce]. Hypertrophy of bone.

hyperostosis (hi'per-os-to'sis) [Gr. *ὑπέρ* over + *ὀστέον* bone]. Hypertrophy of bone; exostosis.

hyperovaria (hi'per-o-va're-ah) [Gr. *ὑπέρ* over + *ὄν* *ovarium* vary]. Sexual precocity in girls from excessive ovarian secretion.

hyperovarianism (hi'per-o-va're-an-izm). Hyperovaria.

hyperoxemia (hi-per-ok-se'me-ah) [Gr. *ὑπέρ* over + *ὀξύς* sharp + *αἷμα* blood]. Excessive acidity of the blood.

hyperoxidation (hi'per-ok-sid-a'shun). Excess in the amount of oxygen present.

hyperparasite (hi-per-par-as-it) [Gr. *ὑπέρ* over + *παράσιτος*]. A parasite that preys on a parasite; a parasite of a parasite.

hyperpepsia (hi-per-pep'se-ah) [Gr. *ὑπέρ* over + *πέψις* digestion]. Dyspepsia with excess of chlorids in the gastric juice.

hyperpepsinia (hi-per-pep-sin'e-ah). Abnormally profuse secretion of pepsin in the stomach.

hyperperistalsis (hi'per-per-e-stal'sis). Excessively active peristalsis.

hyperphalangism (hi'per-fa-lan'jizm). The ex-

istence of a supernumerary phalanx on a finger or toe.

hyperphonia (hi-per-fo'ne-ah) [Gr. *ὑπέρ* over + *φωνή* voice]. Excessive energetic phonation, as seen in stammerers.

hyperphoria (hi-per-fo're-ah) [Gr. *ὑπέρ* over + *φορῶς* bearing]. The elevation of one visual axis above the other.

hyperphosphine (hi-per-fos'fin). Calcium phosphoglycerite, $C_3H_7CaPO_3 \cdot 2H_2O$, a tonic and nerve stimulant: used in neurasthenia, headache, neuralgia, etc.

hyperphrenia (hi-per-fre'ne-ah) [Gr. *ὑπέρ* over + *φρήν* mind]. 1. Great mental excitement. 2. Excessive mental activity.

hyperpiesia (hi-per-pi-e'si-ah). A condition whose essential feature and earliest manifestation is hyperpiesis or elevated blood-pressure without discoverable cardiovascular changes (Allbutt).

hyperpiesis (hi'per-pi-e'sis) [Gr. *ὑπέρ* over + *πίεσις* pressure]. Abnormally high pressure, as elevated blood-pressure.

hyperpietic (hi'per-pi-et'ik). Showing abnormally high blood-pressure; also a person with high blood-pressure.

hyperpigmentation (hi'per-pig-men-ta'shun). Extremely marked pigmentation.

hyperpinealism (hi-per-pi'ne-al-izm). Abnormal activity of pineal gland.

hyperpituitarism (hi'per-pit-u'it-ar-izm). A condition due to pathologically increased activity of the pituitary gland, and marked by gigantism or akromegaly.

hyperplasia (hi-per-pla'ze-ah) [Gr. *ὑπέρ* over + *πλάσις* formation]. The abnormal multiplication or increase in number of the tissue elements. **polar h.**, excessive development at either extremity of the embryo, producing a monster with either two heads or three or more limbs.

hyperplasmia (hi-per-plaz'me-ah) [Gr. *ὑπέρ* over + *πλάσμα*]. 1. Excess in the proportion of blood-plasma to corpuscles. 2. Abnormally large size of erythrocytes through the absorption of plasma.

hyperplastic (hi-per-plas'tik). Pertaining to or characterized by hyperplasia.

hyperpnea, hyperpnoea (hi-per-pe'ne-ah) [Gr. *ὑπέρ* over + *πνοή* breath]. Abnormal exaggeration of the respiratory movements.

hyperporosis (hi-per-po-ro'sis). Excessive callus formation.

hyperpraxia (hi-per-praks'e-ah) [Gr. *ὑπέρ* over + *πρᾶξις* exercise]. Abnormal or maniacal activity.

hyperpresbyopia (hi'per-pres-be-o'pe-ah). Hypermetropia.

hyperprochoreisis (hi'per-pro-ko-re'sis) [Gr. *ὑπέρ* over + *πρό* forward + *χορεία* dance]. Abnormal increase of a motor propulsive function; specifically, hyperperistalsis.

hyperprosexis (hi'per-pro-sek'se-ah) [Gr. *ὑπέρ* over + *προσέξειν* to heed]. A condition in which the mind is occupied by one idea to the exclusion of others.

hyperproteosis (hi'per-pro-te-o'sis). A condition caused by an excess of protein in the diet.

hyperpselaphesia (hi'perp-sel-af-e'ze-ah) [Gr. *ὑπέρ* over + *ψηλάφρησις* touch]. Abnormal increase of tactile sensibility.

hyperpsychosis (hi'per-si-ko'sis) [Gr. *ὑπέρ* over + *ψυχή* mind]. Exaggeration of the function of thought in which flow of thought is abnormally rapid.

hyperpyremia, hyperpyræmia (hi'per-pi-re'me-ah) [Gr. *ὑπέρ* over + *πυρεία* fuel + *αἷμα* blood]. Excess of unoxidized carbonaceous matter in the blood.

hyperpyretic (hi'per-pi-ret'ik). Excessively feverish.

hyperpyrexia (hi'per-pi-reks'e-ah) [Gr. *ὑπέρ* over + *πυρεσσειν* to be feverish]. A high degree of fever.

hyperpyrexial (hi'per-pi-rek'se-al). Pertaining to hyperpyrexia.

hyperquantivalent idea (hi-per-quan-tiv'al-ent). See under *idea*.

hyperreflexia (hi-per-re-flex'e-ah) [Gr. *ὑπέρ* over + *reflex*]. Exaggeration of reflexes.

hyperresonance (hi-per-rez'o-nans). An exaggerated resonance.

hyperrhinoplasty (hi-per-ri'no-plat-e) [Gr. *ὑπέρ* over + *ῥίς* nose + *πλατύνω* wide]. Abnormally great breadth of the bridge of the nose, sometimes accompanied by hypertrophy of the bone.

interocular h., ocular hypertelorism.

hypersalivation (hi-per-sal-iv-a'shun). The condition in which saliva is secreted in abnormal quantities.

hypersecretion (hi-per-se-kre'shun). Excessive or too copious secretion. **gastric h.**, hyperchlorhydria.

hypersensibility (hi'per-sen-sib-il'it-e). See *anaphylaxis*.

hypersensitive (hi-per-sen'sit-iv). 1. Abnormally sensitive. 2. Having the specific or general ability to react with characteristic symptoms to the application or contact with certain substances (allergens) in amounts innocuous to normal individuals.

hypersensitization (hi'per-sen-sit-iz-a'shun). The process of rendering or the condition of being abnormally sensitive; especially the condition of anaphylaxis or increased susceptibility to infection. See *anaphylaxis*.

hyperskeocytosis (hi-per-ske'o-si-to'sis) [Gr. *ὑπέρ* over + *σκαλος* left + *κύτος* cell]. Same as *hyperneocytosis*.

hypersomnia (hi-per-som'ne-ah) [Gr. *ὑπέρ* over + *L. som'nus* sleep]. Pathologically excessive sleep.

hypersphyxia (hi-per-sfik'se-ah) [Gr. *ὑπέρ* over + *σφύξω* pulse]. Increased activity of the circulation with heightened blood-pressure.

hypersplenism, **hypersplenism** (hi-per-sple'ne-ah, hi-per-sple'nizm). Increased hemolytic spleen action.

hypersthenia (hi-per-sthe'ne-ah) [Gr. *ὑπέρ* over + *σθένος* strength]. Exalted strength or tonicity.

hypersthenuria (hi'per-sthen-u're-ah) [Gr. *ὑπέρ* over + *σθένος* strength + *οὐρον* urine]. Increased urinary secretion marked by elevation of the freezing-point of the urine on account of its being diluted.

hypersuprarenalism (hi-per-su-prah-re'nal-izm). Overfunction of the suprarenal capsule; hyperadrenalism.

hypersusceptibility (hi'per-sus-ep-tib-il'it-e). A condition of abnormal susceptibility to poisons, infective agents, or agents which in the normal individual are entirely innocuous, etc. The term is sometimes used improperly as synonymous with anaphylaxis.

hypersystole (hi-per-sis'to-le). Abnormal exaggeration of the systole.

hypersystolic (hi'per-sis-tol'ik). Characterized by hypersystole; having heart-beats of excessive force.

hypertarachia (hi'per-tar-ak'e-ah) [Gr. *ὑπέρ* over + *ταραχή* confusion]. Extreme irritability of the nervous system.

hypertelorism (hi-per-te'lor-izm) [Gr. *ὑπέρ* over + *τῆλε* far + *ὀρίζω* to separate]. Abnormal width between two organs or parts. **ocular h.**, a craniofacial deformity characterized by great breadth of the bridge of the nose with correspondingly great width between the eyes.

hypertension (hi-per-ten'shun) [Gr. *ὑπέρ* over + *tension*]. Abnormally high tension; especially high blood-pressure. **essential h.**, high blood-

pressure without the presence of any discoverable pathologic lesion.

hypertensive (hi-per-ten'siv). Characterized by increased blood-pressure; causing a rise of blood-pressure.

hypertensor (hi-per-ten'sor). Producing increased blood-pressure.

hyperthelia (hi-per-the'le-ah) [Gr. *ὑπέρ* over + *θηλή* nipple]. The presence of supernumerary nipples.

hyperthermal (hi-per-ther'mal). Marked by abnormally high temperature.

hyperthermalgia (hi'per-ther-mal-je'ze-ah) [Gr. *ὑπέρ* over + *θέρμη* heat + *ἄλγος* pain]. Abnormal sensitiveness to heat.

hypertherman (hi-per-ther'man). A sterile milk containing a definite dosage of *Bacterium coli* *bovinum* for injection in non-specific protein therapy. It produces marked general and local reactions.

hyperthermesthesia (hi-per-ther'mes-the'zhe-ah) [Gr. *ὑπέρ* over + *θέρμη* heat + *αἴσθησις* sensation]. Increased sensibility for heat.

hyperthermia (hi-per-ther'me-ah) [Gr. *ὑπέρ* over + *θέρμη* heat]. An abnormally high temperature.

hyperthermin (hi-per-ther'min). A preparation similar to ambrine.

hyperthermo-esthesia (hi-per-ther'mo-es-the'ze-ah). Abnormal sensitiveness to heat.

hyperthermy (hi-per-ther'me). Hyperthermia.

hyperthymia (hi-per-thi'me-ah) [Gr. *ὑπέρ* excessive + *θύμη* mind]. Excessive emotionalism.

hyperthymism (hi-per-thi'mizm). Hyperthymization.

hyperthymization (hi'per-thi-miz-a'shun) [Gr. *ὑπέρ* over + *thymus*]. Excessive activity of the thymus gland, producing a form of poisoning.

hyperthyrea (hi-per-thi're-ah). Hyperthyreosis.

hyperthyreosis, **hyperthyroidation** (hi'per-thi-re-o'sis, hi'per-thi-roid-a'shun) [Gr. *ὑπέρ* over + *thyroid*]. Overactivity of the thyroid gland, as in exophthalmic goiter.

hyperthyroid (hi-per-thi'roid). Marked by, or due to, hyperthyroidism.

hyperthyroidism (hi-per-thi'roi-dizm). A condition due to excessive functional activity of the thyroid gland.

hyperthyroidosis (hi'per-thi-ro-do'sis). Hyperthyroidism.

hypertonia (hi-per-to'ne-ah) [Gr. *ὑπέρ* over + *τόνος* tension]. Excessive tone, tension, or activity. **h. polycythæmica**, polycythemia with increased blood-pressure.

hypertonic (hi-per-ton'ik). Showing abnormally great tension.

hypertonicity (hi'per-to-nis'it-e). Hypertonia.

hypertonus (hi-per-to'nus). Hypertonia.

hypertoxic (hi-per-tok'sik). Excessively toxic.

hypertoxicity (hi-per-tok-sis'it-e). The condition of being hypertoxic.

hypertrichiasis, **hypertrichosis** (hi'per-trik-i'-as-is, hi'per-trik-o'sis) [Gr. *ὑπέρ* over + *θρίξ* hair]. An abnormal growth of hair; excessive hairiness. **h. partialis**, the occurrence of hair in patches where it does not normally grow. **h. universa'lis**, the presence of hair over all the body and limbs.

hypertrichophobia (hi'per-tri-ko-fo'be-ah). Worry over hypertrichiasis.

hypertrophia (hi-per-tro'fe-ah). Hypertrophy.

hypertrophic (hi-per-trof'ik). Pertaining to or marked by hypertrophy.

hypertrophy (hi-per'trof-e) [Gr. *ὑπέρ* over + *τροφή* nutrition]. The morbid enlargement or overgrowth of an organ or part (Leopoldt). **adaptive**

h., increased thickness of the walls of a hollow organ when the outflow is obstructed. **compensatory h.**, that which results from increased functional activity due to some physical defect. **complementary h.**, increase in size of the remaining part of an organ to take the place caused by loss of some portion of the organ. **concentric h.**, increased thickness of the walls of an organ, with no enlargement and with diminished capacity. **eccentric h.**, hypertrophy of a hollow organ, with dilatation of its cavity. **false h.**, increase in only one constituent element, more commonly the stroma. **functional h.**, hypertrophy of an organ or part caused by its increased activity. **Marie's h.**, enlargement of the soft parts of the joints resulting from periostitis. **numeric h.**, that which is due to an increased number of structural elements. **physiologic h.**, hypertrophy not due to an increase in the number of structural elements. **pseudomuscular h.**, pseudohypertrophic paralysis. **quantitative h.**, hyperplasia. **simple h.**, that which is due to a simple increase of the number of structural elements. **simulated h.**, increase in the size of a part (as the teeth), due to absence of the normal attrition. **true h.**, that which is due to an increase of all the component elements. **vicarious h.**, hypertrophy of an organ in consequence of the failure of action of another organ of allied function.

hypertropia (hi-per-tro'pē-ah) [Gr. *ὑπέρ* over + *τρέπειν* to turn]. Elevation of one of the visual axes.

hyperuresis (hi-per-u-re'sis). Polyuria.

hyperuricemia (hi'per-u-ris-e'mē-ah). Excess of uric acid in the blood.

hypervaccination (hi-per-vak-sin-a'shun). A second inoculation of an immunized animal with enough antitoxin to enable it to afford a serum protective to other animals.

hypervascular (hi-per-vas'ku-lar). Extremely vascular.

hypervenosity (hi-per-ve-nos'it-e). Excessive development of the venous system.

hyperviscosity (hi'per-vis-kos'it-e). Excessive viscosity.

hypervolemia (hi'per-vol-e'mē-ah) [Gr. *ὑπέρ* over + *volume* + Gr. *αἷμα* blood]. Increased blood volume.

hypesthesia, hypæsthesia (hi-pes-the'ze-ah) [Gr. *ὑπό* under + *αἰσθῆσις* sensation]. Impairment or lessening of tactile sensibility.

hypha (hi'fah), pl. *hyphæ* [L.]. One of the filaments composing the mycelium of a fungus.

hyphedonia (hi-he-do'ne-ah) [Gr. *ὑπό* under + *ἡδονή* pleasure]. Morbid diminution of the feeling of pleasure in acts that normally give pleasure.

hyphemia (hi-fe'mē-ah) [Gr. *ὑπό* under + *αἷμα* blood]. 1. Oligemia or deficiency of blood. 2. Hemorrhage within the eye.

hyphidrosis (hi-fid-ro'sis) [Gr. *ὑπό* under + *ιδρώς* sweat]. Too scanty perspiration.

hypogonic, hypogenous (hi-fō-jen'ik, hi-fōj'en-us). Produced by hyphomycetes.

Hyphomycetes (hi'fo-mi-se'tēz), pl. [Gr. *ὥφῃ* web + *μύκης* fungus]. A group of fungi not otherwise classified, because their life history is not well known and hence called *fungi imperfecti*.

hyphomycetic (hi'fo-mi-set'ik). Due to the presence of mold-fungi.

hyphomycosis (hi-fō-mi-ko'sis). Infection with lymphomycetes. **h. des'truens equi**. See *leeches*.

hypinosis (hip-in-o'sis) [Gr. *ὑπό* under + *ἰνός, ἴς* fiber]. A scantiness of the fibrin elements of the blood; decreased coagulability of the blood.

hypinotic (hip-in-o'ik). Pertaining to, or characterized by, hypinosis.

hypisotonic (hip-i-so-ton'ik). Less than isotonic.

hypnacetin (hip-nas'et-in). A phenol and acetophenone derivative, $\text{CH}_3\text{CO-NH-C}_6\text{H}_4\text{-OCH}_3\text{CO-C}_6\text{H}_5$, in transparent crystals: hypnotic and antiseptic. Dose, 3-4 gr. (0.2-0.25 gm.).

hypnagogic state (hip-nag-oj'ik). See under *state*.

hypnagogue (hip'pag-og) [Gr. *ὑπνος* sleep + *ἀγωγός* leading]. Hypnotic.

hypnal (hip'nal) [Gr. *ὑπνος* sleep]. Monochloral hydrate antipyrin, $\text{C}_{11}\text{H}_{12}\text{N}_2\text{O}\cdot\text{CCl}_3\cdot\text{CH}(\text{OH})_2$, a colorless, crystalline preparation of antipyrin and chloral hydrate, soluble in 15 parts of water: used as a hypnotic and analgesic. Dose, 15-30 gr. (1-2 gm.).

hypnalgia (hip-nal'je-ah) [Gr. *ὑπνος* sleep + *ἄλγος* pain]. Pain that recurs during sleep.

hypnapagogic (hip'nap-ag-oj'ik) [Gr. *ὑπνος* sleep + *ἀπό* away + *ἀγῶγός* leading]. Preventing sleep.

hypnesthesia (hip-nes-the'ze-ah) [Gr. *ὑπνος* sleep + *αἰσθῆσις* sensation]. Sleepiness.

hypnic (hip'nik) [Gr. *ὑπνικός*]. Inducing or pertaining to sleep.

hypno-acetin (hip'no-as'et-in). A proprietary hypnotic, acetophenonacetylaminophenolester, $\text{C}_6\text{H}_5\text{O}\cdot\text{CH}_2\cdot\text{CO}\cdot\text{C}_6\text{H}_5(\text{NH}\cdot\text{CO}\cdot\text{CH}_3)$. Dose, 2-4 gr. (0.13-0.25 gm.).

hypnocyst (hip'no-sist) [Gr. *ὑπνος* sleep + *κύστις* cyst]. A quiescent cyst.

hypnogen (hip'no-jen). Barbitol.

hypnogenic, hypnogenetic, hypnogenous (hip-no-jen'ik, hip'no-jen-et'ik, hip-noj'en-us) [Gr. *ὑπνος* sleep + *γενεῖν* to produce]. Inducing sleep or hypnotism.

hypnoid, hypnoidal (hip'noid, hip-noi'dal). Resembling hypnosis or the hypnotic state.

hypnoidization (hip'noi-diz-a'shun). The production of light hypnosis or the hypnoid state. See under *state*.

hypnolepsy (hip'no-lep-se) [Gr. *ὑπνος* sleep + *ληψίς* seizure]. Abnormal sleepiness.

hypnology (hip-noi'o-je) [Gr. *ὑπνος* sleep + *λόγος* treatise]. The sum of what is known regarding sleep and hypnotism.

hypnonarcosis (hip'no-nar-ko'sis). Light hypnosis combined with narcosis.

hypnone (hip'nōn) [Gr. *ὑπνος* sleep]. See *acetalphenone*.

hypnopompic (hip-no-pom'pik) [Gr. *ὑπνος* sleep + *πομπή* procession]. Persisting after sleep; applied to visions or dreams that persist prior to complete awakening.

hypnopyrin (hip-no-pi'rin). A crystalline compound, soluble in water, being a chlorin derivative of quinin. It is hypnotic, analgesic, and antipyretic, and is used in rheumatism and various forms of neuralgia. Dose, 4 gr. (0.26 gm.).

hypnosia (hip-no'ze-ah) [Gr. *ὑπνος* sleep]. Unconquerable drowsiness.

hypnosis (hip-no'sis) [Gr. *ὑπνος* sleep]. 1. Abnormal sleep; hypnotism. 2. The approach or production of sleep.

hypnosophy (hip-no'so-fe) [Gr. *ὑπνος* sleep + *σοφία* wisdom]. The study of sleep and its phenomena.

hypnotal (hip'no-tal). See *diethylxylacetyl-urea*.

hypnototherapy (hip-no-ther'ap-e) [Gr. *ὑπνος* sleep + *θεραπεία* treatment]. Treatment of disease by hypnotism.

hypnotic (hip-not'ik) [Gr. *ὑπνωτικός*]. 1. Inducing sleep. 2. Pertaining to or of the nature of hypnosis. 3. A drug that induces sleep. The true hypnotics produce normal sleep, and include chloral, chloralamid, sulphonal, hypnal, hypnone, paraldehyd, somnal, acetanilid, uval, urethan. Hypnotics include also chloroform, opium,

ether, and other drugs that have an anodyne effect. **indirect h's**, agents that induce sleep by curing conditions that interfere with it, as iron in anemia, digitalis in vascular relaxation, etc.

hypnotism (hip'no-tizm) [Gr. *ὑπνος* sleep]. A condition of artificially induced sleep or of a trance resembling sleep. It is induced by having the patient gaze steadily at a bright spot, with relaxation of will power, and by making passes before the eyes. It has been used to produce anesthesia and to influence the patient by means of suggestion while in the hypnotic state.

hypnotist (hip'no-tist). One who performs hypnotism.

hypnotization (hip'no-tiz-a'shun). The induction of hypnotism.

hypnotize (hip'no-tiz). To put into a state of hypnotism.

hypnotoxin (hip-no-tok'sin). A toxin which is supposed to accumulate during the waking hours, until finally it is sufficient to inhibit the activity of the cortical cells and thus induce sleep.

hypo (hi'po). 1. A popular designation of hypochondriasis. 2. A contraction for sodium hyposulphite, used as a photographic fixing agent.

hypo- [Gr. *ὑπό* under]. A prefix denoting a lack or deficiency; also a position under or beneath. In chemistry, it denotes that the principal element in the compound is combined in its lowest state of valence.

hypo-acidity (hi'po-as-id'it-e). Deficiency of acid; lack of normal acidity.

hypo-activity (hi'po-ak-tiv'it-e). Diminished activity.

hypo-adenia (hi'po-ad-e'ne-ah) [Gr. *ὑπό* under + *ἀδήν* gland]. Defective glandular activity.

hypo-adrenalemia (hi'po-ad-re-nal-e'me-ah). The presence of an abnormally small amount of adrenal secretion in the blood.

hypo-adrenalism (hi'po-ad-re'nal-izm). Hypoadrenia.

hypo-adrenia (hi'po-ad-re'ne-ah). Deficiency of adrenal activity.

hypo-alimentation (hi'po-al-im-en-ta'shun). Insufficient nourishment.

hypo-alkaline (hi-po-al'kal-in). Less alkaline than normal.

hypo-alkalinity (hi'po-al-kal-in'it-e). The state of being less alkaline than normal.

hypo-alonemia (hi'po-al-o-ne'me-ah) [Gr. *ὑπό* under + *ἄλς* salt + *αἷμα* blood]. A deficiency of salts in the blood.

hypo-amino-acidemia (hi'po-am'in-o-as-id-e'me-ah). The presence of less than the normal amount of amino-acids in the blood.

hypo-azoturia (hi'po-a-zo-tu're-ah) [Gr. *ὑπό* under + *Λ. azotum* nitrogen + Gr. *οὔρον* urine]. Diminished excretion of nitrogenous material in the urine.

hypobaropathy (hi-po-bar-op'ath-e) [Gr. *ὑπό* under + *βᾶρος* pressure + *πάθος* disease]. The disturbances experienced in high altitudes; aviator's disease, mountain sickness.

hypoblast (hi'po-blast) [Gr. *ὑπό* under + *βλαστός* germ]. The innermost of the layers of the blastoderm, or primitive embryo; the endoderm. From it are developed the epithelium of the alimentary canal and of the organs connected with it and that of the air-passages.

hypoblastic (hi-po-blas'tik). Pertaining to the hypoblast.

Hypobos'ca ru'fipes. A fly of South Africa whose bite transmits the *Trypanosoma theileri*.

hypobromite (hi-po-bro'mit). 'Any salt of hypobromous acid.

hypobulia (hi-po-bu'le-ah) [Gr. *ὑπό* under + *βουλή* will]. Abnormal feebleness of the will.

hypocalcemia (hi'po-kal-se'me-ah) [Gr. *ὑπό* under + *calcium* + *αἷμα* blood]. Reduction of the blood calcium below normal.

hypocapnia (hi-po-kap'ne-ah) [Gr. *ὑπό* under + *κάπνος* smoke]. Deficiency of carbon dioxide in the blood.

hypocelom, hypocœlom (hi-po-se'lom) [Gr. *ὑπό* under + *κοίλωμα* hollow]. The ventral portion of the celom of any embryonic cranial animal.

hypocenesesthesia (hi'po-sen-es-the'ze-ah) [Gr. *ὑπό* over + *cenesthesia*]. Lack of the normal sense of well-being, such as is seen in hypochondria.

hypochlorhydria (hi'po-klor-hid're-ah) [Gr. *ὑπό* under + *χλωρός* green + *ὕδωρ* water]. Too small a proportion of hydrochloric acid in the gastric juice.

hypochlorite (hi-po-klo'rīt) [Gr. *ὑπό* under + *χλωρός* green]. Any salt of hypochlorous acid.

hypochlorization (hi'po-klo-riz-a'shun). Reduction of the amount of salt, sodium chlorid, in the diet.

hypochloruria (hi'po-klo-ru're-ah) [Gr. *ὑπό* under + *chlorid* + Gr. *οὔρον* urine]. Deficiency of chlorids in the urine.

hypcholesteremia (hi'po-ko-les-ter-e'me-ah). Decrease of cholesterol in the blood.

hypochondria (hi-po-kon'dre-ah). 1. Plural of *hypochondrium*. 2. Same as *hypochondriasis*.

hypochondriac (hi-po-kon'dre-ak) [Gr. *ὑπό* under + *χόνδριος* cartilage]. 1. Pertaining to the hypochondrium or to hypochondriasis. 2. A person affected with hypochondriasis.

hypochondriacal (hi-po-kon-dri'ak-al). Affected with hypochondriasis.

hypochondriasis (hi'po-kon-dri'as-is) [so called because the hypochondrium, and especially the spleen, was supposed to be the seat of this disorder]. Morbid anxiety about the health, often associated with a simulated disease and more or less pronounced melancholia.

hypochondrium (hi-po-kon'dre-um), pl. *hypochondria* [Gr. *ὑπό* under + *χόνδριος* cartilage]. The upper lateral region of the abdomen next below the lowest rib.

hypochordal (hi-po-kor'dal). Situated on the ventral side of the spinal cord.

hypochromatic (hi'po-kro-mat'ik). Containing an abnormally small number of chromosomes.

hypochromatism (hi-po-kro'mat-izm) [Gr. *ὑπό* under + *chromatin*]. Deficiency of the chromatin in a cell-nucleus.

hypochromatosis (hi'po-kro-mat-o'sis). The gradual fading and disappearance of the nucleus (the chromatin) of a cell. Called also *nuclear solution*.

hypochromemia (hi'po-kro-me'me-ah) [Gr. *ὑπό* under + *χρώμα* color + *αἷμα* blood]. A condition in which the blood has an abnormally low color-index.

hypochromia (hi-po-kro-me'ah) [Gr. *ὑπό* under + *χρώμα* color]. Deficiency of pigmentation or of coloring.

hypochrosis (hi-po-kro'sis) [Gr. *ὑπό* under + *χρώσις* coloring]. Anemia in which there is an abnormally small amount of hemoglobin in the blood.

hypochylia (hi-po-ki'le-ah) [Gr. *ὑπό* under + *χυλός* chyle]. Deficiency of chyle or of digestive ferments.

hypocinesia, hypocinesis (hi'po-sin-e'ze-ah, hi'-po-sin-e'sis) [Gr. *ὑπό* under + *κίνησις* movement]. Hypokinesis.

hypocist (hi'po-sist). Hypocistis.

hypocistis (hi-po-sis'tis). The juice and extract of various species of *Cytinus*, as of *C. hypocistis* of southern Europe: astringent.

hypocœlom (hi-po-se'lom). Hypocelom.

hypocolasia (hi-po-ko la'zhah) [Gr. ὑπό under + κολασία hindering]. Abnormal weakness of the inhibiting mechanism of the body.

hypocondylar (hi-po-kon'dil-ar). Below a condyle.

hypocone (hi'po-kōn) [Gr. ὑπό under + κώνος cone]. The distolingual cusp of an upper molar tooth.

hypoconid (hi-po-ko'nid). The distobuccal cusp of a lower molar tooth.

hypoconule (hi-po-kon'ul). The distal, or fifth, cusp of an upper molar tooth.

hypoconulid (hi-po-kon'u-lid). The distal, or fifth cusp, of a lower molar tooth.

hypocrinism (hi-po-kri'nism) [Gr. ὑπό under + κρίνειν to secrete]. A bodily state due to deficient secretion of any endocrine gland.

hypocyclosis (hi'po-si-klō'sis) [Gr. ὑπό under + κύκλος circle]. Insufficiency of accommodation due either to undue rigidity of the crystalline lens (lenticular h.) or to weakness of the ciliary muscle (ciliary h.).

hypocystotomy (hi'po-sis-tot'o-me) [Gr. ὑπό under + cystotomy]. The surgical opening of the bladder through the perineum.

hypocytosis (hi'po-si-to'sis) [Gr. ὑπό under + κύτος cell]. Defect or scantiness of corpuscles in the blood.

hypoderm (hi'po-derm) [Gr. ὑπό under + δέρμα skin]. 1. The subcutaneous tissues. 2. A hypodermic injection.

Hypoderma (hi-po-der'mah) [Gr. ὑπό under + δέρμα skin]. A genus of warble flies of the family Eristidae which cause myiasis of the skin.

H. bo'vis, a species which infests cattle, seriously damaging the hide and interfering with the nutrition of the animal. It sometimes causes a "creeping eruption" in man. **H. linea'ris**, **H. linea'ta**, a warble fly of cattle in the United States.

Hypoderma bovis and its larva.

hypodermatoclysis (hi'po-der-mat-ok'lis-is). Hypodermoclysis.

hypodermatotomy (hi'po-der-mat'o-me) [Gr. ὑπό under + δέρμα skin + τέμνειν to cut]. Subcutaneous incision.

hypodermic, **hypodermatic** (hi-po-der'mik, hi'po-der-mat'ik) [Gr. ὑπό under + δέρμα skin]. Applied or administered beneath the skin.

hypodermoclysis (hi'po-der-mok'lis-is) [Gr. ὑπό under + δέρμα skin + κλύσις injection]. The introduction, into the subcutaneous tissues, of fluids, especially physiologic salt solution, in large quantity.

hypodermooxygenator (hi-po-der'mo-ok'se-jen-a-tor). An apparatus for giving oxygen subcutaneously for the treatment of dyspnea.

hypodynamia (hi'po-di-nam'e-ah). Diminished power. **h. cor'dis**, diminished cardiac power.

hypodynamic (hi-po-di-nam'ik) [Gr. ὑπό under + δύναμις power]. Of diminished power.

hypoema (hi-po-e'mah) [Gr. ὑπό under + αἷμα blood]. Hyphemia.

hypo-endocrinism (hi'po-en-dok'rin-izm) [Gr. ὑπό under + ἔνδον within + κρίνειν to secrete]. Abnormally decreased activity of the organs of internal secretion.

hypo-endocrisia (hi'po-en-do-kris'e-ah). Hypo-endocrinism.

hypo-eosinophilia (hi'po-e-o-sin-o-fil'e-ah). Decrease in the eosinophil leukocytes of the blood.

hypo-epinephry (hi'po-ep-e-nef're) [Gr. ὑπό under + ἐπί upon + νεφρός kidney]. Inadequacy of the adrenal secretion.

hypo-equilibrium (hi'po-e-kwil-ib're-um). Unusual freedom from tendency to vertigo.

hypo-esophoria (hi'po-es-o-fo're-ah). Hypophoria combined with esophoria; a downward and inward strabismus.

hypo-exophoria (hi'po-eks-o-fo're-ah). Hypophoria combined with exophoria; a downward and outward strabismus.

hypofunction (hi-po funk'shun). Diminished function.

hypogastric (hi-po-gas'trik) [L. hypogast'ricus]. Of or pertaining to the hypogastrium.

hypogastrium (hi-po-gas'tre-um) [Gr. ὑπό under + γαστήρ stomach]. The lower median anterior region of the abdomen.

hypogenesis (hi-po-jen'es-is) [Gr. ὑπό under + γένεσις production]. Defective growth or development. **polar h.**, defective development at either extremity of the embryo, resulting in some monstrosity.

hypogenetic (hi'po-jen-et'ik). Showing defective development.

hypogenitalism (hi-po-jen'it-al-izm). A eunuchoid condition due to defect of the internal secretion of the testicle or ovary.

hypogeusia (hi-po-gu'ze-ah) [Gr. ὑπό under + γεύσις taste]. Impairment of the sense of taste.

hypogigantosoma (hi'po-ji-gan-to-so'mah) [Gr. ὑπό under + γίγας giant + σῶμα body]. Great height and size, not amounting to true gigantism.

hypoglobulia (hi'po-glo-bu'le-ah) [hypo- + globule]. Deficiency in the number of blood-corpuscles.

hypoglossal (hi-po-glos'al) [Gr. ὑπό under + γλῶσσα tongue]. Situated under the tongue. See also *nerves*, *table of*.

hypoglottis (hi-po-glot'is) [Gr. ὑπό under + γλῶσσα tongue]. 1. The under side or part of the tongue. 2. See *rana*.

hypoglycemia (hi-po-gli-se'me-ah) [Gr. ὑπό under + γλυκύς sweet + αἷμα blood]. A deficiency of sugar in the blood.

hypoglycogenolysis (hi-po-gli'ko-jen-ol'is-is). Defective glycogenolysis.

hypognathous (hi-pog'na-thus) [Gr. ὑπό under + γνάθος jaw]. 1. Having a protruding lower jaw. 2. Of the nature of a hypognathus.

hypognathus (hi-pog'na-thus) [Gr. ὑπό under + γνάθος jaw]. A monster-fetus with the head on the lower jaw.

hypogonadia (hi'po-go-nad'e-ah). Hypogonadism.

hypogonadism (hi-po-go'nad-izm). Decreased secretion of the internal secretion of the gonads; eunuchoidism.

hypohemia (hi-po-he'me-ah) [Gr. ὑπό under + αἷμα blood]. Anemia.

hypohepatia (hi'po-hep-at'e-ah) [Gr. ὑπό under + ἥπαρ liver]. Deficient functioning of the liver.

hypohidrosis (hi'po-hid-ro'sis) [Gr. ὑπό under + ἵδρωσις sweating]. Too scanty perspiration.

hypohydrochloria (hi'po-hi-dro-klo're-ah). Hypochlorhydria.

hypohyloma (hi'po-hi-lo'mah). A tumor due to hyperplasia of hylic tissues.

hypohypnotic (hi'po-hip-not'ik). Marked by light sleep or hypnosis.

hypohypophysism (hi'po-hi-pof'is-izm). Same as *hypopituitarism*.

hypo-idrosis (hi'po-id-ro'sis). Hypohidrosis.

hypo-inosemia (hi'po-in-o-se'me-ah) [Gr. ὑπό under + ἴς, ἰνός fiber + αἷμα blood]. Decreased coagulability of the blood.

hypo-insulinism (hi'po-in'su-lin-izm). Deficient secretion of insulin by the pancreas resulting in diabetes.

hypo-isotonic (hi'po-i-so-tón'ik). Less than isotonic; said of a solution having a lesser osmotic power than another.

hypokinesia (hi'po-kin-e'ze-ah). Hypokinesis.

hypokinesis (hi'po-kin-e'sis) [Gr. ὑπό under + κίνησις motion]. Diminution of motor function or activity.

hypokinetic (hi'po-kin-et'ik). Characterized by decreased functional activity.

hypokolasia (hi'po-ko-la'ze-ah) [Gr. ὑπό under + κολασία hindrance]. Functional weakness of the inhibiting mechanism.

hypolepiderma (hi'po-lep-id-o'mah) [Gr. ὑπό under + λεπίς scale + -ωμα tumor]. A tumor formed by hyperplasia of a hypoblastic tissue.

hypoleukemia, hypoleukæmia (hi'po-lu-ke-me-ah). Same as *hypoleukocytosis*.

hypoleukocytosis (hi'po-lu'ko-si-to'sis). Deficiency of leukocytes in the blood.

hypoleukomatosis (hi'po-lu-ko-mat-o'sis). Hypalbuminosis.

hypoliposis (hi-po-lip-o'sis). Deficiency of fat in the blood-serum or tissues.

hypolymphemia (hi'po-lim-fe-me-ah) [Gr. ὑπό under + λυμφή + αἷμα blood]. Abnormal deficiency in the proportion of lymphocytes in the blood.

hypomania (hi-po-ma'ne-ah) [Gr. ὑπό under + μανία madness]. Mania of a moderate type.

hypomastia, hypomazia (hi-po-mas'te-ah, hi-po-ma'ze-ah) [Gr. ὑπό under + μαστός, μαζός breast]. Abnormal smallness of the mammary glands.

hypomedication (hi'po-med-ik-a'shun). Hypodermic medication.

hypomegasoma (hi'po-meg-as-o'mah) [Gr. ὑπό under + μέγας great + σῶμα body]. Tallness; tall stature.

hypomelancholia (hi'po-mel-an-ko'le-ah) [Gr. ὑπό under + μελαγχολία melancholia]. Melancholia with but slight mental disorder.

hypomere (hi'po-mér). The part of the mesoderm which develops into the walls of the pleuroperitoneal cavity.

hypomesosoma (hi'po-mes-o-so'mah) [Gr. ὑπό under + μέσος middle + σῶμα body]. A stature somewhat below the medium.

hypometabolism (hi'po-met-ab-o-lizm) [Gr. ὑπό under + μεταβολισμός metabolism]. Abnormally decreased utilization of any substance by the body in metabolism.

hypometria (hi-po-me'tre-ah) [Gr. ὑπό under + μετρέω to measure]. Diminished range of movement; a condition in which the movement falls short of reaching the intended point.

hypomicron (hi-po-mi-kron). See *submicron*.

hypomicrosoma (hi'po-mi-kro-so'mah) [Gr. ὑπό under + μικρός small + σῶμα body]. The very lowest normal stature.

hypomnesia (hi-pom-ne'sis) [Gr. ὑπό under + μνήσις memory]. Defective memory.

hypomotility (hi'po-mo-til'it-e). Deficient power of movement in any part.

hypomyotonia (hi'po-mi-o-to'ne-ah) [Gr. ὑπό under + μῦς muscle + τόνος tone]. Deficient muscular tonicity.

hypomyxia (hi-po-miks'e-ah) [Gr. ὑπό under + μύξα mucus]. Decreased secretion of mucus.

hyponanosoma (hi'po-na-no-so'mah) [Gr. ὑπό under + νάνος dwarf + σῶμα body]. The extreme of dwarfishness, or nanism.

hyponea (hi-po-ne'ah). Hyponoia.

hyponeocytosis (hi'po-ne'o-si-to'sis) [Gr. ὑπό under + νέος new + κύτος cell]. Leukopenia with immature forms of leukocytes present in the blood.

hyponoia (hi-po-noi'ah) [Gr. ὑπό under + νοῦς mind]. Sluggish mental activity.

hyponomoderma (hi'po-nom-o-der'mah). See *creeping eruption*, under *eruption*.

hyponychial (hi-po-nik'e-al). Beneath a nail.

hyponychium (hi-po-nik'e-um) [Gr. ὑπό under + ὄνυξ nail]. The epidermic layer upon which the body of the nail rests.

hyponychion (hi-pón'ik-on) [Gr. ὑπό under + ὄνυξ nail]. Ecchymosis beneath the nail.

hypo-orthocytosis (hi'po-or'tho-si-to'sis) [Gr. ὑπό under + ὀρθός regular + κύτος cell]. Leukopenia in which the relative proportion of the various forms of leukocytes is maintained.

hypo-ovaria (hi'po-o-va're-ah). Defective endocrine action of the ovaries.

hypopancreatism (hi-po-pan'kre-at-izm). Diminished pancreatic activity.

hypoparathyrosis (hi'po-par-ah-thi-re-o'sis). The condition produced by defective action of the parathyroids or by the removal of those bodies.

hypoparathyroidism (hi'po-par-ah-thi'roi-dizm). Insufficiency of the parathyroid glands.

hypopepsia (hi-po-pep'se-ah) [Gr. ὑπό under + πέψις digestion]. Impairment of digestion, due to deficient secretion of the gastric ferments.

hypopepsinia (hi-po-pep-sin'e-ah). Deficiency in the pepsin secretion of the stomach.

hypophalangism (hi'po-fal-an'jizm). Deficiency in the number of phalanges of a finger or toe.

hypopharyngoscope (hi-po-far-in'go-skōp). An instrument for inspecting the lower part of the pharynx.

hypopharyngoscopy (hi'po-far-in-gos'ko-pe). Examination of the lower part of the pharynx.

hypopharynx (hi-po-far'inks). The lower or laryngeal part of the pharynx.

hypophen (hi'po-fen). A proprietary extract of the pars nervosa and the pars intermedia of the hypophysis.

hypophonia (hi-po-fō'ne-ah) [Gr. ὑπό under + φωνή voice]. Defective speech from incoördination of the muscles of vocalization.

hypophoria (hi-po-fō're-ah) [Gr. ὑπό under + φόρος bearing]. The condition in which the visual axis of one eye falls below that of the other.

hypophosphite (hi-po-fos'fit). Any salt of hypophosphorous acid. See under *calcium*.

hypophosphites, syrup of (hi-po-fos'fits) [L. *syrupus hypophosphitum*]. A syrup of the hypophosphites of calcium, potassium, and sodium; useful in phthisis, scrofula, and rickets. Dose, 1-2 fl.dr. (4-8 c.c.).

hypophrenia (hi-po-fre'ne-ah) [Gr. ὑπό below + φρήν mind]. Feeble-mindedness.

hypophrenic (hi-po-fren'ik) [Gr. ὑπό under + φρήν diaphragm]. 1. Below the diaphragm. 2. Feeble-minded.

hypophrenosis (hi'po-fren-o'sis). Southard's term for feeble-mindedness, including idiocy, imbecility, enormity, and subnormality.

hypophyseal, hypophysial (hi-po-fiz'e-al). Pertaining to a hypophysis, especially the pituitary body.

hypophysectomize (hi-pof-iz-ek'to-mīz). To remove the hypophysis.

hypophysectomy (hi-pof-is-ek'to-me) [*hypophysis* + Gr. ἐκτομή excision]. Surgical removal of the hypophysis or pituitary body.

hypophyseoprivic, hypophyseoprivous (hi-po-fiz'e-o-priv'ik, -op'riv-us). Due to deficiency of the internal secretion of the pituitary body; dyspituitarism.

hypophysin (hi-pof'is-in). A phosphorous body secreted by the posterior lobe of the hypophysis and having the power of increasing the action of the heart. Hypophysin from the hypophysis of the ox is used as a therapeutic agent in acromegalia.

hypophysis (hi-pof'is-is) [Gr. ὑπό under + φεῖν to grow]. Any process or outgrowth, especially the pituitary body [B N A]. See *pituitary body*, under

body. **h. cer'ebri**, the pituitary body (Soemmering). **pharyngeal h.**, a mass in the pharyngeal wall having a structure similar to that of the pituitary body. **h. sic'ca**. See *pituitarium*.

hypophysoprivic, hypophysoprivous (hi-pof-iz-o-prí'vik, -op'rív-us). See *hypophysoprivic*.

hypopiesis (hi-po-pí'es-is) [Gr. ὑπό under + πῆσις pressure]. Abnormally low arterial pressure.

hypopinealism (hi-po-pí'ne-al-izm). Defective secretory action on the part of the pineal body.

hypopituitarism (hi'po-pi-tu'it-ar-izm). A condition due to pathologically diminished activity of the pituitary body, and marked by excessive deposit of fat and the persistence or acquirement of adolescent characteristics.

hypoplasia (hi-po-pla'ze-ah) [Gr. ὑπό under + πλάσις formation]. Defective or incomplete formation.

hypoplastic (hi-po-plas'tik). Marked by hypoplasia.

hypoplasty, hypoplasia (hi'po-plas-te, hi-pop'-las-e). Same as *hypoplasia*.

hypoporesis (hi'po-po-ro'sis) [Gr. ὑπό under + πόρος callus]. Deficient formation of callus.

hypopraxia (hi-po-praks'e-ah) [Gr. ὑπό under + πράξις action]. Deficient activity.

hypopselaphesia (hi'pop-sel-af-e'ze-ah) [Gr. ὑπό under + ψηλάφησης touch]. Diminution or dullness of the tactile sense.

hypopsychosis (hi'po-si-ko'sis) [Gr. ὑπό under + ψυχή mind, soul]. Diminution of the function of thought; blunting of the thought processes.

hypopyalism (hi-po-tí'al-izm) [Gr. ὑπό under + πτύαλον spittle]. Decreased secretion of saliva.

hypopus (hi-po'pus). A stage in the development of the grain mites (Tyroglyphidae) between the first and the second nymph stages.

hypopyon (hi-po'pe-on) [Gr. ὑπό under + πύον pus]. An accumulation of pus in the anterior chamber of the eye.

hypopyon-kerato-iritis (hi-po'pe-on-ker'at-o-i-rí'tis). Same as *hypopyon keratitis*. See under *keratitis*.

hypoquinidol (hi-po-kwín'id-ol). A proprietary preparation of hypophosphites and quinin.

hyporeflexia (hi-po-re-flek'se-ah). Weakening of the reflexes.

hyposarca (hi-po-sar'kah) [Gr. ὑπό under + σάρξ flesh]. Anasarca.

hyposcheotomy (hi-pos-ke-ot'o-me) [Gr. ὑπό under + σχεον scrotum + τομή cut]. Puncture of a hydrocele at the lower portion of the tunica vaginalis.

hyposcleral (hi-po-skle'ral). Under the sclerotic coat of the eye.

hyposecretion (hi'po-se-kre'shun). Diminished secretion.

hyposensitive (hi-po-sen'sit-iv). Less sensitive; used of allergic cases whose hypersensitiveness has been lessened by repeated and gradually increasing doses of the offending atopen.

hyposensitization (hi'po-sen-sit-iz-a'shun). The act or process of making hypersensitive.

hyposiagonarthritis (hi'po-si-ag-on-ar-thrí'tis). Inflammation of the temporomandibular joint.

hyposialadenitis (hi'po-si-al-ad-en-i'tis) [Gr. ὑπό under + σιαλον saliva + ἀδήν gland]. Inflammation of the submaxillary salivary gland.

hyposkeocytosis (hi'po-ske'o-si-to'sis) [Gr. ὑπό under + σκαίος left + κύτος cell]. Same as *hyponeocytosis*.

hyposmia (hi-poz'me-ah) [Gr. ὑπό under + ὁσμή smell]. Impairment or defect of the sense of smell.

hypospadia, hypospadias (hi-po-spa'de-ah, hi-po-spa'de-as) [Gr. ὑπό under + σπᾶν to draw].

The congenital opening of the urethra on the under side of the penis; also an opening of the urethra into the vagina.

hypospadiac (hi-po-spa'de-ak). A person affected with hypospadia.

hyposphresia (hi-pos-fre'ze-ah) [Gr. ὑπό under + ὄσφρησις smell]. Hyposmia.

hyposphysia (hi-po-sfiks'e-ah) [Gr. ὑπό under + σφύσις pulse]. A depressed state of the circulation with lowered blood-pressure and hyperviscosity of the blood.

hypostasis (hi-pos'tas-is) [Gr. ὑπό under + στάσις halt]. 1. A deposit or sediment. 2. The formation of a deposit; especially a settling of the blood due to a feeble blood-current.

hypostatic (hi-po-stat'ik). 1. Pertaining to, caused by, or associated with, hypostasis. 2. Abnormally static; said of certain inherited characters which are liable to be suppressed by other characters.

hyposteolysis (hi-po-ste-at-ol'is-is). Excessive emulsification of fats during digestion.

hyposthenia (hi-pos-the'ne-ah) [Gr. ὑπό under + σθένος strength]. An enfeebled state; weakness.

hypostheniant, hyposthenic (hi-po-sthe'ne-ant, hi-po-sthen'ik). Reducing the strength; debilitant.

hyposthenuria (hi'pos-the-nu're-ah) [*hyposthenia* + Gr. οὖρον urine]. The secretion of urine of an abnormally low specific gravity; diminution of the concentration of the urine. **tubular h.**, that due to injury of the epithelial cells of the renal tubules. **vascular h.**, that due to oversensitiveness of the renal blood-vessels.

hypostypsis (hi-po-stip'sis) [Gr. ὑποστυψίς]. Moderate astrangency.

hypostyptic (hi-po-stip'tik). Moderately or mildly styptic.

hyposulphite (hi-po-sul'fit). Any salt of hyposulphurous acid (q. v. under *acid*).

hyposuprarenalism (hi'po-su-pa-re'nal-izm). Deficient suprarenal activity.

hyposynergia (hi'po-sin-er'je-ah) [Gr. ὑπό under + synergia]. Defective coordination.

hyposystole (hi-po-sis'to-le) [Gr. ὑπό under + systole]. Abnormal diminution of the systole.

hypotaxia (hi-po-taks'e-ah) [Gr. ὑπό under + τάξις arrangement]. A condition of diminished control over the will and actions, such as occurs in the first stage of hypnotism.

hypotension (hi-po-ten'shun). Diminished tension; lowered blood-pressure.

hypotensive (hi-po-ten'siv). Characterized by low pressure, as by low blood-pressure; causing a fall of blood-pressure.

hypotensor (hi-po-ten'sor). A substance that lowers the blood-pressure.

hypothalamus (hi-po-thal'am-us). [B N A] The subthalamus or subthalamic region; the ventral subdivision of the diencephalon. It consists of three parts: 1, the *pars optica hypothalami* which belongs to the telencephalon; 2, the *pars mamillaris hypothalami* which includes the mammillary bodies, tuber cinereum, infundibulum, and hypophysis; 3, the subthalamus.

hypothernar (hi-poth'en-ar) [Gr. ὑπό under + θέναρ palm]. The ridge on the palm along the bases of the fingers and the ulnar margin.

hypothermal (hi-po-ther'mal) [Gr. ὑπό under + θερμη heat]. Moderately warm or tepid.

hypothermia, hypothermy (hi-po-ther'me-ah, hi-poth'er'me) [Gr. ὑπό under + θερμη heat]. Abnormally low temperature.

hypothesis (hi-poth'e-sis). A supposition assumed as a basis of reasoning. **Harrower's h.**, hormone hunger. **insular h.**, the supposition that diabetes is due to disordered function of the islands of Langerhans in the pancreas. **Makeham's h.**, the assumption that death is due to two coexisting

causes: (1) chance which is constant; (2) inability to withstand destruction which progresses geometrically. **Planck's quantum h.**, that energy is radiated or absorbed only in integral units equal to hn , in which h is Planck's constant ($q.v.$), and n is the frequency of vibration.

hypothyemia (hi-po-thi'me-ah) [Gr. *ὑπό* under + *θυμός* mind]. Abnormal diminution of emotional tone; diminution of feeling tone.

hypothyism (hi-po-thi'mizm). Abnormally deficient thymus activity.

hypothyrea (hi-po-thi're-ah). Hypothyreosis.

hypothyreosis (hi'po-thi-re-o'sis) [Gr. *ὑπό* under + *thyroid*]. Deficient action of the thyroid body.

hypothyroid (hi-po-thi'roid). Marked by or due to hypothyroidism.

hypothyroidation (hi'po-thi-roi-da'shun). The state of body due to insufficient thyroid secretions. See *athyroidation*.

hypothyroidea (hi'po-thi-roi'de-ah). Same as *hypothyreosis*.

hypothyroidism (hi-po-thi'roi-dizm). Same as *hypothyreosis*.

hypothyrosis (hi-po-thi-ro'sis). Hypothyreosis.

hypotonia, **hypotonus**, **hypotony** (hi-po-to'ne-ah, hi-pot'on-us, hi-pot'o-ne) [Gr. *ὑπό* under + *τόνος* tone]. Diminished tension or tonicity; reduction in muscle tone; low intra-ocular tension.

hypotonic (hi-po-ton'ik). 1. Marked by abnormally low tension. 2. Less than isotonic: said of solutions which are of less than isotonic concentration.

hypotoxicity (hi'po-toks-is'te) [Gr. *ὑπό* under + *τοξικόν* poison]. A mitigated or reduced toxic quality.

hypotrichosis (hi'po-trik-o'sis) [Gr. *ὑπό* under + *τριχ* hair]. Partial or complete lack of hair through error of development. **h. localis cystica**, a chronic skin eruption in dogs due to coccidia. Called also *sporadenitis coccidiosa*.

hypotrophy (hi-pot'rof-e) [Gr. *ὑπό* under + *τροφή* nutrition]. See *abiotrophy*.

hypotropia (hi-po-tro'pe-ah) [Gr. *ὑπό* under + *τροπή* turning]. Strabismus in which the axis of one eye deviates downward.

hypovaria (hi-po-va're-ah). Deficiency of the internal secretion of the ovary.

hypovitaminosis (hi'po-vi-tam-in-o'sis). A condition dependent on lack of some essential vitamin from the diet.

hypovolemia (hi'po-vo-le'me-ah) [Gr. *ὑπό* under + *volumē* + Gr. *αἷμα* blood]. Decreased blood volume.

hypoxanthin (hi-po-zan'thin) [Gr. *ὑπό* under + *ξανθός* yellow]. A base, 6-oxypurin, $C_8H_4N_4O$, found in many plant and animal tissues and in urine. It can be produced by deaminizing adenin and can be oxidized through xanthin to uric acid.

hypsibrachycephalic (hip'se-brak-e-sef-al'ik) [Gr. *ὑψι* high + *βραχύς* broad + *κεφαλή* head]. Having the head broad and high.

hypsicephalic (hip'se-sef-al'ik) [Gr. *ὑψι* high + *κεφαλή* head]. Having a cranial index above 75.1°.

hypsiconchous (hip-se-kong'kus) [Gr. *ὑψι* high + *κονχ* shell]. Having an orbital index over 85.

hypsiloid (hip'sil-oid) [Gr. *ὑψιλον* the letter *u* or *y*]. U-shaped or Y-shaped.

hypsistaphylia (hip'se-staf-il'e-ah) [Gr. *ὑψι* on high + *σταφυλή* uvula]. Highness and narrowness of the palate.

hypsistenocephalic (hip'sis-ten-o-sef-al'ik) [Gr. *ὑψι* high + *στενός* narrow + *κεφαλή* head]. Having a high, curved vertex, cheek-bones prominent, and jaws prognathic: said of a form of skull common among Copts, Fellahs, and Abyssinians.

hypsocephalous (hip-so-sef'al-us) [Gr. *ὑψος* height

+ *κεφαλή* head]. Having a high vertex; having a breadth-height index of the head of over 75°.

hypsokinesis (hip'so-kin-e'sis) [Gr. *ὑψος* height + *κίνησις* motion]. A backward swaying, retropulsion or falling when in erect posture, seen in cases of paralysis agitans and other forms of the amyostatic syndrome.

hypsonosus (hip-so'nos-us) [Gr. *ὑψος* height + *νόσος* disease]. Mountain sickness; balloon sickness.

hypsoophobia (hip-so-fo-be-ah) [Gr. *ὑψος* height + *φόβος* fear]. Fear of great heights.

hypurgia (hi-pur'je-ah) [L.; Gr. *ὑπουργία*]. The sum of the minor or subsidiary factors that make for recovery in any particular case.

hyraceum, **hyrax** (hi-ra'se-um, hi'rax). The dried excrement of a badger-like animal of South Africa: used like musk.

hyrgol (hur'gol) [L. *hyrgolum*]. Colloidal mercury: used in the treatment of syphilis.

Hyrtl's loop, **recess**, **sphincter**, etc. (hēr'tl) [Joseph Hyrtl, anatomist of Vienna, 1811-1894]. See *loop*, *recess*, *sphincter*, etc.

hyssop (his'op). The tops and leaves of *Hys'sopus officinalis*: stimulant, tonic, expectorant, and aromatic. Dose of fluidextract, 60-120 min. (4-8 c.c.).

hysteralgia (his-ter-al'je-ah) [Gr. *ὑστέρα* uterus + *ἄλγος* pain]. Neuralgic pain in the uterus.

hysterectomy (his-ter-ek'to-me) [Gr. *ὑστέρα* uterus + *ἐκτομή* excision]. The operation of excising the uterus, performed either through the abdominal wall (*abdominal h.*) or through the vagina (*vaginal h.*). **cesarean h.** Same as *Porro's operation*, see under *operation*. **para-vaginal h.**, excision of the uterus through a perineal incision.

hysteresis (his-ter-e'sis) [Gr. *ὑστέρησις* a too late arrival]. The failure of either one of two associated phenomena to keep up with the other.

hystereurynter (his-ter-u-rin'ter) [Gr. *ὑστέρα* uterus + *εὐρύνειν* to stretch]. An instrument for dilating the uterus: a metreurynter.

hystereurysis (his-ter-u-ris-is). Dilatation of the os uteri.

hysteria (his-te're-ah) [Gr. *ὑστέρα* womb]. A disease, mainly of young women, characterized by lack of control over acts and emotions, by morbid self-consciousness, by exaggeration of the effect of sensory impressions, and by simulation of various disorders. Symptoms of the disease are hyperesthesia; pain and tenderness in the region of the ovaries, spine, and head; anesthesia and other sensory disturbances; choking sensations; dimness of vision; paralysis; tonic spasms; convulsions; retention of urine; vasomotor disturbances; fever, hallucinations, and catalepsy. **conversion h.** See *crampus neurosis*, under *neurosis*. **h. libidino'sa**, Cullen's term for acute uterine pruritis or nymphomania. **h. ma'jor**. See *hystero-epilepsy*. **h. mi'nor**, hysteria with mild convulsions in which consciousness is not lost.

hysteriac (his-te're-ak). A person affected with hysteria.

hysterical, **hysterism** (his-ter'ik, his-ter'ik-al). Pertaining to or affected with hysteria.

hystericism (his-ter-is-izm). A hysterical tendency.

hystericoneuralgic (his-ter'ik-o-nu-ral'jik). Resembling neuralgia, but of the nature of hysteria.

hysterics (his-ter'iks). A hysterical attack.

hysterism (his-ter-izm). Hysteria.

hysteritis (his-ter-i'tis) [Gr. *ὑστέρα* womb + *-itis* inflammation]. Inflammation of the uterus.

hystero- (his-ter-o-) [Gr. *ὑστέρα* uterus]. A prefix denoting some relation to the uterus.

hystero-bubonocoele (his'ter-o-bu-bon-o-sē). An inguinal hernia containing the uterus.

hystero-carcinoma (his'ter-o-kar-sin-o'mah). Uterine carcinoma.

hysteroatalepsy (his'ter-o-kat'al-ep-se). Hysteria with cataleptic symptoms.

hysteroataphraxis (his'ter-o-kat-af-rak'sis). See *hysteroataphraxis*.

hysterocele (his'ter-o-sel) [Gr. *ὑστέρα* uterus + *κήλη* hernia]. Hernia of the gravid uterus.

hysteroconvicotomy (his'ter-o-ser-vik-ot'o-me) [Gr. *ὑστέρα* uterus + *cervix* + Gr. *τομή* cut]. Incision of the cervix uteri and lower segment of the uterus in difficult labor.

hysteroctoleisis (his'ter-o-kl'i'sis) [Gr. *ὑστέρα* womb + *κλείσις* closure]. Surgical closure of the os uteri.

hysteroecystic (his'ter-o-sis'tik). Pertaining to the uterus and the bladder.

hysteroecystocleisis (his'ter-o-sis-to-kl'i'sis) [Gr. *ὑστέρα* womb + *κύστις* bladder + *κλείσις* closure]. The operation of turning the cervix uteri into the bladder and suturing it: done for the relief of vesico-uterovaginal fistula or for uretero-uterine fistula.

hysteroecystopexy (his'ter-o-sis'to-pek-se) [Gr. *ὑστέρα* womb + *κύστις* bladder + *πήξις* fixation]. See *ventrovesicofixation*.

hysteroecynea (his'ter-o-din'e-ah) [Gr. *ὑστέρα* uterus + *δύνη* pain]. Pain in the uterus.

hysteroepilepsy (his'ter-o-ep'il-ep-se). A severe type of hysteria with convulsions simulating those of epilepsy. At first there occur loss of consciousness and spasms, followed by a stage of violent spasmodic movements and mental disturbance, and finally a condition marked by delirium, erotic symptoms, etc.

hysteroepileptogenic, hysteroepileptogenous (his'ter-o-ep-e-lep-to-jen'ik, -lep-toj-en-us) [*hysteroepilepsy* + Gr. *γεννᾶν* to produce]. Producing hysteroepilepsy.

hysteroerotic (his'ter-o-er-ot'ik). Both hysterical and erotic.

hysteroerofrenatory (his'ter-o-fren'at-o-re). Hysteroerofrenic.

hysteroerofrenic (his'ter-o-fren'ik) [*hysteria* + L. *frenāre* to restrain]. Preventing or delaying an attack of hysteria.

hysteroerofrenic (his'ter-o-gas-tror'af-e) [Gr. *ὑστέρα* womb + *γαστήρ* stomach + *ράφη* suture]. The suturing of the uterus to the gastric wall.

hysteroerogenic, hysteroerogenous (his'ter-o-jen'ik, his-ter-oj-en-us) [Gr. *ὑστέρα* womb + *γεννᾶν* to beget]. Causing hysterical phenomena or symptoms.

hysteroeroid (his'ter-oid) [Gr. *ὑστέρα* uterus + *εἶδος* like]. Resembling or akin to hysteria.

hysteroerofrenic (his'ter-o-kat-af-rak'sis) [Gr. *ὑστέρα* womb + *καταφράσσειν* to fence in]. The operation of supporting the uterus with metallic ligatures passed through the abdominal walls and around the uterus.

hysteroerofrenic (his'ter-o-lap-ar-ot'o-me) [Gr. *ὑστέρα* uterus + *λαπᾶρα* flank + *τομή* a cutting]. Incision of the uterus through the abdominal wall.

hysteroerolith (his'ter-o-lith) [Gr. *ὑστέρα* womb + *λίθος* stone]. A uterine calculus; wombstone.

hysteroerology (his-ter-o-l'o-je) [Gr. *ὑστέρα* womb + *λόγος* word]. The sum of what is known regarding the uterus.

hysteroeroloxia (his'ter-o-lok'se-ah) [Gr. *ὑστέρα* uterus + *λοξός* oblique]. Oblique displacement of the uterus.

hysteroerolysis (his-ter-o-l'is-is) [Gr. *ὑστέρα* uterus + *λύσις* solution]. The operation of loosening the uterus from its attachments or adhesions.

hysteroeromalacia (his'ter-o-mal-a'se-ah) [Gr. *ὑστέρα* womb + *μαλακία* softness]. Softening of the uterus.

hysteroeromania (his'ter-o-ma'ne-ah) [Gr. *ὑστέρα* uterus + *μανία* madness]. 1. Hysterical mania. 2. Nymphomania.

hysteroerometer (his-ter-om'et-er) [Gr. *ὑστέρα* womb + *μέτρον* measure]. An instrument for measuring the uterus.

hysteroerometry (his-ter-om'et-er) [Gr. *ὑστέρα* womb + *μέτρον* measure]. The measurement of the length or dimensions of the uterus.

hysteroeromyoma (his'ter-o-mi-o'mah). Myoma of the uterus.

hysteroeromyomectomy (his'ter-o-mi-o-mek'to-me) [Gr. *ὑστέρα* womb + *myoma* + Gr. *ἐκτομή* excision]. Excision of a uterine myoma.

hysteroeromyotomy (his'ter-o-mi-ot'o-me) [Gr. *ὑστέρα* uterus + *μῦς* muscle + *τομή* cut]. Incision of the uterus for the purpose of removing a solid tumor.

hysteroerofrenic (his'ter-o-nar'ko-lep-se). Narcolepsy caused by hysteria.

hysteroerofrenic (his'ter-o-nu-ras-the'ne-ah). Neurasthenia occurring in association with hysteria.

hysteroerofrenic (his'ter-o-nu-ro'sis) [*hystero-* + *neurosis*]. A reflex nervous disorder due to a uterine lesion.

hysteroerofrenic (his'ter-o-o'of-o-rek'to-me) [*hysteroerofrenic* + *oophorectomy*]. The surgical removal of the uterus and ovaries.

hysteroerofrenic (his'ter-o-o'of-o-the-sek'to-me) [Gr. *ὑστέρα* uterus + *φάρμακον* excision]. Excision of the uterus and ovaries.

hysteroerofrenic (his'ter-o-o-va-re-ot'o-me). Same as *hysteroerofrenic*.

hysteroerofrenic (his-ter-op'ath-e) [Gr. *ὑστέρα* womb + *πάθος* illness]. Any uterine disease or disorder.

hysteroerofrenic (his'ter-ōp). A person affected with hysteropia.

hysteroerofrenic, hysteroeropia (his'ter-o-peks-e, his'ter-o-peks-e-ah) [Gr. *ὑστέρα* womb + *πήξις* fixation]. The fixation of a displaced uterus by a surgical operation. It is distinguished as *abdominal* or *vaginal*, according as the uterus is fastened to the abdominal wall or to the vagina.

hysteroerofrenic (his'ter-o-fōr) [Gr. *ὑστέρα* womb + *φέρειν* to bear]. A pessary for supporting the womb.

hysteroeropia (his-ter-o'pe-ah) [Gr. *ὑστέρα* womb + *ὤψ* eye]. Hysterical disorder of the vision.

hysteroeropsychosis (his'ter-o-si-ko'sis) [Gr. *ὑστέρα* uterus + *ψυχή* mind]. A mental disorder due to uterine disease.

hysteroeroptosis (his'ter-op-to'ze-ah). Hysteroeroptosis.

hysteroeroptosis (his'ter-op-to'sis) [Gr. *ὑστέρα* womb + *πίπτω* fall]. Falling or prolapse of the uterus.

hysteroerorrhaphy (his-ter-o'ra-fe) [Gr. *ὑστέρα* womb + *ράφη* suture]. The stitching of the lacerated uterus. See *hysteroeropia*.

hysteroerorrhexis (his'ter-o-eks'is) [Gr. *ὑστέρα* uterus + *ρήξις* rent]. Rupture of the uterus.

hysteroerofrenic (his'ter-o-sal-ping'o-o'of-o-rek'to-me). Surgical removal of the uterus, oviducts, and ovaries.

hysteroerofrenic (his'ter-o-sal-ping'o-o'of-o-the-sek'to-me). Hysteroerofrenic-oophorectomy.

hysteroerofrenic (his'ter-o-sal-ping-os'to-me). The operation of forming an anastomosis between the uterus and the distal portion of the fallopian tube after excision of a strictured or obstructed portion of the tube.

hysteroscope (his'ter-o-skōp) [Gr. *ὑστέρα* uterus + *σκοπεῖν* to view]. An instrument used in inspecting the uterus.

hysterostomatocleisis (his''ter-o-sto-mat-o-kli'-sis) [Gr. *ὑστέρα* uterus + *στόμα* mouth + *κλείσις* closure]. An operation for vesicovaginal fistula consisting of closure of the cervical canal and conversion of the vesical and uterine cavities into one common cavity by means of an opening between them.

hysterostomatomy, hysterostomatotomy (his''ter-o-sto-mat-o-me, his''ter-o-sto-mat-o-t'o-me) [Gr. *ὑστέρα* uterus + *στόμα* mouth + *τομή* cut]. Incision of the os or cervix uteri, or surgical enlargement of the os uteri.

hysterosyphilis (his''ter-o-si'fil-is). A hysteric neurosis due to syphilitic disease.

hysterotome (his''ter-o-tōm) [Gr. *ὑστέρα* womb + *τομή* cut]. An instrument for incising the uterus.

hysterotomotokia (his''ter-o-to''mo-to'ke-ah) [Gr. *ὑστέρα* womb + *τομή* cut + *τόκος* birth]. The cesarean section.

hysterotomy (his-ter-o't'o-me) [Gr. *ὑστέρα* uterus + *τομή* cut]. Incision of the uterus.

hysterotrachelorrhaphy (his''ter-o-trak-el-or'-af-e) [Gr. *ὑστέρα* womb + *τράχηλος* neck + *ράφῃ* suture]. The plastic surgery of the cervix uteri.

hysterotrachelotomy (his''ter-o-trak-el-ot'o-me) [Gr. *ὑστέρα* uterus + *τράχηλος* neck + *τομή* cut]. Incision of the neck of the uterus.

hysterotraumatic (his''ter-o-traw-mat'ik) [Gr. *ὑστέρα* womb + *τραῦμα* wound]. Due to or associated with traumatic hysteria or hysterotraumatism.

hysterotraumatism (his''ter-o-traw-mat-izm). Hysteric symptoms following traumatism.

hysterotismus (his''ter-o-triz'mus) [Gr. *ὑστέρα* womb + *τρισμός* spasm]. Spasm occurring in the uterus.

hystero-vagino-enterocele (his''ter-o-vaj'in-o-en-ter-o-sēl) [Gr. *ὑστέρα* uterus + *vagina* + Gr. *ἔντερον* intestine + *κῆλη* hernia]. Hernia containing the uterus, vagina, and intestine.

hystriciasis, hystricism (his-trik-i'as-is, his-tris-izm) [Gr. *ὑστριξ* hedgehog]. 1. Morbid erection of the hairs. 2. Ichthyosis hystrix.

hystrix (his'triks). See *ichthyosis hystrix*.

hyther (hi'ther) [Gr. *ὑδωρ* water + *θέρμη* heat]. The combined effect upon the body of the humidity and temperature of the air.

hyzone (hi'zōn). An unstable triatomic form of hydrogen, H₃.

I

I. The chemic symbol for *iodin*; also abbreviation for *intensity of magnetism*.

i. Abbreviation for *optically inactive*.

iamatology (i'am-at-ol'o-je) [Gr. *ιαμα* remedy + *λόγος* discourse]. The study or science of remedies.

iateria (i-at-e're-ah). Therapeutics.

iatraliptic (i'at-ral-ip'tik) [Gr. *ιατρεία* cure + *ἀλείπειν* to anoint]. Pertaining to the application of remedies by friction.

iatraliptics (i'at-ral-ip'tiks). Treatment by incination and friction.

iatrevin (i-at're-vin). A preparation of menthol and isobutylphenol; used in pulmonary consumption.

iatric (i-at'rik) [Gr. *ιατρός* physician]. Pertaining to medicine or to a physician.

Iatrobdeila (i'at-ro-bde'l'ah). Same as *Hirudo*.

iatrochemic, iatrochemical (i-at''ro-kem'ik, -kem'ik-al). A term applied to the doctrine of iatrochemistry.

iatrochemistry (i-at''ro-kem'is-tre) [Gr. *ιατρός* physician + *chemistry*]. 1. The name of a school of medicine of the 17th century, which thought all the phenomena of life and disease were based on chemical action. 2. The spagirc or paracelsian system of practice.

iatrol (i-at-rol). Oxyiodomethylanilid; an iodine and aniline derivative. It is an antiseptic, and is used externally like iodoform.

iatrology (i-at-rol'o-je) [Gr. *ιατρός* physician + *λόγος* discourse]. The science of medicine.

iatromathematical (i'at-ro-math-e-mat'ik-al). Same as *iatrophysical*.

iatromechanical (i'at-ro-me-kan'ik-al). Same as *iatrophysical*.

iatrophysical (i'at-ro-fiz'ik-al). The name of a school of medicine in the 17th century which thought all the phenomena of life and disease were based on the laws of physics.

iatrophysics (i'at-ro-fiz'iks) [Gr. *ιατρός* physician + *φυσικός* natural]. 1. The physics of medicine or of medical and surgical treatment. 2. The treatment of diseases by physical or mechanic means.

iatrotechnics (i-at-ro-tek'niks) [Gr. *ιατρός* physician + *τέχνη* art]. The technics of medical and surgical practice.

iatrotechnique (i'at-ro-tek-nēk'). Iatrotechnics.

ibit (i'bit). Bismuth oxyiodotannate, BiO₂(OH)-C₆H₃.CO.O.C₆H₃(OH)₂.COOH, a bactericide and disinfectant.

ibogain (ib-o'ga-in). A poisonous alkaloid, C₅₂H₆₆-N₆O₂, from *iboga*, *Tabernaemontana iboga*, a plant of the Kongo region. It increases blood-pressure and diuresis, raises the bodily temperature, and excites the secretions.

icajin (i-ka'jin) [*icaja* African name of strophanthus]. A poisonous alkaloid from strophanthus.

ice (is). Water solidified by the reduction of its temperature to below 0° Centigrade: used as a refrigerant. **i.-bag, i.-cap, i.-compress**, appliances for the therapeutic application of ice.

Iceland moss (is'land maws). See *Cetraria*. **I. spar**, a crystalline form of calcium carbonate: used in making Nicol prisms.

ichnogram (ik'no-gram) [Gr. *ἔχνος* a footprint + *γράμμα* mark]. A footprint.

ichor (i'kor) [Gr. *ἰχώρ*]. A thin, serous, or sanious fluid from a sore or wound.

ichoremia, ichorhemia (i-chor-e'me-ah) [Gr. *ἰχώρ* ichor + *αἷμα* blood]. Poisoning that is due to the mingling of sanious matter with the blood.

ichoroid (i'ko-roid) [Gr. *ἰχώρ* serum + *εἶδος* form]. Resembling ichor or pus.

ichorous (i'kor-us). Of the nature of a serum or ichor.

ichorrhæa, ichorrhœa (i-chor-e'ah) [Gr. *ἰχώρ* ichor + *ῥοία* flow]. A copious discharge of ichorous fluid or sanies.

ichorrhemia (i-chor-e'me-ah) [Gr. *ἰχώρ* ichor, pus + *αἷμα* blood]. Infection of the blood with septic matter or with non-septic but toxic derivatives of suppurative inflammation.

ichthalbin (ik-thal'bin). A grayish-brown powder (ichthylol aluminate). An odorless compound of ichthylol and albumin: used like ichthylol. Dose, 15-30 gr. (1-2 gm.).

ichthammon (ik-tham'on). The ammonium compound of a sulpho-acid obtained from a bituminous material by distillation with sulphuric acid and neutralization with ammonia: used like ichthylol.

ichthargan (ik-thar'gan) [*ichthylol* + *L. argen'tum* silver]. Silver sulpho-ichthylolate; a brown,

odorless powder, containing 30 per cent. of silver. It is soluble in water and glycerin, and is used as an antiphlogistic, astringent, and bactericide in $\frac{1}{4}$ to 3 per cent. solution.

ichthargol (ik-thar'gol). A silver preparation resembling ichthargan, containing 15 per cent. of silver.

ichthermol (ik-ther'mol). A dark powder, a compound of ichthyosulphonic acid and mercury, containing 24 per cent. of metallic mercury.

ichthidin, **ichthin** (ik'thid-in, ik'thin). Two phosphoglycoproteins from the eggs of fishes.

ichthoform (ik'tho-form). A dark-brown powder, a combination of ichthol and formaldehyd; used as an internal antiparasiticide and antibacterial. Dose, 15-30 gr. (1-2 gm.).

ichtholdine (ik'thol'din). A liquid preparation of ichthol; iodine, boroglycerid, and glycerite of hydrastis.

ichthosote (ik'tho-söt). An antituberculous preparation of ichthol and creosote.

ichthulin (ik'thu-lin). A variety of ichthidin from the eggs of cod-fish and carp.

ichthyanat (ik-thi'an-at). A preparation from the bituminous shale of Achensee in the Tyrol; used like ichthol.

ichthyism (ik'the-izm). Ichthyismus.

ichthyismus (ik'the-iz'mus) [Gr. *ιχθύς* fish]. A disease caused by eating stale or poisonous fish. **i. exanthematicus**, that in which the gastrointestinal irritation is accompanied by a scarlatinous rash.

ichthynat (ik'thin-at). A brownish-black syrupy liquid used in place of ichthol.

ichthyocolla (ik'the-o-kol'ah) [Gr. *ιχθύς* fish + *κόλλα* glue]. Isinglass; a form of gelatin prepared from the swimming-bladders of the Russian sturgeon, *Acipenser hu'so*. It occurs in white, horny sheets, and is used as a food, as a demulcent for clarifying liquids, and externally in the form of a plaster (*i. plaster* or *court-plaster*), as an adhesive and protective dressing.

ichthyodin (ik'thi'o-din). Same as *isamol*.

ichthyofarm (ik'the-o-form). Same as *ichthoform*.

ichthyoid (ik'the-oid) [Gr. *ιχθύς* fish + *εἶδος* form]. Resembling a fish; shaped like a fish. **i. cell** or **stage**. See *megaloblast*.

ichthyol (ik'the-ol) [Gr. *ιχθύς* fish + *L. oleum* oil]. A thick, brownish liquid from an asphalt rich in the remains of fishes; much used in skin diseases and in gynecologic practice. The ichthyol now in use is ammonium ichthyol-sulphonate, $C_{28}H_{36}S_3O_6(NH_4)_2 + H_2O$. It is soluble in water, partly soluble in alcohol and ether, and miscible with oils. Ichthyol is used as an alterative in rheumatism, tuberculosis, syphilis, etc. Dose, 10-30 min. (0.65-2 c.c.) per diem; externally, 5-50 per cent. solution or ointment. **i. aluminat**, ichthalbin. **i. formaldehyd**, ichthoform. **i. silver**. Same as *ichthargan*.

ichthyolidin (ik'the-ol'id-in). Piperazin ichthyol-sulphonate; used in gout and uric-acid diathesis.

ichthyolsulphonate (ik'thi-ol'sul'fo-nät). A salt of ichthyolsulphonic acid.

ichthyolsulphonic acid (ik'thi-ol-sul-fon'ik). See under *acid*.

ichthyolum (ik'the-o'lum). Ichthyol.

ichthyophagous (ik'the-o'fag-us). Eating fish.

ichthyophagy (ik'the-o'faj-e) [Gr. *ιχθύς* fish + *φαγείν* to eat]. The practice of living upon fish.

ichthyophobia (ik'the-o-fö-be-ah) [Gr. *ιχθύς* fish + *φόβος* fear]. Abnormal aversion to fish.

ichthyosis (ik'thi-o'sis) [Gr. *ιχθύς* fish]. A disease characterized by dryness, roughness, and scaldiness of the skin, due to hypertrophy of the horny layer. Called also *fish-skin disease* and *xeroderma*. **i. congenita**, a congenital anomaly

of the skin characterized by diffuse hyperkeratosis and abnormal cornification and resulting in the formation of thick horny scales. Called also *hyperkeratosis congenita*, *keratosis diffusa fetalis*.

i. cornea. Same as *i. hystrix*. **follicular i.**, a form in which sebum and epithelium are heaped around the orifices of the hair-follicles. **i. hystrix**, a variety with dry and warty knobs (Machin, 1733). **i. intra-uterina**, ichthyosis congenita. **linear i.**, ichthyosis occurring in bands or streaks. **i. linguae**, leukoplakia. **i. palmaris**, keratosis palmaris. **i. palmaris et plantaris**, keratoderma symmetrical. **i. plantaris**, keratosis plantaris. **i. sauroderma**, severe ichthyosis in which the skin is covered with thick plates like the skin of a crocodile. Called also *crocodile skin*. **i. scutellata**, a form with lozenge-shaped scales. **i. sebaea cornea**. Same as *keratitis follicularis*. **i. serpentina**, ichthyosis with an eruption resembling a serpent's skin. **i. simplex**. See *xeroderma*. **i. spinoza**, ichthyosis hystrix in which the scales are spiny. **i. thysanotrichica**, a disease marked by hyperkeratosis of the base of the follicles of the skin with a small tuft of hairs, resembling comedones, growing from the follicles. **i. uteri**, a condition marked by the transformation of the columnar epithelium of the endometrium into stratified epithelium.

ichthyosismus (ik'the-o-sis'mus). Same as *ichthyismus*.

ichthyotic (ik'the-ot'ik). Pertaining to or of the nature of ichthyosis.

ichthyotoxic (ik'the-o-tok'sik). Caused by the toxic principle of fish.

ichthyotoxicum (ik'the-o-tok'sik-um) [Gr. *ιχθύς* fish + *τοξικόν* poison]. A poisonous principle obtainable from various fishes.

ichthyotoxin (ik'the-o-toks'in). The poisonous principle of eel-serum.

ichthyotoxism (ik'the-o-tok'sizm) [Gr. *ιχθύς* fish + *τοξικόν* poison]. Poisoning by fish.

icing heart, liver (i'jing). See under *heart* and *liver*.

iconolagny (i-kon-o-lag-ne) [Gr. *εἰκων* image + *λαγνεία* lewdness]. Sexual stimulation aroused by pictures or statues.

I. C. T. Abbreviation for *inflammation of connective tissue*.

icterepatitis (ik'ter-ep-at-i'tis) [L. *icterus* jaundice + *hepatitis*]. Hepatitis with jaundice.

icteric (ik-ter'ik). Pertaining to or affected with jaundice.

icteritious (ik-ter-ish'us). 1. Affected with jaundice. 2. Of a yellow or jaundiced hue.

ictero-anemia (ik'ter-o-an-e'me-ah). A disease marked by the development of icterus and anemia, with splenic enlargement, urobilinuria, and a hemolysis associated with fragility of the red blood-corpuscles. Called also *hemolytic ictero-anemia* and *Widal's syndrome*.

icterode (ik'ter-öd). Icteroïd.

icterogen (ik'ter-o-jen) [See *icterogenic*]. An organic arsenical preparation which causes degeneration of the liver cells and jaundice.

icterogenic, **icterogenous** (ik'ter-o-jen'ik, ik-ter-o-jen-us) [L. *icterus* + Gr. *γεννᾶν* to produce]. Causing icterus.

icterohematuria (ik'ter-o-hem-at-u're-ah). See *hemoglobinuria of sheep*.

icterohematuric (ik'ter-o-hem-at-u'rik). Marked by jaundice and hematuria.

icterohemoglobinuria (ik'ter-o-hem'o-glo-bin-u're-ah). Combined icterus and hemoglobinuria.

icterohepatitis (ik'ter-o-hep-at-i'tis). Inflammation of the liver with marked jaundice.

icteroid (ik'ter-oid) [Gr. *ικτερος* jaundice + *εἶδος* form]. Resembling jaundice.

icterus (ik'ter-us) [L.; Gr. *ικτερος*]. See *jaundice*. **bilirubin-i.**, jaundice with discoloration of the urine, due to the presence of an excessive quantity of bilirubin. **i. castren'sis gra'vis**, Weil's disease occurring among troops in camp. **i. castren'sis le'vis**, catarrhal jaundice affecting troops in camp. **i. catarrha'lis**, simple catarrhal jaundice. **congenital family i.** See *hemolytic jaundice*, under *jaundice*. **cythemo-lytic i.**, icterus due to excessive formation of bile from destruction of red blood-corpuscles. **fe-brile i.**, **i. febril'is**, an acute infectious jaundice; Weil's disease. **i. gra'vis**, acute yellow atrophy of the liver. See *atrophy*. **Gubler's i.**, a kind of hematogenous jaundice believed by Gubler to be due to excessively rapid hemolysis. **i. infectio'sus**, Weil's disease. See *disease*. **Liouville's i.**, icterus neonatorum. **i. me'las**, black jaundice; Winckel's disease. **i. neonato'rum**, the jaundice sometimes seen in newborn children. It is probably due to absorption of bile-pigments from the meconium. **i. pra'cox**, jaundice in secondary syphilis. **i. typhoi'des**, acute yellow atrophy of the liver. **urobilin-i.** See *urobilinicterus*.

ictometer (ik-tom'et-er) [L. *ictus* stroke + Gr. *μετρον* measure]. An instrument for measuring the heart's impulse over the chest-wall.

ictus (ik'tus), pl. *ictus* [L. "stroke"]. A stroke, blow, or sudden attack. **i. cord'is**, the heart-beat. **i. epilep'ticus**, an epileptic attack. **i. immu'nica'torius**, the injection of a large quantity of bacteria or toxin for the purpose of inducing the formation of a large quantity of antibody. **i. paraly'ticus**, a paralytic stroke. **i. san'guinis**, an apopleptic attack. **i. so'lis**, a sunstroke.

Id., id. Abbreviation for *L. idem*, the same.

id (id). Same as *chromomere*.

idant (i'dant). A chromosome or nuclear rod regarded as a factor in heredity. Cf. *biophore*.

idea (i-de'ah) [Gr. *ἰδέα* form]. A mental impression or conception. **autochthonous i.**, an idea which comes into the mind in some unaccountable way, and which is strange, but cannot be accounted for by a hallucination. **compulsive i.**, an idea which intrudes, recurs, and persists despite reason and will. **dominant i.**, a morbid or other impression that controls or colors every action and thought. **fixed i.**, a morbid impression or belief which morbidly stays in the mind and cannot be changed by reason. **hyperquantivalent i.**, an idea which has become of the utmost importance to the patient, absorbing his thought, and excluding anything which might tend to discredit its truth. **i. of reference, referential i.**, an idea which causes the possessor to suppose that the words and actions of others refer to himself or to project the causes of his own imaginary difficulties upon someone else.

ideal (i-de'al). Having some relation to ideas, impressions, or imaginations.

ideation (i-de-a'shun). The distinct mental presentation of objects. **incoherent i.**, a mental condition in which the patient is unable to express a definite idea because there are other ideas rushing into consciousness; called also *flow of ideas*.

ideational (i-de-a'shun-al). Relating to ideation or the formation of objects and images in the mind.

identical points (i-den'tik-al). See *point*.

identification (i-den-tif-ik-a'shun). An unconscious mental process by which a person identifies himself with another.

ideodynamism (i-de'o-di'nam-izm) [*idea* + Gr. *δύναμις* power]. The stimulation, through the cerebral cells, by an idea, of those nerve-fibers which are to realize that idea.

ideogenous (i-de-oj'en-us). Produced by an idea; produced by the mind, but having no physical cause.

ideoglandular (i'de-o-glan'du-lar). Arousing glandular activity as a result of some recollection or thought.

ideometabolic (i'de-o-met-ab-o'ik). Producing some metabolism as a result of mental action, normal or other.

ideometabolism (i'de-o-met-ab'o-lizm). Metabolism produced by mental influence.

ideomotion (i'de-o-mo'shun). Motion or muscular action which is neither reflex nor volitional, but is induced by some dominant idea.

ideomotor (i'de-o-mo'tor). Aroused by an idea or thought: said of involuntary motion so aroused.

ideomuscular (i'de-o-mus'ku-lar). Producing involuntary muscular action, due to some ideation, memory, or hallucination.

ideophrenia (i'de-o-fre'ne-ah) [Gr. *ἰδέα* idea + *φρήν* mind]. Insanity with marked perversion of ideas.

ideophrenic (i'de-o-fren'ik) [Gr. *ἰδέα* idea + *φρενιτικός* insane]. Characterized by perverted ideas.

ideoplastia (i'de-o-plas'te-ah) [Gr. *ἰδέα* idea + *πλάσσειν* to form]. The passive inert condition of a patient under complete hypnosis in which he is capable of receiving suggestions of ideas from the hypnotist.

ideovascular (i'de-o-vas'ku-lar). Producing some vascular change as a result of a recollection or ideation.

idio-agglutinin (id'e-o-ag-lu'tin-in) [Gr. *ἴδιος* own + *αἰσθύνειν* to agglutinate]. An agglutinin which originates in the animal independently of any transfer or artificial means.

idioblast (id'e-o-blast) [Gr. *ἴδιος* one's own + *βλαστῶς* germ]. Any one of the hypothetical ultimate units of a cell: a biophore.

idiochromatin (id'e-o-kro'mat-in) [Gr. *ἴδιος* own + *χρωματίν*]. The chromatin which is concerned in reproduction; the chromatin which bears the ids.

idiochromidial (id'e-o-kro-mid'e-ah) [Gr. *ἴδιος* own + *χρωμίδα*]. That part of the chromidia or extranuclear chromatin which takes part in the reproduction of the cell. Cf. *trophochromidia*.

idiochromosome (id'e-o-kro'mo-sóm). An accessory chromosome.

idiocrasy (id'e-ok'ras-e). Idiosyncrasy.

idiocratic (id'e-o-krat'ik) [Gr. *ἴδιος* own + *κράσις* temperament]. Marked by peculiarities of constitution or of temperament.

idiocy (id'e-o-se) [see *idiot*]. Complete congenital imbecility; extreme dementia.

amaurotic family i. (Lay, 1881; Sachs, 1887), a disease of infants and children, marked by changes in the macula lutea, increasing failure of vision, paralysis, and death.

Aztec i., microcephalic idiocy.

cretinoid i., cretinism.

diplegic i., paralysis in infancy affecting all the extremities.

epileptic i., idiocy combined with epilepsy.

genetous i., that which dates from fetal life.

hemiplegic i., hemiplegia in infancy.

hydrocephalic i., idiocy combined with chronic hydrocephalus.

intrasocial i., idiocy in which the patient is capable of performing some regular occupation.

microcephalic i., idiocy associated with microcephalia.

Mongolian i., congenital idiocy with marked liveliness and imitiveness, a flattened skull, oblique eye-slit, mobile hips, and shortness of thumbs and of little fingers, the special characters of cretinism being absent.

paralytic i., idiocy with paralysis.

paraplegic i., idiocy associated with paraplegia.

sensorial i., mental defect due to early loss of any of the special senses.

traumatic i., that which results from an injury received at birth or in infancy.

idiogamist (id'e-o-gam-ist) [Gr. *ἴδιος* one's own + *γάμος* marriage]. A person who is capable of coitus with only one particular woman, or with only a few selected ones, being impotent with all others.

idiogenesis (id'e-o-jen'es-is) [Gr. *ἴδιος* one's own self + *γενεσις* development]. The idiopathic origin of disease.

idioglossia (id'e-o-glos'e-ah) [Gr. *ιδίωτης* idiot + *γλῶσσα* tongue]. Imperfect articulation, with the utterance of meaningless vocal sounds.

idioglottic (id'e-o-glot'ik). Pertaining to idioglossia.

idiohetero-agglutinin (id'e-o-het'er-o-ag-lu'tin-in) [Gr. *ἴδιος* own + *ἕτερος* other + *agglutinin*]. A hetero-agglutinin normally present in the blood and not produced by artificial means.

idioheterolysin (id'e-o-het-er-ol'is-in). An idiolysin which destroys the cells of an animal of a different species from that in which it is formed.

idiohypnotism (id'e-o-hip'no-tizm) [Gr. *ἴδιος* own + *hypnotism*]. Spontaneous or self-induced hypnotism.

idio-isoagglutinin (id'e-o-i-so-ag-lu'tin-in). An isoagglutinin normally present in the blood, and not produced by artificial means.

idio-isolysin (id'e-o-i-sol'is-in). An idiolysin which destroys the cells of an animal of the same species as that in which it is formed.

idiokinetic (i-de'o-o-kin-et'ik). Ideomotor.

idiolysin (id-e-ol'is-in) [Gr. *ἴδιος* own + *lysin*]. A lysin which is normally present in the blood and is not produced by artificial means.

idiometritis (id'e-o-me-tri'tis) [Gr. *ἴδιος* own + *μήτρα* womb + *-itis* inflammation]. Inflammation of the parenchyma of the uterus.

idiomuscular (id'e-o-mus'ku-lar) [Gr. *ἴδιος* own + *L. musculus* muscle]. Pertaining to the muscular tissue apart from any nerve stimulus; a term applied to certain muscular contractions which occur in degenerated muscles only.

idioneural (id'e-o-nu'ral) [Gr. *ἴδιος* own + *νεῦρον* nerve]. Pertaining to a single nerve, or to the nervous system exclusively.

idioneurosis (id'e-o-nu-ro'sis) [Gr. *ἴδιος* own + *νεῦρον* nerve]. Any neurosis arising from the nerves themselves; an idiopathic neurosis.

idioparasite (id'e-o-par'as-it). A parasite generated within the body of the host.

idiopathic (id'e-o-path-et'ik). Idiopathic.

idiopathic (id-e-o-path'ik). Of the nature of an idiopathy; self-originated; neither sympathetic nor traumatic.

idiopathy (id-e-op'ath-e) [Gr. *ἴδιος* own + *πάθος* disease]. A morbid state of spontaneous origin: one neither sympathetic nor traumatic. **toxic i.**, any one of a group of diseases due to sensitization to particular proteins, and including asthma, hay-fever, urticaria, angioneurotic edema, and some forms of eczema and gastro-intestinal disorder.

idiophone (id'e-o-fōn) [Gr. *ἴδιος* own + *φωνή* voice]. An apparatus by means of which vibrations of the singing voice will produce pictures of flowers on a membrane covered with colored dust.

idiophore (id'e-o-fōr) [Gr. *ἴδιος* own + *φέρειν* to bear]. The (theoretic) primary form of living cell-substance.

idiophrenic (id'e-o-fren'ik) [Gr. *ἴδιος* own + *φρήν* mind]. Pertaining to the brain itself.

idioplasm (id'e-o-plazm) [Gr. *ἴδιος* own + *πλάσμα* anything formed]. The active, vital, or reproductive part of a cell contained in the chromosomes of the nucleus; on it depend the peculiar characters of the cell. Called also *germ-plasm*.

idiopsychologic (id'e-o-si-ko-loj'ik). Pertaining to ideas formed within one's own mind.

idioreflex (id-e-o-re'fleks) [Gr. *ἴδιος* own + *reflex*]. A reflex brought about by a cause within the same organ.

idioretinal (id-e-o-ret'in-al). Pertaining to the retina alone.

idiosome (id'e-o-sōm) [Gr. *ἴδιος* own + *σῶμα* body]. 1. A supposed ultimate element of living matter; micelle. 2. Attraction sphere.

idiospasm (id'e-o-spazm). A spasm of a limited area or region.

idiosyncrasy (id'e-o-sin'kra-se) [Gr. *ἴδιος* own + *σύνκρασις* mixture, temperament]. A habit or quality of body or mind peculiar to any individual.

idiosyncratic (id'e-o-sin-kra'tik). Pertaining to or characterized by idiosyncrasy.

idiot (id'e-ot) [Gr. *ιδίωτης* private]. A person without intellect and understanding; a feeble-minded person whose mental age is below two years. **Mongolian i.**, a person affected with Mongolian idiocy. **pithecod i.**, an idiot with an ape-like face. **i.-savant**, a person who is idiotic in some respects, but not in others.

idiotopie, idiopathy (id'e-o-top-e) [Gr. *ἴδιος* own + *τόπος* place]. The position and relation of the parts of an organ among themselves.

idiotrophic (id'e-o-trof'ik) [Gr. *ἴδιος* own + *τροφή* nutrition]. Capable of selecting its own nourishment.

idioventricular (id'e-o-ven-trik'u-lar). Relating to or affecting the cardiac ventricle alone.

idorgan (id'or-gan). A potential organ or organism containing at least two plastids, but not possessed of individuality.

idose (i'dōs). A hexose isomeric with dextrose.

idozan (i'do-zan). A proprietary iron preparation.

idrosis (id-ro'sis). See *hidrosis*.

idrovocol (id-ro-vo'kol). A preparation of equal parts of colloidal mercury and extract of sarsaparilla: used for syphilis.

I. E. German abbreviation for *immunizing unit*.

igasurin (ig-as-u'rin). A mixture of strychnin and brucin from nux vomica.

igazol (ig'az-ol). A compound containing iodine and paraformaldehyd: used in phthisis.

ignatia (ig-na'she-ah) [L.]. The bean-like seed of *Strychnos igna'tia*, St. Ignatius' bean. It is poisonous, and contains the alkaloids strychnin and brucin. It has properties like those of nux vomica. Dose of abstract, $\frac{1}{4}$ -1 gr. (0.033-0.066 gm.); of extract, $\frac{1}{4}$ - $\frac{1}{2}$ gr. (0.016-0.033 gm.); of fluidextract, 1-6 min. (0.066-0.4 c.c.); of tincture, 2-10 min. (0.133-0.6 c.c.); of drug in substance, $\frac{1}{4}$ -2 gr. (0.016-0.133 gm.).

igni-extirpation (ig'ne-eks-ter-pa'shun) [L. *ig'nis* fire + *extirpa'tio* extirpation]. The excision of an organ by the hot cautery.

igni-operation (ig'ne-op-er-a'shun) [L. *ig'nis* fire + *operation*]. An operation performed by hot cautery.

ignipedites (ig'ne-pe-di'tēz). Same as *beriberi*.

ignipuncture (ig'ne-punk-tūr) [L. *ig'nis* fire + *punctu'ra* puncture]. Therapeutic puncture with hot needles.

ignis (ig'nis). Latin for *fire*. **i. sa'cer**. See *herpes zoster*. **i. St. Igna'tii**, St. Anthony's fire; erysipelas.

ignisation (ig-niz-a'shun) [L. *ig'nis* fire]. The hyperthermia produced by exposure to artificial sources of heat.

ignition (ig-nish'un) [L. *ig'nis* fire]. The act of burning or of taking fire.

ignotin (ig'no-tin). A principle obtained from Liebig's extract of meat. See *carnosin*.

II.-para. Abbreviation for *secundipara*.

III.-para. Abbreviation for *tertipara*.

I. K. An abbreviation for *immun Körpern* (immune bodies). See *tuberculin* and *Spengler's immune bodies*, under *body*.

I. K. I. A soluble iodine compound used for sterilizing catgut.

ikota (i-ko'tah). A kind of palmus prevailing among the Samoyeds.

ikshugandha (ik-shu-gand'ah) [East Indian]. The seeds of the land-caltrop, *Tribulus terrestris*, a European and Asiatic zygophyllaceous plant. The tincture is astringent, and is recommended for spermatorrhea and diseases of the testes. Daily dose, 5-20 min. (0.333-1.333 c.c.).

Ikwa fever (ik'wah). Volhynia fever. See *trench fever*, under *fever*.

ileac (il'e-ak). 1. Of the nature of ileus. 2. Pertaining to the ileum.

ileadelphus (il'e-ad-el'fus) [L. *il'ium* flank + Gr. ἀδελφός brother]. Same as *iliadelphus*.

ileectomy (il-e-ek'to-me) [L. *il'ium* ileum + Gr. ἐκτομή excision]. Surgical removal of the ileum.

ileitis (il-e-i'tis). Inflammation of the ileum.

ileo-. A prefix indicating relation to the ileum.

ileocecal (il'e-o-se'kal). Pertaining to the ileum and cecum.

ileocecum, ileocæcum (il'e-o-se'kum). The ileum and cecum considered as one organ.

ileocolic (il'e-o-kol'ik). Pertaining to the ileum and colon.

ileocolitis (il'e-o-ko-li'tis). Inflammation of the ileum and colon.

ileocolonic (il'e-o-ko-lon'ik). Ileocolic.

ileocolostomy (il'e-o-ko-los'to-me) [*ileum* + *colon* + Gr. στόμα mouth]. The formation of an artificial passage between the ileum and colon.

ileocolotomy (il'e-o-ko-lot'o-me) [*ileum* + *colon* + Gr. τέμνειν to cut]. Surgical incision of the ileum and colon.

ileoileostomy (il'e-o-il-e-os'to-me) [*ileum* + *ileum* + Gr. στόμα mouth]. The formation of a passage between two parts of the ileum.

ileopectostomy (il'e-o-prok-tos'to-me) [*ileum* + Gr. πρῶτος rectum + στόμα mouth]. The formation of a passage between the ileum and rectum.

ileorectostomy (il'e-o-rek-tos'to-me) [*ileum* + *rectum* + Gr. στόμα mouth]. See *ileopectostomy*.

ileosigmoid (il'e-o-sig'moid). Pertaining to the ileum and the sigmoid.

ileosigmoidostomy (il'e-o-sig-moi-dos'to-me) [*ileum* + *sigmoid flexure* + Gr. στόμα mouth]. The surgical creation of an opening between the ileum and the sigmoid flexure.

ileostomy (il-e-os'to-me) [*ileum* + Gr. στόμα mouth]. The making of an artificial opening into the ileum.

ileotomy (il-e-ot'o-me) [*ileum* + Gr. τέμνειν to cut]. The operation of making an incision into the ileum through the abdominal wall.

ileotransversostomy (il'e-o-trans-ver-sos'to-me). The operation of anastomosing the ileum to the transverse colon.

iletin (i'let-in) [*ilets* of Langerhans]. The trade name for a brand of insulin manufactured in America under license from the Insulin Committee of the University of Toronto.

ileum (il'e-um) [L.]. The distal portion of the small intestine, extending from the jejunum to the cecum.

ileus (il'e-us) [L.; Gr. εἰλεός, from εἰλεῖν to twist]. Severe colic due to intestinal obstruction; volvulus. **adynamic i.** Same as *i. paralyticus*.

angioenteric i., dilatation of the stomach and duodenum caused by arterioenteric bands.

chronic duodenal i., compression of the third part of the duodenum by the mesentery producing dilatation of the duodenum and chronic dyspepsia. **i. duplex**, inflammatory enterocolic ileus.

dynamic i., **hyperdynamic i.**, ileus produced by tonic contraction of the muscular fibers of the intestine. **mechanic i.**, ileus produced by mechanic obstruction. **i. paralyticus**, ileus due to paralysis of the muscular coats of the intestine. **i. subpar'ta**, ileus due to pressure of the gravid uterus on the pelvic colon.

Ilex (i'lex). A genus of shrubs and trees, the hollies. The leaves are tonic, astringent, and antiperiodic.

I. paraguayensis. See *mate*.

ilexanthin (i-le-zan'thin). A yellow, crystalline principle, C₁₇H₂₃O₁₁, from holly leaves.

iliac (il'e-ak) [L. *il'i'acus*]. Pertaining to the ilium.

iliacus (il-i'ak-us). See *muscles*, table of.

iliadelphus (il'i'e-ad-el'fus) [L. *il'ium* flank + Gr. ἀδελφός brother]. A monster-fetus double below the pelvis.

ilicin (il'is-in). A bitter antiperiodic compound derived from holly, *Ilex aquifolium*.

ilikibiology (il'i'e-ke-bi-o-l'o-jē). The biology of the aged.

ilio-. A prefix indicating relation to the ilium.

iliocapsularis (il'i'e-o-kap-su-la'ris). The iliacus minor muscle.

iliococcygeal (il'i'e-o-kok-sij'e-al). Pertaining to the ilium and coccyx.

iliocolotomy (il'i'e-o-ko-lot'o-me). Surgical incision of the colon in the iliac region.

iliocostal (il'i'e-o-kos'tal) [*ilium* + L. *costa* rib]. Connecting or pertaining to the ilium and ribs.

iliocostalis (il'i'e-o-kos-ta'lis). See *muscles*, table of.

iliofemoral (il'i'e-o-fem'or-al). Pertaining to the ilium and femur.

iliohypogastric (il'i'e-o-hi-po-gas'trik). Pertaining to the ilium and hypogastrium. **i. nerve**. See *nerves*, table of.

ilio-inguinal (il'i'e-o-in'gwin-al). Pertaining to the iliac and inguinal regions.

iliolumbar (il'i'e-o-lum'bar). Pertaining to the iliac and lumbar regions, or to the flank and loin.

iliolumbocosto-abdominal (il'i'e-o-lum-bokos'to-ab-dom'in-al). Pertaining to the iliac, lumbar, costal, and abdominal regions.

iliometer (il-e-om'et-er) [*iliac* spines + Gr. μέτρον measure]. An instrument for determining the relative heights of the iliac spines and their relative distance from the center of the spinal column.

iliopectineal (il'i'e-o-pek-tin'e-al). Pertaining to the ilium and pubes.

iliopelvic (il-e-o-pel'vik). Pertaining to the iliac region or muscle and to the pelvis.

iliopsoas (il-e-op'so-as). The iliacus and psoas magnus muscles regarded as forming one muscle.

iliosacral (il-e-o-sa'kral). Pertaining to the ilium and the sacrum.

iliosciatic (il'i'e-o-si-at'ik). Pertaining to the ilium and the ischium.

iliospinal (il'i'e-o-spi'nal). Pertaining to the ilium and the spinal column.

iliothoracopagus (il'i'e-o-tho-rak-op'ag-us) [*ilium* + Gr. θώραξ chest + πάγος fixed]. A twin monster-fetus united by the ilium of one twin to the chest of the other.

iliotibial (il'i'e-o-tib'e-al). Pertaining to or extending between the ilium and tibia.

iliotrochanteric (il'i'e-o-tro-kan-ter'ik). Pertaining to the ilium and a trochanter.

ilium (il'e-um), pl. *il'ia* [L.]. 1. The haunch-bone, distinct in fetal life, but becoming the wide upper portion of the innominate bone. 2. The flank.

il (il). 1. Not well; sick. 2. A disease or disorder. **navel i.**, omphalophlebitis.

illacrimation (il-ak-rim-a'shun). Epiphora.

illaqueation (il'ak-we-a'shun) [L. *illaqueo* 're to insnare']. The cure of an ingrowing eyelash by drawing it out with a loop.

Illicium (il-is'e-um) [L.]. A genus of magnoliaceous trees and shrubs. The fruit of *I. verum* is star-anise. See *anise*, *star-*.

illinition (il-in-ish'un) [L. *illini* 're to smear']. The application of an ointment or liniment with rubbing.

illinium (il-in'e-um) [University of Illinois]. A chemical element, No 61, recently discovered by B. S. Hopkins of the University of Illinois.

illumination (il'ū-min-a'shun) [L. *illuminatio*].

The lighting up of a part, cavity, organ, or object for inspection. **axial i.**, the transmission or reflection of light along the axis of a microscope. **central i.**, axial illumination. **contact i.**, illumination of the eye by means of an instrument which is pressed directly to the cornea and conjunctiva. **critical i.**, the focusing of light upon an object inspected. **dark field i.**, **dark ground i.**, microscopic illumination in which the center rays are blocked out and the peripheral rays are directed against the object from the side. The object appears bright upon a dark background. See *ultramicroscope*. **direct i.**, the throwing of light upon an object in front. **focal i.**, the throwing of light upon the focus of a lens or mirror. **lateral i.**, **oblique i.**, illumination in which the light enters the microscope obliquely.

illusion (il-u'zhun) [L. *illusio*]. A false or misinterpreted sensory image; a false interpretation of a sensory image.

illusional (il-u'zhun-al). Pertaining to or characterized by illusions.

iloglandol (i-lo-glan'dol). A Swiss brand of insulin.

image (im'aj) [L. *imago*]. A picture or conception with more or less likeness to an objective reality. **accidental i.** Same as *after-i.* **acoustic i.**, a concept corresponding to something heard. **aerial i.**, an image seen as in the air by the ophthalmoscope. **after-i.**, a retinal impression continued after the image proper has ceased to be visible. **auditory i.** Same as *acoustic i.* **direct i.**, **erect i.**, a picture from rays not yet focused. **false i.**, the one formed by the deviating eye in strabismus. **heteronymous i.**, the two images seen when the eyes are focused on a point beyond the object. **homonymous i.**, the two images seen when the eyes are focused on a point nearer than the object. **incidental i.**, the impression of an image which remains on the retina after the object has been removed. **inverted i.**, one which is upside down; a real image. **memory i.**, a sensation or sense-perception as it is pictured in the memory. **mental i.**, any concept corresponding to an object appreciated by the senses. **negative i.** Same as *after-i.* **optical i.**, one formed by the reflection or refraction of rays of light. **Purkinje's i.**, an image upon the retina produced by the shadow of the blood-vessels. **Purkinje-Sanson i's**, three pairs of images of one object seen in observing the pupil. **real i.**, one formed where the emanating rays are collected. **retinal i.**, the representation formed upon the retina of an object seen. **sensory i.**, a representation formed by means of one or more of the sense-organs. **tactile i.**, a sensory image corresponding to an object perceived by the sense of touch. **virtual i.** See *direct i.* **visual i.**, a mental concept corresponding to an object seen.

imago (im-ag'o). The final or adult stage of an insect.

imamical (im-am'ik-al). A compound used as a remedy in syphilis, infectious jaundice, and rat-bite fever.

imbalance (im-bal'ans). Lack of balance; especially lack of balance between muscles, as in insufficiency of ocular muscles. **autonomic i.**, **autonomic ataxia**. **sympathetic i.**, **vagotonia**. **vasomotor i.**, **autonomic imbalance**.

imbecile (im-bes-il). 1. Defective mentally. 2. One who is mentally defective; a feeble-minded person whose mental age is between two and seven years. **moral i.**, an imbecile with strong criminal tendencies.

imbecility (im-bes-il'it-e) [L. *imbecillitas*]. Feebleness of mind, congenital or acquired.

imbed (im-bed'). See *embed*.

imbibition (im-bib-ish'un) [L. *imbibere* to drink]. The absorption of a liquid. **hemoglobin i.**, absorption by the tissue of free hemoglobin.

imbricated (im'brik-a-ted) [L. *imbricata*; *im'brex* tile]. Overlapping like tiles or shingles.

imbrication (im-brik-a'shun) [L. *im'brex* a roof-tile]. The overlapping of aponeurotic layers in abdominal surgery.

imid (im'id). A secondary amine; any compound containing the divalent group, :NH.

imidiol (im-id'e-od). A substance in glossy rhombic black or reddish crystals; used like iodoform as a wound antiseptic.

imido-. A prefix used to denote the presence in a compound of the group NH.

imido-Roche (im'id-o-rōsh). Betaimidazoethyl-amin in 1 : 1000 solution; used like adrenalin.

iminazol (im-in-a'zol). A radical, $\begin{array}{c} \text{CH}-\text{NH} \\ || \\ \text{CH}-\text{N} \end{array} \text{CH}$,

occurring in histidin.

iminazolyethylamin (im'in-a-zol-il-eth-il-am'-in). A preparation obtained from ergot and from histidin, $\text{C}_8\text{H}_9\text{N}_2(\text{CH}_2)_2\text{NH}_2$. It is supposed to stimulate unstriped muscle-fiber, and has been used like ergot in obstetrics. See *histamin*.

imino-. A prefix used to denote the presence in a compound of the group NH.

Imlach's plug (im'laks) [Francis Imlach, Scotch physician of nineteenth century]. See *plug*.

immature (im-at-ūr') [L. *in* not + *matūrus* mature]. Unripe or not fully developed.

immediate (im-e'de-āt) [L. *in* not + *medius* mediate]. Direct; with nothing intervening.

immedicable (im-ed'ik-ab-l) [L. *immedicabilis*]. Beyond the hope of cure.

immersion (im-er'shun) [L. *immergio*]. 1. The plunging of a body into a liquid. 2. The use of the microscope with the object and object-glass both covered with a liquid. **homogeneous i.**, the employment in microscopy of a liquid of nearly the same refractive power as the cover-glass. **oil-i.**, the covering of the microscopic objective and the object with oil. **water-i.**, the employment of water in microscopic immersion.

immiscible (im-is'ib-l). Not susceptible of being mixed.

immobility (im-o-bil'it-e). Chronic hydrocephalus of cattle.

immobilization (im-o-bil-iz-a'shun). The act of rendering immovable.

immobilize (im-ob'il-iz) [L. *in* not + *mobilis* movable]. To render incapable of being moved.

immune (im-ūn') [L. *immunis* safe]. 1. Protected against any particular disease, as by inoculation. 2. A person or animal that is protected against any particular disease. **i. body**. See under *body*.

immunificient (im-u-nif-a'shent). Producing immunity: said of diseases, such as diphtheria and typhoid, which for a time produce immunity against themselves.

immunifaction (im-u-nif-ak'shun). Immunization.

immunisin (im-u'niz-in). Amboceptor.

immunity (im-u'nit-e) [L. *immunitas*]. The condition of being immune; security against any particular disease; specifically, the power which a living organism possesses to resist and overcome infection. See *Ehrlich's side-chain theory*, under *theory*. **acquired i.**, the immunity which an individual acquires after birth. It may be active or passive. **active i.**, the immunity elaborated by the activity of a person's or animal's own tissues, cells, or body fluids. It may be produced (1) by having and recovering from the disease in question, as in scarlet fever; (2) by the cumulative effect of slight, perhaps unnoticed, infections, especially in childhood, as in tuberculosis; (3) by inoculation with an attenuated form of the

causative organism, as in smallpox vaccination; (4) by the injection of dead bacteria, as in the typhoid prophylactic; (5) by the injection of toxin, as in the production of diphtheria antitoxin; (6) by the injection of bacterial products or constituents of the bacterial cell, as in plague; and an analogous condition is produced; (7) by the injection of other antigens, such as cells (red blood-cells), tissues (thyroid), body fluids (blood-serum), or other proteins. **actual i.**, that which is conferred by a recovery from a contagious disease. **antibacterial i.**, **antimicrobic i.**, immunity against the action of bacteria. **antiblastic i.**, immunity due to forces which are antagonistic to the growth of the microorganism in the body of the patient or animal. **antitoxic i.**, immunity against toxins. **artificial i.**, immunity produced by the injection of bacteria or their products. **athreptic i.**, immunity due to the absence of a specific substance which is necessary for growth of the infecting organism. **bacteriolytic i.** Same as *antibacterial i.* **Behring's i.** See *Behring's method*, under *method*. **Colles's i.** See *Colles's law*. **congenital i.**, the immunity which an individual possesses at birth. **depression i.**, immunity which produces not the death of, but a depression of, the virulence of the infecting organism. Such immunity is seen in reinfection and may possibly explain the occurrence of chronic infection. **familial i.**, immunity occurring as a characteristic in certain families. **inherent i.**, a natural inborn immunity. **inherited i.**, an immunity transmitted from the parents through the germ cells. **mixed i.**, acquired immunity. **natural i.**, the immunity which a person acquires without effort or purpose on his part. It is usually active immunity. **opsonic i.**, immunity due to the presence of opsonins. **passive i.**, immunity which depends upon defensive factors not originating in the individual protected, but which is passively acquired by being injected with the serum of an individual who has acquired an active immunity against the disease in question. **phagocytic i.**, immunity dependent on the formation in the body of substances which prepare the bacteria for phagocytosis. **Profeta's i.**, immunity against syphilitic infection possessed by some children of syphilitic parents. **racial i.**, natural immunity possessed by all the members of a group of individuals. **relative i.**, immunity due to loss of complement of the blood or to a lessened avidity of the body cells for the poison. **species i.**, **specific i.** Same as *racial i.* **toxin-antitoxin i.**, an active antitoxic immunity produced by injecting subcutaneously a nearly neutral mixture of diphtheria toxin and antitoxin.

immunization (im-u-niz-a'shun). The process of rendering a subject immune, or of becoming immune. **active i.**, **isopathic i.**, immunization which produces active immunity. **collateral i.**, non-specific or paraspecific immunization; immunization by the inoculation with a microbe other than that with which the patient is infected. **passive i.**, transient immunization produced by the introduction into the system of the blood-serum of animals already rendered immune. **toxin-antitoxin i.** See *toxin-antitoxin*.

immunizator (im-u-niz-a'tor). That which renders immune.

immunochemistry (im-u-no-kem'is-tre). That department of chemistry which deals with the substances and reactions concerned in immunity.

immunodiagnosis (im-u'no-di-ag-no'sis). Diagnosis by the reactions of immunity; serum-diagnosis.

immunogen (im-u'no-jen). A proprietary form of ecto-antigen.

immunogenic (im-u-no-jen'ik). Producing immunity.

immunology (im-u-nol'o-je). The science or study of immunity.

immunoprotein (im-u-no-pro'te-in). Immunoprotein.

immunoreaction (im-mu'no-re-ak'shun). The little understood specific reaction that takes place between an antigen and its antibody.

immunotherapy (im-u'no-ther'ap-e). Treatment by the production of immunity.

immunotoxin (im-u-no-toks'in). Any antitoxin.

immunotransfusion (im-u'no-trans-fu'zhun). Transfusion of blood which has been immunized by an autogenous vaccine from the patient.

immunoprotein (im-un-pro'te-in). A substance formed in the body of animals on the injection of an old bacterial culture by the union of the zymase of the culture with the body albumin. These immunoproteins have a bacteriolytic power.

impact (im'pakt) [L. *impac'tus*]. A sudden and forcible collision.

impacted (im-pak'ted) [L. *impac'tus*]. Driven firmly in; closely lodged; attended with firm lodgment.

impaction (im-pak'shun) [L. *impac'tio*]. The condition of being firmly lodged or wedged. **dental i.**, the condition in which a tooth is embedded in the alveolus so that its eruption is prevented.

impalpable (im-pal'pa-bl) [L. *in* not + *palpa're* to feel]. That cannot be felt, as, an *impalpable* pulse; also extremely fine, as, *impalpable* powder.

impaludism (im-pal'u-dizm) [L. *in* into + *palus* marsh]. Malarial cachexia; marsh-poisoning.

impar (im'par) [L.]. Not paired; having no fellow; azygous.

impardigitate (im-par-dij'it-at) [L. *im'par* unequal + *dig'itus* finger]. Having the fingers or toes unequal in number, as in man.

imperative (im-per'at-iv) [L. *imperati'vus*]. Dominant; not subject to control by the will.

impercception (im-per-sep'shun). Defective power of perception.

imperforate (im-per'fo-rat) [L. *imperforatus*]. Not open; abnormally closed.

imperialin (im-pe're-al-in). A crystalline alkaloid, $C_{38}H_{50}NO_4$, from *Fritillaria imperialis*.

impermeable (im-per-me-ab-l) [L. *in* not + *per* through + *me're* to move]. Not permitting a passage, as for fluid.

impermeaphane (im-per'me-fan). A light transparent protective dressing material.

impenetrable (im-per've-us) [L. *im'per'vius*]. Impenetrable; not affording a passage.

impetiginization (im-pe-tij-in-iz-a'shun). The development of impetigo upon an area previously affected with some other skin disease.

impetiginous (im-pet-ij'en-us) [L. *impetiginosus*]. Pertaining to or of the nature of impetigo.

impetigo (im-pet-i'go) [L.]. An inflammatory skin disease characterized by isolated pustules.

Bockhart's i., epidemic abscesses produced by pyogenic bacteria. **i. bullo'sa**, impetigo with the lesions in the form of bullae. **i. contagio'sa**, a contagious disease, caused by staphylococci, marked by flat vesicles that become pustular and then crusted. **i. contagio'sa bullo'sa**, a bullous eruption, starting on the face and spreading thence over the body. The bullae rupture and become covered with crusts. The disease is contagious. Called also *Corlett's pyosis*. **i. eczematodes**, pustular eczema. **i. herpetiformis**, a severe disease affecting pregnant women, and characterized by groups of pustules. **i. simplex**, **i. staphylogenes**, an acute inflammatory form due to a staphylococcus. **i. syphilitica**, a pustular eruption in syphilis. **i. variolo'sa**, a pustular eruption occurring between the drying pocks of smallpox.

impf-tetanus (impf'tet-an-us) [Ger.]. Inoculated tetanus; cultures from it afford a special form of pathogenic bacillus.

impilation (im-pi-la'shun). Rouleau formation.

implant (im-plant'). To insert or graft.

implantation (im-plan-ta'shun) [L. *in* into + *plan-* to're to set]. 1. The transfer of parts, as of sound teeth. 2. Grafting, as of the skin, nerves, or tendons. 3. The introduction of a solid medicine beneath the skin. 4. The inoculation of the bacteria into the blood or other fluid which is being tested for its bactericidal power. After a suitable interval portions of the mixture are transferred to culture-media (explanation) or the mixture may be incubated directly if it is nutritive (in culturing). **end-to-end i.**, surgical repair, as of the bowel or of a nerve, by bringing together the divided ends. **filigree i.**, the insertion of a silver network in the abdominal wall for the purpose of closing a large abdominal hernia. **hypodermic i.**, the placing of a medicine in the subcutaneous tissue. **nerve i.**, the operation of inserting and attaching a nerve into the sheath of another nerve. **parenchymatous i.**, the introduction of a medicine into the substance of a tumor. **periosteal i.**, the operation of inserting a normal tendon into the periosteum of a joint at the insertion of a paralyzed tendon to take the place of the latter. **silk i.**, the operation of restoring a paralyzed tendon by implanting strands of sterile silk so that they will stimulate the formation of fascial sheaths along the line of the paralyzed tendon. **teratic i.**, the partial blending of an imperfect with a nearly perfect fetus.

imponderable (im-pon'der-ab-l) [L. *in* not + *pon* weight]. Having no weight.

impotence, impotency (im-po'tens, im-po'ten-se) [L. *in* not + *poten* power]. Lack of power: chiefly of reproductive power or virility.

impotentia (im-po'ten'she-ah) [L.]. Impotence. **i. coeundi**, inability of the male to perform the sexual act. **i. erigen**, inability to have an erection of the penis.

impregnate (im-preg'nāt) [L. *impregna*]. 1. To render pregnant. 2. To saturate or charge with.

impregnation (im-preg-na'shun) [L. *impregna*]. 1. The act of fecundation or of rendering pregnant. 2. The process or act of saturation; a saturated condition.

impressio (im-pres'e-o), pl. *impressio*nes. Latin for *impression*. **i. cardiaca**. 1. The concavity on the mediastinal surface of the lung corresponding to the surface of the heart. 2. [B N A] A depression on the parietal surface of the liver corresponding to the position of the heart. **i. colica** [B N A], **i. duodena** [B N A], **i. gastrica** [B N A], **i. rena** [B N A], **i. suparena** [B N A], **i. impressio**nes on the liver made respectively by the colon, duodenum, stomach, kidney, and suprarenal gland. **impressio**nes *digitatae*. See *digital impressions*, under *impression*. **i. hepatica**, an impression on the kidney where it touches the liver. **i. oesophagea** [B N A], the impression made on the liver by the esophagus. **i. petrosa**, a depression on the temporosphenoid lobe of the brain corresponding to the prominence of the superior semicircular canal of the temporal bone. **i. suparena** [B N A], a depression on the under surface of the right lobe of the liver which lodges the right suprarenal body. **i. trigemini** [B N A], the impression on the petrous portion of the temporal bone made by the gasserian ganglion.

impression (im-presh'un) [L. *impressio*]. 1. A dent, hollow, or indentation. In dentistry, an impression of the jaw with the teeth taken in some plastic substance, as wax or plaster. This impression is filled in with plaster-of-Paris to form a model of the jaw. 2. An effect made upon the mind, body, or senses by some external object. **cardiac i.** See *impressio cardiaca*. **centrifugal i.**, a motor impression sent from a nerve-center outward to a muscle. **centripetal i.**, a sensory impression transmitted by an afferent nerve from the exterior of the body to the central organ. **colic i.** See

impressio colica. **deltoid i.**, the deltoid crest. See *crest*. **digital i's**, impressions on the inner surface of the cranium, corresponding to the cerebral convolutions. **duodenal i.** See *impressio duodenalis*. **maternal i.**, the alleged effect produced upon the fetus in utero by the mental or other experiences received by the mother during gestation. **mental i.**, an effect produced upon the mind by a communication received from an external object. **i.-preparation**, a bacterial colony upon the surface of which a cover-glass is lightly pressed. **renal i.** See *impressio renalis*. **rhomboid i.**, costal tuberosity. **sensory i.**, an effect produced upon an organ of sense by a communication received from an external object. **trigeminal i.**, the depression in the temporal bone for the gasserian ganglion.

improcreant (im-pro'kre-ant). Unable to procreate.

impulse (im'puls). 1. A sudden pushing force. 2. A sudden uncontrollable determination to act.

impulsion (im-pul'shun). An abnormal impulse to perform certain acts, usually of a disagreeable nature.

imputability (im-pu-tab-il'it-e). Soundness of mind; unimpaired responsibility.

im-pyeng (im'pi-eng). See *collapsing typhus*, under *typhus*.

I. M. S. Abbreviation for *Indian Medical Service*.

In. The symbol for *indium*.

in. Abbreviation for *inch*.

in- [L. *in* in, into]. 1. A prefix signifying *in*, *within*, or *into*. 2. A negative or privative prefix.

inacidity (in-as-id'it-e). Absence of acidity.

inaction (in-ak'shun) [L. *in* not + *actio* act]. Imperfect response to a normal stimulus.

inactivate (in-ak'tiv-āt). To render inactive; to destroy the activity of.

inactivation (in-ak-tiv-a'shun). The destruction of the activity of a serum by the action of heat or other means. **i. of the complement** is usually produced by heating the serum to 56° C. for fifteen to thirty minutes.

inactose (in-ak'tōs). A variety of optically inactive plant sugar.

inadequacy (in-ad'ek-was-e) [L. *in* not + *adequa* to make equal]. Inability to perform an allotted function; insufficiency. **cardiac i.**, **mitral i.**, **renal i.**, etc. See under *insufficiency*.

inæmia (in-e'me-ah). Inemia.

inalimental (in'al-im-en'tal) [L. *in* not + *alimentum* food]. Not nutritious; not serviceable as food.

inanimate (in-an'im-āt) [L. *in* not + *animatus* alive]. 1. Without life. 2. Lacking in animation.

inanition (in-an-ish'un) [L. *inanis* empty]. Wasting of the body from lack of food.

inankyloglossia (in-ang'kil-o-glos'e-ah). An immovable condition of the tongue, congenital or acquired.

inappetence (in-ap'et-ens) [L. *in* not + *appetere* to desire]. Lack of desire or appetite.

inarticulate (in-ar-tik'u-lāt) [L. *in* not + *articulatus* joined]. Not uttered like articulate speech.

in articulo mortis (in ar-tik'u-lo mor'tis) [L.]. At the very point of death.

inassimilable (in-as-im'il-ah-bl) [L. *in* not + *assimilable*]. Not susceptible of being utilized as nutriment.

inaxon (in-ak'son) [Gr. *is* fiber + *ἄξων* axis]. A nerve-cell whose axis-cylinder has its arborization at a considerable distance from the cell. See *dendraxon*.

inborn (in'born). Formed or implanted during intra-uterine life.

inbreeding (in-bre-ding). Breeding of animals who have the same parents or near ancestors.

incallosal (in-kal o'sal). Characterized by absence of the corpus callosum, and usually by consequent idiocy.

incandescent (in-kan-des'ent) [L. *incandes'cens* glowing]. Glowing with heat and light.

incarcerated (in-kar'ser-a-ted) [L. *incarceratus* imprisoned]. Imprisoned; held fast; constricted.

incarceration (in-'kar-ser-a'shun) [L. *in* + *car'cer* prison]. Unnatural retention or confinement of a part.

incarial (in-ka're-al). Pertaining to or characteristic of the Incas in Peru or of the Peruvian race. **i. bone**. See under *bone*.

incarnant (in-kar'nant) [L. *incarna're* to make flesh]. Promoting the granulation of wounds; an agent that promotes granulation.

incarnative (in-kar'na-tiv) [L. *incarna're* to make flesh]. 1. Promoting the formation of granulations. 2. An agent or medicine that promotes granulations.

incasement (in-kās'ment). See *evolution* (3d def.).

incident (in-si-dent) [L. *in'cidens* falling upon]. 1. Falling or striking upon. 2. Same as *afferent*.

incineration (in-sin-er-a'shun) [L. *in* into + *cin'eres* ashes]. The act of burning to ashes; cremation.

incipient (in-sip'e-ent). Beginning to exist; coming into existence.

incisal (in-si'zal). Cutting, as, the *incisal* edge of a tooth.

incised (in-sizd') [L. *inci'sus*]. Cut; made by cutting.

incision (in-sizh'un) [L. *incis'io*]. 1. A cut or wound. 2. The act of cutting. **Auvray i.**, an enlarged incision for splenectomy: the usual incision is made along the outer border of the left rectus muscle and up to the costal cartilages; this is extended upward and posteriorly over the lower ribs to the level of the eighth interspace. **Bar's i.**, an incision for cesarean section made in the middle line of the abdomen above the umbilicus, the uterus being incised longitudinally. **Battle-Jalaguier-Kammerer i.**, incision for abdominal section, consisting of a vertical incision of the skin and fascia, vertical division of the anterior layer of the sheath of the rectus, with retraction of the rectus inward, vertical division of the posterior layer of the rectal sheath nearer the median line, together with the subserous areolar tissue and peritoneum: used in quiescent stage of appendicitis and in some operations on the stomach, liver, and gall-bladder. **Bergmann's i.**, an incision for exposing the kidney, made from the outer border of the erector spine at the level of the twelfth rib, toward the junction of the outer and middle third of Poupart's ligament. **Bevan's i.**, a vertical one along the outer edge of the right rectus muscle: for exposing the gall-bladder. **celiotomy i.**, an incision made through the abdominal wall to give access to the peritoneal cavity. **confirmatory i.**, an incision into an organ made for the purpose of confirming a diagnosis. **crucial i.**, a cross-shaped incision. **Deaver's i.** (*for appendicitis*), incision through the sheath of the right rectus muscle, the muscle being then pushed inward. **Fergusson's i.**, an incision for excision of the upper jaw. It runs along the junction of the nose with the cheek, around the ala of the nose to the median line, and descends to bisect the upper lip. **Fowler's angular i.**, an incision for anterolateral abdominal section. **hockey-stick i.** See *Meyer's hockey-stick i.* **Kehr's i.**, an abdominal incision for opening up a wide field. It extends from the xiphoid cartilage to the umbilicus in the median line, and obliquely downward to the right or left of the umbilicus, and again vertically downward. **Küstner's i.**, a semilunar abdominal incision with the concavity above, through the fat above the symphysis pubis, following one of the natural folds of the skin.

The upper flap is detached from the aponeurosis of the external oblique, and then the usual incision is made parallel to the rectus muscle. **Langenbeck's i.**, an abdominal incision through the linea semilunaris parallel to the fibers of the rectus abdominis muscle: used for operations on the kidney, spleen, colon, tail of pancreas, etc. **Longuet's i.** See *Longuet's operation*, under *operation*. **Mackenrodt's i.**, a transverse semilunar abdominal incision, the lowest point of which is about 2 cm. above the pubes. **McBurney's i.**, an abdominal incision parallel to the fibers of the external oblique muscle and about 1 inch from the anterior-superior spine of the ilium. The skin and subcutaneous fat are incised down to the external oblique, the fibers of which are split; the internal oblique is exposed, its fibers, along with those of the transversalis, being split and separated. **Meyer's hockey-stick i.**, an incision for entering the lower anterior abdominal cavity, partly by intramuscular separation, partly by transverse division of muscle, by an incision shaped somewhat like a hockey-stick: used in complicated appendicitis. **Parker's i.**, an incision over the area of dullness in appendical abscess, extending nearly parallel with Poupart's ligament. **Pfan-nenstiel's i.**, an abdominal incision, consisting of a curved incision, the convexity directed downward, just above the symphysis, passing through skin, superficial fascia, and aponeurosis, exposing the pyramidalis and recti muscles, which muscles are separated from each other in the median line, the peritoneum being opened vertically. **relief i.**, a cut made to relieve tension in a part. **Vischer's lumbo-iliac i.**, separation of the muscular and tendinous fibers of the abdominal muscles of the lumbo-iliac region, just above the center of the iliac crest, in their cleavage lines, without transverse division of the muscle-fibers or harm to the abdominal nerves. **Wilde's i.**, exposure of the mastoid process by an incision behind the auricle, the bone being opened if necessary: done for mastoid abscess.

incisive (in-si'siv) [L. *incis'ivus*]. 1. Having the power or quality of cutting. 2. Pertaining to the incisor teeth.

incisor (in-si'sor) [L. *incid'ere* to cut into]. Any one of the four front teeth of either jaw.

incisura (in-sis-u'rah), pl. *incisurae* [L.]. A cut, notch, or incision. **i. acetabuli** [B N A], the cotyloid notch. **i. ap'icis cor'dis** [B N A], a notch in the lower part of the anterior border of the left lung. **i. cardi'aca** [B N A], the cardiac notch. **i. cartilag'inis meatus acustici externi santorini** [B N A]. Same as *i. santorini*. **i. cerebel'li ante'rior** [B N A], the notch between the hemispheres of the cerebellum in front. **i. cerebel'li poste'rior** [B N A], the notch that separates the hemispheres of the cerebellum behind. **i. clavicu'laris** [B N A], the clavicular notch. **incisurae costa'les**, the notches at the sides of the sternum for the ends of the ribs. **i. ethmoida'lis** [B N A], the ethmoid notch. **i. fibula'ris** [B N A], the fibular notch. **i. fronta'lis** [B N A], the frontal notch. **i. interloba'ris**, the deep notch or space between the lobes of the lungs. **i. intertrag'ica** [B N A], the notch between the tragus and antitragus. **i. ischiad'ica ma'jor** [B N A], the great sacrosciatic notch. **i. ischiad'ica mi'nor** [B N A], the lesser sacrosciatic notch. **i. jugula'ris** [B N A], the interclavicular notch. **i. lacrima'lis** [B N A], the lacrimal notch. **i. mandibu'lae** [B N A], the sigmoid notch. **i. mastoi'dea** [B N A], the digastric fossa. **i. nasa'lis** [B N A], the nasal notch. **i. pal'li transver'sa**, the space between the cerebrum and cerebellum into which the tentorium dips. **i. pancrea'tis** [B N A], the pancreatic notch. **i. parieta'lis** [B N A], the parietal notch. **i. radia'lis** [B N A], the lesser sigmoid cavity of the ulna. **i. rivi'ni**, the notch of the superior edge of the inner end of the external au-

ditory meatus. **i. santori'ni**, either of the two fissures in the cartilaginous part of the external auditory meatus. **i. scap'ulæ** [B N A], the supra-scapular notch. **i. scapula'ris**, the greater sigmoid cavity. **i. semiluna'ris** [B N A], the greater sigmoid cavity. **i. sphenopalati'na** [B N A], the sphenopalatine notch. **i. supra-orbita'lis** [B N A], the supra-orbital notch. **i. tento'rii** [B N A], the pachionian foramen. **i. tympani'ca** [rivi'n]. Same as *i. rivini*. **i. ulna'ris** [B N A], the sigmoid cavity of the ulna. **i. umbilica'lis** [B N A], the anterior notch of the liver. **i. vertebra'lis** [B N A], the intervertebral notch.

incisure (in-si'zhūr) [L. *incisus*'ra]. A notch or slash. **i's of Lantermann**, **i's of Schmidt**, oblique lines or slashes on the sheaths of medullated nerve-fibers. **Rivinus's i.** See *Rivinus's notch*, under *notch*.

incitamin (in-sit'am-in). A proprietary sterile solution of equine saliva; used as a moist dressing for ulcers, burns, and infected wounds.

inclination (in-klin-a'shun). In dentistry, the deviation of a tooth from the vertical. It is distinguished in direction as *distal*, *lingual*, and *mesial*.

inclinometer (in-kli-nom'et-er). An instrument for determining the ocular diameter.

inclusion (in-klū'zhun) [L. *inclusio*]. The act of inclosing or condition of being inclosed; that which is inclosed. **cell i.**, any foreign substance included within a cell, such as starch, yolk, or objects picked up. **fetal i.**, a form of monstrosity in which one twin is inclosed within another. **leukocyte i's**. See *Döhle's inclusion bodies*, under *body*.

incorceible (in-ko-er'sib-l). Uncontrollable; that cannot be overcome.

incoherent (in-ko-hēr'ent) [L. *in* not + *coherere* to cling together]. Without proper sequence; incongruous.

incompatibility (in'kom-pat-ib-il'it-e). The quality of being incompatible. **chemic i.**, the quality of not being miscible with another given substance without a chemic change. **physiologic i.**, the quality of not being administrable with another given remedy on account of their antagonistic effects. **therapeutic i.**, opposition in therapeutic effect between two or more medicines.

incompatible (in-kom-pat'ib-l) [L. *incompatibilis*]. Not suitable for combination or simultaneous administration; mutually repellent.

incompensation (in'kom-pen-sa'shun). Lack of compensation.

incompetence, incompetency (in-kom'pet-ens, in-kom'pet-en-se) [L. *in* not + *competens* sufficient]. Inadequacy or insufficiency. **aortic i.** See *aortic insufficiency*, under *insufficiency*. **i. of the cardiac valves**, a defective condition of the valves of the heart in which they allow the return of blood by them when closed. **ileocecal i.**, inability of the ileocecal valve to prevent the flow of material from the colon to the ileum. **muscular i.**, incompetence of a cardiac valve due to defective action of the papillary muscles. **pyloric i.**, passage of undigested food into the intestine. **relative i.**, defective closure of a cardiac valve due to dilatation of the corresponding cavity of the heart. **valvular i.** See *inadequacy*.

incompressible (in-kom-pres'ib-l). Not susceptible of being squeezed together.

incontinence (in-kon'tin-ens) [L. *incontinentia*]. 1. Inability to restrain a natural discharge. 2. Lack of self-control, especially with regard to sexual indulgence. **active i.**, incontinence in which the bowels or bladder are emptied involuntarily, but at regular intervals and in the normal way. **intermittent i.**, loss of control of the urine on a sudden movement or on pressure on the bladder, due to interruption of the voluntary path above the lumbar center. **i. of milk**, galactorrhea. **overflow-i.**, that which is due to pressure.

of retained urine in the bladder. **paralytic i.**, continuous dribbling of the urine and feces, due to relaxation of the sphincters from destruction of the lumbar centers. **passive i.**, incontinence of urine in which the bladder is full and cannot be emptied in the normal way, but the urine dribbles away from mere pressure. **i. of urine**, enuresis.

incontinentia (in-kon-tin-en'she-ah). Incontinence. **i. al'vi**, incontinence of the feces. **i. uri'næ**, constant and involuntary dribbling of the urine.

incoördination (in'ko-or-din-a'shun) [L. *in* not + *coördinatio*]. Lack of the normal adjustment of muscular motions; failure of organs to work harmoniously. **jerky i.**, that which leads to great and sudden irregularity of movement.

incorporation (in'kor-po-ra'shun) [L. *in* into + *corpus* body]. The thorough union of one substance with another, or with others, in a composite mass.

increment (in'kre-ment) [L. *incrementum*]. That by which anything is increased; increase, or augmentative growth.

incretion (in-kre'shun). An internal secretion; an endocrine. **negative i.**, an internal secretion which does not act as a hormone, but is supposed to act as a neutralizer of poisonous substances circulating in the blood.

incretory (in'kre-to-re). Pertaining to internal secretion; endocrine.

incrustation (in-krus-ta'shun) [L. *in* not + *crusta* crust]. The formation of a crust; a crust, scale, or scab.

incubate (in'ku-bāt). To place a culture in an apparatus which will keep it at a constant optimum temperature, so as to secure the maximum growth of bacteria.

incubation (in-ku-ba'shun) [L. *incubatio*]. 1. The period between the implanting of an infectious disease and its manifestation. 2. The keeping of a culture of bacteria or protozoa in an incubator to facilitate development. 3. In Greek medicine, the rite of sleeping in the Æsculapian temples, medical advice being rendered in a dream, or by the priests, if patients waked.

incubator (in'ku-ba-tor). 1. An apparatus for rearing prematurely born children; a couveuse. 2. An apparatus for maintaining cultures of bacteria or other materials at a constant and suitable temperature.

incubus (in'ku-bus) [L.]. 1. A nightmare. 2. A heavy mental burden.

incudal (in'ku-dal) [L. *in'cus* anvil]. Pertaining to the incus.

incudectomy (in-ku-dek'to-me) [L. *in'cus* anvil + Gr. *ἐκτομή* excision]. Surgical removal of the incus.

incudiform (in-ku'dif-orm). Anvil-shaped.

incudius (in-ku'de-us). The laxator tympani muscle.

incudomalleal (in'ku-do-mal'e-al). Pertaining to the incus and malleus.

incudostapedial (in'ku-do-sta-pe'de-al). Pertaining to the incus and stapes.

inculturing (in-kul'tshur-ing). See *implantation*, 4th def.

incurable (in-ku'rab-l). Not susceptible of being cured.

incurvation (in-kur-va'shun) [L. *incurva're* to bend in]. A condition of being bent in.

incus (ing'kus) [L. "anvil"]. The anvil-shaped ossicle of the middle ear.

incwadi (ink-wah'de). The bulbous-rooted plant, *Bu'phane distich'ia*, of South Africa; it affords an arrow-poison.

In d., in d. Abbreviation for *L. in di'es*, daily.

indaconitin (in-dak-on'it-in). A crystalline alkaloid, C₃₄H₄₇NO₁₀, from *Aconitum chasmanthum*.

indagation (in-dag-a'shun) [L. *indagatio*]. A careful search, inquiry, or examination.

indenzation (in-den-iz-a'shun). Same as *innidiation*.

indentation (in-den-ta'shun) [L. *indentatio*; *dens* tooth]. 1. A condition of being notched; a notch, pit, or depression. 2. The act of indenting, as with the finger.

index (in'deks), pl. *in'dices* [L.]. 1. The first or forefinger. 2. The numeric ratio of measurement of any part in comparison with a fixed or assumed standard. **acidosis i.**, a number representing the degree of intensity of a case of acidosis. **altitudinal i.**, the relation of the cranial height to the cranial length; called also *height index* and *length-height i.* **alveolar i.**, the degree of prominence of the jaws; the distance from the basion to the front of the jaw expressed as a percentage of the distance from the basion to the midpoint of the nasal suture. Called also *gnathic i.* **antitryptic i.**, a number representing the increased viscosity of a solution of casein treated with trypsin to which the blood-serum of a cancer patient has been added, as compared with the viscosity after the same procedure in which the blood-serum is normal. **auricular i.**, the relation of the width to the height of the auricle. **auriculoparietal i.**, the ratio of the breadth of the skull between the auricular points to its greatest breadth. **auriculoververtical i.**, the ratio of the height of the skull above the auricular point to its greatest height. **basilar i.**, the ratio of the distance between the basion and the alveolar point to the total length of the skull. **biochemical racial i.**, the ratio of the percentage of persons having agglutinin A in their erythrocytes to the percentage having agglutinin B, or the ratio of persons of blood group II to those of blood group III. **Broder's i.**, an index of malignancy based on the fact that the more undifferentiated or embryonic the cells of a tumor, the more malignant is the tumor. Grade 1 contains one-fourth undifferentiated cells; Grade 2, one-half undifferentiated cells; Grade 3, three-fourths undifferentiated cells; Grade 4, all cells undifferentiated. **calcium i.**, the relative amount of calcium in the blood as compared to that in a 1:6000 solution of calcium oxid. **cardiothoracic i.**, the size of the heart in relation to the size of the chest, being the greatest transverse diameter of the heart shadow as compared to the greatest transverse diameter of the chest shadow on radioscapy. **catalase i.**, a number representing the proportion between the amount (in grams) of hydrogen peroxid decomposed by 1 c.c. of blood, as compared with the erythrocyte count of the same blood. **cephalic i.**, the number found by multiplying the cranial breadth by 100 and dividing by the cranial length. **cephalo-orbital i.**, the number obtained by multiplying the capacity of the cranium by 100 and dividing by the capacity of the two orbits. **cephalorhachidian i.** Same as *cerebrospinal i.* **cerebral i.**, the ratio of the greatest transverse to the greatest anteroposterior diameter of the cranial cavity. **cerebrospinal i.**, the figure obtained by multiplying the final cerebrospinal pressure by the quantity of fluid withdrawn in spinal puncture and then dividing by the initial pressure. **color i.**, the relative amount of hemoglobin contained in a red blood-corpuscle. **coronofrontal i.**, the ratio of the greatest frontal to the greatest coronal breadth of the head. **cranial i.** Same as *cephalic i.* **cytophagic i.**, the relative phagocytic power of leukocytes from a given source, as compared with that of leukocytes from a different source used as a standard. **dental i.**, the result obtained by multiplying the dental length by 100 and dividing by the length of the basinasal line. **empathic i.**, the degree of empathy felt by one person toward another. **endemic i.**, the percentage of children in any locality affected with an endemic disease. **facial i.**, the relation of the length of the face to

its width, obtained by multiplying by 100 the bizygomatic width and dividing the product by the distance from the ophyron to the alveolar point. **Flower's i.**, dental index. **Fourmentin's thoracic i.**, the number obtained by multiplying the transverse diameter of the thorax by 100 and dividing by the anteroposterior diameter. **gnathic i.** See *alveolar i.* **gono-opsonic i.**, the opsonic index in relation with gonococcus infection. **hematopneic i.**, a figure denoting the intensity of blood oxygenation. **hemophagocytic i.**, the relative phagocytic power of the entire blood, including both leukocytes and serum. Called also *opsonocytophagic i.* **hemorenal i.**, the ratio of the amount of inorganic salts in the urine to that in the blood. It is obtained by dividing the electric resistance of the blood by that of the urine. The quotient obtained by dividing the former by the latter is the hemorenal index. **icteric i.**, **icterus i.**, a term denoting the amount of bilirubin in the blood: used as a test of liver function. **length-breadth i.**, the breadth of the skull expressed as a percentage of its length. **length-height i.**, the height of the skull expressed as a percentage of its length. **Lennhoff's i.**, the relation of the distance between the sternal notch and the pubic symphysis to the greatest circumference of the abdomen. **McLean's i.** See *McLean's formula*, under *formula*. **i.-movement**, a compulsory movement in which an animal turns round and round. **nasal i.**, the number obtained by multiplying the nasal width by 100 and dividing by the nasal height. **opsonic i.**, the opsonic power of the blood of a patient for any particular micro-organism compared with the normal as measured by *in vitro* phagocytosis. **opsonocytophagic i.** See *hemophagocytic i.* **orbital i.**, the relation of the height of the orbit to its width. **palatal i.**, **palatine i.**, **palatamaxillary i.**, the number obtained by multiplying the palato-maxillary width by 100 and dividing by the palatamaxillary length. **pelvic i.**, the ratio of the conjugate and transverse diameters of the pelvis. **percentage i.**, the percentage of leukocytes in the blood which are phagocytic. **phagocytic i.** 1. The average number of bacteria ingested per leukocyte of a patient's blood. 2. (*Of Armet*). The proportion in the blood of multinuclear neutrophile leukocytes with nuclei having three or more lobes. **refractive i.**, the coefficient of refraction. **sacral i.**, the number obtained by multiplying the breadth of the sacrum by 100 and dividing by the length. **saturation i.**, a number indicating the hemoglobin content of a person's red blood-cells as compared to the normal. It is the quotient obtained by dividing the percentage of hemoglobin by the percentage by volume of the cells. **splanchnop-totic i.**, the distance of the jugulum from the upper margin of the pubic symphysis divided by the minimal circumference of the abdomen, and the quotient being multiplied by 100. **staphylo-opsonic i.**, the opsonic index in staphylococcic infection. **stephanozygomatic i.**, the relation of the interstephanic and bizygomatic diameters. **thoracic i.**, the ratio of the anteroposterior diameter of the thorax to the transverse diameter. **tibiofemoral i.**, the ratio of the length of the tibia to that of the femur. **tuberculo-opsonic i.**, the opsonic index in tuberculous infection. **urea i.** See *Ambard's formula* and *McLean's formula*, under *formula*. **ureo-secretory i.** Same as *Ambard's formula*. See under *formula*. **uricolytic i.**, the percentage of uric acid which is oxidized to allantoin before being secreted. **vertical i.**, the number obtained by multiplying the height of the skull by 100 and dividing by the length. **vital i.**, the ratio of births to deaths within a given time in a population; called also *birth-death ratio*. **volume i.**, the index indicating the size of an erythrocyte as compared with the normal. It is the quotient obtained by dividing the volume of red corpuscles (ex-

pressed in percentage of the normal) by the number of red corpuscles expressed in percentage of the normal). **zygomatoc-auricular i.**, the ratio between the zygomatic and auricular diameters of the skull.

Indian hemp (in'de-an hemp). See *Cannabis* and *Apocynum*.

Indian tobacco (in'de-an). See *Lobelia*.

india-rubber (in'de-ah-rub'er). See *caoutchouc*.

indican (in'dik-an). 1. A yellow glucosid, $C_{14}H_{17}O_6N$, from the plants that yield indigo. On hydrolysis it yields glucose and indoxyl. 2. Potassium indoxyl sulphate, $C_8H_4NH.C_7H_7.CO.SO_2.OK$, formed by decomposition of tryptophan in the intestines and found in the urine.

indicanemia (in-dik-an-e'me-ah) [*indican* + Gr. *αἷμα* blood]. The presence of indican in the blood.

indicanhidrosis, indicanidrosis (in-dik-an-id-ro'sis) [*indican* + Gr. *ἵδρω* water or *ἰδρῶς* sweat]. Blue sweat.

indicanmeter (in'dik-an-me-ter). An instrument for estimating the amount of indican in the urine.

indican (in'dik-ant). 1. Indicating. 2. A symptom which indicates the true diagnosis or treatment.

indicanuria (in'dik-an-u're-ah) [*indican* + Gr. *οὖρον* urine]. The presence in the urine of indican in excessive quantity. It occurs in chronic constipation, intestinal indigestion, epilepsy, and neurasthenia.

indication (in-dik-a'she-o) [L.]. Same as *indication*. 1. **causalis**, an indication as to the treatment of a disease afforded by its cause. 1. **morbi**, an indication as to treatment afforded by the nature of the morbid processes observed. 1. **symptomática**, an indication as to disease afforded by the symptoms that may arise.

indication (in-dik-a'shun) [L. *indica'tio*]. A sign or circumstance which points to or shows the cause, pathology, treatment, or issue of an attack of disease; that which points out; that which serves as a guide or warning.

indicator (in'dik-a-tor) [L.]. 1. The forefinger; index-finger. 2. The extensor indicis muscle. 3. Any substance which, when added in small quantities, shows the appearance or disappearance of a chemical individual by a conspicuous change of color. **anaërobic i.**, a dilute solution of methylene-blue is decolorized in the absence of oxygen.

Audrade's i., a solution of acid fuchsin, 0.5 gm. in 100 c.c. of water, which is decolorized to a yellow color by sodium hydrate solution. This is added to sugar bouillon culture-medium. An acid-producing organism cultivated on this bouillon turns the medium magenta red.

indichophose (in'dik-o-fōz). An indigo-colored phase.

Indiella (in-de-el'ah). A genus of fungi several species of which (*I. mansoni*, *I. regnicri*) cause white mycetoma.

indifferent (in-dif'er-ent) [L. *indif'ferens*]. Not tending one way or another; neutral; having no preponderating affinity.

indigenous (in-dij'en-us) [L. *indig'enus*]. Native, or not exotic; native to a particular place or country.

indigestible (in-dij-es'tib-l) [*in-* neg. + *digest-ible*]. Not susceptible of being digested.

indigestion (in-dij-es'tshun). Lack or failure of digestion. **acid i.**, hyperchlorhydria. **gastric i.** See *dyspepsia*. **intestinal i.**, imperfect performance of the digestive function of the intestine. **nervous i.**, nervous dyspepsia. See under *dyspepsia*. **psychic i.**, digestive disturbance due to psychic or mental disquietude.

indigation (in-dij-it-a'shun) [L. *in into* + *dig'itus* finger]. Intussusception or invagination.

indiglucin (in-di-glu'sin). A sugar formed to-

gether with indigo on the decomposition of indican.

indigo (in'dig-o) [Gr. *ἰνδικόν* Indian dye]. A blue dyeing material, $[C_8H_4.CO(NH)C:]_2$, from various leguminous and other plants, as *Indigofera tinctoria*, etc.; also made synthetically. It is found in the sweat and the urine, being derived from the indican. It has been used for epilepsy, etc. Dose, 20-60 gr. (1.333-4 gm.). **i.-blue**. See *indigotin*. **i.-red**. See *indoxyl red*. **red i.** See *cudbear*. **wild i.** See *Baptisia tinctoria*.

indigocarmine (in'dig-o-kar'min). Potassium and sodium salts of indigotin-disulphonic acid, $[C_8H_4.CO.C_6H_4.SO_2.ONa]_2$; used as a histologic stain and as a test for sugar.

indigen (in'dig-o-jen). A crystalline principle from indigo.

indigopurpurin (in'dig-o-pur'pu-rin). A purple pigment occasionally found in the urine.

indigotin (in-dig-o'tin). A blue pigment, $C_{16}H_{10}N_2O_2$, the principal ingredient of commercial indigo. Called also *indigo-blue*.

indigouria, indiguria (in-dig-o-u're-ah, in-dig-u're-ah) [*indigo* + Gr. *οὖρον* urine]. The presence of indigo in the urine.

indirect (in-dir-ekt') [L. *indirec'tus*]. 1. Not immediate or straight. 2. Acting through an intermediary agent.

indirubin (in-dir-u'bin). A red pigment occasionally found in the urine.

indiscriminate (in-dis-krim'in-āt) [L. *in* not + *discrimen* distinction]. Affecting various parts; as, *indiscriminate* lesions.

indisposition (in'dis-po-zish'un). The condition of being slightly ill; a slight illness.

indium (in'de-um) [L. *in'dicum* indigo]. A rare soft metal resembling lead; atomic weight, 114.8; symbol, In; named from its blue line in the spectrum. Its use in medicine is mainly homeopathic.

indococcus (in-do-kok'us). A micrococcus occurring in the mouth. It gives a blue color with iodine.

indoform (in'do-form). A white powder, salicylic acid methylene acetate, formed by the action of formaldehyd on acetyl-salicylic acid.

indol (in'dol). A crystallizable body, C_8H_7N , from indigo, and from the decomposition of tryptophan, in the intestines; it is also found in cultures of the spirillum of cholera and other bacteria. It gives part of their peculiar odor to the feces, and in intestinal obstruction causes an accumulation of indol in the intestine; it is found in large quantities in the urine.

indolaceturia (in'do-las-e-tu're-ah). The presence of indolacetic acid in the urine. It is usually associated with pathologic conditions of the intestinal tract.

indolent (in'do-lent) [L. *in* not + *do'lens* painful]. Causing little pain, as, an *indolent* tumor.

indologenous (in-do-loj'en-us) [*indol* + Gr. *γενν* to produce]. Causing the formation of indol.

indophenol-oxydase (in-do-fe'nol-oks'id-ās). An oxidizing ferment occurring in the pancreas, salivary glands, spleen, bone-marrow, and thymus, whose action is to influence the formation of indophenol in the body.

indoxyl (in-doks'il) [Gr. *ἰνδικόν* indigo + *ὀξύς* sharp]. An oily substance, oxyindol, C_8H_7NO , soluble in water, existing normally in the urine of some persons and formed by decomposition of tryptophan. **i.-red**, a red coloring-matter formed by heating to 130° C. an aqueous solution of indoxyl. Called also *indigo-red*.

indoxyl-sulphates (in-doks'il-sul'fats). Compounds found in the urine in some cases where great putrefactive changes are occurring in the intestine.

indoxyluria (in'doks-il-u're-ah) [*indoxyl* + Gr. *οὖρον* urine]. The presence of an excess of indoxyl in the urine.

induced (in-dūst') [L. *inducere* to lead in]. 1. Produced artificially. 2. Produced by induction.

induction (in-duk'shun) [L. *inductio*]. 1. The act or process of inducing or causing to occur. 2. The generation of electric phenomena in a body by the influence of an electrified body near it.

inductogram (in-duk'to-gram). Same as *skia-graph*.

inductorium (in-duk-to're-um). An apparatus for generating currents of induced electricity.

indulin (in'du-lin). A coal-tar dye, used as a histologic stain.

indulinophil (in-du-lin'o-fil) [*indulin* + Gr. *φιλεῖν* to love]. Stainable with indulin.

indurated (in'du-ra-ted) [L. *in* not + *durus* hard]. Hardened; rendered hard.

induration (in-du-ra'shun) [L. *induratio*]. 1. The quality of being hard; the process of hardening. 2. An abnormally hard spot or place. **black i.**, the hardening and pigmentation of lung tissue seen in pneumonia. **brown i.** 1. A deposit of altered blood-pigment in the lung in pneumonia. 2. Marked increase of the connective tissue of the lung and excessive pigmentation, due to long-continued congestion from valvular heart disease or to anthracosis. **cyanotic i.**, a congested, dense, and purple state of the kidney in which the blood-current is slowed and the transudation of fluid through the glomeruli is impeded. **fibroid i.**, cirrhosis. **Froriep's i.**, myositis fibrosa. **granular i.**, cirrhosis. **gray i.**, an induration of lung tissue in or after pneumonia, without pigmentation. **lamine i.**, a thin layer of round-cell infiltration of the corium in chancre. **parchment i.** Same as *lamine i.* **red i.**, interstitial pneumonia in which the lung is red and congested.

indurative (in'du-ra-tiv). Pertaining to or marked by induration.

indusium gris'eum (in-du'ze-um). The thin layer of gray matter above the corpus callosum, seen on horizontal transection of the cerebrum.

inebriant (in-e'bre-ant) [L. *inebrius* drunken]. 1. Causing intoxication. 2. An intoxicating agent.

inebriation (in-e-bre-a'shun) [L. *inebria'tio*]. The condition of being drunk.

inebriety (in-e-bri'et-e) [L. *in* intensive + *ebrietas* drunkenness]. Habitual drunkenness.

inemia, inæmia (in-e-me-ah) [Gr. *ἵς* fiber + *αἷμα* blood]. The presence of fibrin in the blood.

inert (in-ert'). Having no action.

inertia (in-er'she-ah) [L.]. Inactivity; inability to move spontaneously. 1. **uteri**, sluggishness of the uterine contractions during labor.

in extremis (in ex-tre'mis) [L.]. At the very point of death.

Inf. Abbreviation for L. *infundere*, pour in.

infant (in'fant) [L. *infans*]. A babe or young child.

infanticide (in-fan'tis-id) [L. *infans* infant + *caedere* to kill]. The murder or the murderer of an infant.

infantile (in'fan-til) [L. *infantis*]. Pertaining to an infant or to infancy.

infantilism (in-fant'il-izm). A condition in which the characters of childhood persist in adult life. It is marked by mental retardation, underdevelopment of the sexual organs, and often, but not always, by dwarfism of stature. Cf. *ateiosis* and *progeria*. **angioplastic i.**, infantilism attributed to defective development of the vascular system. **Brissaud's i.**, infantile myxedema. **cachectic i.**, infantilism due to chronic infection or poisoning. **celiac i.**, infantilism resulting from celiac disease. **dysthyroidal i.**, infantilism due to defective thyroid activity. **hepatic i.**, infantilism associated with hepatic cirrhosis. **Herter's i.**, intestinal infantilism. **idiopathic i.**, a form of arrested development of unknown causation.

intestinal i., infantilism due to chronic intestinal disorder; a condition in children of arrested development, the child being well formed, but not growing or gaining in weight. The appetite is good, the stools are large and fatty, and there are frequent attacks of diarrhea. The urine shows an excess of putrefactive products of intestinal origin, and the flora of the intestine consists of Gram-positive organisms. **lymphatic i.**, infantilism associated with lymphatism. **myxedematous i.**, cretinism. **pancreatic i.**, infantilism that is marked by defective pancreatic action. **partial i.**, arrested development of a single part or tissue. **renal i.**, infantilism due to disorder of the renal function. **reversible i.**, infantilism beginning after bodily growth has been completed. **symptomatic i.**, infantilism due to general defective development of tissues. **tardy i.**, reversible infantilism. **toxemic i.**, intestinal infantilism. **universal i.**, general dwarfishness in stature with absence of the secondary sexual characteristics.

infantorium (in-fan-to're-um). A hospital for the newborn and young infants.

infarct (in'farkt) [L. *infarc'tus*]. An area of coagulation necrosis in a tissue due to local anemia resulting from obstruction of circulation to the area. **anemic i.**, an area of necrosis in a tissue produced by sudden arrest of circulation in a vessel; called also *pale i.* and *white i.* **calcareous**

Diagram of a hemorrhagic infarct: *a*, Artery obliterated by an embolus (*e*); *v*, vein filled with a secondary thrombus (*th*); *i*, center of infarct, which is becoming disintegrated; *2*, area of extravasation; *3*, area of collateral hyperemia. (O. Weber.)

i., a deposit of calcium salt in the tissues. **hemorrhagic i.**, an infarct which is red in color owing to the oozing of red corpuscles into the dead area; called also *red i.* **pale i.** Same as *anemic i.* **red i.** See *hemorrhagic i.* **uric-acid i.**, a deposit of uric-acid crystals in the renal tubules of the newborn. **white i.** Same as *anemic i.*

infarction (in-fark'shun) [L. *infarci're* to stuff in]. The formation of an infarct; also the infarct itself. **anemic i.**, that in which there is no hemorrhage, and the necrosed tissue is of a light color. Called also *white i.* **calcareous i.**, the deposit of calcium phosphate or carbonate in the connective tissue of an organ, as the kidney. **embolic i.**, a necrosed spot in the region of the distribution of an end-artery, due to its obstruction by an embolus. **hemorrhagic i.**, one in which the tissues are reddened by hemorrhage.

infectible (in-fek'tib-l). Capable of being infected.

infecting (in-fek'ting). Causing infection.

infection (in-fek'shun). Invasion of the tissues of the body by pathogenic organisms in such a way as to favor their growth and permit their toxins to injure the tissues. **aërial i.**, infection through the air by means of dust-particles carrying infection. **agonal i.**, terminal infection. **apical i.**, infection situated at the apex of the root of a tooth. **i.-atrium**, the point of entrance of an infection.

coli-i., infection with *Bacterium coli commu'nis*. **consecutive i.**, septic infection implanted upon a morbid process already established. **contact i.** See *direct i.* **cryptogenic i.**, bacterial infection without discoverable wound for the entrance of an infective agent. **direct i.**, infection produced by contact with another person. **droplet i.**, infection by means of small droplets of sputum which have been thrown into the air during talking or by coughing and sneezing and which remain suspended for some time. **dust i.**, infection by bacteria which have become affixed to particles of dust. **endogenous i.**, infection by the normal bacterial flora of the intestines which have become pathogenic. **focal i.**, infection in which bacteria exist in circumscribed confined colonies in certain tissues, and from there are sent out into the bloodstream. The favorite sites of focal infection are the tonsils, peridental tissue, nasal sinuses, fallopian tubes, and prostate gland. **gas gangrene i.**, infection of wounds by bacteria producing or tending to produce gas gangrene. **germinal i.**, transmission of infection to the child by means of the egg cell or sperm cell of the parent. **hand-borne i.**, infection carried on a person's hands. **indirect i.**, infection transmitted by water, food, or other means of conveyance. **latent i.**, a condition in which bacteria, though they have ceased to multiply, remain alive in secluded parts of the body. **mixed i.**, infection with more than one organism at the same time. **obscisional i.**, an infection occurring in trench warfare (Sacquépée, 1917). **pyogenic i.**, any one of a group of local or general infections caused by the different pus-producing organisms. **secondary i.**, infection by a bacterium following an infection by a bacterium of another kind. **septic i.**, true septicemia. **silent i.**, an infection which shows few, if any, symptoms. **simple i.**, infection by a single variety of microbe. **terminal i.**, an acute infection occurring near the end of a disease and frequently causing death. **Vincent's i.** See *Vincent's angina*, under *angina*. **water-borne i.**, infection transmitted by means of drinking-water.

infectiosity (in-fek-she-os'ti-e). The degree of infectiousness of a microbe.

infectious (in-fek'shus). Liable to be communicated by infection. An infectious disease is one caused by parasites, such as bacteria, protozoa, or fungi, and it may or may not be contagious.

infective (in-fek'tiv) [L. *infectivus*]. Of the nature of an infection; infectious.

infecundity (in-fe-kun'dit-e) [L. *infecunditas*]. Sterility or barrenness.

inferent (in'fer-ent). Same as *afferent*.

inferior (in-fe're-or) [L. "lower"; neut. *inferius*]. Situated or directed below.

inferolateral (in'fer-o-lat'er-al) [L. *in'ferus* low + *la'tus* side]. Situated below and to one side.

inferomedian (in'fer-o-me'de-an) [L. *in'ferus* low + *me'dius* middle]. Situated in the middle of the under side.

• **inferoposterior** (in'fer-o-pos-te're-or). Situated below and behind.

infertilitas (in-fer-til'it-as). Infertility or barrenness. **i. fem'inis**, barrenness.

infestation, infestment (in-fes-ta'shun, infest'ment). An invasion of animal parasites.

infibulation (in-fib-u-la'shun) [L. *in* into + *fib'ula* clasp]. The fastening of the prepuce or labia majora with clasps or stitches to prevent copulation.

infiltrate (in-fil'trat). Material deposited by infiltration.

infiltration (in-fil-tra'shun) [L. *in* into + *filtratio*]. 1. The accumulation in a tissue of substances not normal to it. 2. Any morbid condition of a tissue due to the presence of a substance not normal to it. **adipose i.**, fatty infiltration; the

abnormal diffusion of fat-globules and molecular fat throughout a tissue. **albuminous i., amyloid i.**, infiltration with amyloid substance. **calcareous i.**, a deposit of lime and magnesium salts in the tissues. **calcium i.**, a deposit of calcium salts within the tissues of the body. **cellular i.**, an infiltration of round cells within the tissues. **circumferential i.**, the formation of a wall of anasthetizing edema around an area to be operated upon. **fatty i.**, a deposit of fat in the tissues; also the presence of fat-globules or oil in the cells. **gelatinous i.** Same as *gray i.* **glycogenic i.**, the deposition of granules of glycogen in the cells. **gray i.**, a condition of the lungs in acute tuberculosis in which, after death, they assume a gray appearance. **inflammatory i.**, that which is formed by an inflammatory exudation penetrating the interstices of a tissue. **paraneural i.**, paraneural anesthesia. See *anesthesia*. **pigmentary i.**, an abnormal deposit of pigment in a tissue. **purulent i.**, the presence of pus in the tissues, as in diffuse abscess. **saline i.**, the deposit of mineral salts in a living tissue. **sanguineous i.**, infiltration with extravasated blood. **serous i.**, the abnormal presence of lymph in a tissue. **tuberculous i.**, the formation of a group or of groups of tuberculous cells and bacilli in a tissue. **urinous i.**, an extravasation of urine into a tissue. **waxy i.**, the deposition of an amyloid substance in the tissues.

infinite distance (in'fin-it). In ophthalmology, a distance of twenty feet or more: so called because rays entering the eye from an object at that distance are practically as parallel as if they came from a point at infinite distance.

infinity (in-fin'it-e). Same as *infinite distance*.

infirm (in-firm') [L. *infirmis*; in not + *fir'mus* strong]. Weak; feeble, as from disease or old age.

infirmary (in-fir'ma-re) [L. *infirmarium*]. A hospital or institution where sick or infirm persons are maintained or treated. **camp i.**, a mobile military unit, officered by a sergeant of the hospital corps, designed to furnish dispensary facilities during field service or to become the nucleus of an immobile camp hospital when necessary.

infirmity (in-fir'mit-e) [L. *infirmitas*]. 1. A feeble or weak state of the body or mind. 2. A disease or condition producing weakness.

inflammation (in-flam-a'shun) [L. *inflammatio*; *inflammare* to set on fire]. The condition into which tissues enter as a reaction to irritation (Adam). Inflammation is characterized by pain, heat, redness, and swelling, and histologically by hyperemia, stasis, changes in the blood and walls of the small vessels, and by various exudations. **acute i.**, one in which the processes are active. **adhesive i.**, that which promotes the union of cut surfaces. **atrophic i.**, a form which results in an organized exudate that contracts and leads to atrophy and deformity. Called also *cirrhotic i.*, *fibroid i.*, *sclerosing i.* **catarrhal i.**, one which affects principally a mucous surface, and which is marked by a discharge of mucus and epithelial debris. **chronic i.**, inflammation of slow progress and marked by the formation of new connective tissue. **cirrhotic i.** See *atrophic i.* **croupous i.**, a fibrinous inflammation that leads to the formation of a false membrane, which is not diphtheric and is not known to be of a specific nature. **diffuse i.**, one that is both interstitial and parenchymatous; also one that is spread over a large area. **disseminated i.**, one that has a number of distinct foci. **exudative i.**, that in which the prominent feature is an exudate. **fibrinous i.**, one that produces an exudate of coagulated fibrin. **fibroid i.** See *atrophic i.* **focal i.**, one that is confined to a single spot or to a set of limited spots. **follicular i.**, a catarrhal inflammation which involves the follicles. **gouty i.**, inflammation due to gout. **granulomatous i.**,

chronic inflammation in which there is a formation of granulation tissue, breaking down into small abscesses, with formation of a fistulous tract. **hyperplastic i.**, one which leads to the formation of new connective-tissue fibers. Called also *plastic i.*, *productive i.*, *proliferous i.* **hypertrophic i.**, catarrhal inflammation which is marked by thickening of the submucous tissue. **interstitial i.**, that which affects primarily the materials between the essential structural elements. **irritable i.**, one attended by great irritation. **leukocytal i.**, a condition of the spinal cord said to precede general myelitis. **metastatic i.**, one that is reproduced in a distant part by the conveyance of septic matter through the blood-vessels and lymph-organs. **necrotic i.**, inflammation attended by death of the affected tissue. **obliterative i.**, inflammation of the lining membrane of a cavity, producing adhesions between the surfaces and consequent obliteration of the cavity. **parenchymatous i.**, one that primarily affects the essential tissue elements. **plastic i.**, *productive i.*, *proliferous i.* See *hyperplastic i.* **reactive i.**, that which occurs around a foreign body or a focus of degeneration. **rheumatic i.**, one that is due to exposure, etc. **sclerosing i.** See *atrophic i.* **seroplastic i.**, that which is accompanied by both serous and plastic exudation. **serous i.**, one which produces an exudation of serum. **simple i.**, that in which there is no flow of pus or other product of inflammation. **specific i.**, one that is due to a special microorganism. **suppurative i.**, one that is characterized by the formation of pus. **toxic i.**, one that is caused by a poison, such as a leukomycin or a bacterial product. **traumatic i.**, one that is caused by an injury. **unhealthy i.**, one marked by a tendency to disorganization.

inflammatory (in-flam'at-o-re). Pertaining to or characterized by inflammation.

inflation (in-fla'shun) [L. *in* into + *fla're* to blow]. 1. Distention with air, gas, or a fluid. 2. The act of distending with air or with a gas.

inflator (in-fla'tor). An instrument for inflating any organ for therapeutic or diagnostic purposes.

infection, inflexion (in-flek'shun) [L. *inflex'io*; *in* + *flectere* to bend]. The act of bending inward or state of being bent inward.

inflorescence (in-flo-res'ens). The structure or arrangement of the flowers of a plant.

influenza (in-flu-en'zah) [Ital. "influence"]. An acute infectious, epidemic disease marked by depression, distressing fever, acute catarrhal inflammation of the nose, larynx, and bronchi, neuralgic and muscular pains, gastro-intestinal disorder and nervous disturbances, such as headache, insomnia, convulsions, and delirium. The disease is probably due to the *Bacillus (Hemophilus) influenzae*, and its duration is from a few days to one or two weeks; relapses frequently occur, the patient being left weak for a long time and subject to colds, etc. According to the organs chiefly affected the disease is said to be respiratory, nervous, or gastro-intestinal in form. Complications are frequent, the chief ones being pneumonia and various affections of the ear and eye. The disease occurs in extensive epidemics or pandemics. Recently (1923) a microorganism, *Bacterium pneumosintes*, has been announced as the causative agent. The disease is also known as *la grippe* and *grip*. **abdominal i.**, influenza marked especially by abdominal symptoms, such as tympanites, diarrhea, or symptoms resembling those of typhoid fever. **endemic i.**, a disease resembling epidemic influenza, but less severe in character, occurring during the winter season; called also *influenza nostras*, *acute catarrhal fever*, and *winter grip*. **laryngeal i.**, influenza in horses in which sore throat is the chief symptom. **i. nostras**, endemic influenza. **Spanish i.**, a name given to the pandemic of an acute influenza-like disease

which passed over Europe and America during the summer and autumn of 1918.

influenzal (in-flu-en'zal). Pertaining to influenza.

influenzin (in-flu-en'zin). A proprietary compound of phenacetin, quinin salicylate, caffeine, and sodium chlorid; used in treating influenza.

infolding (in-fol'ding). The operation of inclosing an ulcer (as of the stomach) by suturing together the walls of the organ on either side of it.

infooted (in'foot-ed). Turning in the toes.

infra- [L. *in'fra* beneath]. A prefix denoting situation or occurrence beneath some special part or organ.

infra-axillary (in-frah-aks'il-a-re). Situated below the axilla.

infraclavicular (in'frah-klav-ik'u-lar). Situated beneath a clavicle.

infracommissure (in-frah-kom'is-ur). The inferior commissure.

infraconstrictor (in-frah-kon-strik'tor). The inferior constrictor of the pharynx.

infracortical (in-frah-kor'tik-al). Situated or occurring beneath the cortex, as of the brain.

infracostal (in-frah-kos'tal) [L. *in'fra* below + *cos'ta* rib]. Situated below a rib or below the ribs.

infracotyloid (in-frah-kot'il-oid). Beneath the cotyloid cavity or acetabulum.

infractio (in-frah'shun) [L. *in* into + *frac'tio* break]. Incomplete fracture of a bone without displacement of the fragments.

infradiaphragmatic (in'frah-di-af-rag-mat'ik).

Below the diaphragm.

infraduction (in-frah-duk'shun). The turning downward of a part, especially of the eye.

infraglenoid (in-frah-gle'noid). Below the fossa or the glenoid cavity.

infraglottic (in-frah-glot'ik). Situated beneath the glottis.

infrahyoid (in-frah-hi'oid). Situated below the hyoid bone.

inframammary (in-frah-mam'a-re). Situated or occurring below the mammary gland.

inframamillary (in-frah-mam'il-a-re). Below the nipple.

inframandibular (in'frah-man-dib'u-lar). Beneath the lower jaw.

inframarginal (in-frah-mar'jin-al). Situated below a margin or border, as of the fissure of Sylvius.

inframaxillary (in-frah-maks'il-a-re). Situated beneath the jaw.

infranuclear (in-frah-nu'kle-ar). Below the nucleus.

infra-occlusion (in'frah-ok-lu'zhun). The position of a tooth when it is not sufficiently elevated in its socket to occupy its place in normal occlusion.

infra-orbital (in-frah-or'bit-al). Lying under or on the floor of the orbit.

infrapatellar (in-frah-pat-el'ar). Below the patella.

infrapsychic (in-frah-si'kik). Below the psychic level; automatic.

infra-red (in-frah-red'). Noting rays of energy beyond the limit of vision and below the red rays.

infrascapular (in-frah-skap'u-lar). Situated beneath the shoulder-blade.

infraspinal (in'frah-spi-na'tus). See *muscles*, table of.

infraspinous (in-frah-spi'nus). Situated beneath the spine of the scapula.

infrasternal (in-frah-ster'nal). Situated below the sternum.

infratemporal (in-frah-tem'po-ral). Below the temporal fossa.

infratonsillar (in-frah-ton'sil-ar). Below the faucial tonsil.

infratracheal (in-frah-tra'ke-al). Beneath or below the trachea.

infratrochlear (in-frah-trok'le-ar). Situated beneath the trochlea.

infratubal (in-frah-tu'bal). Beneath a tube.

infratubinal (in-frah-tur'bin-al). The inferior turbinate bone.

infra-umbilical (in'frah-um-bil'ik-al). Situated beneath the umbilicus.

infriction (in-frik'shun) [L. *in* on + *fric'tio* rubbing]. The rubbing of medicaments upon the skin.

infundibular (in-fun-dib'u-lar). Of the nature of or resembling an infundibulum.

infundibuliform (in-fun-dib'u-lif-orm) [L. *infundibulum* funnel + *forma* form]. Shaped like a funnel.

infundibulin (in-fun-dib'u-lin). An extract of the posterior lobe of the pituitary body.

infundibulopelvic (in-fun-dib'u-lo-pel'vik). Pertaining to an infundibulum and a pelvis, either of the kidney or elsewhere.

infundibulum (in-fun-dib'u-lum) [L. "funnel"]. 1. Any funnel-shaped passage. 2. A funnel-shaped extension of the third ventricle extending through the hypothalamus to the end in the pituitary body. 3. Any one of the divisions of the pelvis of a kidney. 4. A passage between the nasal meatus and the ethmoid cells. 5. The cavity of the fimbriae of an oviduct. 6. Any one of the ultimate expansions of a bronchiole. 7. A cavity at the upper end of the cochlear canal. 8. The conus arteriosus. 1. **ethmoidale os'sis ethmoidalis** [B N A], a passage between the nasal meatus and the anterior ethmoid cells. 1. **ethmoidale ca'vi na'si** [B N A], a passage from the nose to the frontal sinus. 1. **hypothalamium** [B N A], the stalk of the pituitary body. 1. **tu'bæ uteri'næ** [B N A], the cavity of the fimbriae of the oviduct.

infundin (in-fun'din). A proprietary extract of the posterior lobe of the pituitary body.

infusible (in-fu'zib-l). Incapable of being melted.

infusion (in-fu'zhun). 1. [L. *infusio*; from *in* into + *fundere* to pour.] The steeping of a substance in water for obtaining its proximate principles. 2. [L. *infusum*, gen. *infusi*.] The product of the process of steeping a drug for the extraction of its medicinal principles. 3. The therapeutic introduction of a fluid, as saline solution, into a vein. **cold i.**, the product of steeping a drug in cold water. **meat i.** (for bacteriologic use): 500 gm. of fresh lean meat free from fat are ground and extracted with a liter of water. The mixture is infused over night in the ice-box, gradually raised to the boiling-point, and filtered. **saline i.**, an injection, either subcutaneous or intravenous, of saline solution.

infusodecoction (in-fu'so-de-kok'shun). A mixture of the infusion and the decoction of a substance.

Infusoria (in-fu-so're-ah) [L., pl. So called because found in *infusions*, after exposure to air]. A class of Protozoa characterized by the presence of cilia.

infusoriotoxin (in-fu-so're-o-tok'sin). A toxin destructive to infusoria.

infusum (in-fu'sum). Latin for *infusion* (2). 1. **anthem'idis**, infusion of chamomile. Dose, 1-2 fl.oz. (30-60 c.c.). 1. **cincho'næ**, infusion of cinchona. Dose, 1-2 fl.oz. (30-60 c.c.). 1. **digitalis** (U. S. P.), infusion of digitalis. Dose, 1-4 fl.dr. (4-16 c.c.). 1. **pru'ni virginia'næ**, infusion of wild cherry. Dose, 1-2 fl.oz. (30-60 c.c.). 1. **sen'næ compos'itum**, the compound infusion of senna; black draft. Dose, 1-4 fl.oz. (30-120 c.c.).

ingesta (in-jes'tah) [L., pl., *in* into + *gerere* to carry]. Food and drink taken into the stomach.

ingestion (in-jes'tshun). The act of taking food, medicines, etc., into the body.

ingestive (in-jes'tiv). Pertaining to or effecting an ingestion.

ingestol (in-jes'tol). A proprietary compound of fifteen ingredients, for use in gastric and intestinal diseases.

ingluvies (in-glu've-ēz) [L.]. 1. The craw or crop of birds. 2. The first stomach of ruminant animals.

ingluvin (in-glu'vin) [L. *ingluvies* gizzard]. A ferment prepared from the gizzards of chickens: used like pepsin. Dose, 10-20 gr. (0.666-1.333 gm.). A similar product is obtained from the gizzards of ostriches and pigeons.

Ingrassias, process of (in-gras'e-as) [Giovanni Filippo Ingrassias, Italian anatomist, 1510-1580]. See *process*.

ingravescent (in-grav-es'ent) [L. *in* upon + *graves* to grow heavy]. Gradually increasing in severity.

inguen (in'gwen) [L. for "groin"]. The groin.

inguinal (in'gwin-al) [L. *inguina'lis*]. Pertaining to the groin.

inguino-abdominal (in'gwin-o-ab-dom'in-al). Pertaining to the groin and the abdomen.

inguinocrural (in'gwin-o-kru'al). Pertaining to the groin and the thigh.

inguinodynia (in'gwin-o-din'e-ah) [L. *in'guen* groin + Gr. *odynē* pain]. Pain in the groin: a common symptom of hysteria.

inguinolabial (in'gwin-o-la-be-al). Pertaining to the groin and a labium.

inguinoperitoneal hernia (in'gwin-o-pro-per-it-o-ne'al). See *hernia*.

inguinoscrotal (in'gwin-o-skro'tal). Pertaining to the groin and the scrotum.

inhalant (in-ha'lant). A medicine to be inhaled.

inhalation (in-hal-a'shun) [L. *inhala'tio*]. 1. The drawing of air or other vapor into the lungs. 2. A substance to be inhaled as a vapor.

inhalatorium (in-ha-lat-o're-um). An institution for treating disease by inhalation methods.

inhale (in-hāl) [L. *inhala're*]. To take into the lungs by breathing.

inhaler (in-ha'ler). 1. An apparatus for administering vapor or volatilized remedies by inhalation. 2. An apparatus to prevent dust, smoke, or the like from entering the lungs, or to enable a person with affected lungs to breathe cold or damp air with less danger and discomfort. **Allis's i.**, an apparatus for administering ether by the drop method. **ether-i.**, a form of apparatus for administering the vapor of ether as an anesthetic.

inherent (in-he'rent) [L. *inha'rens* sticking fast]. Implanting by nature; intrinsic; innate.

inheritance (in-her'it-ans). The act of inheriting or the thing inherited. **alternative i.**, inheritance in which all the characters are inherited from one parent. **amphigenous i.**, inheritance of characteristics from both parents. **blending i.**, inheritance in which the characters of mother and father are blended in the offspring. **criss-cross i.**, inheritance of the maternal characters by the sons and the paternal characters by the daughters. **homochronous i.**, inheritance of characteristics which appear in the offspring at the same age as they appeared in the parent. **homotropic i.**, the inheritance of acquired characteristics. **mendelian i.** See *Mendel's law*, under *law*. **mosaic i.**, inheritance in which the paternal influence is dominant in one group of cells and the maternal in another, as the inheritance of a streaked coloration where the parents are of different color. **particulate i.**, inheritance in which some characters come from one parent and others from the other.

inhibition (in-hib-ish'un) [L. *inhibere* to restrain; *in* in + *habere* to have]. Arrest or restraint of a

process effected by nervous influence. **i. of complement**, complement is inhibited by 15 to 25 per cent. salt solution and can be thus kept in the refrigerator for weeks, resuming its activity when diluted to isotonicity with distilled water. **specific i.**, a condition in which a precipitin is combined with all the available precipitinogen, so that when fresh precipitin is added no precipitate will occur.

inhibitive (in-hib'it-iv). Inhibitory.

inhibitor (in-hib'it-or). 1. Any substance which interferes with a chemic reaction. 2. A mechanic device for curing mouth-breathing.

inhibitory (in-hib'it-or-e) [L. *inhibere* to restrain]. Restraining or arresting any process; effecting a stay or arrest, partial or complete.

inhibitrope (in-hib'it-rōp) [L. *inhibere* to check]. One in whom certain stimuli tend to produce arrest of function.

inhomogeneity (in-ho-mo-jen-e'it-e). Lack of homogeneity; especially variability in the leukocyte count of blood taken from different parts of the circulation at about the same time.

inial, **inial** (in'e-ak, in'e-al). Pertaining to the inion.

inial (in'e-ad). Toward the inion.

iniencephalus (in'e-en-sef'al-us) [Gr. *ivlon* occiput + *ἐγκέφαλος* brain]. A fetus with a fissured occiput and protruding brain.

iniencephaly (in-e-en-sef'al-e). The condition of an iniencephalus.

inion (in'e-on) [Gr. *ivlon* occiput]. The external occipital protuberance.

iniops (in'e-ops) [Gr. *ivlon* occiput + *ὤψ* eye]. A double-faced monster with the posterior face incomplete.

initial (in-ish'al) [L. *initia'lis*, from *inil'ium* beginning]. Pertaining to the very first stage of any process.

initis (in-i'tis) [Gr. *ἴς*, *ivós* fiber]. Inflammation of the substance of a muscle.

Inj. Abbreviation for *injection*.

injected (in-jek'ted). 1. Filled by injection. 2. Thrown in by injection. 3. Congested.

injection (in-jek'she-o), pl. *injection'es*. Latin for *injection*. **i. apomor'phine hypoder'mica**, a 2 per cent. solution of apomorphin hydrochlorid for injection. **i. ergot'ini hypoder'mica**, a hypodermic injection of ergotin. **i. hypoder'mica**, a hypodermic injection. **i. mor'phine hypoder'mica**, a hypodermic injection of morphin.

injection (in-jek'shun) [L. *injection*, from *in* into + *jacere* to throw]. 1. The act of throwing a liquid into a part, such as the rectum or a blood-vessel. 2. A substance thrown into a part or organ; an enema. 3. The condition of being injected; congestion. **anatomic i.**, an injection into the vessels or organs of the cadaver, designed to facilitate dissection or demonstration. **coarse i.**, an anatomic injection that serves to fill only the larger vessels. **epifascial i.**, an injection made upon the surface of a fascia; particularly the injection of salvarsan upon the fascia lata. **exciting i.**, sensitizing injection. **fine i.**, an anatomic injection that fills even the smallest vessels. **gaseous i.**, an injection of gas or air to aid in an anatomic demonstration. **gelatin i.**, a preservative injection of which gelatin is the base. **hypodermatic i.**, **hypodermic i.**, an injection made into the subcutaneous tissues; called also *subcutaneous i.* **intracar-diac i.**, an injection into the cavity of the heart. **intradermic i.**, an injection into the substance of the skin. **intramuscular i.**, an injection into the substance of the muscles. **intravascular i.**, an injection thrown into a vessel. **intravenous i.**, an injection made into a vein. **parenchymatous i.**, one made into the substance of an organ. **plaster i.**, a coarse injection of a thin paste of calcined

gypsum and water, which becomes hardened in the vessels. **preservative i.**, an injection that serves to protect a cadaver or specimen from decay. **saline i.**, an injection of saline solution. **sensitizing i.**, sensitizing dose; the first injection of protein or other sensitizing antigen. **subcutaneous i.** See *hypodermatic i.*

injector (in-jek'tor) [L. *injicere* to inject]. An instrument used in making injections.

Inj. enem. Abbreviation for L. *inijicia'tur en'ema*, let an enema be injected.

injury (in'ju-re) [L. *injur'ia*; in not + *jus* right]. Harm or hurt; a wound or maim.

inlay (in'la). In dentistry, a filling that is first made and then cemented into a cavity. **epithe-lial i.**, a method of securing epithelialization of a wound cavity. A mold of the cavity is taken, and this is covered with a Thiersch graft of epidermis, the whole being inserted into the wound cavity, the edges being approximated with sutures. The mold is removed after ten days, leaving the cavity completely epithelialized.

inlet (in'let). The upper limit of the pelvic cavity.

Inman's disease (in'manz) [Thomas Inman, English physician, 1820-1876]. See *myalgia*.

innate (in'at) [L. *in* in + *nas'ci* to be born]. In-born; hereditary; congenital.

innervation (in-er-va'shun) [L. *in* into + *ner'vus* nerve]. 1. The distribution or supply of nerves to a part. 2. The supply of nervous energy or of nerve stimulus sent to a part. **reciprocal i.**, the innervation of muscles around the joints, where the motor centers are so connected in pairs that when one is excited the center of the corresponding antagonist is inhibited.

innidiation (in-id-e-a'shun) [L. *in* into + *nidus* nest]. The development of cells in a part to which they have been carried by metastasis; called also *colonization* and *indenzation*.

innocent (in'o-sent) [L. *innocens*; in not + *nocere* to harm]. Not malignant; benign; not tending of its own nature to a fatal issue.

innocuous (in-ok'u-us). Harmless.

innominate (in-om-in-a'tal). Pertaining to the innominate artery or to the innominate bone.

innominate (in-om'in-at) [L. *innomina'tus* nameless; in not + *no'men* name]. Not having a name; nameless. **i. artery**. See *arteries*, table of. **i. bone**. See under *bone*.

innnoxious (in-oks'e-us) [L. *in* in not + *nox'ius* harmful]. Not injurious; not hurtful.

innutrition (in-nu-trish'un). Want of nutrition.

inoblast (i'no-blast) [Gr. *ἴς* fiber + *βλαστός* germ]. Any connective-tissue cell in the formative stage.

inoccipitia (in'ok-sip-i'te-ah). Absence or deficiency of the occipital lobe of the brain.

inochondritis (in'o-kon-dri'tis) [Gr. *ἴς* fiber + *χόνδρος* cartilage + *-itis* inflammation]. Inflammation of a fibrocartilage.

inochondroma (in'o-kon-dro'mah) [Gr. *ἴς* fiber + *χόνδρος* cartilage + *-ωμα* tumor]. A fibrochondroma.

inoculability (in-ok'u-la-bil'it-e). Susceptibility of transmission by inoculation.

inoculable (in-ok'u-la-bl). 1. Susceptible of being inoculated; transmissible by inoculation. 2. Not immune against a disease transmissible by inoculation.

inoculation (in-ok-u-la'shun) [L. *inocula'tio*, from *in* into + *oculus* bud]. The insertion of a virus into a wound or abrasion in the skin in order to communicate a disease. **curative i.**, the injection of an antiserum for curative purposes. **protective i.**, the injection of an antiserum to protect against a disease; vaccination against a disease.

inoculum (in-ok'u-lum). The substance used in inoculation.

inocystoma (in'ô-sis-to'mah) [Gr. *ἰς* fiber + *κύστις* cyst + *-ωμα* tumor]. A fibrous tumor affected with cystic degeneration.

inocyte (in'ô-sit) [Gr. *ἰς* fiber + *κύτος* cell]. A cell of fibrous tissue.

ino-epithelioma (in'ô-ep-ith-e-le-ô'mah). Epithelioma with fibrous elements.

inogen (in'ô-jen) [Gr. *ἰς* fiber + *γενᾶν* to produce]. A hypothetic substance of the muscular tissue, the sudden breaking up of which is supposed to cause muscular contraction.

inogenesis (in-ô-jen'es-is) [see *inogen*]. The formation of fibrous tissue.

inogenous (in-ô-jen-us). Produced from tissue or producing tissue.

inoglia (in-og'le-ah) [Gr. *ἰς* fiber + *γλία* glue]. Same as *fibroglia*.

inohymentitis (in'ô-hi-men-i'tis) [Gr. *ἰς* fiber + *ὕμη* membrane + *-ιτις* inflammation]. Inflammation of any fibrous membrane.

inoleiomyoma (in'ô-li-ô-mi-ô'mah) [Gr. *ἰς* fiber + *λεῖος* smooth + *μῦς* muscle + *-ωμα* tumor]. A tumor composed of unstriated muscular tissue.

inolith (in'ô-lith) [Gr. *ἰς* fiber + *λίθος* stone]. A fibrous concretion.

inoma (in-ô'mah) [Gr. *ἰς* fiber + *-ωμα* tumor]. Same as *fibroma*.

inomyoma (in'ô-mi-ô'mah) [Gr. *ἰς* tissue + *μῦς* muscle + *-ωμα* tumor]. Fibromyoma.

inomyositis (in'ô-mi-ô-si'tis) [Gr. *ἰς* fiber + *μῦς* muscle + *-ιτις* inflammation]. Fibromyositis.

inomyxoma (in'ô-mik-so'mah) [Gr. *ἰς* fiber + *μυξωμα*]. Fibromyxoma.

inoneuroma (in'ô-nu-ro'mah). Fibroneuroma.

inoperable (in-op'er-ab-l). Not suitable to be operated upon.

inopexia (in-ô-pek'se-ah) [Gr. *ἰς* fiber + *πῆξις* fixation]. A tendency toward spontaneous coagulation of the blood.

inorganic (in-or-gan'ik) [*in-* not + *organic*]. 1. Having no organs. 2. Not of organic origin. 3. Pertaining to substances not of organic origin.

inorgoxydants (in-or-gok'se-dants). Bacteria which live in and obtain their energy from the oxidation of inorganic materials. The group includes the sulphur, the nitrite, the nitrate, and perhaps also the iron bacteria.

inosclerosis (in-ô-skle-ro'sis) [Gr. *ἰς* fiber + *σκληρός* hard]. Fibrous induration.

inoscopy (in-ô'sko-pe) [Gr. *ἰς*, *ἵνος* fiber + *σκοπεῖν* to view]. The diagnosis of disease by artificial digestion and examination of the fibers or fibrinous matter of the sputum, blood, effusions, etc.

inosculate (in-ô'sku-lât) [L. *in* into + *os'culum* little mouth]. To unite or communicate by means of small openings or anastomoses.

inosculation (in-ô'sku-la'shun). The junction or interunion of arterial or venous branches with each other by means of anastomoses or by direct union.

inose (in'ôs). Muscle-sugar; inosite.

inosemia (in-ô-se'me-ah) [Gr. *ἰς*, *ἵνος* fiber + *αἷμα* blood]. An excess of fibrin in the blood.

inosin (in'ô-sin). A nucleosid resulting from the decomposition of inosinic acid. It is a compound of hypoxanthin and ribose. 1. **hydrolase**, an enzyme which converts inosin into hypoxanthin and sugar.

inosinate (in'ô-sin-ât). A salt of inosinic acid.

inosite (in'ô-sit) [Gr. *ἰς*, *ἵνος* fiber]. Hexahydroxybenzene; a crystallizable substance, $C_6H_8(OH)_6$, of the aromatic series, found in muscle, urine, the viscera, and various plant substances.

inositis (in-ô-si'tis) [Gr. *ἰς* fiber + *-ιτις* inflammation]. Inflammation of fibrous tissue.

inositol (in-ô-si'tol). See *inosite*.

inosituria (in'ô-si-tu're-ah) [*inosite* + Gr. *οὖρον*

urine]. The occurrence of muscle-sugar, or inosite, in the urine.

inosteoma (in'ô-ste-at-ô'mah) [Gr. *ἰς*, *ἵνός* fiber + *στέαρ* fat + *-ωμα* tumor]. A fatty tumor containing fibrous elements.

inostosis (in-ô-sô'sis) [L. *in* again + *οστέον* bone]. The re-formation of bony tissue to replace such tissue which has been destroyed.

inosuria (in-ô-su're-ah). Same as *inosituria*.

inotagma (in-ô-tag'mah) [Gr. *ἰς* fiber + *τάγμα* arrangement]. A linear arrangement of the contractile structural elements of a muscle-cell.

inotropic (in-ô-trop'ik) [Gr. *ἰς* fiber + *τρέπεω* to turn or influence]. Affecting the force or energy of muscular contractions: said of certain nerve-fibers. **negatively i.**, weakening the force of muscular action. **positively i.**, increasing the strength of muscular contraction.

inotropism (in-ô'tro-pizm) [see *inotropic*]. Interference with the contractility of muscle.

In. pulm. Abbreviation for *L. in pulmen'to*, in gruel.

inquest (in'kwest) [L. *in* into + *quer'ere* to seek]. Inquiry before a coroner into the manner of a death.

inquiline (in'kwil-in) [L. *in'colus* inhabitant]. A parasite which lives within another, but does not derive its food from its host.

inquisition (in-kwiz-ish'un) [L. *inquisi'tio*; *in* into + *quer'ere* to seek]. An investigation.

insalivation (in'sal-iv-a'shun) [L. *in* in + *saliva* spittle]. The saturation of the food with saliva in mastication.

insalubrious (in-sal-u'bre-us). Not salubrious; not conducive to health.

insane (in-sân') [L. *in* not + *san'us* sound]. Affected with insanity; not of sound mind.

insanitary (in-san'it-a-re). Not in a good sanitary condition.

insanity (in-san'it-e) [L. *insan'itas*, from *in* not + *san'us* sound]. Disorder of the mental faculties, more or less permanent in character, but without loss of consciousness and will. It is marked by delusions, illusions, and hallucinations, by changes in character and habits, and by unreasonable and purposeless actions and language. **acquired i.**, insanity arising after a long period of mental soundness. **adolescent i.** See *dementia præcox*. **affective i.** Same as *emotional i.* **alcoholic i.**, that which is due to alcoholism. **alternating i.**, insanity characterized by alternating phases of mania and depression, each followed by a quiescent period. **anticipatory i.**, that which appears in a patient at an earlier age than that at which it attacked the parent. **arthritic i.**, insanity due to gout or rheumatism. **choreic i.**, chorea insaniens. **circular i.**, **cyclic i.**, manic-depressive insanity characterized by alternating manic and depressive phases without any quiescent intervals. **climacteric i.**, that which is associated with the menopause. **communicated i.**, that which is transmitted from one person to another. **compound i.**, the concurrence of two or more forms of insanity. **compulsive i.**, insanity in which the patient is completely dominated by impulse or obsessions. **confusional i.**, acute temporary insanity following a severe disease or nervous shock, and marked by mental confusion of varying degrees of intensity. **consecutive i.**, that which follows some neurosis or other disease. **cyclic i.** See *circular i.* **degenerative i.**, **delusional i.**, insanity marked by delusions; paranoia. **dissimilar i.**, that which is inherited, but not identical with that of the parent. **doubting i.**, insanity characterized by morbid doubt, suspicion, and indecision. **drug i.**, insanity due to the excessive use of some drug. **emotional i.**, that which is characterized by emotional depression or exaltation. **epidemic i.**, a form that sometimes affects many persons in a community. **hereditary i.**,

that which is inherited from a parent or grandparent. **homicidal i.**, insanity marked by a desire to take human life. **homochronous i.**, that which appears in the patient at the same age at which it appeared in the patient's father or mother. **homologous i.**, that which is identical with that of the parent. **hysteric i.**, insanity characterized by sudden and short emotional outbreaks. **ideational i.**, insanity with perverted ideation. **ideophrenic i.**, insanity with perverted ideation; ideational insanity. **idiophrenic i.**, insanity due to disease of the brain itself. **imposed i.**, folie à deux. **impulsive i.**, an insane tendency to acts of violence. **induced i.**, compulsive insanity. **intellectual i.** Same as *ideational i.* **iodoform i.**, a condition of mental depression, followed by delirium and acute dementia, due to the excessive use of iodoform. **manic-depressive i.**, insanity in which mania and melancholia alternate. The term includes simple mania and melancholia, recurrent mania and melancholia, periodic mania and melancholia, and circular insanity. **menstrual i.**, that which recurs at the menstrual period. **moral i.**, that which is marked by impairment of the moral sense. **perceptual i.**, a form marked by hallucinations and illusions. **periodic i.**, that which recurs at regular intervals. **polyneuritic i.**, Korsakoff's syndrome. **primary i.**, any insanity not known to be consequent upon some previous attack of disease. **progressive i.**, that which is intensified by transmission to the offspring. **puerperal i.**, the insanity coming on after delivery; also the delirium of childbirth. **recurrent i.**, mental aberration with lucid intervals. **regressive i.**, that which is inherited, but is milder in the offspring than in the parent. **religious i.**, that associated with perverted and exalted religious emotions. **senile i.**, a form due to senile degeneration. **simultaneous i.**, insanity appearing at the same time in two or more persons who live together. **stuporous i.**, primary acute dementia with more or less continuous stupor. **surgical i.**, a form that follows surgical operations. **toxic i.**, acute insanity from poisoning of the system by certain drugs. **volitional i.**, insanity marked by perversion of the will.

insanoid (in-sa'noid). Resembling insanity; nearly insane.

inscriptio tendinea (in-skip'she-o ten-din'e-ah) [L.]. A tendinous cord that traverses a muscle and gives attachment to its fibers.

inscription (in-skip'shun) [L. *inscrip'tio*; in upon + *scribere* to write]. That part of a prescription which contains the names and amounts of the ingredients.

Insecta (in-sek'tah) [L. from *in* in + *sec'tum* cut]. A class of the Arthropoda characterized by division into three parts, head, thorax, and abdomen; there are three orders: Hemiptera, Diptera, and Siphonaptera of medical interest.

insecticide (in-sek'tis-id) [L. *insec'tum* insect + *cedere* to kill]. 1. Destructive to insects. 2. Any substance poisonous to insects.

insemination (in-sem-in-a'shun) [L. *in* into + *se-men* seed]. The fertilization of the ovum.

in senescence (in-sen-es'ens). The process of growing old.

insensible (in-sen'sib-l) [L. *in* not + *sensibilis* appreciable]. 1. Not appreciable by or perceptible to the senses. 2. Devoid of consciousness or of sensibility.

insertion (in-ser'shun) [L. *inser'tio*; from *in* into + *ser'ere* to plant]. 1. The act of implanting, or the condition of being implanted. 2. The place of attachment of a muscle to the bone which it moves. **parasol i.**, insertion of the umbilical cord in the placenta, in which the vessels of the cord separate before they join the placenta and resemble the ribs of a parasol. **velamentous i.** See *velamentous placenta*, under *placenta*.

insheathed (in-shēth'd'). Same as *encysted*.

insidious (in-sid'e-us) [L. *insidiosus*; *insidiā* ambush]. Coming on in a stealthy manner.

insink (in'sink). To become folded in or invaginated.

insipin (in-sip'in). Quinindiglycol sulphate, $O-[CH_2.CO.(C_{20}H_{23}O_2N_2)]_2.H_2SO_4.3H_2O$, a white, tasteless powder; a tasteless quinin. Dose, 3 gr. (0.2 gm.).

in situ (in si'tu) [L.]. In the natural or normal place.

insolation (in-so-la'shun) [L. *insola're* to expose to the sun; *in* in + *sol* sun]. 1. Treatment by exposure to the sun's rays; the sun-bath. 2. Sunstroke; thermic fever due to exposure to the sun's rays. **asphyxial i.**, sunstroke with low temperature, cold skin, and feeble pulse. **hyperpyrexial i.**, thermic fever with very high temperature, coma, and congested skin.

insoluble (in-sol'u-bl) [L. *insolubilis*, from *in* not + *sol'vere* to dissolve]. Not susceptible of being dissolved.

insomnia (in-som'ne-ah) [L. *in* not + *som'nus* sleep]. Inability to sleep; abnormal wakefulness.

inspection (in-spek'shun) [L. *inspec'tio*, *inspic'ere* to behold]. Examination by the eye.

inspersion (in-sper'zhun) [L. *insper'tio*; *in* upon + *spar'gere* to sprinkle]. The act of sprinkling, as with a powder.

inspiration (in-spi-ra'shun) [L. *inspira're*, from *in* in + *spira're* to breathe]. The act of drawing air into the lungs.

inspirator (in-spir-a-tor) [L.]. A form of inhaler or respirator.

inspiratory (in-spir-a-to-re). Pertaining to or subserving inspiration.

inspirium (in-spir'e-um). An inspiration.

inspirometer (in-spi-rom'et-er) [*inspire* + Gr. *μέτρον* measure]. An apparatus for measuring the amount of air inspired.

inspissated (in-spis'a-ted) [L. *inspissa'tus*, from *in* intensive + *spissa're* to thicken]. To thicken, dry, or render less fluid.

inspissation (in-spis-a'shun) [L. *inspissatio*]. 1. The act or process of rendering dry or thick by the evaporation of readily vaporizable parts. 2. The condition of being rendered less thin by evaporation.

inspissator (in-spis-a-tor). An apparatus for inspissating fluids, such as blood-serum.

instep (in'step). The dorsal part of the arch of the foot.

instillation (in-stil-a'shun) [L. *instilla'tio*, from *in* into + *stilla're* to drop]. The act or process of dropping a liquid into a cavity, such as that of the eye.

instillator (in'stil-a-tor). An instrument for performing instillations.

instinct (in'stinkt) [L. *instinctus*; *in* on + *sting'ere* to prick]. A propensity that urges an animal or human being, without the exercise of reason, to the performance of actions which are for the most part normally useful or beneficial.

instinctive (in'stink'tiv). Of the nature of an instinct; performed apparently without the exercise of the reason.

institutes (in'stit-üts) [L. *institu'tum* established regulation]. Established or fundamental principles. 1. of medicine, the fundamental principles of medical science; especially physiology, pathology, and the kindred branches of medical education.

instrol (in'strol). A proprietary bactericide solution used for sterilizing instruments.

instrument (in'stru-ment) [L. *instrumen'tum*; *instru'ere* to furnish]. Any mechanic tool, appliance, or apparatus.

instrumental (in-stru-men'tal). Pertaining to or performed by instruments.

instrumentation (in'stru-men-ta'shun). The use of instruments; work performed with instruments.

insuccation (in-suk-a'shun) [L. *insucca're* to soak in; *in* into + *succus* juice]. The thorough soaking of a drug before preparing an extract from it.

insufficiency (in-suf-ish'en-se) [L. *insufficiētia*, from *in* not + *sufficiens* sufficient]. The condition of being insufficient or inadequate to the performance of the allotted duty. **active i.**, the inability of a muscle to act owing to the abnormal (or other) approximation of its insertion to its origin. **aortic i.**, incomplete closure of the aortic valve, permitting the regurgitation of blood into the left ventricle at each diastole. **cardiac i.**, inability of the heart to perform its function properly. **i. of the externi**, insufficient power in the externi muscles of the eye, so that they are overbalanced by the interni, producing esophoria.

i. of the eyelids, a condition in which the eyes are closed only by a conscious effort. **gastroic i.**, **gastromotor i.**, inability of the stomach to empty itself, although it is not dilated. **hepatic i.**, inability of the liver properly to perform its functions. **i. of the interni**, deficient power in the interni of the eye, resulting in exophoria. **mitral i.** See *i. of the valves*. **muscular i.**, the inability of a muscle to do its normal work by a normal contraction. **myocardial i.**, insufficiency or breakdown of the heart muscle.

ocular i. See *i. of externi* and *i. of interni*. **proteopexic i.** See *hemoclastic crisis*, under *crisis*.

pseudo-aortic i., a condition marked by some of the symptoms of aortic insufficiency, but due to arteriosclerosis. **pulmonary i.** See *i. of the valves*. **pyloric i.**, defective closure of the pylorus, producing inability of the stomach to prevent the too rapid escape of the food into the bowel.

renal i., a state in which the kidneys are unable to remove a sufficient proportion of the effete matter of the blood. **thyroid i.**, hypothyroidism. **tricuspid i.** See *i. of the valves*. **uterine i.**, weakness of the contractile power of the uterus, due to muscular atony. **i. of the valves**, **valvular i.**, a condition in which the valves do not close perfectly, so that the blood passes through the orifices; named, according to the valve affected, **aortic**, **mitral**, **pulmonary**, or **tricuspid**.

insufficiētia vertebrae. Functional neurosis based on spinal injury which does not produce organic disease of the spine.

insufflation (in-suf-la'shun) [L. *in* into + *sub* under + *fla're* to blow]. The act of blowing a powder, vapor, gas, or air into a cavity, as into the lungs. **intratracheal i.**, the operation of blowing air into the trachea through a tube introduced into the larynx; employed to avoid collapse of the lung in intrathoracic operations. **i. of the lungs**, the act of blowing air into the lungs for the purpose of artificial respiration.

insufflator (in'suf-la-tor). An instrument used in performing insufflation.

insula (ins'u-lah) [L. "island"]. The island of Reil.

insular (ins'u-lar). Pertaining to an island, especially the insula.

insulation (ins-u-la'shun) [L. *insula're* to make an island of]. The prevention of the escape of electricity from a body by the use of non-conductors.

insulator (in'su-la-tor). An appliance made of some non-conducting material used in preventing the escape of electricity.

insulin (in'su-lin) [L. *in'sula* island (of the pancreas)]. A clear colorless aqueous extract of the active principle of the internal secretion of the islands of Langerhans of the pancreas of slaughterhouse animals. It is employed in the treatment of diabetes, as it raises the body's power to metabolize carbohydrate, reducing the blood and urinary sugar to normal, causing diminution of the acetone bodies in the urine, and relieving all the clinical

symptoms of the disease. It is marketed in sterile vials of 5 c.c. capacity, each cubic centimeter containing 10 or 20 units. One unit of insulin when injected subcutaneously into a diabetic patient will enable him to utilize 1.5 to 2 gm. of glucose. Called also *ileitin*. **vegetable i.** See *glucokinin*.

insuline (in'su-lin). [See *insulin*.] Shaffer's name for the supposed hormone of the islands of Langerhans of the pancreas.

insulol (in'su-lol). Rectal suppositories containing insulin.

insuloma (in-su-lo'mah) [L. *in'sula* island (of Langerhans) + Gr. *-oma* tumor]. An adenoma of the islands of Langerhans of the pancreas; called also *langerhansian adenoma*.

insultus (in-sul'tus) [L.]. An attack. **i. hystericalus**, the actual hysteric attack.

insusceptibility (in-sus-sep-tib-il'it-e). Same as *immunity*.

intarvin (in'tar-vin). A synthetic fat made from fatty acids having an odd number (17) of carbon atoms. It is composed of the glyceryl ester of margaric acid admixed with 10 per cent. of liquid petrolatum; recommended for use in the diet of diabetes because of its antiketogenic effect.

integration (in-te-gra'shun). 1. Assimilation; anabolic action or activity. 2. The combination of different acts so that they coöperate toward a common end.

integument (in-teg'u-ment) [L. *integumentum*, from *in* on + *teg'ere* to cover]. The covering of the body; the skin.

integumentary (in-teg-u-men'ta-re) 1. Pertaining to or composed of skin. 2. Serving as a covering, like the skin.

integumentum commune [B N A] [L. "common integument"]. The skin.

intellect (in'tel-ekt) [L. *intellectus*, from *intellig'ere* to understand]. The mind, thinking faculty, or understanding.

intemperance (in-tem'per-ans) [L. *in* not + *tempera're* to moderate]. Excess or lack of self-control in respect of food and drink; immoderate indulgence in the use of alcoholic drinks.

intemperant (in-tem'per-ant). A person addicted to the intemperate use of alcoholic stimulants.

intensification (in-ten'sif-ik-a'shun) [L. *intens'us* intense + *fac'ere* to make]. 1. The act of making anything intense. 2. The process of becoming intense.

intensimeter (in-ten-sim'et-er). Fürstenau's device for measuring the intensity of x-rays; it is based on the variation of electric resistance of a selenium cell under influence of irradiation at different intensities.

intensionometer (in-ten-se-o-nom'et-er). An ionometric instrument for measuring the intensity of x-rays. Two series of plates, separated by an air-gap that serves as the dielectric, are connected to opposite terminals in a closed chamber. An electric circuit is completed when the air becomes ionized by the x-rays, and the difference in electric potential is registered by deflection of a galvanometer needle.

intensity (in-ten'sit-e) [L. *intens'us* intense; *in* on + *ten'dere* to stretch]. The condition or quality of being intense; a high degree of tension, activity, or energy.

intensive (in-ten'siv) [L. *in* on + *ten'dere* to stretch]. Of increasing force or intensity.

intention (in-ten'shun) [L. *intenti'o*, from *in* upon + *ten'dere* to stretch]. A natural or other process; a process of healing. See under *healing*.

inter- [L. *in'ter* between]. A prefix signifying between.

interacinar, interacinous (in-ter-as'in-ar, in-ter-as'in-us). Situated between acini.

interagglutination (in'ter-ag-lu-tin-a'shun). Agglutination of one kind of cells by the agglutinins of a nearly related kind.

interalveolar (in-ter-al-ve'o-lar). Between alveoli.

interangular (in-ter-ang'u-lar). Situated or occurring between two or more angles.

interannular (in-ter-an'u-lar) [L. *in'ter* between + *an'nulus* ring]. Situated between two rings or constrictions, or between two of the nodes of Ranvier.

interarticular (in'ter-ar-tik'u-lar) [L. *in'ter* between + *artic'ulus* joint]. Situated between articular surfaces.

interarytenoid (in-ter-ar-i'ten-oid). Between the arytenoid cartilages.

interatrial (in-ter-at're-al). Between the atria of the heart.

interauricular (in'ter-aw-rik'u-lar) [L. *in'ter* between + *auric'ula* auricle]. Situated between the auricles.

interbody (in'ter-bod-e). An amboceptor.

interbrain (in'ter-brān). See *thalamencephalon*.

intercadence (in-ter-ka'dens) [L. *in'ter* between + *cadere* to fall]. An additional or supernumerary beat occurring between two full beats of the pulse; also the occurrence of such a beat.

intercalary (in-ter'kal-a-re) [L. *intercala'rius*; *in'ter* between + *calare* to call]. Inserted or placed between; *interposed*.

intercalated (in-ter'kal-āt-ed) [L. *intercala'tus*]. See *intercalary*.

intercalatum (in'ter-ka-la'tum). The substantia nigra of the brain.

intercanalicular (in'ter-kan-al-ik'u-lar). Between canaliculi.

intercapillary (in-ter-kap'il-a-re). Among or between capillaries.

intercarotic, intercarotid (in'ter-ka-rot'ik, in'ter-ka-rot'id). Situated between the carotid arteries.

intercarpal (in-ter-kar'pal). Between the carpal bones.

intercartilaginous (in'ter-kar-til-aj'in-us). Between cartilages.

intercavernous (in-ter-kav'er-nus). Between two cavities.

intercellular (in-ter-sel'u-lar). Situated between the cells of any structure.

intercentral (in-ter-sen'tral). Situated between or connecting two or more nerve-centers.

intercerebral (in-ter-ser'e-bral). Between two cerebral hemispheres.

interchondral (in-ter-kon'dral) [L. *in'ter* between + Gr. *χόνδρος* cartilage]. Connecting or situated between two or more cartilages.

intercilium (in-ter-sil'e-um) [L. *in'ter* between + *cil'ium* eyelash]. The space between the eyebrows.

interclavicular (in'ter-klav-ik'u-lar) [L. *in'ter* between + *clavic'ula* clavicle]. Situated between the clavicles.

intercoccygeal (in'ter-kok-sij'e-al). Situated between the pieces of the coccyx.

intercolumnar (in'ter-kol-um'nar) [L. *in'ter* between + *columna* column]. Situated between columns or pillars.

intercondylar, intercondyloid, intercondylous (in'ter-kon'dil-ar, in'ter-kon'dil-oid, in'ter-kon'dil-us). Situated between two condyles.

intercostal (in-ter-kos'tal) [L. *in'ter* between + *cos'ta* rib]. Situated between the ribs.

intercostohumeral (in'ter-kos-to-hu'mer-al). Pertaining to an intercostal space and the humerus.

intercostohumeralis (in'ter-kos'to-hu'mer-a-lis) [L.]. The lateral cutaneous branch of the second intercostal nerve going to the skin of the arm.

intercricothyrotomy (in-ter-kri'th'o-thi-rot'o-me) [L. *inter* between + *cricothyroid* + Gr. *τομή* cut]. The operation of opening the larynx through the cricothyroid membrane; laryngotomy.

intercristal (in-ter-kris'tal). Between two crests.

intercru'al (in-ter-kru'ral). Between two crura.

intercurrent (in-ter-ku'rent) [L. *intercur'rens*, from *in'ter* between + *currere* to run]. Breaking into and modifying the course of an already existing disease.

intercusping (in-ter-kus'ping). The correct occlusion of the cusps of the teeth of one jaw with the corresponding depression in the occlusal surfaces of the teeth of the opposite jaw.

intercutaneousmucous (in'ter-ku-ta'ne-o-mu'kus). Occurring or situated between the skin and mucous membrane.

interdeferential (in'ter-def-er-en'shal). Between two vasa deferentia.

interdental (in-ter-den'tal) [L. *in'ter* between + *dens* tooth]. Situated between the teeth; situated between two approximating teeth.

interdentium (in-ter-den'she-um) [See *interdental*]. The space between two contiguous teeth.

interdigit (in-ter-dij'it) [See *interdigital*]. The space between any two contiguous fingers or toes.

interdigital (in-ter-dij'it-al) [L. *in'ter* between + *dig'itus* finger]. Situated between two adjacent fingers or toes.

interdigitation (in'ter-dij-it-a'shun) [L. *in'ter* between + *dig'itus* digit]. 1. An interlocking of parts by finger-like processes. 2. Any one of a set of finger-like processes. Same as *intercusping*.

interfascicular (in'ter-fas-ik'u-lar) [L. *in'ter* between + *fascic'ulus* bundle]. Situated between fasciculi.

interfeminium (in'ter-fe-min'e-um) [L.]. The space between the thighs, or the inside of the thighs.

interfemoral (in-ter-fem'o-ral). Between the thighs.

interfemur (in-ter-fe'mus) [L.]. The space between the thighs.

interference (in-ter-fe'rens) [L. *in'ter* between + *feri're* to strike]. A conflict between two waves of light or of sound, producing in the first instance darkness, in the other, silence.

interferemeter (in-ter-fer-e-om'et-er). An instrument for measuring lengths by means of the phenomena caused by the interference of two rays of light.

interfibrillar, interfibrillary (in'ter-fi-bril'ar, in-ter-fib'ril-a-re) [L. *in'ter* between + *fibril'la* small fiber]. Between or among fibrils.

interfibrous (in-ter-fi'brus). Between fibers.

interfilamentous (in'ter-fil-am-en'tus). Between filaments.

interfilar (in-ter-fi'lar) [L. *in'ter* between + *fil'um* thread]. Situated among the fibrils of a reticulum.

interfrontal (in-ter-fron'tal). Between the halves of the frontal bone.

interganglionic (in'ter-gang-le-on'ik) [L. *in'ter* between + *ganglion*]. Situated between or connecting ganglia.

intergemmal (in-ter-jem'al) [L. *in'ter* between + *gem'ma* bud]. Situated between taste-buds or other buds.

interglobular (in-ter-glob'u-lar) [L. *in'ter* between + *glob'ulus* globule]. Situated between or among globules, as of the dentin.

intergluteal (in-ter-glu'te-al). Between the buttocks.

intergonial (in-ter-go'ne-al). Between two gonias.

intergrade (in-ter-grād) [L. *in'ter* between + *gradus* a step]. A step or stage between two other stages. **sex i.**, an individual showing character-

istics between the typical male and female condition. Called also *intersex*.

intergranular (in-ter-gran'u-lar). Between the granule-cells of the brain.

intergyral (in-ter-jī'ral). Between cerebral gyri or convolutions.

interhemispheric (in'ter-hem-e-ser'e-bral). Between cerebral hemispheres.

interhemispheric (in'ter-hem-is-fer'ik). Between the cerebral hemispheres.

interior (in-te're-or) [L., Latin neuter *intērius*]. 1. Situated inside; inward. 2. An inner part or cavity.

ischial (in'ter-is-ke-ad'ik). Between the two ischia.

interlabial (in-ter-la'be-al) [L. *in'ter* between + *labium* lip]. Between the lips, or between two labia.

interlamellar (in'ter-lam-el'ar) [L. *in'ter* between + *lamella* layer]. Situated between lamellae.

interligamentary, interligamentous (in'ter-lig-am-en'tar-e, -en'tus). Between or among ligaments.

interlobar (in-ter-lo'bar) [L. *in'ter* between + *lobus* lobe]. Situated or occurring between lobes.

interlobitis (in-ter-lo-bi'tis). Inflammation of the pleura which lies between the two lobes of the lung.

interlobular (in-ter-lob'u-lar) [L. *in'ter* between + *lobulus* lobule]. Situated or occurring between lobules.

intermalleolar (in-ter-mal-e'o-lar). Between the malleoli.

intermammary (in-ter-mam'ar-e). Between the breasts.

intermamillary (in-ter-mam'il-a-re). Between the nipples.

intermarriage (in-ter-mar'ij) [L. *in'ter* between + *marita're* to wed]. 1. The marriage of persons related by blood or consanguinity. 2. The marriage of persons of different races.

intermaxilla (in-ter-mak-sil'ah). The intermaxillary bone.

intermaxillary (in-ter-maks'il-a-re). 1. Situated between the jaws, or maxilla. 2. Situated between the rami of a jaw bone.

intermediary (in-ter-me'de-a-re) [L. *in'ter* between + *media're* to divide]. Performed or occurring in a median stage; neither early nor late. 1. **body**. See *Ehrlich's side-chain theory*, under *theory*.

intermediate (in-ter-me'de-āt) [L. *in'ter* between + *media'tus* middle]. Placed between; intervening.

intermediolateral (in'ter-me-de-o-lat'er-al). Both intermediate and lateral.

intermembranous (in-ter-mem'bran-us). Situated or occurring between membranes.

intermeningeal (in'ter-men-in'je-al). Situated or occurring between the meninges.

intermenstrual (in-ter-men'stru-al) [L. *in'ter* between + *menstrual*]. Occurring between the menstrual periods.

intermetacarpal (in'ter-met-ak-ar'pal) [L. *in'ter* between + *metacarpal*]. Situated between the metacarpal bones.

intermetameric (in'ter-met-am-er'ik). Between two metameres.

intermetatarsal (in'ter-met-at-ar'sal). Situated or occurring between the metatarsal bones.

intermission (in-ter-mish'un) [L. *intermis'sio*; *in'ter* between + *mittere* to send]. An interval; temporary cessation or period between two recurrences or paroxysms.

intermittent (in-ter-mit'ent) [L. *intermit'tens*; *in'ter* between + *mittere* to send]. 1. Having periods of cessation of activity. 2. An intermittent fever. **postponing i.**, intermittent fever in

which the paroxysms come on at a later hour each day.

intermuscular (in-ter-mus'ku-lar). Situated between muscles.

intern (in-tern') [Fr. *interne*]. A resident, or indoor, physician or surgeon in a hospital.

internal (in-ter'nal) [L. *inter'nus*]. Situated or occurring within or on the inside.

internarial (in-ter-na're-al) [L. *in'ter* between + *nares* nostrils]. Situated between the nostrils.

internasal (in-ter-na'zal). Situated between the nasal bones or passages; internarial.

interne (in-tern') [Fr.]. See *intern*.

internist (in-ter'nist). A physician who treats diseases of the internal organs.

internodal (in-ter-no'dal). Situated between two nodes.

internode (in-ter-nōd) [L. *in'ter* between + *nodus* knot]. A space between two nodes; the interannular segment of a nerve-fiber. 1. **of Ranvier**, the part of a nerve-fiber between two nodes of Ranvier.

internodular (in-ter-nod'u-lar). Between two nodes.

internuclear (in-ter-nu'kle-ar). 1. Situated between or among nuclei. 2. Between the nuclear layers of the retina.

internuncial (in-ter-nun'she-al) [L. *in'ter* between + *nun'cius* messenger]. Serving as a medium of communication between nerve-centers. 1. **pathways**, correlation tracts connecting different centers or nuclei within the central nervous system.

internus (in-ter'nus) [L. "internal"]. The internal rectus muscle of the eye.

interoceptive (in'ter-o-sep'tiv). Sherrington's term for the internal surface field of distribution of receptor organs. See *receptor*, *exteroceptive*, and *proprioceptive*.

interoceptor (in'ter-o-sep'tor). A sense organ located in the linings of the digestive tract, excited by stimuli arising within the viscera; one of the end-organs of visceral sensibility.

intero-inferiorly (in'ter-o-in-fe-re-or-le). Inwardly and in a downward position or direction.

interol (in'ter-ol). A proprietary paraffin oil preparation for use in constipation.

interolivary (in-ter-ol'iv-a-re). Situated between the olivary bodies.

interorbital (in-ter-or-bit-al) [L. *in'ter* between + *orbita* orbit]. Situated between the orbits.

interosculate (in-ter-os'ku-lāt) [L. *in'ter* between + *os'culum* opening]. To form a communication between two structures.

interosseal (in-ter-os'e-al) [L. *in'ter* between + *os* bone]. 1. Situated between bones. 2. Pertaining to the interosseal muscles.

interosseous (in-ter-os'e-us) [L. *interos'seus*; *in'ter* between + *os* bone]. Situated or occurring between bones.

interosseus (in-ter-os'e-us), pl. *interos'sei* [L.]. See *muscles*, *table of*.

interpallebral (in-ter-pal'pe-bral). Between the eyelids.

interparietal (in'ter-par-i'et-al) [L. *in'ter* between + *paries* wall]. Situated between the parietal bones.

interparoxysmal (in'ter-par-oks-iz'mal). Occurring between paroxysms.

interpeduncular (in'ter-pe-dunk'u-lar) [L. *in'ter* between + *pedunculus* peduncle]. Situated between two peduncles.

interphalangeal (in'ter-fal-an'je-al) [*inter-* + *phalangeal*]. Situated in a joint between two phalanges.

interphyletic (in'ter-fi-let'ik) [L. *in'ter* between + *phyletic*]. Intermediate in form between two types of cell.

interpiäl (in-ter-pi'al). Situated between the two layers of the pia.

interpolar (in-ter-po'lar) [L. *in'ter* between + *po'lus* pole]. Situated between two poles. **i. effect**, the effect of the electric current which acts throughout the whole region of the body between the two poles: contrasted with the *polar* effect, which takes place at the point of application of the electrode, as, for instance, cauterization.

interpolation (in-ter-po-la'shun). Surgical transplantation of tissue.

interpositum (in-ter-poz'it-um). Same as *velum interpositum*.

interprotometamery (in'ter-pro-to-met'am-ër) [L. *in'ter* between + Gr. *πρωτος* first + *μετά* across + *μερος* part]. The structure between the primary segments of the embryo.

interproximal, interproximate (in-ter-prok'-sim-al, -ät). Situated between adjoining surfaces.

interpubic (in-ter-pu'bik) [L. *in'ter* between + *pubes*]. Situated between the pubic bones.

interradial (in-ter-ra'de-al). Situated between rays.

interrenal (in-ter-re'nal) [*inter-* + *renäl*]. Situated between the kidneys. **i. system**, the cortex of the suprarenal gland.

interrenalism (in-ter-re'nal-izm). A condition of virilism due to hyperplasia of the tissue of the suprarenal cortex.

interrenalopathy (in-ter-re-nal-op'ath-e) [*interrenal* system + Gr. *πάθος* disease]. Any disorder of the function of the cortex of the suprarenal gland.

interrupted (in-ter-up'ted) [L. *interrup'tus*; *in'ter* between + *rup'tus* broken]. Not continuous; marked by intermissions or breaches of continuity.

interrupter (in-ter-up'ter). A device for breaking the electric circuit at regular intervals.

interscapillum (in'ter-skap-il'e-um) [L.]. The space between the shoulders.

interscapular (in-ter-skap'u-lar) [L. *in'ter* between + *scap'ula* shoulder-blade]. Situated between the shoulder-blades.

interscapulum (in-ter-skap'u-lum). The interscapillum.

intersciatic (in'ter-si-at'ik). Between the two ischia.

intersegment (in-ter-seg'ment). Any one of a series of segments, like the angiotomes, etc.; a metamer.

intersegmental (in'ter-seg-men'tal). Between segments.

interseptal (in-ter-sep'tal). Between two septa.

interseptum (in-ter-sep'tum) [L.]. The diaphragm.

intersex (in'ter-sex) [L. *in'ter* between + *sex*]. See *sex intergrade*, under *intergrade*.

intersexual (in-ter-sex'u-al). Between the sexes. Cf. *sex intergrade*, under *intergrade*.

interspace (in'ter-späs). A space between two similar structures. **dimeric i.**, the surface between two liquid phases.

interspinal, interspinous (in-ter-spi'nal, -nus). Situated between two spinous processes.

interspinalis (in'ter-spi-na'lis) [L.]. See *muscles*, table of.

interstice (in-ter'stis) [L. *intersti'tium*]. A small interval, space, or gap in a tissue or structure.

interstitial (in-ter-stish'al) [L. *interstitia'lis*; *in'ter* between + *sis'tere* to set]. Pertaining to or situated in the interstices or interspaces of a tissue.

interstitialoma (in-ter-stish'e-al-o'ma). A tumor or mass of interstitial tissue.

intersystole (in-ter-sis'to-le). The interval which

exists between the end of the auricular and the beginning of the ventricular systole.

intertarsal (in-ter-tar'sal). Situated between the tarsal bones.

intertinctus (in-ter-tink'tus). Colored differentially.

intertragicus (in-ter-traj'ik-us) [L.]. See *muscles*, table of.

intertransversalis (in'ter-trans-ver-sa'lis). See *muscles*, table of.

intertransverse (in'ter-trans-vers') [L. *in'ter* between + *transversus* turned across]. Situated between or connecting the transverse processes of the vertebrae.

intertrigo (in-ter-tre'go) [L. *in'ter* between + *ter're* to rub]. A chafe or chafed patch of the skin; also the erythema or eczema that may result from a chafe of the skin.

intertrochanteric (in'ter-tro-kan-ter'ik) [*inter-* + *trochanter*]. Situated between the great and lesser trochanters.

intertubercular (in'ter-tu-ber'ku-lar). Between tubercles.

intertubular (in-ter-tu'bu-lar) [L. *in'ter* between + *tubulus* tubule]. Situated between or among tubules.

interureteral (in'ter-u-re'ter-al). Same as *interureteric*.

interureteric (in'ter-u-re-ter'ik) [*inter-* + *ureter*]. Situated between the ureters.

interval (in-ter-val) [L. *in'ter* between + *val'lum* rampart]. The space between two objects or parts; the lapse of time between two recurrences or paroxysms. **a.-c. i.**, the interval between the auricular and carotid waves in the tracing of the jugular pulse. **atriocarotid i.**, **auriculo-carotid i.**, the time between the beginning of the auricular and the beginning of the carotid waves in a jugular pulse-tracing. Called *intersystolic period*. **c.-a. i.**, the cardio-arterial interval. **cardio-arterial i.**, the time between the apex-beat and arterial pulsation. **focal i.**, the distance from the anterior to the posterior focal point. **passive i.**, the time when neither the auricles nor ventricles of the heart are expanding or contracting. **post-sphygmic i.**, the time between the beginning of dilatation of the ventricle of the heart and the opening of the auriculoventricular valves. **pre-sphygmic i.**, the time between the beginning of contraction of the ventricles of the heart and the raising of the arterial valves. **Q. R. S. T. i.**, the ventricular complex of the electrocardiogram. See *electrocardiogram*. **Sturm's i.** Same as *focal i.*

intervalvular (in-ter-val'vu-lar). Between valves.

intervascular (in-ter-vas'ku-lar). Between blood-vessels.

interventricular (in'ter-ven-trik'u-lar) [L. *in'ter* between + *ventric'ulum* ventricle]. Situated between ventricles.

intervertebral (in-ter-ver'te-bral) [L. *in'ter* between + *vertebra*]. Situated between two contiguous vertebrae.

intervillous (in-ter-vil'us) [L. *in'ter* between + *vill'us* tuft]. Situated between or among villi.

intestin (in-tes'tin). Naphthalin-benzoate of bismuth: an intestinal antiseptic. Dose, $7\frac{1}{2}$ -15 gr. (0.5-1 gm.).

intestinal (in-tes'tin-al) [L. *intestina'lis*]. Pertaining to the intestine.

intestine (in-tes'tin) [L. *intesti'num*, from *in'tus* within]. The membranous tube that extends from the stomach to the anus. The first portion (**small i.**), which is smaller in caliber, is about twenty feet long, and extends from the pylorus to its junction with the large intestine at the cecum: it includes the duodenum, jejunum, and ileum. The **large i.** is about five feet long, and includes the cecum, colon, and rectum.

intestinotoxin (in-tes-'tin-o-tok'sin). Enterotoxin.
intestinum (in-tes-ti'nūm, pl. *intesti'na*. Latin for intestine. 1. *cæcum* [B N A], the cecum. 1. *cras'sum* [B N A], the large intestine. 1. *il'leum* [B N A], the ileum. 1. *jeju'num* [B N A], the jejunum. 1. *rec'tum* [B N A], the rectum. 1. *ten'ue* [B N A], the small intestine.

intima (in'tim-ah) [L. for *innermost*]. The innermost of the three coats of an artery; the tunica intima.

intimal (in'tim-al). Pertaining to the intima.

intima-pia (in'tim-ah-pi'ah). The combined intima of blood-vessels and pia mater which surrounds the arteries of the brain.

intimitis (in-tim-i'tis). Inflammation of an intima.

intoe (in'tō). Hallux valgus.

intolerance (in-to'l'er-ans) [L. *in* not + *tolera're* to bear]. Inability to endure or withstand.

intolin (in-to'l'in). A proprietary preparation of beer yeast in powder form.

intorsion (in-tor'shun) [L. *in* inward + *torque're* to twist]. An inward rotation of the vertical corneal meridians.

intoxation (in-tok-sa'shun). Poisoning.

intoxication (in-toks-ik-a'shun) [L. *in* intensive + Gr. *τοξικόν* poison]. 1. Poisoning; the state of being poisoned. 2. The condition produced by excessive use of alcoholic stimulants. **acid i.**, acidosis of a severe grade. **anaphylactic i.**, the train of symptoms which follow the second injection of protein in anaphylaxis. **Roentgen i.**, a condition sometimes produced by intensive irradiation with Roentgen rays. It is marked by uneasiness, vertigo, nausea, and vomiting. Called also *roentgenkalers*. **septic i.**, sapremia. **serum i.**, a condition of temporary intoxication which sometimes follows the injection of serum.

intra- [L. *in'tra* within]. A prefix meaning within.

intra-abdominal (in'trah-ab-dom'in-al). Situated or occurring within the abdomen.

intra-acinous (in-trah-as'in-us). Occurring or situated within an acinus.

intra-appendicular (in'trah-ap-en-dik'u-lar). Within the appendix.

intra-arachnoid (in'trah-ar-ak'noïd). Within or underneath the arachnoid.

intra-arterial (in'trah-ar-te're-al). Situated within an artery or arteries.

intra-articular (in'trah-ar-tik'u-lar) [L. *in'tra* within + *articulus* joint]. Situated within a joint.

intra-atomic (in'tra-at-om'ik). Within the atom.

intra-atrial (in-trah-a'tre-al). Intra-auricular.

intra-aural (in-trah-aw'ral). Inside of the ear.

intra-auricular (in'trah-aw-rik'u-lar). Within an auricle.

intra-bronchial (in-trah-brong'ke-al). Situated or occurring within a bronchus.

intra-buccal (in-trah-buk'al). Within the mouth or within the cheek.

intra-canalicular (in'trah-kan-al-ik'u-lar). Occurring within canaliculi.

intracapsular (in-trah-kap'su-lar). Situated within a capsule.

intracardiac (in-trah-kar'de-ak). Within the heart.

intracarpal (in-trah-kar'pal). Within the wrist.

intracartilaginous (in'trah-kar-til-aj'in-us). Situated, formed, or occurring within a cartilage.

intracelial (in-trah-se'le-al). Within one of the body cavities.

intracellular (in-trah-sel'u-lar) [L. *in'tra* within + *cellula* cell]. Situated or occurring within a cell or cells.

intracerebellar (in'trah-ser-eb-el'ar). Situated within the cerebellum.

intracerebral (in'trah-ser'eb-ral). Situated within the cerebrum.

intracervical (in-trah-ser'vik-al). Situated within a cervical canal.

intrachordal (in-trah-kor'dal). Within the notochord.

intracistern (in-trah-sis'tern). Within a cistern, especially the cisterna magna.

intracollic (in-trah-kol'ik). Within the colon.

intracordal (in-trah-kor'dal) [L. *in'tra* within + *cor* heart]. Within the heart.

intracorporeal (in'trah-kor-po're-al). Within the body or within any body.

intracorpuseular (in'trah-kor-pus'ku-lar). Occurring within corpuscles.

intracostal (in-trah-kos'tal). On the inner surface of the rib.

intracranial (in-trah-kra'ne-al) [L. *in'tra* within + *cranium*]. Situated within the cranium.

intracruress (in'trah-kru-re'us). The internal part of the crureus.

intracutaneous (in'trah-ku-ta'ne-us). Within the substance of the skin.

intracystic (in-trah-sis'tik). Situated within a cyst.

intrad (in'trad) [Old Lat.]. Within; inward in situation or direction.

intradermal, intradermic (in-trah-der'mal, in-trah-der'mik). Situated or applied within the skin.

intraduodenal (in'trah-du-o-de'nal). Within the duodenum.

intradural (in-trah-du'ral). Situated or occurring within the dura.

intra-epiphyseal (in'trah-ep-e-fiz'e-al). Within an epiphysis.

intra-epithelial (in'trah-ep-e-the'le-al). Situated among the cells of the epithelium.

intrafaradization (in'trah-far-ad-i-za'shun). The faradization of the inner surface of the stomach or other viscus.

intrafascicular (in'trah-fas-ik'u-lar). Situated or occurring within a fascicle.

intrafebrile (in-trah-feb'ril). During the febrile stage.

intrafilar (in-trah-fi'lar) [L. *in'tra* within + *filum* thread]. Situated within a reticulum.

intrafissural (in-trah-fish'u-lar). Within a cerebral fissure.

intrafistular (in-trah-fis'tu-lar). Within a fistula.

intra galvanization (in'trah-gal-van-iz-a'shun). The galvanization of the inner surface of any organ.

intra gastric (in-trah-gas'trik). Situated or occurring within the stomach.

intra gemmal (in-trah-jem'al) [L. *in'tra* within + *gemma* bud]. Situated within a taste-bud or other bud.

intraglandular (in-trah-glan'du-lar). Within a gland.

intraglobular (in-trah-glob'u-lar). Within a blood-corpuscle.

intragyrar (in-trah-ji'ral). Within a cerebral gyrus.

intra hepatic (in'trah-hep-at'ik). Within the liver.

intra hyoid (in-trah-hi'oid). Within the hyoid bone.

intra laryngeal (in-trah-lar-in'je-al). Within the larynx.

intra leukocytic (in'trah-lu-ko-si'tik). Taking place within a leukocyte.

intra ligamentous (in'trah-lig-am-en'tus). Situated within a ligament.

intra lingual (in-trah-ling'wal). Within the tongue.

intra lobar (in-trah-lo'bar). Within a lobe.

- intralobular** (in-trah-lob'u-lar). Situated or occurring within a lobule.
- intralocular** (in-trah-lok'u-lar). Within the loculi of a structure.
- intralumbar** (in-trah-lum'bar). Same as *endolumbar*.
- intramammary** (in-trah-mam'ar-e). Within the breast.
- intramastoiditis** (in'trah-mas-toid-i'tis). Inflammation of the antrum and cells of the mastoid process.
- intramedullary** (in-trah-med'ul-a-re). Situated within the medulla oblongata.
- intramembranous** (in-trah-mem'bran-us). Situated, occurring, or formed within, a membrane.
- intrameningeal** (in'trah-men-in'je-al). Situated or occurring within the meninges.
- intramin**, **intramine** (in'tram-in). A proprietary preparation, diortho-amino-thiobenzene: used like salvarsan in syphilis (J. E. R. McDonagh, 1916).
- intramural** (in-trah-mu'ral) [L. *in'tra* within + *mu'rus* wall]. Situated or occurring within the wall of an organ.
- intramuscular** (in-trah-mus'ku-lar) [L. *in'tra* within + *mus'culus* muscle]. Situated in the substance of a muscle.
- intramyocardial** (in-trah-mi-o-kar'de-al). Within the myocardium.
- intramarial** (in-trah-na're-al). Within the nostrils.
- intranasal** (in-trah-na'zal) [L. *in'tra* within + *na'sus* nose]. Situated within the nose.
- intranatal** (in-trah-na'tal). Occurring during birth.
- intraneural** (in-trah-nu'ral). Within or into a nerve.
- intranidal** (in-trah-ni'dal). Occurring during birth.
- intranuclear** (in-trah-nu'kle-ar). Within a nucleus.
- intra-ocular** (in-trah-ok'u-lar) [L. *in'tra* within + *oc'ulus* eye]. Situated within the eye.
- intra-oral** (in-trah-o'ral). Within the mouth.
